Downer Glacier. 66°58' S, 56°25' E. About 26 km long, it flows E into the Edward VIII Ice Shelf, just N of Wilma Glacier. Part of the glacier was mapped by ANARE in 1954 during Bob Dovers' sledge journey to Edward VIII Bay, and it was photographed aerially by ANARE in 1956. Named by ANCA on July 22, 1959, for Sgt. Graham Kent Downer (b. Feb. 26, 1929), RAAF, electrical and instrument fitter at Mawson Station in 1958. He operated the camera on many aerial photographic missions. US-ACAN accepted the name in 1961. The feature was originally plotted in 66°57' S, 56°17' E, but it has since been re-plotted.

The Downfall. 64°48' S, 62°23' W. A peak, rising to about 1500 m, between the heads of Arago Glacier and Woodbury Glacier, at the base of Arctowski Peninsula, on the Danco Coast, on the W coast of Graham Land. Surveyed by Fids from Base O in Aug. 1956. They hoped to traverse a trail from Orel Ice Fringe to the Forbidden Plateau, but got as far as the very steep drop on the E side of this mountain, and could go no farther. Photographed aerially by FIDASE 1956-57, and mapped in 1959 by FIDS cartographers, from these efforts. Named by UK-APC on Sept. 23, 1960. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Downham, Noel Yorston. b. Dec. 19, 1934, Notty Ash, Liverpool, son of post office telegraphist Albert David Downham and his wife Emily Esther Yorston (Yorston is a Shetlands name). He was working in an insurance company in Liverpool when he was drafted into the Army at 18, into the Service Corps, as a clerk, and then seconded to Military Intelligence, serving 3 months in Austria and 15 months in Trieste, screening refugees. A sergeant while still only 18, and a staff sergeant at 19, in 1955 he went to work for the Kenyan Police, fighting the Mau Mau as head of Tracker Combat Team #2, out of Mwega. By 1959 he had had several bouts of malaria, and left Kenya for a trip through East Africa, down to Cape Town. He had heard of FIDS, and, being a natural, applied, came back to Britain, was accepted, took a crash course in meteorology, and, in Nov. 1959, sailed from Southampton on the *Shackleton*, to Montevideo, via Tristan da Cunha, and then on to winter-over at Base G in 1960 as a met observer, and at Base D in 1961, as a general assistant. When he left in 1962 he traveled through South America, and then returned to Britain via Spain. He was back in Antarctica, as leader at Base D in the winter of 1963, and at Base E in 1964. He went to agricultural school in North Wales, learned sheep shearing, and moved to Canada in 1967, married Geoff Renner's sister, Barbara in 1970, and became reeve of the county of Smoky Lake, Alberta.

Downham Peak. 64°17' S, 58°54' W. A pyramidal rock peak rising to 535 m on the S side of the mouth of Sjögren Glacier, on Trinity Peninsula. Mapped by ground surveys conducted by Fids (including Noel Downham) from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964. US-ACAN accepted the name later that year.

Downie Ridge. 62°58' S, 60°44' W. A geothermally heated ridge trending WSW from the S end of Stonethrow Ridge, Deception Island, in the South Shetlands. It is the site of Antarctic Specially Protected Area #140 (sub-site E). Named by UK-APC on March 17, 2010, for Roderick H. Downie, BAS environmental manager since 1997, who researched and wrote the Antarctic Special Management Area plan for Deception Island.

Downing, Arthur "Jack." b. 1893, Buffalo, NY, son of English immigrants carpenter Harry Downing and his wife Jennie. When Jack was a little lad the family moved to Butte, Mont., where Harry got work as a builder. Jack went back to England, and served 3 years as an apprentice to shipmasters James Boyd & Son, in Cornwall. He then served on the *Madagascar* and the *Dalhanna*, and was involved briefly in the coastal trade around Australia. He was working on the *Aurora* as a casual laborer when that ship was being refitted in Sydney, and was taken on as able seaman for BITE 1914-17. He served with the NZ Expeditionary Force in Europe during World War I. Just as Jack was heading to Antarctica, his brother Norman was leaving the USA for Britain, to study medicine at the University of London. Harry, the father, died in Montana in 1937. Jack's fate is unknown (to this author, anyway).

Downs Cone. 75°50°S, 116°16' W. One of several small cones, or cone remnants, along the SW side of Toney Mountain, 5 km WSW of Boeger Peak, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1976, for Bill S. Downs, USN, air controlman at Williams Field, 1969-70 and 1970-71. He had also wintered-over at Little America in 1958.

Downs Nunatak. 69°36' S, 66°40' W. Rising to about 1000 m, between Garcie Peaks and Webb Peak, SW of Fleming Glacier, on Crescent Scarp, on the Fallières Coast, on the W

coast of Graham Land. Photographed aerially in 1940 by USAS 1939-41, and again by USN in 1966. BAS surveyed it in 1970-73. Named by US-ACAN for Bobby G. Downs, USN, cook at Palmer Station for the winter of 1968. UK-APC accepted the name on May 21, 1979. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Cape Downshire *see* **Downshire Cliffs**

Downshire Cliffs. 71°37' S, 170°36' E. A line of precipitous basalt cliffs rising to 2000 m above the Ross Sea, they form much of the E side of Adare Peninsula, along the coast of northern Victoria Land. At the request of Crozier, Ross named part of them as Cape Downshire, for Crozier's friend, Arthur Blundell Sandys Trumbull Hill, 3rd Marquess of Downshire (1788-1845). Modern historians could not find this cape, so they re-applied the name to the entire cliffs. US-ACAN accepted the new naming in 1966.

Downstream Bravo Camp. 84°01' S, 155°00' W. Also known as Downstream B Camp. American camp on Whillans Ice Stream (then known as Ice Stream B), in Marie Byrd Land. *See also* **Upstream B Camp** and **Upstream C Camp**.

Glaciar Doyle *see* **Doyle Glacier**

Doyle Glacier. 66°00' S, 65°18' W. Flows to the Graham Coast on both sides of Prospect Point, on the W coast of Graham Land. Charted by BGLE 1934-37. In 1956-57 FIDASE photographed it aerially, and Fids from Base J surveyed it from the ground. Named by UK-APC on July 7, 1959, for Sir Arthur Ignatius Conan Doyle (i.e., Doyle was his last name) (1859-1930), Scottish physician, the first British person to make a full day's journey on skis, in March 1893 (not in Antarctica). Doyle also wrote the Sherlock Holmes stories, as well as many novels, including (his best) *Rodney Stone*. It appears on a 1960 British chart. US-ACAN accepted the name in 1971.

Doyle Point. 65°53' S, 54°52' E. Between Cape Batterbee and Cape Borley, on the coast of Enderby Land. Discovered on Jan. 12, 1930 by BANZARE, and named by Mawson as Stuart Doyle Point, for Stuart Doyle (1887-1945), Australian movie magnate who helped Frank Hurley process the expedition's movies. The name was later shortened, and accepted by US-ACAN in 1947, and by ANCA on Nov. 24, 1953.

Drabanten *see* **Drabanten Nunatak**

Drabanten Nunatak. 73°54' S, 5°55' W. An isolated nunatak, W of Urfjell Cliffs, and about 16 km W of Tunga Spur, in the southernmost part of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Drabanten (i.e., "the satellite"). US-ACAN accepted the name Drabanten Nunatak in 1966.

Drabek Peak. 71°05' S, 166°37' E. Rising to 2090 m, 10 km N of Anare Pass, and 14 km W of Redmond Bluff, in the Anare Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Charles M. Drabek, USARP biologist at McMurdo, 1964-65 and 1967-68.

Drachenschwanzhügel. 73°29' S, 167°15' E. The hill next E of Tiger Hill, in the SW area of Spatulate Ridge, in the Mountaineer Range of Victoria Land. Named by the Germans.

Mount Draeger. 71°09' S, 163°54' E. Rising to 1690 m, in the NW part of the Posey Range, in the Bowers Mountains, it overlooks from the E the junction of Smithson Glacier with Graveson Glacier. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Ernest J. Draeger, USN, chief radioman at McMurdo in the winter of 1967.

Dragash Point. 62°26' S, 59°48' W. A rocky point, forming the S extremity of Dee Island, 890 m NNW of Agüedo Point, and 1.06 km NE of Brusen Point, Greenwich Island, in the South Shetlands. Mapped by the British in 1968, by the Chileans in 1971, by the Argentines in 1980, and by the Bulgarians in 2005 and 2009. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Dragash Voyvoda, in northern Bulgaria.

Caleta Drago *see* **Caleta Mazzei**

Dragoman Glacier. 63°01' S, 62°32' W. It flows SE for 2.6 km, from the SE slopes of the Imeon Ridge, SE of Zavet Saddle and S of the summit of Mount Foster, and enters Ivan Asen Cove, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the town in western Bulgaria.

The *Dragon*. A 168-ton brig, registered in Liverpool in 1804, and in 1819 sold to some British persons in Chile. Under the command of Capt. Andrew Macfarlane, she sailed from Valparaíso on Sept. 12, 1820, bound for the South Shetlands, for the 1820-21 sealing season. She met the *Cora* off Desolation Island on Dec. 16, 1820. The vessel may also have made a landing on the Antarctic continent (*see* **Landings**) in early 1821. The expedition took at least 5000 fur seals in 7 weeks.

Caleta Dragón *see* **Dragon Cove**

Dragon Beach. 62°28' S, 60°08' W. A broad area, strewn with boulders and gravel, flanking Dragon Cove (hence the name), and extending up to about 10 m above sea level, on Livingston Island, in the South Shetlands. To the N it ascends to the Williams Point platform, to the S it is bounded by an ice ramp, and to the W it rises onto the flank of Gargoyle Bastion. The beach is a major source of petrified wood, which is abundantly strewn over the area. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1956 and 1958. Named by UK-APC on Dec. 12, 1997. US-ACAN accepted the name in 1998. The British were the latest to replot this feature, in late 2008.

Dragon Cove. 62°28' S, 60°07' W. Immediately SE of Williams Point, on the NE side of Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1956 and 1958. Named by UK-APC on July 7, 1959, for the *Dragon*. US-ACAN accepted the name on Dec. 16, 2003. The British were the latest to replot this feature, in late 2008. The Chileans and the Argentines both call it Caleta Dragón.

Dragon fish. *Prionodraco evansii*. Coastal fish of Antarctica.

Dragon Glacier. 62°07' S, 58°22' W. An outlet glacier from Kraków Dome, to the N of Wawel Hill, between that hill and Smok Hill, at Martel Inlet, in the area of Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for the legendary "Dragon of Krakow" killed by Prince Krak (*see* **Krak Glacier**). The British were the latest to replot this feature, in late 2008.

The Dragons Back. 80°23' S, 28°33' W. A mostly ice-free ridge, rising to 1315 m (the British say 1015 m) E of Stratton Glacier, in the W part of the La Grange Nunataks, in the Shackleton Range. Photographed aerially by the RN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named descriptively by UK-APC on Jan. 5, 1972, for the spikes on the ridge crest that give the illusion of a dragon. US-ACAN accepted the name. It appears in the British gazetteer of 1974.

Dragons Lair Névé. 85°51' S, 154°00' W. A névé of about 25 sq miles, in the Hays Mountains. It is bounded by Mount Griffith, Mount Pulitzer, Taylor Ridge, and Vaughan Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. During Nov. 1987, the névé was the camp site of the USARP-Arizona State University geological party, and they named it. Surrounded by peaks, including the dragon-shaped Mount Pulitzer, the name is a natural. US-ACAN accepted the name.

Dragon's Mouth *see* **Neptunes Bellows**

Dragons Teeth. 63°15' S, 58°40' W. A small group of black, tooth-shaped rocks in water, rising to an elevation of about 100 m above sea level, off the NE part of Astrolabe Island, off Trinity Peninsula. In 1956-57, FIDASE not only photoraphed this feature aerially, they also surveyed it from the ground. Named descriptively by UK-APC on Aug. 31, 1962. US-ACAN accepted the name later in 1962. The Argentines call it Punta Dientes de Dragón (which means the same thing). It appears on a 1966 U.S. chart as Dragons Tooth.

Dragons Tooth *see* **Dragons Teeth**

Dragor Hill. 63°54' S, 59°31' W. Rising to 748 m, E of Whitecloud Glacier, 7.85 km SE of Nikyup Point, 2.85 km S of Almond Point, and 1.85 km WNW of Borovan Knoll, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the town of Dragor, in southern Bulgaria.

Mount Dragovan. 77°23' S, 160°43' E. Rising to 2360 m, W of Wreath Valley, it is the highest summit in the Apocalypse Peaks, in the W part of that group, in Victoria Land. Named by US-ACAN in 2005, for astronomer Mark W. Dragovan, who, in 1986, collaborated with Yerkes Observatory engineer Robert J. Pernic to build a telescope to observe the early formation of structure in the universe. He spent 9 field seasons at Pole Station's Center for Astrophysical Research, between 1988 and 2000. NZ-APC accepted the name on Sept. 12, 2005.

Pasaje Drake *see* **Drake Passage**

Paso Drake *see* **Drake Passage**

Drake, Francis Randall Hugo "Franky." b. Nov. 8, 1878, Dover, Kent, but raised in Greenwich, son of Lt. Charles Edward Drake, RN, and his wife Mary Ann Godden. He joined the RN in 1896, became a clerk, was promoted in 1899 to assistant paymaster, and served on the *Pelorus* during the South African War. In 1901 he was transferred to the *Diana*, later that year to the *Implacable*, then the *Blake*, and in 1902 to the *Research*. In 1905 he joined the *Drake*, as clerk to the flag secretary, and on March 6, 1908 was placed on the retired list. He was assistant paymaster and meteorologist on the *Terra Nova* during BAE 1910-13, as well as being secretary to the expedition. Not a member of Scott's shore party, he remained on the ship under the command of Lt. Harry Pennell, as the ship cruised to the north after dropping Scott's party at McMurdo Sound. After the expedition he re-enlisted in the Navy, as a paymaster, and served on several ships during World War I. In 1915 he married Winifred Mary Gifford at St. George Hanover Square, in London, and in 1917 he became fleet paymaster. His marriage came to an end in the divorce court in 1926 (she sued him). He was a naval paymaster commander by then, and on Nov. 8, 1928 was promoted to captain and placed on the retired list again. In 1929 he took ship from Southampton, bound for Algiers, later returning to Britain and dying in Brighton on Oct. 17, 1936.

Drake Glacier. 61°56' S, 58°05' W. A large glacier between False Round Point and Glass Point, facing the Drake Passage, at Corsair Bight, on the N coast of King George Island, in the South Shetlands. Named by the Poles in 1984, for Sir Francis Drake (1540-1596) (they named Corsair Bight for Drake as well).

Drake Head. 69°13' S, 158°15' E. A headland forming the W side of the entrance to Davies Bay, in Oates Land. Discovered by Harry Pennell in the *Terra Nova*, in Feb. 1911, during BAE 1910-13, and named by him for Francis R.H. Drake (q.v.). Photographed in Feb. 1959, during an ANARE expedition here led by Phil Law on the *Magga Dan*. US-ACAN accepted the name in 1953, and ANCA followed suit on July 22, 1959.

Drake Icefall. 79°46' S, 83°50' W. An icefall, 3 km wide, between the Soholt Peaks and the Edson Hills, it flows eastward from the Polar Plateau to join the general flow of Union Glacier through the Heritage Range, in the Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party of 1962-63, for Benjamin Drake IV, geologist and member of the party.

Drake Nunatak. 85°17' S, 89°20' W. Rising to 1935 m, at the base of the Bermel Escarpment, 1.5 km E of Elliott Nunatak, in the Thiel Mountains. Named by Bermel and Ford of the USGS Thiel Mountains Survey Party of 1961-61, for Avery Ala Drake, Jr. (b. Jan. 17, 1927, Kansas City), geologist on the *Glacier* to Thurston Island, in 1960-61, during the Bellingshausen Sea Expedition. Mr. Drake was with USGS from 1952 to 1979. US-ACAN accepted the name in 1962.

Drake Passage. Centers on 58°00' S, 70°00' W, but stretches over the 60th degree of southern latitude. It is the 1000-km stretch of water that latitudinally separates South America and the Falklands to the N from the Antarctic Peninsula and the South Shetlands to the S, and longitudinally connects the Atlantic Ocean with the Pacific Ocean. The average depth of water is 11,000 feet, but the southern boundaries can reach up (down) to 15,600 feet. Sir Francis Drake discovered it in Sept. 1585, and it was named for him, even though he did not sail through the passage, that honor first going to a Flemish expedition led by Willen Cornelis-zoon Schouten (1580-1625). Some say it was named Mar Magallanes at one point (named after Magellan), and Mar de Drake. Arctowksi, in 1899, refers to it as the Antarctic Strait, and later as Canal Antarctique. De Gerlache, during BelgAE 1897-99, referred to it as Détroit de Drake (which means the Drake Strait), and Nordenskjöld, during SwedAE 1901-04, refers to it as Drakesund or Drake Sundet (both names meaning the Drake Sound), and even Drake-Sond. Hugh Robert Mill refers to it in his 1905 book as Drake Strait, and it appears that way on a 1930 British chart. By 1907, Dr. Karl Fricker, the German geologist, was pushing for Drake Strait to be the officially accepted name, but other geological voices felt that, given the width of the feature, Drake Sea would be more appropriate. David Ferguson, in 1921, calls it Drake's Strait. There was a certain amount of overlapping between the Drake Passage (by whatever name) and the Scotia Sea, and in the 1920s and 1930s it was candidly being called Drake Sea, but British charts of 1932 and 1934 both show it as Drake Passage, and that was the name accepted by UK-APC on Sept. 8, 1953, and which appears in the 1955 British gazetteer, defined as "bounded on the N by the latitude of Cape Horn, on the E by the meridian of 55°W longitude, and on the S by the South Shetland Islands." It appears on a 1945 Argentine chart as Pasaje Drake, on Argentine charts of 1946 and 1947 as Pasaje de Drake, and Pasaje de Drake was accepted by the Argentine gazetteer of 1970, even though the Argentines today call it Pasaje Drake. It appears on a Chilean chart of 1947, as Paso Drake, and that name was accepted by the 1974 Chilean gazetteer. However, there is a 1948 Chilean reference to it Mar de Cochrane, named after Adm. Sir Thomas Cochrane (1775-1860), RN, the 10th Earl of Dundonald, and first commander-in-chief of the Chilean Navy, 1818-23, but this name did not catch on. There is also a 1948 reference to it as Paso de Drake, and a 1950 reference as Estrecho Drake. There is a 1951 reference to it as Mar de Piedrabuena, named after Comandante Piedrabuena (*see* **Forrestal Range**). Again, this name did not catch on. It appears on a 1953 Argentine map as Mar de Hoces (named after Francisco de Hoces, the 16th-century navigator—*see* **The *San Lesmes***), and on another one from that year as Pasaje de Hoces. On a 1957 Argentine chart, the passage has been divided into Drake Norte and Drake Sur. US-ACAN, apparently, remains silent on the subject of the Drake Passage.

Drake Sea *see* **Drake Passage**

Drake Strait *see* **Drake Passage**

Drake Sundet *see* **Drake Passage**

The *Drakensburg*. South African ship which relieved not only Sanae Station but also Georg von Neumayer Station as well, in 1990-91.

Drakesund *see* **Drake Passage**

Cape Drakon. 68°55' S, 77°54' E. About 2.5 km SE of the easternmost point of Torckler Island, it forms the northern of the 2 arms of Macey Peninsula, in the Rauer Islands. Charted by SovAE 1956, and named by the Russians as Mys Drakon. ANCA translated the name on March 7, 1991.

Massif Drakon. 73°25' S, 61°52' E. A massif N of Mount Menzies, in the Prince Charles Mountains. Named by the Russians.

Mys Drakon *see* **Cape Drakon**

Dralfa Point. 64°27' S, 63°05' W. A point forming the N extremity of Thompson Peninsula, on the NE coast of Anvers Island, in the Palmer Archipelago, about 26 km SSE of Cape Grönland, and 18.6 km NW of Ryswyck Point. Named by the Bulgarians on June 3, 2010, for the town of Dralfa, in northeastern Bulgaria.

Drama Glacier. 78°43' S, 84°16' W. A glacier, 10 km long and 1.5 km wide, on the E side of the southern Sentinel Range, N of Carey Glacier, E of the ENE ridge of Mount Landolt, and SE of Kornicker Glacier, it flows ENE to join the Rutford Ice Stream, NE of Long Peak, in the Ellsworth Mountains. Mapped by USGS in 1988. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Drama, in southeastern Bulgaria.

Drangov Peak. 62°33' S, 59°38' W. A peak rising to 430 m in the SE extremity of Breznik Heights, 450 m SE of Vratsa Peak, 1.4 km E by S of the highest point on Viskyar Ridge, 2.3 km W of Fort Point, 400 m N of Ziezi Peak, and 2.3 km NE of Sartorius Point, it overlooks Musala Glacier to the N and Targovishte Glacier to the SW, on Greenwich Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Dec. 15, 2006, for Col. Boris Drangov (1872-1917), a renowned Bulgarian military commander and warfare pedagogue.

Dråpane *see* **Dråpane Nunataks**

Dråpane Nunataks. 73°46' S, 5°03' W. A group of nunataks close N of Urnosa Spur, in Uhligberga, in the N part of Urfjell Cliffs, near the SW end of Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Dråpane (i.e., "the droplets"). US-ACAN accepted the name Dråpane Nunataks in 1966.

Draves Island *see* **Draves Point**

Draves Point. 66°04' S, 101°04' E. The most westerly point on Booth Peninsula, 0.5 km N of the E part of Thomas Island, in the Bunger Hills, on the Knox Coast of Enderby Land. The prevailing belief at the time being that the W part of Booth Island was itself a separate island (this belief came from an erroneous analysis of the air photos taken during OpHJ 1946-47), that part was named Draves Island by US-ACAN in 1956, for Dale Draves, machinist's mate from Los Angeles, who was on David Bunger's flights during OpHJ 1946-47. SovAE 1956-57 found that it was part of Booth Island, and in 1961, US-ACAN re-defined it. ANCA accepted the name on Oct. 22, 1968.

Drawwater, Benjamin. b. ca. 1748. On Jan. 7, 1772 he joined the *Resolution* as Surgeon Patten's 2nd mate for Cook's 2nd voyage, 1772-75. He was promoted to surgeon after the voyage, and served on a few more ships before retiring in 1783, to practice medicine in Eastwood, Notts. On Oct. 5, 1785, at Greasley, Notts, he married Dorothy Toplis, and in 1801 started up a practice in Mansfield. He died on June 2, 1815.

Dread Point *see* **Renier Point**

Dreadnought Point. 64°00' S, 57°48' W. A prominent rocky point on the W side of Croft Bay, James Ross Island. Surveyed by Fids from Base D in Aug. 1953. Named descriptively by UK-APC on Sept. 4, 1957, for the bows of Dreadnought ships that it somewhat resembles. US-ACAN accepted the name in 1963.

Dream Island. 64°44' S, 64°14' W. An island, 1.5 km SE of Cape Monaco, and W of Wylie Bay, off the SW coast of Anvers Island, in the area of Palmer Station, in the Palmer Archipelago. Charted by an RN Hydrographic Survey unit together with Fids from Base N in 1956-57. So named by UK-APC on July 7, 1959, because among the island's natural features are a cave, a waterfall (in summer, at least), with mossy patches and grass (*Deschampsia antarctica*). US-ACAN accepted the name in 1960. It appears on a British chart of 1960.

Dreary Isthmus. 78°12' S, 165°17' E. A low, narrow neck of land, or isthmus, that joins the base of Brown Peninsula to the low morainal area N of Mount Discovery, on the Scott Coast of Victoria Land. Named descriptively by US-ACAN in 1999, in keeping with the dark and gloomy aspect of the feature. NZ-APC accepted the name on Nov. 4, 1999.

Dreatin Glacier. 63°54' S, 58°41' W. A glacier, 12 km long and 7.5 km wide, on the NE side of the Detroit Plateau, SW of the Znepole Ice Piedmont, and N of Aitkenhead Glacier, it drains the area SW of Mount Bradley and N of Tuff Nunatak, and flows southeastward into Prince Gustav Channel, on Trinity Peninsula. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Dreatin, in western Bulgaria.

Drei Schwestern. 73°19' S, 161°06' E. A feature of unknown type, SE of the Caudal Hills, in Victoria Land. Named by the Germans ("three sisters"). Unfortunately, we get little guidance from the gazetteers.

Mount Dreikanter *see* **Dreikanter Head**

Dreikanter Head. 76°53' S, 162°30' E. A dark headland, rising to about 500 m, between Lion Island and Cape Retreat, and between the mouths of Hunt Glacier and Marston Glacier, on the W coast of Granite Harbor, in Victoria Land. It is separated by a small glacier from the N side of the Kar Plateau. It looks triangular from the SE (dreikantig means "three-edged" in German), hence the name given by BAE 1910-13, who also charted it. US-ACAN accepted the name in 1952, and NZ-APC followed suit. It is reported that the Russians call it Mount Dreikanter, which seems doubtful.

Drenta Bluff. 63°40' S, 58°25' W. An ice-covered bluff, rising to 1076 m, and forming the S extremity of the Louis Philippe Plateau, on the N side of Benz Pass, 1.64 km N by W of Gigen Peak, 13.5 km SE of Mount Ignatiev, and 6.62 km SW of Smin Peak, it surmounts Verdikal Gap to the W and Cugnot Ice Piedmont to the ENE, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Drenta, in northern Bulgaria.

Drescher Bank. 71°24' S, 13°12' W. A bank off the Princess Martha Coast, with a least depth of 200 m. The name was proposed by Heinrich Hinze in Jan. 1997, for Heinz Eberhard Drescher (1944-1983), biologist from the Alfred Wegener Institute in Germany, who conducted marine and polar mammal research. The name was accepted by international agreement in June 1997. Drescher died in a helicopter crash.

Drescher Camp. 72°53' S, 19°10' W. West German summer-only base opened in Oct. 1986, at Drescher Inlet, on the Riiser-Larsen Ice Shelf. There was an automatic weather station here, at an elevation of 20 m. The camp was closed during the 1989-90 season, and removed, the process continuing into the 1990-91 summer.

Drescher Inlet. 72°52' S, 19°25' W. A Weddell Sea inlet in the Riiser-Larsen Ice Shelf, off the Princess Martha Coast of Queen Maud Land. Named for Heinz Eberhard Drescher (*see* **Drescher Bank**). The Germans call it Dreschereisfrontkerbe.

Dreschereisfrontkerbe *see* **Drescher Inlet**

Dreschhoff Peak. 78°01' S, 161°05' E. The mountain next SE of Mount Blackwelder, in the Wilkniss Mountains of Victoria Land. Named by US-ACAN in 1995, for physicist Gisela A.M. Dreschhoff, of the Space Technology Center, at the University of Kansas, who conducted radioactivity surveys and other field work in various parts of Antarctica, including Victoria Land, for 11 field seasons between 1976 and 1989.

Drew Cove. 66°20' S, 110°30' E. Indents the W side of Mitchell Peninsula, in the Windmill Islands, off the Budd Coast. First mapped from air photos taken in 1947, during OpHJ 1946-47, and in 1948, during OpW. Named by US-ACAN in 1963, for chief construction electrician John W. Drew, USN, at Wilkes Station in 1958.

Mount Drewry. 84°27' S, 167°21' E. A prominent, block-like mountain, rising to 2190 m on the W side of the Beardmore Glacier, between Bingley Glacier and Cherry Icefall, in the Queen Alexandra Range. Discovered and roughly mapped by Shackleton's party as he pushed toward the Pole. He was abeam this mountain on Dec. 13, 1908, but apparently did not name it, which does not sound like Shackleton at all. Named by US-ACAN in 1986, for David Drewry. NZ-APC accepted the name.

Drewry, David John. b. Sept. 22, 1947, Grimsby, Lincs. Glaciologist. In 1968, while a student at London University, he went on an expedition to Greenland. After summering in Antarctica in 1969-70 and 1971-72, he was awarded his PhD from Cambridge, in polar geophysics, in 1973, the year he joined the Scott Polar Research Institute (SPRI), in Cambridge. He had also returned to Greenland in 1972. He was back in Antarctica in 1974-75, 1977-78 (as base leader, leading the 5th season of the SPRI/NSF studies started by Gordon Robin), and 1978-79 (as base leader). He spent many northern summer seasons in Greenland. In 1984 he became director of SPRI, and from 1987 to 1994 was director of BAS. He was at James Ross Island in Jan. and Feb. 1989, collecting geological samples. On Nov. 1, 1999 he became vice chancellor of Hull University.

Drewry Ice Stream. 75°40' S, 73°00' W. Flows SW from the area around Haggerty Peak (between the Behrendt Mountains and Mount Hassage) until it joins Evans Ice Stream in about 76°W, in the E part of Ellsworth Land. Mapped from 1997 satellite imagery. Named by UK-APC on Oct. 4, 2004, for David Drewry. US-ACAN accepted the name in 2005.

Dreyer, Gustav. Ship's carpenter, he served on the *Deutschland*, during GermAE 1911-12. He was in the Navy during World War I.

Cabo Dreyfus. 62°32' S, 60°49' W. A cape marking the extreme N point of Barclay Bay, about 5 km SSW of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for Iván Dreyfus Viera, engineer with the Chilean Air Force, who was on the *Maipo* during ChilAE 1948-49. The Argentines call it Cabo Scesa.

Kap Dreyfus *see* **Cape Well-met**

Lednik Driackogo. 74°09' S, 67°17' E. A glacier, NW of the bluff the Russians call

Obryv Zigzag, near the head of the Lambert Glacier. Named by the Russians.

Cabo Driencourt *see* **Driencourt Point**

Cap Driencourt *see* **Driencourt Point**

Cape Driencourt *see* **Driencourt Point**

Pointe Driencourt *see* **Driencourt Point**

Driencourt Point. 64°12' S, 62°31' W. A point, 10 km SE of Claude Point, on the W coast of Brabant Island, in the Palmer Archipelago. Charted by FrAE 1903-05, and named by Charcot as Pointe Driencourt, for Joseph-Fernand-Ludovic Driencourt (known as Ludovic Driencourt) (1858-1940), hydrographic enginer who advised on the hydrographic equipment used on the expedition. It appears as such on Charcot's map of 1906, but it appears on Matha and Rey's map of 1908 as Cap Driencourt. It appears as Cape Driencourt on a 1943 U.S. Hydrographic Office chart, and as Cabo Driencourt on a 1949 Argentine chart, the latter name being the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57. The feature was later called Driencourt Point in English, and, as such, was accepted by UK-APC on Sept. 23, 1960, and by US-ACAN later that year. It appears as such on a British chart of 1961.

Drifter Cirque. 76°35' S, 161°02' E. A minor feeder to the Fry Glacier, between Mount Schmidtman and Mount Nabb, at the NE end of Eastwind Ridge, in the Convoy Range of Victoria Land. The iceflow from Eastwind Ridge is insufficient to carry surface moraine away into Fry Glacier, and moraines lie in the cirque in a tangled eddy. After considering the name Eddy Cirque, NZ-APC accepted the name Drifter Cirque. US-ACAN accepted the name on Jan. 15, 2008.

Drigalski *see* **Drygalski**

Drillhole Spur. 77°25' S, 164°20' E. A very isolated spur off Cape Bernacchi, McMurdo Sound, in Victoria Land. Named by NZ-APC on June 29, 1989.

Drinkwater Pond. 62°39' S, 61°08' W. A small lake on the central plateau at the head of a stream feeding a coastal lagoon, about 0.8 km E of Point Smellie, at President Beaches, Byers Peninsula, Livingston Island, in the South Shetlands. So named by UK-APC on Dec. 2, 1993 because this pond provided drinking water for the BAS scientific field party there in 1990-91. The British were the latest to replot this feature, in late 2008.

Drinov Peak. 62°57' S, 62°29' W. Rising to 1630 m, 3.5 km NNE of Antim Peak, 1.9 km N of Slatina Peak, and 1.8 km SW of Mount Pisgah, in the Imeon Range, on Smith Island, in the South Shetlands. It overlooks Ovech Glacier to the SE, Vetrino Glacier to the N, Yablanitsa Glacier to the NW, and Chuprene Glacier to the SW. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, after scientist Marin Drinov (1838-1906), co-founder of the Bulgarian Academy of Sciences.

Driscoll Glacier. 79°42' S, 83°00' W. A glacier, 21 km long, flowing SE between the Collier Hills and the Buchanan Hills into Union Glacier, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Cdr. Jerome M. "Jerry" Driscoll, VX-6 administration officer during OpDF 65 (i.e., 1964-65).

Driscoll Island. 76°12' S, 146°50' W. A large but narrow, ice-covered island, 26 km long, in Block Bay, along the coast of Marie Byrd Land. Partially delineated from air photos taken on Dec. 5, 1929, during ByrdAE 1928-30. Completely mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Lawrence J. Driscoll, Jr. (b. May 22, 1926, Newton, Mass.), who joined the U.S. Navy in Jan. 1944, and who was bosun's mate on the *Glacier* here in 1961-62. He retired from the Navy in April 1963.

Driscoll Point. 82°59' S, 168°00' E. Forms the E side of the entrance to Wise Bay, and overlooks the Ross Ice Shelf. Mapped by USGS from U.S. air photos taken in 1961, and from tellurometer surveys conducted in 1961-62. Named by US-ACAN in 1966, for Charles Eugene Driscoll, captain of the *Private Joseph F. Merrell* during OpDF 63 (i.e., 1962-63).

Mount Dromedary. 78°19' S, 163°02' E. A hump-shaped mountain, i.e., a mountain with two slightly elevated summits (hence the name), rising to over 2400 m (the New Zealanders say 2926 m), at the NW side of Koettlitz Glacier, about 6 km ENE of Mount Kempe, in the Royal Society Range of southern Victoria Land. First mapped by BNAE 1901-04, and named by BAE 1910-13. US-ACAN accepted the name in 1953, and NZ-APC followed suit.

Dromedary Glacier. 78°18' S, 163°19' E. A small alpine glacier occupying a high cirque on the E side of Mount Dromedary, in the Royal Society Range of Victoria Land. Named by VUWAE 1960-61, in association with the mountain. NZ-APC accepted the name, and US-ACAN followed suit in 1963. Originally plotted in 78°23' S, 163°06' E, it has since been replotted.

Halm Drong *see* **Drong Hill**

Drong Hill. 62°35' S, 61°10' W. A double rocky hill, rising to 180 m, in the N extremity of Dospey Heights, on Byers Peninsula, Livingston Island, in the South Shetlands. The higher one rises to 180 m, and is 750 m ESE of Essex Point, and 1.8 km N of Start Hill. The lower one, 250 m WSW of the higher one, rises to 160 m, and is 500 m ESE of Essex Point. Mapped by the Spanish in 1993. Named by the Bulgarians on Dec. 15, 2006, as Halm Drong, for the 6th-century Bulgar ruler, Drong. The name has been translated into English.

Dronning Fabiolafjella *see* **Queen Fabiola Mountains**

Dronning Mary Land *see* **Queen Mary Land**

Dronning Maud Land *see* **Queen Maud Land**

Dronning Maudsfjell *see* **Queen Maud Mountains**

Drøvelen. 72°22' S, 27°35' E. A small nunatak W of the group of rocks the Norwegians call Bollane, at the E side of the upper part of Byrdbreen, in the E part of the Sør Rondane Mountains. Named descriptively by the Norwegians ("the uvula").

Dru Rock. 66°46' S, 141°35' E. A rocky islet, about 200 m long, SE of Retour Island, between that island and Claquebue Island, in the Curzon Islands, in the area of Cape Découverte. Charted by the French in 1951, and named by them at that time as Rocher des Drus, in memory of the scaling of the needle-shaped peaks called Les Drus, on the Mont Blanc massif in the Chamonix Valley, in France. The French mountain is called Aiguille du Dru, but is generally referred to as Les Drus because right at the very top the mountain diverges into 2 peaks, Grande Aiguille du Dru and Petite Aiguille du Dru, one only slightly higher than the other, the 2 being connected by the Brèche du Dru. The N face of the Petite is one of the great north faces in the Alps. US-ACAN accepted the name Dru Rock in 1962. The French have, for their part, discontinued the name.

Drum Rock. 65°14' S, 64°16' W. An insular rock rising to an elevation of 6 m above sea level, between Smooth Island and Grotto Island, on the E edge of the Forge Islands, in the Argentine Islands, to the N of Faraday Station, off the Graham Coast, on the W coast of Graham Land. Named for its shape by BAS personnel at Faraday Station in the 1980s. UK-APC accepted the name on Feb. 12, 1988, and US-ACAN followed suit.

Drummond, Captain. Skipper of the *Hercules*, a London sealer in the South Shetlands for the 1820-21 season.

Drummond Glacier. 66°40' S, 65°43' W. A glacier, 16 km long and 3 km wide, flowing WNW into the SE part of Darbel Bay, to the S of Hopkins Glacier, on the Loubet Coast, on the W coast of Graham Land. Partly surveyed in 1946-47 by Fids from Base E, and named by them as West Balch Glacier. In 1957 FIDS decided that this glacier had no connection with East Balch Glacier (*see* **Balch Glacier**), and renamed it for Sir Jack Cecil Drummond (1891-1952), professor of biochemistry at the University of London, 1922-45, who helped select rations for many expeditions from 1920 to 1940. UK-APC accepted this situation on July 7, 1959, and US-ACAN followed suit in 1960. It appears as such on a 1961 British chart.

Drummond Peak. 77°51' S, 153°58' W. A low, isolated rock peak, 29 km SW of La Gorce Peak, rising above the ice surface of Edward VII Peninsula. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1959. Named by US-ACAN in 1966, for Lt. (jg) Glen Nelson "Bulldog" Drummond, Jr. (b. Feb. 25, 1921, Nettleton, Mo. d. Jan. 15, 2009, Fairfax Co., Va.), USN (1941-69), assistant aerologist on the staff of the commander, U.S. Naval Support Force, Antarctica, 1959-

62, and later long-time magistrate in Fairfax Co., Va. He was on *Edisto* during OpDF IV (i.e., 1958-59).

Drumohar Peak. 63°18' S, 58°41' W. An ice-covered peak rising to 553 m on Astrolabe Island, 3.15 km ENE of Raduil Point, and 1.9 km NNW of Rogach Peak, in Graham Land. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Drumohar, in western Bulgaria.

Drune Hill. 71°20' S, 68°20' W. A rounded, flat-topped mountain, rising to 673.5 m, about 0.8 km N of Khufu Peak, and separated from it by Khufu Corrie, and about 0.8 km NE of Pearce Dome, at Fossil Bluff, Alexander Island. Named by personnel working in the area, the name was accepted by UK-APC on April 23, 1998, and by US-ACAN in 1999. One's first thought is that it must be relatively easy to figure out why it was so named, but, in fact, it's not.

Drury Nunatak. 69°14' S, 156°58' E. A very distinctive, bare, black, isolated nunatak standing up boldly from the continental ice on the SE side (i.e., the head) of Lauritzen Bay, 2.5 km NW of Reynolds Peak, in Oates Land. Discovered and charted on Feb. 20, 1959, by Phil Law's ANARE party from the *Magga Dan*. Named by ANCA on July 22, 1959, for Alan Campbell-Drury, photographic officer of the Antarctic Division, Melbourne. He was on this expedition. He had wintered-over at Heard Island in 1948, as one of the first ANARE expeditioners. US-ACAN accepted the name in 1961.

Drury Ridge. 83°39' S, 55°45' W. A mainly snow-covered ridge, rising to 1285 m, and extending W for 14 km from Nelson Peak, W of the Washington Escarpment, in the Neptune Range, in the Pensacola Mountains. Surveyed from the ground by USGS in 1963-64, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1965, for L. David Drury, U.S. Weather Bureau meteorologist from East St. Louis, Ill., U.S. representative at Ellsworth Station in 1959-60 (summer) and 1961 (winter). At that point in time it was plotted in 83°39' S, 55°39' W, but the coordinates were corrected by 1969. UK-APC accepted the name, and the new coordinates, on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Rocher des Drus *see* **Dru Rock**

Druzhba Station. 66°43' S, 86°24' E. A temporary Soviet weather station built 191 m above sea level, on the West Ice Shelf, near Mirnyy Station, and open between May and Aug. 1960.

Kupola Druzhby. 70°04' S, 11°40' E. The ice dome occupying the bay the Russians call Bukhta Belaja, on the Princess Astrid Coast of Queen Maud Land. Named by the Russians.

Lake Druzhby. 68°36' S, 78°19' E. A lake in the SE part of the Vestfold Hills, about 3 km E of Ellis Fjord. Photographed aerially during OpHJ 1946-47, again by SovAE 1956, and by ANARE in 1957 and 1958. Named by the Russians as Ozero Druzhby (i.e., "friendship lake"). The name was translated by ANCA on Nov. 27, 1973.

Ozero Druzhby *see* **Lake Druzhby**

Gora Druzhnaja. 82°37' S, 52°20' W. A nunatak or peak immediately W of Worcester Summit, in the Dufek Massif, in the Pensacola Mountains. Named by the Russians. In fact, it is so close to Worcester Summit that one is tempted to think it may be the Russian name for that summit.

Druzhnaya Station. 77°32' S, 40°13' W. Soviet scientific camp and summer base dedicated to geological research, which was opened on Dec. 31, 1975, 45 m above sea level on the Filchner Ice Shelf of Queen Maud Land. In 1982, when Druzhnaya II was underway, it became known as Druzhnaya I. It was open every summer until Dec. 25, 1986, when it was destroyed by a massive cave-in on the ice shelf, and calved off with an iceberg into the Weddell Sea. It was soon located by the *Polarstern*, and salvaged by the *Kapitan Kondrat'yev*.

Druzhnaya II Station. 74°30' S, 62°00' W. Soviet scientific station on the Lassiter Coast, on the Ronne Ice Shelf, originally planned for the 1980-81 season, it was opened on Jan. 8, 1982, and was open every summer from then until it was closed, in Feb. 1986.

Druzhnaya III Station. 71°06' S, 10°49' W. Soviet scientific station (really an airbase) near Cape Norvegia, on the Quar Ice Shelf, on the Princess Astrid Coast of Queen Maud Land, which opened on Jan. 19, 1987, i.e., after Druzhnaya IV opened (the sites for both stations had been negotatiated simultaneously. It just so happened that III opened before IV). It closed in Feb. 1992.

Druzhnaya IV Station. 69°44' S, 73°42' E. Soviet scientific station on Landing Bluff, Sandefjord Ice Bay, on the Ingrid Christensen Coast of Princess Elizabeth Land, 113 km from Progress Station. It opened on Jan. 18, 1987. There were 17 buildings, for a maximum of 50 persons. It closed on April 18, 1995.

Dry Valley *see* **Taylor Valley**

The Dry Valley Drilling Project. Known also as DVDP. 1971-76. Geophysical exploration, geological reconnaissance, and bedrock drilling in the dry valleys north of McMurdo Station, in southern Victoria Land. Carried out by NZ, Japan, and the USA. The first borehole was begun on Jan. 21, 1972. Leon Oliver was chief driller in 1973-74, and drilling superintendent, 1974-75. The goal of the project was to understand better the Cenozoic geologic history of the McMurdo Sound region.

Dry valleys. The general lowering of ice sheet levels at certain times in geological history caused some glaciers to recede and vanish from their valleys, producing dry valleys, or ice-free valleys, as they are sometimes called. Taylor Valley was the first such to be discovered — in 1902, by BNAE 1901-04, and Scott seems to have named them "dry valleys" in 1907 (when he was in between expeditions). That they were reasonably frequent occurrences was only realized by aerial photography during OpW 1947-48. *See* **Arena Valley, Balham Valley, Barwick Valley, Beacon Valley, Bull Pass, Conrow Valley, David Valley, Garwood Valley, King Valley, King-David Junction, McKelvey Valley, Matterhorn Valley, No Name Valley, Olympus Range, Pearse Valley, Taylor Valley, Turnabout Valley, Victoria Valley, Wheeler Valley, Wright Valley**. *See also* **Glaciers**.

Dryanovo Heights. 62°29' S, 59°52' W. Ice-covered heights extending 10 km in a NW-SE direction and 7 km in a NE-SW direction, and rising to over 500 m, in the NW part of Greenwich Island, in the South Shetlands. Features include Mount Plymouth in the E, Crutch Peaks in the NW, Lloyd Hill in the SW, and Malamir Knoll in the SE. Named by the Bulgarians on Nov. 4, 2005, for the town of Dryanovo, in Bulgaria.

Mount Dryfoose. 84°52' S, 169°56' W. A ridge-type mountain, about 3 km long, it has peaks on it rising to more than 1600 m, 5 km E of Mount Daniel, astride the ridge descending NE from the S part of the Lillie Range, in the foothills of the Prince Olav Mountains. Discovered by the U.S. Ross Ice Shelf Traverse Party of 1957-58, under Bert Crary, who named it for Lt. Earl D. "Buz" (short for Buzzard) Dryfoose, Jr. (b. Feb. 7, 1929, Springfield, Ill.), who joined the U.S. Navy in June 1946, and who was in the USNR when he was VX-6 pilot of the R4D-8 nicknamed "Wilshie Duit" during IGY. In 1958-59 he flew Admiral Tyree to the Pole, and the plane was unable to take off again. They had to send in another plane from McMurdo. Buz, who had a 5-year old German shepherd with him at McMurdo in 1958-59, named Utz, retired from the Navy in July 1968. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Bahía Drygalski *see* **Drygalski Glacier**

Cabo Drygalski. 64°39' S, 60°25' W. A cape, immediately NW of Cape Worsley, on the Nordenskjöld Coast, on the E coast of Graham Land. Named by the Argentines, for Erich von Drygalski.

Glaciar Drygalski *see* **Drygalski Glacier**

Golfe de Drygalski *see* **Drygalski Glacier**

Drygalski, Erich von *see* **von Drygalski, Erich**

Drygalski Automatic Weather Station *see* **Fountain Automatic Weather Station**

Drygalski Barrier *see* **Drygalski Ice Tongue**

Drygalski Basin. 74°50' S, 166°30' E. Submarine feature of the Ross Sea. *See also* **Nordenskjöld Basin**. Named by international agreement in April 1980, in association with the Drygalski Ice Tongue. In Nov. 1995 its name was changed to Von Drygalski Basin, but in June 2003 it was changed back to Drygalski Basin. Originally plotted in 74°45' S, 167°00' E, it has since been replotted.

Drygalski Bay *see* **Drygalski Glacier**

Drygalski Berge *see* **Drygalski Mountains**

Drygalski Bucht *see* **Drygalski Glacier**

Drygalski Canyon. 69°42' S, 11°30' W. A

canyon out to sea beyond the Princess Martha Coast. Named by Heinrich Hinze in Jan. 1997. The name was accepted by international agreement in June 1997.

Drygalski Glacier. 64°43' S, 60°44' W. A broad glacier, 28 km long (the Chileans say 24 km long by 13 wide), it flows ESE from Herbert Plateau through a rectangular re-entrant into the Larsen Ice Shelf, at a point immediately N of Sentinel Nunatak, SW of Cape Worsley, and 24 km N of Cape Fairweather, on the Nordenskjöld Coast, on the E coast of Graham Land. Discovered and roughly mapped in 1902, by SwedAE 1901-04, and named by Nordenskjöld as Von Drygalski Bucht, for Erich von Drygalski. On some of the translations of Nordenskjöld's maps it appears as Golfe de Drygalski, Von Drygalski Bay, Drygalski Bucht, V. Drygalski Bay, and Bahía de Drygalskis (sic). By 1908 the Argentines were referring to it as Bahía Drigalski, and it appears as Drygalski Bay on a British chart of 1921. On his flight of Dec. 28, 1928, Wilkins re-identified this feature as a bay, and it appears as such on his 1929 chart. It appears on a 1946 Argentine map as Bahía Drygalski. It was surveyed from the ground in Nov. 1947, by Fids from Base D, who found it to be a glacier. UK-APC accepted the name Drygalski Glacier on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears as such in the 1955 British gazetteer, and on a 1957 British chart. It appears as Glaciar Drygalski on a 1958 Argentine chart, and that was the name accepted by the 1970 Argentine gazatteer, and also by the 1974 Chilean gazetteer, although it did appear on a 1971 Chilean chart as Glaciar Drygalsky.

Drygalski Glacier Tongue *see* **Drygalksi Ice Tongue**

Drygalski Ice Tongue. 75°24' S, 163°30' E. Also called Drygalski Barrier, and Drygalski Glacier Tongue. It is actually a glacier tongue, the prominent seaward (i.e., eastward) extension of the David Glacier into the Ross Sea. 50 km long (the New Zealanders estimate it more at 60 km), and between 14 and 24 km wide (the New Zealanders say that, at its base, it could be as much as 40 km wide), it is fed not only by the David Glacier but also by the Larsen Glacier, along the coast of Victoria Land. Discovered by Scott in Jan. 1902, during BNAE 1901-04, when they were seeking a harbor for winter quarters, and named by him for Erich von Drygalski. US-ACAN accepted the name in 1947, and NZ-APC followed suit. Note: Although it is a glacier tongue, the name Drygalski Ice Tongue has been in use for so long that it was decided to keep it.

Drygalski Island. 65°45' S, 92°30' E. A low, domed, ice-capped island, 17.5 km long and rising to an elevation of 327 m above sea level, 72 km NNE of Cape Filchner, in the Davis Sea, and 85 km N of the coast of Queen Mary Land. First seen from the continental coast in Nov. 1912, by the Western Base Party of AAE 1911-14, and more closely observed in Jan. 1914, from the *Aurora*, on the voyage home. It may well be the feature that Drygalski charted in 1902 as Drygalski's High Land. US-ACAN accepted the name, and ANCA followed suit.

Drygalski Mountains. 71°45' S, 8°15' E. A group of scattered mountains and nunataks between the Filchner Mountains and the Kurze Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Drygalski Berge, for Erich von Drygalski. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. US-ACAN accepted the name Drygalski Mountains in 1966. The Norwegians call them Drygalskifjella.

Drygalskiberge *see* **Drygalski Mountains**

Drygalskifjella *see* **Drygalski Mountains**

Bahía de Drygalskis *see* **Drygalski Glacier**

Drygalski's High Land *see* **Drygalski Island**

Drygalsky *see* **Drygalski**

Punta Drying *see* **Drying Point**

Drying Point. 60°43' S, 45°37' W. The E entrance point of Cemetery Bay, on the SW side of Borge Bay, about 330 m NW of Mooring Point, on the E side of Signy Island, in the South Orkneys. The name first appears in print in 1927 by Discovery Investigations personnel on the *Discovery* (it appears on their 1929 chart), but the name may well reflect a term used by whalers, in reference to shallows off the point drying out at low tide. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer.

DSS Automatic Weather Station. 66°49' S, 112°49' E. Also known as Law Dome Summit South. An Australian AWS, installed on Dec. 20, 1997, at Law Dome, near Casey Station, at an elevation of 1376 m, and removed on Jan. 19, 2003, being replaced on that day by DSS-A.

DSS-A Automatic Weather Station. 66°49' S, 112°49' E. Australian AWS, installed on Jan. 19, 2003, at Law Dome, near Casey Station, at an elevation of 1376 m, the day its predecessor, DSS, was removed. The new one ran until March 2, 2005.

Du Baty, Raymond Rallier. b. Aug. 18, 1881, Lorient, France, son of a naval captain and nephew of an admiral. A cadet in the French merchant marine, after hydrographic studies at Nantes he offered his services to Charcot as naval apprentice seaman on the *Français* during FrAE 1903-05. After the expedition, he obtained his skipper's certificate, and in 1907 mounted an expedition of his own, a charting and sealing trip to the Kerguélen Islands, in a 45-ton, 18-meter ketch he bought in Boulogne, and which he renamed the *J.-B. Charcot*. Despite Charcot's support, he had to sell a family property to raise the funds. He and his crew of four (including his brother Henri) took the *J.-B. Charcot* out of Boulogne in Sept. 1907, and in 1908-09 they were in at the Kerguélens. In July 1909 they arrived in Melbourne, sold the vessel, and the elephant oil they had taken in the sub-Antarctic seas, and made their way back to Paris. Du Baty became a flyer, published his memoirs in English in 1911 (they would not appear in French for another 80 years) and then built a new, 75-ton, 20.65-meter sailboat, the *La Curieuse*, which, with 5 men and 3 officers (including the cook, Émile d'Anglade), he took to the Kerguélens for 1913-14, making hydrographic and coastal surveys, work which led to the first complete map of the islands in 1922. The vessel's captain, Jean Loranchet, left the expedition in June 1914, and du Baty's old friend from the *Français*, Jacques Nozal, who was then living in Australia, took over as skipper. In Aug. 1914 they learned that war had broken out, and, leaving his ketch with the Australian government, in Sydney, he set out from Sydney, with Nozal, in Jan. 1915, in the *Niagara*, bound for Vancouver, and from there to Halifax, Nova Scotia, and from there to Liverpool, and on to France. He and Nozal became pilots in seaplanes, based at the maritime aviation center in Dunkirk, and du Baty founded a similar center in Le Havre. His brother Henri died in the war, but Raymond survived, and died as late as May 7, 1978, at Talant, France.

Du Beau Glacier *see* **DuBeau Glacier**

Du Bouzet, Joseph-Fidèle-Eugène. b. Dec. 9, 1805, Montauban, France. Lieutenant (and 2nd-in-command) on the *Zélée* during FrAE 1837-40. On Jan. 21, 1840 he claimed Adélie Land for France by landing on an offshore islet. He made captain upon his return to France. He was governor of French Polynesia, 1854-58, at the end of his tour being promoted to rear admiral. The Marquis du Bouzet died on Sept. 22, 1867, in Brest.

Rocher du Débarquement *see* **Débarquement Rock**

Île du Dépôt *see* **Dépôt Island**

Île du Derby *see* **Derby Island**

Sierra Du Fief *see* **Sierra DuFief**

Presqu'île du Glacier. 66°41' S, 139°55' E. An elevated peninsula protecting a natural harbor to the E, at the S extremity of Cap André Prud'homme, at the foot of a hanging glacier, in the Géologie Archipelago. Named descriptively by the French.

Rocher du Gravimètre. 66°41' S, 139°55' E. A conspicuous, sharp rocky massif in the central part of Cap André Prud'homme, in the Géologie Archipelago. So named by the French in 1958, because it was used as a gravimetric measuring station. The term is no longer used.

Baie du Large. 66°39' S, 140°01' E. A small bay in the Géologie Archipelago. Named by the French in 1978, for its orientation ("large" means "open sea").

Anse du Lion. 66°40' S, 140°00' E. A cove between Pétrel Island to the S and the Lion Island artificial airstrip to the N. Named by the French as Chenal du Lion (i.e., "lion channel"), in association with Lion Island. With the coming of the piste, it became a cove. *See also* **Piste du Lion** (under **P**)

Les Brisants du Lion *see under* **Les**

Chenal du Lion *see* **Anse du Lion** (above)

Tête du Lion *see under* **T**

Île du Lion *see* **[2]Lion Island**

Récif du Merle. 66°41' S, 139°56' E. A reef at the back of Baie Pierre Lejay, NE of Le Rocher Gris (*see under* **L**), in the Géologie Archipelago. Named by the French for the whistling of the wind, which sounded like a blackbird ("merle").

Île du Navigateur. 66°41' S, 139°55' E. An island at the head of Baie Pierre Lejaie, N of Cap André Prud'homme, in the Géologie Archipelago. Named by the French in honor of Capt. Nielsen of the *Thala Dan*, who used to drop anchor off Cap André Prud'homme during station reliefs.

Île du Nord *see* **Nord Island**

Récif du Norsel. 66°35' S, 139°50' E. A reef in the Dumont d'Urville Sea, at the N limit of Baie Piere Lejay, and N of the Fram Islands. Named by the French in 1960, for the *Norsel*, from which this reef was discovered.

Col du Pendu. 66°40' S, 140°01' E. A natural passage in the form of a col, in the central part of Pétrel Island, in the Géologie Archipelago. Named by the French in 1977, for the mannequin they hung from a gibbet for the benefit of the arrival of the relief ship. The term is not used anymore.

Île du Piton *see* **Piton Island**

Anse du Pré. 66°40' S, 140°01' E. A cove indenting the SE part of Pétrel Island, in the Géologie Archipelago. Named by the French in the early 1950s, as Baie du Pré, the feature was later redefined.

Baie du Pré *see* **Anse du Pré** (immediately above)

Pointe du Raz. 66°40' S, 140°01' E. The S extremity of Lion Island, separating Chenal du Lion and Baie des Gémeaux, in the Géologie Archipelago. Named by the French for the breaking of the swell because of the configuration of the area. "Raz" is short for "raz-demarée," which means "tidal wave." In 2009, the French decided to discontinue this name.

Mont du Sabbat. 66°49°S, 141°24' E. A rocky outcrop at the E extremity of Port-Martin Peninsula. It ends in a cirque, reminding the French who named it in 1950, of a place favored by witches.

Rocher du Séisme. 66°40' S, 140°01' E. A pointed rocky massif in the central part of Bon-Docteur Nunatak, in the Géologie Archipelago. Named by the French for the gravimetric station used as a reference point during the overland traverse to Charcot Station in Jan.-Feb. 1958. Here a very strong earthquake delayed their departure. The term is no longer used.

Baie du Skodern. 66°45' S, 140°53' E. A glacial indentation in the coast, W of Cape Jules, in the Géologie Archipelago. Named by the French in 1952, for the little motor vessel *Skodern* which took part in 7 hydrographic sorties off Port-Martin during the 1951-52 season, but which, covered with ice, sank on March 17, 1952 .

Pointe du Skodern. 66°45' S, 140°49' E. A point between Cape Bienvenue and Cape Jules, in the Géologie Archipelago. Named by the French on Feb. 16, 2010, in association with Baie du Skodern.

Mont du Sphinx. 66°49' S, 141°24' E. A rocky eminence at the extreme E of the Port-Martin peninsula, in the Géologie Archipelago. So named by the French expedition of 1949-52 because, seen from the SW, it resembles the sphinx in Egypt.

Roche du Thala Dan. 66°42' S, 141°18' E. A submarine rock in the area of the Zélée Glacier, E of Ressac Island, and out to sea from Port-Martin. Named by the French for the failed attempt of the *Thala Dan* to relieve Dumont d'Urville Station on Dec. 12, 1976. The term is no longer used.

Du Thilleul, Jacques-Marie-Eugène Marescot *see under* **Marescot du Thilleul**

Du Toit Mountains. 72°28' S, 62°11' W. A group of mountains about 55 km long and 15 km long, to the SW of the Wilson Mountains, on the Black Coast, in the SE part of Palmer Land. They have peaks rising to about 1700 m, and are bounded by Beaumont Glacier, Maury Glacier, and Defant Glacier. First photographed aerially in 1940, by USAS 1939-41, and again between 1966 and 1969 by USN. USGS mapped these mountains from those photos, especially the 1960s ones. Named by UK-APC on May 21, 1979, for Alexander Logie "Alex" Du Toit (1878-1948), highly influential South African geologist, an early proponent of the continental drift theory. US-ACAN followed suit with the naming. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Du Toit Nunataks. 80°43' S, 25°50' W. A group of nunataks, rising to about 1475 m, between Cornwall Glacier and Glenn Glacier, marking the W end of the Read Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, as Dutoit Nunataks, for Alex Du Toit (*see* **Du Toit Mountains**). US-ACAN accepted the name. The spelling was corrected by the time of the 1980 British gazetteer, and US-ACAN also effected the change.

Rocher du Topographe. 66°41' S, 139°54' E. A small rock outcrop at the extreme NW of Cap André Prud'homme, in the Géologie Archipelago. So named by the French because the site was used as a topographical measuring station by the French in 1964-65. The term is not used anymore.

Récif du Tottan *see* **Récif Tottan** (under **T**)

Îlot du Vêlage. 66°40' S, 140°01' E. An islet, W of Baie des Empereurs, in the extreme SW of Chenal des Orques, NW of Bon-Docteur Nunatak, in the Géologie Archipelago. Named by the French in 1977, in association with Astrolabe Glacier, from which icebergs calve off (which is what "vêlage" means).

Îlot du Verseau *see* **Le Verseau** (under **L**)

Ensenada Duarte. 64°12' S, 60°57' W. An extensive inlet opening off the extreme SE of the shore SW of Cierva Point, NE of Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Named by ChilAE 1948-49, for José Duarte V., skipper of the *Lautaro*, 1948-49 and 1949-50. The Argentines call it Ensenada Escondida (i.e., "hidden inlet").

Dube, Raymond J. "Ray." b. April 10, 1921, Taunton, Mass., son of French-Canadian cotton mill worker Alexis Dube and his wife Celia. He joined the U.S. Navy as a radioman, and served during World War II. He was radioman 1st class on Jack Bursey's Byrd Station trail party of Jan.-Feb. 1956. He died on April 19, 2000, in Brockton, Mass.

DuBeau Glacier. 66°23' S, 106°27' E. A channel glacier flowing to the coast, 28 km (the Australians say 37 km) W of Merritt Island, on the Knox Coast of Wilkes Land. Mapped in 1955 by U.S. cartographer Gard Blodgett, using air photos taken during OpHJ 1946-47. Named by US-ACAN in 1956, for Earl P. DuBeau (b. Sept. 29, 1919, Minneapolis), who joined the U.S. Navy in Oct. 1937, and who was photo interpreter on OpW 1947-48, being based aboard the *Burton Island*, and who assisted in establishing astronomical control stations along the coasts of Queen Mary Land and Knox Land, as well as along the Budd Coast. He retired from the Navy in Aug. 1957. ANCA accepted the name, but, in the British tradition (following the French, of course), have split up Mr. DuBeau's name as Du Beau, which is wrong, as Mr. DuBeau was an American.

Dubinin Trough. 67°10' S, 80°30' E. An undersea feature in the Weddell Sea. The name Zhëlob Dubinina was proposed by Dr. Galina Agapova, of the Geological Institute of the Russian Academy of Sciences, and was accepted by international agreement, in 1985. Dubinin Trough is the English-language translation. Aleksandr Iosifovich Dubinin (1908-1963) was skipper of the *Ob',* 1958-61.

Ostrov Dubinina *see* **Kame Island**

Zhëlob Dubinina *see* **Dubinin Trough**

Zaliv Dublickogo *see* **Dublitskiy Bay**

Dublitskiy Bay. 70°05' S, 7°45' E. A bay, 20 km wide, indenting the ice shelf around the coast of Queen Maud Land, 110 km N of Sigurd Knolls. Mapped (but not named) by Norwegian cartographers working from 1958-59 air photos taken during the long NorAE 1956-60. Mapped again by SovAE 1961, and named by them as Zaliv Dublickogo, for K.A. Dublitskiy, former captain of the icebreaker *Litke*. US-ACAN accepted the translated name Dublitskiy Bay in 1970.

Isla DuBois *see* **DuBois Island**

Dubois, Jacques. Chief mechanic at Port-Martin Station in 1951. Leader at Charcot Station from Jan. 1957 to 1958. Replaced by René Garcia.

DuBois Island. 66°16' S, 67°10' W. An island, 1.5 km W of Krogh Island, near the SW

end of the Biscoe Islands. Mapped by FIDS cartographers from aerial photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Eugene Floyd DuBois (1882-1959), U.S. physiologist. It appears on a British chart of 1961, as Dubois Island. US-ACAN accepted the name in 1965.

Duboisbreen. 72°01' S, 23°16' E. A glacier, about 11 km long, between Tanngarden Peaks and Viking Heights, in the Sør Rondane Mountains. Named by the Norwegians, presumably for Jacques Dubois.

Dubord, Baptiste. Steward on the *Astrolabe* during FrAE 1837-40. He left the expedition at Talcahuano, Chile, on May 9, 1838.

Cerro Dubos *see* **Mahogany Bluff**

Cabo Dubouzet *see* **Cape Dubouzet**

Cap Dubouzet *see* **Cape Dubouzet**

Cape Dubouzet. 63°16' S, 57°03' W. A cape, 3 km E of Mount Bransfield, it marks the NE end of Trinity Peninsula, off the Antarctic Peninsula. Made up of ice cliffs, it is difficult to identify because it does not project in any obvious way from the coast. Some rocks lie off it. Charted on Feb. 27, 1838, by FrAE 1837-40, and named by Dumont d'Urville as Cap Dubouzet, for Joseph du Bouzet (sic and q.v.). It appears as such on the expedition's charts and maps. It appears on a Spanish chart of 1861 as Cabo Dubouzet, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It appears on a 1901 British chart as Cape Dubouzet, a name that also appears on a 1942 USAAF chart (misspelled as Cape Dubouxet). In 1938, Ellsworth referred to it as Cape Trinity, in association with the Peninsula. It was surveyed by Fids from Base D between 1945-47. The name Cape Dubouzet was accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer.

Dubouzet, Joseph-Fidèle-Eugène *see under* **Du Bouzet**

Massif Dubovskogo. 80°58' S, 56°15' W. A lonely massif on the Filchner Ice Shelf. Named by the Russians.

DuBridge Range. 71°30' S, 168°53' E. A mountain range in the Admiralty Mountains, over 30 km long and trending in a SW-NE direction, between Pitkevich Glacier and Shipley Glacier, and terminating at the N coast of Victoria Land just W of Flat Island. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lee DuBridge, member of the National Science Board for many years, and science adviser to the president of the USA, 1969-70.

Dubris Valley. 80°00' S, 155°28' E. A narrow, ice-free valley just E of Danum Platform, in the northern Britannia Range. Named in association with the Roman name Britannia, by Mike Selby's 1978-79 University of Waikato (NZ) field party here, for the old stream at Dover named Dubris by the Romans. NZ-APC accepted the name, and US-ACAN followed suit.

Duce Bay *see* **Duse Bay**

Isla Duchaylard *see* **Duchaylard Island**

Duchaylard Island. 65°42' S, 65°07' W. An island, about 4.5 km long, and about 2.5 km wide, which forms a rocky massif rising to about 556 m above sea level, and whose N face falls sharply toward the sea, at the W side of Grandidier Channel, about 2 km SE of Vieugué Island, and 16 km W of Cape García, off the Graham Coast, on the W coast of Graham Land. Toward the S is another hill, shaped like the fin of a fish. The SW of the island is foul. Discovered and roughly charted by FrAE 1903-05, and named by Charcot as Île du Chaylard, for Jean-Marie-Guy-Georges, Comte du Chaylard (b. 1844), French consul to Tientsin (China), 1894-97 and again 1898-1902, but more important to Antarctica, subsequently the French minister plenipotentiary in Montevideo who helped the expedition when it was there in Dec. 1903. It appears as such on Charcot's maps of the expedition, as well as on a British chart of 1916. On a British chart of 1908 it appears as Chaylard Island. Charcot, on his map of 1912, uses the spelling Île Duchaylard, as does Bongrain in his 1914 report of the expedition, and that is the spelling now used universally. It appears on a 1914 British chart as Duchaylard Island, and that was the name accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base J in 1957-58. It appears on a 1963 Argentine chart as Isla Du Chaylard, and that was the name accepted by the 1970 Argentine gazetteer, even though, today, the Argentines call it Isla Duchaylard, which was also the name accepted by the 1974 Chilean gazetteer.

Duck Island *see* **Bob Island**

Pointe Duclaux *see* **Duclaux Point**

Punta Duclaux *see* **Duclaux Point**

Duclaux Point. 64°04' S, 62°15' W. A cape projecting into the W side of Bouquet Bay from the E side of Pasteur Peninsula, 5 km SE of Cape Cockburn, on Brabant Island, in the Palmer Archipelago. Charted by FrAE 1903-05, and named by Charcot as Pointe Duclaux, for biochemist Pierre-Émile Duclaux (1840-1904), director of the Pasteur Institute in Paris. It appears on a 1943 U.S. Hydrographic Office chart as Point Duclaux, and on a 1949 Argentine chart as Punta Duclaux. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Duclaux Point on Sept. 23, 1960, and US-ACAN followed suit that year. It appears as such on a British chart of 1961. A 1954 Argentine chart has it as "Punta Lengua o Punta Duclaux," meaning "Punta Lengua or Punta Duclaux," "lengua" meaning "tongue." That name went nowhere, as both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Punta Duclaux.

Cabo Ducorps *see* **Cape Ducorps**

Cap Ducorps *see* **Cape Ducorps**

Cape Ducorps. 63°24' S, 58°08' W. A cape, 5 km long, marking the W entrance point of Huon Bay, and also the N point of Cockerell Peninsula (which joins it to the coast), 11 km SW of Cape Legoupil, on the NW coast of Trinity Peninsula. Discovered on Feb. 27, 1838, by FrAE 1837-40, and named by Dumont d'Urville as Cap Ducorps, for Louis Ducorps. It appears as such on the expedition's charts, and also in Vincendon-Dumoulin's atlas of 1847. It appears on a Spanish chart of 1861, as Cabo Ducorps, and as such appears in the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974. It was re-identified, surveyed, and charted by Fids from Base D in 1946, the same year it appears on a USAAF chart as Cape Ducorps, which was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. It appears as such in the 1955 British gazetteer. There was a Chilean move, in 1974, that never got anywhere, to call it Cabo Unión.

Ducorps, Louis-Jacques. b. Feb. 12, 1811, Maintenon, France. Purser 3rd class on the *Astrolabe* during FrAE 1837-40. On Dec. 26, 1838 he was promoted to purser 2nd class, and on Sept. 2, 1840 to purser 1st class.

Islote Duda *see* **Query Island**

Dudeney, John Richard. b. March 7, 1945, Surrey. BAS ionosphere physicist who joined BAS as a graduate in 1966, and wintered-over at Base F in 1967 and 1968, the second year also as base commander. In 1975 he was back, at Faraday Station and Halley Bay, and again many times between 1981 and 1994. From 1990 to 1998 he was head of BAS's Upper Atmospheric Services Division, and in 1998 became deputy director of BAS. In all, he made 20 trips to Antarctica.

[1]**Mount Dudley**. 68°16' S, 66°30' W. Rising to over 1375 m (the British say about 1700 m), at the head of Neny Fjord, at Marguerite Bay, on the Fallières Coast, on the W coast of Graham Land. Neny Glacier bounds it on its N and E sides. Roughly surveyed on its W side in 1936, by BGLE 1934-37, it appears on Rymill's 1938 map of the expedition. It was surveyed in its entirety in 1940, by USAS 1939-41. On Aug. 14, 1947, it was photographed and sketched aerially by RARE 1947-48, and that season was surveyed from the ground by a joint sledging team comprising RARE personnel and Fids from Base E. Named by Finn Ronne in 1948, for Harold M. Dudley, executive secretary of the American Council of Commercial Laboratories, in Washington, DC, who helped RARE 1947-48, both with equipment and money. It was re-surveyed in 1949 by Fids from Base E. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. From 1978 there have been descriptive Argentine references to this mountain as Cerro Tres Hermanos (i.e., "three brothers hill").

[2]**Mount Dudley** *see* **Dudley Head**

The *Dudley Docker*. One of the 3 longboats used by Shackleton during BITE 1914-17.

Dudley Head. 84°18' S, 172°15' E. A prominent snow-covered ridge, rising to 2540 m, and surmounted by several domes, it projects into

the E side of the Beardmore Glacier, anywhere between 8 and 20 km S of Mount Patrick. Shackleton discovered it in Dec. 1908, during BAE 1907-09, and named it Mount Dudley, plotting it in 84°30' S, 173°00' E. It was redefined by US-ACAN in 1962, as a head, in keeping with the appearance of the feature. Actually it is a ridge. Sir William Humble Ward (1867-1932), 2nd Earl of Dudley (succeeding his father in 1885) was governor general of Australia, 1908-11.

DuDu *see* **Dumont d'Urville Station**

Duegen, Charles *see* **USEE 1838-42**

Duell, Thomas. b. 1792. On April 25, 1818, in Stepney, he married Mary Ann Todrig, known as Ann (daughter of South Georgia sealer and shipowner Francis Todrig—*see* **The *King George***), and that was where they lived. In 1820-21 Duell was skipper of the sealer *George IV*, for that season's sealing in the South Shetlands. He was skipper of the *Dart*, in the South Shetlands, for the 1821-22 and 1822-23 seasons. He and Todrig sold the *Dart* after this last expedition, to William and Andrew Low, in Aug. 1823. In 1833, Ann died, and Thomas moved to Kennington, where he died on April 5, 1843. They are buried together at St Anne's, Limehouse.

Cape Duemler *see* **Cape Robinson**

Monte Duemler *see* **Mount Duemler**

Mount Duemler. 70°01' S, 63°45' W. Rising to 2225 m, SW of the head of Anthony Glacier, between that glacier and Clifford Glacier, 17.5 km W of Mount Bailey, in the Eternity Range, inland from the Wilkins Coast, on the E coast of Palmer Land. Roughly surveyed and charted in Dec. 1936, by BGLE 1934-37, and shown on Stephenson's 1940 map of the expedition in 69°59' S, 63°48' W. Photographed aerially in 1940 by USAS 1939-41, and again in 1947 by RARE 1947-48. It was also surveyed from the ground in 1947 by a joint sledging team consisting of RARE personnel and Fids from Base E, during which it was recharted. Named by Finn Ronne for Robert F. Duemler (1909-1985), vice president (from Jan. 1, 1945) of the Delaware, Lackawanna and Western Coal Co., of New York, which contributed coal to RARE. However, Ronne had originally applied the name Duemler to what is now Cape Robinson (q.v.), it appearing as such on Ronne's 1949 map. UK-APC accepted the name Mount Duemler on Jan. 28, 1953, and US-ACAN followed suit that year. It appears as such on a 1954 British chart, and also in the 1955 British gazetteer, but it appears (misspelled) on a 1953 U.S. Hydrographic Office chart as Mount Duenler. It appears on an Argentine chart of 1957 as Monte Duemier (simply a misspelling), and the name used by the Argentines (and the Chileans) today is, of course, Monte Duemler.

Islote Duende *see* **Gremlin Island**

Islas Dufaure *see* **Lajarte Islands**

Dufaure de Lajarte Islands *see* **Lajarte Islands**

Isla Dufayel *see* **Dufayel Island**

Dufayel Island. 62°10' S, 58°34' W. A high, massifed island, ice-free in summer, about 1.6 km long, about 360 m wide, with cliffed shorelines and a jagged summit rising to about 205 m above sea level, near the center of Ezcurra Inlet, in Admiralty Bay, King George Island, in the South Shetlands. It was known to sealers from at least 1822. Charted in Dec. 1909, by FrAE 1908-10, and named by Charcot as Île Dufayel, for Georges-Jules Dufayel (1855-1916), plutocratic owner of Crespin-Dufayel, the Louvre grand magasin in Paris, the overwhelmingly massive "poor people's department store" of Paris, who donated furniture to Charcot for the expedition. It appears as such on his expedition maps. On David Ferguson's chart of 1918 (and on a few other charts from that time period) it appears as Hawk Island, and on a 1921 Ferguson chart as Haakon Island. It had been named thus by Norwegian whalers in the area, for their king, Haakon VII (*see* **Haakon VII Sea**), and Hawk was simply a corruption thereof. It appears on a 1929 British chart as Dufayel Island, and that was the name that was accepted by US-ACAN in 1952, and by UK-APC on Jan. 20, 1953. It appears on a 1947 Chilean chart as Isla Dufayel, and that was name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57.

Mount Dufek *see* **Dufek Mountain**

Dufek, George John. b. Feb. 10, 1903, Rockford, Ill., son of Fran Dufek and his wife Mary Wachuta. He entered the Naval Academy in 1921, graduating in 1925, and became an ensign that year. After ship and submarine work, he was a lieutenant (jg) by 1929, became a naval aviator in 1933, and was promoted to lieutenant on Aug. 24, 1934, and to lieutenant commander in 1939. He was navigator of the *Bear*, during USAS 1939-41, spending many hours flying over the Antarctic continent, and discovering the mountains of Thurston Island. One of the best-remembered quotes of this expedition was Dufek's, regarding Antarctica, "a hell of a lot of ice, but what good is it?" During World War II, while commanding a flight training squadron for the invasion of North Africa and also that of southern France, he was promoted to commander in 1942, and to captain in 1943. In 1944 he commanded the *Bogue*, which sank the last German U-boat. He led the Eastern Group during OpHJ 1946-47, and fell into the Bellingshausen Sea during this cruise. In 1947 he married Murial Thomson Bones. On Aug. 16, 1954 he reported in as commander of Task Force 43 (U.S. Naval Support Force, Antarctica), was activated as tactical leader of OpDF on Feb. 1, 1955, promoted from captain to rear admiral, and went south on the *Arneb,* as commander of Task Force 43, the military side of the operation (as opposed to the scientific). On Oct. 31, 1956 he became the third leader ever to stand at the South Pole, when he was flown there in the *Que Sera Sera*. On Aug. 15, 1957 he took over from Byrd as the U.S. Antarctic Projects Officer, and on April 14, 1959 was replaced as the head American in Antarctica by Admiral Tyree. He wrote *Operation Deep Freeze*, in 1957 (*see* the Bibliography). He settled in Newport News, and became director of the Mariners Museum. He died on Feb. 10, 1977, at Bethesda, Md, of cancer, one of the great figures in Antarctic history.

Dufek Coast. 84°30' S, 179°00' W. That portion of the Antarctic coast along the SW margin of the Ross Ice Shelf, lying between Airdrop Peak (on the E side of the Beardmore Glacier) and Morris Peak (on the E side of the Liv Glacier), at the foot of the Transantarctic Mountains, between the Bush Mountains and the Prince Olav Mountains. Named by NZ-APC in 1961 for Admiral Dufek. US-ACAN accepted the name in 1964. A support station was set up in this region by Admiral Dufek, to assist in flights to Pole Station.

Dufek Hall. The name give in May 1956 to the admin building and sick bay at McMurdo. Named for Admiral Dufek.

Dufek Head. 77°37' S, 167°42' E. An ice-covered headland, rising to 620 m on the E side of the terminus of Aurora Glacier, 6.6 km NE of Tyree Head, in the S part of Ross Island. In association with Tyree Head (an admirals motif therefore), it was named by US-ACAN in 2000, for George Dufek. NZ-APC accepted the name on Feb. 20, 2001. Note: In the 1990s US-ACAN had proposed the name Dufek Point for a feature on Ross Island, the intention being to honor the admiral with a Ross Island feature. However, the name Micou Point was given to it instead. Dufek Head was, therefore, a compensation.

Dufek Massif. 82°36' S, 52°30' W. A rugged, largely snow-covered massif, about 45 km long, and rising to about 2030 m (the Chileans say 1949 m), W of the Forrestal Range, in the N part of the Pensacola Mountains, about 50 km S of the S limit of the Filchner Ice Shelf. Discovered on Jan. 13, 1956, aerially (see that date under Operation Deep Freeze I), and named by US-ACAN in 1957, for Admiral Dufek. It appears on a *National Geographic* map of 1957, plotted in 81°15' S, 42°00' W (which were also the coordinates shown in the U.S. gazetteer of 1957). However, on both a National Geographic Society map of 1957, and on an American Geographical Society map of 1962, it appears plotted in 82°36' S, 51°30' W, and those were the coordinates accepted by UK-APC on Aug. 31, 1962. The feature was seen again from the air in Oct. 1957, and surveyed from the ground in Dec. 1957, by personnel from Ellsworth Station. The entire Pensacola Mountains were mapped by USGS in 1967 and 1968 from ground surveys conducted in 1963-64 and 1965-66 (during the Pensacola Mountains Project), and from air photos taken in 1964, and, with its new coordinates, the feature was shown in the 1977 British gazetteer. As early as the 1950s the Argentines were calling it Cordillera Santa Teresita (i.e., "Santa Teresita range"), named after St. Theresa. Finn Ronne, on his 1961 map, when referring to the Argentine name, calls it

"Santa Teresita Range (Dufek Massif)" (even though he misspelled Teresita as Teresila), and the name Cordillera Santa Teresita appears on an Argentine chart of 1964, and was the name accepted by the Argentine gazetteer of 1970. However, since 1978 there have been references to it as Macizo Santa Teresita (i.e., "Santa Teresita massif"). The Chileans call it Macizo Augusto Pinochet, for Augusto José Ramón Pinochet Ugarte (1915-2006), president of Chile, 1973-90, who traveled to Antarctica on the *Aquiles* in 1977.

Dufek Mountain. 72°10' S, 24°45' E. A large mountain, rising to 3150 m, 3 km SW of Mefjell Mountain, in the south-central part of the Sør Rondane Mountains. Mapped in 1957 by Norwegian cartographers working from air photos taken during OpHJ 1946-47, and named by them as Dufekfjellet, for Admiral Dufek. They plotted it in 72°13' S, 24°42' E. US-ACAN accepted the translated name Dufek Mountain in 1962, but with new coordinates. The name is also seen as Mount Dufek.

Dufekfjellet *see* **Dufek Mountain**

Punta Duff *see* **Duff Point**

Duff Peak. 77°47' S, 162°27' E. A peak, rising to 1945 m, 1.5 km ESE of Sentinel Peak, at the head of Hughes Glacier, in the Kukri Hills of Victoria Land. Named by US-ACAN in 1992, for Roger Shepherd Duff (d. 1978), for 30 years director of the Canterbury Museum, in Christchurch, NZ.

Duff Point. 62°27' S, 60°02' W. The westernmost point of Greenwich Island, and the NE entrance point of McFarlane Strait, in the South Shetlands. It was known to early sealers in the area, and Richard Sherratt's chart of 1821 erroneously has it as Sheriff's Cape. Photographed aerially by FIDASE in 1956. So named by UK-APC on March 2, 1961, in order to preserve the name of Duff in the area (*see* **McFarlane Strait**). Norwich Duff (1792-1862) was the son of the famous Capt. George Duff, of the *Mars* (who was killed at Trafalgar). In fact, Norwich was a young midshipman serving aboard his father's ship when it happened. He later became an admiral. James Weddell had served under him on the *Espoir*, in 1814 (not in Antarctica). It appears on a British chart of 1962. US-ACAN accepted the name in 1965. The Argentines call it Punta Duff.

Duffourc, Antoine-Clément-Édouard. b. Feb. 1817, La Plume, France. Junior seaman on the *Astrolabe* during FrAE 1837-40.

Duff's Straits *see* **McFarlane Straits**

Duffy Peak. 71°45' S, 70°40' W. A peak, SE of Hageman Peak, in the Staccato Peaks, on the W coast of Alexander Island. Photographed aerially by Lincoln Ellsworth in 1935. Named by US-ACAN for Lt. Cdr. Joseph A. Duffy, USN, VX-6 pilot during OpDF 69 (i.e., 1968-69) and OpDF 70 (i.e., 1969-70). VX-6 became VXE-6 while he was with them. UK-APC accepted the name on June 11, 1980.

Sierra DuFief. 64°52' S, 63°28' W. A mountain range, 6 km long, with numerous sharp peaks, the highest being 1415 m (Savoia Peak, at the NE end), extending in a NE-SW direction, in the SW part of Wiencke Island, in the Palmer Archipelago. Also in the sierra is Janssen Peak (at the SW end, and rising to 1085 m). Discovered and roughly mapped in Feb. 1898, by BelgAE 1897-99, and named by de Gerlache as Sierra du Fief, for Jean du Fief, general secretary of the Belgian Royal Geographical Society. Actually, de Gerlache appplied the name to all the mountains in central Wiencke Island. Arctowski's map, from the same expedition, refers to them as Monts du Fief. They were further surveyed by FrAE 1903-05. On a British chart of 1929, the name was limited to the present feature, and that definition has remained in place. In 1944 the feature was surveyed by Operation Tabarin personnel from Port Lockroy Station. It appears on a 1947 Chilean chart translated as Sierra del Feudo, as if the word "fief" were a common noun. On a 1952 British chart it appears as du Fief Sierra. In April 1955, Fids on the *Norsel* re-surveyed the feature, and that year Fids from Base N did the same thing. UK-APC accepted the name Sierra du Fief on Sept. 20, 1955, and US-ACAN followed suit in 1956. On Sept. 23, 1960, UK-APC renamed it Fief Mountains, and it appears that way on a British chart of 1961. It appears as Sierra du Fief Range on a 1963 U.S. Hydrographic Office chart, but in 1963, US-ACAN accepted the name Sierra DuFief, to accord with the orthographic phenomenon that was sweeping the USA at that time of making one word (where there had once been two) out of all French-type names beginning with "du," "de," etc, and to capitalize where the first letter of the first word had previously been lower case. The Argentine gazetteer of 1970 accepted the name Sierra Du Fief. It appears in the 1976 British gazetteer as "Fief Mountains (Sierra du Fief)."

Dufour, Gustave-Gaston. b. Dec. 12, 1876, Mons, Belgium. Sailor on BelgAE 1897-99. He died in 1940.

Bahía Dufourq. 61°13' S, 54°02' W. A bay on the SW coast of Sugarloaf Island, in the South Shetlands. Named by the Argentines.

Dufrèche, Celestin. b. ca. 1870, France. He joined the French Merchant Marine, as an ordinary sailor, and in 1897 left Marseille on the *Australien*, bound for Noumea. He would spend the next several years on the *Australien*, the *Ville de la Ciotat*, or the *Polynésien*, plying between New Caledonia and Sydney. He was a sailor on the *Pourquoi Pas?* during FrAE 1908-10.

Morena Duga. 70°04' S, 66°14' E. An isolated moraine, inland from the coast of Mac. Robertson Land. Named by the Russians.

Dugdale Glacier. 71°38' S, 169°50' E. About 40 km long, it flows NE from the high plateau of northern Victoria Land, down the Admiralty Mountains, and along the W side of Geikie Ridge, before merging with Murray Glacier and entering Robertson Bay, just NW of Duke of York Island, on the N coast of Victoria Land. Charted in 1899 by BAE 1898-1900, and named by Borchgrevink for Frank Dugdale (1857-1925), Esq., of Snitterfield, Stratford-on-Avon, a supporter. US-ACAN andd NZ-APC both accepted the name.

Duggan, Albert Edward James. b. Feb. 26, 1914, Nanaimo, British Columbia, son of engineering clerk Edward James Duggan and his wife Annie Maud Jermin. The family moved to Juneau, Alaska just after Albert was born, and, then soon after, to Seattle. On April 4, 1928, he became a naturalized American citizen. He was a seaman on the *North Star* during USAS 1939-41 (this was his first trip), stayed at sea, made mate during World War II, and was still sailing, as a mate in the early 1950s for the American Mail Line, between Seattle and Vancouver, and occasionally doing a run over to Calcutta, Yokohama, or Shanghai. He died in Seattle on Nov. 10, 1979.

Dugurdspiggen *see* **Dugurdspiggen Peak**

Dugurdspiggen Peak. 72°26' S, 2°46' W. An isolated mountain peak, N of the Regula Range, about 6 km NE of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Dugurdspiggen (i.e., "the lunch peak"). US-ACAN accepted the name Dugurdspiggen Peak in 1966.

Duke, David Bernard E. b. 1926, Uppingham, Rutland, son of David Duke and his wife Ellen Hewitt. He was a 3rd radio officer at the tail end of World War II, serving in Egypt, and joined FIDS in 1949, as a radio operator, leaving London in 1949, bound for Montevideo, and from there to winter-over at Signy Island Station in 1950. In 1951 he returned to Port Stanley, and stayed in the Falklands for a year, before returning to London on the *Andes*, from Montevideo, arriving in England on Feb. 26, 1952. In 1953, in Bridgwater, Somerset, he married Christine Gannicott.

Duke Ernst Bay *see* **Vahsel Bay**

Duke of York Island. 71°38' S, 170°04' E. A steep, mountainous, ice-free island, rising to about 555 m, 4 km long in a N-S direction, near the S end of Robertson Bay, along the N coast of Victoria Land. It is remarkable for its layers of blue, red, and green rock. Broad, deep quartz reefs cut through the island from E to W. First charted in 1899 by BAE 1898-1900, and named by Borchgrevink for the Duke of York (who would later become George V). US-ACAN accepted the name, and NZ-APC followed suit.

Duken *see* **Duken Flat**

Duken Flat. 73°48' S, 5°10' W. A small, flat, ice-covered plain between Urnosa Spur on the one hand and Framranten Point and Kuvungen Hill on the other, in Uhligberga, near the SW end of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them

as Duken (i.e., "the cloth"). US-ACAN accepted the name Duken Flat in 1966.

Dulo Hill. 62°36' S, 61°09' W. A rocky hill rising to 210 m in Dospey Heights, 1.23 km SE of Start Hill, and 2.28 km WNW of Penca Hill, on Byers Peninsula, Livingston Island, in the South Shetlands. Mapped by the Spanish in 1992, and by the Bulgarians in 2009. Named by the Bulgarians on Nov. 23, 2009, for the Bulgarian ruling dynasty of Dulo (7th to 10th centuries).

Mount Dumais. 85°02' S, 64°30' W. A bluff-type mountain rising to 1830 m, on the SW edge of the Mackin Table, 3 km N of Lekander Nunatak, in the S part of the Patuxent Range, in the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Lt. Clarence C. Dumais, USN, medical officer and officer-in-charge of Pole Station in the winter of 1960. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Dumasrücken. 73°05' S, 167°54' E. A ridge on the SE side of Mount Alberts, on the E margin of the Malta Plateau, in Victoria Land. Named by the Germans.

Islote Dumbbell *see* **Dumbbell Island**

Dumbbell Island. 68°43' S, 67°35' W. A low, rocky island, 1.5 km W of Alamode Island, it is the westernmost of the Terra Firma Islands, off Mikkelsen Bay, off the Fallières Coast, on the W coast of Graham Land. Surveyed by Fids from Base E in 1948, and named by them as Dumbbell Islet, for its shape. UK-APC accepted this name on March 31, 1955, and US-ACAN followed suit in 1956. On July 7, 1959, UK-APC redefined it as Dumbbell Island, and US-ACAN accepted this change in 1963. It appears as such on a British chart of 1961. The Argentines call it Islote Dumbbell, but occasionally (if not almost always) misspell it as Dumbell, as many English-speaking persons do too.

Dumbbell Islet *see* **Dumbbell Island**

Mount Dummett. 73°11' S, 64°01' E. An elongated ice-covered rock mass, with 2 smaller outcrops, 17.5 km E of Mount McCauley, in the southern Prince Charles Mountains. Discovered and photographed aerially by ANARE in 1956, and first plotted by Australian cartographers from those photos. Named by ANCA for Robert Bryan Dummett (1912-1977), with BP since 1936, and later managing director of BP Australia, supporter of ANARE for years. From 1967 he was vice chairman of BP, in London. US-ACAN accepted the name in 1965.

Mer Dumont d'Urville *see* **Dumont d'Urville Sea**

Dumont d'Urville, Jules-Sébastien-César. b. May 23, 1790, in Condé-sur-Noireau, in Calvados, France, son of very rich judge Gabriel-Charles-François Dumont d'Urville and his wife Jeanne-Françoise-Julie-Victoire de Croisilles. The family was a victim of the French Revolution, and in 1807 the future explorer entered the Navy as a midshipman. In 1812 he was promoted to ensign, and on May 1, 1815, at Toulon, he married Adèle-Dorothée Pepin (for whom Adélie Land was named). He became a noted botanist and linguist, and secured the Venus de Milo for France in 1820. In 1821 he helped found the Paris Geographical Society, and on Aug. 15, 1821 was promoted to lieutenant. He was 2nd-in-command of the *Coquille* as that ship made her famous 3-year voyage around the world. Dumont d'Urville was in charge of botany. The *Coquille* was renamed *Astrolabe*, and from 1826 to 1829 Dumont d'Urville, now a commander, took the ship on another world cruise of exploration and science. On Aug. 8, 1829 he was made captain. He led FrAE 1837-40. He was promoted to rear admiral on Dec. 31, 1840. On May 8, 1842, he, his wife, and only surviving son, were on a train between Bellevue and Meudon when it crashed.

Dumont d'Urville Automatic Weather Station *see* **D-10**

Dumont d'Urville Sea. 66°00' S, 141°00' E. These are the French coordinates. In the southern Indian Ocean, along the shores of Adélie Land, and also to the area to the east. Named by Mawson in 1912, during AAE 1911-14, for J-S-C Dumont d'Urville. Mawson plotted it in 63°S, 137°E. The French refer to it as Mer Dumont d'Urville. Also seen as D'Urville Sea. The Russians plot it in 65°S, 140°E.

Dumont d'Urville Station. 66°40' S, 140°01' E. French scientific station, consisting of 49 buildings lying scattered over very small Pétrel Island, in the central part of the Géologie Archipelago, off the coast of Adélie Land, and affectionately called DuDu. Built by Robert Guillard and his men in 1956 to replace Port-Martin Station, which had been destroyed by fire, 100 km to the E, it was an extension of the substation built earlier by Marret (Base Marret). **Jan. 1, 1956**: The *Norsel* reached Adélie Land. **Jan. 12, 1956**: The station opened. **1956 winter**: Robert Guillard (q.v.) (base leader), Maurice Grisoni (general assistant and 2nd-in-command), Pierre Dill and Jean Laroque (meteorologists), Jean Prévost (q.v.) (biologist), Jean-Marie de Souza-Maquin (ionosphere physicist), Gérard Bazile (medical officer), Maurice Sabbah and Roger Thurieau (radio officers), Georges Couly (centrale), Jacques Quinquet (mechanical engineer), Mathurin Evanno and Lucien Faivre (technicians), and Guy Duffaud (cook). **1957 winter**: Bertrand Imbert (q.v.) (seismologist and base leader), Sidney Emery (hydrographer and co-2nd-in-command), Maurice Grisoni (geodesist and co-2nd-in-command), Jacques Gilbert, Michel Plantier, and Robert Magniez (meteorologists), Kenneth Bullough and Félix Lazarus (ionosphere physicists), José Daguillon and Gilbert Weill (optical aurora physicists), André Lebeau (magnetician), René Merle (q.v.) (chief radio officer), Pierre Manuel (radio operator and 2nd cook), René Dova (mechanic; he had been at Port-Martin Station in 1951), Fernand Jardel (mechanical engineer), René Renard (hélico mechanic), Jacques Masson (general assistant and lab photographer), Marcel Renard (technician), and Jean Lapostolle (chief cook). **1958 winter**: Gaston Rouillon (q.v.) (leader), André Cornet (geodesist and 2nd-in-command), Jacques Chesneau, André Dourmap, André Prud'homme (q.v.), and Bernard Valtat (meteorologists), Fernand Gallet (ionosphere physicist), Bernard Morlet (ionosphere physicist and aurora radar specialist), Jean Delannoy (optical aurora physicist), Philippe Jeulin (optical aurora physicist and ozone specialist), Raymond Lachaux (magnetician), Jacques Isel (medical officer), Roland Novel (radio operator), Raymond Pingard (mechanical engineer), René Manzey (centrale), André Payen and Marcel Vieillame (technicians), Bruno Ricard (lab photographer), René Behre (general assistant), and Lucien Montant (cook). **1959 winter**: René Merle (leader). **1960 winter**: Alfred Faure (leader). **1961 winter**: Fernand E. Digeon (leader). **1962 winter**: René Merle (leader). **1963 winter**: Robert Guillard (leader). **1964 winter**: Jean Morin (leader). **1965 winter**: Claude Lorius (leader). **1966 winter**: René Merle (leader). **1967 winter**: André Hougron (leader). **1968 winter**: Fernand D'Amato (leader). **1969 winter**: Jean-François Guyader (leader). **1970 winter**: Claude Volck (leader). **1971 winter**: Bernard Barriquand (leader). **1972 winter**: Robert Guillard (leader). **1973 winter**: Jean-Pierre Jacquin (leader). **1974 winter**: Bernard Barriquand (leader). **1975 winter**: Claude Volck (leader). **1976 winter**: Alain Duret (leader). **1977 winter**: Robert Guillard (leader). **1978 winter**: Jean-Claude Chacun (leader). **1979 winter**: Alain Duret (leader). **1980 winter**: Bernard Stagüennec (leader). **1981 winter**: Robert Chauchon (leader). **1982 winter**: Bernard Pontoizeau (leader). **1983 winter**: Claude Chaufriasse (leader). **1984 winter**: Michel Engler (leader). **1985 winter**: Francis de Montaigne (leader). **1986 winter**: Jean-Paul Stefanini (leader). **1987 winter**: Christian Grevisse (leader). **1988 winter**: Jacques Durieux (leader). **1989 winter**: Jean-François Hussin (leader). **1990 winter**: Claude Chaufriasse (leader). **1991 winter**: Bernard Lefebure (leader). **1992 winter**: Georges Reverse (leader). **1993 winter**: Gilles Kerlidou (leader). **1994 winter**: Jacques Durieux (leader). **1995 winter**: Jean-Baptiste Seigneuric (leader). **1996 winter**: Charles-Gilles Testa (leader). **1997 winter**: Gilles Chanet (leader). **1998 winter**: Richard Gaud (leader). **1999 winter**: Thierry Courtet (leader). **2000 winter**: Michel Galliot (leader). The station continues as a winter station. It has all modern conveniences now, and can accommodate about 120 persons in the summer and 30 in the winter. It has a year-round skiway landing strip called D-21, 21 km away, but right at the station itself is a controversial gravel runway that has never been used. In the early 1980s, in order to build it, an island and some islands housing an Adélie penguin rookery, were dynamited, and then, in 1984, a giant ice-

berg, blown in by the wind, hit the runway and the hangar, damaging both. Bowing to international pressure, the French have since left it unused. The station is re-supplied 4 times per summer season by the ship *L'Astrolabe*, which is based in Hobart.

Dumont d'Urville Trough *see* **Adélie Valley**

Dumoulard, Anthelme. b. Sept. 11, 1814, Lyon. He embarked on the *Zélée* at Hobart on Dec. 30, 1830, as an ordinary seaman, during FrAE 1837-40.

Île Dumoulin *see* **Jurien Island**

Îles Dumoulin *see* **Dumoulin Islands**, **Jurien Island**, **Kendall Rocks**

Îlots Dumoulin *see* **Dumoulin Rocks**

Isla Dumoulin *see* **Jurien Island**

Islote Dumoulin *see* **Jurien Island**

Rocas Dumoulin *see* **Dumoulin Rocks**

Dumoulin, C.A. Vincendon *see* **Vincendon-Dumoulin, C.A.**

Dumoulin Island *see* **Jurien Island**

Dumoulin Islands. 66°37' S, 140°04' E. A small group of rocky islands and islets, E of Baie Pierre Lejay, at the NE end of the Géologie Archipelago, 4 km N of the Astrolabe Glacier Tongue. They include: Derby Island, Pasteur Island, and Dépôt Island. In 1840, during FrAE 1837-40, Dumont d'Urville sent a party, led by du Bouzet, onto one of these islands. Roughly charted by AAE 1911-14, and named by Mawson for C.A. Vincendon-Dumoulin (*see under* **V**). Photographed aerially during OpHJ 1946-47. US-ACAN accepted the name in 1947. The islands were re-charted by the French under Liotard, and they called them Îles Dumoulin.

Dumoulin Islet *see* **Jurien Island**

Dumoulin Rock *see* **Jurien Island**

Dumoulin Rocks. 63°26' S, 59°48' W. A group of rocks in water, 6 km NE of Cape Leguillou (the N tip of Tower Island), and NE of the Kendall Rocks, in the Palmer Archipelago. In 1829, Foster was here leading the *Chanticleer* Expedition, and he charted them, together with the Kendall Rocks, as one feature, naming them the Kendall Group, after his 1st lieutenant, Edward Kendall. However, he incorrectly positioned the group in 63°14' S, 60°04' W. A few years later, Dumont d'Urville was here, on March 4-5, 1838, leading FrAE 1837-40, and, like Foster, he charted the two groups together, naming them Îles Dumoulin, for C.A. Vincendon-Dumoulin (*see under* **V**). But, he plotted them correctly, in relation to Tower Island, that is. They also appear on his charts as Îlots Dumoulin. Following aerial photography by FIDASE in 1956-57, it was decided the two groups are separate, and Dumoulin Rocks was the name given to the NE group, while the name Kendall Rocks was given to the SW group. However, *see also* **Jurien Island**, and *see also* **Kendall Rocks**. UK-APC accepted the name Dumoulin Rocks on Sept. 23, 1960, and US-ACAN followed suit that year. At that point in time, the group was plotted in 63°26' S, 59°48' W. The coordinates were corrected by the time of a British chart of 1962, and, with the new coordinates, the feature appears in the 1977 British gazetteer. In the 1967 British gazetteer, the name appears (misspelled) as Doumoulin Rocks. The Argentines use the name Rocas Dumoulin.

Cabo Dumoutier *see* **Cape Dumoutier**

Cap Dumoutier *see* **Cape Dumoutier**

Cape Dumoutier. 63°35' S, 59°45' W. Forms the E tip of Tower Island, at the NE end of the Palmer Archipelago. Discovered and charted on March 4-5, 1838, by FrAE 1837-40, and named by Dumont d'Urville as Cap Dumoutier, for Pierre Dumoutier. It appears on a British chart of 1901 as Cape Dumoutier, and that was the name accepted by US-ACAN in 1952. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Cape Dumoutier on Sept. 23, 1960, and it appears as such on a 1962 British chart. From at least 1978, there have been Argentine references to it as Punta Traverso, named thus by one of the Argentine Antarctic expeditions, for a cadet who died on active service (not in Antarctica). However, the Argentines generally call it Cabo Dumoutier.

Dumoutier, Pierre-Marie-Alexandre. b. Nov. 21, 1797, Paris. Assistant naturalist, assistant surgeon, and phrenologist on the *Astrolabe*, during FrAE 1837-40. He died in 1871.

Dumpa. 72°05' S, 27°34' E. A depression, just NE of Humpen, in the W part of Berrheia, on Balchen Mountain, in the Sør Rondane Mountains. Named by the Norwegians ("the depression").

Dun Glacier. 77°48' S, 162°14' E. A small, short, steep, tributary glacier flowing from the S side of the Kukri Hills, about midway between Mount Coates and Sentinel Peak, and feeding Ferrar Glacier, in Victoria Land. Named by Grif Taylor's Western Journey Party during BAE 1910-13. US-ACAN accepted the name in 1964, and NZ-APC followed suit. Originally plotted in 77°48' S, 162°09' E, it has since been replotted. Why it was named "dun" is not clear, except that it may be to do with the dark, brownish, gloomy color.

Islas Dunbar *see* **Dunbar Islands**

Port Dunbar. Originally it seems to have been someone's idea of trying to re-name Deception Island in the 1820-21 season, and it was definitely an early name for what later became known as Port Foster. Also called Dunbar's Harbor, it was almost certainly named for Thomas J. Dunbar, Jr.

Dunbar, Addison *see* **USEE 1838-42**

Dunbar, Thomas J., Jr. b. Nov. 7, 1788, Westerly, RI, son of Thomas Dunbar and his wife Eunice Barber. On Jan. 30, 1814, in Stonington, Conn., he married Thankful Barber. Sealing captain, commander and part owner of the *Free Gift* during the Fanning-Pendelton Sealing Expedition to the South Shetlands in 1820-21. In 1821-22 he was captain of the *Express*. He died in 1860.

Dunbar, William. New London skipper of the *Flying Fish*, 1877-78 and 1878-79.

Dunbar Head. 78°38' S, 164°10' E. A projecting rock headland, rising to over 200 m, and overlooking the Ross Ice Shelf midway between Eastface Nunatak and Birthday Bluffs, 17.5 km SE of the summit of Mount Morning, at the S end of the Scott Coast, in Victoria Land. Named by US-ACAN in 1999, for Nelia W. Dunbar, of the department of geoscience at the New Mexico Institute of Mining and Technology, in Socorro, who made geological investigations at nearby Mount Erebus, the Allan Hills, Mount Takahe, and the Crary Mountains. NZ-APC accepted the name on Nov. 4, 1999.

Dunbar Islands. 62°28' S, 60°12' W. A group of 3 small islands — working from W to E, Balsha Island, Zavala Island, and Aspis Island — SW of Williams Point, off the N coast of Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1956 and 1958. Named by UK-APC on July 7, 1959, for Thomas Dunbar. US-ACAN accepted the name in 1960. The feature appears on a British chart of 1962. The Argentines call them Islas Dunbar. The British were the latest to replot this feature, in late 2008, but the Bulgarians were surveying it in 2008-09.

Dunbar Ridge. 79°33' S, 84°16' W. A narrow ridge, 16 km long, it separates the upper reaches of Balish Glacier and Schneider Glacier, in the Heritage Range. Named by the University of Minnesota Geological Party of 1963-64, for Warrant Officer William Dunbar, maintenance officer of the 62nd Transportation Detachment, who helped the party. US-ACAN accepted the name in 1966.

The Dunbars *see* **Meade Islands**, **Zed Islands**

Dunbar's Harbor *see* **Port Dunbar** (under **D**, above)

Duncan, Alexander. b. July 29, 1872, Peterhead, Aberdeenshire, son of laborer James Duncan and his wife Janet Kinghorn. He was a fireman on the merchant ship *Pioneer*, based in Lerwick, in the Shetlands when he went on the *Scotia* as part of ScotNAE 1902-04.

Duncan, Howard Henry. b. Jan. 18, 1929, Carew Harbour, West Falkland, son of shepherd David Henry Duncan and his wife Agnes Halliday. He joined FIDS in 1948, spent the summer of 1948-49 at Base B, was due to winter-over there, but didn't. On Jan. 11, 1956, in Stanley, he married Eveline Bertha Thompson (née McRae). On Aug., 23, 1997, again in Stanley, he married Christina Maclean, and moved to Scotland.

Duncan, James. b. June 24, 1870, Alyth, Perthshire, but raised in Dundee, son of ship's carpenter Stewart Duncan and his wife Margaret Lowdon. A former merchant marine shipwright, he was married to Mary Jane, had 3 small children, and was working on the *Discovery* in Dundee as she was being built, when he was picked by Scott to go on BNAE 1901-04 as an able seaman. He was part of the shore party, and took part in sledging expeditions.

After a year on the ice, he returned to Britain in the *Morning*.

Duncan Bluff. 79°57' S, 155°58' E. A steep rock bluff along the N side of Hatherton Glacier, it rises to 1800 m between Corell Cirque and Conant Valley, in the Darwin Mountains. Named by US-ACAN in 2001, for Patrick Duncan Smith, of the NSF's Office of Polar Programs from 1995, information technology specialist for USAP, with responsibilty for projects that access communication satellites, as well as Antarctic communication with the outside world.

Duncan Mountains. 85°02' S, 166°00' W. A group of rugged coastal foothills, about 28 km long and rising to about 1500 m, just E of the mouth of the Liv Glacier, and extending from that point along a snow corridor to the mouth of Strom Glacier, in the Transantarctic Mountains, at the head of, and overlooking, the Ross Ice Shelf. In plan form, they resemble the letter H. Discovered in Nov. 1929 during ByrdAE 1928-30, and named by Byrd as the James Duncan Mountains, for Jim Duncan, manager of Tapley Ltd., Byrd's shipping agent in Dunedin, NZ. The name was later abbreviated, and, as such, accepted by US-ACAN in 1947, and, subsequently, also by NZ-APC.

Duncan Peninsula. 73°56' S, 119°30' W. An ice-covered peninsula, 50 km long, forming the E part of Carney Island, along the coast of Marie Byrd Land. Delineated from air photos taken in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1967, for Adm. Donald Bradley Duncan (b. Sept. 1, 1896. d. Sept. 8, 1975), who joined the U.S. Navy in 1917, and who was vice chief of naval operations under Admiral Carney, during IGY. He retired just afterwards.

Cabo Dundas *see* **Cape Dundas**

Cape Dundas. 60°43' S, 44°24' W. The most easterly point on Laurie Island, in the South Orkneys. Discovered and roughly charted by Weddell on Jan. 22, 1823, and, in association with Melville's Island (Weddell's name for Laurie Island), named by him for the British noble family, of which Henry Dundas, 1st Viscount Melville (1742-1811), was First Lord of the Admiralty, 1804-05, and his son, Robert Saunders Dundas, the 2nd Viscount (1771-1851), was also First Lord, 1812-27 and 1828-30. It appears on Weddell's chart of 1825, on Powell's chart of 1831, and on a British chart of 1839. It was re-surveyed by the Discovery Investigations in 1933, and appears on their 1934 chart. US-ACAN accepted the name in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. All the other interested countries translated it accordingly, for example it appears on Petter Sørlle's 1930 chart as Kapp Dundas, and in the 1970 Argentine gazetteer as Cabo Dundas.

Isla Dundee *see* **Dundee Island**

Dundee Island. 63°30' S, 55°55' W. An ice-covered island, 22 km long from E to W, about 18 km wide, and reaching an elevation of about 600 m above sea level in the mountains in the extreme S of the island (only that part of the island is mountainous), and with coasts formed of glaciers and ice cliffs, it lies E of the NE tip of the Antarctic Peninsula, immediately S of Joinville Island, and is separated from that island by Active Sound and the Firth of Tay. Discovered by Ross in 1842-43, who, however, did not see it as an island. Re-discovered on Jan. 5, 1893, by Capt. Thomas Robertson of the *Active*, during the Dundee Whaling Expedition, who did see it as an island, and named it for the town of Dundee. Ellsworth used the island as a base for his ski-equipped aircraft, in Nov. 1935. It appears on a 1938 British chart, and US-ACAN accepted the name in 1947, with UK-APC following suit on Sept. 8, 1953. It appears in the British gazetteer of 1955. In 1951 the Argentines built a refugio here (*see* **Isla Dundee Refugio**, under **I**). The island was surveyed by Fids from Base D between 1945 and 1954, and photographed aerially by FIDASE in 1956-57. The Argentine gazetteer of 1970 accepted the name Isla Dundee, which, of course, is what the Argentines had always called it. The Chilean gazetteer of 1974 accepted the same name. Note: There was a 1948 Chilean reference (by Francisco Orrego Vicuña) to it as Isla Carlos Pórter, named for the Valparaíso naturalist Carlos Emilio Pórter Mosso (1867-1942).

Dundee Whaling Expedition. 1892-93. Abbreviated in this book to DWE. **1891**: Famous Greenland whaling captain, David Gray of Peterhead, Aberdeenshire, proposed the expedition — to seek out the right whales in the Weddell Sea that had been reported by Ross 50 years before. However, Gray couldn't get it together. In 1892 Dundee merchant and shipowner Robert Kinnes, equipped 4 Dundee whaling vessels for Antarctica. The men were paid half a month in advance, and had a big party in Dundee before sailing. **Sept. 6, 1892**: Amid great public excitement, the fleet of 4 ships left Dundee. The personnel were (one does the best one can here): On the *Balaena*: Alexander Fairweather (captain); Adams (1st mate); George (2nd mate); Petrie (bosun); Allan (coxswain); Broch (1st engineer); there was a 2nd engineer; the following able seamen: William Watson, James Fairweather (the skipper's son), Mason, Charles Campbell, William Cant, Taylor, Allan, Fraser, Jack, Jock Harvey; the harpooners Marshall, Bonnar, and Harry Keddie; Peter White (cook); Nicholas "Nick" (steward); William S. Bruce (naturalist and doctor); W.G. Burn Murdoch (artist and assistant surgeon). On the *Active*: Thomas Robertson (captain); Charles W. Donald (naturalist and doctor). On the *Diana*: Robert Davidson (captain); John Campbell (naturalist and doctor). On the *Polar Star*: James Davidson (captain); Robert Walker and David Frederick (mates), David Jackson (bosun), Charles Brooks (engineer), James Forbes (sail maker), Colin Ironside (carpenter and harpooner), John M. Williams (1st harpooner), John Taylor (steward), David Esplin, Peter McNab, and Frank McIntosh (able seamen), John Donaldson, William Malcolm, Charles Jones, Thomas Ross, Alexander Sinclair, David Donald, Alexander McDougall, William McLean, John Mairs, and James Malone (ordinary seamen), William Coghill (fireman), and George Petrie (cook). Also aboard was William Davies, as spectator. Even before they cleared the Tay, a dozen stowaways would be found and landed at Broughty Ferry. Five more would be landed at Stornoway from the *Diana*, and 15 from the *Polar Star* at Blyth. Two more, William Brannan and Terry McMahon, would be discovered much later. There was also Fanny the dog. **Sept. 12, 1892**: Bonnar got hit on the head by an iron block, and Bruce operated on him. **Oct. 25, 1892**: The *Balaena* crossed the Equator. **Dec. 8, 1892**: 92 days later the *Balaena* and *Active* arrived in the Falkland Islands. Three men deserted and the two stowaways, Brannan and McMahon, signed on as crew members. **Dec. 11, 1892**: The *Diana* and *Polar Star* arrived at the Falklands, and the *Balaena* and *Active* left, heading south. **Dec. 16, 1892**: They saw their first iceberg, in 59°18' S, 51°01' W. A second was seen that evening as they crossed into Antarctic waters. **Dec. 17, 1892**: The fog slowed their progress south, but they encountered their first seal, about 12 feet long. It was promptly shot and brought aboard. **Dec. 22, 1892**: The fog lifted. **Dec. 23, 1892**: In the morning they passed the Danger Islands off the extreme W coast of Joinville Island (known as Joinville Land then). **Dec. 24, 1892**: Three of the ships (i.e., not the *Polar Star*) made fast to a very large floe. **Dec. 25, 1892**: They were in 64°13' S, 55°52' W. Then they started killing the docile seals and storing them on the ships. **Dec. 26, 1892:** They were in 64°30' S, 55°28' W, waiting for whales. They spotted a sail, hoped it might be the *Polar Star*, but it proved to be the *Jason*. For much of the time in the ice they would have the company of the *Jason*, commanded by Carl Anton Larsen, who had arrived about a month before them. **Dec. 27, 1892**: The temperature was 31°F. **Dec. 28, 1892**: Bruce went aboard the *Jason* to attend to a sick Norwegian. Larsen and his 1st mate came aboard the *Balaena* for the evening. **Jan. 8, 1893**: Robertson discovered Dundee Island. **Jan. 16, 1893**: The temperature was 35°F, their warmest day yet in the ice. The *Polar Star* showed up. **Jan. 24, 1893**: Donald went aboard the *Jason*. **Jan. 29, 1893**: The *Balaena* now had 4800 seals on board, taken in 28 days. A gory heap weighing 100 tons. **Feb. 14, 1893**: The fleet got stuck in the pack ice. **Feb. 17, 1893**: The fleet set sail for the Falklands. The *Balaena* had secured 6000 seals, the *Active* and the *Diana* about 4000 each, and the *Polar Star* about 2000. **Feb. 18, 1893**: They sailed past Clarence Island that night, heading north. **Feb. 20, 1893**: They were in 60°27' S, 53°40' W, saw their last iceberg, and exited Antarctic waters, heading north. **Feb. 28, 1893**: They arrived back at the Falklands. **Early March, 1893**: They left the Falklands, bound for Scotland. **May 24, 1893**: The *Balaena* arrived back

at Portland, England. **May 30, 1893**: The *Balaena* arrived back in Dundee. Despite the commercialism of the project, there was scientific work done, instruments being provided by the Royal Geographical Society and by Mr. Leigh Smith.

Dunedin Range. 71°24' S, 167°54' E. A NW-trending mountain range, between 30 and 39 km long, and between 3 and 6 km wide, 8 km E of the Lyttelton Range, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for the town of Dunedin, in NZ, for its long history of support to Antarctic expeditions from all countries. NZ-APC accepted the name.

Dungane *see* **Dungane Peaks**

Dungane Peaks. 72°11' S, 24°09' E. Actually 2 peaks, rising to 2870 m, at the S side of Mount Walnum, 14 km W of Dufek Mountain in the south-central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from USN air photos taken during OpHJ, 1946–47, and named by them as Dungane ("the heaps"). US-ACAN accepted the name Dungane Peaks in 1966.

Dungeslaet. 72°11' S, 24°17' E. A slope on the E side of Dungane Peaks, between Mount Walnum and the Rogers Peaks, in the south-central part of the Sør Rondane Mountains. Named by the Norwegians in association with Dungane.

Mount Dungey. 67°00' S, 51°15' E. About 1.6 km W of Pythagoras Peak in the Tula Mountains of Enderby Land. Plotted by Australian cartographers from aerial photos taken by ANARE in 1956, and named by ANCA for Frank Dungey. US-ACAN accepted the name in 1965.

Dungey, Francis George "Frank." b. early 1888, Feock, near Devoran, Cornwall, 4th of 10 children of laborer George Dungey and his wife Emily Pascoe. He went to sea, and was chief steward on the *Discovery* during the 1st half of BANZARE 1929–31. He returned to London on the *Bendigo*, from Melbourne, on June 25, 1930.

Dunikowski Ridge. 62°09' S, 58°11' W. A mountain ridge trending NW-SE, and rising to about 315 m NE of Legru Bay, between Wyspianksi Icefall and Stwosz Icefall, King George Island, at the Bransfield Strait, in the South Shetlands. Dick Barton, a Fid here in 1961, referred to it as Commando Ridge, but the name never seems to have been used again, although the name is noted on Birkenmajer's 1980 Polish map, which, more to the point, gives the new name Grán Dunikowskiego, applied by the Poles in 1980, for Xawery Dunikowski (1875–1964), Polish sculptor. Geological work had been done here by the Poles between 1977 and 1979. UK-APC accepted the translated name on April 3, 1984, and US-ACAN followed suit. As such, it appears in the British gazetteer of 1986. The British were the latest to replot this feature, in late 2008.

Grán Dunikowskiego *see* **Dunikowski Ridge**

Cape Dunlop. 77°14' S, 163°27' E. A rocky headland just W of Dunlop Island, and about 22 km SSE of Cape Roberts, along the Wilson Piedmont Glacier, on the coast of Victoria Land. First mapped by BAE 1907–09, and named by Shackleton as Rocky Point. Later renamed Dunlop Point, in association with the nearby island. Later still, the term cape was deemed more appropriate. US-ACAN accepted the name Cape Dunlop, and it appears in the 1958 NZ gazetteer.

Dunlop, Henry Joseph Long "Harry." b. Oct. 15, 1876, Belfast, son of Samuel Dunlop, the chief cashier of Harland & Wolfe, the famous shipbuilders, and his wife Dorothea Hamilton. After training at Harland & Wolfe, he became a ship's engineer, and was chief engineer on the *Ashburton* when, at Poplar, in London, on July 26, 1907, he signed on as chief engineer of the *Nimrod* during BAE 1907–09. He remained with the expedition until it returned home, and he was discharged at Poplar on Aug. 31, 1909. In 1912 he became general manager of the African Oil and Cake Mills Company, in Liverpool, and in 1914, in Liverpool, he married Ethel Jane Ward. He died on March 5, 1931, in Belfast.

Dunlop Island. 77°14' S, 163°30' E. Also called Terrace Island. A little rocky island, triangular in shape, about 2.5 km wide on its W side, and about 1.5 km long in a N-S direction, rising to a maximum elevation of about 20 m above sea level, close NE of Cape Dunlop, from which is is separated by a narrow channel 400 m wide, in McMurdo Sound, lying just off Wilson Piedmont Glacier and the coast of Victoria Land. First mapped by BAE 1907–09, and named by Shackleton for Harry Dunlop. US-ACAN accepted the name, and NZ-APC followed suit.

Dunlop Peak. 67°57' S, 62°28' E. Rising to 1330 m, it is the southern of the Smith Peaks, 1.5 km S of Mount Hordern, in the David Range of the Framnes Mountains, in Mac. Robertson Land. Photographed aerially by LCE 1936–37, and mapped (but not named) from these photos in 1946 by Norwegian cartographers. The feature has been passed by ANARE field parties since 1956, as they headed south. Named by ANCA on Oct. 11, 1960, for Ross Dunlop, cosmic ray physicist at Mawson Station in 1959. US-ACAN accepted the name in 1965.

Dunlop Point *see* **Cape Dunlop**

Dunn, James *see* **USEE 1838–42**

Dunn Glacier. 73°37' S, 165°43' E. A steep tributary glacier flowing N from the NW slopes of Mount Casey into Icebreaker Glacier, in the Mountaineer Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Robert Dunn, USN, commissaryman who wintered-over at McMurdo in 1967.

Dunn Spur. 86°21' S, 147°22' W. A prominent rock spur descending from Mount Blackburn, and extending for 8 km along the N side of Van Reeth Glacier, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Thomas H. Dunn (b. Aug. 10, 1939, Andover, Maine), who joined the U.S. Navy in Sept. 1957, and who was a VX-6 air crewman on photographic flights over Antarctica, during OpDF 64 (i.e., 1963–64), OpDF 66 (i.e., 1965–66), and OpDF 67 (i.e., 1966–67). He retired from the Navy in May 1987.

Dunraven Rocks. 71°34' S, 170°13' E. A long line of rocks in the sea, several miles to the N and W of Cape Adare, and "showing their black summits conspicuously against the white foam of the breakers." Discovered by Ross in 1841, and named by him for Windham Henry Quin, 2nd Earl of Dunraven and Mount-Earl (1782–1850). Lord Dunraven's title, before he succeeded his father as earl in 1824, was Viscount Adare. During BAE 1898–1900, Borchgrevink could find no trace of these rocks, and he would have seen them if they were there. He speculated that what Ross saw was a large, rotten, submerged mass of ice.

Duparc Rocks. 63°31' S, 58°50' W. A group of rocks in water, between 1.5 and 2.5 km off the coast, 5 km NE of Cape Roquemaurel, Trinity Peninsula. Surveyed by Fids from Base D in 1960–61, and mapped from these efforts. Named by UK-APC on Feb. 12, 1964, for Louis-Emmanuel Le Maistre Duparc (b. July 25, 1815, Bosc-Benard-Crescy, France), who set out as an élève on FrAE 1837–40, but was put ashore sick at Rio on Nov. 13, 1837, long before the expedition got to Antarctica. Given that this man was never in Antarctic waters (and never did anything Antarctican), it is odd that he should have been honored with a feature. US-ACAN accepted the name later in 1964.

Bahía Duperré *see* **Duperré Bay**

Baie Duperré *see* **Duperré Bay**

Duperré Bay. 64°27' S, 62°41' W. A bay indenting the SW extremity of Brabant Island for 5 km, immediately NE of Hulot Peninsula, between that peninsula and Humann Point, in the Palmer Archipelago. At its head it forms 2 clear and deep inlets, into which glaciers discharge. Discovered and roughly charted by FrAE 1903–05, and named by Charcot as Baie Duperré, for Vice Admiral Charles-Marie Duperré (1832–1914), of the French Navy. It also appears on French charts of 1911 as Baie Ch. Duperré and Baie de Ch. Duperré. On David Ferguson's chart of 1918 and on his map of 1921, it appears as Shackleton Harbour, named for Ernest Shackleton. This name was in use when Ferguson was doing his geological reconnaissance of the area in 1913, and had been named by either him or the whalers who were transporting him. It appears on a 1943 U.S. Hydrographic Office chart as "Duperré Bay (Shackleton Harbor)." It appears on a 1949 Argentine chart as Bahía Duperré, and that was the name accepted by the 1970 Argentine gazetteer, and also by the 1974 Chilean gazetteer. However, at some stage, the Argentines called

this bay Bahía Santa Marta. It was surveyed by Fids from the *Norsel* in April 1955, and photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Duperré Bay on Sept. 4, 1957, and it appears as such on a British chart of 1959. US-ACAN accepted the name in 1963.

Duphornhöhe. 71°37' S, 170°31' E. Heights at the W end of Devonshire Cliffs, on the E side of Adare Peninsula, on the coast of Victoria Land. Named by the Germans.

Dupnitsa Point. 63°03' S, 62°35' W. Forms the NE entrance to Hisarya Cove, 8.4 km NE of Cape James, on Smith Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for the town in SW Bulgaria.

Dupuis, Antoine-Armand. b. April 17, 1806, Moulins, France. Taken on at Valparaíso as the new cook on the *Astrolabe*, on May 29, 1838.

Morro Duque de Caxias *see* **Clement Hill**

Cerro Durán *see* **Mount Nemesis**

Punta Durán. 62°11' S, 58°53' W. The point marking the N of Ardley Cove, on the W side of Maxwell Bay, King George Island, in the South Shetlands. Named by the Chileans.

The *Durant*. U.S. ship DER-389, 1200 tons, 306 feet long, and capable of 21 knots, she was launched Aug. 3, 1943, by Brown's Shipbuilding Company, in Houston, Texas, and named for pharmacist's mate 3rd class Kenneth W. Durant, a Marine killed at Guadalcanal. She was commissioned into the U.S. Navy on Nov. 16, 1943, Capt. C.C. Knapp, U.S. Coast Guard, in command. She was in Antarctica in 1962-63, as an ocean picket ship, with 175 men and 15 officers, Lt. Cdr. Robert A. Kanak, skipper. She left Dunedin on Oct. 27, 1962, and assumed picket station on Oct. 30, 1962. She had to go back to Dunedin a day early to rush electrician Cousleneau to a hospital for acute appendicitis, but she set a record of 35 days without re-fueling. The *Rotoiti* replaced her. She was de-commissioned in 1964, and sold for scrap in 1974.

Dürbaumgletscher. 74°10' S, 164°15' E. A glacier due E of Bier Point, in Victoria Land. Named by the Germans.

Mount Durham. 85°33' S, 151°12' W. A mainly ice-free mountain, rising to 860 m between Leverett Glacier and Scott Glacier, at the E side of the mouth of Scott Glacier, it marks the NW limits of the Tapley Mountains, overlooking the Ross Ice Shelf, in the Queen Maud Mountains. Discovered by Larry Gould's Dec. 1929 geological party during ByrdAE 1928-30, and climbed in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35. Named by Byrd for Durham, N.H., home of Stuart Paine (q.v.). US-ACAN accepted the name in 1956.

Durham Point. 85°32' S, 151°12' W. A small rock spur which extends N from Mount Durham, at the NW end of the Tapley Mountains, in the Queen Maud Mountains, just to the E of where Scott Glacier flows into the Ross Ice Shelf. Visited in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35, and named in association with the mountain. US-ACAN accepted the name in 1956.

Mount Durnford. 80°58' S, 158°15' E. Rising to 2715 m (the Australians say about 2840 m above sea level), 8 km SE of Mount Field, in the Churchill Mountains, about 66 km W of Cape Douglas, on the W side of the Ross Ice Shelf, between the ice shelf and Byrd Glacier. Discovered by BNAE 1901-04, and named by Scott as Durnford Bluff, for Adm. Sir John Durnford (1849-1914), junior naval lord (from 1901) who helped the expedition. Re-mapped, re-defined, and re-named by NZGSAE 1960-61. US-ACAN accepted the name in 1965, and ANCA followed suit on May 18, 1971.

Durnford Bluff *see* **Mount Durnford**

Îles Duroch *see* **Duroch Islands**

Islotes Duroch *see* **Duroch Islands**

Roca Duroch *see* **Duroch Islands**

Rocher Duroch *see* **Duroch Islands**

Duroch, Joseph-Antoine. b. March 3, 1812, in Bastia, Corsica. He joined the Navy in 1828, and on Oct. 19 of that year became an "aspirant." On Oct. 30, 1831, after distinguishing himself at Bône, in Algeria, he was promoted to ensign, and, as such, was the junior surveying officer on the *Astrolabe* during Dumont d'Urville's FrAE 1837-40. He was promoted to lieutenant commander on Aug. 20, 1839, during the voyage. In 1840 he carried out a survey of Otago Harbour, in NZ, and, on June 11, 1853, he was promoted to capitaine de frégate. In 1860 he was harbormaster in Senegal, and was promoted to capitaine de vaisseau on March 4, 1861. He was still alive in mid-1884, living in Toulon.

Duroch Islands. 63°18' S, 57°54' W. A group of islands and rocks which extend for 5 km just NW of Cape Legoupil, on the N coast of Trinity Peninsula. They include Gándara Island, Kopaitic Island, Pebbly Mudstone Island, Silvia Rock, Acuña Rocks, the Cohen Islands, Islote Calderón, etc, i.e., all the islands between the Wisconsin Islands in the NE to Estay Rock in the SW, but not the Demas Rocks. The group was discovered and roughly charted by FrAE 1837-40, during 2 approaches to the coast on Feb. 27-28, 1838, and Dumont d'Urville plotted it as two groups—Îles Duroch and Îles Coupvent. As for the individual islands, he named only one of the larger ones, Rocher Duroch (which lay within the group he called Îles Duroch), for Joseph Duroch. This name was translated into English as Duroch Rock, and was often seen spelled (erroneously) as Durock Rock. Until 1946 the two groups were known in English as the Duroch Islands and the Coupvent Islands, but, that year, Fids from Base D re-charted the area, and found that there was no logical reason for the two groups, and so combined them, as the Duroch Islets, which is how they charted them. ChilAE 1947-48 did a thorough survey of the islands, but even so called them Roca Duroch (in the singular, a name accepted by the 1974 Chilean gazetteer). UK-APC accepted the name Duroch Islets on Nov. 21, 1949, US-ACAN followed suit in 1952, and that is how the name appears in the 1955 British gazetteer. Photographed aerially by FIDASE in 1956-57. The group appears on a 1953 Argentine chart as Islotes Duroch (they had rejected the awkward name Rocas Duroch y Coupvent), but on one of their 1957 charts as Islas Duroch. However, it was Islotes Duroch that was accepted by the 1970 Argentine gazetteer. The group was renamed Duroch Islands by US-ACAN in 1963, and it appears as such on a 1963 U.S. chart. UK-APC accepted that name on Feb. 12, 1964.

Duroch Rock *see* **Duroch Islands**

Durock Rock *see* **Duroch Islands**

Durrance Inlet. 73°50' S, 16°30' W. An ice-filled inlet, 8 km wide, 16 km N of Veststraumen Glacier, indenting the Princess Martha Coast for 20 km, and opening to the Riiser-Larsen Ice Shelf. Plotted by USGS from VX-6 photos taken on a reconnaissance flight over this area on Nov. 5, 1967. Named by US-ACAN in 1970, for Lt. (jg) (later Cdr.) Frank McDonald Durrance, Jr., USNR, navigator on that flight.

Cabo d'Ursel *see* **D'Ursel Point**

Cap d'Ursel *see* **D'Ursel Point**

Cape D'Ursel *see* **D'Ursel Point**

D'Ursel Point. 64°25' S, 62°20' W. Marks the extreme S side of the entrance to Buls Bay, on the SE coast of Brabant Island, in the Palmer Archipelago. Discovered on Jan. 30, 1898, by BelgAE 1897-99, who established a camp on the point (later commemorated by a plaque on Metchnikoff Point), charted by them between that date and Feb. 5, 1898, and named by de Gerlache as Cap d'Ursel, for Count Hippolyte d'Ursel, president of the Belgian Royal Geographical Society, and a supporter of the expedition. It appears on Dr. Frederick Cook's 1900 English language version of the expedition's map, as Cape d'Ursel. It appears as such on a 1942 British chart, but with the coordinates 64°21' S, 62°08' W, and Cape d'Ursel was the name (and with those coordinates) accepted by UK-APC on Sept. 20, 1955. US-ACAN accepted the same situation in 1956. However, the feature was re-charted by Fids from the *Norsel* in 1955, and photographed aerially by FIDASE in 1956-57, and on Sept. 23, 1960, UK-APC redefined it (and replotted it) as d'Ursel Point (sic). US-ACAN accepted this later that year, but as D'Ursel Point (sic). It appears as Cabo d'Ursel on a Chilean chart of 1947 and on a 1954 Argentine chart as Cabo D'Ursel (albeit misspelled as Cabo D'Urset). Both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the spelling Cabo d'Ursel. Note: The Spanish language does, of course, have the word "punta" for "point" and "cabo" for "cape," but the differences in usage between the two are not precisely as they are in the English language, and often (although not always) what is a "punta" in Spanish can quite validly be a "cape" in English, and vice versa.

d'Urville *see also* **Dumont d'Urville**

Cerro d'Urville *see* **d'Urville Monument**
Île d'Urville *see* **d'Urville Island**
Isla d'Urville *see* **d'Urville Island**
Mont d'Urville *see* **Mount d'Urville**
Monte D'Urville *see* **d'Urville Monument, Mount d'Urville**

Mount d'Urville. 63°31' S, 58°11' W. Rising to 1085 m (the Chileans say 1070 m), close N of the E end of the Louis Philippe Plateau, on Trinity Peninsula. Discovered and roughly charted on Feb. 27, 1838, by FrAE 1837-40, and named by them as Mont d'Urville, for Dumont d'Urville, leader of the expedition. In 1875 a German chart showed it as D'Urville Berg, and so does Friederichsen's chart of 1895. Two British charts, one of 1892 (the Dundee Whaling Expedition) and the other of 1901 (BAE 1898-1900), both show it as Mount D'Urville, and by 1908 the Argentines were showing it as Monte D'Urville, which is the name accepted by both the 1970 Argentine gazetteer of 1970 and the Chilean gazetteer of 1974, although the Argentines (to name but one country) often spell it with a small "d," which is the way it finally appeared in the 1991 Argentine gazetteer. On a British chart of 1942 it appears as Mount d'Urville, and that was the spelling accepted by UK-APC on Sept. 8, 1953, and the way it is spelled in the 1955 British gazetteer (in other words, the correct way). However, a Chilean chart of 1947 shows it as Monte de Urville (merely an aberration), and a 1948 Chilean sketch map shows it as Cono Capitán R. Llorente (a name never used), for Capt. Raúl Llorente Rodrigo (*see* **Cerro Llorente**). A Norwegian map of 1930 shows it as d'Urvillefjellet. The feature was photographed aerially by FIDASE in 1957, and surveyed from the ground by Fids from Base D in 1959-61.

D'Urville Berg *see* **Mount D'Urville**

d'Urville Canyon. 64°30' S, 137°00' E. A submarine feature off Adélie Land. Named for Dumont d'Urville.

d'Urville Island. 63°05' S, 56°20' W. About 27 km long, immediately NW of Joinville Island, from which it is separated by the Larsen Channel. It is the most northerly of the Joinville group, and the most northerly island S of the Bransfield Strait, off the Trinity Peninsula. Bransfield roughly charted it on its W coast in Feb. 1820. On Feb. 27, 1838, FrAE 1837-40 sighted it, but thought it was part of Joinville Island. It appears as such on their expedition map published in 1842. Charted as a separate island in Dec. 1902 by SwedAE 1901-04, and named by Nordenskjöld as Île d'Urville, for Dumont d'Urville. The island was surveyed by Fids from Base D between 1946 and 1954. US-ACAN accepted the name D'Urville Island (sic) in 1947, and that is how it appears on a 1947 USAAF chart. UK-APC accepted the spelling d'Urville Island on Sept. 8, 1953, and that is how it appears in the 1955 British gazetteer. There is a 1948 Chilean reference to it as Isla Henrique Mac Iver (sic), named for Enrique Mac Iver (1844-1922), Chilean politician. The island was photographed aerially by FIDASE 1956-57. The translated name Isla d'Urville was the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

d'Urville Monument. 63°25' S, 56°18' W. A conspicuous conical summit rising to 576 m, at the extreme SW end of Joinville Island, off the NE end of the Antarctic Peninsula. Discovered and charted on Dec. 30, 1842, by RossAE 1839-43, and named by Ross as d'Urville's Monument, in honor of the French navigator. That was the name used on the 1930 Discovery Investigations chart. By 1908 the Argentines were referring to it as Cerro d'Urville (which really means d'Urville Hill). A 1943 U.S. Hydrographic Office chart showed it erroneously as Mount Percy. The feature was identified and re-surveyed by Fids from Base D, between 1945 and 1947, and the name was altered slightly to d'Urville Monument. It appears that way on a 1949 FIDS chart, and that was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952 (except that the Americans rendered it as D'Urville Monument). It appears as d'Urville Monument in the 1955 British gazetteer. It appears on a 1951 Chilean chart as Monte de Urville, which was changed to Monte D'Urville in time for the 1974 Chilean gazetteer. Meanwhile, it had appeared as Monte D'Urville on a 1954 Argentine chart, but in the 1970 Argentine gazetteer, it appears as Monumento D'Urville.

d'Urville Sea *see* **Dumont d'Urville Sea**

D'Urville Wall. 75°16' S, 162°13' E. A great glacier-cut wall of granite, rising to 720 m, it forms the N wall of David Glacier near its terminus, in the Prince Albert Mountains of Victoria Land. Discovered by BAE 1907-09, and named by Shackleton for Dumont d'Urville. Both US-ACAN and NZ-APC accepted the name (with a capital "D').

d'Urvillefjellet *see* **Mount d'Urville**

d'Urville's Monument *see* **d'Urville Monument**

Bahía Duse *see* **Duse Bay**

Duse, Samuel August. b. Aug. 2, 1873, Stockholm. An artillery lieutenant with the Norrlands Regiment at Östersund from 1895 to 1917, he was cartographer on SwedAE 1901-04. He was one of the 3 forced to winter-over at Hope Bay in 1903. On July 14, 1907, at Östersund, he married Ellen Amalia Dahlen. He retired as a major, and wrote detective stories under the name of of Sam Sellén. His character, barrister Leo Carring, was the first Swedish fictional detective of note. He died in 1933.

Duse Bay. 63°34' S, 57°15' W. An indentation in the SE coast of Trinity Peninsula, between View Point and Cape Burd (the SW extremity of Tabarin Peninsula), it is bounded on the SW by Beak Island. Discovered and surveyed on Dec. 31, 1902, by J. Gunnar Andersson's party, in 1902-03, during SwedAE 1901-04, and named by Nordenskjöld as Duses Bukt, for Samuel A. Duse. It appears on Nordenskjöld's maps variously over the years as Duse Bukt and Bay of the Thousand Icebergs (a descriptive name). It appears, misspelled as Duce Bay, on Wilkins' map of 1929. The bay was re-surveyed by Fids from Base D in 1945, and it appears on a 1946 USAAF chart as Duse Bay, which was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. The Argentines built a refuge hut here, Bahía Duse Refugio, in 1953. The bay was re-surveyed again by Fids from Base D in 1956. The name Bahía Duse was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Duse Bukt *see* **Duse Bay**
Cabo Duseberg *see* **Duseberg Buttress**
Cap Duseberg *see* **Duseberg Buttress**
Cape Duseberg *see* **Duseberg Buttress**
Massif Duseberg *see* **Duseberg Buttress**

Duseberg Buttress. 65°10' S, 64°06' W. A conspicuous, dark, rocky cone, rising to about 500 m at the SW side of Mount Scott, on the E side of Penola Strait, on the Graham Coast, on the W coast of Graham Land. Discovered in 1898 by BelgAE 1897-99, and named by de Gerlache as Cap Duseberg, for H.T. Duseberg, Belgian consul in Copenhagen, and a supporter of the expedition. It appears as such on Lecointe's map of 1903. Roughly mapped in 1909 by FrAE 1908-10, it appears on their expeditions maps as Massif Duseberg, and also as Duseberg Rock. It appears as Cape Duseberg on a 1916 British chart, and on a 1943 U.S. Hydrographic Office chart Cape Duseberg is described as being topped by a cone 470 m high. That was the name accepted by UK-APC on March 20, 1955, and by US-ACAN in 1956. It appears on an Argentine chart of 1949 as Cabo Duseberg, and that was the name accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974. Photographed aerially by FIDASE in 1956-57, but the photos revealed no cap (point) here, only a rocky buttress, so, on July 7, 1959, UK-APC redefined it as Duseberg Buttress. US-ACAN followed suit with the naming in 1960. It appears as such on a British chart of 1960.

Duseberg Rock *see* **Duseberg Buttress**
Duses Bukt *see* **Duse Bay**

Dusky Ledge. 80°02' S, 156°57' E. An area of relatively level exposed rock, at an elevation of about 1100 m, that forms the N part of Dusky Ridge, in the Britannia Range. Named by US-ACAN in 2000, in association with the ridge. NZ-APC accepted the name on Feb. 20, 2001.

Dusky dolphin. Order: Cetacea (whales); sub-order: Odontoceti; family: Delphinidae. *Lagenorhyncus obscurus*, also called the white-sided dolphin, is found around the Antarctic Convergence. It is 5 feet long, and 220 pounds, with a rounded snout and short beak.

Dusky Mountains *see* **Dusky Ridge**

Dusky Ridge. 80°05' S, 157°02' E. An ice-free rock ridge, 3 km wide, extending N-S for between 11 and 14 km between Lieske Glacier and Hinton Glacier, or, to put it another way, between Byrd Glacier and Hatherton Glacier, in the Britannia Range. The Darwin Glacier

Party of BCTAE 1956-58 named it Dusky Mountains because of the almost complete lack of snow on its E faces and associated dry valleys. The name was accepted by US-ACAN in 1962, but, after remapping by USGS from ground surveys, and air photos taken between 1960 and 1962, it was re-defined by US-ACAN in 1966, as Dusky Ridge. ANCA accepted the name.

Dustin, Frederic G. "Fred." b. July 26, 1910, Revere, Mass., son of builder Arthur J. Dustin and his wife Agnes M. Riley. He joined the merchant marine, and was an able seaman on the *Jacob Ruppert* as it sailed south for ByrdAE 1933-35. He wintered-over as one of the shore party in 1934 at Little America. He was due to winter-over at East Base as a mechanic, during USAS 1939-41, but in March 1940 was transferred to West Base, being replaced at East Base by Dutch Dolleman. He took part in OpHJ 1946-47, and then, in 1955-56, during OpDF I, he was a commander on the *Glacier*. A member of the U.S. Antarctic Committee, and president of the Admiral Richard E. Byrd Polar Center, in Boston, on Nov. 22, 1968 he and 67 other persons landed at McMurdo station for a few hours, on *Polar Byrd I*, during a high-price "transpolar expedition" (round the world, including flights over both Poles), which he led under the aegis of the Polar Center. Capt. Hal Neff (former pilot of Air Force One) was the pilot, and the precedent of a commercial flight refueling at McMurdo was never allowed again. Dustin died on Nov. 24, 1987, in Boston.

Dustin Island. 72°34' S, 94°48' W. An island, 30 km long, consisting of a low, snow-covered dome and abrupt coastal cliffs, 24 km SE of Cape Annawan, it forms the SE limit of Seraph Bay, E of Thurston Island. Discovered by Byrd on a flight from the *Bear* on Feb. 27, 1940, during USAS 1939-41, and named by him for Fred Dustin. US-ACAN accepted the name in 1947.

Duthie, Alastair Simpson. b. Dunedin, NZ, the youngest son of Edward Fawns Duthie, secretary of the Otago Agricultural and Pastoral Association and his wife Madalene. When one of the Norwegian crew resigned from Ellsworth's expedition, Duthie replaced him on the 1934-35 expedition, as a crew member on the *Wyatt Earp*. He left the expedition at Montevideo, and arrived back in NZ on the *Ionic* in April 1935. He became a clerk in Dunedin, and by 1946 was living there with his first wife, Pierrete Germaine, and driving a truck for a living. The marriage didn't last, and by 1949 he was single again. Then he ran a store in Awarua, and finally became a launch master in Invercargill, marrying Charlotte Elizabeth. He retired to Otago, with Charlotte, and then moved to Nelson. He was still alive in 1981.

Cabo Duthiers *see* **Duthiers Point**

Duthiers Head *see* **Duthiers Point**

Duthiers Point. 64°48' S, 62°49' W. Forms the S side of the entrance to Andvord Bay and the NE entrance point of Aguirre Passage, on the Danco Coast, on the W coast of Graham Land. Discovered and charted in Feb. 1898, by BelgAE 1897-99, and named by de Gerlache as Cap Lacaze-Duthiers, or Cap La Caze Duthiers, for Félix-Joseph-Henri de Lacaze-Duthiers (1821-1901), French naturalist, and authority on the anatomy of mollusks. It appears on the expedition's maps, including an English-language version by Dr. Frederick Cook from 1900, on which it is shown as Cape La Caze Duthiers. Lester and Bagshawe, during their British Imperial Antarctic Expedition of 1920-22, called it Shag Point, for the colony of blue-eyed shags there. It appears on a 1943 U.S. Hydrographic Office chart as Cape Lacaze-Duthiers, on a Chilean chart of 1947 as Punta Canelo (i.e., "cinnamon point"), and on a 1949 Argentine chart as Cabo Lacaze-Duthiers, that latter name being the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Today, while the Chileans still use that name, the Argentine have shortened it to Cabo Duthiers. It was surveyed by Fids on the *Norsel* in April 1955, and renamed Duthiers Head, that name being accepted by UK-APC on Sept. 4, 1957. It appears as such on a British chart of 1959. Following aerial photography by FIDASE in 1956-57, it was renamed by UK-APC on July 7, 1959, as Duthiers Point. It appears as such on a 1961 British chart, and US-ACAN accepted that name.

Duthilleul, Jacques-Marie-Eugène Marescot *see under* **Marescot du Thilleul**

Punta Duthoit *see* **Duthoit Point**

Duthoit Point. 62°19' S, 58°50' W. A low, foul point, with 2 snow-free hills upon it, and with several islets and rocks lying off it, it forms the SE extremity of Nelson Island and the SW entrance of Maxwell Bay, SW of King George Island, in the South Shetlands. The point appears (unnamed) on old sealing charts going back to 1822. Surveyed by the Discovery Investigations in 1934-35, and named by them for Arthur Dennis Duthoit (1890-1957; his birth certificate says "Dennis" but his marriage certificate says "Denis"), a draftsman in the Hydrographic Office, at the Admiralty. It appears as such on their chart of that year, and also on a 1937 British chart. It was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year, and is the name that appears in the 1955 British gazetteer. It appears on a 1946 Argentine chart as Punta Duthoit, on an Argentine chart of 1954 (misspelled as Punta Duthon), and on one of their 1957 charts as Punta Dethoit, but it was the name Punta Duthoit that was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Tony Bancroft, of FIDASE, referred to it in 1959 as Point Duthoit.

Punta Duthon *see* **Duthiers Point**, **Duthoit Point**

Dutkiewicz Cliff. 62°10' S, 58°31' W. A mountain ridge and cliff rising to about 330 m above sea level, between Italia Valley and Dera Icefall, at Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for geomorphologist Leopold Dutkiewicz, a member of various Polish Antarctic expeditions. He was one of the first winterers-over at Arctowski Station, in 1977.

Dutoit *see* **Du Toit**

Duus, Ole Peder. b. April 24, 1881, Arendal, Norway, son of seaman Tellef Duus and his wife Thona. Able seaman on SwedAE 1901-04.

Mount Duvall. 78°22' S, 162°31' E. An ice-covered mountain rising to 2149 m, close W of Fisher Bastion, on the N side of Solomon Glacier, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1995, for Thomas L. Duvall, Jr., who, with John W. Harvey and Martin Pomerantz, conducted research in helioseismology at Pole Station from 1980.

Duyvis Point. 65°55' S, 64°35' W. On the NE side of Barilari Bay, 17.5 km SSE of Cape García, on the Graham Coast, on the W coast of Graham Land. First roughly charted by BGLE 1934-37. Mapped more accurately by FIDS cartographers working from aerial photos taken by FIDASE in 1956-57, and from ground surveys conducted that same season by Fids from Base J. Named by UK-APC on July 7, 1959, for Frits Donker Duyvis (1894-1961), Dutch documentalist, secretary of the International Federation for Documentation. In 1942 he wrote, "A document is the repository of an expressed thought. Consequently, its contents have a spiritual character." It appears on a British chart of 1960. US-ACAN accepted the name, and the sentiments, in 1971.

Dvergen *see* **Dvergen Hill**

Dvergen Hill. 72°13' S, 0°47' E. A small, isolated rock hill, or nunatak, between Nils Plain and Rømlingsletta Flat, 6.5 km N of Fuglefjellet in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Dvergen (i.e., "the dwarf"). US-ACAN accepted the name Dvergen Hill in 1966.

Dvergetunga. 69°55' S, 10°10' E. A tongue of ice projecting from the ice shelf the Norwegians call Nivlisen, N of the Schirmacher Hills, on the Princess Astrid Coast of Queen Maud Land. Name means "the dwarf's tongue" in Norwegian.

Dvořák Ice Rise. 71°17' S, 72°57' W. About 2.3 km in extent, it rises above the ice of Mendelssohn Inlet, in the N part of Beethoven Peninsula, in the SW part of Alexander Island. First mapped by Searle of the FIDS in 1959-60, from air photos taken in late 1947 by RARE 1947-48, and plotted by him in 71°17' S, 72°57' W. Named by UK-APC on March 2, 1961, for the Bohemian composer Antonín Leopold Dvořák (1841-1904), who wrote the *New World Symphony*. US-ACAN accepted the name later in 1961. It has since been replotted.

[1]**Gora Dvuglavaja**. 70°25°S, 66°27' E. A nunatak, on the W side of Mount McCarthy (which is the easternmost peak of the Porthos

Range), in the Prince Charles Mountains. Named by the Russians.

[2]**Gora Dvuglavaja**. 70°47' S, 67°48' E. A nunatak on the NW side of Glukhoy Glacier, in the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Gora Dvugorbaja *see* **Humphreys Ridge**

Dwarsdal *see* **Cross Valley**

DWE 1892-93 *see* **Dundee Whaling Expedition**

[1]**Mount Dwyer**. 70°11' S, 65°04' E. A mountain, 3 km SE of Mount Dovers, and 3 km E of Mount Peter, in the Athos Range of the Prince Charles Mountains. Plotted from ANARE air photos, and named by ANCA for Victor J. "Vic" Dwyer, radio operator-in-charge who wintered-over at Mawson Station in 1964.

[2]**Mount Dwyer** *see* **Berg Mountains**

Dwyer Escarpment. 70°38' S, 165°24' E. An ice-covered escarpment overlooking the N coast of Victoria Land, W of cape North, between that cape and Cooper Spur. Mapped by ANARE in 1962, and named by ANCA for Leonard Joseph "Len" Dwyer (1907-1962), director of the Australian Commonwealth Bureau of Meteorology, 1955-62, a member of the ANARE executive planning committee. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Dwyer Nunataks. 68°13' S, 58°27' E. A scattered group of low peaks and ridges, about 11 km in extent, and 6 km wide, 3.5 km SE of Mount Gjeita (what the Australians call Mount Banfield), in the Hansen Mountains, in Kemp Land. Plotted by Australian cartographers from ANARE air photos, and named by ANCA on July 29, 1965, for Vic Dwyer [*see* [1]**Mount Dwyer**], a member of one of the survey parties which carried out a tellurometer traverse passing through the Hansen Mountains in 1965. US-ACAN accepted the name in 1967.

Dybvadskog Peak. 79°19' S, 86°21' W. A sharp, somewhat isolated peak rising to 2180 m, the westernmost of those rising above the ice surface just W of the S part of the Founders Escarpment, in the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Olav Bjarne Dybvadskog (b. 1936), Norwegian glaciologist from the Norsk Polarinstitutt, a member of the USARP South Pole-Queen Maud Land Traverse of 1964-65.

Meseta Dyer *see* **Dyer Plateau**

Montañas Dyer *see* **Dyer Plateau**

Planicie Dyer *see* **Dyer Plateau**

Dyer, Henry Edward George. b. Oct. 8, 1934, Bath, son of William C. Dyer and his wife Doris G. Lethby. Senior radio operator on the 2nd and 3rd parts (i.e., 1956-58 and 1957-59) of the British Royal Society Expedition, and as such wintered-over at Halley Bay in 1957 and 1958. After the expedition, he left Cape Town on the *Kenya Castle*, and arrived back in London on Feb. 27, 1959. He moved to Australia in 1961, and worked on the P & O Line. He died on Oct. 20, 2009.

Dyer, James Glenn. Known as Glenn Dyer. b. May 10, 1908, Alamosa, Colo., son of railroad man and teacher James Wesley Dyer and his wife Beulah Bailey. After graduating in aeronautical engineering from Georgia Tech in 1933, he became a surveyor with the General Land Office, Department of the Interior. He was the cadastral engineer at East Base during USAS 1939-41, and leader of the sledging party from that base which traversed from Fleming Glacier SE across (what would become known as) the Dyer Plateau to the Welch Mountains, in Nov. 1940. He was a colonel in the Air Force, in Greenland during World War II, and on Dec. 11, 1945, he married Nona Richards. He was later in charge of Arctic operations for the U.S. Weather Bureau, retiring in 1974 after several years as director of overseas operations. In the 1956-57 summer season he was on the *Glacier*, and on Jan. 25, 1957, at Vincennes Bay, boarded the *Kista Dan* as U.S. observer with ANARE. He moved to Utah, and died in Logan (he was a member of the Church), on March 13, 1995.

Dyer, John Newton. b. July 14, 1910, Haverhill, Mass., son of shoe salesman Charles Newton Dyer and his wife Emma Wilson Emerson. He graduated from MIT in 1931, and was chief radio engineer on the shore party of ByrdAE 1933-35. In 1934 he fell 45 feet from an antenna pole at Little America II, but only scraped his shin. On his return he went to work for CBS in NYC, and on June 15, 1936, at Pittsfield, Mass, he married Priscilla Noble Feeley. He lived in North Clarendon, Vermont, and died on Jan. 5, 1996, in Shelburne, Vt.

Dyer Island. 67°36' S, 62°52' E. A small island just N of Entrance Island, between that island and Lee Island, in Holme Bay, off the Mawson Coast of Mac. Robertson Land. Plotted from 1956 ANARE air photos. Named by ANCA for Ralph Dyer, cook who wintered-over at nearby Mawson Station in 1960. US-ACAN accepted the name in 1965.

Dyer Plateau. 70°30' S, 64°25' W. A huge, broad, ice-covered upland of north-central Palmer Land, rising to an elevation of about 2250 m above sea level, to the E of Alexander Island. It actually ranges between 69°45' S and 71°40' S, and between 65°00' W and 63°30' W, and is bounded to the N by Fleming Glacier and Bingham Glacier, and to the S by the Gutenko Mountains. Photographed aerially and partially surveyed from the ground in 1940, by USAS 1939-41. Named for Glenn Dyer. The name appears on a 1943 U.S. Hydrographic Office chart, and US-ACAN accepted the name in 1947. The plateau was photographed aerially by USN, 1966-69. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land. It appears on a 1956 South American map as Meseta Dyer, but, on a 1966 Argentine map it appears as Montañas Dyer and on a 1966 Chilean map as Planicie Dyer.

Dyer Point. 71°53' S, 100°37' W. An ice-covered point, just W of Hughes Peninsula, on the N coast of Thurston Island. First plotted from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1960, for John N. Dyer.

Dyes, John W.W. *see* **USEE 1838-42**

Mount Dyke. 67°35' S, 49°25' E. Rising to 1100 m, about 6 km N of Mount Humble, in the NE part of the Raggatt Mountains, in Enderby Land. Plotted from ANARE air photos taken in 1956. Named by ANCA for Flying Officer Graham Dyke, RAAF pilot who wintered-over at Mawson Station in 1960. US-ACAN accepted the name in 1965.

Dyke Mountain. 78°20' S, 163°20' E. South of Walcott Glacier, in Victoria Land. Named by NZ-APC.

Dyke Point. 62°14' S, 58°57' W. A small point with outlying rocks which mark the volcanic dyke within the middle of a shallow, unnamed, bay, the point dividing the beaches into two, the 2 sides being offset by about 150 meters. It is located N of Halfthree Point, Fildes Peninsula, King George island, in the South Shetlands. About 1996, the Chileans named it Punta Doris, presumably for Doris Oliva Eklund [*see* [2]**Punta Doris**]. UK-APC accepted the name Dyke Point, rather than the proposed Doris Point. The British were the latest to replot this feature, in late 2008.

Dykeman Point. 71°33' S, 75°08' W. The snow-covered NW point of Pesce Peninsula, between Rameau Inlet and Verdi Inlet, on Beethoven Peninsula, Alexander Island. Mapped by USGS from USN air photos taken 1967-68, and from U.S. Landsat images taken in Jan. 1973. Named by US-ACAN, the name was accepted by UK-APC on May 13, 1991, and honors Cdr. Paul Richard Dykeman, USN, commander of VXE-6 from May 1981 to May 1982.

Dykes Peak. 77°13' S, 161°01' E. Rising to 2220 m, at the head of Victoria Upper Glacier, 6 km E of Skew Peak, in the Clare Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1947 and 1962. Named by US-ACAN in 1975, for geographer Leonard Henry Dykes (1914-2005), involved for many years with the successive co-ordinating committees within the U.S. Government.

Dyment Island. 74°08' S, 102°02' W. A small island, 8 km SW of the McKinzie Islands, in the inner-central part of Cranton Bay. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Donald I. "Don" Dyment (b. June 7, 1936, Union, Maine. d. Feb. 1, 2005), USN, who wintered-over as cook at Byrd Station, in 1967.

Dymond, Percy John "Jack." b. 1883, Stoke Climsland, Cornwall, son of copper miner John Dymond and his wife Sarah J. Spargo. Copper mining was not a romantic business, and John Dymond had to give it up, becoming a market gardener instead. Percy began his career as an ordinary farm laborer, but then followed his father into copper mining in nearby Callington. His uncle Jim had gone

to Greenland, in Michigan, to work on the copper mine there which, keen to attract lads like Percy, they gaily called Adventure Mountain. Percy left Liverpool on the *Oceanic* and arrived in New York on May 4, 1905, to give Adventure Mountain a shot. It didn't last long, and in August he was in Spokane, Wash., the great Northwest, working on a farm. He eventually moved to Seattle. He was a messman on the *Jacob Ruppert* for both halves of ByrdAE 1933-35, and, after the expedition, decided to stay in NZ, dying in Christchurch on Sept. 22, 1949, aged 66.

Dyna *see* **Dyna Hill**

Dyna Hill. 72°22' S, 0°40' E. A low, rounded, partly snow-covered ridge-like hill, 3 km W of Kvithovden Peak in the central portion of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Dyna (i.e., "the dune"). US-ACAN accepted the name Dyna Hill in 1966.

Dynamite Island. 68°11' S, 67°00' W. A small, low, rocky island about 150 m long, and trending in a NW-SE direction, in Back Bay, about 160 m E of Stonington Island, off the Fallières Coast, on the W coast of Graham Land. Surveyed by USAS 1939-41, and named Petrel Island by them, for the petrels seen here. It is seen as such on Glenn Dyer's 1941 expedition map, and on a 1946 U.S. Hydrographic Office chart of 1946, but on a 1947 Chilean chart as Isla Petrel. However, there was already another Petrel Island, in South Georgia (54°S), so Finn Ronne renamed it in 1948 as Dynamite Islet, for the dynamite he used to blast the *Port of Beaumont, Texas* out of the ice to the E of this island, in 1947, during RARE 1947-48. UK-APC accepted the name Dynamite Islet, on March 31, 1955, but on July 7, 1959, redefined it as Dynamite Island, and US-ACAN followed suit in 1963. It appears on a 1969 Chilean chart as Islote Petrel.

Dynamite Islet *see* **Dynamite Island**

Dyrdal Peak. 83°25' S, 51°23' W. Rising to 1820 m, at the SW extremity of the Saratoga Table, 3 km WNW of Fierle Peak, in the S part of the Forrestal Range, in the Pensacola Mountains. Mapped by USGS from USN air photos taken in 1964, and from their own ground surveys conducted during the Pensacola Mountains Project of 1965-66. Named by US-ACAN in 1968, for Frederick F. "Fred" Dyrdal (b. Nov. 10, 1917, Farnumsville, Mass. d. May 31, 2006, North Kingstown, RI), who joined the U.S. Navy in March 1942, and who was VX-6 aviation structural mechanic at Ellsworth Station in 1957, and the only man to get frostbite that winter at that station. He retired from the Navy in Dec. 1962. UK-APC accepted the name on Nov. 3, 1971.

Dzema Peak. 85°45' S, 138°00' W. Rising to 2570 m, 8 km WSW of Mount Ratliff, on the N side of the Watson Escarpment. Named by US-ACAN in 1967, for Lt. (jg) John N. Dzema, of Edwardville, Pa., who was with VX-6, at McMurdo in 1962-63 and 1963-64. On April 14, 1969, during the Vietnam War, Lt. Dzema was shot down by two MIGS over North Korea.

Mount Dzhalil'. 72°01' S, 14°36' E. A small mountain, a nunatak really, rising to 2510 m, in the N part of the Linnormen Hills, in the Payer Mountains, in the E part of the Hoel Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 aerial photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and named by the Soviets as Gory Musy Dzhalilja, for Musa Dzhalil', Tatar poet who died during World War II. US-ACAN accepted the name Mount Dzhalil' in 1970. The Norwegians call it Dzhalil'knausen.

Dzhalil'knausen *see* **Mount Dzhalil'**

Dziura Nunatak. 71°44' S, 161°15' E. An ice-free nunatak, rising to 1480 m, 3.2 km NW of Mount Remington, in the NW extremity of the Helliwell Hills. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Charles Stanley Dziura (b. March 4, 1930, NJ), USARP meteorologist at Pole Station in 1967-68, and again at Byrd Station in 1968-69, and for the winter-over of 1969, during which time he found the first troubling signs of a problem in the ozone layer (*see* **Ozone**).

Monte E. *see* **Mount Aciar**

E-66 *see* **D-66A**

E-Base *see* **Echo Base**

E. de Rothschild Island *see* **Rothschild Island**

Mount E. Gruening *see* **Mount Jackson**

Isla Eadie *see* **Eadie Island**

Eadie, Ione Elizabeth J. b. April 22, 1936, Barrow Hall, Shardlow, Derbyshire, younger daughter of James Alister Eadie (who would become deputy lieutenant of Staffordshire in 1949) and his wife Nereida Cynthia Carmen Clarke. She was one of the Duke of Edinburgh's lady clerks, and, along with fellow clerk, Miss A. Stevenson, became, on Dec. 31, 1956, one of the first two British ladies to cross the Antarctic Circle, while on board the *Britannia* during the royal yacht's world cruise. The pair made quite a stir when they walked into the FIDS hut at Admiralty Bay, on Jan. 4, 1957. She was on the *Britannia* when she met Captain John Harold Adams, RN, and on Oct. 6, 1961, in London, she became his second wife. They would have two sons and two daughters. She died in May 1998, in Basingstoke, and the captain (who had retired as a rear admiral) died in 2008.

Eadie Island. 61°29' S, 55°57' W. An island, 1.3 km long, midway between Aspland Island and O'Brien Island, in the easterly group (which the Chileans call Islas Piloto Pardo) of the South Shetlands. Roughly charted by Bransfield in Feb.-March 1820, and he named the three islands together as O'Brien's Islands. In Feb. 1821, von Bellingshausen charted the 3 islands as Ostrova Tri Brata (i.e., "three brothers islands"). In Dec. 1821, however, Powell, individualized two of them, Aspland's Island (by 1837 it was being called Aspland Island) and O'Brien's Island (*see* **O'Brien Island**). This left one brother unnamed, and that would later become Eadie Island. Eadie Island (still at that time unnamed) was shown on a 1937 British chart as part of Aspland Island, and the combined feature was called Sugarloaf Peninsula. However, in Jan. 1937, the Discovery Investigations surveyed this area, and set the matter straight. Lt. Leonard Hill on the *Discovery II* named this one for Donald Eadie (b. Sept. 15, 1883), dredging engineer and manager of the Melbourne Harbour Trust's dockyard at Williamstown. UK-APC accepted the name (and the new situation) on Sept. 8, 1953, and US-ACAN followed suit that year. The islands were photographed aerially by FIDASE in 1956-57. This feature appears on a 1947 Chilean chart as Isla Eadie, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. The British Joint Services Expedition visited the island in 1977. This island was last plotted by the UK, in late 2008.

Eady Ice Piedmont. 78°31' S, 165°20' E. Just S of Mount Discovery and Minna Bluff, in the piedmont area of Moore Bay, merging at its S side with the edge of the Ross Ice Shelf, in the Transantarctic Mountains. Mapped by USGS from ground surveys and from air photos taken by USN. Named by US-ACAN in 1963, for Capt. Jack Alfred Eady (b. Oct. 29, 1914, Washington, DC. d. Jan. 7, 2009, Atlantic Shores, Va.), who, in the U.S. Navy from 1936, flew Liberators during World War II, and was chief of staff and aide to the commander, U.S. Naval Support Force, Antarctica, from July 1, 1959 to April 11, 1962.

The *Eagle*. A small, 176-foot, 418-ton "wooden wall" steamer, the last of the Newfoundland sealers, built in Norway in 1902 as the *Sophie*, she was bought in 1903 by Bowring of St. John's, Newfoundland, as an Arctic sealer, and on arrival in Newfoundland had her name changed to the *Eagle*, the second Bowring sealer out of Newfoundland to bear this name. She had a clipper bow, a large barrel at her foretop, and was powered by an 82 NHP steam engine. In 1908 she was ice-strengthened by St. John's shipwright H.J. Taylor, and in 1924 became the first Newfoundland sealer to carry an aircraft for seal-spotting. Her skipper from 1934 to 1945 was Bobby Sheppard. In April 1944 she sailed from Newfoundland with 121 men, and caught 6697 seals. Immediately after this trip, she was chartered by the Colonial Office, to participate in Phase II of Operation Tabarin, i.e., the 1944-45 part. Captain was still Bobby Sheppard. He handpicked 27 men as crew: Capt. Abe Butler (1st mate), Robert Whitten (2nd mate), Tom Carrel (3rd mate and bosun; the real spelling of his name is Carroll), John

Hayward (carpenter and bosun), Charles Lewis (chief engineer), Frank Power (2nd engineer), Patrick Ring (3rd engineer), Nick Furlong (chief steward), Jim Harding (2nd steward), Harold Squires (radio officer and purser), 6 deckhands and seamen (Howard Currin, Alex Shano, Richard Pittman, John Murrin, James Fleming, and Thomas Kelly), 9 firemen and oilers (Victor Rumsey, Nick Cullen, Danny Lamb, Jackey Kean, William Bishop, Earl Hayes, Jimmy Hearn, Dinny Hearn, and John Power), Onslow Grandy (chief cook), and Maxwell Rowe (2nd cook). On Oct. 24, 1944, she left Newfoundland, bound for Port Stanley, in the Falkland Islands, arriving there 3 months later. She picked up the Tabarin men, and 25 huskies, and was used primarily to establish Hope Bay Station (Base D), in Feb. 1945. The vessel was severely damaged unloading stores at Hope Bay. Incidentally, there was only one flush toilet aboard, and that was for officers only. After the expedition, she made her way back to Montevideo, leaving there on June 24, 1945, bound for Rio, where, on or about Aug. 1, 1945, Nick Cullen had an accident and died. On Aug. 5, 1945, they left Bahia, Brazil, after burying Nick there, and headed home.

Caleta Eagle *see* **Eagle Cove**

Isla Eagle *see* **Eagle Island**

Eagle Automatic Weather Station. 76°25' S, 77°01' E. An Australian/Chinese AWS, at an elevation of 2824 m, installed on Jan. 27, 2005, in the interior of Mac. Robertson Land, and still operating in 2009.

Eagle Bluff. 62°08' S, 58°08' W. A basaltic bluff, rising to about 100 m above sea level, at the N edge of White Eagle Glacier, in the area of Lions Rump, on the W side of the entrance to King George Bay, King George Island, in the South Shetlands. Named by the Poles, on Sept. 1, 1999, in association with the glacier.

Eagle Cove. 63°24' S, 57°00' W. A small cove immediately to the SW of Seal Point, along the SW side of Hope Bay, Trinity Peninsula, at the NE end of the Antarctic Peninsula. Discovered and roughly mapped by J. Gunnar Andersson, during SwedAE 1901-04. David James, surveyed it in Jan.-Feb. 1945, from Hope Bay, during Operation Tabarin, and named it Handy Cove. It appears as such on his 1949 map. However, Andrew Taylor (q.v.) proposed the name Eagle Cove, for the *Eagle*, and that was the name accepted by UK-APC on Nov. 21, 1949. It appears as such on a 1950 British chart. US-ACAN accepted that name in 1952. It appears on a 1953 Argentine chart as Caleta Eagle, but by 1955 the Argentines had, rather misguidedly, translated it all the way, as Caleta Águila. That is how it appears on a 1957 Argentine chart, and it is what the Argentines call it today, despite the fact that the 1970 Argentine gazetteer went for Caleta Teniente Saborido [*see* [1]**Caleta Valenzuela**]. The Chilean gazetteer of 1974 lists it as Caleta Eagle.

Eagle Island. 63°40' S, 57°29' W. An island, 8 km long and 6 km wide, rising to a height of 560 m on its extreme NE side. It is the largest of the six islands that the Chileans collectively call Islas Águila (this group may also be what the Argentines call Islas Andersson—*see* **Islas Águila**), in the archipelago between Trinity Peninsula and Vega Island, and lies in the entrance to Duse Bay, in the Prince Gustav Channel. Probably first seen (although certainly not recognized as an island) by J. Gunnar Andersson's party during SwedAE 1901-04. Charted by Fids from Base D in Nov. 1945, and named by them for the *Eagle*. It appears as such on a British chart of 1949. UK-APC accepted that name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears as such in the 1955 British gazetteer. It appears as Isla Águila (the name translated into Spanish) on a Chilean chart of 1951, and in the 1974 Chilean gazetteer, which shows that the Chileans have always called it Isla Águila. However, the Argentines' name for this feature has varied over the years. On one of their 1953 charts it appears as Isla Eagle, but on one from 1959 it is Isla Santa Teresita (i.e., "island of little Saint Teresa"). Yet, on another, from 1963, it is Isla Águila.

Eared seals *see* **Seals**

Earle Island. 63°29' S, 54°47' W. A small island, 5 km SW of Darwin Island, marking the SW end of the Danger Islands, about 25 km SE of Joinville Island, just off the N tip of the Antarctic Peninsula. Hydrographic work was done here by the British on the *Endurance*, in 1977-78. Named by UK-APC on June 11, 1980, for painter Augustus Earle (1793-1838), artist on the *Beagle* in South American waters in the 1830s. The name was accepted by US-ACAN in 1993.

Earley, Neal E. *see* **Mount Early** (below)

Mount Early. 87°04' S, 153°46' W. A solitary volcanic cone, rising to 2720 m, 21 km N of D'Angelo Bluff, on the W side, and near the head of, Scott Glacier. Discovered in Dec. 1934 from nearby Mount Weaver by Quin Blackburn during ByrdAE 1933-35. Visited by George Doumani's Ohio State University geological party on Nov. 21, 1962. Named by US-ACAN in 1965, for Capt. (later Major) Neal Edward Earley [sic] (b. April 8, 1936, Bessemer, Ala. d. Sept. 1982, Chester, Va., of prostate cancer), U.S. Army, a member of the aviation unit that supported the USGS Topo East survey here in 1962-63. That year (Feb. 4, 1963) he was one of the first men ever to fly a helicopter to the South Pole (*see* that date under the entry **South Pole**). He later flew in Vietnam.

Early Bluff. 75°13' S, 113°57' W. A high bluff on the E side of Kohler Glacier, on the S side of the Kohler Range, at the point where Kohler Glacier drains northward from Smith Glacier, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by local scientists in the 1960s for Thomas Oren Early (b. 1943), USARP paleomagnetician on the Marie Byrd Land Survey Party of 1966-67. US-ACAN accepted the name in 1967.

Early Islands. 73°40' S, 101°40' W. A group of small islands just W of the Cosgrove Ice Shelf, in the SE corner of Ferrero Bay, in the Amundsen Sea. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1970, for Tommy Joe Early, Ohio State University biologist with the Ellsworth Land Survey of 1968-69.

Earnshaw Glacier. 68°45' S, 65°11' W. A glacier, 16 km long, flowing northeastward to the E of Norwood Scarp, and entering Maitland Glacier to the S of Werner Peak, at Mobiloil Inlet, in the E part of the Antarctic Peninsula. Photographed aerially on Sept. 28, 1940, by USAS 1939-41, and by Fids from Base E in 1947. Surveyed from the ground by FIDS in Jan. 1961, and plotted in 68°49' S, 65°17' W. Named by UK-APC on Aug. 31, 1962, for watchmaker Thomas Earnshaw (1749-1829), father of the modern marine chronometer. US-ACAN accepted the name in 1965. The feature has since been re-plotted.

Mount Earp *see* **Mount Wyatt Earp**

Earthquakes. Seismologically, Antarctica is the quietest of the continents (that is, when one is discussing earthquakes of any enormity). At least, according to records so far, and since IGY (1957-59), there have been 10 seismological stations operating in Antarctica. There have not been many major Antarctic earthquakes in modern times, although the continent is quite active tectonically, as was shown in 1981 when earthquake activity was picked up by the 3 seismic stations on Mount Erebus (*see* **Volcanoes**). During the summer of 1982-83 thousands of small earthquakes were recorded by these devices, sometimes as many as 650 a day. Major earthquakes are over 6.9, and large ones are 6.0 to 6.9. Some recent notable Antarctic earthquakes have been: **Jan. 4, 1925**: Deception Island. **Jan. 3, 1930**: Deception Island, when Wilkins was there. Huge holes were made in the ground. Two bridges at the Norwegian Tand whaling station were destroyed, and 4 men were thrown from the oil tank. One was killed. No one in Wilkins' crew was hurt. **1952**: A large earthquake was recorded in northern Victoria Land. **Aug. 11, 1970**: 60°36' S, 25°24' W. At sea. 6 on the Richter Scale. **Feb. 8, 1971**: On Deception Island. 6.3 on the Richter Scale. No volcanic activity. **Aug. 11, 1971**: In the Balleny Islands. 5.4 on the Richter Scale. **Feb. 25, 1972**: 60°36' S, 25°42' W. 6.1 on the Richter Scale. **Feb. 25, 1973**: 61°00' S, 37°54' W. At sea. 6.4 on the Richter Scale. **Oct. 6, 1973**: 60°48' S, 21°30' W. At sea. 7.0 on the Richter Scale. **Oct. 15, 1974**: Close to Leningradskaya Station. 4.9 on the Richter Scale. However, this may been an icequake, rather than a tectonic earthquake **Nov. 4, 1982**: 4.5 on the Richter Scale. This was the first recorded earthquake in the interior of the Antarctic continent, in 81°S, 37°E. **1985**: 4.7 recorded, in Queen Maud Land. **Jan. 12, 1995**: 4.7 recorded, in 81°S. **March 25, 1998**: Near the Balleny Islands. 8.1 on the Richter Scale. **Sept. 27, 1999**: 3.4 recorded, in 71°S, 23°E. **Nov. 4, 2007**: 5.8 on

the Richter scale, 105 km SSE of Casey Station. *See also* **Icequakes,** and **Seismology**.

Earth's crust *see* **Crust**

Cape Easson *see* **Cape Little**

East Aisle Ridge. 78°21' S, 163°23' E. It runs N-S to the E of Central Aisle Ridge. Named by NZ in 1980, for its position in relation to Central Aisle Ridge and to West Aisle Ridge, and keeping the names in association with The Stage, the natural amphitheatre on the N side of the lower Renegar Glacier. US-ACAN accepted the name in 1995.

East Antarctic Ice Sheet. 80°00' S, 80°00' E. An immense ice sheet overlying East Antarctica. It is now so high and vast that little atmospheric moisture nourishes its central part, and so it is a desert. It can reach heights of 11,500 feet and more (*see* **Highest points in Antarctica**). *See also* **East Antarctica**, and **Atmosphere**.

East Antarctica. Centers on 80°S, 80°E. Also called Greater Antarctica (especially by the British), or (geologically speaking) Gondwana Province (because of its geographical affinity with the Gondwana region of India; it may once have been joined to it. *See* **Gondwanaland**). East Antarctica is really a high, ice-covered plateau, on the Indian Ocean side of the Transantarctic Mountains, the ice cap being unstable, or mobile, and between 50 and 200 million years old. Geologically, though, the 3-5 billion-year-old pre-Cambrian shield bedrock beneath is stable, and this mass of land is the actual continental mainland of Antarctica, West Antarctica being geologically an archipelago of islands. It is only the thick ice sheets joining the two halves together that adds to the surface size of the continent. East Antarctica comprises Coats Land, Queen Maud Land, Enderby Land, Mac. Robertson Land, Wilkes Land, and Victoria Land. The name was coined by Edwin Swift Balch (*see* the Bibliography) in 1902, because by far the greater part of it lies in the Eastern Hemisphere. The name was used by Nordenskjöld a few years later. The name grew in popularity until IGY (1957-58) when the Transantarctic Mountains proved such a divide between the two halves of Antarctica, that the name was made official by US-ACAN in 1962. It was not until May 13, 1991 that UK-APC followed suit.

East Arm. 67°36' S, 62°53' E. A rocky peninsula which forms the E arm of Horseshoe Harbor, at Mawson Station, in Holme Bay, Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1947 by Norwegian cartographers. Photographed aerially by OpHJ 1946-47. First visited on Feb. 5, 1954 by an ANARE party led by Phil Law, and named descriptively by ANCA. US-ACAN accepted the name in 1965. *See also* **East Bay**.

East Balch Glacier *see* **Balch Glacier**

East Base. 68°11' S, 67°00' W. Built by Richard Black and his party at the N end of Stonington Island, in Marguerite Bay, off the W coast of the Antarctic Peninsula. It was the eastern base of USAS 1939-41. Black was in command, and Finn Ronne was second-in-command. For other personnel *see* **United States Antarctic Service Expedition 1939-41**. This site was selected on March 8, 1940. There were 6 prefabricated buildings. The main building had the galley, the leader's quarters, and the sick bay. The others were a science building with a meteorological tower, a machine shop with 2 generators, a small hut, a taxidermy shop, and a storage hut. When Ronne landed here again in 1947 for RARE he found that the base had been ravaged by other expeditions. He renamed it "Port of Beaumont, Texas, Base," and wintered-over there in 1947. Although East Base was the first year-round base on the Antarctic Peninsula, it has not been used since 1948.

East Bay. 67°36' S, 62°53' E. A little bay in Horseshoe Harbor, Holme Bay, in Mac. Robertson Land. Named by the Russians. The SCAR gazetteer has this as an individual feature, with no descriptor. However, it is so close in coordinates to Horseshoe Harbor, that it may well be the same feature.

East Beacon. 77°50' S, 160°52' E. The prominent E peak rising to over 2265 m above the plateau-type ridge that joins it to West Beacon, the whole forming the feature known as Beacon Heights, between Beacon Valley and Arena Valley, on the S side of Taylor Glacier, in the Quartermain Mountains of southern Victoria Land. Named by NZGSAE 1958-59. The name was accepted by US-ACAN in 1964.

East Budd Island. 67°35' S, 62°51' E. The eastern of the 2 larger islands at the N end of the Flat Islands, in Holme Bay, Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. They named the northern islands in the Flat Islands as Flatøynålane (i.e., "the flat island needles"). This island, plotted from ANARE ground surveys and aerial photographs, was named by ANCA on July 4, 1961, for Grahame Budd. US-ACAN accepted the name in 1965. This island, and West Budd Island, seem to form what the Russians call the Budd Islands.

[1]**East Cape**. 60°38' S, 45°11' W. About 2.3 km SE of Cape Bennett, it is the easternmost cape on the N coast of Coronation Island, in the South Orkneys. Discovered and roughly charted (but not named, it seems) by Powell and Palmer in Dec. 1821. Roughly charted by Petter Sørlle in 1912-13, but again, not named. Re-charted by personnel on the *Discovery II* in 1933, and they named it descriptively. It appears on their 1934 chart. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1952 Argentine chart as Cabo Este (which means the same thing), and that was the name accepted by the 1970 Argentine gazetteer.

[2]**East Cape**. The E side of the entrance to the Bay of Whales. When the Bay of Whales broke up, East Bay disappeared.

East Commonwealth Range *see* **Separation Range**

East Egerton. 80°50' S, 158°06' E. A prominent peak rising to 2815 m above sea level (the Australians say 2915 m), 3 km E of Mount Egerton (hence the name), in the Churchill Mountains. Mapped and named by NZGSAE 1960-61. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA accepted the name on May 18, 1971.

East Fork *see* **Ferrar Glacier**

East Germany. East German scientists were active in Antarctica from before the Berlin Wall went up, but mostly as members of Soviet teams. The country was ratified on Nov. 19, 1974 as the 18th signatory of the Antarctic Treaty. Hartwig Gernandt led the first East German expedition to Antarctica, in 1975-76, to the Russian Novolazarevskaya Station, and on April 21, 1976 they set up their own scientific station (finally named in 1987 as Georg Forster Base). East Germany was the 19th country to achieve Consultative status within the Antarctic Treaty system, on Oct. 5, 1987. The country no longer exists (*see* **Germany**).

East Gould Glacier *see* **Gould Glacier**

East Groin. 77°39' S, 160°57' E. A narrow rock spur forming the E wall of Flory Cirque, on the S side of the Asgard Range, in Victoria Land. Named descriptively by US-ACAN in 1976, in association with nearby West Groin (which had been named by BAE 1910-13).

East Lake. 67°00' S, 142°41' E. The smallest and most easterly of the lakes at Cape Denison, 990 m ESE of Mawson's Main Hut during AAE 1911-14. Named descriptively by Mawson, it is on official maps of that expedition. ANCA accepted the name on March 7, 1991.

East Melchior Islands. 64°19' S, 62°55' W. A group of small ice-covered islands and rocks, east of The Sound, in the Melchior Islands of the Palmer Archipelago. *See also* the **West Melchior Islands** (which are the islands W of The Sound) and the **Melchior Islands**. For a history of this group *see* **Melchior Islands**.

East Ongul Island. 69°01' S, 39°35' E. An island, 1.5 km long, immediately E of the N part of Ongul Island, in the NE side of the entrance to Lützow-Holm Bay, off the Prince Olav Coast. Showa Station is here. Photographed aerially by LCE 1936-37, and in 1946 the Norwegian cartographers using these photos mapped this feature as the NE part of Ongul Island. The Japanese, in 1957, discovered Nakano-seto Strait separating the 2 islands, and they re-defined this feature, calling it Higasi-Ongul-to (East Ongul Island). US-ACAN accepted the translated name in 1971.

East Pacific Rise *see* **Albatross Cordillera**

East Peak. 77°40' S, 166°22' E. Rising to 160 m, it is the highest peak on Inaccessible Island, in the Dellbridge Islands, in McMurdo Sound. Named by NZ-APC.

East Perrier Bay *see* **Perrier Bay**

East Quartzite Range. 72°00' S, 165°05' E. A range, 26 km long, forming a subordinate SW unit of the King Range, in the Concord

Mountains, between 8 and 13 km E of the West Quartzite Range, with which it runs somewhat parallel. Named by the Northern Party of the NZ Federated Mountain Clubs Antarctic Expedition 1962-63 for the distinctive geological formation here. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

East Russell Glacier *see* **Russell East Glacier**

East Stack. 67°05' S, 58°12' E. A coastal rock outcrop, rising to about 60 m above sea level, on the E side of Hoseason Glacier, 26 km SE of Edward VIII Bay, in Kemp Land. Discovered in Feb. 1936 by personnel on the *William Scoresby*, and named by them in association with West Stack. US-ACAN accepted the name in 1947, and ANCA followed suit on Aug. 20, 1957. The Norwegians call it Austskotet.

The *Eastella*. A Hull trawler, originally called the *Arctic Privateer*, owned by the Boyd Line. In March 1974, she was bought by the Ministry of Agriculture, Fisheries, and Food, to re-place the *Sir William Hardy*, and, after an 18-month refit she became the *G.A. Reay*, and was used by the British government for research into storage, handling, and processing at sea. In 1987 the MAFF sold her to J. Marr & Sons, and she was renamed the *Falklands Right*, and renamed again, on Jan. 13, 1988, as the *Eastella*. As such, she was used to take down the Korean Antarctic expeditions of 1989-90 and 1990-91 (skipper on both occasions was Peter Taylor). On Dec. 31, 1990, she was sold again, and in 1991 was renamed *Falklands Protector*. On May 3, 1993, she was sold again, to Aquanymph Navigation, of South Africa, re-registered in Malta, and renamed the *Aquanymph*. She was sold again on Jan. 31, 1996.

Easter Island Cordillera *see* **Albatross Cordillera**

Easter Island Rise *see* **Albatross Cordillera**

Easter Island Swell *see* **Albatross Cordillera**

Eastern Basin. One of the three N-S trending sedimentary basins underlying the Ross Sea, it runs E of the 180°meridian. *See also* **Victoria Land Basin** and **Central Basin**.

Eastern Claw. 62°54' S, 60°34' W. A steep cliff resembling a claw, W of Macaroni Point, on Deception Island, in the South Shetlands. Named by the Poles on Sept. 1, 1999.

Eastern-Indian Antarctic Basin *see* **South Indian Basin**

Eastern Plain *see* **Polar Subglacial Basin**

Eastface Nunatak. 78°42' S, 163°38' E. A small, ice-covered nunatak, with a conspicuous rock face on its E side, in Moore Bay, about 20 km S of Mount Morning, in Victoria Land. Mapped by USGS from ground surveys and USN air photos. Named descriptively by US-ACAN in 1963.

Easther Island. 69°23' S, 76°14' E. A roughly H-shaped island in the Larsemann Hills. Plotted in 1946 by Norwegian cartographers, from aerial photographs taken by LCE 1936-37, and named by them as Upsøy. Named by ANCA on Sept. 29, 1988, for mountain climber and photographer Robert "Rob" Easther (b. Mount Gambier, South Australia), former schoolteacher, and officer-in-charge at Davis Station in 1986, who helped establish Law Base. After 20 years with the Australian Antarctic Division (from 1985), during which he summered-over 4 times in Antarctica (1989 station manager; field leader in the Prince Charles Mountains in 1989; at Casey Station in 1996-97, as mediator between station leader and team; 1998-2000 at Cape Denison with the Mawson's Hut Foundation; led the 2000-01 expedition to Cape Denison), and made 7 round trip voyages to Antarctica (once as cargo supervisor and then 6 times as voyage leader), Mr. Easther retired to work for the Mawson's Hut Foundation. The Chinese call it Hutou Dao.

Mount Eastman. 65°10' S, 62°59' W. Rising to about 1200 m, it overlooks the head of Flandres Bay, 6 km S of Pelletan Point, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. Photographed aerially by FIDASE 1956-57. Named by UK-APC on Sept. 23, 1960, for George Eastman (1854-1932), photography pioneer of Eastman Kodak fame. The name was accepted by US-ACAN in 1965.

Eastman, Samuel *see* **USEE 1838-42**

The *Eastwind*. A 6600-ton U.S. Coastguard icebreaker, launched in 1943. Sister ship of the *Southwind*, these two Wind-class ships were the first true American icebreakers. Built by Western Pipe & Steel, San Pedro, Calif., in collaboration with the Coast Guard, these "Winds" were heavily armed and carried J25 amphibian aircraft. The *Eastwind* was in Greenland waters in 1945, and in 1949 collided with the tanker *Gulfstream*, but survived, which is more than 13 crewmen did. She took part in OpDF 1955-56 (under the command of Capt. Oscar Rohnke; skipper from July 31, 1954 to June 1, 1956; *see* **Rohnke Crests**), arriving at Christchurch, NZ, on Dec. 12, 1955. She then took *YOG-34* in tow to McMurdo Sound, arriving there on Dec. 27, 1955. She was back in Antarctic waters, supplying U.S. bases for OpDF 60 (1959-60; Captain Richard D. Schmidtman; skipper from May 1, 1958 to May 1, 1960; *see* **Mount Schmidtman**), OpDF 61 (1960-61; Captain Joe Naab; skipper from May 1, 1960 to June 1, 1962; *see* **Mount Naab**; that season the *Eastwind* became the first icebreaker to circumnavigate the Earth; the *Eastwind* left Boston on Oct. 24, 1960, and on Jan. 10, 1961, lost equipment in a 2-hour fire aboard, while in Antarctic waters), OpDF 62 (1961-62; Capt. Naab), OpDF 63 (1962-63; Capt. B.R. Henry; skipper from June 1, 1962 to Aug. 10, 1965; *see* **Henry Mesa**), OpDF 64 (1963-64; Capt. Henry), OpDF 65 (1964-65; Capt. Henry), OpDF 66 (1965-66; Capt. Mike Benkert; skipper from Aug. 10, 1965 to Sept. 10, 1967; *see* **Mount Benkert**), OpDF 67 (1966-67; Capt. Benkert). She was decommissioned on Dec. 13, 1968, sold in 1972, and scrapped. Warren Bonner wrote a very interesting history of the *Eastwind*.

Eastwind Glacier. 77°37' S, 168°16' E. It drains part of the S slopes of Mount Terror, flowing SW and coalescing with the E margin of Terror Glacier, where the 2 glaciers enter Fog Bay, in the SE part of Ross Island. NZ was the first to accept the name (for the *Eastwind*), on Nov. 12, 1999, and US-ACAN followed suit in 2000.

Eastwind Ridge. 76°36' S, 160°47' E. A broad ridge, 16 km long, and partly ice-covered, between Chattahoochee Glacier and Towle Glacier, in the Convoy Range. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1965, for the *Eastwind*.

Eastwood, William *see* **USEE 1838-42**

Easty, David Leonello. b. 1933, Orsett, Essex, son of Arthur Victor Easty and his wife Florence M. Kennedy. He became a doctor in 1960, and joined FIDS that year, as medical officer, wintering-over at Halley Bay Station in 1961. Professor of ophthalmology at the Bristol Eye Hospital.

Mount Eather. 70°29' S, 65°50' E. About 3 km S of Martin Massif, and about 6 km S of Mount Gardner, in the Porthos Range of the Prince Charles Mountains. Plotted from ANARE aerial photographs, and named by ANCA for Robert Hugh "Bob" Eather (b. April 22, 1941; from Canterbury, Vic.), aurora physicist who wintered-over at Mawson Station in 1963. In 1970 he became research professor at Boston College, in Massachusetts. He returned 5 times to Antarctica. US-ACAN accepted the name in 1967.

Eaton Nunatak. 75°10' S, 72°00' W. A prominent nunatak rising to about 1400 m, and which marks the SE extremity of the Merrick Mountains, in Ellsworth Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1966, for John W. Eaton, of Ferguson, Mo., USARP aurora scientist who wintered-over at Eights Station in 1964. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Pointe Ebba. 66°34' S, 139°35' E. A glacier tongue, NW of Astrolabe Glacier, at the extreme W of Baie Pierre Lejay, in Commonwealth Bay. Named in 1950 by the French expedition of that year, in memory of a glacier in Spitzbergen, explored previously by 3 members of the expedition.

Ebba Glacier *see* **Liotard Glacier**

Ebbe, Gordon Knudsen. b. July 1, 1916, Lincoln, Wisc., son of dairy farmer Wesley Ebbe and his wife Della, both children of Danish immigrants. He became a commander in the U.S. Navy, and was the first commander of VX-6, from June 1955 to June 1956. He made the 6th long-range exploratory flight over Antarctica, in an R5D, on Jan. 8-9, 1956, during OpDF I. Admiral Byrd was aboard, and they flew over the Pole and the Beardmore Gla-

cier. He died on Aug. 2, 1989, in Colorado Springs.

Ebbe Glacier. 71°03' S, 164°45' E. A large tributary glacier, about 100 km long, flowing NW from the Homerun Range, or rather, from the saddle S of Robinson Heights (Greenwell Glacier also flows NW from this divide; Tucker Glacier flows SE to the Ross Sea from the same saddle), and then WNW between, on one side the Everett Range, and on the other the Anare Mountains and the Wellington Mountains, or between Rennick Glacier and Cape Adare, in Oates Land, and enters Lillie Glacier. Mapped by USGS from ground surveys, and VX-6 air photos taken between 1960 and 1962, and plotted in 71°05' S, 165°00' E. Named by US-ACAN in 1964, for Gordon Ebbe. It has since been re-plotted.

Ebel Hills. 77°13' S, 160°51' E. A cluster of rugged hills, 2.5 km long and rising to about 2300 m above sea level, at the head of Frazier Glacier, abutting the rim of Webb Cirque, E of Skew Peak, in Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Michael Scott "Mike" Ebel (b. Sept. 23, 1956, Mich.), who worked at McMurdo for at least part of every year except one between 1988 and 2007, including 5 summers from 2003 as maintenance specialist responsible for the mechanical operation of the Crary Lab, at McMurdo. NZ-APC accepted the name on April 7, 2008.

Eblen Hills. 85°51' S, 133°28' W. A cluster of precipitous rock hills, rising to 1640 m, just N of the mouth of Colorado Glacier, where that glacier enters the W side of Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for James Carl Eblen (b. Feb. 20, 1931, Fort Leavenworth, Kans.), aviation machinist who summered at McMurdo in 1958-59, wintered-over at McMurdo in 1959 (he left Antarctica in Oct. 1959, for the USA), and did several summer seasons at McMurdo after that, as a C-130 flight mechanic—1960-61, 1961-62, and 1964-65. He was based in Christchurch, NZ, in 1965-66 and 1966-67, in the latter season making a brief trip to McMurdo to bring back Billy Bridger's airplane (Mr. Bridger was marrying a NZ girl). He was the first president of OAEA (Old Antarctic Explorers' Association).

Ebon Pond. 78°11' S, 165°11' E. In the SW extremity of Brown Peninsula, in Victoria Land. First studied by Troy L. Péwé, U.S. geologist, in 1957-58, and named by him for the black (ebon) volcanic terrain entirely surrounding the pond. US-ACAN accepted the name in 1960.

Ebony Ridge. 83°46' S, 172°46' E. A coastal ridge, 8 km long, running in a S direction between Airdrop Peak and Mount Robert Scott, at the N end of the Commonwealth Range. The highest point on it is Mount Kathleen. The ridge consists of dark, metamorphosed greywacke, contrasting sharply with the predominant brown ocher of the weathered surface of the granitic intrusions which form the nearby Mount Kyffin and Mount Harcourt. Hence the name given by the NZ Alpine Club Antarctic Expedition of 1959-60. US-ACAN accepted the name in 1966.

Ebony Wall. 63°55' S, 59°09' W. A dark, nearly vertical, rock wall cliff, 3 km long, and rising to 400 m (the Chileans say 300 m, and the British say about 1100 m), at the head of Pettus Glacier, 20 km SE of Cape Kjellman, and forming part of the W escarpment of the Detroit Plateau, near the base of Trinity Peninsula, at the Davis Coast, on the Antarctic Peninsula. Charted and named descriptively by Fids from Base D in 1948. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It was photographed aerially by FIDASE in 1956-57, and appears on British charts of 1961 and 1962. It appears on a 1962 Chilean chart as Muralla de Ébano (which means the same thing), and that was the name accepted by the 1974 Chilean gazetteer.

Ebosi-ike. 69°01' S, 39°35' E. One of the small lakes on East Ongul Island, in Lützow-Holm Bay, off the Prince Olav Coast. Mapped by Japanese cartographers from ground surveys conducted by JARE 1957, and named by them on June 22, 1972. Ebosi was a headgear worn by Japanese adults in ancient times.

ECARE *see* **Teniente de Navío Ruperto Elichiribehety Station**

Echelmeyer Ice Stream. 79°10' S, 150°00' W. An ice stream flowing W to the Shirase Coast, to the N of MacAyeal Ice Stream. At first it was called Ice Stream F (*see* **Macayeal Ice Stream** for further details), and in 2003 US-ACAN changed the name to honor Keith Alan Echelmeyer (b. Aug. 14, 1954, Denver, Colo. d. Oct. 2, 2010, Fairbanks, of a chronic brain tumor), of the Geophysical Institute, at the University of Alaska, at Fairbanks (1984-2005), who studied the flow of ice streams in Marie Byrd Land in 1992-93 and again in 1994-95. NZ-APC accepted the name on May 15, 2003.

Puerto Echeverría *see* **New Plymouth**

Ensenada Echeverry. 64°50' S, 63°33' W. A cove in the central W part of the N coast of Doumer Island, opening into Neumayer Channel, in the Palmer Archipelago. Named by the Chileans for Héctor Echeverry, marine biologist on the *Angamos* during ChilAE 1950-51. The Argentines call it Ensenada Sarandí.

Echinoids. Sea urchins. Marine invertebrates that lie on the sea bed near the shore (*see* **Fauna**).

Mount Echo *see* **Echo Mountain**

Echo Base. Also called E-Base. 70°18' S, 2°24' W. South African base built on the Fimbul Ice Shelf, near Sanae Station, in 1985, as an emergency (hence the name; E for Emergency) and logistical base. During the summer season of 1995-96 a man from the working party here died in a blizzard. It is open every summer.

Echo Canyon. 84°38' S, 116°10' W. A canyon, NE of Tuning Nunatak, in the Ohio Range, at the NE end of the Horlick Mountains. Named by NZ.

Echo Mountain. 60°37' S, 45°41' W. A conspicuous mountain, rising to 795 m, it surmounts the W side of Laws Glacier, close N of Cragsman Peaks, E of Norway Bight, on Coronation Island, in the South Orkneys. Surveyed by Fids from Signy Island Station in 1948-49, and so named by them for the echo experienced in this part of Laws Glacier. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. Further surveyed by Fids from Signy in 1956-58. The Russians have a tendency to refer to it as Mount Echo (so we are told).

Ilôt de l'Échouage *see under* **L**

Cabo Eckener *see* **Eckener Point**

Eckener Point. 64°26' S, 61°36' W. Marks the NE side of the entrance to Charlotte Bay, on the Danco Coast, on the W coast of Graham Land. First roughly charted by BelgAE 1897-99. Photographed from the air by FIDASE in 1956-57, and surveyed from the ground by Fids from Portal Point in 1957-59. Named by UK-APC on Sept. 23, 1960, for Hugo Eckener (1868-1954), German airship pioneer, whose Graf Zeppelin (with him at the wheel) made more than 600 flights, including a major one over the Arctic in 1931. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Cabo Eckener.

Eckhörner *see* **Eckhörner Peaks**

Eckhörner Peaks. 71°31' S, 11°27' E. A series of about 6 peaks that form the N wall of Schüssel Cirque, in the north-central part of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially, by GermAE 1938-39, and named descriptively as Eckhörner (i.e., "corner peaks"). US-ACAN accepted the name Eckhörner Peaks in 1970. The Norwegians call them Hjørnehorna.

Eckins Nunatak. 85°07' S, 175°51' W. A small, isolated nunatak, 8 km NE of Matador Mountain, in the E part of Shackleton Glacier. Named by US-ACAN in 1966, for Hank John Eckins, USARP meteorologist who wintered-over at Pole Station in 1961.

Eckman Bluff. 74°47' S, 110°22' W. An angular bluff, mostly ice-covered but with a steep SE rock face, rising to about 350 m above sea level, in the S part of Jones Bluffs, on Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken in 1966. Named by US-ACAN for Cdr. James F. Eckman, of the U.S. Coast Guard, engineer officer on the *Burton Island*, 1970-71, executive officer on the same ship, 1975-76, and ship operations officer on the staff of the commander, Naval Support Force, Antarctica, 1977-78 and 1978-79.

Eclipse Point *see* **Aguda Point**

Eco Nelson. 62°15' S, 58°59' W. A permanently-manned international base, the only privately-owned house in Antarctica, built as a primitive wooden hut for 2 persons, with adjacent huts, on Stansbury Peninsula, on a rocky beach, 100 meters from the shore, at the foot

of a cliff, on Nelson Island, in the South Shetlands, in 1989, by Czech writer and mountain climber Jaroslav Pavlicek who, as head of this private expedition, was transported with his team to Antarctica by the Russians (and would be again, for the next several seasons). It was opened on Feb. 26, 1989, as Vaclav Vojtech Base, named after Vaclav Vojtech, the first Czech in Antarctica. **1988-89 summer**: Dr. Pavlicek (leader). **1989 winter**: Martin Kriz (leader). **1990 winter**: 3 men, led by Dr. Pavlicek. **1990-91 summer**: Dr. Pavlicek (leader). **1991 winter**: 3 men, led by Jaroslav Fous. **1991-92 summer**: Dr. Pavlicek (leader). **1992 winter**: 3 men, led by Petr Lumpe. **1992-93 summer**: Petr Lumpe (leader). At the end of this summer, the station was closed. Then nothing for a few years. In 1996-97 the South Koreans took the Czechs down again, and the name of the station was changed to Eco Nelson. The main hut had a hallway, kitchen, pantry, and dining room, with an office cum radio room, and bedroom, at the back. A minimal-impact concept, power was generated mainly by wind-turbine, and there was a wood-burning stove in the lounge. All waste was removed from Nelson Island. **1996-97 summer**: Radek Forman (leader). A small yacht, the *Naxos*, was used to get them around locally. **1997 winter**: Jan Mráz (leader).

Ecology Glacier. 62°11' S, 58°29' W. A large glacier, an outlet of the Warszawa Icefield, it flows NE into Admiralty Bay, N of Llano Point and SE of Point Thomas, or (to put it another way) between Rakusa Point and Llano Point, on King George Island, in the South Shetlands. Named by the Poles in 1980, after the Institute of Ecology, at the Polish Academy of Sciences (they organized Arctowski Station). UK-APC accepted the name on July 8, 2003, and US-ACAN followed suit that year. This glacier was last plotted by the UK, in late 2008.

Economy. Until recently the two economies in Antarctica were whaling and sealing. Now Antarctica exports mainly scientific findings. Tourism seems to be proving an economy of sorts (the bases that allow tourists are raking it in by selling souvenirs, etc). Then there is the on-again, off-again concern of the minerals. When technology reaches a stage where it can dig the minerals out of the frozen continent, the Antarctic Treaty may well receive its first real test (greed). Krill fishing is limited because it has proved difficult to market, and also because it is supposedly protected by CCAMLR. Ice (and, therefore, non-salt water) is abundant to the point that Antarctica contains 90 percent of the world's ice, but transportation costs to the civilized parts of the world would be too high to make exporting the ice economical — as of 2009. If that problem can be overcome, Antarctica may shrink in size dramatically over the next few millennia, and also become a more hospitable place (and that's not taking any other possible shrinking phenomena into account). Could this be the colony of the future for mankind?

Ecuador. On Feb. 27, 1967 the Ecuadorian constituent assembly claimed the wedge of Antarctica between 84°30' W and 96°30' W. This claim was not supported by the government. The country was ratified as the 37th signatory of the Antarctic Treaty on Sept. 15, 1987. In 1987-88 the Ecuadorians sent an oceanographic expedition to Bransfield Strait on the *Orión*, and they built a hut (República del Ecuador Refugio) on Point Hennequin, King George Island, in the South Shetlands. PROANTEC (Programa Antártico Ecuatoriano) was set up in 1988, to handle the country's Antarctic involvement. The second Ecuadorian expedition was in Jan. 1990. On Nov. 19, 1990 Ecuador gained consultative status within the Treaty system. Ecuador has a scientific station, Vicente (also known as Maldonado, but *see* **Pedro Vicente Maldonado Station**), and continued to operate the ship *Orión* in support, as well as for oceanographic research. Below are the Ecuadorian Antarctic Expeditions (EcAE).

Ecuadorian Antarctic Expeditions. These are the expeditions (EcAE). **EcAE 1987-88**. On Dec. 1, 1987, the *Orión* steamed out of Guayaquil, with 60 persons aboard, including officers, crew, expeditioners, and an invited Brazilian naval officer. On the way down to Antarctica, at Valparaíso, they picked up two Chilean officers. Leader of the expedition was head scientist Hernán Moreano Andrade. They built Repúblicla del Ecuador Refugio. **EcAE 1989-90**. Jan. 1990. The first Ecuadorian expedition in 2 years, this one was led by Homero Arellano, again on the *Orión*. República del Ecuador Station was opened for the summer on King George Island. On March 2, 1990, they established Base Científica Pedro Vicente Maldonado (known as Vicente Station, or Maldonado Station). **EcAE 1990-91**. Jan. 1991. The ship used was the *Yelcho*. Leader was Fernando Zurita Fabre. They studied geology, medicine, ecology, and meteorology, and fixed up the exterior of Vicente Station. **EcAE 1991-92**. The expedition left Ecuador on the *Piloto Pardo*, in Jan. 1992, led by Fausto López. **EcAE 1993-94**. The first Ecuadorian expedition in 2 years, this one was led by Arturo Romero Velásquez, on the *Piloto Pardo* and the *Galvarino*. **EcAE 1994-95**: In Jan. 1995, the personnel, led by Humberto Gómez Proaña, were flown in to Vicente by aircraft, and supplied by Chilean ships. **EcAE 1997-98**. The first Ecuadorian Antarctic expedition since 1994. Again, the expedition sailed on the *Orión*, and the leader was José Olmedo Morán (former skipper of the *Orión*, and now a commodore). Rodney Martínez was scientific leader. **EcAE 2000-2001**. The first Ecuadorian Antarctic expedition since 1998. Víctor Yépez led this one. **EcAE 2003-04**. This one, led by Rafael Cabello, was the 9th Ecuadorian expedition to Antarctica, and the first since 2001. Geologist Essy Santana was chief scientist. 22 expeditioners arrived in Antarctica on Dec. 22, 2003. Vicente Station was covered in ice.

The *Écureuil-Poitou-Charentes II*. A 60-foot French round-the-world yacht, skippered by Isabelle Autissier (b. 1956), which visited the South Shetlands and the Antarctic Peninsula in 1994-95, and which was badly damaged.

The *Ed Sweeney*. Twin-engine Beechcraft C-45 airplane, the photographic plane for RARE 1947-48. It was loaded aboard the *Port of Beaumont, Texas*, at Balboa, Panama, as a substitute for the original Beechcraft which had fallen into the dock at Beaumont, Texas, as it was being loaded onto the ship. Test flown in Antarctica on Sept. 30, 1947. Named by Ronne for Cdr. Edward C. Sweeney, USNR, a contributor to the expedition.

Edbrooke Hill. 77°24' S, 160°38' E. Rising to 2100 m above sea level, 100 m above the adjacent plateau ice, which diverges at this hill to become the NE-flowing Haselton Glacier and the E-flowing Huka Kapo Glacier, at the extreme W end of the Apocalypse Peaks, in Victoria Land. Named by NZ-APC on Sept. 12, 2005, for Steven William "Steve" Edbrooke, the NZGS geologist who worked on mapping coal measures in the area of Upper Wright Valley, Shapeless Mountain, and Mistake Peak, in 1982-83, and also on mapping in the area of Upper Wright Valley, the Clare Range, and the Willett Range, in 1992-93. US-ACAN accepted the name in 2006.

The *Edda*. A 128-ton Norwegian whale catcher, built in 1908, and owned by Bryde & Dahl, used for work out of Godthal, South Georgia from the 1908-09 season. She also worked in the South Shetlands. She was later sold, and worked out of South Africa.

Eddy Cirque *see* **Drifter Cirque**

Eddy Col. 63°26' S, 57°06' W. A steep-sided rocky col, at an elevation of 460 m, between Mount Taylor and Blade Ridge, 2.5 km SW of the head of Hope Bay, Trinity Peninsula. Surveyed and named in 1954-56 by FIDS. The wind direction creates eddies in this col as it changes constantly. UK-APC accepted the name on Sept. 4, 1957, and it appears on a British chart of 1961. US-ACAN accepted the name in 1963.

Eddy Point. 62°14' S, 58°58' W. A small point on the S side of Fildes Peninsula, 0.8 km W of Halfthree Point, on King George Island, in the South Shetlands. Charted and named by the personnel on the *Discovery II* in 1934-35. It is used as a reference point for finding the rocks in Fildes Strait. It was photographed aerially by FIDASE in 1956. UK-APC accepted the name on Sept. 23, 1960, and US-ACAN followed suit that year. It appears on a 1964 Argentine map as Cabo Andrada (however, *see* **Rip Point**). This feature was last plotted by the UK, in late 2008.

(The) (Las) Eddystone *see* **Eddystone Rocks**

Île Eddystone *see* **Eddystone Rocks**

Islas Eddystone *see* **Eddystone Rocks**

Rocas Eddystone *see* **Eddystone Rocks**

Rochers Eddystone *see* **Eddystone Rocks**

Eddystone Island *see* **Eddystone Rocks**

Eddystone Rock *see* **Eddystone Rocks**

Eddystone Rocks. 62°36' S, 61°23' W. Two

rocks in water, extending in a NE-SW direction for 5 km, W of New Plymouth, and 7 km WSW of Start Point, on Livingston Island, in the South Shetlands. Charted by Robert Fildes in 1820-21, and named by him as The Eddystone, after the rock of that name off Plymouth, in England. Powell's 1822 chart has it as Eddystone. Fildes' 1827 chart has it as Eddystone Rock. Charcot's map of 1912 shows it as Île Eddystone, and a 1929 British chart shows it as Eddystone Island. The Discovery Investigations re-charted the feature in 1929-31, and pluralized it, and it appears on their chart of 1933 as Eddystone Rocks. By 1937 the French were referring to it as Rochers Eddystone, and it appears on an Argentine map of 1946 as Rocas Eddystone, and that is the name the Argentines still use for this feature, even though on 1957 maps it appeared variously as Rocas Eddystone, Las Eddystone and Islas Eddystone. US-ACAN accepted the name Eddystone Rocks in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955, and on a British chart of 1962. It appears in the Chilean gazetteer of 1974 as Rocas Eddystone. This feature was last plotted by the UK, in late 2008.

Glaciar Edén *see* **Eden Glacier**

Île Eden *see* **Eden Rocks**

Isla Edén *see* **Eden Rocks**

Eden Glacier. 66°12' S, 63°15' W. A glacier, 8 km long (the Chileans say 16 km), it flows in a southerly direction into the head (i.e., the N side) of Cabinet Inlet, NW of Lyttelton Ridge, on the Foyn Coast, on the E coast of the Antarctic Peninsula. In late 1947 RARE photographed it aerially, and in December of that year Fids from Base D surveyed it from the ground, charted it, and named it, for British politician, Anthony Eden (1897-1977), a member of the War Cabinet which created Operation Tabarin. He was later prime minister (1955-57). UK-APC accepted the name on May 23, 1951, and US-ACAN followed suit in 1952. It appears on a 1954 British chart, and in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Glaciar Edén, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Eden Island *see* **Eden Rocks**

Eden Isle *see* **Eden Rocks**

Eden Islet *see* **Eden Rocks**

Eden Rocks. 63°29' S, 55°40' W. Rocks in water, rising to about 90 m, just off the E end of Dundee Island, S of Joinville Island, off the N end of the Antarctic Peninsula. RossAE 1839-43 reported a small island W of Cape Purvis, on Dec. 30, 1842, roughly charted it in 63°35' S, 55°42' W, and called it Eden Islet, for Capt. (later Adm.) Charles Eden, RN (1808-1878). In Jan. 1893, DWE 1892-93 saw it, and named it Bass Rock, for the rock of that name in the Firth of Forth, in Scotland. It appears as "Eden Island (Bass Rock)" on Capt. Robertson's expedition chart of 1893. It appears as Eden Island on a U.S. Hydrographic Office chart of 1894, and also on a 1948 British chart. Charcot refers to it as Île Eden on one of his 1912 maps, and all interested countries translated the name according to their own language. It appears on a 1930 British chart as Eden Isle. ArgAE 1952-53 descriptively named it Islote Dos Lomos (i.e., "islet with two ridges"), and it appears as such on their 1953 expedition chart. A Dec. 1953 survey by Fids from Base D, however, proved it to be two islands close together, and this was confirmed by aerial photos taken by FIDASE in 1956-57. It appears on an Argentine chart of 1956 as Islotes Dos Lomos (i.e., in the plural), and that was the name accepted by the Argentine gazetteer of 1970. UK-APC accepted the name Eden Rocks on Sept. 4, 1957, and that name appears on a British chart of 1962. US-ACAN followed suit with the British naming in 1963. The Chilean gazetteer of 1974, apparently either not up to speed or doubtful, accepted the name Isla Edén (and there was an element of doubt, as reflected in the American gazetteer's phrase "it was reported that the feature consists of two rocks lying close together"). The larger one is sometimes called Eden Island and the smaller one is sometimes called Bass Rock. *See also* **Baldred Rock**.

Eder Island Automatic Weather Station. 66°57' S, 143°56' E. An Australian AWS, at an elevation of 52 m, installed on Aug. 9, 1999 at Commonwealth Bay, and removed on Oct. 19, 2000.

Bahía Edgall *see* **Edgell Bay**

Islote Edgardo. 64°50' S, 64°31' W. An islet, 2220 m E of Buff Island, near the W mouth of Bismarck Strait, S of Anvers Island, in the Palmer Archipelago, it is one of the two tiny islands comprising the Walsham Rocks (the other being Islote Jorge). *See* **Walsham Rocks** for more detail.

Edge Glacier. 82°29' S, 51°07' W. A small, cliff-type glacier flowing northward from the Sallee Snowfield into Davis Valley, in the NE part of the Dufek Massif, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their 1965-66 Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Joseph L. Edge (b. Jan. 15, 1930, Cherokee Co., Ala.), who joined the U.S. Navy in Jan. 1948, and who was a VX-6 photographer during OpDF 63 (i.e., 1962-63) and OpDF 64 (i.e., 1963-64). He retired from the Navy in June 1977. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Edge Hill *see* **Mount Tranchant**

Edge Rocks. 83°59' S, 52°55' W. Two rocks on land, rising to about 1440 m above sea level, at the SE margin of the Iroquois Plateau, 17.5 km E of Hill Nunatak, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their 1965-66 Pensacola Mountains Survey, and mapped by USGS from these efforts. So named by US-ACAN in 1968, for their position on the edge of the plateau. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Edgecumbe, John. 2nd lieutenant, and commander of the Marines on the *Resolution*, during Cook's second voyage (1772-75). He had also been with Cook on the *Discovery* during the great navigator's first voyage.

Bahía Edgel *see* **Edgell Bay**

Bahía Edgell *see* **Edgell Bay**

Monte Edgell *see* **Mount Edgell**

Mount Edgell. 69°26' S, 68°16' W. Rising to 1675 m, ESE of and overlooking Cape Jeremy (the E side of the N entrance to George VI Sound), between Rip Point and O'Cain Point, off Maxwell Bay, just S of the Wordie Ice Shelf, on the Fallières Coast, on the W coast of Graham Land. Discovered at a distance, from Marguerite Bay, on Jan. 16, 1909, by FrAE 1908-10, thought by them to be an island, and named by Charcot as Île Gordon Bennett, for James Gordon Bennett (1841-1918), of the *New York Herald*, a supporter (*see* Lucius Beebe's book *The Big Spenders*, for the best ever portrait of Bennett). They also named a mountain in the Douglas Range, as Mont Gordon Bennett, and, on Jan. 2, 1909, they misidentified this feature as the island (or rather, vice versa), and as a consequence, the mountain got plotted by the French too far to the NW. The The feature (i.e., the one later called Mount Edgell) appeared as Gordon Bennett Island on a British chart of 1914. In 1936-37 BGLE couldn't find an island here, but did find the mountain, and renamed it Mount Edgell for Vice Admiral Sir John Augustine Edgell (b. Dec. 20, 1880, Teddington. d. Nov. 14, 1962, Salisbury), hydrographer of the Royal Navy from 1932 to 1945, who assisted with the expedition. It appears as such on a British chart of 1940, and was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on an Argentine chart of 1946, as Monte Edgell, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was re-surveyed by Fids from Base E in 1948-49. It appears on a 1963 Argentine chart as Monte Gordon Bennet (sic). In the end Gordon Bennett got screwed out of an Antarctic feature, which is only right, considering how many people he screwed.

Edgell Bay. 62°16' S, 58°59' W. A bay, 2.5 km long and 2.5 km wide, indenting the NE side of Nelson Island, in the South Shetlands. It appears in rough outline on Powell's 1822 chart. Re-charted in 1934-35 by personnel on the *Discovery II*, who named it for Sir John Edgell (*see* **Mount Edgell**), a member of the Discovery Committee. It appears on a British chart of 1937. It appears on a 1946 Argentine chart as Bahía Edgall (sic), and on a 1947 Chilean chart as Bahía Edgell, a name that was accepted by the Chilean gazetteer of 1974 (it also appears, misspelled as Bahía Edgel, on a 1966 Chilean chart). ArgAE 1946-47 named it Bahía Don Samuel, after the *Don Samuel*, and it appears as such on a 1963 Argentine chart. It

was also the name accepted by the Argentine gazetteer of 1970. US-ACAN accepted the name Edgell Bay in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956. This bay was last plotted by the UK, in late 2008. Also, from 1978, the Argentines have used the name Caleta Colón (q.v.) for a cove at the NW end of the bay.

Edgeworth David Base. 66°15' S, 100°36' E. Also called Edgeworth David Station, and Bunger Hills Station. Australian research summer station, opened on Jan. 14, 1986, 440 km W of Casey Station and 85 km inland from the Shackleton Ice Shelf, in the Bunger Hills, on the Knox Coast of Wilkes Land, it stood at an elevation of 6 meters. Named for Edgeworth David. It consisted of 2 Apple huts and 2 Melon huts and could accommodate 6-8 people. It couldn't be used in 1986-87, due to the pack ice, and was closed in 1989.

Edgeworth Glacier. 64°20' S, 59°51' W. A glacier, 20 km long, flowing SW from the edge of the Detroit Plateau below Wolseley Buttress to the Larsen Ice Shelf on the W of Sobral Peninsula, in Graham Land. Mapped from surveys conducted by Fids from Base D in 1960-61, and plotted by them in 64°23' S, 59°55' W. Named by UK-APC on Feb. 12, 1964, for Richard Lovell Edgeworth (1744-1817), inventor of the "Portable Railway" in 1770, the first track-laying vehicle. US-ACAN accepted the name later in 1964. It has since been replotted.

Punta Edholm *see* **Edholm Point**

Edholm Point. 66°15' S, 67°04' W. The most northwesterly point of Krogh Island, in the Biscoe Islands. Mapped by FIDS cartographers in 1959-60, from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Otto Gustaf Edholm (b. June 14, 1909. d. Jan. 18, 1985), British polar physiologist specializing in the cold, who finally got to Antarctica in 1973, on the *Bransfield*, as a guest of BAS. US-ACAN accepted the name in 1965. The Argentines call it Punta Edholm.

Cerro Edimburgo *see* **Edinburgh Hill**, **Inott Point**

Colina Edimburgo *see* **Edinburgh Hill**

Morro (de) Edimburgo *see* **Edinburgh Hill**

Punta Edimburgo *see* **Edinburgh Hill**

Edinburgh Hill. 62°33' S, 60°01' W. A volcanic knob rising to about 120 m (the Chileans say 110 m) above sea level, which forms the NW side of the entrance to Moon Bay, in the NW of Half Moon Island, in the E part of Livingston Island, in the South Shetlands. Its sides fall sharply to the sea, and it is joined to the land by a low tongue of volcanic pebbles. In summer it is ice-free, which makes it very conspicuous. Photographed by David Ferguson in 1913-14, and named by him after the Scottish capital, it appears as such on his map of 1921. There is another 1921 British reference to it, as standing on a small island in McFarlane Strait. In 1935 the personnel on the *Discovery II* mapped it and descriptively (re)named it High Point. There is a 1943 U.S. Hydrographic Office reference to Edinburgh Hill as lying in the cove to the north. The name High Point is seen on British charts of 1942 and 1948, and was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The name Cerro Edimburgo appears on a 1948 Argentine chart, but wrongly referring to Inott Point (the Spanish render Edinburgh as Edimburgo, or at least most of them do; the word "cerro" means "hill"), and on the same Argentine chart the real Edinburgh Hill (or High Point as most people were calling it then) appears as Punta High. On a 1949 Argentine chart it appears as Colina Edimburgo ("colina" being another word for a hill), but on this chart it is placed roughly to the N of the real feature. The name Punta Alta appears in the log book of the *Bahía Aguirre*, during ArgAE 1953-54, but on the expedition's map as Cerro Edimburgo. In 1956 Argentina approved the name Punta Alta, but the 1970 Argentine gazetteer accepted both. There is also a 1955 reference to it as Punta Edimburgo. Following aerial photography by FIDASE in 1956-57, UK-APC accepted the name Edinburgh Hill on July 7, 1959, and US-ACAN followed suit that year. It appears as such on a British chart of 1962. It appears on 2 Chilean charts, as Morro Edimburgo, and Morro de Edimburgo, the name Morro Edimburgo being accepted by the 1974 Chilean gazetteer, along with Punta Alta (the word "morro" also means "hill"). Today, the Argentines tend to call it Cerro Edimburgo, and the Argentines call it Morro Edimburgo. This hill was last plotted by the UK, in late 2008.

The *Edisto*. A 5957-ton, 269-foot ship, capable of 13 knots, launched by Western Pipe & Steel, of San Pedro, Calif., on May 29, 1946, as AG-89, and commissioned on March 29, 1947. **Nov. 1, 1947**: She left her home port of Boston for the Panama Canal, and from there to American Samoa. Edward C. Folger, Jr., was skipper. **Dec. 2, 1947**: The *Edisto* rendezvoused with her sister ship, the *Burton Island*, both vessels heading down to Scott Island, to take part in OpW 1947-48. **Dec. 16, 1947**: Due to heavy pack-ice, the *Edisto* and the *Burton Island* had to abandon attempts to land at Scott Island. **Dec. 25, 1947**: The *Edisto* and the *Burton Island* arrived at the Davis Sea. **March 31, 1948**: The *Edisto* arrived back in Boston. **Jan. 28, 1949**: Re-designated AGB-2. **Oct. 31, 1955**: After a few seasons in the Arctic, the *Edisto* sailed out of Boston, headed south, under the command of Capt. Roger Luther, as part of Task Force 43. This, more than anything, signaled the concrete beginning of OpDF I. She towed the *YOG-70* from the Panama Canal to Christchurch, NZ. **Dec. 19, 1955**: She arrived at McMurdo Sound. Her squadron of 2 helos was led by Lt. Cdr. Charles A. Costanza, of Lakehurst, NJ. He played Santa on the ship at Christmas 1955, at McMurdo Sound. The vessel was in Antarctica five times. **1960-61**: Skipper was Griffith C. Evans. **1962-63**: Skipper was E.A. Davidson. **1964-65**: Cdr. Norval Eugene Nickerson (captain). **Oct. 20, 1965**: Transferred to the U.S. Coastguard. **1968-69**: Skipper was Herbert E. Steel. **1969-70**: Skipper was Capt. Steel again. **Nov. 15, 1974**: Following a collision with the *Mizar*, she was decommissioned, and transferred to the General Service Administration. **Sept. 29, 1977**: Sold to Boston Metals, of Baltimore, who, in turn sold her to Union Minerals, of Carey, NJ, who scrapped her in the Baltimore Shipyard.

Roca Edisto *see* **Edisto Rocks**

Rocas Edisto *see* **Edisto Rocks**

Edisto Bay *see* **Edisto Inlet**

Edisto Channel. 66°05' S, 100°50' E. A marine channel extending in a NE-SW direction between the Taylor Islands and the northwestern islands in the Highjump Archipelago on the W, and the Bunger Hills, Thomas Island, and the rest of the Highjump Archipelago on the E, off the Knox Coast of Wilkes Land. The SW end is occupied by the Edisto Ice Tongue. Delineated by U.S. cartographer Gard Blodgett in 1955 from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for the *Edisto*. ANCA accepted the name on Aug. 20, 1957.

Edisto Glacier. 72°27' S, 169°53' E. The main valley glacier flowing NE between Felsite Island and Redcastle Ridge into the head of Edisto Inlet. Named by NZGSAE 1957-58 for the *Edisto*, the first vessel to visit the area of the inlet. US-ACAN accepted the name in 1962, and ANCA followed suit on Oct. 22. 1968. Name also seen in some NZ circles as Hallett Glacier.

Edisto Glacier Tongue *see* **Edisto Ice Tongue**

Edisto Ice Tongue. 66°10' S, 100°40' E. Fed by Apfel Glacier and Scott Glacier, it is actually the seaward extension of the Apfel and part of the main flow of the Scott (from which it branches off), and occupies the SW part of Edisto Channel, in the NE edge of the Bunger Hills, in the Highjump Archipelago of Queen Mary Land. Mapped by U.S. cartographer Gard Blodgett in 1955, from air photos taken by OpHJ 1946-47, and named by US-ACAN in 1955, in association with the channel. The Australians once described it as a glacier tongue, and called it Edisto Glacier Tongue.

Edisto Inlet. 72°20' S, 170°05' E. A rectangular arm of Moubray Bay (at the S end of that bay), it is 11 km long and 5 km wide. Cape Hallett projects into it from Victoria Land, and the inlet is enclosed between that cape and Cape Christie, and that is the only way to enter it. Originally named by NZGSAE 1957-58, as Edisto Bay, for the *Edisto*, which was the first ship to come in here (in Feb. 1956), looking for a station (Hallett, as it turned out). It was later re-defined. US-ACAN accepted the name Edisto Inlet in 1962, and NZ-APC followed suit. The name is also seen in some NZ circles as Hallett Inlet.

Edisto Rock *see* **Edisto Rocks**

Edisto Rocks. 68°13' S, 67°08' W. A group of low offshore rocks, just under 2 km SW of the W tip of Neny Island, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Surveyed in 1947 by Fids from Base E, plotted by them as one notable rock and several off-lying pieces of rock, and named by them as Edisto Rock, for the *Edisto*, which assisted in the relief of RARE and FIDS parties at Stonington Island, in Feb. 1948. They did not name the offlying rocks. The name Edisto Rock was accepted by UK-APC on March 31, 1955, and it appears on a British chart of 1956, and on a 1962 Chilean chart as Roca Edisto. USN air photos of 1966-67 showed it to be more than one rock, and it appears duly pluralized as Edisto Rocks on a 1967 British chart, and as Rocas Edisto on a 1969 Chilean chart. However, the name accepted by the 1974 Chilean gazetteer was Roca Edisto (their justification being that they named not only the group as Rocas Edisto, but also the largest of the rocks as Roca Edisto — the two concepts do, after all, appear separately in the SCAR gazetteer). In 1972, US-ACAN re-defined this feature in the plural, and UK-APC followed suit on Dec. 20, 1974. The Argentines now call this feature Rocas Edisto.

Bahía Edith *see* **Eyrie Bay**

The *Edith R. Balcom*. A 99-ton wooden Canadian schooner, with sails, named for Edith Roberta Balcom, built at Lunenburg, Nova Scotia, in 1902, and belonging to the Balcom Sealing Fleet. She was in the South Orkneys and South Shetlands in 1905-06, under the command of Reuben Balcom. She was subsequently skippered by Wentworth Baker off the South American coast, but was never back in Antarctic waters, foundering on March 18, 1908.

Tierra Edith Ronne *see* **Edith Ronne Land, Ronne Ice Shelf**

Edith Ronne Ice Shelf *see* **Ronne Ice Shelf**

Edith Ronne Land. From Mount Austin at the base of the Antarctic Peninsula to Berkner Island in between what are now called the Ronne Ice Shelf and the Filchner Ice Shelf. Named by Finn Ronne in 1947 for his wife (*see* **Ronne, Edith "Jackie"**), and claimed by him for the USA. In 1968 it became part of the Ronne Ice Shelf (q.v. for details). The Chileans called it Tierra Edith Ronne.

Mount Edixon. 71°48' S, 163°23' E. A high peak, rising to 2080 m, 10 km SE of Bowers Peak, in the Lanterman Range of the Bowers Mountains, in Oates Land. Mapped by the Northern Party of NZGSAE 1963-64, and named by them for Lt. (later Lt. Cdr.) James Richard "Jim" Edixon (b. 1929), USN, VX-6 pilot who supported the party. NZ-APC accepted the name in 1964, and US-ACAN followed suit that year.

The *Edle*. A 156-ton Norwegian whale catcher built in Bergen in 1912. She and two other new catchers, the *Scott* and the *Ross*, operated out of Deception Island in 1912-13, working for the *Ronald*. In 1920-21 she was working for the new *Ronald*. In 1928 she was renamed *Windau*, and in 1931 the *Gun 3*.

Edlin Névé. 71°10' S, 163°06' E. At the S side of Mount Sturm, in the Bowers Mountains of Oates Land. It feeds the Carryer, Irwin, McLin, and Graveson Glaciers, as well as others. Named by NZGSAE 1967-68 for George Edlin, the postmaster at Scott Base that season. He was the first person to hold this position, and also assisted in the field during the expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1969.

Edman Island. 66°18' S, 110°32' E. Near the center of O'Brien Bay, in the Windmill Islands, off the Budd Coast. First mapped from air photos taken in Jan. 1947, during OpHJ 1946-47, and in Jan. 1948, during OpW 1947-48. Named by US-ACAN in 1963, for Donald H. Edman, ionosphere physicist at Wilkes Station in 1958.

Edmonson Point. 74°20' S, 165°08' E. A round, largely ice-free point, below Mount Melbourne, along the W side of Wood Bay, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Larry D. Edmonson, satellite geodesy scientist who wintered-over at McMurdo in 1966.

Mount Edred. 70°34' S, 69°03' W. A prominent, ice-covered mountain rising to 2195 m, 16 km inland from George VI Sound, and marking the S limit of the Douglas Range, on Alexander Island. Discovered and photographed aerially on Nov. 23, 1935, by Ellsworth, and mapped from these photos in 1936 by U.S. cartographer W.L.G. Joerg. Re-photographed aerially in Oct. 1936 by BGLE 1934-37 (Joerg was eagerly awaiting the BGLE photos, so he could compare them to Ellsworth's). The feature's E side was roughly surveyed from the ground by BGLE about that time. Re-surveyed, from the ground, by Fids from Base E in 1949, and named by them for the old Saxon king Edred, who lived 923-955, and who reigned 946-55. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on a U.S. Hydrographic Office chart of 1955. The W face of the mountain was mapped by Searle of the FIDS in 1959-60, using air photos taken by RARE 1947-48.

Edsel Ford Mountains *see* **Ford Ranges**

Edsel Ford Ranges *see* **Ford Ranges**

Edson Hills. 79°50' S, 83°39' W. A group of mainly ice-free hills, S of Drake Icefall, and W of Union Glacier, in the Heritage Range, in the Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party of 1962-63, for Dean T. Edson, USGS topographic engineer with the party. US-ACAN accepted the name in 1964.

Eduard Dallmann Laboratory. 62°14' S, 58°40' W. An international laboratory, opened in Jan. 1994, at Jubany Station, on Potter Cove, King George Island, in the South Shetlands, and operated jointly by the Germans, Dutch, and Argentines.

Cape Edvind Astrup *see* **Cape Astrup**

Monte Edward *see* **[2]Mount Edward**

[1]Mount Edward. 70°13' S, 65°32' E. A mountain, 11 km WNW of Mount Jacklyn, in the Athos Range of the Prince Charles Mountains. Plotted from ANARE aerial photographs. Named by ANCA for Bill Edward.

[2]Mount Edward. 75°12' S, 69°33' W. A prominent rock mountain, rising to 1635 m, centrally on the S margin of the Sweeney Mountains (it is the highest peak in those mountains), in eastern Ellsworth Land. Discovered aerially on Dec. 21, 1947, by RARE 1947-48, and named by Ronne for Cdr. Ed Sweeney (*see* **The *Ed Sweeney***). It was shown on an American Geographical Society map of 1962, but with the coordinates 75°48' S, 67°40' W. It appears erroneously on a 1966 Argentine chart as Monte Edwards. It was shown with the correct coordinates on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974. The Chileans call it Monte Edward.

Edward, William Walter "Bill." b. Dec. 23, 1930. From Moonee Ponds, Vic. Senior diesel mechanic at Macquarie Island in 1961, and at Mawson Station in 1963 and 1965.

Edward VII Land. 77°00' S, 145°00' W. The land behind and including the famous Edward VII Peninsula. On Jan. 30, 1902 Scott discovered this land, and called it King Edward VII Land, for the new king. What Scott actually discovered was a peninsula, but he had no way of knowing its true character. However, the peninsula is only the largest part of an even greater area of land now called Edward VII Land.

Edward VII Peninsula. 77°40' S, 155°00' W. Also called King Edward VII Peninsula. A large, ice-covered peninsula forming the tip of Edward VII Land, and projecting into the Ross Sea at the NW extremity of Marie Byrd Land, and which also forms the NE edge of the Ross Ice Shelf, lying between the NE corner of that ice shelf and Sulzberger Bay. It has on it the Rockefeller Mountains and the Alexandra Mountains. This peninsula was discovered on Jan. 30, 1902, by Scott, who named it King Edward VII Land, a term that was later shortened to Edward VII Land (q.v. for further details). This was the first Antarctic discovery of the 20th century. During ByrdAE 1933-35 it began to look as if this land were actually a peninsula, and this suspicion was proved to be a fact by USAS 1939-41. The name of this enormous, ice-covered peninsula was subsequently given by US-ACAN in 1947, as Edward VII Peninsula, and the land to the S of it was called Edward VII Land. The term Edward VII Land (when it is used at all, which is not officially, not in the USA anyway) now covers the peninsula as well, yet the peninsula has retained its own name as a separate feature within that land.

Edward VIII Bay. 66°50' S, 57°00' E. A bay, about 30 km in extent, between the Edward VIII Plateau and the Øygarden Group,

or, more specificlaly, between Law Promontory and Cape Boothby, in Kemp Land. Discovered in 1936 by personnel on the *William Scoresby*, and named by them for the king. US-ACAN accepted the name in 1947. The Australians call it Edward VIII Gulf.

Edward VIII Gulf *see* **Edward VIII Bay**

Edward VIII Ice Shelf. 66°50' S, 56°33' E. Occupies the head of (i.e., the inner part of) Edward VIII Bay, in East Antarctica, and it is fed by several glaciers. Photographed aerially by LCE 1936-37. The N part was named Innviksletta (meaning "the inner bay plain") by the Norwegian cartographers working from these photos in 1946. The area was first visited in 1954, by an ANARE sledge party led by Bob Dovers. The whole ice shelf was then mapped, re-defined, and renamed by ANCA on Feb. 15, 1958, as King Edward Ice Shelf, in association with the bay. US-ACAN accepted the name Edward VIII Ice Shelf in 1962.

Edward VIII Plateau. 66°35' S, 56°50' E. A dome-shaped, ice-covered peninsula between Magnet Bay and Edward VIII Bay, in Kemp Land. Probably seen by personnel on the *William Scoresby* in Feb. 1936. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Gulfplatået (i.e., "the gulf plateau"). ANCA renamed it King Edward Plateau on Feb. 18, 1958. US-ACAN accepted the name Edward VIII Plateau in 1965.

Edward Ridge. 67°15' S, 55°34' E. A gently rising, snow-covered ridge, the main part of which runs NE-SW with exposed rock faces on the SE slopes, about 23 km NW of Rayner Peak, in Kemp Land, in Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1959. Named by ANCA on July 29, 1965, for Edward Nash, aircraft mechanic with the ANARE *Nella Dan* expedition of 1965 under Phil Law. US-ACAN accepted the name in 1966.

Isla Edwards *see* **Edwards Island**

Monte Edwards *see* [2]**Mount Edward**

Mount Edwards. 76°51' S, 144°07' W. A mountain, 8 km ESE of Morris Peak, in the Denfeld Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41. Named by Byrd for Leroy P. Edwards, financial adviser to Byrd with regard to funds on his first 2 expeditions (ByrdAE 1928-30 and ByrdAE 1933-35). US-ACAN accepted the name in 1970.

Punta Edwards *see* **Edwards Point**

Edwards, David "Big Dave." He joined FIDS in 1960, as a carpenter and general assistant, and wintered-over at Halley Bay Station in 1961. Deceased.

Edwards, Kenneth Anthony "Tony." b. June 8, 1939, Birmingham. He joined FIDS in 1960, as a topographical surveyor, and wintered-over at Base D in 1961 and 1962. He later moved to the UN Environment Program, and died on April 23, 1998, in Geneva.

Edwards, Malcolm John. b. April 17, 1936, Stoke-on-Trent, son of Edward J. Edwards and his wife Elsie M. Whitehurst. He was a sergeant in the Royal Army Catering Corps when he became senior cook on the 2nd and 3rd parts (i.e., 1956-58 and 1957-59) of the British Royal Society Expedition, and as such wintered-over at Halley Bay in 1957 and 1958. After the expedition, he left Cape Town on the *Carnarvon Castle*, and arrived back in London on Feb. 27, 1959.

Edwards, Reginald Stanley "Reg." b. 1924, Southampton, son of Reginald Stanley Edwards and his wife Frieda Lydia O'Connor. He was living in Bristol when he joined FIDS at the 11th hour, in 1951, as a diesel electric mechanic, and flew out from the UK in Jan. 1952, to Montevideo. He wintered-over at Base G in 1952. At the end of his tour he returned to Port Stanley, and there caught the *Fitzroy*, bound for London, where he arrived on Feb. 3, 1952. In 1959 he emigrated to South Africa.

Edwards Gap. 71°15' S, 70°20' W. A pass, running in a NE-SW direction at an elevation of about 500 m above sea level, through the Walton Mountains, southward of Mount McArthur, on Alexander Island. BAS did geological work here between 1973 and 1975. Named by UK-APC on Dec. 8, 1977, for Christopher William Edwards (b. April 11, 1950, Scotland), BAS geologist who wintered-over at Base E in 1973 and 1974, and who mapped this area. It appears in the British gazetteer of 1980. Chris Edwards got his PhD from Birmingham University, in 1981, later lived in Aberdeen, and was a tour leader to exotic parts of the world, including Antarctica (for example, 2006-07, aboard the *Explorer*). US-ACAN accepted the name.

Edwards Glacier. 71°35' S, 160°30' E. Flows from the E slopes of the Daniels Range, between Thompson Spur and Schroder Spur, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970 for Lloyd Norman Edwards (b. 1937), U.S. geologist at McMurdo in 1967-68.

[1]**Edwards Island**. Somewhere in the South Shetlands, in the area of Deception Island. William Smith discovered it in Feb. 1820, and named it. It has remained a mystery as to what exactly this island was. Was it an iceberg, was it an island which doesn't exist any more, or was it Deception Island itself, or perhaps another island which now has another name?

[2]**Edwards Island**. 65°35' S, 64°19' W. An island, 2 km long, it is the second largest and innermost of the group of islands lying in the entrance to Leroux Bay, off the W coast of Graham Land, and is separated from Lahille Island (which lies to the NW) by a small channel 1 km wide. Mapped by FIDS cartographers from FIDS ground surveys and FIDASE air photos taken in 1956-57. Named by UK-APC on July 7, 1959, for Lt. Cecil John Copner Wynne-Edwards (known as John), (b. July 16, 1930, "Woodside," Plymouth) RN, son of Lt. Cecil John Wynne-Edwards, RN, and his wife Bud Leyborne-Popham. After the Royal Naval College at Dartmouth, 1944-47, he led a hydrographic Survey unit to Antarctica in 1956-57 and 1957-58, and was promoted to captain after this. US-ACAN accepted the name in 1965. It appears on a Chilean chart of 1963, as Isla Edwards, but, in this case, it was not named for Wynne-Edwards. Santiago Edwards Ossandón was a Chilean, born about 1835, who, with his brother, founded Casa Edwards & Company, the first Sociedad Anónima Industrial (i.e., stock company), whose object was whale-hunting. The Chilean gazetteer of 1974 accepted the name. In April 2010, following extensive lobbying from some ex-Fids, the name was changed to Wynne-Edwards Island.

[1]**Edwards Islands**. 66°51' S, 50°29' E. A group in the E side of Amundsen Bay, 4 km (the Australians say 7 km) SW of Mount Oldfield, in Enderby Land. Plotted from air photos taken by ANARE in 1956. Named by ANCA for Thomas A. "Tom" Edwards, assistant diesel mechanic at Wilkes Station in 1960 and 1962. US-ACAN accepted the name in 1965.

[2]**Edwards Islands**. 73°53' S, 103°08' W. A group of about 20 small islands, mostly ice-free, off the SW tip of Canisteo Peninsula, in the Amundsen Sea. Plotted from air photos taken by VX-6 in Jan. 1960. Named by US-ACAN for Z.T. Edwards (b. July 26, 1919. d. Aug. 5, 1996, Pensacola), chief quartermaster here on the *Glacier* in 1959-60. He retired as a lieutenant commander.

Edwards Nunatak. 70°46' S, 65°42' E. A nunatak with 2 small rock outliers, 3 km SW of Mount Kizaki, and 13 km SW of Mount Downie, in the Aramis Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos. Named by ANCA for Darrell R. Edwards, radio technician at Mawson Station in 1969, who took part in the Prince Charles Mountains survey of 1969. US-ACAN accepted the name in 1971.

Edwards Peninsula. 72°00' S, 97°40' W. An ice-covered peninsula, 30 km long, between Murphy Inlet and Koether Inlet, on the N side of Thurston Island. Delineated from air photos taken in Dec. 1946 by OpHJ 1946-47, and by VX-6 in Jan. 1960. Named by US-ACAN for Lt. Donald L. Edwards, navigator of the *Burton Island* in 1959-60, during the USN Bellingshausen Sea Expedition that season. Originally plotted in 71°55' S, 97°46' W, it was later re-plotted.

Edwards Pillar. 73°05' S, 66°20' E. A large rock pillar on the W face of Mount Stinear, in the Prince Charles Mountains. Named by ANCA on May 18, 1971, for Norman F. "Norm" Edwards, a surveyor with the ANARE Prince Charles Mountains survey party in 1971, which established a geodetic survey station near here. US-ACAN accepted the name in 1973.

Edwards Point. 62°28' S, 59°30' W. A low point of black rock, ice-free in summer, 5 km W of Robert Point, and marking the S extremity of Robert Island, and the SE point of English Strait, in the South Shetlands, it ter-

minates at the sea in little hummocks. Charted by personnel on the *Discovery II* in 1935, but not named by the British until 1948, when the Admiralty chart appeared based on the 1935 survey. Victor M. Edwards was a draftsman in the Admiralty Hydrographic Office at the time. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer. The Argentines call it Punta Edwards. It appears on a 1961 Chilean chart as Punta Prat, named for Capitán Arturo Prat (*see* **Capitán Arturo Prat Station**), and that was the name accepted by the 1974 Chilean gazetteer. It has even been translated as Prat Point. This feature was last plotted by the UK, in late 2008.

Edwards Spur. 75°59' S, 135°18' W. A spur with a small rock exposure along its crest, on the lower NW slopes of Mount Moulton in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Alvah G. "Big Ed" Edwards (of Lakebay, Wash.), construction driver 1st class with the Army-Navy Trail Party which traversed out of Little America to establish Byrd Station in 1956. Big Ed, the man they lowered into the crevasse to try to rescue Max Kiel after his D-8 plunged into it, was from Gig Harbor, Wash., was born March 21, 1931 and died April 10, 2005, in Maricopa, Calif.

Eel pout. *Lychenchelis antarcticus*. Thick-lipped, elongated, eel-shaped coastal fishes of the order Zoarcidae, living at the sea bottom. They may grow up to 3 feet long. Some lay eggs and some are viviparous.

Monte Efraín *see* **Ephraim Bluff**

Ostrov Efremova *see* **Efremova Island**

Efremova Island. 68°49' S, 77°55' E. A large island to the E of Winterover Bay, in the Rauer Islands. Named by the Russians as Ostrov Efremova. The feature was re-plotted by the Australians, and the name was translated by ANCA on March 7, 1991.

Mount Egbert. 69°57' S, 69°37' W. A mainly ice-covered mountain, rising to 2895 m, 13 km SSE of Mount Stephenson, in the Douglas Range of Alexander Island. FrAE 1908-10 may have seen it on Jan. 21, 1909, but, if they did, they did not recognize it as a mountain. Seen from the air and surveyed from the ground on its E side, in 1936-37, by BGLE 1934-37, it appears as such on their expedition charts. Re-surveyed in Dec. 1948, by Fids from Base E, who named it for the old Saxon king, Egbert (802-839), who reigned 827-39. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year.

Mount Ege. 83°34' S, 55°53' W. Rising to 1350 m, between Berquist Ridge and Drury Ridge, in the Neptune Range of the Pensacola Mountains. Photographed aerially by USN in 1963-64, and also surveyed from the ground that season by the Neptune Range geological field party (which included USGS geologist John R. Ege). They plotted it in 83°34' S, 55°38' W. Named by US-ACAN in 1965, for Mr. Ege. It was again surveyed from the ground by USGS in 1965-66, during their Pensacola Mountains Project, and re-plotted. UK-APC accepted the name (and the new coordinates) on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Egeberg Glacier. 71°34' S, 169°50' E. A small glacier between Scott Keltie Glacier and Dugdale Glacier, descending steeply into the W side of Robertson Bay, in Victoria Land. First charted in 1899, by BAE 1898-1900, and named by Borchgrevink as Westye Egeberg Glacier, for Consul Westye Egeberg (1805-1898) of Christiania (now Oslo), one of the great Norwegian timber merchants. Egeberg was also Borchgrevink's middle name. US-ACAN accepted the shortened name Egeberg Glacier, and NZ-APC followed suit.

Egenes, Einar. b. July 21, 1869, Nøtterøy, Norway. He joined the Norwegian merchant marine, as a whaler, working his way up through the mate ranks until he became captain of the *Sobraon*, 1907-08. In the mid-1890s he married Petra Henriette, and they had a family in Kristiania. In 1910, he was 1st mate on the *Segovia*.

Mount Egerton. 80°50' S, 157°55' E. Rising to 2830 m (the Australians say about 2320 m), 5 km NNW of Mount Field, in the Churchill Mountains, about 19 km S of Mount Hamilton, and about 46 km WNW of Cape Douglas, overlooking Barne Inlet, on the W side of the Ross Ice Shelf. Discovered by BNAE 1901-04, and named by Scott for Admiral Sir George le Clerk Egerton (1852-1940), Arctic explorer and an adviser to Scott. US-ACAN accepted the name, and NZ-APC and ANCA followed suit.

Egg Island. 63°41' S, 57°42' W. A circular island, about 2.5 km across, and rising to 310 m above sea level, 1.5 km W of Tail Island, in the NE part of Prince Gustav Channel, off Trinity Peninsula. Probably first seen in 1902-03, by Dr. J. Gunnar Andersson's party during SwedAE 1901-04. Charted by Fids from Base D in 1945, and named by them for its shape, and in association with Tail Island, Eagle Island, and Beak Island. It appears on a British chart of 1949, and was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. It appears as such in the 1955 British gazetteer. It appears on a Chilean chart of 1951, as Isla Huevo (the Spanish translation), and that was the name accepted by the 1974 Chilean gazetteer. It appears on a 1959 Argentine chart as Isla Santa Isabel, but the name accepted by the 1970 Argentine gazetteer was Isla Huevo.

Lake Eggers. 78°06' S, 165°25' E. An ice-covered lake, 0.8 km long, just E of Rainbow Ridge, in the central part of Brown Peninsula, on the Scott Coast of Victoria Land. Named by US-ACAN in 1999, for Alan J. Eggers of the department of geology, at Victoria University of Wellington, who, in Dec. 1975, as a member of VUWAE, took samples of the Scallop Hill Formation at the N end of Brown Peninsula. NZ-APC accepted the name on Nov. 4, 1999.

Egil Peak. 72°24' S, 1°18' E. Rising to 2640 m, at the E side of Isingen Mountain, in the central part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Egilnuten (i.e., "Egil peak"), for Egil Rogstad. US-ACAN accepted the translated name in 1966.

Egilnuten *see* **Egil Peak**

Punta Egreso. 67°48' S, 67°19' W. The W point of Sally Cove, on the NW shore of Horseshoe Island, Square Bay, along the W coast of Graham Land. Named by the Argentines. *See also* **Punta Regreso**.

Egress Peak. 81°24' S, 158°54' E. A peak, rising to 1690 m, in the Churchill Mountains, about 11 km E of Mount Albert Markham, at the W extremity of the Carlstrom Foothills, overlooking a 1400-meter ice divide. Benbrook Glacier flows S from the divide into Flynn Glacier, and Bally Glacier flows N from the divide into Jorda Glacier. So named by US-ACAN in 2003 because of the emergence of the two glaciers adjacent to this peak. NZ-APC accepted the name on Feb. 27, 2003.

Ehlers Knob. 72°35' S, 95°09' W. A small but conspicuous ice-covered hill, or knob, which surmounts the W part of the N coast of Dustin Island, E of Thurston Island. Photographed from helicopters off the *Burton Island* during the Bellingshausen Sea Expedition of Jan. and Feb. 1960. Named by US-ACAN in 1968, for Robert C. Ehlers, field assistant at Byrd Station in 1966-67.

Gora Ého *see* **Ekho Mountain**

Ozero Ého *see* **Lake Ekho**

Mount Ehrenspeck. 84°46' S, 175°35' W. Rising to 2090 m, 3 km SW of Mount Kenney, in Cathedral Peaks, on the E side of Shackleton Glacier, in the Queen Maud Mountains. Named by US-ACAN for Helmut Emil Ehrenspeck (b. June 4, 1943, Andechs, Germany. d. July 1, 2001; U.S. citizen since 1965), geologist here in 1970-71, with the Ohio State University party, which geologically mapped this vicinity.

Mount Ehrlich *see* **Mount Aciar**

Ehrlich, Edward Norman "Ed." b. Sept. 1928, Detroit, son of Polish-Jewish dentist Adolph Ehrlich and his wife Faye. He graduated from high school at 16, from the University of Michigan at 20, and from their medical school at 23. He was in the Naval Reserve when he got called up in July 1954, and, after a year aboard ship he volunteered for Antarctic duty. After a summer at the cold-weather training program at the Naval Hospital in Bethesda, Md., and as a lieutenant (jg), he became medical officer (known as "Doc," of course) at Little America V in 1956. He performed 4 voluntary circumcisions during that winter, as well as an appendectomy, and pulled half a dozen teeth. He retired to Milwaukee.

Eichorst Island. 64°47' S, 66°04' W. A tiny island, whose W end is deeply cleft into 3 parts, which, at high tide, give the appearance of 3

separate rocks, about 0.8 km S of Palmer Station, off Anvers Island, between Shortcut Island and Surge Rocks. Charted by a combined team of FIDS and RN, 1956–58. Following USARP work here from Palmer Station, from 1965 onwards, it was named by US-ACAN in 1975, for Marvin H. "Ike" Eichorst (b. April 19, 1905, Brillion, Wisc. d. May 1985), of Glenview, Ill., ham radio operator (W9RUK) connecting Palmer Station to the USA between 1964 and 1972, and former chief engineer at CBS, Chicago. UK-APC accepted the name on May 30, 1975. It appears in the 1977 British gazetteer.

Eidsbotnen. 71°38' S, 11°35' E. A valley in the N part of the Humboldt Mountains, in the W part of the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians (name means "the isthmus cirque").

Eidsgavlen *see* **Eidsgavlen Cliff**

Eidsgavlen Cliff. 71°41' S, 11°42' E. A cliff, 1.5 km S of Eidshaugane Peaks, and E of Kvervenuten in the Humboldt Mountains, in the W part of the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Eidsgavlen (i.e., "the isthmus gable"). US-ACAN accepted the name Eidsgavlen Cliff in 1970.

Eidshaugane *see* **Eidshaugane Peaks**

Eidshaugane Peaks. 71°40' S, 11°46' E. A group of peaks 1.5 km N of Eidsgavlen Cliff, in the NE part of the Humboldt Mountains, in the Wohlthat Mountains, in Fimbulheimen, in Queen Maud land. Discovered and photographed aerially by GermAE 1938–39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956–60, and from 1958–59 air photos taken during the same long expedition, and named by them as Eidshaugane (i.e., "the isthmus hills"). US-ACAN accepted the name Eidshaugane Peaks in 1970.

Cape Eielson *see* **Cape Boggs**

Península Eielson *see* **Eielson Peninsula**

Eielson, Carl Benjamin "Ben." b. July 20, 1897, Hatton, N.D., son of Wisconsin-Norwegian retail store keeper Ole Eielson and his Minnesota wife Olava. After studying law at the Universities of North Dakota and Wisconsin, he became a lieutenant in the Army at the tail end of World War I, then became a barnstormer throughout the mid-west. In 1922 he became a school teacher in Alaska, the following year began a commercial air service, and in 1924 opened up the first airmail route in Alaska. In 1928, by now a well-known Alaskan bush pilot, he piloted the plane in the "Over the Top of the World Flight," the first flight over the Arctic Ocean. He was Wilkins' main pilot on the first half of the Wilkins-Hearst Expedition. On Nov. 16, 1928 Wilkins sent a telegram to Ole Eielson in North Dakota: "Ben made first Antarctic flight today. Wilkins," meaning the first flight ever made in a plane in Antarctica. He and Wilkins flew on a 10-hour expedition down the Antarctic Peninsula on Dec. 20, 1928, as far as Stefansson Strait. He was the first man to fly over both polar regions in the same year. He did not go back to Antarctica for the 2nd half of the expedition. Eielson, and his mechanic Earl Borland, disappeared on Nov. 9, 1929, in high Siberian latitudes, while rescuing passengers and crew from a ship caught in the ice.

Eielson Peninsula. 70°35' S, 61°45' W. A rugged, mountainous, mainly snow-covered peninsula, between 30 and 35 km long in an E-W direction, and 16 km wide on average, and rising to an elevation of about 1067 m, between Smith Inlet and Lehrke Inlet, on the E coast of Palmer Land, it projects into the S part of the Larsen Ice Shelf and divides the Wilkins Coast from the Black Coast, opposite Dolleman Island. The rocky NW wall of this peninsula, rising to about 600 m and visible from a great distance, is probably the feature which, on his flight of Dec. 20, 1928, Wilkins discovered from a position above Stefansson Strait and described as "a few small, low nunataks about a cape," plotting it in 70°10' S, 62°35' W. It was the farthest south rock outcrop seen from that position, and he named it Cape Eielson, after Ben Eielson. This rock wall is conspicuous in the photos taken in 1940 from an aerial position at the N side of Stefansson Strait, during USAS 1939–41. In 1953, US-ACAN renamed the entire peninsula as Eielson Peninsula, and the cape, as best as it can be identified with Wilkins' feature, was renamed Cape Boggs. UK-APC accepted this on Sept. 8, 1953. It appears as such on a British chart of 1954. The Chileans and Argentines both call it Península Eielson.

Eigg Rock *see* **Nigg Rock**

Cabo 18 de Setiembre *see* **Cabo Arauco**

Costa Eights *see* **Eights Coast**

Eights, James. b. 1798, Albany, NY, son of Dr. Jonathan Eights and his wife Alida Wynkoop. An artist and cartographer, as well as a physician and naturalist, he was known as "Doctor Eights," although he never practiced as such. He was draftsman to the geological survey of the Erie Canal, and was naturalist on the Palmer-Pendleton Expedition to Antarctica in 1829–31. He was the first American scientist to visit Antarctica, and is thought to be the first ever to do field work there (*see*, however, W.H.B. Webster). He wrote 7 papers, the first by a scientist in Antarctica, and described the pycnogonids (q.v.) to a disbelieving world. Probably due to alcoholism, he was refused a place on USEE 1838–42. Later in his career he became a geologist, and died in poverty in June 1882, at his sister's, in Ballston, NY. He has been much neglected until recent times.

Eights Coast. 73°30' S, 96°00' W. That portion of the Antarctic coast between Cape Waite and Phrogner Point, it overlooks the Bellingshausen Sea and is bisected by the Jones Mountains, and bordered by Thurston Island, the Abbot Ice Shelf, and some islands in the ice shelf. Discovered on flights from the *Bear* in Feb. 1940, by members of USAS 1939–41. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1947, for James Eights. It was first explored in Feb. 1960 by the *Glacier* and the *Burton Island* during the USN Bellingshausen Sea Expedition. The Chileans call it Costa Eights.

Eights Peninsula *see* **Thurston Island**

Eights Station. 75°14' S, 77°10' W. A U.S. scientific station in the Sentinel Mountains, at the base of the Antarctic Peninsula, in Ellsworth Land, 494 m above sea level. At first it was a camp serving as a conjugate point station to carry on simultaneous measurements of the Earth's magnetic field and of the ionosphere during the USARP Project Ski-Hi, and was called Camp Ski-Hi. The site was selected in Nov. 1961 and the first Dakota aircraft landed here on Nov. 26, 1961 (piloted by Lt. Ron Carlson; co-pilot was Lt. H.B. Haskell; aviation electronics technician was Noble Cheeks. George D. Luck was also on this flight), to drop men off to prepare a skiway. Construction on the camp and landing strip began in Dec. 1961, and was completed on Feb. 9, 1962. Floyd Johnson (q.v.) was the scientific leader. The others there that season were: Steve Barnes (q.v.), who set up the conjugate ionospheric observation stations; Neil Brice (researcher; *see* **Mount Brice**), John Bunham, Pat Caywood (geomagetician; *see* **Mount Caywood**), Gordon Angus (ionosphere physicist; *see* **Angus Nunatak**), and Chuck Neuner (station engineer; *see* **Mount Neuner**). On Dec. 27, 1961, the Antarctic Peninsula Traverse (q.v.) party arrived. The camp, comprising 3 Jamesway huts built in Calgary, Alberta, housed 10–11 men. It was enlarged and became Eights Station in Jan. 1963. On Feb. 14, 1963, the last plane flew out of Eights. **1963 winter**: 11 men. Navy personnel were: Petty Officer Richard Steventon (hospital corpsman and officer-in-charge; *see* **Steventon Island**), Harry E. Davis (radioman), Big John Henry (engineman; *see* **Henry Nunataks**), Ray Olander (electronics technician; *see* **Olander Nunatak**), Truman Tollefson (construction electrician; *see* **Tollefson Nunatak**), and Robert E. "Smitty" Smith (cook; of Carmel, NY; now deceased). Scientific personnel were: Jerry Huffman (scientific leader; *see* **Mount Huffman**), Al Goodman (aurora scientist; *see* **Mount Goodman**), Lorne Matheson (ionosphere physicist; *see* **^{2}Mount Matheson**), Mike Trimpi (radioscience researcher; *see* **Mount Trimpi**), and Clarence McKenny (meteorologist; *see* **Mount McKenny**). **1964 winter**: Navy personnel were: Francis Boyer (hospital corpsman and officer-in-charge; *see* **Mount Boyer**), John Janke (radioman; *see* **Janke Nunatak**), Willard Shelton (electrician; *see* **Shelton Nunataks**), Paul Witte (construction mechanic; *see* **Witte Nunataks**), Henry Anderson (ET2; of Port Angeles, Wash.), and William Morgan (cook; *see* **Morgan Nunataks**). Scientific personnel were: Wesley Morris (scientific leader;

see **Mount Morris**), Steve Maagoe (ionosphere physicist; *see* **Maagoe Peak**), John Eaton (aurora scientist; *see* **Eaton Nunatak**), and Charles Anderson (geomagnetician; of Washington, DC). **1965 winter**: Navy personnel were: Owen Lyon (hospital corpsman and chief petty officer in charge; *see* **Lyon Nunataks**), George T. Wood (radioman), Edward R. Sullivan (electronics technician), Milton Spear (construction electrician; *see* **Spear Glacier**), José Gomez (mechanic; *see* **Gomez Nunatak**), and Robert Smart (cook; *see* **Mount Smart**). Scientific personnel were: Joseph Hirman (scientific leader; *see* **Mount Hirman**), Peter Bingham (aurora scientist; *see* **Bingham Peak**), Rossman Smith (ionosphere physicist; *see* **Mount Rossman**), Felix Henderson (meteorologist; *see* **Henderson Glacier**), and Reinhard Menzel (geomagnetist and seismologist; *see* **Cape Menzel**). It was closed on Nov. 15, 1965. A University of Wisconsin geological party passed by here in the summer of 1965-66, led by Thomas Laudon (*see* **Mount Laudon**).

Eijkman Point. 65°37' S, 64°10' W. The extremity of a rocky spur that projects into the NE side of Leroux Bay from the Graham Coast, 6 km SSE of Nuñez Point, on the W coast of Graham Land. First mapped by BGLE 1934-37. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base J in 1957-58. Named by UK-APC on July 7, 1959, for Christiaan Eijkman (1858-1930), Dutch biologist and pioneer in the cure of beriberi. He won the Nobel Prize for medicine in 1929. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

The *Eik*. Norwegian whale catcher, working for the *Solstreif* in the South Shetlands from the 1910-11 season onwards (she was still there in 1921-22, the season she rescued the crew of the *Minerva* when that catcher foundered).

Eilefsen, Albert Martin. b. May 22, 1897, Ibestad, near Tromsø, Norway, as Albert Martin Magnussen, son of fisherman Magnus Eilevsen and his wife Hanna Olsdatter. He married Alvilde, and they lived in Kopervik, near Tromsø. When Byrd was putting together ByrdAE 1933-35, his ice pilot Ben Johansen recommended old Norwegian friend Albert as dog driver and ski expert, and went to get him from Norway. The two men arrived back in New York from Oslo, on the *Stavengerfjord*, on Sept. 12, 1933, just in time for the expedition.

Eilefsen Peak. 76°52' S, 146°25' W. In the NE part of Radford Island, in the Sulzberger Ice Shelf, off the coast of Marie Byrd Land. Probably seen aerially during ByrdAE 1928-30. Named by US-ACAN in 1966, for Albert Eilefsen.

Eilers Peak. 80°04' S, 159°28' E. A prominent peak rising to about 1500 m, 4 km NNW of Rand Peak, in the central part of the Nebraska Peaks, in the E part of the Britannia Range. Named by US-ACAN in 2000, for Duane H. "D.H." Eilers (b. 1953), of the Ross Ice Shelf Project management office, at the University of Nebraska, at Lincoln, a member of the USARP glaciological party during the 1974-75 RISP field season. NZ-APC accepted the name on Feb. 20, 2001.

Isla Eillium *see* **Eillium Island**

Islote Eillium *see* **Eillium Island**

Eillium Island. 60°42' S, 44°51' W. A small island, about 1.9 km NW of Route Point (the NW tip of Laurie Island), in the South Orkneys. Discovered and roughly charted by Powell and Palmer in 1821, and re-charted on Nov. 27, 1903, by ScotNAE 1902-04. In 1904 Bruce named it Eillium Isle, for his son, Eillium (a variant of the name Uilleam, meaning William). Eillium Alastair Bruce was born in April 1902, seven months before his father left for Antarctica. On some of the expedition's maps, however, the name figures as Eillium Island, and that was the name that appears on a British chart of 1938, and that was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on an Argentine chart of 1931, as Isla Eillium, but on a 1957 Argentine chart as Islote Eillium. It was Isla Eillium that was accepted by the 1970 Argentine gazetteer. Eillium Bruce died in 1979.

Eillium Isle *see* **Eillium Island**

Einbuen. 72°50°S, 28°36' E. A small isolated nunatak, SE of Vørterkaka Nunatak, in the southeasternmost part of the Sør Rondane Mountains. Named descriptively by the Norwegians ("the hermit").

Einseten. 71°34' S, 19°24' E. A nunatak, SW of Mount Rusanov, N of the Russkiye Mountains, and just W of the Sør Rondane Mountains. Named by the Norwegians (means "the single one").

Einstøding Islands. 67°28' S, 61°41' E. A group of 3 small islands, 3 km (the Australians say 6 km) N of the Stanton Group, off the coast of Mac. Robertson Land. Probably first seen by BANZARE 1929-31. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Einstødingane (i.e., "the hermits"), for the islands' lonely position. ANCA accepted the name Einstøding Islands on Feb. 18, 1958, and US-ACAN followed suit in 1965.

Einstødingane *see* **Einstøding Islands**

Einstødingen *see* **Einstødingen Island**

Einstødingen Island. 69°39' S, 38°50' E. A small island, 16 km E of Padda Island, in the S part of Lützow-Holm Bay. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Einstødingen (i.e., "the hermit"), for its solitary position between the Prince Harald Coast and the Prince Olav Coast. US-ACAN accepted the name Einstødingen Island in 1968.

Einthoven Hill. 64°14' S, 62°09' W. Rising to about 850 m, 5 km SW of Mitchell Point, on the E side of Brabant Island, in the Palmer Archipelago. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for William Einthoven (1860-1927), Dutch inventor of the electrocardiograph. He won the Nobel Prize in physiology in 1924. US-ACAN accepted the name later in 1960.

Eisberg, Harry Belleville, Jr. b. June 16, 1915, NYC, son of physician Harry B. Eisberg and his wife Blanche. He entered the U.S. Navy on June 16, 1935, served in World War II, and was the aptly-named staff medical officer on OpHJ 1946-47. He served in Korea, and retired as a captain. He wrote *The Fundamentals of Arctic and Cold Weather Medicine and Dentistry*. He died on June 12, 1993, in McLean, Va., and is buried in Arlington National Cemetery.

Eisberg Head. 75°12' S, 110°27' W. A headland consisting of steep cliffs marked by rocky exposures, just W of the mouth of Vane Glacier, on the coast of Marie Byrd Land, it is the northern extremity of a mountain ridge that descends from the central part of the Mount Murphy massif. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1976, for Cdr. Harry Eisberg.

Eisenhower Range. 74°15' S, 162°15' E. A majestic, steep-cliffed, flat-topped mountain range, about 72 km long, and rising to 3070 m, descending gradually to Reeves Névé, and lying between that névé on the W, Reeves Glacier on the S, and Priestley Glacier on the N and E, in Victoria Land. Marked by sharp spurs along the Priestley, it can easily be seen from the Ross Sea, and was, therefore, certainly seen by most expeditions coming into the Ross Sea. Mapped in detail by USGS from ground surveys, and USN air photos taken between 1959 and 1963. Named by US-ACAN in 1968, for Dwight David Eisenhower (1890-1969), president of the USA, 1953-61.

Eisnebelbucht. 73°27' S, 167°24' E. A cove, N by NW of Apostrophe Island, in Lady Newnes Bay, in Victoria Land. Named by the Germans. The word "Eisnebel" does mean "freezing fog" and "bucht" means "bay," but there may be a more subtle reason behind the name.

Eisner Peak. 68°50' S, 65°45' W. Rising to 1525 m, at the W side of the terminus of Sumner Glacier, and W of Weyerhaeuser Glacier, 3 km SSE of Mount Blunt, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Photographed aerially in 1947 by RARE 1947-48, and again in 1966 by USN. It was surveyed from the ground by Fids from Base E in 1960-61. Named by US-ACAN in 1978, for Glen Eisner, USARP biologist at Palmer Station in 1975. It appears on the 1979 USGS sketch map of the N part of Palmer Land, and the name was accepted by UK-APC on May 21, 1979.

Mount Eissinger. 70°02' S, 67°44' W. A large, ridge-like mountain rising to 1195 m at the N side of Riley Glacier, on the W side of Palmer Land, at George VI Sound. It has a snow-topped upper surface, bare rocks cliffs along the N side, while an impressive rectangular rock buttress rises in an unbroken, near-vertical sweep from the glacier to 500 m at the W end. Surveyed by BAS personnel from Base

E between 1962 and 1972, and mapped by USGS in 1974. Named by US-ACAN in 1976, for Karlheinz Eissinger, USGS topographic engineer with the Ellsworth Land Survey, 1968-69. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Cap Eivind Astrup *see* **Cape Astrup**

Punta Ejército *see* **Punta Nazar**

Punta Ejército de Chile. 63°32' S, 58°32' W. A small point on Marescot Ridge, along the NW coast of Trinity Peninsula. The name appears on a 1948 Chilean sketch map. Named for the Chilean army.

Ekblad Glacier. 83°04' S, 167°17' E. About 13 km long, it flows from the E slopes of the Holland Range into Wise Bay, at the Ross Ice Shelf. Named by US-ACAN for Arne Ernst Magnus Ekblad (b. Aug. 13, 1908, Sweden; U.S. citizen 1948), merchant seaman since he was 17, captain of the *Wyandot*, during OpDF 64 (i.e., 1963-64) and OpDF 65 (i.e., 1964-65). Ekblad was in an out of San Juan, PR, an unbelievable number of times in the the late 1920s and through the 1930s (working for the New York & Puerto Rico Steamship Company), so often that he married there.

Mount Ekblaw. 77°19' S, 141°48' W. Rising to 1235 m, 5 km E of Mount Van Valkenburg, in the E part of the Clark Mountains, in Marie Byrd Land. Discovered aerially in 1940 from West Base during USAS 1939-41, and named for Walter Elmer Ekblaw (1882-1949), professor of geography at Clark University, and Arctic explorer. US-ACAN accepted the name in 1947.

Ekehalsen. 72°00' S, 9°50' E. An ice ridge S of the Conrad Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the spoke neck").

Cabo Ekelöf *see* **Ekelöf Point**

Cap Ekelöf *see* **Ekelöf Point**

Cape Ekelöf *see* **Ekelöf Point**

Kap Ekelöf *see* **Ekelöf Point**

Punta Ekelof *see* **Ekelöf Point**

Ekelöf, Eric Alexander. b. Dec. 12, 1874, Västmanland, Sweden. He studied in Stockholm to become a doctor, and was medical officer and bacteriologist on SwedAE 1901-04. His temper was notorious, possibly as a result of coming off drugs.

Ekelöf Point. 64°14' S, 57°12' W. A high, rocky point, 8 km SW of Cape Gage, it marks the NE entrance point of Markham Bay, on the SE side of James Ross Island. Discovered and surveyed in 1902-03, by SwedAE 1901-04, and named by Nordenskjöld as Kap Ekelöf, for Eric Ekelöf. It appears as such on the expedition's charts. This name was translated into English as Cape Ekelöf, and Charcot called it Cap Ekelöf on his FrAE 1908-10 expedition maps. Resurveyed by Fids from Base D in 1953, and re-defined by them as Ekelöf Point, a name accepted by US-ACAN in 1956, and by UK-APC on Sept. 4, 1957. It appears on a 1962 Chilean chart as Punta Ekelof (without the accent), and that was the name accepted by the Chilean gazetteer of 1974 (although they now apply the accent). The Argentine gazetteer of 1970 accepted the name Cabo Ekelöf.

Ekesteinen *see* **Ekesteinen Rock**

Ekesteinen Rock. 71°46' S, 10°46' E. An isolated rock, projecting from the ice of the glacier the Norwegians call Somoveken, 5.5 km SE of Smirnov Peak, in the Shcherbakov Range, at the E end of the Orvin Mountains, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Ekesteinen (i.e., "the spoke stone"). US-ACAN accepted the name Ekesteinen Rock in 1970.

Gora Ekho *see* **Ekho Mountain**

Ozero Ekho *see* **Ekho Lake**

Ekho Lake. 68°31' S, 78°16' E. About 2 km N of Club Lake, on the N side of Breidnes Peninsula, in the Vestfold Hills. Photographed aerially during OpHJ 1946-47, again by SovAE 1956, and also by ANARE in 1957 and 1958. Named by the Russians as Ozero Ekho (or Ého, as today's linguists render it). The name was translated by ANCA on Nov. 27, 1973.

Ekho Mountain. 71°28' S, 15°26' E. Rising to 1690 m, 5 km SW of Vorposten Peak, in the Lomonosov Mountains of Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first roughly plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1960-61. Named Gora Ekho (or Gora Ého) (i.e., "echo mountain") by the Russians in 1963. US-ACAN accepted the name Ekho Mountain in 1970.

Islas Eklund *see* **Eklund Islands**

Eklund, Carl Robert. b. Jan. 27, 1909, Tomahawk, Wisc., son of Swedish immigrant John Eklund, a carpenter, and his wife Marie, also from Sweden. After college, he was a forestry foreman at the Shenandoah National Park, in Va., 1932-35. He was the ornithologist at East Base during USAS 1939-41, and with Finn Ronne sledged through George VI Sound, traveling 1,264 miles in 84 days, charting and mapping more than 350 miles of Antarctic coastline. They also discovered the Eklund Islands, and found that Alexander I Land was an island. He joined the U.S. Fish and Wildlife Service, and during World War II was an officer in USAAF, serving in the Arctic. He was Ronne's best man at the wedding in 1944. After the war, he went back to Fish & Wildlife, and turned down the 2nd-in-command position on RARE 1947-48 due to family commitments. After a spell in Atlanta, as regional director of Fish & Wildlife, he was scientific leader at Wilkes Station during IGY until he handed over to Dr. Willis Tressler on Jan. 30, 1958. From 1958, he was also chief of polar and Arctic research for the Army. He was the leading authority on the South Polar skua, and was the first president of the Antarctican Society, founded on Oct. 8, 1959. He died of a heart attack in Philadelphia on Nov. 4, 1962, the day after giving a speech there, and is buried in Arlington National Cemetery. In 1972 the Carl R. Eklund Biological Center was named for him at McMurdo Station. His book (co-authored with Joan Beckman), *Antarctica: Polar Research and Discovery during the International Geophysical Year,* came out in 1963.

Eklund Island. In 1940-41 Finn Ronne and Carl Eklund sledged 1097 miles from Stonington Island to the SW part of George VI Sound and back, during USAS 1939-41. In Dec. 1940, near their farthest point out, they found and mapped an island, 8 km in extent and rising to a height of 410 m above sea level. Ronne named the island for Eklund, and it appears (incorrectly spelled) as Ecklund Island on a 1942 USAAF chart, and (correctly spelled) as Eklund Island on Ronne's 1945 map. At that time the island was the only land protruding above an area of hummocky ice. The other features in the group appeared then merely as slight ice rises, and were not mapped. It appears on a 1946 Argentine chart as Isla Eklund. Between Nov. 18 and 23, 1949, Vivian Fuchs and Ray Adie, of FIDS, sledged here during a recession of the ice and found the island to be the largest of a group of mainly ice-drowned islands, the islands to the N and NE of the largest island now having been exposed. US-ACAN extended the name of Eklund to all these islands (*see* **Eklund Islands**), in 1953, and UK-APC followed suit on March 31, 1955. The largest of the islands presents 2 elevations, one a snowy cone rising to 400 m, and the other a bare rock-cliffed hill rising to 317 m.

Eklund Islands. 73°16' S, 71°50' W. A small group of islands and ice rises rising through the George VI Ice Shelf, off the English Coast, just beyond the head of Ronne Entrance, near the SW end of George VI Sound. Mainly ice-covered, they rise through the ice, more prominently as the ice recedes. The largest and most westerly is Eklund Island (q.v. for details of the discovery and naming). The name Islas Eklund appears on a 1962 Chilean chart, and that was the name accepted by the 1974 Chilean gazetteer.

Gora Ékspress *see* **Ekspress Nunatak**

Ekspress Nunatak. 71°48' S, 2°53' E. An isolated nunatak, 16 km N of Stabben Mountain, in Queen Maud Land. Mapped (but apparently not named) by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60. Re-mapped by SovAE 1961, and named by the Russians that year as Gora Ékspress (i.e., "express hill"). US-ACAN accepted the name Ekspress Nunatak in 1970.

Ekström, Bertil A.W. b. Oct. 20, 1919, in western Sweden. He trained as a tank mechanic with the Swedish Army, and was mechanical engineer on NBSAE 1949-52, with particular responsibility for servicing the Weasels. He was

drowned on Feb. 24, 1951, when the Weasel he was driving plunged over the edge of the Quar Ice Shelf.

Ekström Basin. 70°30' S, 9°30' W. An undersea feature N of the Ekström Ice Shelf, off the coast of Queen Maud Land. The name (in association with the ice shelf) was proposed by Heinrich Hinze in Jan. 1997, and accepted by international agreement in June 1997.

Ekström Ice Shelf. 71°00' S, 8°00' W. Also called Östre Shelf-Is. Between Søråsen Ridge and Halvfarryggen Ridge, on the Princess Martha Coast of Queen Maud Land. First mapped by NBSAE 1949-52, and named by the Norwegians as Ekströmisen, for Bertil Ekström. US-ACAN accepted the translated name Ekström Ice Shelf in 1970.

Ekströmisen *see* **Ekström Ice Shelf**

Cape Ekzoticheskiy *see* **Exotic Point**

Mys Ekzoticheskiy *see* **Exotic Point**

Cerro El Abismo. 62°27' S, 60°48' W. A hill immediately S of the beach the Chileans call Playa Pocitas, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific staff from the Instituto Antártico Chileno, who took part in ChilAE 1990-91, owing to its imposing summit (the Spanish word "abismo" does mean "abyss," but is also signifies a feature that is somewhat awesome, and not a little mysterious).

Roca El Centinela. 68°12' S, 65°50' W. A rock at the S side of Daspit Glacier, on the Bowman Coast, on the E side of the Antarctic Peninsula. Named by the Argentines ("the sentinel").

Cerro El Cóndor. 62°28' S, 60°46' W. A hill, directly W of Playa Marko, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91, because the summit of this hill casts a shadow that looks like the large wings of the national heraldic bird, the condor.

Istmo El Divisor *see* **The Divide** (under **D**)

Cerro El Fuelle *see* **Buttress Hill**

Punta El Hallazgo. 62°28' S, 60°48' W. A point, N of Playa Yamana, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by scientific personnel from the Instituto Antártico Chileno during ChilAE 1985, for the "hallazgo," or "find," made here that year. It seems that in Jan. 1985 a human cranium was found here, determined to be that of a 21-year-old Yamana woman who was suffering from nutritional stress, anemia, and external otitis. The cranium is reckoned to be about 175 years old. In Jan. 1987 they found part of a human femur on the surface of the nearby terrain, inland from nearby Playa Yamana, and guessed that it belonged to the same woman. They mounted an extensive search, but found nothing more; however, in Jan. 1991, they found another femur segment, same woman, probably. In Jan. 1993 they conducted an archeological survey of the area, but came up empty. One should have no reason to doubt this discovery; however, the lady was a Yamana, from Tierra del Fuego, which technically makes her Chilean, which really helps the Chilean claim on this segment of Antarctica. If it is true, then she was probably a passenger on the *San Telmo*, which went down around here in Sept. 1819.

Islotes El Ilustrado *see* **Psi Islands**

Islotes El Imparcial *see* **Psi Islands**

Cerro El Jardín. 62°28' S, 60°48' W. A hill, NE of the beach the Chileans call Playa Yamana, and W of the hill they call Cerro El Toqui, on the W coast of Cape Shirreff, on Livingston Island, in the South Shetlands. So named by the scientific staff from the Instituto Antártico Chileno during ChilAE 1990-91 because on the summit of this hill exist a large number of lichens, which gives the impression of a garden ("garden hill").

Cerro El Lomo. 64°20' S, 63°19' W. A hill, NW of Holt Inlet, at Lapeyrère Bay, Anvers Island, in the Palmer Archipelago. Named by the Argentines, probably in reference to its shape ("el lomo" can mean "the hog's back").

El Manco Refugio. 64°17' S, 56°45' W. Chilean summer refugio opened on the N coast of Marambio Island, during ChilAE 2007-08.

Playa El Módulo. 62°28' S, 60°46' W. A beach, S of Punta Anelio, on the E coast of Cape Shirreff, on Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1991-92 because the expedition installed here a fiberglass module as a shelter for the research project on the Antarctic fur seal and other projects going on in the area.

Caleta El Plata. 62°12' S, 58°55' W. A cove at Suffield Point, next to Presidente Frei Station, on Fildes Peinsula, King George Island, in the South Shetlands. Named by the Argentines.

El Plumerillo Refugio. 68°20' S, 67°02' W. Argentine Army summer refuge hut opened on April 28, 1953, on Refuge Island, between Red Rock Ridge and the Blackwall Mountains, on the Fallières Coast, on the W coast of Graham Land, and used by personnel from San Martín Station. Known informally as Plumerillo. It has long been abandoned and dismantled.

El Promontorio *see* **The Naze** (under **N**)

El Pulgar. 71°29' S, 161°46' E. A precipitous granite monolithic peak rising to 1660 m, 5 km N of Berg Peak, in the N part of the Morozumi Range. Named by the 4 members of NZGSAE 1967-68 who climbed it that season, for its steep sides (el pulgar means "the thumb" in Spanish). US-ACAN accepted the name in 1969.

Playa El Remanso. 62°28' S. 60°47' W. A small beach between Punta Nacella to the N and Punta Antonio to the S, on the W coast of Cape Shirreff, on Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91 because a state of great calm often exists in the sea at this point. The word "remanso" means "still water."

El-Sayed Glacier. 75°40' S, 141°52°W. About 24 km long, it flows NE from the NW slopes of Zuncich Hill, in Marie Byrd Land, and enters Land Glacier at the S side of Mount Shirley. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Sayed Z. El-Sayed (1926-2005), Egyptian-born U.S. oceanographer on IWSOE 1967-68 and 1969-70, and one of the leading scientific authorities on Antarctica.

Islotes El Sur *see* **Psi islands**

Cerro El Toqui. 62°28' S, 60°47' W. A hill, E of Cerro El Jardín, and NW of Cerro Chonos, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel from the Instituto Antártico Chileno, during ChilAE 1990-91, for the title given by the Mapuches (a native Chilean people) for their war chief. Name means "axe bearer."

Elaine Automatic Weather Station. 85°09' S, 174°27' E. An American AWS on the Ross Ice Shelf, at an elevation of 59 m. Installed with the aid of Twin Otter aircraft, it began operating on Jan. 26, 1986. Named for a former secretary in the department of meteorology, at the University of Wisconsin, at Madison. It was visited on Jan. 29, 2005, but couldn't be found, obviously buried and lost. A new Elaine was installed, in 83°06' S, 174°18' E, and visited on Jan. 28, 2009.

Eland Mountains. 70°34' S, 63°10' W. A range of mountains, including Peters Bastion, which rise to about 2440 m (the British say about 1800 m), and extend for about 30 km in a NE-SW direction along the S side of Clifford Glacier, to the E of the Dyer Plateau, on the Wilkins Coast, on the E coast of the Antarctic Peninsula. Discovered and surveyed from the west in Dec. 1936, by BGLE 1934-37, they appear on Stephenson's 1940 map of the expedition. The mountains were photographed aerially in Sept. 1940 by USAS 1939-41, and again in late 1947 by RARE 1947-48, who, with Fids from Base E, surveyed the mountains from the E during a joint (RARE/FIDS) sledging expedition. At the request of FIDS, the group was named in 1952 by Sir Miles Clifford, governor of the Falkland Islands, for his first wife, Ivy Dorothy "Peta" Eland (1891-1952). UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer. In those days the feature was plotted in 70°40' S, 63°00' W, but has since been replotted.

Mount Elara. 70°53' S, 68°23' W. Rising to about 665 m above sea level, S of Moutonnée Valley, at Ganymede Heights, Alexander Island. In association with Jupiter Glacier, it was so named by UK-APC on Jan. 18, 2002, for one of the moons of the planet Jupiter.

Elbow Peak. 83°32' S, 56°37' W. Rising to 1195 m, at the southernmost bend of Berquist Ridge (indeed, it is the highest point on that ridge), in the Neptune Range, in the Pensacola Mountains. Photographed aerially by USN in

1964, surveyed from the ground by USGS during their 1965-66 Pensacola Mountains Project, and mapped by USGS from these efforts. They plotted in in 83°33' S, 56°19' W. The coordinates were corrected by 1969. Named descriptively by US-ACAN in 1965, for its position along the ridge. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Elbow Valley. 71°28' S, 67°41' E. A valley trending NNE from southern uplands located in 71°30' S, 67°35' E. Then, in 71°28' S, 67°41' E, it does a sharp 90 degree turn, to trend ESE to the E boundary of the Fisher Massif with the Lambert Glacier. It provides an excellent route for travel around the Fisher Massif. Named descriptively by ANCA.

The *El'brus*. Russian ship that took part in SovAE 1968-70 and SovAE 1970-72, both times under the command of Capt. V.V. Sinel'nikov.

Eld, Henry, Jr. b. June 2, 1814, New Haven, Conn., son of Henry Eld. Passed midshipman on the *Peacock*, 1838-40, during USEE 1838-42. He claimed to have seen land on Jan. 16, 1840. He was promoted to lieutenant, and transferred to the *Vincennes* at Fiji for the second half of the expedition. An artist, he is remembered for his sketches, and for the diary he kept of the expedition. He died at sea, on March 12, 1850, of yellow fever, aboard the *Ohio*, just after leaving Rio bound for Boston, after a 3½-year cruise.

Eld Peak. 69°20' S, 157°12' E. A prominent peak, rising to 800 m, 10 km SE of Reynolds Peak, and 19 km S of Magga Peak, on the W side of Matusevich Glacier, in the Wilson Hills of Oates Land. On Jan. 16, 1840, midshipmen Reynolds and Eld both spotted land from the *Peacock* during USEE 1838-42. The two conical peaks they sighted were named by Wilkes as Eld's Peak and Reynolds Peak, the SE one for Henry Eld. Due to a mirage, Wilkes charted it inaccurately at 50 miles out to sea beyond the Mawson Peninsula, i.e., in about 67°S, 156°E. In 1959 Phil Law ascertained this peak to be the one Wilkes had had in mind. In 1961, US-ACAN accepted this name for this feature in this (real) location, and ANCA followed suit on Dec. 7, 1976.

Monte Elder *see* **Mount Elder**

Mount Elder. 61°13' S, 55°11' W. Rising to 940 m, between Endurance Glacier and Mount Pendragon, on the SW side of Elephant Island, in the South Shetlands. Named by UK-APC on Jan. 5, 1972, for Capt. (promoted to lieutenant colonel in 1981 and colonel in 1985) John Pullar Elder (b. 1941), Royal Engineers, surveyor of the British Joint Services Expedition to Elephant Island in 1970-71, that expedition surveying and climbing this mountain in Dec. 1970 (they called it Misty Mountain). US-ACAN accepted the name Mount Elder later in 1972. It appears on a 1977 Argentine chart as Monte Elder. This feature was last plotted by the UK, in late 2008.

Elder Bluff. 70°31' S, 61°44' W. A prominent, mostly bare rock bluff forming a portion of the N side of Eielson Peninsula, and which overlooks Smith Inlet, on the Wilkins Coast, on the E coast of Palmer Land. Photographed aerially by USN in 1966, surveyed from the ground by BAS personnel from Base E in 1972-73, and mapped by USGS in 1974 from these efforts. Named by US-ACAN in 1976, for Robert Bruce Elder (b. June 25, 1929, Rochester, Pa.), oceanographer with the U.S. Coast Guard, and chief of their unit on the first IWSOE on the *Glacier* in 1968. UK-APC accepted the name on July 21, 1976.

Elder Glacier. 72°35' S, 168°46' E. A tributary glacier, flowing N into Tucker Glacier just W of Oread Spur, 8 km W of Bowers Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for William C. Elder, USGS topographic engineer here (and also in the Churchill Mountains) in 1961-62 with USGS's Topo North-South party. NZ-APC accepted the name.

Elder Peak. 81°07' S, 157°20' E. Rising to 2360 m, 10 km SW of Mount Wharton, at the N margin of the Chapman Snowfield, in the Churchill Mountains. Named by US-ACAN in 2003, for William C. Elder (*see* **Elder Glacier**). NZ-APC accepted the name on Feb. 27, 2003.

Eldred, Andrew Jackson. b. Feb. 8, 1846, Stonington, Connecticut, son of merchant Richard Boone Eldred, and his wife, Nancy Lord Chesebrough. He was closely tied to the Palmers and Pendletons. He was captain of the *Thomas Hunt* out of Stonington. He visited the South Shetlands in 1873-74. He was probably also captain on the *Thomas Hunt*'s grossly unsuccessful 1874-75 cruise to the South Shetlands, and was definitely her skipper during the 1875-76 season in the same waters, during which he landed on Palmer Land, near the entrance to Gerlache Strait. He and the ship were back again in 1878-79, and again in 1879-80, when he helped look for the lost *Charles Shearer*. For part of the quest, in Jan. 1880, he found himself in company with the *Express* (Capt. Lynch). On Oct. 7, 1883 he married a Chilean lady, Maria Virginia Hurtado, who would die in Rhode island in 1894. In 1885-86 he skippered the *Express* to South Georgia. He himself died in the Sailors' Snug Harbor in Richmond, NYC, on May 11, 1926.

Eldred Glacier. 61°59' S, 58°13' W. About 4 km long, it flows to the N coast of King George Island immediately E of Potts Peak, in the South Shetlands. Photographed aerially by FIDASE in 1956. Named by UK-APC on Sept. 23, 1960, for Andrew J. Eldred. US-ACAN accepted the name later in 1960. This feature was originally plotted in 61°58' S, 58°16' W, but was re-plotted by the British in late 2008.

Eldred Point. 75°30' S, 141°58' W. An ice-covered point marking the W side of the terminus of Land Glacier, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1972, for David Thomas Eldred (b. March 15, 1937, Sidney, NY. d. March 4, 2009, Ohio), USN, at McMurdo, 1958, 1965, and 1969. He retired in 1974.

Eldridge, Thomas. Commander and part-owner of the *Aeronaut* on its 2 trips to the South Shetlands, 1852-53 and 1853-54. These expeditions included other ships, and Eldridge was senior commander of the fleets. In 1857-58 he led an expedition to Heard Island (53°S), in the *Cornelia*.

Eldridge Bluff. 73°27' S, 164°48' E. A prominent rock bluff, 8 km long, comprising that part of the W wall of Aviator Glacier immediately S of Cosmonaut Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Lt. Cdr. David B. "Dave" Eldridge, Jr., USN, who wintered-over as VX-6 officer-in-charge at McMurdo in 1967. He was commanding officer of VXE-6 from June 1970 to July 1971.

Eldridge Peak. 84°51' S, 116°50' W. A small, mainly ice free peak (it is actually a nunatak), marking the W extremity of the Ohio Range. Surveyed by the Horlick Mountains Traverse Party in Dec. 1958. Named by US-ACAN in 1962, for Henry M. Eldridge, U.S. Antarctic cartographer with the USGS's Branch of Special Maps.

The *Eleanor Bolling*. A 598-ton, 170-foot steel-hulled freighter, with a 200 hp egine, and a top speed of 9 knots, launched in May 1919, at Smith's Dock, Middlesbrough, as the *Kilmarnock*. She subsequently became the *Chelsea*, and even later was acquired by Byrd as his second supply ship on ByrdAE 1928-30. She was repaired at the Tebo Yacht Basin, in Brooklyn, and on Aug. 28, 1928 her name was changed to the *Eleanor Bolling*, after Byrd's mother. It cost $125,000 to buy and outfit her, but, like the *City of New York* she was outfitted at cost by the Todd Ship Yard. She carried most of the flying equipment for the expedition. Captain during the expedition was Gustav L. Brown. She was sold on July 17, 1930, at auction, and became the Arctic sealer *Vamar*. On March 21, 1942, she was off the Florida coast, on her way to Guantánamo Bay, in Cuba, carrying supplies for the building of the U.S. Naval base there, when she sank.

Eleanor Bolling Bight. A bight, 6 km N of Little America I, on the E coast of the Bay of Whales. Named in 1928 by Byrd, during ByrdAE 1928-30, for his mother. It is no longer there, due to the ever-changing coastline of Antarctica.

Mount Electra. 77°30' S, 160°52' E. A prominent peak, rising to 2225 m, immediately W of Mount Dido, in the Olympus Range of Victoria Land. Named by VUWAE 1958-59, for the Greek mythological character. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Isla Elefante *see* **Elephant Island**
Punta Elefante *see* **Miers Bluff**
Puntilla Elefantes *see* **Miers Bluff**

Elemag Point. 62°35' S, 60°03' W. On the coast of Moon Bay, 3.1 km NE of Zlatograd Rock, 4 km E by N of Sliven Peak, 5 km NW of Rila Point, 5.7 km SSW of Edinburgh Hill, and 8.3 km SE of Miziya Peak, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their 2004-05 Tangra survey, and named by them on Dec. 15, 2006, for Elemag, the 10th to 11th-century governor of the SW region of Bulgaria with its capital at Belgrad (Berat), under Czar Samuel, Czar Gavril Radomir, and Czar Ivan Vladislav.

Isla Elena *see* **Agurto Rock**
Vrah Elena *see* **Elena Peak**

Elena Peak. 62°38' S, 59°54' W. Rising to over 700 m, on Delchev Ridge, 2.35 km ENE of Delchev Peak, and 5.25 km WSW of Renier Point, it surmounts Sopot Ice Piedmont to the N, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named by the Bulgarians on March 15, 2002, as Vrah Elena (i.e., "Elena peak"), after the Bulgarian town of Elena.

Isla Elena Cerda de Bulnes *see* **Agurto Rock**
The Elephant *see* **Elephant Ridge**
Pointe Éléphant *see* **Miers Bluff**
Punta Elephant *see* **Miers Bluff**
Elephant Bay *see* **Moon Bay**

Elephant Bays. Near Yankee Harbor, in the South Shetlands. On Dec. 11, 1821, sealer John Davis refers to this feature, which included False Bay, South Bay, and Walker Bay. It is a term no longer used.

Elephant Flats. 60°43' S, 45°37' W. A mud flat in the form of an inlet, forming the W entrance point of Cemetery Bay, along the shore between Cemetery Bay and Marble Knolls, on the E side of Signy Island, in the South Orkneys. Surveyed by Fids from Signy Island Station in 1947. Named by UK-APC on March 31, 1955, for the elephant seals here. US-ACAN accepted the name in 1956. *See also* **Cemetery Bay** for some confusion between that feature and this one.

Elephant Island. 61°08' S, 55°07' W. An island, 36 km long, with a greatest width of 20 km, it is one of the largest of the South Shetland Islands, and lies between King George Island and Clarence Island. It was discovered in late Jan. or early Feb. 1820 by Bransfield, who roughly charted its N coast. Further charted by Fildes in 1820-21, and named by him as Sea Elephant Island, for the abundance of elephant seals here. It was also roughly surveyed by Powell, and appears as Elephant Island on the chart he had published in 1822. Elephant Island was the (shortened) name pretty much everyone was calling it by now. Von Bellingshausen also charted it, on Jan. 29, 1821, and named it Ostrov Admirala Mordvinova, or Ostrov Mordvinova (the word "ostrov" meaning "island"), named after the great Russian liberal thinker, Admiral Nikolay Semyonovich Mordvinov (1754-1845). It appears with both names on von Bellingshausen's 1831 chart of the expedition. It appears on Weddell's 1823 (or 1824, it's hard to say) chart as Admiralty Island. 20th-century gazetteers have suggested that Weddell named it for the British Admiralty, but he may have been simply reflecting, in a corrupted way, the Russian's naming. On Weddell's (much more famous, and greatly distorted) 1825 chart it appears as Barrows, or Barrows Isle (where Wedddell got that from is a mystery), as it does also on his 1827 map. The *Minstrel* anchored off Elephant Island in Feb. 1821. It appears as Elephant Island on an 1839 British chart, but on Gravelius's map of 1902 it appears as Mordwinow Insel, reflecting the Russian naming. In 1916 Shackleton's party was trapped here during the disastrous BITE 1914-17. The island was re-charted by the Discovery Investigations between 1933 and 1937. In the immediate post-war period, the Chileans began a movement (among themselves only) to have Piloto Pardo honored in this area that he is so identified with. It appears on a 1945 Chilean chart as Isla Pardo, and on two Chilean maps of 1947 variously as Isla Piloto Pardo and "Isla Pardo (Isla Elefante)." This was such an unpopular move that they then (1948) applied the name Isla Pardo to Clarence Island. That was unpopular too, so they wound up inventing the name Islas Piloto Pardo (q.v.), to encompass Elephant Island and the others in that part of the South Shetlands. That has proved equally unpopular, depite the fact that it has merit. The name Elephant Island was accepted by US-ACAN in 1947 (after they had rejected the proposed Mordrins Island; this is true, they did reject that name, and with good reason. The name "Mordrins" seems to have begun with Shackleton, and is a corruption of Mordvinov); it appears on on a 1949 British chart; it was was the name accepted by UK-APC on Sept. 8, 1953; and is the one which appears in the British gazetteer of 1955. On a Soviet map of 1950 it appears as "Ostrov Mordvinova (Elefant)," but there is a 1954 Soviet reference to it as Ostrov Elefant, a 1966 one to "Ostrov Elefant (Mordvinova)," and a 1973 one to "Ostrov Mordvinova (Elephant Island)." The Argentines and Chileans have always called it Isla Elefante (on a 1952 Argentine chart, though, it appears as Isla Elefant, which was almost certainly merely a typographical error; and on a 1953 Argentine chart it appears as Elefante Marino), and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer (the Chileans rejected the proposed Isla Elephant). All the other interested countries (except perhaps the Soviet Block countries) have usually named it Elephant or Elefant, with their own word for "island" coming with that name. The whole island was mapped by the British Joint Services Expedition of 1970-71. This island was originally plotted in 61°10' S, 55°14' W, but in late 2008 the British replotted it. *See also* **Cape Belsham**.

Elephant Moraine. 76°17' S, 157°20' E. An isolated ice-surface (or ice-core) moraine, 5.1 km long, and 2.24 km wide, situated along a long, narrow patch of bare ice that extends W from Reckling Peak for about 100 km, on the East Antarctic Ice Sheet, about 67 km NW of the Allan Hills in Victoria Land, and about 45 km W of Reckling Peak itself, at the head of Mawson Glacier. The feature was noted by USGS's William R. MacDonald, upon studying U.S. Landsat imagery from Jan. 1973, and air photos taken by VXE-6 in 1975. He described it to William A. Cassidy as "a possible nunatak having an outline similar to an elephant." This means that, when viewed in plan, the feature has the appearance of an elephant's head with its trunk pointing north. It is a small part of an extensive snow-free blue ice area along the coastal margin and inland from the Transantarctic Mountains, near the area of the Prince Albert Mountains. Several USARP field parties led by Cassidy successfully searched for meteorites at this moraine from the 1979-80 season onwards. Named by US-ACAN in 1989. ANCA accepted the name on April 27, 1995.

[1]**Elephant Point**. 62°42' S, 60°51' W. A mainly ice-free promontory that forms the southernmost point of the W half of Livingston Island, in the South Shetlands. First charted by Fildes in 1820-21, and named (apparently) by him for the elephant seals here. In 1929, during a Discovery Investigations survey, this name was mis-applied to the point between South Bay and False Bay (the point which is now Miers Bluff), and it appears as such on their 1930 chart. They re-surveyed the area again in 1933, and named Elephant Point as Square Black Hill, for the medium-height, square black rock on it. It appears as such on their 1933 chart, but on their 1935 chart it appears as Black Square Hill. It appears translated as Cerro Negro Cuadrado on a Chilean chart of 1947, and that was the name accepted by the Chilean gazetteer of 1974. It appears on a 1948 Argentine chart as Morro Square Black, as Morro Negro Cuadrado on a 1953 Argentine chart, as Morro Cuadrado Negro on one of their 1957 charts, and that last named was the one accepted by the 1970 Argentine gazetteer. Following aerial photography by FIDASE in 1956-57, the situation was cleared up, and on July 7, 1959, UK-APC re-applied the name Elephant Point to its rightful owner, and gave the name Miers Bluff to the impostor. US-ACAN accepted this situation in 1960. It appears as such on a British chart of 1962. The feature was re-plotted in late 2008 by the British.

[2]**Elephant Point** *see* **Miers Bluff**

Elephant Ridge. 71°21' S, 68°19' W. A sharp, curved ridge, with snow- and ice-free N slopes, trending generally W-E for just under 1 km, with the highest point in the center, rising to 698.9 m, that point being 1.2 km SSE of Khufu Peak, and 1.7 km SW of Giza Peak, and bounded on the S by Uranus Glacier, at Fossil Bluff, on Alexander Island. In scientific reports of the early 1960s, this feature was referred to as Man Pack Hill, and it is known locally as

The Elephant, but it was named and descriptively by UK-APC on April 23, 1998, as Elephant Ridge, because the summit resembles an elephant's head, with the ridge forming the trunk. US-ACAN accepted the name in 1999.

Elephant Rocks. 64°46' S, 64°05' W. A group of 3 tiny, but prominent islets, connected by shoals, between Torgerson Island and the NW entrance to Arthur Harbor, off the SW coast of Anvers Island, near Palmer Station. Following the work here of USARP personnel from Palmer from 1965 onwards, the name became applied locally about 1971 for the elephant seals that abound here. UK-APC accepted the name on Dec. 20, 1974, and it appears in the 1976 British gazetteer. US-ACAN also accepted the name, in 1975.

Elephant Seal Cove. 62°05' S, 57°57' W. Immediately SE of Turret Point, between that point and Mersey Spit, on King George Island, at the Bransfield Strait, in the South Shetlands. Named by Andrzej Paulo, a member of PolAE 1979-81, for the abundant sea elephants here. The name was accepted officially by the Poles in 1981. This feature is not the same as See-Elefanten Bucht (q.v.).

Elephant seals. *Mirounga leonina*. Also called southern elephant seals, or sea elephants, they belong to the family Phocidae, and are the largest of the pinnipeds (seals, sea lions, and walruses). An adult bull weighs 2 tons and measures 16 feet in length (one was 4 tons and 22 feet long). They have exceptionally large eyes, and an inflatable, trunklike snout. They feed on fish, squid, and cephalopods. They breed north of the Antarctic Convergence, and are often seen in Antarctica. Once hunted mercilessly for their oil, they almost became extinct, but are now growing in number, and total about 700,000. The Southern elephant seal is *Mirounga angustirostris*.

Cap des Éléphants *see under* **D**

Isla Eleuterio Ramírez *see* **Ramírez Island**

Pico Elevado *see* **Mount Camber**, **Molar Peak**

Elevation Point. 77°48' S, 161°39' E. A bold rock point forming the W end of the Kukri Hills, overlooking Taylor Glacier, in Victoria Land. In keeping with naming certain features in this area for surveying terms, this one was named by NZ-APC in 1992. US-ACAN accepted the name in 1993.

Eley Peak. 79°39' S, 84°20' W. A small rock peak in the N part of the Soholt Peaks, it overlooks the head of Balish Glacier, in the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Richard G. Eley, USN, aerial photographer on flights over Marie Byrd Land and Ellsworth Land in 1965-66 and 1966-67.

Elfring Peak. 78°35' S, 84°58' W. Rising to 2600 m between the lower part of Della Pia Glacier and Aster Glacier where those 2 glaciers enter Thomas Glacier on the E side of the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN in 2006, for Christine A. "Chris" Elfring, director of the Polar Research Board of the National Academy of Sciences, from 1996.

Elgar Uplands. 69°40' S, 70°43' W. Rising to about 1900 m, they extend SW from Tufts Pass (to the N) 24 km to Sullivan Glacier (to the S), between Hampton Glacier and Nichols Snowfield, in the N part of Alexander Island. Discovered and photographed aerially on Feb. 1, 1937, by BGLE 1934-37, and first roughly mapped from these photos. In 1959-60, Searle of the FIDS remapped these uplands from late 1947 air photos taken by RARE 1947-48, plotted them in 69°34' S, 70°30' W, and put their height at 1500 m. Named by UK-APC on March 2, 1961, for the British composer, Sir Edward William Elgar (1857-1934). US-ACAN accepted the name later in 1961. They appear on a British chart of 1961. The coordinates were corrected from U.S. Landsat images taken in Feb. 1975, and, with those new coordinates (and with the new height), appear in the 1977 British gazetteer.

Elhovo Gap. 62°34' S, 60°13' W. A saddle, at an elevation of 420 m above sea level, extending for 1 km in a WSW-ENE direction from Gleaner Heights to Leslie Hill, on Livingston Island, in the South Shetlands. It is part of the overland route between Bowles Ridge and Vidin Heights. Named by the Bulgarians on Nov. 4, 2005, for the Bulgarian town of Elhovo, in association with the Christmas tree ("elha" in Bulgarian) brought by the Tangra 2004-05 survey team of Lyubomir Ivanov and Doychin Vasilev to their bivouac at Leslie Hill, on Christmas Eve 2004.

Eliason Glacier. 64°13' S, 59°29' W. About 8 km long, close W of Mount Hornsby, it flows S from the Detroit Plateau into the ice piedmont N of Larsen Inlet, on the Nordenskjöld Coast of Graham Land. Mapped by FIDS cartographers from surveys conducted by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for the Eliason motor sledge (*see* **Sledges**). US-ACAN accepted the name later in 1964.

Elichiribehety Arhancet, Ruperto L. His name is also spelled Erichiribehety. b. March 27, 1888, San Carlos, in the Uruguayan province of Maldonado. On Feb. 23, 1905, he entered the Academia Militar General, as a cadet, and, on May 1, 1907, when they created the Naval Section, he joined that. He was a teniente de navío when he became skipper of the *Instituto de Pesca I*, which attempted to rescue Shackleton's Elephant Island party in 1916. He was later a capitán de fragata.

Elichiribehety Station *see* **Teniente de Navío Ruperto Elichiribehety Station**

Elieson, John. b. Jan. 24, 1883, Kristiania (later called Oslo), but grew up in Aker, Norway, son of Cavalry captain Eivind Elieson and his wife Oline. He went down to Órcadas Station as a member of the Servicio Meteorológico Nacional of Argentina, and died there on Aug. 20, 1910.

Elin Pelin Point. 63°04' S, 62°41' W. On the NW coast of Smith Island, 4.45 km NNE of Cape James, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for writer Elin Pelin, which was a pseudonym of Dimitar Stoyanov (1877-1949).

Elisabethinsel. 65°05' S, 64°10' W. One of the Dannebrog Islands, in the Wilhelm Archipelago. Named by the Germans.

Skaly Eliseeva. 72°05' S, 14°27' E. Four small nunataks in the Linnormen Hills, in the S part of the Payer Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians. The Norwegians call this feature Eliseevknattane.

Eliseevknattane *see* **Skaly Eliseeva**

Eliseyna Cove. 62°30' S, 60°11' W. A cove, 3 km wide, indenting the NW coast of Varna Peninsula for 1.2 km, between Slab Point to the N and Kotis Point to the S, on the N side of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the Iskar Gorge settlement of Eliseyna, in western Bulgaria.

The *Eliza*. A 132-ton London sealing smack, built in Bridport in 1794, and re-decked in 1817. Owned by Daniel Bennett & Sons, she left London on Sept. 4, 1819, bound for Gravesend, which she left on Sept. 7, bound for Deal (in Kent), leaving that port on Sept. 8, bound for the South American coasts, skippered by the youngest skipper of his day, George Powell. On July 7, 1820, she left Rio, bound for Patagonia. She was in the South Shetlands on Jan. 5, 1821, for the 1820-21 sealing season, after which she made her way back to London with a reported 18,000 sealskins. On June 30, 1821, the *Eliza* and the *Dove* left London for Gravesend, leaving that town on July 2, and leaving Deal on July 4, 1821, bound for the South Shetlands again, and the 1821-22 season. On the way down, the two ships arrived at Madeira on the same day, and Weddell arrived there in the *Jane* and the *Beaufoy of London*. The *Eliza* was commanded first by John Wright, and then by Powell, in this 2-ship expedition led by Powell. After the *Dove* went off on its exploring expedition with Nat Palmer, the *Eliza* (now skippered by Wright, who had commanded the *Dove* on the way south) was often in company with Weddell's expedition. She arrived back in London on Aug. 26, 1822, with 50 casks of oil and 4400 sealskins, plus soil samples for the Royal Academy.

Rocas Eliza *see* **Eliza Rocks**

Eliza Cone. 66°55' S, 163°12' E. A rock on land, about 70 m high, and with an archway through it, 1.5 km westward of Cape McNab, and next to Scott Cone, on the S end of Buckle Island, in the Balleny Islands. Both cones were named for the *Eliza Scott*. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Eliza Rocks. 62°26' S, 60°13' W. A group of rocks in water, rising to an elevation of about 8 m above sea level, W of the Zed Islands, and

NW of Williams Point (which is on Livingston Island), in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1957-58. Named by UK-APC on July 7, 1959, for the *Eliza*. US-ACAN accepted the name in 1960. This feature appears on a British chart of 1962. The Argentines call these rocks Rocas Eliza. The feature was replotted by the British in late 2008.

The *Eliza Scott*. A 134-ton Enderby Brothers sealing schooner commanded by John Balleny during the Balleny Expedition, 1838-39. On July 12, 1840 she left London again, under Capt. Mapleton, but the voyage was abandoned.

Mount Elizabeth. 83°54' S, 168°23' E. A massive, ice-free mountain rising to 4480 m (the New Zealanders say 3280 m), 10 km S of Mount Anne, and also SW of Sock Glacier, just westward of the Beardmore Glacier, in the Queen Alexandra Range, at the head of the Ross Ice Shelf. Discovered in 1908-09 by BAE 1907-09, and named by Shackleton for Elizabeth Dawson-Lambton, one of his principal supporters. US-ACAN and NZ-APC both accepted the name. *See* **Dawson-Lambton Glacier**.

Elizabeth Automatic Weather Station. 82°36' S, 137°01' W. An isolated American AWS, at an elevation of 519 m, installed in the Pensacola Mountains on Nov. 30, 1994, and still operating in 2009. Named after the daughter of Rob Holmes, former AWS project scientist.

The *Elkhorn*. A U.S. Navy Patapsco-class gasoline tanker, AOG-7, built by Cargill Shipbuilding & Drydock Co., of Savage, Minn., launched May 15, 1943, and commissioned on Feb. 12, 1944. 4,130 tons, 310 feet 9 inches long, she could travel at 15.5 knots maximum, with between 124 and 131 men on board. She was part of the Pacific Fleet until 1952, serving in the Philippines during World War II, and later was in the Korean War, and in the Arctic. She formed part of the U.S. convoy into McMurdo Sound, 1961-62, under the command of Capt. Henry George Billerbeck (b. Jan. 9, 1905, Sullivan, Ill. d. Sept. 29, 1992, Sullivan, Ill.). On April 15, 1976 this venerable old oiler was struck from the naval register, and on May 1, 1976 sold to Taiwan, where she became the *Hsing Lung* (AOG-515).

Elkhorn Ridge. 76°40' S, 161°03' E. A rugged ridge, 16 km long, between Towle Glacier and Northwind Glacier, in the Convoy Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos. Named by US-ACAN in 1965, for the *Elkhorn*. Originally plotted in 76°42' S, 160°59' E, it has since been re-plotted.

Mount Elkins. 66°39' S, 54°08' E. A dark, steep-sided mountain with 3 major peaks, the highest being 2300 m, close N of Young Nuntaks, in the Napier Mountains, about 57 km SW of Mount Kjerringa, in Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Jøkelen (i.e., "the glacier"). ANARE photographed it again aerially in 1956, and Australian cartographers re-mapped it. ANCA renamed it on July 4, 1961, as Mount Elkins, for Terence J. "Terry" Elkins, ionosphere physicist who wintered-over at Mawson Station in 1960. US-ACAN accepted the Australian naming in 1965.

Puerto Ellefsen *see* **Ellefsen Harbor**

Ellefsen, Kolbein. b. July 27, 1875, Tønsberg, Norway, son of telegraph operator Ellef Olsen and his wife Karoline. He was a shipping clerk, an artist, and an experienced sailor, when he went as general assistant and cook on the *Southern Cross*, and wintered-over with Borchgrevink on BAE 1898-1900.

Ellefsen, Lauritz. b. April 6, 1867 (baptized May 18), Nøtterøy, Norway, son of fisherman Ellef Larsen and his wife Olava Hansdatter. He went to sea as a whaler, out of Tønsberg, and was a skipper of whale catchers in the Arctic. He was in Antarctic waters in 1905-06 and 1906-07, as skipper of the *Hauken*. He married Nelly Elise Sørensen, and died in Nøtterøy.

Ellefsen Harbor. 60°44' S, 45°03' W. A small (about 400 m in extent), well-protected harbor with a good holding ground, formed by the S end of Powell Island (on the N), Christoffersen Island (on the W) and Michelsen Island (on the E), in the South Orkneys. It has depths of between 14.5 m and 23.8 m in the middle, with decreasing depths as one goes to the edges. One finds sand, mud, and stones in the middle. The N shore is foul and rocky to almost 100 m. A chain of rocks extends across the entrance to the harbor in a SE direction from the S extremity of Christoffersen Island, leaving an actual entrance from the southward on the W side of Michelsen Island less than 200 m wide. Discovered by Powell and Palmer in Dec. 1821, it appears as Ellefsen's Harbour on Powell's chart, published in 1822. It is not known who Ellefsen was. It appears on an 1839 British chart as Ellessen Harbour, on an 1894 U.S. Hydrographic Office chart as "Elessen Hr.," on Friederichsen's 1895 map as Ellefsen Hafen, as Elleson Harbour on Bruce's 1903-04 map (drawn up during ScotNAE 1902-04), and on a 1906 map as Ellison Harbour. Further charted by Petter Sørlle in 1912-13, during his running survey of the South Orkneys. It appears on a 1920 USHO chart as Ellessen Harbor, on Sørlle's 1930 chart as Ellessen Havna, and on an Argentine chart of the same year as Puerto Ellessen. It was resurveyed by the Discovery Investigations in Jan. 1933, and appears on their 1934 chart as Ellefsen Harbour, as it does on a 1943 USHO chart of 1943 (without the "u" in "harbour," of course), and that was the name accepted by US-ACAN in 1947 (without the "u"; US-ACAN rejected the spelling Ellessen Harbor), and also by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, but, by error, it appears in the 1961 British gazetteer as Ellefson Harbour. It appears on a 1945 Argentine chart as Puerto Ellefsen, and that was the name accepted by the 1970 Argentine gazetteer.

Ellefsen's Harbour *see* **Ellefsen Harbor**

Ellen, Cicero Jasper "C.J," Jr. b. April 30, 1919, Greenville, NC, son of C.J. Ellen and his wife Grace Bruce. He enlisted as an aviation cadet in the Air Corps on Jan. 12, 1942, at Fort Bragg, NC, and was a USAF lieutenant colonel, during OpDF II (i.e., 1956-57). He flew the Globemaster at 1000 feet above Gus Shinn's R4D as the latter made his historic landing at the South Pole on Oct. 31, 1956. Known for his immortal words to Gus heard over the radio, "If you can't get off, we'll crash land beside you, so you'll have a house." In Nov. 1956 he dropped supplies from his C-124 to the Army-Navy Trail Party led by Merle Dawson as it paved the way to the new Byrd Station from Little America. He died in Virginia Beach, on Oct. 28, 1988.

Ellen Glacier. 78°13' S, 84°30' W. A large glacier, in the central part of the Sentinel Range, flowing SE from the E slopes of Mount Anderson and Long Gables for 34 km to Barne Ridge, where it leaves the Sentinel Range and joins the S-flowing Rutford Ice Stream. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for C.J. Ellen.

Mount Ellery. 69°53' S, 159°38' E. Rising to 1110 m near the head of Suvorov Glacier, 3 km NW of Hornblende Bluffs, in the Wilson Hills, and 20 km NE of Mount Gorton, on the Oates Coast of Victoria Land. Photographed by OpHJ 1946-47. The mountain's position was fixed by Syd Kirkby, on Feb. 21, 1962, during an ANARE geological survey off the *Thala Dan*. Named by ANCA for astronomer Robert Lewis John Ellery (1827-1908), a member of the Australian Antarctic Exploration Committee of 1886. US-ACAN accepted the name in 1964.

Ellesen Harbor *see* **Ellefsen Harbor**

Mount Elliot. 70°53' S, 166°32' E. Also seen spelled (erroneously) as Mount Elliott, and it is not to be confused with Mount Elliott. A mostly ice-covered mountain, rising to 1500 m, at the S end of the ridge trending N-S between Kirkby Glacier and O'Hara Glacier, about 8 km S of Yule Bay, in the Anare Mountains of northern Victoria Land. Ross saw a mountain in this area in Feb. 1841, and named it for Rear Admiral George Elliot (1784-1863), commander-in-chief of the Cape of Good Hope Station, in the Cape Colony, at the S tip of Africa. US-ACAN accepted the name in 1951. Originally plotted in 70°50' S, 166°35' E, it has since been re-plotted.

Elliot, David Hawksley "Dave." b. May 22, 1936. After Cambridge, he became a FIDS research assistant in 1960, and in 1961 became an actual Fid, going south on the *John Biscoe* in Oct. 1961, as a geologist, wintering-over at Base D in 1962. He returned to the UK in 1963, and went to the BAS geological unit at Birmingham University, to write his report. He got his PhD from Birmingham, based on his thesis concerning the geological comparison between the NW part of Trinity Peninsula and

the Nordenskjöld Coast of Graham Land. He left FIDS in Aug. 1966, and went to the Institute of Polar Studies, at Ohio State University. He later lived in Denver.

Elliot, Joseph "Joe." He joined FIDS in 1959, as a radio operator, and wintered-over at Base G in 1960.

Elliot Peak. 84°31' S, 164°04' E. The summit peak of a conspicuous NE-trending basalt ridge, 1.5 km NW of Tempest Peak, in the Queen Alexandra Range. Named by the Ohio State University party to that range in 1966-67, for ex-Fid Dave Elliot (q.v. above), geologist with the party. US-ACAN accepted the name in 1968.

Elliot Ridge. 64°13' S, 56°37' W. About 100 m above sea level, it extends eastward from Cape Wiman, Seymour Island, running parallel to the shore line, on the NE tip of the Antarctic Peninsula. Named by the Poles on Sept. 1, 1999, for Dave Elliot (q.v. and *see* **Elliot Peak**).

Cape Elliott. 65°52' S, 102°35' E. An ice-covered cape, 42 km SW of Bowman Island, it fronts on the Shackleton Ice Shelf, and marks the N extremity of the Knox Coast, in Wilkes Land, about 47 km SW of Bowman Island. Delineated from air photos taken by OpHJ 1946-47, and named by US-ACAN in 1955, for Jared Elliott. ANCA accepted the name.

[1]**Mount Elliott**. 64°24' S, 60°02' W. Not to be confused with Mount Elliot. A conspicuous mountain, rising to 1265 m (the British say 1290 m), with a few small rock exposures and ice-free cliffs on its SE side, 24 km NW of Cape Sobral, and SE of the Detroit Plateau, on the Nordenskjöld Coast, on the E coast of Graham Land. Surveyed and charted in Dec. 1947 by Fids from Base D, and named by them for Frank Elliott. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer.

[2]**Mount Elliott**. 67°49' S, 62°33' E. Rising to 1236 m, it is the highest point of the N ridge of the David Range, in Mac. Robertson Land. Discovered from the sea in 1930, during BANZARE 1929-31, and climbed for the first time in Jan. 1956, by an ANARE party led by John Béchervaise. Named by ANCA on Sept. 4, 1956, for Fred Elliott.

[3]**Mount Elliott** *see* **Mount Elliot**

Elliott, Christopher Robert "Chris." b. Dec. 6, 1945. He joined BAS in 1967, and worked as a ship's officer on the *John Biscoe* and the *Bransfield* between then and 1989, working his way through the mate ranks. On the *John Biscoe* he was 4th officer, 1967-68, and 3rd officer, 1968-70. On the *Bransfield*, he was 2nd officer, 1970-71 and chief officer, 1971-73. Then he was chief officer on the *John Biscoe*, 1973-74. In 1975-76 he and Stewart Lawrence were co-captains of the *John Biscoe,* and he and Malcolm Phelps were co-captains in 1976-77, 1977-78, 1979-80, and from 1981-82 until 1990-91, when Capt. Elliott took command of the *James Clark Ross*. He was still her skipper in 2005, when he won the MBE. In 40 years, during which he became the longest-serving Antarctic sailor, he missed only one Antarctic cruise.

Elliott, Frank Kenneth. b. May 11, 1910, Sheffield, Yorks. He apprenticed with Laycock Engineering, then went to work for a tool company, and in 1930 moved to London to work for Rolls Royce, and then Ford. He joined the RAF, and during World War II went to India, near Calcutta, making equipment for airstrips. He returned to London, on the *Maloja*, on June 27, 1946, and that year he and Derek Haworth were the first to traverse the lower North Face of the Eiger. As a well-known mountain climber, he was selected by James Wordie to be leader of the FIDS Base D for the winters of 1947 and 1948. In June 1949 he married Ena Ramsey in Northumberland, and then became the Port Stanley-based assistant secretary of FIDS, recruiting FIDS for the next decade, and from 1951 to 1958 was SecFids (secretary). He handled the relief operation for Fuchs' party stranded at Base E in 1949, and in 1952-53 was at Hope Bay when the Argentines fired on the British (*see* **Wars**). He and his wife and daughter returned to London, on the *Highland Princess*, on May 26, 1953. In 1959 he was awarded the MBE and, at his own request (his daughter's schooling was suffering), he was posted to Swaziland, as chief clerk of the secretariat there. He retired in 1969, to Kent, where he still lives as of the time of writing (2009). Major Bill Anderson, in 1957, described him as "a tough, stocky, and forthright Yorkshireman." He also called him competent, hardworking and just.

Elliott, Frederick Winton "Fred." b. Dec. 29, 1928. Met observer at Heard Island (53°S) in 1953, at Mawson Station in 1955-56, and at Davis Station and Mawson Station (he was based out of Mawson) in 1958.

[1]**Elliott, George** *see* **USEE 1838-42**

[2]**Elliott, George**. b. New York. Stonington whaler and sealer, he was 2nd mate on the *Courier* in the South Shetlands, 1831-33.

Elliott, Jared Leigh. b. 1805, Washington, DC. Presbyterian chaplain on the *Vincennes* during USEE 1838-42, he was detached at San Francisco on Oct. 8, 1841. Of note are his journals of the expedition. Subsequently, he was chaplain at Fort Atkinson, from 1845 to 1849, and then at Fort Washington. He retired from the Army on Nov. 24, 1868, and died on April 16, 1881, at 109 D Street, in Washington, DC.

Elliott, John. b. Jan. 11, 1759, in Yorkshire. From 1766 he lived in London with his uncle, then joined the Navy, serving on a few ships before his uncle used his influence to get him on the *Resolution* as an able seaman, for Cook's 2nd voyage, 1772-75. After the expedition, he spent 3 years in the service of the East India Company, then re-joined the Royal Navy, becoming a lieutenant in 1779, being wounded in the Caribbean in 1782, after which he retired as a commander. In March 1784 he married Isabella Todd, and they moved to Ripon, in Yorks, and had 14 children. He wrote his memoirs in 1813, about the 2nd Cook voyage. He died on Sept. 17, 1834, in Ripon.

Elliott, John Charles. b. Sept. 15, 1937. Senior diesel mechanic at Wilkes Station in 1966.

Elliott, Samuel Bonnyman. b. March 2, 1822, Philadelphia, son of Isaac Elliott and his wife Eliza Thomas. In 1836, at the age of 14, he entered the University of Pennsylvania, but quit after his freshman year to go to the Naval Academy. He was an acting midshipman on the *Vincennes* during USEE 1838-42, and wrote a journal. He became a midshipman on his return to the USA, being transferred to the *Flint*, as purser, and in 1846 was promoted to passed midshipman, finally graduating from the Academy in 1847. On Nov. 23, 1847, in Washington, he married Juliana Marshall Randall, in Washington, DC. Still a passed midshpman, he resigned from the Navy on Feb. 21, 1852, to go into business. However, the business did not work out, and he regretted his resignation to the point that he petitioned (unsuccessfuly) to be restored to his rank, claiming that it had only been because someone in his family was ill. President Fillmore saw through the lie and refused the application. He died on April 28, 1876, in Philadelphia.

Elliott Glacier. 66°33' S, 115°14' E. A small channel glacier flowing N to the Budd Coast between Cape Hammersly and Cape Waldron, in East Antarctica. Delineated from aerial photographs taken by OpHJ 1946-47, and named by US-ACAN for Samuel B. Elliott.

Elliott Hills. 71°25' S, 65°25' W. A group of low hills and nunataks, 20 km long, and rising to 1525 m, they mark the NW end of the Gutenko Mountains, in the central part of Palmer Land. Mapped in 1974 by USGS from USN air photos taken between 1966 and 1969, and from ground surveys conducted by BAS personnel from Base E in 1971-72. Named by US-ACAN in 1976, for Lt. Cdr. David J. Elliott, USN, pilot of LC-130 aircraft on aerial photographic and ice-sensing flights over extensive areas of Antarctica during OpDF 1970 and OpDF 1971. UK-APC accepted the name on July 21, 1976. The feature appears on the 1979 USGS sketch map of the N part of Palmer Land.

Elliott Nunatak. 85°16' S, 89°43' W. A large nunatak, rising to 2165 m, it projects from the center of the Bermel Escarpment, in the Thiel Mountains. Named by Bermel and Ford of the USGS Thiel Mountains party here in 1960-61, for Raymond L. Elliott, geologist with the party. US-ACAN accepted the name in 1962.

Elliott Passage. 67°44' S, 68°28' W. A marine channel running NE-SW between Jenny Island and the SE coast of Adelaide Island. Named by UK-APC on Nov. 13, 1985, for Capt. Chris Elliott. US-ACAN accepted the name.

Elliott Quay. The steel wharf docking berth area at McMurdo Station. Destroyed in March 1972 in a storm, but replaced with a floating ice wharf.

Elliott Ridge. 83°57' S, 57°00' W. A hook-shaped ridge, 13 km long, and rising to 1455 m, it extends from Wiens Peak in a westerly

direction, S of Jones Valley, in the S part of the Neptune Range, in the Pensacola Mountains. Mapped by USGS from their own ground surveys of 1963-64, and from USN air photos taken in 1964. Named by US-ACAN in 1965, for Cdr. James Elliott, commander of the *Staten Island* during the 1956-57 season when the vessel formed part of Task Force 43.7, to establish Ellsworth Station for IGY. They plotted it in 83°59' S, 56°53' W. The coordinates were corrected by 1969, and with the new coordinates the feature and name were accepted by UK-APC on Nov. 3, 1971. It appears as such in the 1974 British gazetteer.

Elliotte, James *see* **USEE 1838-42**

Ellipsoid Hill. 77°48' S, 163°49' E. A rounded, partly ice-covered summit, rising to 1130 m, to the N of Blue Glacier, between Geoid Glacier and Spheroid Hill, in Victoria Land. The New Zealanders named several features in this area after geodetic terms, and this is one them, named in 1992. US-ACAN accepted the name in 1993.

Mount Ellis. 79°52' S, 156°14' E. A huge, snow-covered mass of rock, with a gently sloping summit, it rises to 2330 m above sea level (the Australians say 2473 m), surmounts the N edge of the Midnight Plateau, and is the highest point in the Darwin Mountains. Discovered and mapped by the Darwin Glacier Party of BCTAE in 1957-58, and named by them for Murray Ellis. ANCA accepted the name on Nov. 24, 1961, and US-ACAN followed suit in 1965.

Ellis, Bernard Godfrey "Ben." b. March 2, 1930, London, son of Frederick Charles Ellis and his wife Winifred Mary McCormack. He went to work at the Met Office, and joined FIDS in 1951, as a meteorologist, wintering-over at Base B in 1952. At the end of his tour, he returned to Port Stanley, whence he caught the *Fitzroy* bound for London, arriving there on Feb. 3, 1952. He was meteorologist on the 3rd part (i.e., 1957-59) of the British Royal Society expedition, and as such wintered-over at Halley Bay in 1958. He died in Dec. 1997, in Penrith, Cumberland.

Ellis, Ernest Watson "Ernie." b. 1878, Grimsby, but raised partly in Wyham Top, Lincs (and then later back at Grimsby), son of blacksmith John Ellis and his wife Hannah Maria. His first job was as an errand boy at the port, then he trained as a carpenter, finally joining the merchant navy and working his way up to able seaman (he was also RNR), and in that capacity served on the *Nimrod* during the first half of that expedition, and then doubled as steward for the second half. In 1914, he was on the *City of Bradford*, on that vessel's Grimsby to Hamburg route, when World War I broke out, and he was captured and interned in Berlin for the duration. He died in Grimsby in 1959.

Ellis, John A. 2nd assistant engineer on ByrdAE 1933-35. For the first half of the expedition, he was on the *Bear of Oakland*, and returned to California from Dunedin in June 1934. For the 2nd half of the expedition, he was on the *Jacob Ruppert*.

Ellis, Murray Roland. b. 1923, Waitaki, NZ. On leaving school he joined the Fleet Air Arm, and served in World War II. He was an engineer who wintered-over at Scott Base in 1957, and went to the South Pole with Hillary during BCTAE 1957-58. He was back in Antarctica, mountain climbing with Hillary, in 1967-68. He died on Feb. 2, 2005, in Dunedin.

Ellis Bluff. 85°20' S, 175°35' W. A rock bluff, rising to 2280 m, at the S side of the mouth of Logie Glacier, in the Cumulus Hills. Named by US-ACAN in 1966, for W. Ellis, USN, chief air controlman, in Antarctica during OpDF 1965 (i.e., 1964-65) and OpDF 1966 (i.e., 1965-66).

Ellis Cone. 75°49' S, 116°23' W. One of several small cones (*see* **Cones**) on the SW side of Toney Mountain, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1976, for Homer L. Ellis, USN, radar air traffic controller at McMurdo in the winter of 1968, and chief in charge of the ground-controlled approach unit at the Byrd Station skiway landing strip in 1969-70.

Ellis Fjord. 68°36' S, 78°05' E. A long narrow fjord or inlet, about 33 km long, between Breidnes Peninsula and Mule Peninsula, in the Vestfold Hills, on the Ingrid Christensen Coast of East Antarctica. Photographed aerially by LCE 1936-37. Using these photos in 1946, Norwegian cartographers mapped it as a bay and a remnant lake, which they called, respectively, Mulvik (i.e., "snout bay") and Langevatnet (i.e., "the long lake"). In 1952 John H. Roscoe, the U.S. cartographer, working from the more recent photos taken by OpHJ 1946-47, determined the 2 features to be connected, and he re-defined them and renamed the feature Ellis Fjord, for Edwin E. Ellis, OpHJ aerial photographer on flights over this area. First visited on Jan. 31, 1955, by an ANARE party led by Phil Law. US-ACAN accepted the name in 1956, and ANCA followed suit. Originally plotted in 68°33' S, 78°06' E, it has since been replotted.

Ellis Glacier. 71°58' S, 24°17' E. A glacier, 6 km (the Norwegians say 10 km) long, and flowing N from Mount Walnum, between Gillock Glacier and Jennings Glacier, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by OpHJ 1946-47, and named by them as Ellisbreen (i.e., "Ellis glacier"), for Edwin E. Ellis (*see* **Ellis Fjord**). US-ACAN accepted the name Ellis Glacier in 1966.

Ellis Narrows. 68°37' S, 78°00' E. A narrow strait in the Vestfold Hills, with a tidal race in Ellis Fjord, in association with which this feature was named by ANCA on July 26, 1983.

Ellis Rapids. 68°36' S, 78°14' E. A meltwater stream flowing rapidly in summer from the lakes into the E end (i.e., the head) of Ellis Fjord, on Mule Peninsula, in the Vestfold Hills. Named in association with the fjord. The rapids were crossed by an ANARE party who erected a flying fox (a cable for crossing a river) across them in Jan. 1972.

Ellis Ridge. 74°45' S, 113°54' W. An ice-covered ridge, 16 km long and 1.5 km wide, extending NE from Jenkins Heights between Dorchuck Glacier and Keys Glacier, at Martin Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1967, and also from U.S. Landsat images taken in Jan. 1973. Named by US-ACAN for Melvin Y. Ellis, USGS cartographer, a member of USGS's satellite surveying team at Pole Station in the winter of 1974.

Ellisbreen *see* **Ellis Glacier**

Ellis-Evans, John Cynan. b. March 9, 1951. BAS microbiologist who wintered-over at Signy Island Station in 1976 and 1977, and summered at the same station, 1985-86.

Ellson, Mal. He wintered-over at Davis Station in 1985, at Macquarie Island in 1987, at Casey Station in 1990, at Mawson Station in 1992, and again at Davis in 1995.

Cape Ellsworth. 66°17' S, 162°20' E. A sheer rock bluff rising to 290 m, it forms the N extremity of Young Island, in the Balleny Islands. Named by personnel on the *Discovery II* in 1936 for Lincoln Ellsworth. The vessel picked him up after his transantarctic flight, and then made a running survey of the N end of the Ballenys. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Mount Ellsworth. 85°45' S, 161°00' W. Rising to 2925 m, it is the highest peak on the elongated massif between Steagall Glacier and Amundsen Glacier, in the Queen Maud Mountains. Discovered on the South Pole flight of Nov. 28-29, 1929, during ByrdAE 1928-30, and named by Byrd as Mount Lincoln Ellsworth, for Lincoln Ellsworth. US-ACAN accepted the name in 1951. The name was later shortened. NZ-APC accepted the shortened name.

Ellsworth, Lincoln. b. May 12, 1880, Chicago, son of coal magnate James W. Ellsworth and his wife Eva (who died when Lincoln was 8). He began his exploring life after leaving school, and financed his own expeditions. In 1926 he crossed the Arctic, and in the early 1930s turned his attention to the Antarctic (*see* **Ellsworth Expedition, 1933-34**; **Ellsworth Expedition, 1934-35**; **Ellsworth Expedition, 1935-36**; **Ellsworth Expedition, 1938-39**). On May 23, 1933 he married aviatrix Mary Louise Ulmer. After his last Antarctic venture, he immediately planned his next one, a wintering-over at the South Pole for a month with 2 companions in 1941. It never materialized. He died on May 26, 1951, in NYC.

Ellsworth Bank. 65°35' S, 161°44' E. An undersea feature with a minimum depth of 250 m, off the coast of Oates Land. Named by international agreement in May 1995, for Lincoln Ellsworth.

Ellsworth-Byrd Traverse. 1958-59. A 1250-mile traverse from Ellsworth Station to Byrd

Station, completed in 67 days. Members were: Father Edwin Bradley, Tom Turcotte, Bob Goodwin, and William Axtell.

Ellsworth Expedition, 1933-34. Lincoln Ellsworth, who, because he was able to, financed all his expeditions to Antarctica. He intended to be the first man to complete a transantarctic crossing, but this time in a plane. "The last big geographical discovery it is possible to make," said Hubert Wilkins, who had signed on as expedition manager and newspaper correspondent. Another main aim was to prove or disprove the existence of the Ross-Weddell Graben, that was supposed to split Antarctica in two. Wilkins went to Norway to buy the *Fanefjord*, a fishing vessel that Ellsworth renamed the *Wyatt Earp*, after every boy's western hero. Northrop built the airplane *Polar Star*, which was shipped to Oslo (but not named until they got to the ice). **Jan. 6, 1933**: Hjalmar Riiser-Larsen, the Norwegian whaler and explorer, in company with whaling magnate Lars Christensen and his wife, left London (independent of the expedition), bound for Cape Town. Riiser-Larsen's intention was to lay depots for Ellsworth from the coast of Enderby Land all the way to the Ross Sea. The Christensens would, after leaving Enderby Land, return to South Africa to hunt big game. **Jan. 25, 1933**: Ellsworth and Bernt Balchen (the pilot) flew the *Polar Star* in a test flight over NYC. **Feb. 17, 1933**: Balchen and Ellsworth left New Jersey in the *Polar Star*, headed for North Dakota, where they would do test flights across the Canadian border. **March 6, 1933**: Balchen okayed the plane after tests. **April 8, 1933**: Balchen flew the *Polar Star* from Los Angeles to Kansas City. **April 9, 1933**: Balchen flew the *Polar Star* from Kansas City to NJ. **April 12, 1933**: Bernt Balchen, his wife and son, and Chris Braathen (the mechanic for the expedition), and the plane *Polar Star*, all sailed on the *Stavangerfjord*, bound for Oslo. That same day, Wilkins missed his ship, the *Empress of Britain*, bound for Cherbourg and Southampton. **April 15, 1933**: Wilkins and his wife sailed for London on the *Bremen*. **May 20, 1933**: In Aalesund, Norway, the following crewmen signed on to the *Wyatt Earp*: Hartvig Olsen (chief mate), Lauritz Liavaag (2nd mate and carpenter), Harald Holmboe (1st engineer), and Bjarne Larsen (cabin boy). **May 23, 1933**: Ellsworth got married. **July 15, 1933**: Ellsworth and his wife and mother-in-law sailed from San Francisco, bound for NZ. **July 30, 1933**: The *Wyatt Earp* sailed from Bergen, Norway, bound for Dunedin, NZ, with 17 men aboard: Baard Holth (ship's captain), Hartvig Olsen, Liavaag, Magnus Olsen (Hartvig's son; 3rd mate), Johanssen (bosun), Holmboe, Harald Sperre (2nd engineer), Arnfinn Bigseth (3rd engineer and machinist), Strom (carpenter), Oluf Bernhard Dahl (cook), Bjarne Larsen, Jorgen Holmboe (meteorologist and able seaman), Wilkins (acting as purser), Balchen (acting as storekeeper), Walter J. Lanz (radio operator), Realf Berg (doctor). The crew were mostly veterans of Norwegian whaling fleets. **Aug. 11, 1933**: Ellsworth arrived in Auckland. **Aug. 13, 1933**: The *Wyatt Earp* arrived at Las Palmas, in the Canary Islands. **Aug. 14, 1933**: The *Wyatt Earp* left Las Palmas, bound for Cape Town. **Sept. 19, 1933**: The *Wyatt Earp* arrived at Cape Town, where Balchen had his appendix removed. **Sept. 28, 1933**: The *Wyatt Earp* left Cape Town, bound for Dunedin. **Nov. 2, 1933**: The *Wyatt Earp* sighted Tasmania. **Nov. 9, 1933**: The *Wyatt Earp* pulled into Dunedin, NZ, where Ellsworth joined her. **Nov. 15, 1933**: The airplane *Polar Star* was unloaded from the *Wyatt Earp*. **Dec. 5, 1933**: The *Wyatt Earp* sailed from Dunedin, bound for Antarctica, with the airplane *Polar Star* aboard and 17 men. Dr. Jorgen Holmboe was now purely a meteorologist, and his seaman duties were taken over by NZ seaman Griff Robinson. Also aboard was a pig, and a small black cat who had adopted the captain. **Dec. 13, 1933**: The *Wyatt Earp* entered the pack-ice of the Ross Sea. **Dec. 17, 1933**: Trapped in the pack in 66°35' S, 176°E. **Dec. 25, 1933**: The crankshaft of the dynamo engine broke on the *Wyatt Earp*. **Jan. 3, 1934**: They finally got through the pack into the Ross Sea. **Jan. 6, 1934**: They sighted the Ross Ice Barrier. **Jan. 7, 1934**: They reached the Bay of Whales, after 17,322 miles. The plan was to fly from the Bay of Whales to the Weddell Sea. Balchen and Braathen skied to Little America, at Byrd's request, to check it out. It must be said that a week after Ellsworth arrived at the Bay of Whales, ByrdAE 1933-35 arrived for their expedition. Although both leaders were at enormous pains to claim "no race," "no rivalry," it was, of course, a big competition. **Jan. 8, 1934**: The *Polar Star* was unloaded onto the ice. **Jan. 11, 1934**: Ellsworth made his first test flight in the *Polar Star*, a 40-minute flight. **Jan. 12, 1934**: The sea-ice broke up suddenly, casting the *Wyatt Earp* adrift, and the skis of the plane fell through a crack. It took the men 6 hours to rescue the plane, but the *Polar Star* was damaged. **Jan. 14, 1934**: The plane was found to be too badly damaged to continue, the expedition was abandoned, and the *Wyatt Earp* left the Bay of Whales. **Jan. 16, 1934**: Byrd offered one of his planes, but Ellsworth declined it. **Jan. 19, 1934**: Ellsworth was already planning his next expedition (see below). **Jan. 22, 1934**: The *Wyatt Earp* left Antarctic waters, heading for Dunedin. **Jan. 28, 1934**: Ellsworth and the *Wyatt Earp* back in Dunedin. **Feb. 1934**: Balchen and Braathen accompanied the *Polar Star* plane to the USA on the oil tanker *Texaco South Africa*. **Feb. 10, 1934**: Ellsworth sailed on the *Mariposa* to Los Angeles. The *Wyatt Earp* remained in NZ, getting overhauled, ready for next season. **Feb. 24, 1934**: Ellsworth arrived in Los Angeles. He would be back.

Ellsworth Expedition, 1934-35. **April 12, 1934**: Ellsworth unveiled his plans for the new expedition. **May 18, 1934**: Balchen arrived in New Jersey after a flight from Los Angeles in the now-repaired *Polar Star*. **July 14, 1934**: Ellsworth and his wife sailed from Los Angeles for Honolulu. **Aug. 18, 1934**: The *Wyatt Earp* left Wellington bound for Dunedin, with the *Polar Star* on board. Dr. Dana Coman left NY bound for Los Angeles, after completing medical arrangements. **Aug. 23, 1934**: Coman left Los Angeles, bound for Honolulu. **Sept. 7, 1934**: Ellsworth and Coman arrived in NZ. **Sept. 14, 1934**: Ellsworth and Coman arrived in Dunedin. **Sept. 19, 1934**: Ellsworth on the *Wyatt Earp* sailed again from Dunedin, NZ, in a 2nd attempt to effect the first (aerial) transantarctic crossing. The personnel were: Ellsworth (leader), Hubert Wilkins (expedition manager), Bernt Balchen (pilot), Chris Braathen (mechanic), Walter J. Lanz (radio operator), Dr. F. Dana Coman (medical officer), Dr. Jorgen Holmboe (meteorologist), Baard Holth (ship's captain), Hartvig Olsen (1st mate), Lauritz Liavaag (2nd mate), Magnus Olsen (3rd mate), Arnfinn Bigseth (assistant engineer), Alastair Duthie (he had replaced a Norwegian crewman who had returned to Europe), and Bjarne Larsen (cabin boy). **Oct. 5, 1934**: The *Wyatt Earp* was in Antarctic waters. **Oct. 14, 1934**: They arrived at Deception Island, in the South Shetlands. This time the plan was to fly from the Antarctic Peninsula over to the Bay of Whales, from where ByrdAE 1933-35 was just emerging after a long winter-over at Little America. A connecting rod in the plane's engine was damaged when they tried starting the engine with one cylinder full of lubricating oil. **Oct. 21, 1934**: There being no real ice in the harbor from which to fly off, the plane was unloaded onto the island itself. **Oct. 31, 1934**: The *Wyatt Earp* sailed for Magallanes, Chile, to pick up a new connecting rod for the plane's engine. Ellsworth stayed behind on Deception Island with Coman, Balchen, Braathen, and Jorgen Holmboe. **Nov. 11, 1934**: The *Wyatt Earp* left Magallanes with the new rod. **Nov. 17, 1934**: The *Wyatt Earp* arrived back at Deception Island. **Nov. 27, 1934**: The snow having melted and made the area unsuitable for a runway, they loaded the plane aboard. **Nov. 28, 1934**: They left Deception Island, looking for a more suitable runway. **Dec. 3, 1934**: They moored at Snow Hill Island. **Dec. 18, 1934**: The *Polar Star* made its first flight of the expedition, from the runaway on the slopes of the summit of Snow Hill Island. **Jan. 3, 1935**: The 2nd flight had to turn back due to weather conditions. **Jan. 10, 1934**: The *Polar Star* was aboard again, and they all knew that, because they could not find a suitable airstrip, there was no hope of succeeding this year. The expedition was abandoned. **Jan. 21, 1935**: They left Deception Island. **Feb. 2, 1935**: They arrived in Montevideo. **Feb. 9, 1935**: Ellsworth flew to Peru for some mountain climbing. **Feb. 17, 1935**: Ellsworth arrived in Panama, already planning his next expedition. He would be back. **Feb. 26, 1934**: Balchen, Coman, and Lantz arrived in Bermuda on their way to New York. **March 13, 1935**: Wilkins arrived in Santiago, Chile, after flying across the Andes from

Montevideo. **April 17, 1935**: Balchen sailed for Europe.

Ellsworth Expedition, 1935-36. **Aug. 1, 1935**: Crew members who signed on in Norway, on the *Wyatt Earp*, included: Hartvig Olsen (ship's captain), Lauritz Liavaag (1st mate), Magnus Olsen (2nd mate), Olaf Valderhaug (bosun), Bjarne Larsen (sailor), Harald Holmboe (chief engineer), Harald Soerge (2nd engineer), Harald Sperre (3rd engineer), Magnus Johannessen (steward), Kristian Jensen (messboy), and Walter Lanz (radio operator). In North America Ellsworth picked Herbert Hollick-Kenyon as his chief pilot, Red Lymburner as mechanic and reserve pilot, and Pat Howard as 2nd airplane mechanic, as well as Dr. Theodore Schlossbach (medical officer). Ellsworth and Hubert Wilkins (expedition manager) made up the complement. **Oct. 18, 1935**: Back for a 3rd try, Ellsworth and the *Wyatt Earp* sailed from Montevideo, again with the *Polar Star* plane. 18 men this time. **Oct. 28, 1935**: The *Wyatt Earp* left Magallanes, Chile, bound for Antarctica. **Nov. 2, 1935**: They arrived at Deception Island. **Nov. 12, 1935**: They arrived at Dundee Island, where the *Polar Star* was unloaded. **Nov. 20, 1935**: Ellsworth and Hollick-Kenyon took off from Dundee Island in the *Polar Star*, intending to fly to the Bay of Whales, but returned after 3 hours 11 minutes flying time, with a leaking fuel line. **Nov. 21, 1935**: A 2nd attempt failed, after 10 hours 30 minutes, due to weather conditions. But they did discover the Eternity Range. **Nov. 23, 1935**: At 8.05 A.M., the same duo left again, Hollick-Kenyon at the controls. Ellsworth was then 55 years old. They flew south along the Antarctic Peninsula, photographing everything they saw, then crossed the continent itself. Then the radio signals stopped as they were halfway to the Bay of Whales. They were forced to land, in 79°12' S, 104°10' W. **Nov. 24, 1935**: At 5 P.M. they took off, but could only fly for half an hour before being forced down again. **Nov. 25, 1935**: The 2nd full day without a signal from Ellsworth. **Nov. 26-27, 1935**: The *Wyatt Earp* sailed to Deception Island, ready either to lay depots for Ellsworth or to be near to the Bay of Whales if a radio signal came. **Nov. 27, 1935**: At midnight Ellsworth and Hollick-Kenyon took off again, but 55 minutes later were forced down yet again. They would be here for a week. **Nov. 30, 1935**: The *Wyatt Earp* headed north, bound for Magallanes, Chile, to pick up a plane. **Dec. 3, 1935**: In a fit of global hysteria (which sold newspapers) the world waited. Was Ellsworth alive? Many nations and individuals volunteered to help find him. Experts discussed possibilities, every explorer of note and non-note was interviewed for his opinion. Britain set the *Discovery II* in motion. Meanwhile aircraft mechanic William Klenke was desperately trying to bring a plane down from the States for the *Wyatt Earp*. He tried one famous pilot, who crashed, then another, who finally got the Northrop Gamma 2D and Klenke to Chile. **Dec. 4, 1935**: Meanwhile, back in Antarctica, at 11.10 P.M., Ellsworth and Hollick-Kenyon took off again in the *Polar Star*, but had to land in 79°17' S, 153°16' W. **Dec. 5, 1935**: At 9 A.M. the *Polar Star* took off toward Little America, and they ran out of fuel in 78°45' S, 163°36' W, 25 miles from their target — Little America, the station that had been evacuated earlier that year by Byrd. The *Wyatt Earp* arrived at Magallanes. **Dec. 9, 1935**: Ellsworth and Hollick-Kenyon set out with sledges (no dogs, of course) for Little America. The trip had been 2300 miles long. **Dec. 15, 1935**: Ellsworth and Hollick-Kenyon arrived at Little America. **Dec. 22, 1935**: Wilkins sailed the *Wyatt Earp* out of Magallanes, heading back to Antarctica. Klenke was aboard. **Dec. 24, 1935**: The *Discovery II* left Melbourne with 2 planes and, for luck if not for practical purposes, Mawson's old sledge. **Dec. 27, 1935**: The *Wyatt Earp* arrived in the area of Charcot Island, a pre-arranged supply depot in case Ellsworth's plane crashed. However the ship could not get close because of the ice. **Dec. 30, 1935**: Unable to lay the depot, the *Wyatt Earp* sailed south for the Bay of Whales. **Jan. 2, 1936**: The *Discovery II* left Dunedin. **Jan. 16, 1936**: With the *Wyatt Earp* 420 miles away, the *Discovery II* arrived at the Bay of Whales, sent up a plane, and saw a moving black speck. It was Hollick-Kenyon, far below. Flight Lt. Douglas and Flying Officer Murdoch radioed London. That's how the world first learned that Ellsworth and Hollick-Kenyon were alive. The British parachuted fruit, canned orange juice, chocolate, and raisins, but Ellsworth was asleep. Hollick Kenyon woke him with, "Here's a note from Wilkins." **Jan. 17, 1936**: When Hollick-Kenyon met his rescuers, he was spotless, clean-shaven, elegantly dressed, and issued the immortal line, "I say, it's awfully decent of you fellows to drop in on us like this." **Jan. 19, 1936**: The *Wyatt Earp* arrived at the Bay of Whales, only 3 days earlier than her originally scheduled arrival date (if all had gone well). **Jan. 26, 1936**: A 4-man party, led by Red Lymburner, attempted to sledge out to the *Polar Star*, but were turned back by crevasses. **Jan. 28, 1936**: The *Texaco 20*, with Lymburner (pilot), Hollick-Kenyon, and Pat Howard, flew gasoline to the *Polar Star*. They also took shovels, but needed more help. Lymburner flew back and picked up Liavaag and Larsen. **Jan. 29, 1936**: The *Polar Star* and the *Texaco 20* flew back together to the Bay of Whales, where they were both loaded aboard the *Wyatt Earp*. **Jan. 30, 1936**: The *Wyatt Earp* left the Bay of Whales, bound for Valparaíso. Ellsworth had gone ahead, to Melbourne, on the *Discovery II*. **Feb. 17, 1936**: Ellsworth was mobbed as he arrived in Melbourne. **March 2, 1936**: The *Wyatt Earp*, with Wilkins aboard, arrived at Valparaíso. **March 21, 1936**: Ellsworth arrived in Los Angeles. **April 19, 1936**: The *Wyatt Earp* arrived at New York. **April 24, 1936**: Ellsworth donated the *Polar Star* to the Smithsonian. **June 17, 1936**: The *Wyatt Earp* left New York, bound for England. **July 8, 1936**: The *Wyatt Earp* arrived in England. No one else would cross the Antarctic again until Jan. 1956, when a P2V-2N Neptune aircraft from VX-6 flew from McMurdo Sound to the Weddell Sea. However, Ellsworth would be back in Antarctica.

Ellsworth Expedition, 1938-39. As early as May 1936 Lincoln Ellsworth and Harold June began planning another expedition to Antarctica, but probably not to take place for another couple of years. **April 28, 1937**: The first concrete plans for the expedition were released to the public. His aim was to go down with 16 men on the *Wyatt Earp* to Enderby Land, and, with 2 planes, explore the vast area he'd seen from the plane in his last trip, and to fly over the South Pole. Herbert Hollick-Kenyon was not available for this new expedition, so Red Lymburner was picked. **May 18, 1938**: Hubert Wilkins, again the expedition manager, was in Norway to find a crew. **July 1, 1938**: The following crew members signed on at Aalesund, Norway, for the *Wyatt Earp*: Per-Tønder Johansen (captain), Lauritz Liavaag (1st mate), Alf Nordseth (2nd mate), Jakob Kristian Hvitfeldtsen and Johannes O. Bakke (able seamen), Peder P. Berg, Torvald Berg, and Harald Rønneberg (ordinary seamen), Albert Darger Schrøder (1st engineer), Otto Hjelseth (2nd engineer), Harald Sperre (3rd engineer), Oluf Bernhard Dahl (steward), and Astor Dahl (messboy). **July 6, 1938**: The *Wyatt Earp* left Norway, bound for NY. **July 26, 1938**: Ellsworth and his wife sailed from NY to Southampton. This was the beginning of the expedition. **July 28, 1938**: Wilkins, in Utah selecting an expedition doctor, confirmed that he, himself, would definitely be going on the expedition. **July 31, 1938**: The *Wyatt Earp* arrived in New York, from Aalesund. **Aug. 12, 1938**: The *Wyatt Earp* arrived at New York. **Aug. 13, 1938**: The 2 planes were loaded on the *Wyatt Earp* at Floyd Bennett Field, Brooklyn. **Aug. 16, 1938**: The *Wyatt Earp* left New York, bound for Cape Town, and carrying 2 planes. One was an all-metal Northrop Delta monoplane (NC14267) with a 750 hp Wright Cyclone engine, and the other was a 2-seater Aeronca scouting plane. Both had skis, wheels, and pontoons, and 2-way radios. Wilkins did not sail on the ship. **Sept. 6, 1938**: Wilkins arrived in Sydney. **Sept. 13, 1938**: The *Wyatt Earp* stopped at Pernambuco, Brazil, for supplies. **Oct. 9, 1938**: The *Wyatt Earp* arrived at Cape Town. **Oct. 29, 1938**: The *Wyatt Earp* sailed from Cape Town, this time carrying 19 men: Ellsworth (leader), Hubert Wilkins (technical adviser and expedition manager), Red Lymburner (chief pilot), Burton Trerice (reserve pilot), Harmon Rhoads (medical officer), Fred Seid (radio operator), and the all-Norwegian crew. **Nov. 14, 1938**: They arrived at the Kerguélen Islands. **Nov. 17, 1938**: They left the Kerguélens, bound for Antarctica. **Nov. 21, 1938**: They saw their first ice. **Jan. 1, 1939**: After 45 days in the pack-ice, and two scouting flights in the Aeronca, they sighted Antarctica, near the outer edge of the Amery Ice Shelf. **Jan.**

7, 1939: The Delta was assembled and ready for flight. **Jan. 10, 1939**: They had to move to a new location. **Jan. 11, 1939**: The Delta made a flight, Ellsworth and Lymburner over the American Highland (which Ellsworth discovered and named), but ice conditions forced another move. **Jan. 14, 1939**: Liavaag had an accident in which his right knee was crushed between two sections of ice, and Ellsworth canceled the trip in order to get him to a hospital in Hobart. **Feb. 4, 1939**: The *Wyatt Earp* and the expedition arrived at Hobart. **Feb. 18, 1939**: Seid and Rhoads took the *Aorangi* from Sydney to Vancouver. **March 10, 1939**: Seid and Rhoads arrived back in Vancouver. **March 23, 1939**: The *Oronsay* arrived in London from Melbourne, carrying (as passengers) Capt. Johansen, the Dahls, the Bergs, Rønneberg, Bakke, Hvitfeldtsen, and Hjelseth. Ellsworth would not be back in Antarctica. This was his last expedition.

Ellsworth Highland *see* **Ellsworth Land**

Ellsworth Highland Traverse. 1960-61. Led by Charlie Bentley. This was, as it turned out, the precursor to the Antarctic Peninsula Traverse of 1961-62.

Ellsworth Land. It centers on 75°30' S, and its longitudes are between 80°W and 120°W. A large tract of land between the old Hearst Land and Marie Byrd Land (which bounds it to the W), and between the Ronne Ice Shelf and the Bellingshausen Sea (on the N), just SW of the S base of the Antarctic Peninsula. It is largely a high ice-plateau, but does include the Ellsworth Mountains, as well as the Hudson Mountains, the Behrendt Mountains, the Jones Mountains, the Merrick Mountains, and the Sweeney Mountains. Discovered by Lincoln Ellsworth and named by him as James W. Ellsworth Highland, for his father. This name got changed to James W. Ellsworth Land, and then Ellsworth Highland. In 1962, US-ACAN named it Ellsworth Land, more for the son than for the father.

Ellsworth Land Traverse *see* **Antarctic Peninsula Traverse**

Ellsworth Mountains. 79°00' S, 85°00' W. A major group of mountains, about 300 km long and 50 km wide, trending NNW-SSE, and rising from the relatively featureless snow plain that borders the W margin of the Ronne Ice Shelf, just to the E of the Hollick-Kenyon Plateau, in Ellsworth Land. It is the highest and least known area of West Antarctica. The Vinson Massif is here. Ellsworth discovered them aerially on Nov. 23, 1935, and named them the Sentinel Range for their imposing, sentrylike position. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1966. The mountains were found to be bisected by the Minnesota Glacier, and thus forming 2 distinct ranges — the Sentinel Range to the N, and the Heritage Range to the S, and the name was changed by US-ACAN in 1961, to honor Ellsworth.

Ellsworth Mountains Camp. 79°07' S, 85°39' W. An American camp (a Jamesway hut) established in Nov. 1979, in the Ellsworth Mountains. It was dismantled in Jan. 1980.

Ellsworth Station. 77°39' S, 41°05' W. Elevation 138 feet. U.S. Navy station, established for IGY on the Filchner Ice Shelf, in the Weddell Sea. It was originally going to be called Weddell Sea Station, but was instead named for Lincoln Ellsworth. It was the only U.S. IGY station not approached from NZ (one got to it from the South American sector). It almost didn't become a station at all, but once the go-ahead was given, Task Force 43.7 was established, consisting of 2 ships (the *Staten Island* and the *Wyandot*) led by its newly-appointed commander, Capt. Edwin McDonald, with the express purpose of building the station. **Nov. 3, 1956**: The *Staten Island* left Davisville, RI. **Nov. 9, 1956**: The *Wyandot* left Davisville. The two ships met up at Panama, and sailed together down the W coast of South America, to Valparaíso, where Finn Ronne came aboard. He was to be the scientific leader at the new station. Also aboard was William Littlewood, oceanographer. The ships went down to Punta Arenas, across the Drake Passage, to the Weddell Sea. **Dec. 31, 1956**: The *Wyandot* was badly damaged by the pack-ice. Ronne and Capt. McDonald flew to pay courtesy calls at General Belgrano Station and Shackleton Base. **Jan. 4, 1957**: With time running out, Admiral Dufek gave orders for the ships to set up the base wherever they could, in other words, it didn't have to be Cape Adare, as they had planned on (i.e., on Bowman Peninsula). **Jan. 15, 1957**: The ships were in uncharted seas, close to Cape Adams. **Jan. 23, 1957**: They still hadn't found a site, and the pressure was on everyone, from Dufek on down. **Jan. 26, 1957**: They were in 77°41' S, 42°07' W, at Bahía Chica. **Jan. 27, 1957**: Unloading began from the *Wyandot*. The station was built 2 miles inland, on floating ice 850 feet thick, 25 miles from General Belgrano Station, and 50 miles west of Shackleton Base. Lt. Cdr. Hank Stephens, engineer in charge of the building of Ellsworth Station, and his 91 Seabees and 2 other officers, had counted on 50 days to build the station. Now they were faced with a window of only 16 days. This is why they were the Seabees. There was a big confrontation between Stephens and Ronne. **Jan. 29, 1957**: The Seabees had 18 Jamesway huts up. **Feb. 2, 1957**: The airdales (U.S. slang for airmen or anyone connected with aircraft) had the planes re-assembled. Ellsworth had its own VX-6 squadron of 3 Otters (one was left crated as a spare) and an HO4-S Sikorsky helicopter known as the Horse, which could take 9 passengers at 70 mph. There were 3 pilots supported by 8 enlisted men. **Feb. 11, 1957**: The station was commissioned, and the *Staten Island* left. The station was 90 percent finished. The *Wyandot* left soon afterwards. She had no difficulty heading north. **1957 winter**: 39 men: Finn Ronne (scientific leader; this was his 4th Antarctic winter); Lt. Cdr. Charles J. "Mac" McCarthy, USNR (VX-6 officer-in-charge); Clint Smith (doctor; *see* **Clinton Spur**); Lt. Con Jaburg, USN (VX-6 pilot); Lt. (jg) William Sumrall, USNR (pilot); and enlisted men Thomas A. Ackerman, Ronald D. "Brownie" Brown (the youngest man in the group, his tractor came within an ace of plunging down a 900-foot crevasse one day), John Beiszer, Gary C. Camp, William Butler, Walter M. "Wally" Cox, Carl L. Crouse, Frederick F. Dyrdal, Edward H. "Ed" Davis, Walter L. "Walt" Davis, Charlie W. Forlidas, Dave Greaney, Richard W. Grob, Robert E. Haskill, Earl F. Herring, James L. Hannah, Allen M. Jackson, Kenneth K. Kent, Larry R. Larson, Atles F. Lewis, Clyde J.M. McCauley, Melvin Mathis, Walter H. May, James A. Ray, and Albert Spear. Chief seismologist was Ed Thiel, and his assistants were Nolan Aughenbaugh and John Behrendt. Chief glaciologist was Hugo A.C. Neuburg, and his assistant was Paul T. Walker. John Brown was ionosphere physicist and his assistant was Donald Skidmore. Chief meteorologist was Jerry Fierle, and chief of the Aurora program was Kim Malville. Ronne's management style created problems, there can be no doubt about that. **Jan. 16, 1958**: Ronne handed over to Paul Tidd (military) and Dr. Matthew J. Brennan (scientific). **1958 winter**: Paul Tidd (military leader); Lt. (jg) James R. Dasinger; Matthew J. Brennan (scientific leader). **Feb. 3, 1959**: After IGY the station was loaned to Argentina, and became Estación Ellsworth. **1959 winter**: Jorge H. Súarez (leader). **1960 winter**: Jorge H. Súarez (leader). **1960-61 summer**: the station was partially evacuated by air. **1961 winter**: Lt. Fermín Eduardo Areta (leader). **1962 winter**: Fermín Eduardo Areta (leader). **Dec. 30, 1962**: the station was closed. **April 1986**: the station calved off.

Ellsworth Subglacial Highlands. 80°30' S. 94°00' W. A line of subglacial mountains in West Antarctica that extend WSW from the central part of the Ellsworth Mountains to the vicinity of Mount Moore and Mount Woollard. The existence of this feature was first indicated from seismic soundings by the Marie Byrd Land Traverse Party of 1957-58, led by Charlie Bentley. It was delineated in detail by the SPRI-NSF-TUD airborne radio echo-sounding program of 1967-79, and named by US-ACAN in association with the Ellsworth Mountains.

Ellsworth Subglacial Lake. 79°00' S, 90°30' W. A subglacial lake, 10 km long and 3 km wide, within the subglacial foothills of the Ellsworth Mountains, in Ellsworth Land. It lies beneath 3.2 to 3.4 km of ice, and its depth of water in unknown. Named by UK-APC on Nov. 9, 2005, in association with the Ellsworth-named features here.

Ellyard Nunatak. 70°19' S, 64°54' E. On the N side of Scylla Glacier, 11 km (the Australians say 13 km) SSE of Mount Béchervaise, in the Athos Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1965. Named by ANCA for David G. "Dave" Ellyard, physicist at Mawson Station in 1966, and later TV

weather man in Sydney. US-ACAN accepted the name in 1971.

Elmers Nunatak. 83°58' S, 55°25' W. A prominent nunatak, rising to 1630 m, 8 km SE of Mount Hawkes, and E of the Washington Escarpment, in the Neptune Range of the Pensacola Mountains. Photographed from the air by USN in 1963-64, surveyed from the ground by USGS, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Elmer H. Smith, USN, aerographer who wintered-over at Ellsworth Station in 1958 and at McMurdo in 1961. The name Smith was already too much in use in Antarctic place names. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Elms, Arthur James. b. 1869, Dover, Kent, son of shopkeeper and traveling salesman Stephen Read Elms and his wife Mary. He joined the Merchant Navy, and had just been serving on the *Andreta* when, in July 1903, he pulled into Glasgow from New York, on the *Astoria*, and joined the *Terra Nova*, as 2nd mate, for the 1903-04 relief of BNAE 1901-04. He wrote a diary of the expedition. He was later a ship's captain and lived in Port Pirie, South Australia, where he died on July 31, 1939.

El-Sayed Glacier *see as if they were separate words*

Else Nunataks. 67°21' S, 55°40' E. A group of 6 low, partially snow-covered nunataks, 5 km N of Mount Øydeholmen, on the S side of Wilma Glacier, about 12 km W of Rayner Peak, on the Kemp Coast of Enderby Land. Mapped by Australian cartographers from ANARE ground surveys and air photos, 1954-66. Named by ANCA on July 29, 1965, for H. Else, ANARE pilot off the *Nella Dan* in 1965, who also supported the 1969 Prince Charles Mountains ANARE party. US-ACAN accepted the name in 1970.

Else Platform. 70°22' S, 68°48' E. An elevated, flat-topped mass of rock at the N end of Jetty Peninsula, in Mac. Robertson Land. It was the site of a survey station occupied by Max Rubeli, surveyor with the ANARE Prince Charles Mountains Survey Party of 1969. Named by ANCA on May 18, 1971, for H. Else (*see* **Else Nunataks**), helo pilot with the survey. US-ACAN accepted the name in 1973.

Elsner Ridge. 71°47' S, 167°21' E. A narrow ridge, trending SW for 10 km, 6 km NE of the S end of the Homerun Range, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Robert W. Elsner, USARP biolgist at McMurdo, 1967-68, 1968-69, and 1969-70.

The *Eltanin*. U.S. ice-strengthened floating laboratory research ship, 266 feet 2 inches long, with a gross tonnage of 2703 tons, diesel electric 2700 hp, a cruising speed of 12.5 knots and a maximum speed of 13.5 knots. She could accommodate 48 crew and 38 scientists. Built in 1956 at Avondale Marineways, Avondale, La., and launched on Jan. 16, 1957, she was converted to a research ship in 1962. Between July 5, 1962 and Dec. 29, 1972 she made 52 southern cruises, covering 400,000 miles over 80 percent of the southern oceans between 35°S and the Antarctic continent, in oceanic research sponsored by the NSF. There were 3 additional, more northerly, cruises, which brought the distance traveled over that 10-year period to 410,000 miles and 3014 days at sea. These voyages were of immense scientific importance. Scientific leaders included such luminaries as Albert Crary, George Toney, George A. Llano, Kendall Moulton, Merle Dawson, Lawrence Frakes, and Sayed Z. El-Sayed. Of her actual Antarctic cruises, her captain during the 1962-63 season was George Fladerer (*see* **Fladerer Bay**; *also see* **Women in Antarctica**, 1962-63, for a more detailed description of this *Eltanin* summer); during 1965-66 it was Ken McCann (*see* **Mount McCann**), and in 1966-67 it was Larry Wirth (*see* **Wirth Peninsula**). She left Wellington on Dec. 30, 1966, bound for the Ross Sea via the Antipodes Islands. George Llano was aboard, as USARP representative. During 1967-68, 1968-69, and 1969-70 the skipper was C. Richard Thornton; and during 1971-72 it was Richard Gregg. In 1973 the *Eltanin* was leased to Argentina as a research vessel for that nation, her name was changed to *Islas Órcadas*, and in 1974 carried on research in what really amounted to joint Argentine/U.S. cruises. She made 14 such cruises between 1974 and 1979, 8 sponsored by the USA and 6 by Argentina, and covered 116,736 miles over the 5-year period. She was part of ArgAE 1975-76 (Captain Pedro Fernández Sanjurjo); ArgAE 1976-77 (Captain Eduardo G. Lestrade); ArgAE 1977-78 (Captain Jorge Horacio Badaroux); ArgAE 1978-79 (Captain Antonio L. Faure). On Aug. 1, 1979, at the end of the lease, she was returned to the USA. She is now out of service.

Eltanin Bay. 73°40' S, 82°00' W. About 56 km wide, in the S part of the Bellingshausen Sea, it indents the coast of Ellsworth Land W of Wirth Peninsula. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1968, for the *Eltanin*.

Elton Hill. 68°50' S, 66°35' W. A prominent rocky hill, rising to about 1000 m, it marks the SE limit of Meridian Glacier at its junction with Clarke Glacier, SE of Mikkelsen Bay, on the Fallières Coast, on the W coast of Graham Land. Discovered and photographed aerially on Nov. 27, 1947, by RARE 1947-48, and surveyed from the ground by Fids from Base E in Dec. 1958. Named by UK-APC on Aug. 31, 1962, for John Elton, British sea captain, inventor of the artificial horizon in 1728. US-ACAN accepted the name later in 1962.

Elvers Peak. 79°52' S, 83°33' W. Rising to 1615 m, at the SE end of the Edson Hills, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Douglas J. Elvers, seismologist on the USARP South Pole-Queen Maud Land Traverse, 1965-66.

Ely, Charles Samuel. b. June 3, 1899, Baltimore, son of Howard Ely and his wife Ella, who divorced. On April 7, 1917 he joined the U.S. Navy as an apprentice seaman; on April 18 he was a seaman 2nd class; on April 23, 1917 he joined the *Tacoma,* and on June 28, 1917 transferred to the *Wheeling*; on April 1, 1918 he was promoted to seaman, based out of Norfolk, Va.; on April 26, 1919 he was honorably discharged, and became a ding-dong on a street car in Baltimore. Then he became a Baltimore city cop. In 1930 he married an under-age drug company invoice clerk named Thelma. In Oct. 1937 he was riding in a cab when he shot himself to death. That, in itself, is not particularly unusual, or exciting, but press reports said that relatives had identified him as having been a member of ByrdAE 1933-35.

Ely Nunatak. 72°08' S, 66°30' E. A small, dark-colored nunatak about 7 km N of Mount Izabelle, in the Prince Charles Mountains. The position of this nunatak was fixed by intersection from geodetic survey stations in 1971. Named by ANCA on May 18, 1971, for John H. Ely, technical officer (survey) with the ANARE Prince Charles Mountains Survey in 1971. US-ACAN accepted the name in 1973.

Isla Ema *see* **Emma Island**

Islote Ema *see* **Emma Island**

Embassy Islands. 67°53' S, 68°45' W. Two small islands, the most westerly of the Dion Islands, 11 km S of Adelaide Island. The Dion Islands were discovered and roughly charted in 1909, by FrAE 1908-10. This particular group of 2 was surveyed by Fids from Base E in June 1949, and they mapped it as a single island or rock, naming it Embassy Rock, for its detached position away from Emperor Island. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit in 1956. In 1963 an RN Hydrographic Survey unit on the *John Biscoe* re-defined it as 2 islands, and named them the Embassy Islands. UK-APC accepted this change on Feb. 12, 1964, and US-ACAN followed suit that year.

Embassy Rock *see* **Embassy Islands**

Embree Glacier. 77°59' S, 85°10' W. About 30 km long, in the north central part of the Sentinel Range, it flows NNE from the slopes of Mount Anderson and Mount Bentley, and then E to its terminus opposite Mount Tegge on the E side of the range. Named by US-ACAN in 1961, for Major Henry Embree, USAF, who helped build Pole Station in 1956-57.

Pointe des Embruns *see under* **Des**

Islotes Eme *see* **Emm Rock**

Roca Eme *see* **Emm Rock**

Rocas Eme *see* **Emm Rock**

The *Emeline*. Sealing brig of 108 tons, and 67 feet long, built in Lyme, Conn., in 1818, and owned by W.W. Rodman. Registered in New London on July 17, 1820, she was part of Alexander Clark's expedition to the South Shetlands in 1820-21. Captain was Jeremiah Holmes. She

arrived in the Falklands on Oct. 26, 1820, via Rio, and in company with the *Catharina* (Capt. Henfield). She took 10,500 fur seal skins. She was back in the South Shetlands for the 1821-22 season, in company with the *Essex* and the *Catharina*. She took in 1000 seal skins and 825 barrels of oil.

Emeline Island. 62°23' S, 59°48' W. An island, 3 km NW of Cecilia Island, in the Aitcho Islands, in English Strait, in the South Shetlands. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Aug. 31, 1962, for the *Emeline*. US-ACAN accepted the name in 1964. It appears on a British chart of 1968, and, misspelled as Emmeline Island, in the 1974 British gazetteer. The latest plotting of this island was done in late 2008, by the British.

Mys Ëmel'janova *see* **Cape Yemel'yanov**

The *Emerald*. Boston sealing brig of 81 tons, built at Providence, RI, in 1817, and owned by John and Sullivan Dorr and David W. Child. Registered in Boston on Sept. 16, 1820, she was captained by John G. Scott during the Boston Expedition of 1820-21. She took 2000 fur seal skins. She was sold in Chile on July 12, 1821.

Emerald Cove. 61°55' S, 57°43' W. A cove, 3 km wide, between North Foreland and Brimstone Peak, on the N coast of King George Island, in the South Shetlands. Roughly charted on Oct. 16, 1819, by William Smith, who called it Shireff's Cove (sic), for William Shirreff, RN, Smith's boss in Chile that year (1819-20). A mix-up resulted in that name being applied to a cove on the coast of Livingston Island (*see* **Shirreff Cove**), and that was the situation that stuck, leaving the cove on King George island without a name. The now-unnamed cove was surveyed by the Discovery Investigations in 1935 and 1937, and, indeed, the E part of the cove was used as an anchorage by *Discovery II* in 1937. Photographed aerially by FIDASE in 1956-57. UK-APC renamed this cove on Sept. 23, 1960, for the *Emerald*, and US-ACAN accepted that later that year. There is a 1970 Argentine reference to it as Caleta Esmeralda (which is a translation). This cove was originally plotted in 61°55' S, 57°46' W, but in late 2008 the British re-plotted it.

Emerald Crag. 62°08' S, 58°08' W. A low, rocky crag about 100 m long, extending W-E with a small waterfall at its W end. It was only exposed by the recent retreat of the White Eagle Glacier, which now bounds it about 200 m to the S, on King George Island, in the South Shetlands. Named by UK-APC on Feb. 15, 1998, for its distinctive emerald-colored rock. This feature was last plotted in late 2008, by the UK.

Emerald Fracture Zone. 62°00' S, 170°00' E. An undersea feature running the distance from the SW corner of the Campbell Plateau to the N tip of Iselin Bank, out to sea beyond the Oates Coast. Named in 1995, by Dr. Stephen C. Cande, of the Scripps Instutution, for the old sealer *Emerald*. The name was accepted in 1997, by international agreement.

Emerald Icefalls. 62°09' S, 58°34' W. Sérac'd icefalls extending northeastward from Cardozo Cove, between Pond Hill and Mirror Point, along the N side of Ezcurra Inlet, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for the beautiful colors of this feature. UK-APC accepted the name on Dec. 16, 2003, and US-ACAN followed suit in 2004. Last plotted in late 2008, by the British.

[1]**Emerald Lake**. 60°43' S, 45°39' W. A small lake, just over 0.8 km SE of Jebsen Point, in the W part of Signy Island, in the South Orkneys. BAS personnel from Signy Island Station did biological work here up to 1973. Named descriptively by UK-APC on Dec. 20, 1974, for the color of the water here, which is unique on Signy Island. US-ACAN accepted the name in 1975.

[2]**Emerald Lake**. 62°59' S, 60°43' W. A crater lake with emerald blue water, below Monte Irízar, S of Decepción Station, on Deception Island, in the South Shetlands. Mapped geologically by Don Hawkes in 1961, it was finally named (descriptively) by the Poles on Sept. 1, 1999.

Emerald Nunatak. 69°39' S, 69°59' W. Rising to about 1250 m, W of Toynbee Glacier, on the W side of the Douglas Range, near the head of Hampton Glacier, in the NE part of Alexander Island. Surveyed by BAS between 1973 and 1977. Named descriptively by UK-APC on Dec. 8, 1977, for the greenish rock of which it is composed. US-ACAN accepted the name.

Emerald Point. 62°09' S, 58°36' W. A small promontory and buttress, below Emerald Icefalls (hence the name given by the Poles in 1980), at Cardozo Cove, Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands.

The *Emerald Sea*. A 177-meter cargo ship, built in Oct. 1984, in Finland, for the Russians. In the early 1990s, she was acquired by Eastland Shipping Co., of Greece, registered in Liberia, and operated by Elmira Shipping and Trading. She was first in Antarctic waters in 1999-2000 (unknown skipper), and has been many years in Antarctica since. She carried the 23rd, 26th, and 27th Indian Antarctic expeditions.

Emerging Island. 73°23' S, 168°02' E. An ice-covered island, 3 km long, 2.5 km E of Index Point, in the N part of Lady Newnes Bay, Victoria Land. So named by NZ-APC in 1966 because the island seems to be emerging above the ice at the terminus of Mariner Glacier. US-ACAN accepted the name later in 1966.

Mount Emerson. 71°35' S, 168°44' E. Rising to 2190 m, 8 km ESE of Brewer Peak, in the S part of the DuBridge Range, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for George L. Emerson, USN, steelworker at McMurdo in 1967.

Emerson, David. b. March 25, 1931, Birmingham, son of Philip Shotter Emerson and his wife Grace Violet Pugh. He graduated from Downing, Cambridge in 1952, and qualified as a doctor in 1955, having done his clinical work at Radcliffe, Oxford. He was living in Cambridge when he saw an ad for FIDS in the *British Medical Journal*, and went to London to be interviewed by Johnny Green (Bill Sloman and Sir James Wordie also had a hand in the interview). He left Southampton on Oct. 1, 1956, on the *Shackleton*, bound for the Falkland Islands, then on to Antarctica, wintering-over as base leader and medical officer at Base F in 1957. In 1958-59 he was medical officer in the camps in the Falkland Islands, and in 1959 returned to the UK, to general practice in Cambridge. That year (1959) he married Shirley Atkins. Between 1970 and 1990 he did the pre-employment medicals for BAS, and retired in 1991.

Emery, Sidney. Hydrographer and 2nd-in-command at Dumont d'Urville Station for the winter of 1957.

Emilia Automatic Weather Station. 78°29' S, 173°06' E. An American AWS, on the Ross Ice Shelf, at an elevation of 52.3 m, installed by John Cassano in Feb. 2004, and named for his mother. It was visited on Jan. 31, 2005, and was still operating in 2009.

Emilio Goeldi Refugio. 61°08' S, 55°35' W. Brazilian refuge hut built in 1988-89, on Elephant Island, in the South Shetlands. Open most summers (*see* **Brazilian Antarctic Expeditions**). In 1988-89, a Dutch biology expedition accompanied the Brazilians, and worked out of this refugio.

Mount Emily. 85°50' S, 174°20' E. A rock peak, rising to about 3048 m, 3 km NE of Mount Cecily, in the Grosvenor Mountains, to the E of the Otway Massif, in the Queen Maud Mountains, it is separated from the Dominion Range by Mill Glacier (even though Shackleton had it as part of the Dominion Range). Named by Shackleton during BAE 1907-09 for his wife, Emily Dorman (b. 1868, Sydenham, Kent, daughter of solicitor Charles Dorman and his wife Jane Swinford), whom he married on April 9, 1904, in London, after 5 years of engagement. They moved to Edinburgh. She died on June 9, 1936, at Hampton Court Palace, where George V had given her a set of apartments in 1929. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Mount Emison. 74°12' S, 163°44' E. A prominent mountain, rising to 2050 m, on the W side of Campbell Glacier, just N of the mouth of Bates Glacier, in the Deep Freeze Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for William B. Emison, biologist at McMurdo, 1964-65 and 1965-66.

Emlen Peaks. 71°54' S, 160°35' E. A group of scattered peaks and nunataks extending over an area 26 km long by 12 km wide, 10 km S of the Daniels Range, in the S end of the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between

1960 and 1963. Named by US-ACAN for John T. Emlen, biologist from the University of Wisconsin, program leader who made penguin navigation studies on the Ross Ice Shelf, in the interior of Victoria Land, and other places in Antarctica, 1962-63. NZ-APC accepted the name.

Emm Rock. 62°16' S, 58°41' W. A conspicuous rock in water, rising to 30 m above sea level, surrounded by smaller rocks, 0.8 km off the E entrance to Potter Cove, on the S coast of King George Island, in the South Shetlands. This rock was presumably known to early sealers, in the 1820s. Sketched by FrAE 1908-10. It was charted by personnel on the *Discovery II* in 1934-35, and they probably named it Emm Rock, for its resemblance in shape to the letter "M." UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and on a 1962 British chart. On an Argentine chart of 1948 it has been translated as Roca Emm, but is shown as a rock on land N of North Spit, at Marian Cove. On an Argentine chart of 1953 this rock and offlying rocks are grouped together and called Rocas Ewens (presumably a corrupt reading of "emm"). On one 1957 Argentine chart the rock and its offliers appear as Rocas "A," on another as Rocas Eme ("eme" signifies the letter "M"), and on yet another the main rock appears as Roca Ewens. On a 1959 Argentine chart the main rock appears as Roca Eme, and that was the name accepted by the 1970 Argentine gazetteer. This rock was last plotted in late 2008, by the UK. The Chileans, after a struggle with Islotes Ewens, finally accepted Rocas Eme, and that name was accepted by the 1974 Chilean gazetteer.

The *Emma*. A 70-ton British-built two-masted schooner, owned by Braun & Ewing of Punta Arenas, used by Shackleton in July 1916 to make his 3rd (unsuccessful) attempt to rescue his 22 men trapped on Elephant Island. British and Chilean residents in Punta Arenas, had subscribed £15,000 for this purpose. The captain was Pilot 2nd class León Aguirre Romero. The *Yelcho* accompanied the ship as far south as 60°S.

Caleta Emma *see* **Rodman Cove**

Île Emma *see* **Emma Island**

Isla Emma *see* **Emma Island**

Punta Emma *see* **Punta Abovedada**

Emma Cove *see* **Rodman Cove**

Emma Island. 64°36' S, 62°18' W. An island, 2.5 km long, with bare, jagged peaks projecting through an ice cap, 6 km W of Nansen Island, in the SW half of the entrance to Wilhelmina Bay, E of Cape Anna, about midway between that cape and Delaite Island, off the Danco Coast, on the W coast of Graham Land. Discovered and charted on Jan. 29, 1898, by BelgAE 1897-99, and named by de Gerlache as Île Emma, for his mother, the former Emma-Thérèse Biscops (1834-1933). It appears as such, and as Îlot Emma, on the expedition maps. On Dr. Frederick Cook's 1900 English language translation of those maps, it appears as Emma Island, as it does also on a British chart of 1901. That was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1959. It appears (fully translated) on a Chilean chart of 1947, as Isla Ema, but on a 1949 Argentine chart as Isla Emma, yet on a 1953 Argentine chart as Islote Ema. Isla Emma was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Emmanuel Glacier. 77°54' S, 162°05' E. In the Royal Society Range of Victoria Land, it flows northwestward from Mount Lister, between Table Mountain and Cathedral Rocks, into Ferrar Glacier. Named by BAE 1910-13 for Emmanuel College, Cambridge. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Emmeline Island *see* **Emeline Island**

Emmona Anchorage *see* **Emona Anchorage**

Point Emmons *see* **Cape Wild**

Emmons, George Foster. b. Aug. 23, 1811, Clarendon, Vt., son of Horatio Emmons and Abigail Foster. He entered the U.S. Navy on April 1, 1828, as a midshipman, trained at the Brooklyn Navy School, and served on the *Brandywine*, in the Mediterranean, 1830-33, becoming a passed midshipman in July 1834. In 1834 he married Antonia Thornton, daughter of the U.S. Navy's chief purser. He sailed on the *Vincennes* during USEE 1838-42, was promoted to lieutenant on Feb. 25, 1841, and left 3 journals and 4 sketchbooks relating to this expedition and his adventures on the West Coast of North America after his vessel, the *Peacock*, was lost in July 1841. After the expedition he was on recruiting duty in Baltimore, in 1843, served on the *Boston*, as part of the Brazil squadron (1843-46), and fought on the *Ohio* during the Mexican War, as part of the Pacific Squadron. He compiled the book, *The Navy of the United States from 1775 to 1853*. On Jan. 28, 1856 he became a commander, and in 1861, in time for the Civil War, was placed in command of the *Hatteras*, as part of the Western Gulf Squadron. After various other ships, he was promoted to captain on Feb. 6, 1863, and was fleet captain under Admiral Dahlgren, off Charleston. He was skipper of the *Ossipee* when that vessel made its famous trip taking the U.S. commissioners up to Alaska in 1866-68 to plant the U.S. flag there. He became a commodore on Sept. 20, 1868, and was made a senior member of the Ordnance Board in Washington, DC, in 1869. In 1870 he was made head of the Hydrographic Office in Washington, DC, and on Nov. 25, 1872 was promoted to rear admiral, and became commandant of the Philadelphia Navy Yard. He retired on Aug. 23, 1873, and died on July 2, 1884, in Princeton, NJ.

Emona Anchorage. 62°37' S, 60°21' W. Also called Emona Harbor. An embayment, approximately square in shape, and over 100 m deep in the middle, NW by N of Spanish Point, and forming the head of South Bay, Livingston Island, in the South Shetlands. It is entered between Hespérides Point and an unnamed cape lying 3.18 km NW by N of Hespérides Point and 3.04 km NE by E of Ereby Point. Charted by sealers in the 1820s, by the time the Spanish mapped it in 1991 it had reconfigured. Named by the Bulgarians on March 16, 1994, as Zaliv Emona (i.e., "Emona anchorage"), after the Bulgarian town of Emona. This feature was last plotted by the UK, in late 2008.

Emona Harbor *see* **Emona Anchorage**

Emory Land Bay *see* **Land Bay**

Emory Land Glacier *see* **Land Glacier**

Île de l'Empereur *see* **Empereur Island**

Empereur Island. 66°48' S, 141°23' E. A rocky island, 1.5 km N of Cape Margerie, immediately N of Breton Island, in the entrance to Port-Martin, in the Géologie Archipelago. This area was photographed aerially by OpHJ 1946-47, but this particular feature was charted by the French under Liotard in 1949-51, and named by them in 1950, as Île de l'Empereur, because they captured their first emperor penguin here. US-ACAN accepted the translated name in 1955.

Baie des Empereurs *see under* **D**

Emperor Bay. 75°32' S, 26°52' W. A small bay indenting the Brunt Ice Shelf due W of Halley Station. So named by the British Royal Society Expedition in 1956, because of the emperor penguin colony on the fast ice in the embayment, nearby to the west of their base. US-ACAN accepted the name in 1965.

Emperor Island. 67°52' S, 68°43' W. A small island, close NE of the Courtier Islands, in the Dion Islands, in Marguerite Bay, SE of Adelaide Island. The islands in this group were discovered and roughly charted in 1909 by FrAE 1908-10. This island was surveyed by Fids from Base E in Oct. 1948, and named by UK-APC on March 31, 1955, as Emperor Islet, because a low rock and shingle isthmus at the SE end of the island is a winter breeding site for emperor penguins. US-ACAN accepted the name in 1956. However, on July 7, 1959, UK-APC redefined it as Emperor Island, and US-ACAN followed suit in 1963. It appears as such in the 1963 British gazetteer, and also on a 1964 British chart.

Emperor Islet *see* **Emperor Island**

Emperor penguins. *Aptenodytes forsteri*. The largest of the penguins living in Antarctica (*see* **Penguins**). Thought at one time to be rare, there are actually over a million, living in 25 colonies. They weigh 55 to 100 pounds, and can stand almost 4 feet tall. They congregate in close-packed hordes. Females lay a single egg each autumn. The male incubates the egg by carrying it on his broad feet beneath a warm fold of abdominal skin. They do not build nests like other penguins do. They are the deepest-diving birds in the world, able to reach 870 feet underwater and remain submerged for 18 minutes. They do not migrate north during the winter months. Found exclusively south of 60°S, except in 6 sightings only (once in NZ!)

by reporters who knew the difference between emperors and kings. This from a report of a member of the Dundee Whaling Expedition of 1892-93: "The emperor penguin is very difficult to kill. He will live after his skull has been most hopelessly smashed. The best way to put an end to them is to pith them. Six of us set out one day to capture one alive, and so strong was the bird that five with difficulty kept their hold, and after he was bound with strong cords and nautical knots, he flapped his flippers and released himself." In Oct. 1902 Wilson discovered and studied the first colony, during BNAE 1901-04. They were first seen incubating in winter by members of the French Polar Expedition, on June 10, 1951. The first emperor chick to have been bred and hatched outside the Antarctic was born Sept. 16, 1980, at Hubbs-Sea World Research Institute in San Diego. Sea World has several emperors in an Antarctic-like environment.

Emperor Point. 77°37' S, 47°50' W. An isolated point on the Filchner Ice Shelf. Supposedly named by the Russians.

The *Empire Venture*. This was the old whaling factory ship *Vikingen* (q.v.). She had been sold in 1938 to Germany, and became the *Wikingen*. In 1945 she was seized by the British Ministry of Defence, and, under the management of the Kerguélen Whaling and Sealing Company, went to Antarctic waters for the 1945-46 whaling season, as the *Empire Venture*. One of her whale catchers was the *Sukha*. In 1946 she was aquired by the Russians, and her named changed to the *Slava* (q.v.).

The *Empire Victory*. Built in 1937 in Hamburg as the German whaler *Unitas* (q.v.), she was taken by the Allies at Flensburg, at the end of World War II, converted into a British whaling factory ship, and re-named *Empire Victory*. 21,846 tons and 608 feet long, her first trip to Antarctic waters, in 1945-46, was unsuccessful. She was back in Antarctic waters in 1946-47, 1947-48, 1948-49, and 1949-50. In 1950 she was bought by the Union Whaling Company of Durban, and re-named the *Abraham Larsen* (for the founder of that company). For her subsequent career, *see* **The *Abraham Larsen***.

Bajo Enano. 62°32' S, 59°48' W. A shoal, part of Spit Point, the narrow gravel spit forming the S side of the entrance to Yankee Harbor, Greenwich Island, in the South Shetlands. Named by the Chileans ("dwarf shoal").

Enceladus Nunataks. 71°43' S, 69°27' W. A group of about 8 nunataks, rising to about 1055 m, and scattered over a wide area NW of the head of the drainage basin of Saturn Glacier, in southern Alexander Island. Mapped by FIDS cartographers in 1959, from trimetrogon aerial photographs taken by RARE 1947-48, and from ground surveys conducted by FIDS 1948-50. Surveyed by BAS between 1961 and 1973. Named by UK-APC on Dec. 20, 1974, in association with Saturn Glacier, Enceladus being one of the planet Saturn's moons. US-ACAN accepted the name in 1975.

Enchanted Valley. 82°37' S, 53°10' W. A small, snow-filled, and beautifully scenic valley, running NE-SW between Walker Peak and Hannah Peak, at the SW end of the Dufek Massif, in the Pensacola Mountains. Surveyed by the Americans from Ellsworth Station, who visited it in Dec. 1957, and who named it appropriately. US-ACAN accepted the name in 1968, and UK-APC followed suit on Nov. 3, 1971. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land, and also in the 1974 British gazetteer.

The *Enchantress*. A 126-ton British sealing brigantine from Plymouth, built in 1818 for J. Roberts, and engaged in the Mediterranean and Brazil trade. In July 1821 she was fitted out in Plymouth for a trip to the South Shetlands, and, going via the Falklands, arrived in the South Shetlands for the 1821-22 season, under the command of Captain W. Bond. She sailed in company with the *Martha* (under the command of Capt. Ralph Bond) and the *Pomona* (under the command of Capt. Charles Robinson). They moored in New Plymouth and Clothier Harbor. After the expedition, Capt. George Kissock took command.

Enchantress Rocks. 62°43' S, 60°49' W. A group of rocks in water, 2.5 km SE of Elephant Point, Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Aug. 31, 1962, for the *Enchantress*. US-ACAN accepted the name in 1965. This feature was last plotted by the UK, in late 2008.

[1]**The *Endeavour***. Hillary's polar ship, formerly the RRS *John Biscoe*, which transported the NZ party to McMurdo Sound in 1957 for their part in the BCTAE. Her first commander was Harry Kirkwood (1955-58). The ship's company on the 1956-57 trip to Antarctica were: Kirkwood (skipper), Lt. Cdr. W.J.L. Smith, RNZN, Lt. A.C. Coutts, RNZN, Lt. H. Pool, RNZNR, Lt. D. Scholfield, RNZNVR, J.C. Harman (chief petty officer), W.J. Douglas and L. Lowndes (petty officers), M.G.A. Brown, R.E. Carss, M.J. Diggins, N.P. Hape, B.H. Harding, J.B. Johnson, B.W. Nolan, D.P. Rogers, and Ramón Tito (able seamen), A.M. Bennett (chief engine room artificer), T.R. Waddell, M.W.H. Johns, T.R. Robertson, and P.B. Wichman (engine room artificers), O.M. Cox (shipwright artificer), L.C. Budden, B.R. Kersel, T.S. Brand, A. Cross, and B.O. Seymour-East (mechanics), C.W. Woodriffe (electrical artificer), J. Spence and J. Hadfield (telegraphists), B.R. McCormick (L.S.A.), A.J. McCune (chief steward), E.C. Tricker (steward), E.G. Scoble (chief cook), and N.G. Mundt (cook). The ship's company on the 1957-58 trip to Antarctica were: Kirkwood (skipper), Lt. Cdr. W.J. Doole, Lt. E. Burrows, Lt. D.B. Donnett, Lt. M.N. Waymouth, J.C. Harman (chief petty officer), W.J. Douglas (petty officer), N.P. Hape and S.J. Mace (leading seamen), M.G.A. Brown, T.J. Devlin, B.H. Harding, E.J.W. Lyne, C. Thomas, Ramón Tito, E.A. Wilson, and B.W. Nolan (able seamen), H.W. Warner (chief mechanic), T.R. Waddell (and M.R.H. Johns (engine room artificers), L.C. Budden (chief engineering mechanic), W.J. Ormsby and B.R. Kersel (leading engineering mechanics), T.S. Brand, R.W. Cunningham, B.O. Seymour-East, and D.W. Stewart (engineering mechanics), A.C. Black and R.D. Pinker (electrical artificers), E. Voisin (joiner), J. Spence (chief petty officer telegraphist), J. Hadfield (telegraphist), D. George (LSA), E.G. Scoble (chief cook), P. Gadsby (cook), E.G. Tricker (chief steward), C.P. Rands (steward). She took down NZARP 1958-59, her captain that year being John Ernle Washburn. She also took down NZARP 1959-60 and NZARP 1960-61 (Capt. Roy Herbert Longland Humby on both occasions). After that season she was withdrawn from service, and replaced by another ship with the same name (see below). She later saw service in Canada, and foundered in 1986.

[2]**The *Endeavour***. Also known as the *Endeavour II*. A 310-foot NZ supply tanker, A184, which began carrying NZARP down to Antarctica in the 1962-63 season, replacing the older *Endeavour*. She was actually the U.S. tanker *Namakagon*, on loan to NZ. 1962-63 (Captain James Lennox-King on both occasions); 1963-64 and 1964-65 (Captain P.R.H. Silk; in command from May 1963 to Oct. 1965); 1965-66 and 1966-67 (Captain Lionel Ernest Hodge on both occasions); 1967-68 and 1968-69 (Captain Douglas Gerard "Doug" Bamfield on both occasions); 1969-70 (Captain M.C. Verran); and 1970-71 (Captain P.R.H. Silk).

[3]**The *Endeavour*** *see* **The *Caledonian Star***

Mount Endeavour. 76°33' S, 162°00' E. A summit at an elevation of 1810 m above sea level, 1.5 km N of the base of Ketchum Ridge, and 5 km NW of Mount Creak, in the S part of the Endeavour Massif, in Victoria Land. In Oct. 1957 the NZ Northern Survey Party of BCTAE in 1957 gave the name Mount Endeavour to the S block of the Kirkwood Range, naming it for their ship, the *Endeavour* (formerly the *John Biscoe*). However, on subsequent U.S. and NZ maps the name became applied to the 1810-meter summit which is the subject of this entry, and, in 1999, after mapping that year, US-ACAN accepted the name Mount Endeavour for the 1810-meter mountain, and the name Endeavour Massif for the S block of the Kirkwood Range. NZ-APC accepted the name on Nov. 12, 1999.

Endeavour Massif. 76°33' S, 162°02' E. A huge, flat-topped massif extending S from Pa Tio Tio Gap to Fry Glacier, it forms the S block of the Kirkwood Range, on the Scott Coast of Victoria Land (Robertson Massif forms the N block). Shoulder Mountain, Mount Belgrave, and Mount Creak all rise from the S part of the massif. Steep coastal cliffs and projecting ridges mark the E margin, but there is a gentle slope W from the massif's broad, plateau-like snow summit. For a history of the naming of this feature, *see* **Mount Endeavour** (above).

Endeavour Piedmont Glacier. 77°23' S, 166°40' E. A piedmont glacier, 10 km long and

3 km wide, between Micou Point and the SW part of Mount Bird, on Ross Island. Named by NZ-APC on Nov. 12, 1999, for the *Endeavour* (that is, the 2nd *Endeavour*, what was called the new *Endeavour*). US-ACAN accepted the name in 2000.

The *Endeavour II* *see* [2]**The *Endeavour***

Endelsleiste. 72°50' S, 166°07' E. A ledge in the Lawrence Peaks of Victoria Land. Named by the Germans.

Enden *see* **Enden Point**

Enden Point. 73°37' S, 4°14' W. Also called Mount Kleynshmidt. A partly snow-capped rock point at the SW side of Belgen Valley, between that valley and Utråkket Valley, in the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Enden (i.e., "the end"). US-ACAN accepted the name Enden Point in 1966.

Gora Énderbitovaja. 67°22' S, 49°15' E. One of the Fyfe Hills, in Enderby Land. Named by the Russians.

The *Enderby*. Refrigeration ship which replaced the old *Bransfield* as freezing ship for the *Balaena* fleet, during its last 2 years in the Antarctic, 1958-59 and 1959-60.

Enderby Abyssal Plain *see* **Enderby Plain**

Enderby Brothers. It all started with Samuel Enderby (1720-1797), who founded the whaling firm of Enderby & Sons, in Paul's Wharf, London. During the American Revolutionary War they were partially responsible for establishing the Southern Whale Industry, out of London. One of Samuel's sons was Samuel Enderby (1756-1829), who had three sons who are the ones we're talking about in this book when we refer to the Enderby Brothers, the largest British whaling company of the day. Charles (1797-1876), Henry (1800-1876), and George Enderby (1802-1891). One of their nephews was Gordon of Khartoum (*see* **Mount Gordon**). The firm went broke eventually.

Enderby Land. Centers on 67°30' S, and extends longitudinally from Shinnar Glacier (44°38' E) to William Scoresby Bay (59°34' E), centering on 53°E. A large stretch of barren ice-capped plateau in the interior of East Antarctica, E of Queen Maud Land, between that land and the Amery Ice Shelf. It has high peaks toward the coast, including the Napier Mountains. Discovered by John Biscoe on Feb. 28, 1831, while he was sailing for Enderby Brothers. Britain claimed it on Jan. 13, 1930, and in 1933 they handed it over to Australia. ANCA accepted the name.

Enderby Plain. 60°00' S, 40°00' E. Also called Enderby Abyssal Plain. An undersea plain extending between 55°S and 63°S and between 29°E and 55°E. Discovered by the *Discovery II* in the 1930s, and explored by the *Ob'* in 1957-58. The name was accepted by US-ACAN in 1988.

Endeveggen. 63°58' S, 90°39' W. A mainly ice- and snow-covered rock face, 2 km long, between Vestveggen and Zavodovskijbreen, at the SW end of Peter I Island. Named by the Norwegians (name means "the end wall").

Endresen Islands. 67°17' S, 60°00' E. A group of small islands, the highest rising to 60 m above sea level, just N of the Hobbs Islands, off the coast of Mac. Robertson Land, in East Antarctica. Discovered in Feb. 1936 by personnel on the *William Scoresby*. US-ACAN accepted the name in 1947, and ANCA followed suit.

[1]**The *Endurance***. A 3-masted barquentine of 144 feet long, built by Lars Christensen (q.v.), and launched in 1912. She was called *Polaris* then, and was owned by Adrien de Gerlache (q.v.). Her 350-hp steam engine gave her a top speed of 10.5 knots. De Gerlache sold her to Shackleton, who re-named her *Endurance*. She was the vessel on the disastrous BITE 1914-17, and was crushed in the ice on Nov. 21, 1915. She lives on in memory as one of the most famous ships of all time.

[2]**The *Endurance***. Built by Lauritzen Lines as the *Anita Dan*, a Danish vessel in 1956, she was bought by the RN as a 3600-ton ice-patrol, research and hydrographic ship, her name was changed, and she was replaced the *Protector* as guard ship in Antarctic waters, being there every summer season from 1968-69, doing hydrographic surveying. That first season, 1968-69, her skipper was Capt. Peter W. Buchanan. They investigated Deception Island after the volcano blew, and conducted hydrographic surveys of the Biscoe Islands, the Argentine Islands, and Potter Cove. She was back in 1969-70, again, under Buchanan, doing much the same as before. Her captain for the 1970-71 and 1971-72 seasons was Ian Rodney Bowden. During his first season, the ship was used to carry the British Joint Services Expedition to Elephant Island. In 1972-73, under Capt. Christopher John Isacke, RN, she worked with the *John Biscoe* in Marguerite Bay. The 1973-74 season (again under Isacke) was her 6th in Antarctic waters. Noel Bearne was her captain in 1974-75, and 1975-76, and Derek Alan Wallis for the 1976-77 and 1977-78 seasons. James Trevor Lord (*see* **Lord Bank**) was skipper for 1978-79, and that season he took Governor Parker of the Falklands to the South Orkneys and the Antarctic Peninsula. Laird was captain again in 1979-80, and that season helped the *Bransfield* after she ran aground off Adelaide Island. Her captain in 1980-81 was Nicolas John Barker. The vessel was due to be scrapped in 1981, but she was reprieved. Barker stayed on as her captain for the 1981-82 season, and landed troops on South Georgia for the recapture of the island from the Argentines, and rescued several scientists and a couple of girl film makers. During the operation he actually fired a guided missile at the *Santa Fé*, off Grytviken. Captain in 1982-83, 1983-84 (on May 18, 1984, she staggered into Portsmouth with a 12-foot hole in her hull after having run aground), and 1984-85 was Colin Laird MacGregor, and Patrick McLaren took over for 1985-86. She was not in Antarctic waters in 1986-87, but returned in 1987-88 and 1988-89, with Thomas Lacey Murray Sunter as her skipper both seasons. In the latter season she visited the South Shetlands, South Orkneys, and the Antarctic Peninsula, and carried a joint UK-NZ Antarctic Treaty inspection team, that took in 11 stations. On Feb. 7, 1989, she was damaged in an ice collision, and had to be assisted by the *Stena Seaspread*. Her skipper in 1989-90 was Norman Richard Hodgson, and in 1990-91 D.L. Deakin, during which season she was in at the South Shetlands, South Orkneys, and the Antarctic Peninsula region. She was decommissioned on Oct. 17, 1991, and replaced by the *Polarsirkel*, which was re-named *Endurance*.

[3]**The *Endurance*** *see* **The *Polarsirkel***

Cabo Endurance. 61°13' S, 55°03' W. A cape on Elephant Island, in the South Shetlands. Named by the Argentines.

Glaciar Endurance *see* **Endurance Glacier**

Glacier Endurance *see* **Français Glacier**

Endurance Canyon. 69°30' S, 48°00' W. A submarine feature in the Weddell Sea. Named after Shackleton's famous ship, the *Endurance*.

Endurance Cliffs. 82°47' S, 155°05' E. A line of steep-sided, east-facing rock cliffs, between Mount Summerson and Mount Albright, forming the S end of the Geologists Range. Mapped by the Northern Party of NZGSAE 1961-62, and named by them as Endurance Nunatak, for Shackleton's old ship. The feature was later re-defined, and the name was accepted by US-ACAN in 1966, as Endurance Cliffs. ANCA followed suit on May 18, 1971.

[1]**Endurance Glacier** *see* **Veststraumen Glacier**

[2]**Endurance Glacier**. 61°10' S, 55°11' W. A broad glacier, N of Mount Elder, flowing SE to the S coast of Elephant Island, in the South Shetlands, it is the main discharge glacier on the island. Surveyed by the British Joint Services Expedition of 1970-71, and named by them as Flog Glacier, for the difficulty in getting across it. Re-named by UK-APC on Nov. 3, 1971, for the *Endurance*, the modern vessel that took the expedition to Elephant Island in 1970, and established several anchorages off this glacier. The expedition's hut was built to the SW of the glacier. US-ACAN accepted the name in 1972. The feature appears on a 1977 Argentine chart as Glaciar Endurance, and that is what they still call it. This glacier was originally plotted in 61°10' S, 55°08' W, but, in late 2008, was replotted by the British.

Endurance Nunatak *see* **Endurance Cliffs**

Endurance Reef. 68°18' S, 67°32' W. A reef, 13 km W of Red Rock Ridge, in Marguerite Bay, off the Fallières Coast, on the W coast of the Antarctic Peninsula. Named by UK-APC on Dec. 20, 1974, for the *Endurance*, the modern vessel which, in Feb. 1972, hit a rock here in a depth of 2 meters. The area was surveyed by boats from the same ship in 1973, and

similar depths were found up to 1.5 km SSW of the rock. US-ACAN accepted the name in 1975.

Endurance Ridge. 62°30' S, 40°00' W. An undersea ridge in the Weddell Sea, named by international agreement in June 1987, for Shackleton's ship, the *Endurance*.

Cerro Enéas. 63°45' S, 58°27' W. A hill, about 8 km NNW of Pitt Point, on the S coast of Trinity Peninsula. Named by the Chileans, for Capt. Enéas Aguirre Sérsic, of the Chilean Army, part of the Army delegation on ChilAE 1947-48. The Argentines call it Cerro Pincen.

Pozza Eneide. 74°42' S, 164°06' E. A shallow pond (one meter deep), 56 m above sea level, and which measures 25 by 15 m, 7.6 km ENE of Mount Abbott, and 0.3 km W of Baia Terra Nova Station (later named Mario Zucchelli Station), at the point where the Italians established their meteorological station ENEIDE in Feb. 1997, at an elevation of 91.94 m. Surveyed and named by Vittorio Libera, during ItAE IV (1988-89). The Italians accepted the name officially on July 17, 1997.

Punta Engaño. 62°25' S, 59°26' W. A point on the N coast of Robert Island, in the South Shetlands. Named by the Argentines ("deception point").

Engberg Bluff. 73°13' S, 166°48' E. A bold, ice-covered bluff, between the mouths of Argonaut Glacier and Meander Glacier, where these two tributary glaciers enter the S part of Mariner Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Larry W. Engberg, meteorologist at Hallett Station in 1961.

Engebretson Peak. 78°08' S, 162°27' E. A peak rising on the W end of Johns Hopkins Ridge, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1995, for Mark J. Engebretson, upper atmosphere physicist at Augsburg College, an authority on the correlation of Arctic, Antarctic, and spacecraft data. Originally plotted in 78°12' S, 162°27' E, it has since been replotted.

Cape Engel *see* **Cape Freeman**

Engel Peaks. 69°32' S, 63°08' W. Three peaks, the highest being 1460 m, they extend in a NW-SE direction for 6 km, 24 km W of Cape Rymill, in the Eternity Range, on the Wilkins Coast, on the E side of Palmer Land. Photographed aerially by Wilkins on Dec. 20, 1928. Wilkins grouped this feature with (what would become known as) DeBusk Scarp, Briesemeister Peak, and Finley Heights, and called them all, collectively, Finley Islands (*see* **Finley Heights**). The feature was photographed aerially again in Sept. 1940, by USAS 1939-41, who also surveyed along here while on a sledging journey. The feature is seen on a 1943 U.S. Hydrographic Office chart. In Nov. 1947, during RARE 1947-48, this feature was surveyed again by a joint sledging team of RARE personnel and Fids from Base E. and was named by Finn Ronne in 1948 for Bud Engel of the Albert Richard Division of the Osterman Company, in Milwaukee, who contributed winter clothes for Ronne's expedition. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer.

Engelberg. 71°40' S, 161°57' E. A peak due W of the valley the Germans named Diskordanztal, in the Morozumi Range. Named by the Germans, probably for Stephan Engel, who was on GANOVEX III (1982-83).

Engelhardt Ice Ridge. 83°20' S, 146°00' W. Between Whillans Ice Stream and Kamb Ice Stream, near the junction of the Gould Coast and the Siple Coast, in Marie Byrd Land. Named by US-ACAN in 2003, for Hermann Engelhardt, of the division of geology and planetary sciences, at the California Institute of Technology, USAP geophysicist who drilled boreholes in both those ice streams in 4 field seasons between 1991 and 1996.

Mount Engelstad. 85°29' S, 167°24' W. Also seen spelled (erroneously) as Mount Engelstat. A rounded, snow covered summit, rising 3252 m from the edge of the S part of the Polar Plateau, at the head of the Axel Heiberg Glacier, about midway between Helland-Hansen Shoulder and Mount Wilhelm Christophersen, in the Queen Maud Mountains. Discovered in Nov. 1911 by Amundsen, and named by him as Mount O. Engelstad, for Norwegian naval captain Ole Engelstad, who was to have commanded the *Fram* and been 2nd-in-command of the expedition, but who was killed by lightning while conducting kite tests in July 1909 (at the period when Amundsen was still planning to go to the North Pole). The name was later given more substance, as Mount Ole Engelstad, but later still, shortened. US-ACAN accepted the name Mount Engelstad in 1950. Modern cartographers, when trying to plot this mountain and Mount Wilhelm Christophersen in accordance with the two actual mountains in front of them (so to speak), and yet trying to remain true to Amundsen's namings, were faced with a bit of a problem, in that, using Amundsen's book *Sydpolen* (the only viable source of information regarding the original namings), the two mountains were confused, in that Amundsen's map therein and his text were at direct variance, i.e., in the narrative this feature is Mount Engelstad, yet on the map it is Mount Wilhelm Christopherson. So, the modern cartographers, figuring that there was less chance of error in the narrative, picked that as the reliable source.

Engemann, Fritz. Seaman on the *Deutschland*, during GermAE 1911-12.

Engenheiro Wiltgen Refugio. 61°04' S, 55°21' W. Brazilian refuge hut established at Hammer Hill, on Elephant Island in Jan. 1985. It was open most summer seasons, until it was dismantled in 1997-98.

Engenhovet. 74°34' S, 11°00' W. A partly ice-covered ridge in the northernmost part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for journalist Hans Engen (1912-1966), Norwegian Resistance leader during World War II. In 1958 he was ambassador to the UN.

Mount England. 77°03' S, 162°27' E. A conical-topped mountain rising to 1205 m (the New Zealanders say about 1432 m), immediately S of New Glacier, it overlooks Granite Harbor, in the NE part of the Gonville and Caius Range, in Victoria Land. Discovered by BNAE 1901-04, and named by Scott for Rupert England. US-ACAN accepted the name, and NZ-APC followed suit.

England, Rupert George Alexander. b. 1877, Harthill, Yorks, and baptized Jan. 25, 1878, at Gate Helmsley, Yorks, son of the Rev. George Alexander England and his wife Ellen Ward. After Hull Grammar School, he became a Merchant Navy officer (and lieutenant commander, RNR), working for the Wilson Line. He was 1st officer on the *Morning*, 1902-04, during the relief of BNAE 1901-04, and on July 26, 1907, at Poplar (in London), he signed on as captain of the *Nimrod*, for BAE 1907-08. He was discharged in Lyttelton, on March 23, 1908. In April 1908, he married Jessy, a girl from Christchurch, NZ, and returned to England. He left the sea in 1909, but served in World War I. He was later president of the Antarctic Club (1933-34). He died on Nov. 1, 1942, at Bourne Place, Hildenborough, Kent.

England Glacier. 73°30' S, 68°23' E. A small glacier between Gibbs Bluff and McCue Bluff, on the Mawson Escarpment, in Mac. Robertson Land. Plotted by Australian cartographers from ANARE aerial photos taken in 1956, 1960, and 1973, and named by ANCA for Richard "Dick" England, geologist with the ANARE Prince Charles Mountains summer survey parties of 1973 and 1974.

England Peak. 82°37' S, 52°49' W. A sharp peak, rising to 2150 m (the British say about 1900 m), 0.8 km S of Aughenbaugh Peak, E of Neuburg Peak, and W of the Jaeger Table, in the W part of the Dufek Massif, in the N part of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed by USGS during their Pensacola Mountains Project of 1965-66, and mapped by them from all these efforts. Named by US-ACAN in 1979, at the suggestion of Art Ford, for Anthony W. England, USGS geophysicist who worked in and around the Dufek Massif in 1976-77 and 1978-79. UK-APC accepted the name on May 21, 1979.

England Ridge. 77°02' S, 162°29' E. The NE continuation of the glaciated and steep NE crest of Mount England, forming a snow-free crest with steep NW-facing snow-free walls down to the frozen sea, at the terminus of New Glacier, in Victoria Land. Explored by Fiorenzo Ugolini, Keith Wise, and Heinz Janetschek, in Jan. 1962. Named by US-ACAN in 1968, in association with the mountain.

Estrecho English *see* **English Strait**

Mount English *see* **Mount Mooney**

English, Desmond Patrick "Paddy." b. Aug. 11, 1929, Limerick, Ireland. Flight Lt.

FIDS pilot who wintered-over at Base B in 1960.

English, Robert Allen Joseph "Bob." b. June 5, 1899, Arizona, son of outrageous and powerful Tombstone lawyer Allen Robert English by his 2nd of 3 wives, Hannah A. Walsh. He graduated from the Naval Academy in 1922, and in 1928 married Lucille, a beautiful 21-year-old brunette artist's model, and they lived in San Diego. By 1933 they were living in Washington, DC, and he was still a lieutenant (jg) when he was detached and appointed commander of the *Bear of Oakland* for ByrdAE 1933-35. While he was away, in the fall of 1934, Lucille was in New York and met a lawyer, Harold Wayne Starr, about her age. The Englishes had an apartment there too, or at least Lucille did, and it was from a window of this apartment that Lucille twice tried to jump. Mr. Starr had to hold her back on one occasion. On her husband's return to DC, Lucille rushed to the Willard to welcome him home. People wept at their joyous reunion. "I went to work and concentrated on my job," she replied to the obvious question. "Lonely? Oh, yes, I was lonely." A month later, while Mr. Starr was visiting Lucille in her fifth-floor apartment at the Embassy Towers on Fuller Street, Mrs. English went into the kitchen to mix yet more drinks, and, sitting on the window ledge yelling, "Help! Police!," she took the plunge. Even though the lawn cushioned her fall, she was rendered a paraplegic, and from her hospital bed exonerated Starr and was divorced from her husband, who won the DSM, went onto the *Nevada* for two years as assistant engineer, and, now a lieutenant commander, was executive secretary of USAS 1939-41. In 1941 Lucille left town. When Bob got back he married again, to Doris Smith, a Maryland girl, and in June 1942 they moved to an apartment in Lee Gardens, on Wayne Street, Arlington, Va. During World War II he was mostly in the Atlantic and Europe, being highly decorated. In 1946, while Captain English was stationed in England, Doris filled the apartment up with gas from the oven, grasped her three-year-old daughter Roberta in a death grip, and never came out of the kitchen alive. Bob retired as a rear admiral, became an investment broker in San Gabriel, Calif., and in 1957 became president of the American Polar Society. He died on Aug. 1, 1969, in Los Angeles.

English Coast. 73°30' S, 73°00' W. That portion of the coast at the neck of Palmer Land, on the W side of the Antarctic Peninsula, between the N tip of Rydberg Peninsula and Buttress Nunataks. Discovered, explored, and roughly mapped in 1940 by Ronne and Eklund during USAS 1939-41, and named Robert English Coast, for Bob English. Members of the expedition from East Base also reconnoitered it from the air. It appears as such on a 1943 U.S. Hydrographic Office chart, plotted between 73°W and 78°W. On another USHO chart of that year it is plotted between 68°W and 78°W. On a USAAF chart of that year it is shown running between Carroll Inlet and Thurston Island. In one of the more bizarre Antarctic namings, it appears on a 1946 Argentine chart as Costa Inglesa Robert, plotted between 69°W and 84°W, and on one of their 1948 charts as Costa Inglesa, plotted between 74°W and 82°30' W. US-ACAN accepted the name Robert English Coast in 1947, with the plotting between 67°W and Smyley Island. In this gazetteer, the W part of the George Bryan Coast was included in the Robert English Coast, as it was on a 1948 USHO chart (the Bryan Coast, as it is called now, is, these days, defined as extending between 80°06' W to 89°35' W), and as it was on a 1952 Argentine chart (they used the name Costa George Bryan), and on a 1954 Argentine chart (this time they used the name Costa Jorge Bryan). Another 1954 Argentine chart shows the Robert English Coast as Costa Roberto English. The coast was photographed aerially on Dec. 23, 1947, during RARE 1947-48, and it appears on Ronne's map of 1949. It appears on an Argentine chart of 1953 as Costa Robert English. It first appears as English Coast in 1954, plotted between 70°W and 80°W. In the 1956 U.S. gazetteer the Robert English Coast runs between 67°W and Rydberg Peninsula. On a 1962 USHO chart it runs between the Seward Mountains and Caroll Inlet. The whole coast was photographed aerially by USN in 1965-6, and in 1966, US-ACAN accepted the shortened name English Coast (that was the year they shortened most of the names given in honor of USAS personnel), and UK-APC followed suit on Dec. 20, 1974. It appears as such on the 1968 USGS sketch map of Bryan Coast-Ellsworth Land. The Chilean gazetteer of 1974 accepted the name Costa Robert English.

English Rock. 76°49' S, 118°00' W. A rock outcrop near the foot of the W slopes of Mount Frakes, in the Crary Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1975, for Claude L. "Buddy" English, Jr., USN, VX-6 helicopter crewman in Antarctica in 1960-61, 1961-62, 1964-65, and 1969-70.

The *English Rose VI*. A 57-foot British ketch, owned by John Ridgway (b. 1938) and family (Marie Christine and Rebecca). They visited Deception Island and South Georgia in 1994-95, and wrote *Then We Sailed Away*. Mr. Ridgway, in 1966, while a captain in the Paras, rowed with Chay Blyth across the Atlantic in *English Rose III*.

English Strait. 62°27' S, 59°38' W. A strait running NW-SE, separating Greenwich Island from Robert Island, in the South Shetlands. It was roughly indicated on a chart published in 1821, following William Smith's voyage. It was further charted by sealers, and was named about 1821. It appears as English Straits on Fildes' chart of 1821, and as English Strait on Powell's chart published in 1822. On Sherratt's chart of 1821 it appears as Yankee Straits. It was named Cecilia's Straits by John Davis in 1822, for the *Cecilia*. An 1823 French map shows the name Détroit de Freeman (i.e., "Freeman strait"), which refers to either this strait or MacFarlane Strait. On an 1824 French translation of Powell's 1822 chart, it appears as Détroit Anglais. On Weddell's 1825 chart it appears as Spencer's Straits (*see* **Santa Cruz Point**, for an explanation of that name). On an 1842 map reflecting FrAE 1837-40, it appears as Détroit English; on a British chart of 1844 it appears as English Strait; and on an 1861 Spanish chart it appears as Estrecho de los Ingleses. The Argentines were calling it Estrecho English from at least 1908. It was re-charted by the Discovery Investigations in 1934-35, and appears on a 1937 British chart as English Strait. It appears on an Argentine chart of 1946 as Estrecho Inglés, but in 1947 there is a reference to it as Canal Inglés. It appears on a 1947 Chilean chart as Estrecho de Inglés. English Strait was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. On an Argentine chart of 1953 it appears as Estrecho Bouchard, named after Hipólito Bouchard (q.v.); however, on one of their 1954 charts it appears as Paso Inglés. It was not until 1957 that Argentina finally settled on a name, Estrecho Espora, which appears on one of their charts of that year, named after Col. Tomás Espora (d. 1835), Argentine national hero. The Argentine gazetteer of 1970 accepted that name. The Chilean gazetteer of 1974 accepted the name Estrecho English, but today, apparently, they call it Estrecho Inglés. This strait was last plotted by the UK, in late 2008.

Englund, Carl. Skipper of the *Ørnen*, 1893-94, and of the *Vesterlide*, 1908-09.

Lago Enigma *see* **Enigma Lake**

Enigma Automatic Weather Station. 74°43' S, 164°02' E. An Italian AWS, installed in Jan. 2006, at an elevation of 210 m, in the vicinity of Engima Lake, in the Northern Foothills of Victoria Land. It was operated on a need-to-run basis, i.e., it was installed every year in November, and dismantled in the following February. Also called Enigma Lake AWS.

Enigma Lake. 74°43' S, 164°00' E. A lake beside Strandline Glacier, in the Northern Foothills, at Terra Nova Bay, in Victoria Land. The Italians named it Lago Enigma. In 2008, NZ-APC accepted the name Enigma Lake

Enigma Lake Automatic Weather Station *see* **Enigma Automatic Weather Station**

Enigma Peak. 69°34' S, 72°44' W. Rising to about 1000 m, it surmounts the NW end of Fournier Ridge, N of Wagner Ice Piedmont, in the Desko Mountains, on Rothschild Island. Probably seen from a distance by von Bellingshausen in 1821, in 1909 by FrAE 1908-10, and in 1936 by BGLE 1934-37. It was discovered properly and photographed aerially by USAS 1939-41, and described by them as the prominent NW peak of Rothschild Island. Photographed aerially in Dec. 1947, by RARE 1947-48, and because of low cloud cover, they thought it was on Dorsey Island. On Ronne's

1949 map is it shown as a peak on Charcot Island. In 1959-60, Searle of the FIDS, working from the RARE photos, located it correctly on Rothschild Island, but plotted it in 69°22' S, 72°42' W. So named by UK-APC on March 2, 1961, because of the difficulty in finding it from photos during the mapping process. US-ACAN accepted the name later in 1961. It appears on a British chart of 1961. It was replotted over the years, in 69°24' S, 72°42' W, but U.S. Landsat imagery of Feb. 1975, revealed the true coordinates.

Enigma Rocks. 72°28' S, 164°47' E. A group of rocks NW of Symes Nunatak, near the middle of Evans Névé, in Victoria Land. Named by NZ-APC.

Caleta Enojada *see* **Mitchell Cove**

The *Enrico C.* Italian vessel, belonging to the Costa Line, of Genoa. In 1977-78 she visited the Antarctic Peninsula, but made no landings, due to bad weather.

Cerro Enrique. 62°27' S, 60°47' W. A hill about 120 m E of Playa Alcázar, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for former ambassador (to Sweden) Enrique Gajardo Villarroel (1899-1994), who represented Chile at the preliminary meeting of the Antarctic Treaty nations in 1958, and who was a strong supporter of the 1965-66 Chilean census of Antarctic marine mammals.

Isla Enrique *see* **Harry Island**

Seno Enrique. 64°30' S, 62°42' W. A bay indenting the SW coast of Brabant Island, about 5 km NW of Strath Point, in the Palmer Archipelago. Named by the Chileans for Capitán de navío Enrique Cordovez Madariaga, Chilean observer on the *Primero de Mayo* during ArgAE 1943. *See* **Bahía Cordovez** and **Lobodon Island**.

Enrique Hill. 62°36' S, 61°08' W. An ice-free hill rising to 156 m in Dospey Heights, on Ray Promontory, 840 m SE of Battenberg Hill, and 550 m NNW of Penca Hill, it surmounts Barclay Bay to the E and NE, on Byers Peninsula, Livingston Island, in the South Shetlands. Mapped by the Spanish in 1993. Named by the Bulgarians on Sept. 14, 2010, for Jorge Enrique, a Catalan, who, with Francesc Sàbat, made the first ascent of Mount Friesland (Livingston Island's highest point), on Dec. 30, 1991.

Ensenada Martel Refugio. 62°06' S, 52°28' W. An Argentine refuge hut, opened on Dec. 30, 1947, at Martel Inlet, in Admiralty Bay, King George Island, in the South Shetlands. Its official name was Refugio Naval Ensenada Martel, but it was usually seen as Martel Refugio (or just Martel). It was also known as Admiralty Bay Refugio.

Cap des Entailles *see under* **D**

Enterprise Hills. 79°55' S, 82°00' W. A prominent group of largely ice-free hills and peaks in the form of an arc extending for 50 km, they form the N and NE boundary of Horseshoe Valley, in the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1964, in keeping with the heritage theme.

Enterprise Island. 64°32' S, 62°00' W. An island, 2.5 km long, at the NE end of Nansen Island, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. This island and the larger Nansen Island to the S were charted together, as one feature, on Jan. 24, 1898, as Île Nansen, by BelgAE 1897-99, named for the great Artic explorer. By the early 1900s whalers had spotted that there were, in fact, two islands here, and were calling them North Nansen Island and South Nansen Island. The British Imperial Antarctic Expedition of 1920-22 were the first to chart them as two separate islands. ChilAE 1949-50 named the northern island as Isla Lientur, after the *Lientur*, and it appears as such on a 1962 Chilean chart, and was the name accepted by the 1974 Chilean gazetteer. Following aerial photography by FIDASE in 1956-57, North Nansen Island became Enterprise Island, named by UK-APC on Sept. 23, 1960, for the enterprise of the whalers in the area who made the anchorage in Foyn Bay, between the two islands. It appears as such on a British chart of 1961. US-ACAN accepted this name in 1965. South Nansen Island retained the name Nansen Island (q.v.). The northern of the 2 islands (i.e., what we now call Enterprise Island) appears on an Argentine chart of 1953 as Isla Nansen Norte, and that was the name accepted by the Argentine gazetteer of 1970 (their name for what we call Nansen Island today, is Isla Nansen Sur).

Islote Entrada *see* **Tetrad Islands**

Punta Entrada *see* **Entrance Point**

Entrance Island. 67°36' S, 62°52' E. Just N of the entrance to Horseshoe Harbor, in Holme Bay, Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped (but not named, apparently) by Norwegian cartographers from these photos in 1946. Re-photographed aerially during OpHJ 1946-47, and also by ANARE in 1956. Named by ANCA on July 22, 1959, for its position at the entrance to the harbor at Mawson Station. US-ACAN accepted the name in 1965.

Entrance Point. 63°00' S, 60°33' W. The S entrance point of Neptunes Bellows, and the southeasterly point on Deception Island, where one passes through Neptune's Bellows to get inside the island to Port Foster. It was known to sealers in the early 1820s. ChilAE 1946-47 named it Punta Caupolicán, for Caupolicán, leader of the Mapuche people, the hero of the Arauco war of the 16th century. It appears as such on their 1947 chart, and was the name accepted by the Chilean gazetteer of 1974. Surveyed by Lt. Cdr. David Penfold, RN, in 1948-49, and named descriptively by him as Entrance Point. It appears as such on his 1949 chart, and that was the name accepted by UK-APC on Nov. 15, 1951, and by US-ACAN in 1952. It appears as such in the 1955 British gazetteer. On an Argentine chart of 1953 it appears translated as Punta Entrada, and that was the name accepted by the 1970 Argentine gazetteer. This feature was last re-plotted in late 2008, by the British.

Entrance Shoal. 67°36' S, 62°52' E. A small shoal, 55 m wide, extending over an area of 180 m in a N-S direction, with a least depth of 7.9 m and a maximum depth of 20 m, just W of Entrance Island, at the NW entrance to Horseshoe Harbor, about 1 km from the triangulation point on West Arm (at Mawson Station), in Holme Bay, Mac. Robertson Land. Charted by Tom Gale while on ANARE's *Thala Dan* cruise led by Don Styles here in Feb. 1961. Named by ANCA on July 4, 1961, in association with the island. US-ACAN accepted the name in 1965.

The *Entre Ríos*. Destroyer, launched on Sept. 21, 1937, Barrow-on-Furness, England, at the Vickers-Armstrong yard, built there for the Argentine Navy, at a cost of £400,000. Named for the province of Entre Ríos. Harald Cappus was her skipper in 1943. In Oct. 1947 Capitán de navío Domingo R. Arambarri became her skipper, and she took part in the Argentine naval maneuvers of Feb. 1948 in the South Shetlands under the overall command of (by now Contra-Almirante) Cappus (q.v. for details). Capt. Arambarri left the ship in Sept. 1948.

Archipiélago Entre Ríos *see* **Archipiélago De los Ríos** (under **D)**

Cordillera Entre Ríos. 82°25' S, 36°20' W. A range. Named by the Argentines. This is either another name for the Forrestal Range (of the Argentina Range), or a portion thereof.

Nunataks Entre Ríos *see* **Whichaway Nunataks**

Entrikin, Joseph Waldo "Joe." b. Oct. 26, 1922, Des Moines, Iowa, but raised partly in Kennet Square, and Westchester, Pa., son of dentist Joseph Baily Entrikin and his much younger third wife, sometime librarian Letha Manning. His father died in 1931, and his mother married again, to teacher Ralph Johnson. He joined the U.S. Navy in Nov. 1942, became a pilot, and received his commission in 1944, serving until 1947 in the Aleutians. On March 15, 1946, in Seattle, he married Phyllis Field. From 1947 to 1949 he was stationed in Hawaii, then based in Japan for the Korean War, flying missions over Korea, until the war ended in 1953. In 1955 he was a lieutenant commander at Anacostia when he went on OpDF I (i.e., 1955-56), flying to NZ, and then piloting the first plane ever to land at McMurdo from another continent. He was pilot of the P2V Neptune that almost came to grief on Jan. 6, 1956, the same day Richard Williams died on the ice at McMurdo. This was the 4th long-range exploratory flight over Antarctica by OpDF I, Entrikin had flown to 72°15' S, 96°30' E., and the flight was being controlled from the *Wyandot*. At 10.11 p.m SOS signals started pouring into the *Wyandot*. The plane's starboard motor was failing at 13,000 feet, and the plane was 1000 miles from base. In desperate circumstances, Entrikin brought the plane in on the one surviving engine, with 150 gallons of fuel left. After the expedition, he was in Italy for 2

years, then at Patuxent River, was with VX-6 for a short while, then with VR-7 out of California. He retired in July 1964, to Lynden, Wash., where he went into real estate and was manager of the development council for Whatcom County for a long time. He and his wife went to Ecuador as a team for the Peace Corps, 1982-85. Since then he has really been retired.

Entrikin Glacier. 80°49' S, 160°00' E. A broad, sweeping glacier flowing eastward from the Churchill Mountains into Matterson Inlet, where it is about 9 km wide. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Joe Entrikin. ANCA accepted the name on Aug. 27, 1975.

Entusiastbreen *see* **Entuziasty Glacier**

(Shel'fovyj) Lednik Entuziastov *see* **Entuziasty Glacier**

Entuziasty Glacier. 70°30' S, 14°30' E. A broad outlet glacier formed, in its upper reaches (near Vorposten Peak), from ice draining from the Hoel Mountains and the NE end of the Wohlthat Mountains, and then flowing in a generally northward direction, being fed along the way by the Musketov Glacier, and emerging into the Lazarev Ice Shelf, in Queen Maud Land. The lower part of the glacier, particularly its relationship with the Musketov, was first delineated by SovAE 1961, who named it Lednik Entuziastov (i.e., "enthusiasts' glacier"). The ice shelf it creates they called Shel'fovyj Lednik Entuziastov. For the glacier itself, US-ACAN accepted the name Entuziasty Glacier. The Norwegians call it Entusiastbreen (which means the same thing). Only the Russians have ever named the ice shelf part of it. Everyone else regards the ice shelf as part of the Lazarev Ice Shelf, and therefore not worth an individual name.

Roca Enviada *see* **Envoy Rock**

Envoy Rock. 67°51' S, 68°42' W. A submerged rock marking the N limit of the Dion Islands, off the S end of Adelaide Island. Charted by an RN Hydrographic Survey unit on the *Protector*, in 1963. Following the theme of courtly names applied to other islands in the area (Emperor, etc), this rock was named by UK-APC on Feb. 12, 1964, for its envoy-type position. US-ACAN accepted the name later that year. The Argentines translated it as Roca Enviada.

Enyo Glacier. 77°29' S, 162°00' E. A glacier flowing on the W side of Mount Peleus, in the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. In keeping with the naming of several features in the Olympus Range after characters in Greek mythology, this glacier was named by NZ-APC on Oct. 7, 1998, for Enyo, goddess of war. US-ACAN accepted the name later in 1998. It appears in the NZ gazetteer of 2009. *See also* **Eos Glacier**.

Cape Eolovyj. 66°15' S, 100°47' E. The SW cape of the long, straight section of coast which forms the SE shore of Rybij Khvost Gulf, 5.5 km NE of Dobrowolski Station, in the Bunger Hills, it is formed by cliffs up to 25 m in height, where there is a shelf before rising steeply to 89 m. Charted by SovAE 1956, and named by the Russians as Mys Éolovyj. ANCA translated the name on March 7, 1991.

Mys Éolovyj *see* **Cape Eolovyj**

Mount Eos. 71°42' S, 168°38' E. A mountain with a bare summit, rising to about 2600 m, at the head of Shipley Glacier, about 7 km N of Mount Adam, in the Admiralty Mountains of Victoria Land. Visited in 1981-82 by NZGS geologist Bradley Field, who so named this feature because it provided excellent views of dawns and sunsets, Eos being the Greek goddess of the dawn. NZ-APC accepted the name in 1982, and US-ACAN followed suit. The interesting thing is, this feature does not seem to appear in the NZ gazetteer.

Eos Glacier. 77°28' S, 162°10' E. A glacier running on the S side of McClelland Ridge, in the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. For the same reasons and at precisely the same time as Enyo Glacier (see almost immediately above), this glacier was named by NZ-APC, and the name was accepted by US-ACAN (again, at the same time). It appears in the 2009 NZ gazetteer. Eos was goddess of the the dawn.

Baie des Épaves *see under* **D**

Monte Ephraim *see* **Ephraim Bluff**

Mount Ephraim *see* **Ephraim Bluff**

Ephraim Bluff. 62°33' S, 59°43' W. Named, in reference to the Biblical feature, as Mount Ephraim, by sealers as early as 1820, they used it as a lead mark for Yankee Harbor to the NW. It appears as such on Fildes' chart of 1821; on Fildes' 1827 map as Berg Ephraim; and on a British chart of 1916 as Mount Ephraim. In 1935, the Discovery Investigations surveyed the area, and assumed the name Mount Ephraim referred to a hill inland of the bluff, and so it appears on their chart, as well as on a 1948 British chart. This hill rises to 425 m, and, in summer, a large part of it is ice-free, its dark color contrasting starkly with the glaciers which surround it. It is this hill which appears on a 1948 Argentine chart as Monte Ephraim, but on a 1954 Argentine chart as Monte Efraim. UK-APC accepted this situation on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such in the 1955 British gazetteer. On a 1957 Argentine chart it has been translated all the way as Monte Efraín. FIDASE air photography of 1956-57 showed the original feature to be a high rock bluff which forms the SW point of Greenwich Island, overlooking the S entrance to McFarlane Strait, 2.6 km W of Sartorius Point, in the South Shetlands. The name Mount Ephraim was discontinued (for the inland hill) and the name Ephraim Bluff applied to the original feature, now defined as a bluff. US-ACAN accepted that situation in 1965. However, despite this new definition, the 1970 Argentine gazetteer accepted the name Monte Efraín (for the hill), and the 1974 Chilean gazetteer accepted the name Monte Ephraim (for the hill). The bluff was last plotted in late 2008, by the UK.

Ephyra Lake. 68°35' S, 78°14' E. A small, boomerang-shaped lake to the W of Medusa Lake, in the Vestfold Hills. It has a maximum recorded depth of 9 m, although there may be slightly deeper spots. In Dec. 1992, and in 1994, the two lakes were joined by a narrow connection, about 1 m wide and about 0.5 m deep, but since then it has been observed that this connection is not always maintained, and that often, the two lakes are separate. Despite the occasional connection, the 2 lakes have different salinity profiles and mixing characteristics, and thus deserve separate names. Named by ANCA on April 27, 1995. Ephyrae are the juvenile form of Medusa jellyfish (which is one of the reasons Medusa Lake was so named).

EPICA *see* **European Project for Ice Coring in Antarctica**

Epidote Peak. 84°46' S, 176°56' W. A prominent rock peak just N of the mouth of Held Glacier, overlooking the W side of Shackleton Glacier, in the Queen Maud Mountains. Named by the Texas Tech Shackleton Glacier Expedition of 1964-65 for the epidote (a type of mineral) found here in abundance, and which gives the peak a spotted appearance. US-ACAN accepted the name in 1966.

Epler Glacier. 86°15' S, 161°00' W. A tributary glacier, 16 km long, it flows W from the Nilsen Plateau in the Queen Maud Mountains to enter Amundsen Glacier just S of Olsen Crags. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Charles F. Epler, VX-6 storekeeper during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67).

Mount Epperly. 78°26' S, 85°53' W. Rising to over 4600 m, 3 km S of Mount Tyree, in the main ridge of the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Lt. Robert M. Epperly, USNR, pilot here on reconnaissance and traverse flights in 1957-58.

Epperly Ridge. 78°25' S, 85°45' W. A rock ridge extending NE for 6 km from Mount Epperly, in the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN in 2006, in association with the mountain.

Isla Épsilon *see* **Epsilon Island**

Epsilon Island. 64°19' S, 63°00' W. A small island S of Lambda Island, between the extreme S tip of that island and Alpha Island, in Dallmann Bay, in the Melchior Islands, in the Palmer Archipelago. Roughly surveyed and charted by Discovery Investigations personnel in 1927, further charted by ArgAE 1942 and ArgAE 1943-44, and, after the latter expedition, Argentina named it provisionally as Isla Épsilon, after the Greek letter, and in association with other islands in this group named after Greek letters. The name appears on a 1946 Argentine chart. The translated name Epsilon Island appears on a British chart of 1947, and was the name accepted by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British

gazetteer. US-ACAN accepted the name in 1956, and it appears on a British chart of 1960. The Argentines, unhappy about the name they had invented, came up with Isla Hubac, named for Ángel Hubac (*see* **Caleta Couyoumdjian**), and as such it appears on a 1953 chart. It appears on a 1957 Argentine chart as Islote Hubac, but on another of their 1957 charts, as well as on a 1958 chart, it appears as Isla Alberti, in honor of Manuel Alberti (1763-1811), a Buenos Aires priest who fell in the events subsequent to May 1810. That was the name accepted by the Argentine gazetteer of 1970. The Chilean gazetteer of 1974 accepted the name Isla Épsilon.

Erasmie, Gustav *see* **Órcadas Station**, 1912

Erb, Erwin. He wintered-over at Mawson Station in 1976, at Davis Station in 1984, at Macquarie Island in 1985 and 1988, at Mawson in 1991, and at Heard Island in 1992.

Erb Range. 84°38' S, 177°36' W. A rugged mountain range rising to 2240 m, between Kosco Glacier and Shackleton Glacier, in the Queen Maud Mountains, and extending N from Anderson Heights to Mount Speed, on the W side of the Ross Ice Shelf. Photographed aerially by USAS 1939-41, and surveyed from the ground by Bert Crary during the U.S. Ross Ice Shelf Traverse of 1957-58. Named by US-ACAN on Oct. 21, 2008, for Karl A. Erb, who played a major role in guiding USAP, as the NSF's senior science advisor in the mid-1990s, and then as the director of the Office of Polar Programs from 1998 onwards. During his term as senior science advisor, he was fundamental in justifying to Congress the funds necessary for re-building Pole Station.

Islote Ercilla *see* **Heroína Island**

[1]**The *Erebus***. A small signal boat, or bomb (small warship used for carrying mortars) of 378 tons displacement. She was 106 feet long, with a 29-foot beam, and was launched in 1826. She was the larger of the two ships that went into Antarctic waters during RossAE 1839-43. Made entirely of wood, but reinforced for the ice, she was commanded by Ross himself. There were 3 lieutenants, a purser, 3 executive officers, a surgeon, and an assistant surgeon in charge of zoological and geological observations. Charles T. Tucker was master, and Henry Yule was 2nd master. For other crew, *see* **Ross Antarctic Expedition**.

[2]**The *Erebus***. Ship used to take down KARP 1991-92 (Korea) and 1992-93, 1993-94. Alain Veyser was skipper on all three occasions.

Mount Erebus. 77°32' S, 167°09' E. An active volcano, rising to 4069 m (13,200 feet), it is the most southerly volcano on Ross Island, at the SW corner of the island, near the edge of the Ross Ice Shelf. Indeed, it is Antarctica's major volcano, at one time thought to be the only active one on the continent (*see* **Volcanoes**). It is one of only 3 convecting magma lake volcanoes in the world (the other 2 are in Africa), meaning it has a permanent lake of molten lava, which, in this case, is 30 m wide, and was discovered in 1972. Erebus's crater is 900 feet deep and 2640 feet across. The mountain was first seen on Jan. 25, 1841 by RossAE 1839-43, and thought to be an island (Ross called it High Island, but the next day he defined it more accurately, and named it for his ship). It was in a state of eruption at the time. Ross estimated its height at 12,367 feet. Scott was the next to see it, in 1902, and he estimated its height at 13,120 feet, and then at 12,922 feet. At 10 A.M., on March 10, 1908, during BAE 1907-09, Edgeworth David and Jameson Adams reached the top, at the head of a party which included Douglas Mawson and the Baronet Brocklehurst. Their climb, which took 5 days, made the height 13,370 feet. Ray Priestley led the 2nd ascent of Erebus in 1911, during BAE 1910-13. During that expedition, sledges were hauled to a height of 2743 m. Estimates of the height varied greatly, but the generally accepted one for a long time was 12,448 feet (3793 m), until 1957, when a height of 13,200 feet was adopted as the standard. Erebus erupted for 6 hours on Sept. 4, 1974, and again in 1979. The International Mount Erebus Seismic Study (IMESS) was begun in Dec. 1980 (*see* **Earthquakes**). The volcano began erupting on Sept. 17, 1984. On June 7, 1985 Roger Mear climbed it (i.e., in the winter). On Jan. 19-20, 1991, Charles J. Blackmer made the first known solo ascent of Erebus (it is not a difficult climb). In Nov. 1989 the Americans installed an automatic weather station here, at an elevation of 3700 m. It ceased operating on Oct. 17, 1990. In 2004, after a long period of quiescence, the volcano began acting up, and it really hotted up in 2005.

Gulf of Erebus and Terror *see* **Erebus and Terror Gulf**

Erebus and Terror Gulf. 63°55' S, 56°40' W. Off the SE part of the extreme NE tip of the Antarctic Peninsula, between Dundee Island to the NE, James Ross Island to the SW, and the coast of Trinity Peninsula to the W, it is characterized by the great concentrations of floating ice that usually cover the water in summer. The interior waters of the gulf are completely consolidated in ice, freeing up only in very favorable glaciological conditions. Roughly charted by Ross in Dec. 1842-Jan. 1843, and named by him as Gulf of Erebus and Terror, for his two ships of RossAE 1839-43. However, it also appears on his expedition charts as Erebus Gulf, and as Erebus and Terror Gulf. It was further charted by Larsen in 1893-94, and mapped by SwedAE 1901-04. Fids from Base D surveyed it again between 1945 and 1954. US-ACAN accepted the name Erebus and Terror Gulf in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1957. The Argentine gazetteer of 1970 and the 1974 Chilean gazetteer both accepted the name Golfo Erebus y Terror.

Erebus Basin. 77°15' S, 166°00' E. Submarine feature off the NW coast of Ross Island, in McMurdo Sound. Named in association with all the features in the area that contain the name Erebus.

Erebus Bay. 77°44' S, 166°31' E. About 21 km wide, between Cape Evans and Hut Point Peninsula, on the SW coast of Ross Island, in McMurdo Sound, it is surmounted by Mount Erebus. Discovered and explored by BNAE 1901-04, and named by BAE 1910-13 in association with the mountain. US-ACAN accepted the name, and NZ-APC followed suit.

Erebus Glacier. 77°41' S, 167°00' E. Flows from the lower S slopes of Mount Erebus, on Ross Island, to Erebus Bay, on the W coast of the island, where it forms the partially floating Erebus Glacier Tongue. Named by Scott in 1902, during BNAE 1901-04, in association with the mountain. US-ACAN accepted the name in 1972.

Erebus Glacier Tongue. 77°42' S, 166°40' E. The partially floating (possibly all of it floats) seaward extension of Erebus Glacier, it juts out 8 km into Erebus Bay, on the W side of Ross Island. Charted in 1902 by BNAE 1901-04, and named by Scott in association with the glacier. US-ACAN accepted the name in 1964.

Erebus Gulf *see* **Erebus and Terror Gulf**

Golfo Erebus y Terror *see* **Erebus and Terror Gulf**

Ereby Point. 62°38' S, 60°28' W. A point, 7.2 km ENE of Hannah Point, on the N side of South Bay, Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57. Named as such by UK-APC on Aug. 31, 1962, in order to preserve the name Ereby, which had otherwise become extinct with Erebys Bay (*see* **South Bay**). US-ACAN followed suit with the naming in 1965. This feature was last re-plotted in late 2008, by the UK.

Erebys Bay *see* **South Bay**

Eremitten *see* **Eremitten Nunatak**

Eremitten Nunatak. 72°11' S, 27°13' E. A nunatak, 5 km S of Balchen Mountain, it is the easternmost nunatak in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken during OpHJ 1946-47, and named by them as Eremitten (i.e., "the hermit"). US-ACAN accepted the name Eremitten Nunatak in 1966.

Eremiya Hill. 63°33' S, 58°38' W. An ice-covered hill rising to 863 m, in the W part of Marescot Ridge, 3.48 km WNW of Crown Peak, 4.83 km NNE of Corner Peak, 6 km SE of Thanaron Point, and 5.89 km SW of Bardarevo Knoll, it surmounts Malorad Glacier to the SW, on Trinity Peninsula. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Eremiya, in western Bulgaria.

Erewhon Basin. 79°48' S, 158°34' E. An extensive ice-free area forming a basin in the Brown Hills, it separates the snouts of Foggydog Glacier and Bartrum Glacier from the N edge of Darwin Glacier. Explored by VUWAE 1962-63, and named by them for Samuel Butler's novel *Erewhon* (which is, of course, an anagram of "nowhere"). NZ-APC accepted the name, and US-ACAN followed suit in 1968. ANCA also accepted the name.

Erewhon Nunatak. 74°31' S, 76°41' W. A

small nunatak, 6 m high and 15 m long, at an elevation of 1050 m above sea level, NW of Henkle Peak, in southern Palmer Land. Discovered in Jan. 1985 by a joint USGS-BAS geological party lost in the fog in the vicinity. Named by UK-APC on Feb. 15, 1988. The name comes from Samuel Butler's 1872 satirical romance *Erewhon*, which is an anagram of "nowhere."

Eric Automatic Weather station. 81°30' S, 163°56' E. An American AWS, at an elevation of 45 m, on the Ross Ice Shelf, deployed by University of Wyoming researcher Tom Parrish, on Jan. 29, 2005, and named for his son.

Erickson, Sverre "William." Also known as Dick. b. 1891, Christiansand, Norway, as Sverre J. Isaksen, son of shoemaker Sophus Isaksen and his wife Anne. He went to sea in 1911, left the sea for a while, went into construction, became a rigger foreman with the Old Dominion Stevedore Company, in Norfolk, Va., and was taken on as 3rd mate on the *City of New York* during ByrdAE 1928-30. He left for NZ on the same ship on Feb. 22, 1929, but was back for the second part of the expedition. About this time he changed his name to Sverre Erickson. The trip got him American naturalization, on Feb. 18, 1936, in Brooklyn, during which he signed his name Sverre Erickson Isaksen. He continued to sail, on various ships up to World War II, but, at one stage, the Great Depression hit him hard. If it wasn't for a Nov. 24, 1932 free turkey dinner at the Seaman's House, in New York's West Side, he would have starved (and so would Kessler, King, Cody, Gawronski, and Creagh). But the pressures of the Depression were not over for Sverre. At one o'clock on the morning of April 2, 1933, Miss Anna Doskas, a 30-year-old lady staying at the YWCA in Brooklyn, woke up to find a man at the foot of her bed. She screamed. The man grabbed her handbag from a bureau, and fled. A detective, who heard the screams, caught the man, finding the handbag in his possession. The burglar had in his pocket only a bit of small change, but he was wearing a watch that had inscribed upon it "S. Isaksen, second officer 1928-1930, Byrd Antarctic Expedition." In 1936 Erickson went to England to pick up the racing yacht *Yankee* at Gosport, to be the navigator on her trip back to the States.

Erickson Bluffs. 75°02' S, 136°30' W. A series of conspicuous rock bluffs that extend from Gilbert Bluff to Mount Sinha, and form the SW edge of McDonald Heights, near the coast of Marie Byrd Land. A portion of these bluffs was photographed aerially by USAS 1939-41, and the entire feature was later mapped by USGS from ground surveys and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Albert W. Erickson, biologist and leader of a team that made population studies of seals, whales, and birds in the pack-ice of the Bellingshausen Sea and the Amundsen Sea, while traveling aboard the *Southwind* in 1971-72.

Erickson Glacier. 84°25' S, 179°50' W. A glacier, 20 km long, flowing N from the Queen Maud Mountains, between Mount Young and O'Leary Peak, and joining Ramsey Glacier at the edge of the Ross Ice Shelf. Named by US-ACAN in 1966, for Cdr. J.L. Erickson, USN, commander of the *Staten Island* in 1964-65.

The *Erika Dan*. Ship that brought BelgAE 1960-62 to Antarctica, under the leadership of Guido Derom. Captain of the vessel was Leo Christiaensen.

Erin Automatic Weather Station. 84°54' S, 128°48' W. An American AWS, at an elevation of 1006 m, on the Polar Plateau, installed on Nov. 29, 1994. Named after one of the daughters of Dave Bresnahan.

Erina Nunatak. 81°21' S, 153°02' E. Rising to 1791 m in the Lonewolf Nunataks, W of the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for a NZ dog who worked here (*see* **Lonewolf Nunataks**).

Eris Glacier. 70°36' S, 68°42' W. Flows eastward from the Douglas Range into George VI Sound, between Mount Edred and Lamina Peak to the N and Belemnite Peak to the S. Named by UK-APC on March 17, 2010, for the largest known dwarf planet in the solar system, which was discovered by a team from the Palomar Observatory, Calif., on Jan. 5, 2005. In order to get a grasp of the importance of this celestial body, it is bigger than Pluto. So, in a sense, a very real sense, really, if one still accepts Pluto as a bona fide planet, then one must accept Eris as a new one added to the list of planets in our solar system (and there are others).

Roca Erizo *see* **Urchin Rock**

Erlang Shan. 69°26' S, 76°01' E. A hill in the Larsemann Hills. Named by the Chinese.

Erlanger Spur. 83°16' S, 51°06' W. A rock spur, at a height of about 1500 m, projecting from the SW extremity of the Lexington Tableland, S of Abele Spur, on the N side of May Valley, and extending W toward Blount Nunatak, in the Forrestal Range, at the N end of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their 1965-66 Pensacola Mountains Project, and mapped by USGS from these efforts. At the suggestion of Art Ford, it was named by US-ACAN for George L. Erlanger, electronics specialist with Geophysical Survey Systems, Inc., who worked with the USARP-CRREL survey in the Pensacola Mountains in 1973-74. UK-APC accepted the name on May 21, 1979.

Erma Knoll. 62°39' S, 60°08' W. A peak rising to 412 m in the upper Huron Glacier, 1.6 km ESE of Kuzman Knoll, 1.3 km NE of Zograf Peak, and 390 m NE of Lozen Nunatak, on Livingston Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra survey of 2004-04, and named by them on April 11, 2005, for the Erma River, in western Bulgaria.

Bukhta Ërmak. 67°57' S, 44°26' E. A bay, W of Shinnan Glacier and Shinnan Rocks, on the E part of the Prince Olav Coast. Named by the Russians as Bukhta Ërmak, for the *Yermak* (sic and *see* **Yermak Point**). The Norwegians call it Ermakbukta. *See also* **Yermak Point**.

Mys Ërmak *see* **Yermak Point**

Ermakbukta *see* **Bukhta Ërmak**

Skala Ermolaeva. 72°52' S, 74°57' E. Rocks on the NW side of Mount Harding, in the Grove Mountains of Princess Elizabeth Land. Named by the Russians.

Nunatak Erna. 66°41' S, 139°51' E. A small bulge that rises up out of the glacier tongue that flows down from the continental plateau in the SE part of Cape Géodésie, E of the Astrolabe Glacier. Named by the French in 1950-51 for a very close relative of Georges Schwartz, who was raised by this lady. Schwartz was one of the first to reach this nunatak. The name has been discontinued.

Mount Ernest Gruening *see* **Mount Jackson**

The *Ernest Shackleton*. An 80-meter ice-strengthened vessel specially designed for polar work, built in 1995, by Kverner Klevin Leirvik, of Norway, for the Rieber Shipping Company of Bergen, in Norway, in 1995, and named the *Polar Queen*. She was used by various national Antarctic programs, and then in Aug. 1999 the British Antarctic Survey bought her and renamed her *Ernest Shackleton*. She was in at Halley Station in 1999-2000.

The *Ernesto Tornquist*. Built by C. Connell, of Glasgow, in 1897 as the *Craftsman*. In 1919 she became the *Hampstead Heath*, and in 1923, was converted into the 6457-ton, 450-foot, 52 foot wide whaler *Kommandøren I*, with 583 hp, capable of 10 knots, and working in Kamchatka and the Galapagos Islands. In 1927 she was bought by the Compañía Argentina de Pesca, renamed for Snr. Ernesto Tornquist, principal shareholder of the compañía, registered in Buenos Aires, and used by the company as a transport ship. She was doing pelagic whaling in Antarctic waters between 1927-28 and 1930-31, with Frithjof Jacobsen as her manager. Between austral summers she whaled off the coast of Patagonia. She was laid up in 1931-32, and between 1932 and 1950 worked as a transport out of Grytviken, in South Georgia. She was back in actual Antarctic waters for the 1940-41 season. For her movements during part of this last season, *see* **The *Queen of Bermuda***. On Oct. 15, 1950 she ran ashore in a storm at Cape Constance, in a bay later called Tornquist Bay, in South Georgia. Augustín Ferro was her skipper that season. All 260 men were rescued.

Ernst Bay *see* **Vahsel Bay**

The *Ernst Krenkel*. Russian ship in Antarctic waters in 1996-97 (Capt. Oleksandr Igorovich Syvorov) and 1997-98 (Capt. Sergey Zhukov), both times taking the Ukrainian Antarctic expedition.

Ernstsenskjera. 71°45' S, 12°50' E. A group of nunataks, in the E portion of the Südliche Petermann Range, in the Wohthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians for Astor O.K. Ernstsen, who wintered-over as a meteorological

assistant at Norway Station in 1959, during NorAE 1956-60.

Eroica Peninsula. 71°12' S, 72°05' W. An ice-covered peninsula just N of Beethoven Peninsula and Mendelssohn Inlet, between that inlet and the Wilkins Ice Shelf, in the W part of Alexander Island. Photographed aerially in Nov. 1947, by RARE 1947-48, surveyed by Fids from Base D between 1948 and 1950, and mapped in 1959-60 by Searle of the FIDS working from these efforts, primarly the RARE air photos. He plotted it in 71°11' S, 72°30' W. Named by UK-APC on Dec. 20, 1974, for Beethoven's famous symphony of 1804. US-ACAN accepted the name in 1975. Re-surveyed by BAS between 1961 and 1973, and given new coordinates.

Eros Glacier. 71°16' S, 68°22' W. A glacier, 11 km long, and 3 km wide at its mouth, flowing SE from Planet Heights into George VI Sound, on the E coast of Alexander Island, immediately N of Fossil Bluff. It was probably first seen by Ellsworth, who flew directly over it on Nov. 23, 1935, and obtained photos of the features directly to the N and S of it. The mouth was observed and positioned in 1936, by BGLE 1934-37, and by FIDS in 1948 and 1949. Working from late-1947 air photos taken during RARE 1947-48, Searle of the FIDS mapped it in 1959-60. In association with nearby Pluto Glacier and Uranus Glacier, this glacier was named by UK-APC on March 2, 1961, for the minor planet Eros. US-ACAN accepted the name later in 1961.

Erosion. Wearing down of the Earth's surface features by the elements. Erosion is important in the geologic history of Antarctica. Whole mountain ranges have been eroded (*see* **Beacon Sandstone formation**, for example). Glacial erosion dominates the landscape. Running water erosion has produced little effect (*see also* **Rocks**).

Errant Glacier. 82°21' S, 160°58' E. A small glacier, 24 km long and 3 km wide, on the E side of the Holyoake Range, it flows S into Nimrod Glacier. So named by the Southern Party of NZGSAE 1960-61 to describe their zigzag route on the glacier as they looked for a route N from Nimrod Glacier in Dec. 1960. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Erratic Valley. 70°47' S, 68°25' W. A short valley, running S into Ablation Valley, on the E side of Alexander Island. In 1978-79 a field party from the geography department of the University of Aberdeen (in Scotland) was here, mapping the area, supported by BAS. They found a large number of erratic igneous blocks here, hence the name given by UK-APC on Dec. 9, 1981. US-ACAN accepted the name.

Erratics. Ice-worn rocks carried by a glacier to a new position.

Erratics Valley. 60°43' S, 45°39' W. A valley, recently emerged as a result of deglaciation, N of Whalers Bluff, on Signy Island, in the South Orkneys. So named by UK-APC on Sept. 29, 2004 because the valley contains a number of erratic geological features otherwise relatively rare on Signy Island.

Cabo Errera *see* **Cape Errera**

Canal Errera *see* **Errera Channel**

Cap Errera *see* **Cape Errera**

Cape Errera. 64°55' S, 63°37' W. The SW point of Wiencke Island, and the SW entrance point of Peltier Channel, in the Palmer Archipelago, off the Danco Coast, on the W coast of Graham Land. Noted for a pyramidal hill rising on it to a height of 722 m. Discovered and roughly charted on Feb. 9, 1898, by BelgAE 1897-99, and named by de Gerlache as Cap Errera, for Léo Errera (*see* **Errera Channel**). It appears as Cape Errera on Dr. Frederick Cook's 1900 English language version of the expedition's maps, and also on a British chart of 1909. On one of Charcot's 1906 maps, it appears as Cap Herrera, and on Matha and Rey's 1911 chart it appears as Pointe Errera. It was re-surveyed by the Discovery Investigations in 1927, appears on their chart of 1929, as Cape Errera, which was the name accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1960. It appears on a Chilean chart of 1947 as Cabo Errera, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was further charted by an RN Hydrographic Survey unit on the *Protector*, in 1956-57.

Chenal Errera *see* **Errera Channel**

Pointe Errera *see* **Cape Errera**

Errera Channel. 64°42' S, 62°36' W. A deep, wide marine channel separating Rongé Island from the Danco Coast, on the W coast of Graham Land. The only difficulty when navigating it is the huge mass of floating ice. Discovered and roughly charted in Feb. 1898, by BelgAE 1897-99, and named by de Gerlache as Chenal d'Errera, for Léo-Abram Errera (1858-1905), professor at the University of Brussels, and a member of the *Belgica* Commission. It appears as Strait of Errera on Dr. Frederick Cook's 1900 English language version of the expedition maps, and as Errera Channel on Arctowski's. UK-APC accepted the name Errera Channel on Sept. 4, 1957, and US-ACAN followed suit. It appears as such on British charts of 1959 and 1960. It appears on an Argentine chart of 1953 as Canal Errera, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was re-charted by Fids on the *Norsel* in April 1955, and on the *Shackleton* in 1956-57.

Nunataki Ershova. 81°39' S, 21°55' W. A group of nunataks inland from the Filchner Ice Shelf. Named by the Russians.

Erskin, Charles *see* **USEE 1838-42**

Glaciar Erskine *see* **Erskine Glacier**

Erskine, Angus Bruce. b. May 11, 1928, in Buckingham Palace, the son of Col. Sir Arthur E. Erskine, crown equerry to kings George V and VI, by his wife Rosemary Baird. In Aug. 1941, he took his entrance exam for Dartmouth, and entered the college as a naval cadet in 1942. At the tail end of World War II he graduated from the naval college and entered the fight. He was a sub lieutenant on the *Bigbury Bay* in the 1949-50 season, when that ship picked up Fuchs and his stranded Fids from the South Shetlands, and, as a lieutenant, he was on Jim Simpson's Greenland expedition of 1952-54. As the result of a pub bet he joined FIDS and in 1956-57 spent 9 weeks as harbormaster at Base B. That was the season the Duke of Edinburgh arrived in the royal yacht *Britannia*. Then he moved over to Base W, as leader there for the 1957 winter. On Aug. 5, 1961, by now a lieutenant commander, he married Alison Gillian Duthie, in Chelsea. He commanded three ships, the *Wizard*, the *Active*, and the *Diana*, and retired on Oct. 16, 1972, as a commander, dying on April 15, 2006, in Edinburgh.

Erskine Glacier. 66°29' S, 65°40' W. About 26 km long, it flows NW into Darbel Bay to the N of Hopkins Glacier, on the Loubet Coast, on the W coast of Graham Land. Partly surveyed by Fids from Base E in 1946-47, and named by them as West Gould Glacier (*see* **Gould Glacier**). US-ACAN accepted West Gould Glacier and East Gould Glacier in 1952, and UK-APC followed suit on Sept. 8, 1953. At that time it was believed that the 2 glaciers filled a transverse depression across Graham Land. They appear as such in the 1955 British gazetteer. However, following a complete survey of the area conducted by Fids from Base W in 1957, led by Angus Bruce Erskine (this was the first FIDS party to travel down the glacier), it was shown that there was no topographical alignment between this glacier and East Gould Glacier, and so, on July 7, 1959, UK-APC redefined this situation. The E glacier became Gould Glacier and the W one was re-named for Erskine. US-ACAN accepted this in 1960. It appears as such on a 1961 British chart. It is reported that the 1974 Chilean gazetteer accepted the name Glaciar West Gould, but this hardly seems credible.

Erskine Iceport. 69°56' S, 19°12' E. A more or less permanent bay, about 10 km long and 5.5 km wide, extending SE for about 4 km into the seaward front of the extensive ice shelf fringing the Princess Astrid Coast of Queen Maud Land, E of Cape Sedov (which marks the NW extremity of the Lazarev Ice Shelf). Discovered on March 26, 1956 by the *Glacier*, which made a running survey of this coast that month, and named by them as General Erskine Bay, for retired Marine Lt. Gen. Graves Blanchard Erskine (1897-1973), who led the 3rd Marine Division at Iwo Jima, and was assistant secretary of defense for special operations. The name was later shortened to Erskine Bay, then redefined as an iceport. The Norwegians call it Erskinebukta.

Erskinebukta *see* **Erskine Iceport**

Erta. 71°40' S, 27°08' E. A small nunatak in the N part of Bulkisen, between Austhamaren Peak and Bulken Hill, in the E part of the Sør Rondane Mountains. Name means "the pea" in Norwegian.

Ertenberg, Homer Joice. b. May 17, 1915,

Hornet, near Minneapolis, but raised partly in Rockford, Ill., son of Swedish immigrant parents, farmer (later a blacksmith) Andrew John Ertenberg and his wife Anna C. Johnsson (they married in Massachusetts in 1906). He joined the U.S. Navy, and served on the *Oklahoma* and the *Wyoming*. He was a seaman 1st class on the *Bear*, during both halves of USAS 1939-41 (promoted to chief bosun's mate for the 2nd half). In 1945 he married Helen Chapman. In 1952 he moved to Laconia, NH, where he flew his own plane out of Laconia Flying Club. In the mid 1970s he moved to Punta Gorda, Fla., but died back in Laconia, on Oct. 23, 2009. He is in the 1920 census as Homer George Ertenberg (which has to be an error).

Erul Heights. 63°42' S, 58°21' W. Heights, rising to 1092 m (in Gigen Peak), and extending 8 km from Benz Pass in an ESE direction toward Smokinya Cove, they are bounded by Russell East Glacier to the S and the Cugnot Ice Piedmont to the N, and surmount Prince Gustav Channel to the SE, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians for the settlement of Erul, in western Bulgaria.

Erven Nunataks. 75°45' S, 128°10' W. A small mountain group, 12 km NE of Putzke Peak, in the McCuddin Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Raymond D. Erven, USARP meteorologist at Byrd Station in 1964.

Escalade Peak. 78°38' S, 159°23' E. A prominent peak, rising to 2035 m, 13 km E of the S end of the Boomerang Range, and 39 km WNW of Mount Harmsworth, at the S end of the Skelton Névé, in Victoria Land. So named by the NZ party of BCTAE in 1957 because its vertical pitches and platforms provide a ladder-like route to the summit. US-ACAN accepted the name in 1961, and ANCA followed suit.

Cabo Escalonado. 64°24' S, 61°33' W. A point on the SE side of Murray Island (what the British call Bluff Island and the Chileans call Isla Gándara), at the SW side of Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Punta Escandé. 64°04' S, 58°24' W. A point on the SE side of Gin Cove, in the W part of James Ross Island. Named by the Argentines.

Roca Escarceo *see* **[1]Channel Rock**

Punta Escarpada *see* **Escarpada Point**

Escarpada Point. 61°18' S, 54°14' W. The rocky, rugged SW point of Clarence Island, in the South Shetlands. Named by ArgAE 1953-54 as Punta Escarpada (i.e., "craggy point"). It appears as such on a 1957 Argentine chart, and that was the name accepted by the 1970 Argentine gazetteer. Surveyed by the British Joint Services Expedition of 1970-71. On Nov. 3, 1971, UK-APC accepted the name Craggy Point, and as such it appears in the 1974 British gazetteer. US-ACAN accepted the name Escarpada Point in 1972, and it appears as such in the 1977 American gazetteer. The British were the latest to replot this feature, in late 2008.

Rocas Escarpadas *see* **Rugged Rocks**

Islote Escarpado *see* **Craggy Island**

Punta Escobar. 60°41' S, 45°09' W. A point projecting into Spence Harbor, along the E coast of Coronation Island, in the South Orkneys. Named by the Argentines for Fortunato Escobar.

Escobar, Fortunato. b. Oct. 30, 1885, Argentina. Argentine suboficial, a radiotelegrapher, who wintered over at Órcadas Station in 1928, and died there on Oct. 27, 1928.

Bahía Escondida *see* **Hidden Bay**

Ensenada Escondida *see* **Ensenada Duarte**

Playa Escondida. 62°27' S, 60°48' W. A small beach immediately N of Punta Pasillo, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91, because it is hidden ("escondida" means "hidden").

Isla Escritor Orrego Vicuña *see* **Runaway Island**

Islote Escudero *see* **Mamelon Point**

Escudero Station *see* **Profesor Julio Escudero Station**

Gora Ësenina. 72°03' S, 14°26' E. A mountain at the S side of Skavlhø Mountain, in the Payer Mountains, in the E part of the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians for Sergey Aleksandrovich Yesenin (1895-1925). The Norwegians call it Esenintoppen.

Esenintoppen *see* **Gora Esenin**

La Esfinge *see* **Inca Point**, **Punta Esfinge**

Isla Esfinge *see* **Sphinx Island**

Piedra de la Esfinge *see* **Inca Point**, **Punta Esfinge**

Punta Esfinge. 62°18' S, 59°10' W. A minor point to the NE of Inca Point, at Harmony Cove, Nelson Island, in the South Shetlands. For the origin of this name, and the confusion with Inca Point, *see* **Inca Point**. Name means "sphinx point." Named by the Argentines.

Roca Esfinge *see* **[1]Sphinx Rock**

Eskers *see* **Strand Moraines**

Eskimo Point. 74°17' S, 162°33' E. A flat-topped, steep-sided promontory which projects from the E side of the Eisenhower Range, and forms the N wall of O'Kane Canyon, along the high scarp face along the W edge of the Polar Plateau, between Timber Peak and Mount Mackintosh, in Victoria Land. Named by the Southern Party of NZGSAE 1962-63, which built an igloo on its upper surface, while waiting for a whiteout to lift. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Eskimo Ysbult *see* **Novyy Island**

Eskimos in Antarctica. Of course, there aren't any. They live in the other place. Yet there has been an Eskimo presence in Antarctica, most notably, perhaps in the form of John Kalerak and Franklyn Johnson, cook and wiper respectively on the *North Star*, during USAS 1939-41. In 1927, Byrd announced that he would take 6 Eskimos (4 men and 2 women) with him on ByrdAE 1928-30, one of whom, Nukapingwa, had been of help to Byrd in the Arctic. However, although Byrd's expedition materialized, the Eskimos didn't. Byrd sent out radio messages all over the world, calling for his old friend, Nukapingwa, in his igloo not too far from the North Pole, but the Eskimo never got the message.

Eskola Cirque. 80°43' S, 23°49' W. 3 km wide, between Arkell Cirque and Bowen Cirque, in the south-central part of the Read Mountains, in the Shackleton Range. Photographed aerially in 1967, by USN, surveyed by BAS personnel from Halley Bay Station, 1968-71, and mapped by USGS from these efforts. Named by UK-APC on Jan. 5, 1972, following the geologists motif in the area, for Pentti Eskola (1883-1964), Finnish authority on the Precambrian rocks of Finland, and on silicate melt systems. It appears in the 1974 British gazetteer. US-ACAN accepted the name.

Caleta Esmeralda *see* **Emerald Cove**

Cordón Esmeralda. 74°26' S, 62°42' W. A mountain chain (actually the SE portion of the Hutton Mountains) extending from the area around Bowman Peninsula to Gardner Inlet, on Trinity Peninsula. Named by the Chileans for the *Esmeralda*, the ship commanded by Capitán Arturo Prat during the famous naval battle of Iquique, May 21, 1879. The Argentines call it Cordón Trenque Lauquen, after the Argentine city.

Monte España. 64°48' S, 62°54' W. A high mountain, covered in snow but with visible outcrops of black rock, and with cliffed sides, in the center of Lemaire Island, off the W coast of Graham Land. This feature has been appearing as such on Chilean maps since 1952.

Caleta Española *see* **Española Cove**

Española Cove. 62°40' S, 60°23' W. A small cove immediately N of Rey Juan Carlos I Station, between Polish Bluff and Johnsons Dock, on the E side of South Bay, Livingston Island, in the South Shetlands. Photographed aerially by FIDASE 1956-57. Named Caleta Española by the Spanish about 1991, the name was translated as Española Cove by UK-APC on Dec. 16, 2003. This cove was last plotted in late 2008, by the UK.

Española Glacier. 62°40' S, 60°23' W. Flows NNW toward Rey Juan Carlos I Station (hence the name), SW of Queen Sofia Mount, Hurd Peninsula, Livingston Island, in the South Shetlands. Named by the Spanish in 1991, as Lóbulo de la Base Española. UK-APC accepted the name Española Glacier, on Dec. 16, 2003. This glacier was last plotted in late 2008, by the UK.

Espenchied Nunatak *see* **Espenschied Nunatak**

Espenschied Nunatak. 73°35' S, 77°52' W. Rising to about 500 m S of Carroll Inlet, it is the most westerly of the Snow Nunataks, on the English Coast of Ellsworth Land. Surveyed from the ground during the Antarctic Peninsula

Traverse of 1961-62, photographed aerially by USN in 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, as Espenchied Nunatak (sic) for Peter C. Espenschied, USARP aurora scientist at the Byrd Auroral Substation in 1960-61. It appears as such on the 1968 USGS sketch map of Bryan Coast-Ellsworth Land. UK-APC accepted that name on Dec. 20, 1974. In 1981, US-ACAN having realized their mistake, corrected the spelling, and UK-APC followed suit the following year.

Esperanto Island. 62°26' S, 60°10' W. The largest and most northwesterly of the Zed Islands, it measures 950 m by 900 m, and rises to a height of 290 m (although the Chileans hint that it might be as high as 320 m), lying 70 m to the NW of Phanagoria Island, and 2.7 km NW of Williams Point, off the N coast of Livingston Island, in the South Shetlands. On a 1962 Chilean map it appears as Isla Zeta, a name sometimes translated into English as Zed Island. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the international language.

The *Esperanza*. Whaling factory ship, formerly the *BAS II*, she was owned by the Mexico Company, hunting off the coast of Mexico, and in 1929-30 was in Antarctic waters.

Bahía Esperanza *see* **Hope Bay**

Base Esperanza *see* **Esperanza Station**

Fondeadero Esperanza *see* **Hope Bay**

Glaciar Esperanza *see* **Depot Glacier**

Isla Esperanza *see* **Hope Island**

Lago Esperanza *see* **Lake Hope**

Esperanza Bay *see* **Hope Bay**

Esperanza Station. 63°24' S, 56°59' W. Known officially as Base de Ejército Esperanza (Esperanza Army Base), but more commonly known as Base Esperanza. Argentine year-round scientific station, built on rock, 25 m above sea level, on Hope Bay (Esperanza is Spanish for "hope"), 30 m from the coast, on Trinity Peninsula, next to Britain's Base D, and 1.5 km from Teniente Ruperto Elichiribehety (Uruguay's summer station). **Dec. 31, 1951**: Work began on building the station, at that time a Navy base known as Destacamento Naval Esperanza. **Jan. 14, 1952**: The station opened, with 6 huts for 25 persons. **Feb. 1952**: The fracas with the FIDS. **March 31, 1952**: The station was inaugurated, as Destacamento Naval Esperanza. **1952 winter**: Luis Manuel Casanova (leader). **Dec. 17, 1952**: It became an Army base. **1953 winter**: Juan Carlos Kelly (leader), Cavalry Captain Jorge Edgard Léal (deputy leader). **1953-54 summer**: A 2nd station was built here, and led by Infantry Lt. Col. Fortunato Castro. **1954 winter**: Ismael Rodrigo (leader of station #1) and Infantry Lt. Col. Fortunato Castro (leader of station #2). **1955 winter**: Humberto Valiani (leader of station #1) and Infantry Captain Jorge Rodolfo González Moreno (leader of station #2). **1956 winter**: Horacio F. Giorgi (leader of station #1) and Engineer Major Nicolás Jorge Méndez (leader of station #2). Station #2 was closed after that year. **1957 winter**: Nicolás Jorge Méndez (leader). One of the meteorological observers was Eduardo Ramón Leyton, who had twice wintered-over at Órcadas Station. **1958 winter**: Cavalry Major Alberto Pedro Giovannini (leader). **Oct. 15, 1958**: The station was destroyed by fire, but rebuilt. **1959 winter**: Engineer Captain Ignacio Carro (leader). **1960 winter**: Artillery Captain Edgardo Arturo Fehrmann (leader). **1961 winter**: Artillery 1st Lt. Raúl Alfredo Ahumada (leader). **1962 winter**: Infantry 1st Lt. Gustavo Adolfo Giró Tapper (leader). **1963 winter**: Engineer Captain Jorge Aníbal García (leader). **1964 winter**: Infantry Major Raúl Héctor Toledo (leader). **1965 winter**: Engineer Major Ernesto Juan Peyregne (leader). **1966 winter**: Cavalry 1st Lt. Guillermo José Gómez (leader). **1967 winter**: Infantry Captain José Eduardo Antonio Valladares (leader). **1968 winter**: Cavalry 1st Lt. Guillermo José Gómez (leader). **1969 winter**: Cavalry 1st Lt. Julio César Veronelli (leader). **1970 winter**: Infantry 1st Lt. José Bilbao Richter (leader). **1971 winter**: Engineer Lt. Carlos Felipe Lazarte (leader). **1972 winter**: Infantry 1st Lt. Adrián Patricio Nirich (leader). **1973 winter**: Infantry Lt. José María Roberto Eduardo de Feliú (leader). **1974 winter**: Engineer 1st Lt. Enrique Eduardo Rutsch (leader). **1975 winter**: Infantry 1st Lt. Edgardo Humberto Marpegán (leader). **1976 winter**: Cavalry Captain Julio César Veronelli (leader). **1977 winter**: Infantry Captain Carlos Alberto Fernández (leader). **Feb. 1978**: The first Antarctic wedding took place: Primer sargento Carlos Alberto Sugliano married Julia Beatriz Buonamio. An Argentine military chaplain performed the ceremony. **1978 winter**: Engineer Lt. Col. Ignacio Carro (leader). **1979 winter**: Communications Captain Juan Carlos Videla (leader). **1980 winter**: Infantry Major Marcos Alberto Calmón (leader). **1981 winter**: Cavalry Lt. Col. Héctor Fructuoso Funés (leader). **1982 winter**: Infantry Lt. Col. José Bilbao Richter (leader). **1983 winter**: Communications Major Héctor Luis Repetto (leader). **1984 winter**: Infantry Lt. Col. Juan Carlos Orticelli (leader). **1985 winter**: Infantry Major Juan Norberto Rubio (leader). **1986 winter**: Infantry Captain Enrique Enéas Neirotti (leader). **1987 winter**: Engineer Captain José Antonio Murga (leader). **1988 winter**: Infantry Captain Jorge Ipólito Villamayor (leader). **1989 winter**: Infantry Major Néstor Omar Facio (leader). **1990 winter**: Infantry Major Hugo Carlos Casela (leader). **1991 winter**: Engineer Major Alberto Martínez (leader). **1992 winter**: Communications Major Juan Carlos Fernández (leader). **1993 winter**: Infantry Major Enrique Enéas Neirotti (leader). **1994 winter**: Infantry Major Víctor Alejandro Forster (leader). **1995 winter**: Infantry Lt. Col. Eduardo Ezequiel Alonso (leader). **1996 winter**: Infantry Lt. Col. Luis Alberto Dupuy (leader). **1997 winter**: Artillery Major Víctor Hugo Figueroa (leader). **1998 winter**: Infantry Lt. Col. Hugo Carlos Casela (leader). **1999 winter**: Infantry Lt. Col. Fernando R. García Pinasco (leader). **2000 winter**: Engineer Major Carlos Alberto Drews (leader). **2001 winter**: Artillery Lt. Col. Juan Carlos Pérez Arrieu (leader). **2002 winter**: Engineer Major Fernando José Isla (leader). **2003 winter**: Engineer Major Carlos Félix Flesia (leader). **2004 winter**: Infantry Major Néstor Adrián Argüello (leader). **2005 winter**: Engineer Lt. Col. Marcos Jorge Ramírez (leader). **2006 winter**: Artillery Major Alejandro Héctor Berto (leader). **2007 winter**: Engineer Major Sergio José Fabián Pietrafesa (leader). **2008 winter**: Infantry Lt. Col. Miguel Monteleone (leader). **2009 winter**: Cavalry Lt. Col. Gustavo María Gómez (leader). For decades now it has been an extensive military base, occupied (since the 1978 winter) by entire families. Nordenskjöld's hut is here (*see* **Historic sites**).

Islote Espina *see* **Spine Island**

Espíndola, Ignacio. Argentinian surveyor and naval lieutenant (teniente de navío), commander of the *Uruguay* from Dec. 30, 1914 to Nov. 24, 1915.

Arrecife Espinoza *see* **Armstrong Reef**

The *Espíritu Santo*. Name almost always seen erroneously as the *Espirito Santo*. A 650-ton Argentine sailing ship built in 1800, which normally plied between London, Lisbon, and Pernambuco. Owned by one Rodrigo, she was chartered, apparently, by Joseph Herring (former mate on the *Williams*), and went to the South Shetlands for the 1819-20 season, with Don Pedro Nelson as skipper and with an English crew. Capt. Sheffield of the *Hersilia* described her as "a black brig from Buenos Aires." On Dec. 25, 1819 she reached the South Shetlands, Herring raised the British flag, claimed the South Shetlands for George III, and spent 33 days looking for seal pelts. Herring wrote about this trip in the July 1820 edition of the *Imperial Magazine*.

Pasaje Espíritu Santo *see* **Loper Channel**

Esplin, David. b. 1830, Dundee, twin son of weaver Adam Esplin and his wife Betsy Souter. He became a seaman, trawling in the North Sea, and married Agnes Nicoll in Panbride, on Dec. 8, 1865. He was an able seaman on the *Polar Star* during DWE 1892-93.

Esplin Islands. 67°45' S, 69°00' W. A group of 2 small islands and off-lying rocks, rising to an elevation of 6 m above sea level, NE of Box Reef, off the SW end of Adelaide Island. Named by UK-APC on Feb. 12, 1964, for Sub Lt. (later Cdr.) Christopher John Esplin-Jones (b. 1940), RN, a member of the RN Hydrographic Survey Unit which charted this group in 1962-63, on the *John Biscoe*. He later fought in the Falkland Islands War. US-ACAN accepted the name later in 1964, and it appears on a British chart of 1964.

Estrecho Espora *see* **English Strait**

Caleta Esquitines *see* **Caleta Barros**

Bahía Esquivel *see* **Bahía Ricke**

Esquivel Refugio *see* **Teniente Esquivel Refugio**

Esser Bluff. 77°38' S, 166°54' E. A rock bluff rising to about 600 m, on the SE margin of

Turks Head Ridge, 1.6 km ENE of Grazyna Bluff, on Ross Island. Named by Phil Kyle for Richard Esser, a member of the New Mexico Tech field parties on Mount Erebus, 1993-94 and 1994-95, and later a technician in the geochronology lab at NM Tech, where he has dated many Antarctic rocks. US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001.

Esser Hill. 77°56' S, 164°05' E. A peak, rising to 1235 m, between the divergent flow of Priddy Glacier and Blackwelder Glacier, 1.5 km SW of Chambers Hill, on the Scott Coast of Victoria Land. Named by US-ACAN in 1992, for Alan C. Esser, of Holmes & Narver, project manager of Antarctic Support Arctivities, 1976-80, and who was responsible for contractor operations at McMurdo, Pole Station, and Siple Station, as well as field activities in support of USAP.

The *Essex*. Stonington, Conn., sealing schooner, owned by W.W. Rodman, in the South Shetlands in 1820-21, and again in 1821-22, both seasons under the command of Capt. Chester, and in the latter season in company with the *Emeline* and the *Catharina*. In the second season she took 1000 seal skins and 1000 barrels of oil. Not to be confused with the (non-Antarctic) whaler *Essex* (Capt. Pollard), out of Nantucket that, in Nov. 1820, in 44°S, had been attacked and sunk by a whale.

Punta Essex *see* **Essex Point**

Essex Point. 62°35' S, 61°11' W. A point, 1.5 km NE of Start Point, at the end of Byers Peninsula, and thus forming the extreme NW end of Livingston Island, in the South Shetlands. Named by UK-APC on July 7, 1959, for the *Essex*. US-ACAN accepted the name in 1960. On Chilean maps, it is sometimes confused with Start Point (q.v. for more detail), and erroneously called Punta Start. However, on correct Chilean maps it is called Punta Essex, which is what the Argentines call it. The British were the latest to re-plot this feature, in late 2008.

Mount Essinger. 77°52' S, 162°38' E. A peak rising to 1905 m, surmunting the most eastern massif of the Cathedral Rocks, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1992, for Lt. Cdr. Jesse W. Essinger, USN, chaplain who wintered-over at McMurdo in 1968.

Passage Est. 66°40' S, 140°02' E. A channel between Buffon Island and Lamarck Island, E of Pétrel Island, in the central part of the Géologie Archipelago. Much used by ships coming in to relieve Dumont d'Urville Station. Named by the French in 1978 ("est" means "east").

Estación Aeronaval Petrel *see* **Petrel Station**

Estación Ellsworth *see* **Ellsworth Station**

Estación Científica Almirante Brown *see* **Almirante Brown Station**

Estación Científica Corbeta Uruguay *see* **Corbeta Uruguay Station**

Estación Científica Teniente Jubany *see* **Jubany Station**

Glaciar Estadio *see* **The Stadium**

Isla Estay *see* **Fitzroy Island**

Islote Estay *see* **Estay Rock**

Estay Rock. 63°19' S, 57°59' W. A rock in water, in Covadonga Harbor, 3 km WSW of Toro Point, it is the southwesternmost feature of the Duroch Islands, off Cape Legoupil, on the W coast of Trinity Peninsula. Charted by ChilAE 1947-48, and named by them as Islote Ministro Fidel Estay Cortéz, for Fidel Segundo Estay Cortés (sic; b. 1887), senator in the Chilean parliament. It appears as such on their chart of 1948. This name was too long, and even the Chileans knew it, so in 1951 it appears on charts variously as Islote F. Estay and Islote Fidel Estay. Photographed by FIDASE in 1956-57. It appears on a Chilean chart of 1959 as Islote Estay, and that was the name accepted by the 1974 Chilean gazetteer. It appears as Estay Rock on a U.S. chart of 1963, and that was the name accepted by US-ACAN in 1964. It appears as such in the UK gazetteer of 1986.

Cabo Este *see* **Cape East**

Glaciar Este *see* **Shoesmith Glacier**

Punta Este. 62°27' S, 60°47' W. Immediately SE of Punta Boreal (not to be confused with Boreal Point, which is on Joinville Island), on the N coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by personnel from the Instituto Antártico Chileno during ChilAE 1991-92, because it points toward the east (name means "east point"). The Argentines call it the same thing. However, the SCAR gazetteer says that the Argentines plot it in 62°28' S, 60°17' W, which is quite different from the Chilean plotting. Yet, it must be the same feature, because in the purported Argentine coordinates there is no feature that fits. If the Argentines do, indeed, list those coordinates, then they are wrong.

Mount Ester. 82°18' S, 155°04' E. Rising to over 2200 m, it surmounts the W part of McKay Cliffs, about 24 NW of Mount Macpherson, in the Geologists Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Donald W. Ester, USARP geologist at McMurdo in 1962-63. ANCA accepted the name.

Mount Estes. 78°16' S, 166°18' E. A flattish mountain, 4 km S of Mount Aurora, in the S part of Black Island, in the Ross Archipelago. Rising to 600 m, it is similar to the flat Cape Beck massif that forms the S end of the island. Named by US-ACAN in 1999, for Steve A. Estes, of the Geophysical Institute, at the University of Alaska, at Fairbanks, who investigated the seismicity of nearby Mount Erebus in 1980-81 and 1981-82. NZ-APC accepted the name on Nov. 4, 1999.

Bahía Esteverena. 63°54' S, 57°27' W. A bay, immediately NE of Comb Ridge, at the N end of The Naze, on James Ross Island. Named by the Argentines, for Capitán de corbeta Horacio Alberto Esteverena (b. Sept. 23, 1914, Buenos Aires), skipper of the *Granville* in 1947-48.

Punta Esteverena. 62°46' S, 61°32' W. A point, immediately SW of Byewater Point, on Snow Island, in the South Shetlands. Named by the Argentines for Don Horacio Esteverena (*see* **Bahía Esteverena**, above).

The *Esther*. Boston sealing ship owned by the same people who owned the *Emerald*. On May 14, 1820, she arrived in Boston from the China Seas, under Capt. Low. She was, with her tender (the *Hermaphrodite*), in the South Shetlands in the 1820-21 season, as part of the Boston Expedition. Low was still skipper. She took 7000 seal skins.

Puerto Esther *see* **Esther Harbor**

Esther Bay *see* **Venus Bay**

Esther Harbor. 61°56' S, 57°57' W. A small harbor at the W side of Venus Bay, immediately W of Pyrites Island, and S of Gam Point, on the N coast of King George Island, in the South Shetlands. It was the landing place of William Smith when he took formal possession of King George Island for King George III, on Oct. 16, 1819. Roughly charted by the early American sealers (who used it as an anchorage), and named by them for the *Esther*. In 1821, it was the site of the first wintering-over in Antarctica (*see* **The *Lord Melville***, and also **Wintering-over**). It appears as Esther Harbour on Sherratt's chart of 1821; as Esther's Harbour on Fildes' chart of 1821; as Ester's Harbour on Powell's chart published in 1822; as Esther Harbour on a British chart of 1839; as Havre Esther in Vincendon-Dumoulin's atlas of 1847; as Puerto Esther on a Spanish chart of 1861; as Bahía Esther on Irízar's Argentine chart of 1904 (this was translated as Esther Bay); on Charcot's map of 1912 as Havre Ester; as Esther Harbour on David Ferguson's chart of 1921; and on Wilkins' 1929 map as Ester Harbour. On Discovery Investigations charts of 1937 and 1938 it appears wrongly on the W side of Brimstone Peak. It appears on a 1942 USAAF chart as Esther Harbor; on a 1946 Argentine chart as Puerto Ester; and on a 1947 Chilean chart as Bahía Ester. In 1948, FIDS incorrectly described it as lying SW of Ridley Island. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1958. UK-APC accepted the name Esther Harbour on Sept. 23, 1960, and US-ACAN followed suit later that year (without the "u" in "harbor," of course). Today, both the Argentines and the Chileans call it Puerto Esther. This feature was originally plotted in 61°55' S, 57°59' W, but in late 2008 the UK re-plotted it.

Esther Islands *see* **Pyrites Island**

Esther Nunatak. 61°57' S, 57°47' W. A nunatak, rising to about 200 m, E of Venus Bay, and 3 km SW of Brimstone Peak, in the NE part of King George Island, in the South Shetlands. Charted by the personnel on the *Discovery II* in 1937, and named by them in association with nearby Esther Harbor. It appears on a 1942 British chart. Photographed aerially by FIDASE in 1956, and surveyed from the ground by FIDS in 1958. UK-APC accepted the name on Sept. 23, 1960, and US-

ACAN followed suit that year. This nunatak was originally plotted in 61°57' S, 57°50' W, but, in late 2008, the UK re-plotted it.

The *Esther O'Cain* *see* **The *O'Cain***

Estivariz Refugio *see* **Capitán Estivariz Refugio**

Estonia. Probably the first Estonian to winter-over at the South Pole was Henry Oona, in 1964. His brother Hain followed him there, for the winter of 1968. In 2003, a team of Estonians went to Wood Bay, in Victoria Land, assisted by the New Zealanders and the Italians, to mark out a site for a summer station.

The *Estonia* *see* **The *Estoniya***

Podnjatie Éstonija. 69°00' S, 0°00'. An upland on the coast of Queen Maud Land, Named by the Russians for their ship, the *Estoniya*.

The *Estoniya*. Russian ship that took part in SovAE 1962-64 and SovAE 1963-65 (both times under the command of Capt. Adam Mikhaylovich Oganov; Charles Swithinbank traveled on the vessel in 1963-64), SovAE 1964-66 (Capt. Vladimir Yanovich Bether), SovAE 1976-78, 1977-79, and 1978-80 (all three times under Capt. Igor Iosifovich Kir'yanov), SovAE 1979-81 and SovAE 1980-82 (both times under Capt. Artur Aleksandrovich Markov), and SovAE 1981-83 (Capt. Anatoliy Mikhaylovich Ponomarev).

Nunatak Estrada. 66°00' S, 61°06' W. Immediately W of Standring Inlet, on the N coast of Jason Peninsula. Named by the Argentines.

Isla Estrecha *see* **Furse Peninsula**

Paso Estrecho. 62°28' S, 60°47' W. A marine passage joining Punta Nacella (on the W coast of Cape Shirreff) to the S part of Half Moon Beach (on the E coast of Cape Shirreff), on Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1990-91, because it is descriptive of the narrow form of the channel, "estrecho" meaning "narrow." It is also a play on words, in a sense, as the words "paso" and "estrecho" both mean "channel" or "strait."

Islote Estrella del Norte *see* **Northstar Island**

Islotes Estrella del Norte. 68°11' S, 67°06' W. The Chilean name for Northstar Island and its offlying islets and rocks, about 1 km NW of the extreme W point of Neny Island, in Marguerite Bay, off the W coast of the Antarctic Peninsula. *See* **Northstar Island** for a history. The reason for the name Estrella del Norte is that it is the Spanish translation of *North Star*, the USAS ship that visited Marguerite Bay in 1940. The name Islote Estrella del Norte for the main island appears on a 1962 Chilean chart, and the group name Islotes Estrella del Norte appears on a 1969 Chilean chart, and was the name accepted by the 1974 Chilean gazetteer.

Isla Eta *see* **Eta Island**

Eta Island. 64°19' S, 62°55' W. An island, 2.5 km long, with a regular relief and moderate height (100 m), immediately N of Omega Island, it is the largest feature in the NE part of the Melchior Islands, in the Palmer Archipelago. The most conspicuous feature on its extreme NW point is a small skull-shaped hummock formed by a rock outcrop on the snow. During FrAE 1903-05, Charcot thought Eta Island and Omega Island were one large island, and named it Île Melchior. It was roughly surveyed and charted by the Discovery Investigations personnel in 1927. In 1941 USAS 1939-41 surveyed it more accurately, and named it North Star Island, after their ship. It was mapped in more detail by the Argentine Antarctic expeditions of 1942 and 1943. This island and Omega Island were thus determined to be two separate islands. The name Isla Eta first seems to appear on an Argentine chart of 1946, named for the Greek letter. It also appears on a 1947 chart as East Melchior Island, but that name went nowhere. The Argentines no longer call it Isla Eta, but the Chileans do (it appears in the 1974 Chilean gazetteer). It appeared on a 1948 Argentine chart as Isla Piedrabuena, named for Luis Piedrabuena (*see* **Forrestal Range**), and that was the name accepted by the 1970 Argentine gazetteer. On Sept. 8, 1953, UK-APC accepted the translated name of Eta Island, and US-ACAN followed suit in 1956. It appears as such in the British gazetteer of 1955, and on a British chart of 1960.

Etar Snowfield. 62°34' S, 60°46' W. Roughly crescent-shaped, extending 5 km inland and 15 km in a SSW-NNE direction, on Livingston Island, in the South Shetlands, it flows from the W slopes of Oryahovo Heights and the N slopes of Rotch Dome, to enter Barclay Bay between Mercury Bluff and Rowe Point. Named by the Bulgarians on Nov. 4, 2005, for the settlement of Etar, in the central Balkans.

Mount Etchells. 80°17' S, 28°20' W. Rising to about 900 m, it is one of the La Grange Nunataks, to the W of Mount Beney, in the Shackleton Range. Photographed aerially by USN in 1967, surveyed by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS in 1974 from these efforts. Named by UK-APC on Jan. 5, 1972, for William Alan Etchells (known as Alan, or "Dad") (b. May 17, 1928), BAS general assistant, mechanic, and tractorman who wintered-over at Halley in 1963 and 1964, and again in 1967 and 1968. He was in the Shackleton Range in 1968-69. In 1970 he wintered-over as diesel electric mechanic on South Georgia. He worked for BAS until 1988, as projects officer (engineering). It appears in the 1974 British gazetteer. US-ACAN accepted the name.

Cadena Eternidad *see* **Eternity Range**

Cordillera Eternidad *see* **Eternity Range**

Cordón Eternidad *see* **Eternity Range**

Cadena Eternity *see* **Eternity Range**

[1]**Eternity Mountains** *see* **Welch Mountains**

[2]**Eternity Mountains** *see* **Eternity Range**

Eternity Range. 69°46' S, 64°34' W. A range of mountains, trending N-S for about 42 km, and rising to about 2860 m, it is in the middle of what used to be called Hearst Land, approximately in the middle of the Antarctic Peninsula, and bisects the Antarctic Peninsula into Graham Land and Palmer Land. The range is divided up into 3 main mountain blocks, which, running from N to S, are Mount Faith, Mount Hope, and Mount Charity. These 3 names, and the name Eternity Range, were given by Ellsworth as he photographed the land below during his flyovers of Nov. 21 and Nov. 23, 1935. As for the Eternity Range, he seems to have given this name to all the mountains lying between Mobiloil Inlet (on the Bowman Coast, on the E coast of the Antarctic Peninsula) and (to the W) the S part of Alexander Island. The rough chart made up from Ellsworth's photos by U.S. cartographer W.L.G. Joerg in 1936-37, and a 1948 British chart, seem to indicate this to be so. Ellsworth was, at that moment of his life, very impressed with the concept of eternity. The range (as we know it today) was surveyed and roughly mapped in Nov. 1936, by BGLE 1934-37, or, at least, part of it, the N part, was, and it appears on Stephenson's 1940 map of the expedition. When Rymill returned to the UK, after the expedition, he wrote a lot of articles and gave many lectures. One series of lectures, turned into articles, appeared in the *Geological Journal* of Nov. 1937. In Vol. 91, No. 5, of that journal, appears the article titled "The British Graham Land Expedition, 1934-37." This article includes several beautiful black and white photos, one of which shows a tent, a sledge, and an ice-covered mountain in the background. The caption reads "Camp in the Pass Mountains, December 1936." The name Pass Mountains seems to be referring to the Eternity Range, or, at least, a portion thereof. Rymill, who was working closely (in a cartographic sense) with Ellsworth and his cartographer Joerg, was very careful in these lectures not to tread on their toes. He was aware that Ellsworth had probably named this range, but Rymill did not yet have the official name. So he provisionally called it the Pass Mountains (this explains why he did not give a better name to such a magnificent range). Anyway, the name Pass Mountains was never seen or heard of again. Rymill did, however, name the central and highest mountain in the range, as Mount Wakefield (he did not know that Ellsworth had already named it Mount Hope). Incidentally, on Rymill's very detailed color maps of Graham Land, the range is not shown, by any name. It was the precise location (or, one should say, the extent) of Ellsworth's discovery, that hindered acceptance of the the name he gave it. This situation was complicated by the fact that USAS 1939-41, who partly photographed it from the air and partly surveyed it from the ground, wrongly applied the name Eternity Range, or Eternity Mountains, to the central plateau area E of the whole length of the George VI Sound, i.e., the present Welch Mountains, about 100 km to the S. It appears

as such on Bob English's 1941 map of that expedition. In 1945 Dick Black refers to (what is now accepted as the Eternity Range) as the Wakefield Mountains. On an Argentine chart of 1946 appears the feature Cordón Eternidad (meaning "eternity range"), and again, as such, on a 1950 Argentine map, with the coordinates between 71°S and 73°S. The range was photographed aerially again on Dec. 22-23, 1947, by RARE 1947-48. The range appears on a 1949 Argentine chart as Cadena Eternidad (which means the same thing), and on a 1956 chart as Cordillera Eternidad (which also means the same thing), and the name Cadena Eternidad was the one accepted by the 1970 Argentine gazetteer. The Chileans call it that too. It appears in the U.S. gazetteer of 1956 as Eternity Mountains, and it appears as such on the 1957 *National Geographic* map. It appears on a USAF chart of 1961 as the Eternity Mountains, plotted in 71°00' S, 63°30' W, and on another of their charts, in 1962, plotted in 72°00' S, 65°00' W. However, after much studying and restudying of maps, air photos (notably Ellsworth's and those of RARE), ground surveys (notably those conducted of the N part of the range by Fids from Base E in Nov. 1960) and reports by all parties concerned, UK-APC accepted the name Eternity Range on Aug. 31, 1962, as applied to the area we know today (which, anyway, probably forms the backbone of the mountain system named by Ellsworth), and US-ACAN followed suit later in 1962. At those same naming sessions, Rymill's Mount Wakefield was officially renamed Mount Hope, which had been Ellsworth's original naming, and the name Wakefield was re-applied to Wakefield Highland.

Ethelbald Bluff. 70°50' S, 69°03' W. A west-facing bluff composed of igneous rock, which forms the W end of the complex ridges trending W from Belemnite Point, on Alexander Island. Named by UK-APC on April 29, 1997, for Ethelbald (834-860), son of Ethelwulf, king of the West Saxons, and effectively king of all England from 858-860. US-ACAN accepted the name later in 1997.

Ethelbert Ridge. 70°19' S, 68°55' W. A ridge composed of igneous rocks within the Fossil Bluff groups of sedimentary rocks located ESE of Mount Alfred, on Alexander Island. Originally, it was informally named Saddleback Ridge, by BAS geologist Alastair Linn (b. 1945; wintered-over at Base E in 1970), because of its pronounced saddleback when viewed from the south. UK-APC renamed it Ethelbert Ridge on April 29, 1997, for Ethelbert (836-866), son of Ethelwulf, king of the West Saxons and Kentishmen, and effectively king of all England from 860 to 866. US-ACAN accepted the name later in 1997.

Mount Ethelred. 70°07' S, 69°34' W. A mainly ice-covered mountain, rising to 2470 m (the British say 2250 m), 5 km SE of Mount Ethelwulf, and 13 km inland from George VI Sound, in the Douglas Range of Alexander Island. Probably first seen by Ellsworth, who aerially photographed the E side of the Douglas Range on Nov. 23, 1935. It was probably seen from the air on March 13, 1936, by BGLE 1934-37, and its E face was certainly roughly surveyed from the ground in Oct. and Nov., 1936, during the same expedition. It appears on Stephenson's 1940 map of the expedition. It was re-surveyed by Fids from Base E in 1948-49, and named by them for Ethelred I, king of the West Saxons and Kentishmen, and effectively king of all England between 865 and 871. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on a British chart of 1957. The W face of the mountain was mapped in 1959-60, by Searle of the FIDS, working from 1947 air photos taken by RARE 1947-48. He plotted it in 70°04' S, 69°29' W, and it has since been re-plotted.

Mount Ethelwulf. 70°02' S, 69°34' W. A mainly ice-covered mountain rising to 2590 m, between Mount Egbert and Mount Ethelred, at the head of Tumble Glacier, in the Douglas Range, in the N part of Alexander Island. Probably first seen by Ellsworth on Nov. 23, 1935, as he photographed the E side of the Douglas Range from the air. It was probably seen again from the air on March 13, 1936, by BGLE 1934-37, and they certainly roughly surveyed its E side in October and November that year. It appears on Stephenson's 1940 map of the expedition. FIDS surveyed it in more detail in 1948, and named it for Ethelwulf, king of the West Saxons and Kentishman, 839-858. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. In 1959-60 Searle of the FIDS mapped the W face from 1947 air photos taken during RARE 1947-48. It appears in the 1974 British gazetteer as Mount Ethelwolf.

Etheridge, William Arthur "Bill." b. 1930, Falkland Islands. He joined FIDS in 1951, as an ionosphere physicist, and wintered-over at Port Lockroy Station in 1952. After his tour, the *John Biscoe* came to pick him up, and took him back to Southampton, where he arrived on June 11, 1953. He was due to winter-over at Lockroy again, in 1955; in fact, he came in on the *Norsel* in Feb.-March 1955, to do just that, as the senior ionospheric ist (the only one with real training and experience), but, after a few months there changed his mind and went back to the Falklands (basically he refused to work under a base leader as young as Alan Carroll). He was colonial postmaster in 1985, and died in Port Stanley.

Bahía Etienne *see* **Étienne Fjord**

Baie Étienne *see* **Étienne Fjord**

Fiordo Etienne *see* **Étienne Fjord**

Étienne Fjord. 65°09' S, 63°13' W. A bay, 8 km long, between Bolsón Cove and Thomson Cove, it forms the SW arm of Flandres Bay, on the Danco Coast, on the W coast of Graham Land. Charted by FrAE 1903-05, and named by Charcot as Baie Étienne, for Eugène Étienne (1844-1921), vice president of the Chamber of Deputies, in France, 1902-04, minister of war, 1905-06, and a supporter of Charcot's expedition. It appears on a 1943 U.S. Hydrographic Office chart as Etienne Bay (sans accent). It appears on a 1949 Argentine chart as Bahía Etienne (encore sans accent; an accent here, in Spanish, would only confuse the pronunciation), and that was the name accepted by first the Argentine gazetteer of 1970 and then the Chilean gazetteer of 1974. In 1956-57 it was photographed aerially by FIDASE and surveyed by Fids on the *Shackleton*. UK-APC accepted the name Étienne Fjord on Sept. 23, 1960, it appears on a 1963 U.S. Hydrographic Office chart, and US-ACAN followed suit with the naming in 1965. Interestingly, once the Chileans had accepted the name Bahía Etienne, the Argentines changed their name to Fiordo Etienne.

Islote Etna *see* **Etna Island**

Mount Etna *see* **Mount Melbourne**

Etna Island. 63°05' S, 55°09' W. An island, N of Fitzroy Point, 10 km N of the E end of Joinville Island, just N of Fliess Bay, off the NE tip of the Antarctic Peninsula. Discovered by Ross on Dec. 28, 1842, and named by him as Aetna Island because its high summit (53 m above sea level) reminded him of the Sicilian volcano. It appears as such on his chart of 1847, and on a British chart of 1893. It appears as Etna Island on a British chart of 1921, but incorrectly shown E of Fitzroy Point, a mistake that had come from one of Nordenskjöld's maps of 1905. It appears as Aetna Island on a U.S. Hydrographic Office chart of 1930. US-ACAN accepted the name Etna Island in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on an Argentine chart of 1953 as Islote Etna, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57.

Etropole Peak. 62°36' S, 60°08' W. Rising to 620 m in Melnik Ridge, 640 m E of Melnik Peak, 680 m W of Sliven Peak, and 1.8 km NW of Atansasoff Nunatak, on Livingston Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the town of Etropole, in central Bulgaria.

Mount Eubanks. 70°02' S, 67°15' W. An isolated mountain rising to about 600 m above the ice-surface (in this case, 1210 m above sea level), and providing a prominent landmark near the head of Riley Glacier, in Palmer Land, at George VI Sound. Surveyed by BAS between 1962 and 1972. Named by US-ACAN in 1976, for Lt. Cdr. Paul D. Eubanks, USN, commander of LC-130 aircraft on long-range flights between McMurdo and the Lassiter Coast, during OpDF 70 (i.e., 1969-70). He also carried out open field and resupply missions to various stations and camps elsewhere in Antarctica. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Eubanks Point. 73°27' S, 93°38' W. A point

with steep, ice-covered slopes marked by a rock exposure on the NE face, 3 km WSW of the summit of Mount Loweth, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61. Named by US-ACAN in 1963, for Staff Sgt. Leroy E. Eubanks, U.S. Marine navigator with VX-6 here in 1961-62, who participated in pioneering flights of LC-47 Dakota aircraft from Byrd Station to the Eights Coast area in Nov. 1961.

The *Eugenie Fautrel*. A 2306-ton, 79.54-meter, 3-masted French steel barque, built for Ehrenberg of Paris, and launched on Sept. 18, 1899, at Saint-Nazaire. On Sept. 14, 1902, apparently in 61°S, 68°W (i.e., in the Drake Passage), under the command of Capt. Eugène Allée (b. May 5, 1877, Saint-Briac), she spotted an iceberg 300 feet high and 7 miles long. During World War I, on a voyage from Melbourne to Bordeaux, she was shelled and sunk by a U-Boat about 300 km SW of Ushant.

Eugenie Spur. 64°10' S, 57°18' W. A prominent cliff-faced spur, about 600 m above sea level, and separating the upper reaches of Coley Glacier to the N from Coley South Glacier to the S, about 12 km W of Cape Gage, in the E part of Ross Island. Named by UK-APC on Nov. 15, 2006. The name Eugenie was originally applied locally by BAS personnel to a prominent tuff cone and crater visible toward the SW end of the spur.

Eureka Glacier. 69°43' S, 67°56' W. A broad, gently sloping glacier, about 28 km long, and about 27 km wide at its mouth, it flows westward from the W side of Palmer Land into George VI Sound, N of Niznik Island. It is bounded on the N by the nunataks S of Mount Edgell; on the S by the Traverse Mountains and Terminus Nunatak; and, at its head, Prospect Glacier provides a route to the Wordie Ice Shelf. A sledging party of BGLE 1934-37 found their way to George VI Sound via this glacier in 1936, and they roughly surveyed it, and named it appropriately. It appears on Stephenson's 1940 map of the expedition. It was re-surveyed in its W part by Fids from Base E in 1948. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. In those days it was plotted in 69°44' S, 68°15' W (it appears that way, for example, in the 1956 U.S. gazetteer). It appears on the 1979 USGS sketch map of the N part of Palmer Land. The coordinates shown at the top of this entry are those given in the 1993 British gazetteer. The ones shown in the 1989 U.S. gazetteer are 69°44' S, 68°45' W.

Eureka Spurs. 72°42' S, 166°00' E. Several rock spurs exposed along the E side of the head of Mariner Glacier, 13 km SW of Mount McCarthy, in Victoria Land. So named by VUWAE 1971-72 during their trip to the Evans Névé, on the occasion of fossil discoveries made in the area. NZ-APC accepted the name, and US-ACAN followed suit.

The *Europa* *see* **The *Bark Europa***

Europa Cliffs. 70°52' S, 68°45' W. A group of interconnected hills and rock ridges, rising to about 1000 m on the W side of Jupiter Glacier, in the NE part of Alexander Island. RARE photographed the cliffs aerially in late 1947, FIDS surveyed them between 1948 and 1959, and FIDS cartographers mapped them from these efforts. BAS further surveyed them between 1961 and 1973. Named by UK-APC on Dec. 20, 1974, for one of the satellites of the planet Jupiter. US-ACAN accepted the name in 1975.

EUROSHACK. European Expedition to the Shackleton Range, Dec. 1994 to Jan. 1995. A joint (Germany, Italy, Russia, UK) expedition to the Shackleton Range. Led by Franz Tessensohn and Mike Thomson.

Eurus Ridge. 77°26' S, 161°59' E. A ridge on the W side of Clio Glacier, in the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by NZ-APC on Oct. 7, 1998, for Eurus, the god of the East Wind in Greek mythology. US-ACAN accepted the name later in 1998. It appears in the 2004 NZ gazetteer.

Cabo Eusebio *see* **Exotic Point**

Cabo Eusebione. 72°07' S, 60°39' W. A small cape, NE of Flagon Point, on the E coast of Palmer Land. Named by the Argentines.

Cape Eustnes *see* **Cape Gotley**

The *Eva* *see* **Balloons**

Cabo Eva *see* **Cape Eva**

Cape Eva. 68°42' S, 90°37' W. Also called Evas Cape. Forms the NW extremity of Peter I Island. Rocks and low shoals extend out from this cape for about 700 m. Discovered and charted in 1927, by Eyvind Tofte in the *Odd I*, and named by him as Evaodden. US-ACAN accepted the translated name Cape Eva in 1952. Evaodden Camp was here.

Eva, R. Seaman on the *City of New York* during the 2nd half of ByrdAE 1928-30.

Eva Perón Bay *see* **Mobiloil Inlet**

Isla Evandro. 65°24' S, 65°38' W. An island, about 0.9 km long, 5 km N of the extreme NW point of Pickwick Island, in the Pitt Islands, in the Biscoe Islands. Named by the Chileans for Group Captain Evandro Valenzuela Guevara, of the Chilean Air Force, leader of the wintering-over parties at Presidente Frei Station in 1971 and 1976.

Cape Evans. 77°38' S, 166°24' E. A rocky promontory, the termination of a comparatively low, rocky peninsula which projects about 2.5 km into McMurdo Sound, and which forms the N entrance to Erebus Bay, 10 km S of Cape Royds, on the W coast of Ross Island. Discovered in 1902 by BNAE 1901-04, and named by Scott as The Skuary. Coming back in 1911, during BAE 1910-13, Scott built his headquarters here, but, before doing so, he renamed it on Jan. 2 that year, for Teddy Evans. Shackleton's Ross Sea Party also wintered here during BITE 1914-17. US-ACAN accepted the name, and it appears in the 1958 NZ gazetteer.

Ensenada Evans *see* [1]**Evans Glacier**

Estrecho Evans *see* [1]**Evans Glacier**

Mount Evans. 77°15' S, 162°29' E. A mountain with a double summit rising to 1420 m (the New Zealanders say "a mountain with twin summits, about 1188 and 1127 m high"), at the S side of Debenham Glacier, between that glacier and Wilson Piedmont Glacier, and about 10 km WSW of Lizards Foot, it dominates the central part of the Saint Johns Range, in Victoria Land. Discovered by BNAE 1901-04, and named by Scott for Teddy Evans. Evans later took his title from this mountain. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Seno Evans *see* [1]**Evans Glacier**

Evans, David Gilbert "Dave." b. March 9, 1935, Sheffield, son of Thomas G. Evans and his wife Iris Connelly. He joined FIDS in 1956, as a surveyor, and wintered-over at Base O in 1957 and 1958. After the expedition, he and Eddie Dagless hitched across South America. An inveterate traveler, he was in Czechoslovakia and met Nadezda "Nadia" Svobodova. She was smuggled out and they married in Sheffield in 1969, and raised a family in Bratton, near Trowbridge, Wilts. He died in Trowbridge, in March 2001. Vince O'Neil and Eddie Dagless were at his funeral.

Evans, Edgar "Taff." b. March 7, 1876, Middleton, Rhossilli, Wales, but raised in Pilton, another hamlet of Rhossili, then in Swansea, and then back to Pilton, son of sailor Charles Evans and his wife Sarah Beynon. He left school in 1913, joined the RN in 1891, and, while serving with Scott, as a petty officer on the *Majestic*, volunteered for BNAE 1901-04, during which he, Scott, and Lashly sledged 680 miles across Victoria Land. When he got home to Britain, he became a gunnery instructor, and then, utterly bored with life, volunteered again to go with Scott on the *Terra Nova*, for BAE 1910-13. In the early stages of the expedition, before they had left England, Evans was hitting the booze pretty hard, and Scott left him behind. But, Evans overcame it, and Scott decided to take him. Despite Evans having been with Scott on the earlier expedition, Scott's assessment of him (in Scott's diary of 1911) seems to indicate the leader had never even noticed the petty officer before, "Evans himself is a queer study — his boyish enthusiasm carries all along, till one sees clearly the childish limitations of its foundation, and appreciates that it is not a rock to be built upon — he is altogether a good fellow, and wholly well-meaning, but terrible slow to learn and hence fails altogether to grasp the value of any work but his own — very desirous to help everyone, he is mentally incapable of doing it." Then, with eerie prescience, Scott writes, "There are problems ahead here." Scott admits that the ship is Evans' natural milieu, "but on the land he seems incapable of expanding beyond the limits of an astonishingly narrow experience." He made it to the Pole with Scott on Jan. 17, 1912, but was the first to die on the way back, on Feb. 17, 1912, on the Beardmore Glacier. He was buried the following day, at the foot of the Beardmore. Scott called him "a giant worker with a truly remarkable head-piece." Mrs. Evans died in Swansea in 1952. There is a book

about him, *Edgar Evans of Gower*, written by Gary Gregor, and published in Swansea in 2008.

Evans, Edward Ratcliffe Garth Russell "Teddy." b. Oct. 28, 1880, London, son of barrister Frank Evans and his wife Eliza Frances Garth. He was expelled from the famous Merchant Taylors School for truancy, and joined the RN in 1896, becoming an officer in 1902. In 1902-03 he was sub lieutenant on the *Morning*, which relieved BNAE 1901-04 and took Shackleton home. On April 13, 1904, in Christchurch, he married Hilda Russell. In 1910, by now a lieutenant, he went on the *Terra Nova* with BAE 1910-13, as navigator and 2nd-in-command of the expedition. In his diary, Scott described him as "shy and slow" and "very painstaking," and concluded that "he has not intelligence of a high order." Leader of the support party on the way to the Pole, he came down with scurvy on the way back, and barely made it back alive to Cape Evans (named for him). He was invalided home in 1912, but in Jan. 1913 returned on the *Terra Nova* to take charge of the rest of the expedition (Scott had died). His wife died, and the king of Norway introduced him to Elsa Andvord, and Evans married her on Jan. 22, 1916, in London. In 1917 he commanded the *Broke*. The *Broke* and the *Swift* took on, and beat, 6 German destroyers, and from that time on Evans was known as Evans of the *Broke*. He wrote several books, including *South with Scott* (1921). He commanded several ships, was involved in the usual (for him) heroics, and in Feb. 1928 was promoted to rear admiral. In 1929 he was placed in command of the Royal Australian Squadron. In Oct. 1932 he made vice admiral, and commander in chief of Africa Station. In 1934 he was at Bouvet island (which is not in Antarctica, but which is on the way south), in command of the *Milford*, but was unable to land. In 1936 he made full admiral. He was regional commissioner for civil defence in London during World War II, and in 1945 was created Lord Mountevans. He died on Aug. 20, 1957, in Norway.

Evans, Frederick Pryce "Fred." b. 1874, Newton, Montgomeryshire, Wales, as Frederic Pryce Evans (no "k"), son of flannel manufacturer Frederick Pryce Evans and his wife Susan Maria Baddeley. At 18, he went to sea as an apprentice on the *Penrhyn Castle*, moved to NZ, and by 1897 was 4th officer on the *Waikare*. He got his 2nd mate's certificate, joined the Union Steamship Company, of NZ, and and by 1902 was 2nd officer on the *Warrimoo*. He was skipper of the *Koonya*, 1907-08, and from 1908 to 1909 of the *Nimrod*, when he replaced Capt. England after the latter had had arguments with Shackleton. In 1910 he was skipper of the *Aorangi*, and by 1912, of the *Tahiti*, still working for the Company, making the Wellington to San Francisco run. He was called up for World War I, as a lieutenant RNR, but retained control of the *Tahiti*, which was used as a transport during the war. After 23 years with the Company, he moved to London, married Mary I. Thomson there in 1916, became a barrister in 1920, and returned to Australia to practice law. He retired at 76, and died on July 9, 1959, in Sydney. He wrote an autobiography.

Evans, Griffith Conrad, Jr. b. May 17, 1918, Lynn, Mass., but raised at the Rice Institute, near Houston, Tex., where his father was a professor. His mother was Isabel Mary John. In 1933, his father having accepted an offer at Berkeley, as head of the math department, the family moved to California. He joined the U.S. Navy, and was a commander when, from Dec. 1959 to Dec. 14, 1960 he was captain of the *Burton Island*, and then became captain of the *Edisto*. On July 13, 1974, in San Francisco, he married Margaret E. Lind. He died on Sept. 8, 1978, in Seattle.

Evans, Henry *see* **USEE 1838-42**

Evans, Hugh Blackwall. b. Nov. 19, 1874, Aylburton, Glos., and raised partly in Gloucester, son of the Rev. Edward Evans. In 1891 he moved to Saskatchewan to study agriculture, returned to England in 1897, then went to Australia, that year joining a cousin on a sealing expedition to the Kerguélen Islands. On his return to England, he became assistant zoologist on BAE 1898-1900, and wintered-over with Borchgrevink. His plans to join BNAE 1901-04 were frustrated due to a confusion over timing, and likewise his attempt to join the relief expedition on the *Morning* was thwarted. He returned to Canada, to farming in the Vermilion River Valley, where he died on Feb. 8, 1975, aged 100.

Evans, Malcolm. Nicknamed "Splendid." After graduating from the University of London in 1953, he joined FIDS in 1955, as a medical officer, and wintered-over at Base Y in 1956. He went to Australia.

Evans, Ronald "Ron." b. Sept. 5, 1921. RAF chief technician, based in Wiltshire, he was senior radio operator on the 2nd part (i.e., 1956-58) of the British Royal Society Expedition, and as such wintered-over at Halley Bay in 1957. After the expedition, he left Las Palmas on the *City of Port Elizabeth*, and arrived back in Plymouth on Feb. 20, 1958. He died in Jan. 1994, in Thanet, Kent.

Evans, Stanley "Stan." b. Nov. 11, 1929, Stockport. Radio astronomer from Joddrell Bank, he was physicist on the first part (1955-57) of the British Royal Society Expedition, returning to London on the *Magga Dan* on March 13, 1957. Beginning in 1961, he developed the apparatus and technique for radio echo-sounding of ice caps and glaciers from the air, and participated in 1969-70 radio echo-sounding flights from McMurdo, organized by SPRI, NSF, and TUD (Technical University of Denmark). In 1971-72 he led the 3rd part of the SPRI/NSF/BAS program started by Gordon Robin (q.v. for details).

Evans, Thomas *see* **The *Huron***

Evans Bay. 68°39' S, 71°37' E. A bay indenting the Amery Ice shelf. The SCAR gazetteer says it was named by the Russians, which is an odd name for the Russians to give.

Evans Butte. 85°55' S, 145°16' W. A prominent, snow-topped butte, rising to 2570 m at the head of Albanus Glacier, it marks the SE limit of the Tapley Mountains. Named by US-ACAN in 1967, for Lt. Eldon L. Evans, USN, who wintered-over as medical officer at Byrd Station in 1962.

Evans Cove. 74°53' S, 163°48' E. A cove, about 4 km wide, indenting the coast of Victoria Land at Terra Nova Bay, between the Northern Foothills and Inexpressible Island, being entered between that island and Cape Russell. First charted by BAE 1907-09, and named by them as Evans Coves, for Capt. Fred Evans. Campbell's Northern Party wintered-over here in 1911-13. The name was later singularized, and, as such, accepted by US-ACAN abd NZ-APC.

Evans Coves *see* **Evans Cove**

[1]**Evans Glacier**. 65°05' S, 61°40' W. A gently sloping glacier, 24 km long and 6 km wide, flowing eastward from the plateau escarpment to join Hektoria Glacier between Shiver Point and Whiteside Hill, N of Foyn Point, at the Larsen Ice Shelf, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. Discovered aerially by Wilkins on Dec. 20, 1928, and named by him as Evans Inlet, for Edward Steptoe Evans (1879-1945), a Detroit manufacturer, and manager of the 1925-26 Detroit Arctic Expedition. It appears as Evans Inlet on a British chart of 1940. Fids from Base D surveyed it in Nov. 1947, but did not redefine it, which indicates, surely, one of two things; either it was, indeed, an inlet at that point of time, which seems highly unlikely, or the thoroughness of the FIDS survey must be questioned. The name Evans Inlet was accepted by UK-APC on Jan. 22, 1951, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer. Fids from Base D re-surveyed it in Sept. 1955, and found that this low-lying area is not an inlet, but is formed by the lower reaches of Hektoria Glacier. It was re-named by UK-APC on July 7, 1959, as Evans Glacier, and US-ACAN followed suit with that naming in 1960. It appears as such on a 1961 British chart. It appears as Estrecho Evans on a 1947 Chilean chart, but as Ensenada Evans on a 1949 Argentine chart, and that last name was the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer (after the Chileans had rejected the proposed Seno Evans). Note: The British give the longitudinal coordinates as 61°53' W.

[2]**Evans Glacier**. 83°47' S, 169°55' E. A small tributary glacier just S of the Owen Hills, flowing E from the Queen Alexandra Range into the lower part of the Beardmore Glacier. Named by the Northern Party of NZGSAE 1961-62, for Edgar Evans. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Evans Heights. 75°06' S, 161°33' E. Small rock heights on the W side of the mouth of Woodberry Glacier, in the Prince Albert Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos

taken between 1956 and 1962. Named by US-ACAN in 1968, for John P. Evans, field assistant at McMurdo, 1964-65.

Evans Ice Stream. 76°00' S, 78°00' W. A large ice stream flowing SE from Ellsworth Land, between Cape Zumberge (on the Orville Coast) and Fowler Ice Rise, into the W part of the Ronne Ice Shelf. It was recorded on U.S. Landsat imagery of Feb. 5, 1974, and was surveyed on radio echo-sounding flights by BAS from Siple Station between Jan. 21 and 23, 1975. Named by UK-APC on Dec. 8, 1977, for Stan Evans. US-ACAN accepted the name.

Evans Inlet *see* [1]**Evans Glacier**

Evans Island. 67°36' S, 62°48' E. The most southerly of the Flat Islands, in the E part of Holme Bay, about 4 km W of Mawson Station, in Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos by Norwegian cartographers in 1946. Re-photographed aerially by OpHJ 1946-47, and by ANARE. Visited by various ANARE parties between 1954 and 1959. Named by ANCA on July 22, 1959, for Desmond John "Pancho" Evans (b. July 22, 1931), a corporal in the Royal Australian Electrical and Mechanical Engineers, diesel mechanic at Mawson Station in 1958, and at Wilkes Station in 1962. US-ACAN accepted the name in 1961.

Evans Knoll. 74°51' S, 100°25' W. A mainly snow-covered knoll at the N side of the terminus of Pine Island Glacier, 14 km SW of Webber Nunatak, it marks the SW end of the Hudson Mountains, on the coast of Marie Byrd Land. Mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1968, for Donald J. Evans, VLF scientist at Byrd Station in 1960-61.

Evans Névé. 72°45' S, 164°30' E. A large névé (the New Zealanders call it "a great snowfield"), occupying an area of about 3000 sq miles, which feeds Tucker Glacier, Mariner Glacier, Aviator Glacier, Rennick Glacier, and Lillie Glacier, in Oates Land. Named by the Northern Party of NZGSAE 1963-64, for Edgar Evans. NZ-APC accepted the name, and US-ACAN followed suit in 1964. Originally plotted in 72°30' S, 164°45' E, it has since been replotted.

Evans Peak. 78°17' S, 85°58' W. A prominent rock peak, rising to 3950 m, 5 km ENE of Mount Ostenso, in the Sentinel Range, in the Ellsworth Mountains. Named by the University of Minnesota Geological Party here in 1963-64, for John Evans, geologist with the party. US-ACAN accepted the name in 1966.

Evans Peninsula. 72°01' S, 96°47' W. An ice-covered peninsula about 50 km long, projecting from the NE side of Thurston Island, between Koether Inlet and Cadwalader Inlet. Discovered on flights from the *Burton Island* and the *Glacier* during the USN Bellingshausen Sea Expedition of Feb. 1960, and named by US-ACAN in 1960, for Griffith C. Evans, Jr. Originally plotted in 71°58' S, 96°42' W, it has since been replotted.

Evans Piedmont Glacier. 76°44' S, 162°40' E. A broad ice sheet occupying the low-lying coastal platform between Tripp Island and Cape Archer, between Oates Piedmont Glacier and Wilson Piedmont Glacier, on the coast of Victoria Land. Named by the NZ Northern Survey Party of BCTAE when they circumnavigated it in Oct. 1957, for Edgar Evans. NZ-APC accepted the name, and US-ACAN followed suit in 1961.

Evans Point. 72°28' S, 99°23' W. An ice-covered point fronting on Peacock Sound, 24 km WNW of Von der Wall Point, at the S side of Thurston Island. First mapped from air photos taken in Dec. 1946, during OpHJ 1946-47, and plotted in 72°26' S, 99°39' W. Named by US-ACAN in 1960, for Richard Evans, oceanographer on the *Burton Island* here during the USN Bellingshausen Sea Expedition of Feb. 1960. It has since been replotted.

Evans Ridge. 72°07' S, 166°54' E. A broad ridge trending in a N-S direction for 20 km between Midway Glacier and McKellar Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1966, for Arthur Evans, secretary of the NZ Antarctic Place Names Committee.

Evaodden *see* **Cape Eva**

[1]**Evaodden Camp**. 68°42' S, 90°37' W. On Cape Eva, Peter I Island. In 1986-87 Einar Enderud and Kåre Pedersen joined a team from the Norsk Polarinstitutt which was exploring Peter I Island. The two men operated out of this camp between Jan. 23 and Feb. 2, 1987.

[2]**Evaodden Camp**. 68°42' S, 90°37' W. The second camp of this name, at the same site as the first one. This second one was established by a team of Americans, Mexicans, Swiss, and Belgians, who used it between Feb. 1 and Feb. 16, 1994.

Evas Cape *see* **Cape Eva**

Eveno, Victor. b. June 21, 1811, Brest. Junior seaman on the *Astrolabe* during FrAE 1837-40.

Cabo Evensen *see* **Cape Evensen**

Cap Evensen *see* **Cape Evensen**

[1]**Cape Evensen** *see* **Cape Vik**

[2]**Cape Evensen**. 66°09' S, 65°44' W. A cape forming the N entrance point of Auvert Bay, on the Graham Coast, on the W coast of Graham Land. Discovered and roughly charted by FrAE 1903-05, and named by Charcot as Cap Evensen, for Karl Julius Evensen (q.v.), who, as skipper of the *Hertha* in 1893-94, visited the area between the Graham Coast and the Biscoe Islands. It appears as such, and as Pointe Evensen, on Charcot's map of 1906, but in Bongrain's 1914 photograph description, it is shown incorrectly referring to the rock buttresses in Auvert Bay. It appears on a British chart of 1908 as Cape Evensen, but on some of the Discovery Investigations charts (the 1931, for example) as Cape Evansen (sic). It was remapped in 1935, by BGLE 1934-37, and incorrectly shown as Cape Waldeck Rousseau on Rymill's 1938 map of that expedition. It appears, misspelled as Cape Evenson, on a 1940 U.S. Hydrographic Office chart. It appears on a 1946 Argentine chart of 1946 as Cabo Evensen, and on a 1947 Chilean chart as Cabo Waldeck Rousseau, but it was the name Cabo Evensen that was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer (after the Chileans had rejected Cabo Ivensen, a spelling which had appeared on a Chilean chart). David James's 1949 chart shows it as Cape Evanson, but Cape Evensen was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953, and it appears as such in the 1955 British gazetteer, and on a 1961 British chart. It was photographed aerially by FIDASE in 1956-57.

Pointe Evensen *see* **Cape Evensen**

Evensen, Karl Julius. b. Dec. 3, 1851, Drøbak, Norway (as one steams down Oslofjord from Oslo, Dråbak is on the left), son of master mason Ole Evensen and his wife Lovise Olsdatter. He went to sea, and in 1878 married Severine Marie Jensen, and they moved to Østre Moland, where they raised a family. In 1886 they moved to Tjølling, in 1888 to Sandefjord, and in 1890 to Sandehered, reproducing busily as they went. Karl Julius rose through the ranks of the whaling industry, and was commander of the *Hertha*, in the South Shetlands in 1893-94, which was sailing in company with the *Castor*. He returned to Sandehered, and continued to breed. In 1899 he moved to Sandar, and that year was skipper of the *Stella Polaris* when the Duke of Abruzzi took her to the Arctic. He died in 1937. *See also* **The *Jason***.

[1]**Evensen, Kristian**. b. 1895, Tønsberg, Norway, son of Even Evensen and his wife Klara Jørgine. He went to sea as a whaler, married Konstance M. Kristiansen, and they lived at Lund Skallestad. He went down with the whale catcher *Graham* in 1924, in the South Shetlands (*see* **Whalers Bay Cemetery**).

[2]**Evensen, Kristian**. Skipper of the *Thorshammer*, in Antarctic waters in 1945-46.

Evensen Bay *see* **Auvert Bay**

Evensen Nunatak. 64°59' S, 60°22' W. Rising to about 160 m above the Larsen Ice Shelf, 2.5 km NW of Dallmann Nunatak, in the Seal Nunataks, off the Nordenskjöld coast, on the E coast of the Antarctic Peninsula. Surveyed and charted by Fids from Base D in Nov. 1947, and named by them for K.J. Evensen. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer.

Everett, Tony. He wintered-over at Macquarie Island in 1978, at Mawson Station in 1980, at Davis Station in 1983, at Mawson in 1985 and 1988, and at Macquarie Island in 1992.

Everett Nunatak. 85°28' S, 176°40' W. A massive rock nunatak just NE of the Roberts Massif, at the SW side of Zaneveld Glacier. Named by the Texas Tech Shackleton Glacier Expedition of 1964-65, for James R. Everett, graduate student of that institution and a member of the expedition who first explored this feature. US-ACAN accepted the name in 1966.

Everett Range. 71°20' S, 165°40' E. A rugged, mainly ice-covered range, nearly 100 km long, it forms the E side of Lillie Glacier, between Greenwell Glacier and Ebbe Glacier, in Oates Land, in the NW part of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Cdr. William H. Everett, USN, VX-6 commander in 1962-63. NZ-APC accepted the name.

Everett Spur. 71°05' S, 164°30' E. A prominent rock spur marking the NW end of the Everett Range, and the junction of Ebbe Glacier with Lillie Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Kaye Ronald Everett (b. Jan. 8, 1934, Corning, NY. d. Oct. 21, 1994, Newark, O.), geologist at McMurdo, 1967-68, and at Livingston Island, 1968-69. He was one of the founders of the Byrd Polar Research Center.

Everson, Inigo. b. Sept. 22, 1942, Surrey, son of Thomas H.C. Everson and his wife Ethel M. Crofts. BAS marine biologist and krill authority from 1964, who wintered-over on Signy Island in 1965 and 1966. In 1968, at Watford, he married Brenda Heasman, and they raised a family in Cambridge. He was back at Signy Island and at South Georgia, for the summer of 1973-74. He was in Antarctic waters aboard the *John Biscoe*, for the following tours: Jan.-April 1978; Dec. 1980-April 1981; Dec. 1982-April 1982; July 1983-Sept. 1983; Jan. 1985-March 1985; and Jan. 1986-March 1986. Although he did not go south with BAS again, he was involved with them for several more years, and was co-leader of the Polish-British Antarctic Expedition of 1988-89. His wife died in 1993, and in 1996, Dr. Everson, still in Cambridge, married Diana Spencer.

Everson Ridge. 60°43' S, 45°39' W. Rising to 195 m above sea level, and running W from Jebsen Point to Tioga Hill, on the W coast of Signy Island, in the South Orkneys. BAS did geological work here up to 1973. Named by UK-APC on Dec. 20, 1974, for Inigo Everson. US-ACAN accepted the name in 1975.

Baie de l'Eveyne *see under* **D**

Cape Evgenov *see* **Cape Yevgenov**

Mys Evgenova *see* **Cape Yevgenov**

Evison Glacier. 71°41' S, 163°51' E. A small glacier flowing from the S end of the Molar Massif, in the Bowers Mountains. Named by NZGSAE 1967-68, for Frank Foster Evison (1922-2005), NZ's first professor of geophysics. NZ-APC accepted the name, and US-ACAN followed suit in 1969. Originally plotted in 71°42' S, 164°00' E, it has since been replotted.

Evlogi Peak. 62°59' S, 62°33' W. Rising to 2090 m, 1 km NNE of the summit of Mount Foster, and 1.2 km SW of Antim Peak, with intervening saddles of elevation 1950 and 1800 m resp., overlooking Rupite Glacier to the SE. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, for Evlogi Georgiev (1819-1897), industrialist and financier, a philanthropist whose endowment funded the construction of Sofia University's main building.

Gora Evstifeeva. 73°59' S, 66°45' W. A nunatak, NW of Lang Nunatak, inland from the Lassiter Coast, on the SE coast of Palmer Land. Named by the Russians.

Evteev Glacier. 78°57' S, 161°12' E. Flows from the SE slopes of the Worcester Range, to the Ross Ice Shelf, W of Cape Timberlake. Named by US-ACAN in 1964, for Sveneld A. "Sven" Evteev, glaciologist and USSR exchange scientist at McMurdo in 1960. He took part in Bert Crary's 8-man traverse from McMurdo to the Pole in 1960-61. NZ-APC accepted the name.

Mount Ewart. 78°08' S, 166°08' E. An ice-free mountain rising to 213 m at the NW side of Lake Cole, and 2.5 km W of Mount Melania, on Black Island, in the Ross Archipelago. Named by NZ-APC on Nov. 4, 1999, for Anthony E. "Tony" Ewart, of NZGS, of Lower Hutt, NZ, who, with Jim Cole (*see* **Lake Cole**), investigated the geology of Brown Peninsula, Black Island, and Cape Bird, in 1964-65. US-ACAN accepted the name later in 1999.

Islotes Ewens *see* **Emm Rock**

Roca Ewens *see* **Emm Rock**

Ewer, Jack Renew. His name was not John. b. Dec. 4, 1918, Oatlands Park, near Chertsey, Surrey, but grew up in Tywardreath, near Fowey, Cornwall, son of William Edward F. Ewer and his wife Maria Louisa Keightley. He had an older brother, Tom, who would become a famous international professor of animal husbandry and an OBE. Jack intended to become a lawyer, and won a scholarship to Oxford, but then World War II broke out. He fought in France, Africa and the Far East, and after the war, worked as a clerk at Australia House, in London, where he met Lilian Dorothy Lothian, an Australian librarian. Jack wanted to go to India, but history was against him. Instead, on the recommendation of Dick Butson, a climbing companion, he joined FIDS, and went to Antarctica as a meteorological observer. He spent Jan., Feb., and March of 1947 at Base C, arrived for a brief while at Port Lockroy on March 26, 1947, and spent the winter of 1947 and the summer of 1947-48 at Base B. In 1948 he returned to Port Stanley, and there caught the *Lafonia* back to London, where he arrived on April 21, 1948. He determined to move to Chile as soon as he could, he and Lilian married in Cuckfield, Sussex, in 1949, and in August of that year he left London for Buenos Aires, and then on to Chile. Lilian joined him 4 months later. They worked first, for 3 years, at Mackay School, in Viña del Mar, Jack as assistant headmaster and math teacher, and Lilian as English teacher and librarian. Then they moved to Santiago, where he taught part-time at the University of Chile and part-time at the Catholic University, finally, in 1958, becoming a full time professor at the latter. He was also a well-known mountain climber, and in the late 1950s and 1960s accompanied Eric Shipton on various Patagonian expeditions. He became interested in English for Special Purposes (ESP), for which he became quite famous, and then was fired from the university in 1981, after 23 years, due to the unusual political climate of the time. In early 1982, he set out to climb the volcano Osorno, and was never seen again.

Ewer Pass. 60°43' S, 44°32' W. About 200 m above sea level, trending NNW-SSE, between Browns Bay and Aitken Cove, on Laurie Island, in the South Orkneys. Named by UK-APC on Feb. 15, 1988, for Jack Ewer (q.v.), a member of the FIDS party who crossed Laurie Island via this pass. US-ACAN accepted the name.

Ewin, William. Bosun of the *Resolution* during Cook's voyage of 1772-75.

Isla Ewing *see* **Ewing Island**

Ewing Island. 69°52' S, 61°12' W. An ice-covered, dome-shaped island (really an ice rise), 13 km across, at an elevation of about 300 m, 24 km NE of Cape Collier, and (according to the Chilean gazetteer) 30 km SE of the extreme S end of Hearst Island, at the Larsen Ice Front, off the Wilkins Coast, on the E coast of the Antarctic Peninsula. There is reason to believe it was first seen from the ground in 1940, during USAS 1939-41, because an irregular-shaped island is shown on a 1946 U.S. Hydrographic Office chart in 70°10' S, 61°55' W, and the USHO chart of that year (as with that of 1943) relied heavily on information that had come in from USAS. Discovered and photographed aerially on Nov. 7, 1947, by RARE, and named by Ronne for Dr. Maurice Ewing (*see* **The *Vema***, for details of Doc Ewing), of Columbia University, who helped plan the RARE seismological program. RARE personnel, with Fids from Base E, also surveyed it from the ground during a joint sledging trip. It appears on Ronne's 1949 map, and the name was accepted by UK-APC on Jan. 28, 1953, and by US-ACAN later that year. It appears in the 1955 British gazetteer, and on a 1979 USGS sketch map of the N part of Palmer Land. It appears on an Argentine chart of 1952 as Isla Ewing, and that is what the Argentines call it today. It was also the name accepted by the 1974 Chilean gazetteer.

Bahía Exasperación *see* **Exasperation Inlet**

Ensenada Exasperación *see* **Exasperation Inlet**

Seno Exasperación *see* **Exasperation Inlet**

Exasperation Inlet. 65°22' S, 61°53' W. A large, ice-filled inlet, 26 km wide at its entrance, indenting the Oscar II Coast for 28 km in an E-W direction, between Foyn Point and Cape Disappointment, on the E coast of Graham Land. Roughly surveyed in Oct. 1902, by SwedAE 1901-04, but it looks as if Nordenskjöld did not name this feature in any way. It appears on Bjarne Aagaard's 1930 map as Sandefiordsbukten (i.e., "Sandefjord bay"), and is shown as the E entrance to Wilkins' supposed Crane Channel (q.v.). Charted by Fids from Base D in 1947 and again in 1949, and, in association with names such as Hope and Disap-

pointment, renamed by them for the exasperation experienced here by sledging parties due to the disturbed nature of the ice. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a 1952 British chart, in the 1955 British gazetteer, and on a British chart of 1957. It appears on an Argentine chart of 1953 as Ensenada Desesperación (i.e., "desperation inlet"), on one of their 1954 charts as Bahía Exasperación, and on one from 1957 as Ensenada Exasperación, which was the name accepted by not only the 1970 Argentine gazetteer, but also the 1974 Chilean gazetteer (the Chileans rejecting the proposed Seno Exasperación). It was further surveyed by Fids from Base D in 1961.

The *Excess*. A yacht in at the South Shetlands and the Antarctic Peninsula, in 1998-99, under the command of Capt. Terry Travers.

Exchange scientists. This means scientists working at stations belonging to distinctly foreign powers, and does not apply to, say, Poles or East Germans working at, say, Russian stations. **1957 winter**: Gordon Cartwright at Mirnyy. **1958 winter**: Mort Rubin at Mirnyy. **1960 winter**: Gilbert Dewart at Mirnyy; Sveneld "Sven" Evteev at McMurdo. **1961 winter**: Stewart Gillmore at Mirnyy. **1962 winter**: Madison Pryor at Mirnyy. **1965-66 summer**: Victor Hessler at Vostok. **1966-67 summer**: Victor Hessler at Vostok. **1967 winter**: Pyotr Astakhov at Pole Station; Wakefield Dort at Showa. **1969-70 summer**: Herman Friis at Showa. **1970 winter**: John Croom at Bellingshausen. **1972 winter**: Y.N. Kamenev, Soviet scientist, wintered-over at McMurdo (*see* **Kamenev Nunatak**). **1973-74 summer**: Patricia Nicely and Lt. Ann Coyer at Vostok (*see* **Women in Antarctica**). **1974 winter**: Rob Flint at Vostok. By this time exchange scientists were so frequent, it is pointless to list them any further.

Executive Committee Range. 76°50' S, 126°00' W. Also called the Committee Range. A range trending N-S for about 80 km along the 126th meridian, in Marie Byrd Land. It has 5 major extinct volcanoes: Mount Sidley, Mount Waesche, Mount Hampton, Mount Cumming, and Whitney Peak. Byrd discovered Mount Sidley in 1934, during ByrdAE 1933-35, as an individual mountain, but the range itself was discovered aerially on Dec. 15, 1940, by USAS 1939-41, and named for the executive committee of the expedition. Excepting Mount Sidley, the peaks in this range are named for individual members of that committee. US-ACAN accepted the name in 1947. The entire range was mapped in detail by USGS from ground surveys, and USN air photos taken between 1958 and 1960.

Executive Committee Range Traverse. Feb. and March 1959. This was the first USARP expedition after IGY. Jock Pirrit (leader; q.v.), Bill Chapman (*see* **Mount Chapman**), George Doumani (q.v.), and Gerard Bennett (*see* **Bennett Saddle**).

Montaña Exequiel *see* **Mount Brading**

Exhibition Buttress. 67°34' S, 68°08' W. A rock buttress at the SE end of Reptile Ridge, and overloooking Rothera Station, on Adelaide Island. Photographed by FIDASE in 1956-57. Named by UK-APC on Oct. 4, 2004.

Exile Nunatak. 70°33' S, 70°52' W. An isolated nunatak (hence the name) rising to 350 m, in the NW part of Handel Ice Piedmont, in the west-central part of Alexander Island. From a distance, ChilAE 1946-47 saw a feature in this general area that they named Cabo 12 de Febrero (i.e., "Feb. 12 cape"). It appears as such on their 1947 chart. As this cape has never since been identified, the nunatak may well have been what they saw. Mapped in 1959-60 by Searle of the FIDS, working from 1947 air photos taken by RARE 1947-48. He plotted it in 70°19' S, 71°16' W. Named by UK-APC on March 2, 1961. US-ACAN accepted the name later in 1961. U.S. Landsat images of Feb. 1979 corrected the coordinates, and, with the new coordinates, it appears in the 1986 British gazetteer.

Exiles Nunataks. 69°57' S, 158°03' E. A cluster of small nunataks, 13 km SSW of DeRemer Nunataks, near the head of Matusevich Glacier, in the Wilson Hills of Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. So named by the Northern Party of NZGSAE 1963-64 for the isolated position of these nunataks. NZ-APC accepted the name, as did ANCA, and US-ACAN followed suit in 1964.

Caleta Exley *see* **Gaul Cove**

Mount Exley. 81°10' S, 156°14' E. Rising to about 1900 m, in the Wallabies Nunataks, W of the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for Robert Ross Exley, who wintered-over at Hallett Station in 1962, as a technician on the geomagnetic project. US-ACAN accepted the name later in 2003.

Exley, James Arthur "Jim." b. Aug. 31, 1932, Dewsbury, Yorks, son of Arthur Exley and his wife Agnes Wilson. After the University of Nottingham he joined FIDS in 1954, as a geologist, and wintered-over at Base Y from its opening, and through the winters of 1955 and 1956. He was with Frank Ryan when Ryan fell down the slope and broke his leg. He arrived back in England on the *John Biscoe* on June 4, 1957. He lives in Cambridgeshire.

Cabo Éxodo. 66°42' S, 67°37' W. A point somewhere in the area of the NW part of Adelaide Island, either on the island itself, or (given the coordinates, which, may, of course, be wrong) a part of Koechlin Island, in the entrance to Buchanan Passage. The British and American gazetteers say it is the Argentine name for Landauer Point (or, at least, that there is a 1978 Argentine reference to it as such), but two things militate against this being true. One is that the coordinates for Cabo Éxodo (as given in the SCAR gazetteer) are so very different from those for Landauer Point, and the other is that the Argentines already have a name for Landauer Point — and that is Punta Landauer. The name Cabo Éxodo means "Cape Exodus."

Exodus Glacier. 79°50' S, 156°22' E. A steep, smooth glacier, 1.5 km NE of Mount Ellis, it flows northward from the N edge of the Midnight Plateau to the SW corner of Island Arena, in the Darwin Mountains. Discovered by VUWAE 1962-63, and named by them in association with nearby Exodus Valley. NZ-APC accepted the name, and US-ACAN and ANCA followed suit.

Exodus Valley. 79°50' S, 156°18' E. A steep, moraine-filled valley dropping northward from the edge of the Midnight Plateau (near Mount Ellis), between Colosseum Ridge and Exodus Glacier, to Island Arena, in the Darwin Mountains. Discovered by VUWAE 1962-63, and so named by them because it provides virtually the only easy descent route from the Midnight Plateau. NZ-APC accepted the name, and US-ACAN and ANCA followed suit.

Exotic Point. 62°13' S, 59°02' W. A point on the SW side of Fildes Peninsula, it forms the S entrance point to Geographers Cove, as well as the extreme SW point of King George Island, in the South Shetlands. Russian geologists at Bellingshausen Station worked here in 1968, and named it Mys Ekzoticheskiy, which means Exotic Point, and so named presumably because the rocks here differ from those adjoining the point. This name was seen translated as Cape Ekzoticheskiy. This name was too exotic for UK-APC, who accepted the name Exotic Point on Feb. 7, 1978. It appears as such in the 1980 British gazetteer, and US-ACAN accepted that name. It also appears as such on a Chinese map of 1990. The Argentines call it Cabo Sarratea, after Col. Manuel de Sarratea (1774-1849), Argentine soldier, governor of Buenos Aires in 1820. The Chileans call it Cabo Eusebio, for Eusebio Flores Silva (b. Nov. 30, 1920. d. 1992), professor of geography at the University of Chile, who collected geological samples during ChilAE 1946-47. He founded the chair of geology at the university. This feature was last plotted in late 2008, by the UK.

Rocas Expedición *see* **Expedition Rock**

Expedition Ice Bound. **Jan. 11, 2001**: The *Spirit of Sydney* left Hobart, bound for Antarctica. Chris Roberts was skipper. Other crew included: John Scully, Trevor White, Robert Tulk, Peter Lynch, Dick Meisenhelter, Leigh Pfitzner (q.v.), Bill Reynolds, and Colin Loughead. **Jan. 22, 2001**: The *Spirit of Sydney* crossed into Antarctic waters, and at the end of the day was in 61°24' S, 144°47' E. **Jan. 23, 2001**: In 63°34' S, 143°43' E. **Jan. 24, 2001**: In 65°35' S, 141°34' E. **Jan. 25, 2001**: In 65°37' S, 140°51' E. **Jan. 26, 2001**: In 65°36' S, 139°14' E. **Jan. 27, 2001**: In 66°06' S, 139°15' E. **Jan. 28, 2001**: In 66°43' S, 142°20' E. **Jan. 29, 2001**: In 66°05' S, 140°14' E. The *Spirit of Sydney* became trapped in the pack-ice, 50 miles from Dumont d'Urville Station. In addition, she became disabled from steering and engine problems. **Jan. 30, 2001**: In 65°53' S, 138°49' E. **Jan. 31, 2001**: In 65°18' S, 138°57' E. Cruising at 2.5 knots. **Feb. 1, 2001**: In 64°04' S, 139°15' E. Cruising at 5 knots. **Feb. 2, 2001**: In 62°12' S,

140°14' E. Cruising at 2 knots. **Feb. 3, 2001**: In 61°45' S, 139°40' E. **Feb. 4, 2001**: In 61°13' S, 140°04' E. Cruising at 0.5 knots. **Feb. 5, 2001**: They crossed out of Antarctic waters, heading north at 5 knots. **Feb. 8-11, 2001**: The *Spirit of Sydney* ran into a major storm as she headed as fast as she could toward Hobart. **Feb. 19, 2001**: The *Spirit of Sydney* arrived back in Hobart.

Expedition Rock. 60°42' S, 44°44' W. Also seen as Expedition Rocks. A submerged rock in water, 2.5 km ENE of Cape Robertson, in the entrance to Jessie Bay, on the N side of Laurie Island, in the South Orkneys. Petter Sørlle, who conducted a running survey of these waters between 1912 and 1915, named this rock as "Aagot Gr.," which is short for Aagot Grunning (which means "Agatha Shoal"). It appears as such on his 1930 chart. It was re-surveyed by personnel on the *Discovery II* in 1933, and renamed by them as Expedition Rock. It appears as such on their 1934 chart. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1958 Argentine chart as Rocas Expedición, and that was the name accepted by the 1970 Argentine gazetteer.

Expedition Rocks *see* **Expedition Rock**

Expeditions. The first expeditions to Antarctica were confined to ships, i.e., no one got out and walked around, until 1820, when the seal rush started in the South Shetlands. It was not until the 1890s that men walked regularly on the continent itself (i.e., as opposed to the islands, or the occasional iceberg). The 19th century also saw the beginning of government sponsorship of Antarctic expeditions, a necessity and an inevitability, really, as complex and costly as expeditions are and were. Since World War II most expeditions have been governmental, although the In the Footsteps of Scott Expedition, for example, was privately sponsored in 1985, and there have been many like that in recent years. The last private expedition of major dimensions was RARE, led by Finn Ronne in 1947-48. *See also* **Tourism**. Below is a list of expeditions to Antarctica, i.e., those south of 60°S. The list is not complete, by any means, but it is fairly comprehensive, especially as regards the major expeditions. **650 A.D.**: The *Te-Ivi-O-Atea*. **1502**: Vespucci. **1599**: Dirck Gerritsz. **Unknown years**: Cowley; Sharpe; Edward Davis. **1603**: The *Blyde Bootschap*. **1687-88**: Lionel Wafer. **1712**: Frazier. **1719-20**: Shelvocke. **1772-75**: Cook in the *Resolution* and *Adventure*. **1818-19**: The *Williams*. **1819**: The *Williams;* the *San Telmo* and the *Primeroso-Mariana*. **1819-20**: The *Espíritu Santo;* the *Hersilia;* the *San Juan Nepomuceno;* unknown vessel in the South Shetlands, owned by Stephen White of Salem, Mass.; von Bellingshausen's expedition; the *Williams*. **1819-21**: Weddell's 1st voyage. **1820-21**: Liverpool sealing expeditions: The *Caraquette*; the *Cora*; the *George*; the *Hannah*; the *Indian*; the *King George*; the *Lady Troubridge*; the *Salisbury*. London sealing expeditions: The *Anne;* the *Dove*; the *Henry Wellesley*; the *Hercules*; the *Hetty*; the *Horatio;* the *John*; the *George IV*; the *Lady Francis;* the *Livonia*; the *Lord Melville*; the *Mercury;* the *Minerva;* the *Minstrel;* the *Nelson; the Pomona; the Sprightly; the Swan; the Woodburn*. Newcastle sealing expedition: The *Williams*. Plymouth sealing expedition: The *Queen Charlotte*. Calcutta sealing expedition: The *Frances Charlotte*. Boston sealing expeditions: The *Esther* and the *Emerald*; the *O'Cain* and the *Stranger*. Nantucket sealing expeditions: The *Diana*; the *Harmony* and the *William and Nancy*; the *Samuel*. New Bedford sealing expedition: The *Gleaner*; the *Ospray*. New Haven sealing expedition: The *Huron* and the *Huntress*. New York sealing expeditions: The *Jane Maria*, the *Aurora*, the *Henry*, and the *Sarah*; the *Charity* and the *Wasp*; the *Venus*. Salem sealing expedition: The *Nancy*, the *Governor Brooks*, and the *General Knox*. Stonington sealing expeditions: The *Catharina*, the *Clothier*, and the *Emeline*; the *Essex*; the Fanning-Pendleton Sealing Expedition (the *Frederick*, the *Hersilia*, the *Free Gift*, the *Hero*, and the *Express*). Valparaíso sealing expedition: The *Dragon*. Sydney sealing expedition: The *Lynx*. **1821-22**: Leith exploring expedition: The *Jane* and the *Beaufoy of London* (Weddell's 2nd voyage). Liverpool sealing expedition: The *Ann*; the *Indian*; the *King George*; the *Robert*. London sealing expeditions: The *Brussa*; the *Caraquette*; the *Dart*; the *Dove* and the *Eliza*; the *George IV*; the *Hetty* and the *Sprightly*; the *John*; the *Livonia*; the *Nelson* and the *Pomona*; the *Romeo*; the *Tartar*. Newcastle sealing expedition: The *Liberty* and the *Mellona*. Plymouth sealing expedition: The *Enchantress*, the *Grace*, and the *Martha*; the *Henry*. Boston sealing expedition: The *O'Cain*. Nantucket sealing expedition: The *George Porter* and the *Harmony*. New Bedford sealing expedition: The *Cornelia*. New Haven sealing expedition: The *Huron*. New York sealing expedition: The *Charity*; the *Jane Maria* and the *Wasp*. Sag Harbor sealing expedition: The *General Scott*. Salem sealing expedition: The *Nancy* and the *Governor Brooks*. Stonington sealing expedition: The Fanning-Pendleton Sealing Expedition (the *Frederick*, the *Alabama Packet*, the *Essex*, the *Express*, the *Free Gift*, the *Hero*, and the *James Monroe*). Sydney sealing expedition: The *Lynx*. Hobart sealing expedition: The *Caroline*. Calcutta sealing expedition: The *Princess Charlotte*. **1822-23**: The *Adeona*; the *Cicero*; the *Dart;* the *Dove*; the *Henry;* the *Jane* and the *Beaufoy of London* (Weddell's third voyage); the *Jenny;* the *George IV*; the *Martha*; the *Nereiad*; the *Pomona*; the *Prince of Denmark*; the *Wasp*. **1823-24**: The *Adeona*; the *Alliance*; the *Maro*; the *Susanna Ann*. **1824-25**: The *Beaufoy of London*; the *Sprightly*; the *Susanna Ann*. **1820s**: James Johnson. **1826-27**: The *Prince of Saxe-Coburg*; the *Susanna Ann*. **1828-31**: The *Chanticleer*. **1829-31**: The *Pacific;* the Palmer-Pendleton Expedition (the *Seraph*, the *Annawan*, and the *Penguin*). **1830-32**: Biscoe's expedition. **1831**: The *Venus*. **1831-32**: The *Exquisite*. **1831-33**: The *Charles Adams* and the *Courier*; the *Talma*. **1833-34**: The *Hopefull* and the *Rose*; the *Magnet*. **1834-35**: The *Sailor's Return*; the *Talma* and the *Pacific*; the *William Baker*. **1836-37**: The *Athenian*; the *Sailor's Return* and the *Geneva*. **1837-40**: Dumont d'Urville's French Antarctic Expedition. **1838-39**: Balleny's expedition. **1838-42**: Wilkes's United States Exploring Expedition. **1839-40**: The *Benjamin de Wolf*. **1839-43**: The Ross Antarctic Expedition. **1841**: The *James Stewart*. **1841-42**: The *Ohio*. **1843-44**: The *Herald* and the *Richard Henry*. **1844-45**: The *Herald*. **1845**: The *Pagoda*. **1859**: The *Fleetwood*. **1845-46**: The *Catherine* and the *America*. **1848-49**: The *Junior*. **1849**: The *Brisk*. **1851-52**: The *Sarah E. Spear*. **1852-53**: The *Sarah E. Spear;* the *Silas Richards*; the *Fanny*; the *Congress*. **1852-53**: The *Aeronaut* and the *Lion*; the *Levant*; the *Sarah E. Spear*; the *United States*. **1853-54**: The *Aeronaut*, the *Lion*, and the *Wilmington;* the *Flying Cloud;* the *Parana*; the *Sarah E. Spear;* the *United States*. **1854-55**: The *Tekoa,* the *Parana*. **1855-56**: The *Tekoa*. **1856-57**: The *Susan*. **1856-60**: The *Tenedos*. **1859-60**: The *Louise*. **1871-72**: The *Flying Fish*; the *Francis Allyn*; the *Franklin*; the *Golden West*; the *Peru*; the *Nile*; the *Thomas Hunt*; **1872-73**: The *Flying Fish*; the *Lizzie P. Simmons*; 6 unnamed U.S. sealers in the South Shetlands. **1872-76**: The *Challenger*. **1873-74**: The *Flying Fish;* the *Francis Allyn;* the *Franklin;* the *Golden West;* the *Lizzie P. Simmons*; the *Thomas Hunt*. **1873-75**: Dallmann's expedition. **1874-75**: The *Charles Shearer;* the *Francis Allyn;* the *Franklin*; the *Golden West;* the *Lizzie P. Simmons*; the *Thomas Hunt*. **1875-76**: The *Francis Allyn*; the *Thomas Hunt*. **1876-77**: The *Florence*; the *Mary Chilton*. **1877-78**: The *Charles Colgate*; the *Charles Shearer;* the *Francis Allyn*. **1878-79**: The *Francis Allyn*; the *Thomas Hunt*. **1879-80**: The *Express*; the *Thomas Hunt*. **1880-81**: The *Adelia Chase*; the *Wanderer*. **1881-82**: The *Adelia Chase*. **1882-83**: The *Sarah W. Hunt*; the *Thomas Hunt*. **1883-84**: The *Thomas Hunt*. **1887-88**: The *Sarah W. Hunt*. **1888-89**: The *Sarah W. Hunt*. **1889-90**: The *Sarah W. Hunt*. **1890-91**: The *Sarah W. Hunt*. **1891-92**: The *Sarah W. Hunt*. **1892-93**: Dundee Whaling Expedition; the *Jason*. **1893-94**: The *Antarctic* (Bull); the *Jason*, *Castor*, and *Hertha*. **1897-99**: de Gerlache's Belgian Antarctic Expedition. **1898-99**: German Deep Sea Expedition (the *Valdivia*). **1898-1900**: Borchgrevink's British Antarctic Expedition. **1901-02**: The *Beatrice L. Corkum*. **1901-03**: von Drygalski's German Antarctic Expedition. **1901-04**: Nordenskjöld's Swedish Antarctic Expedition; Scott's British National Antarctic Expedition. **1902**: The *Eugenie Fautrel*; the *Archie*, the *Pichincha*, and the *Rippling Wave*. **1902-03**: The *Uruguay*. **1902-03**: The *Morning*. **1902-04**: Bruce's Scottish National Antarctic Expedition. **1903-04**: The *Frithiof*; the *Morning* and *Terra Nova*. **1903-05**: Charcot's French Antarctic Expedition. **1904-05**: The *Uruguay* (relief of Órcadas Station). **1905-06**: The *Admiralen*; the *Austral*;

the *Baden Powell*; the *Edith R. Balcom*. **1906-07**: The *Admiralen*; the *Baden Powell*; the *Gobernador Bories*; the *Nor*; the *Uruguay* (relief of Órcadas Station). **1907-08**: The *Admiralen*; the *Beatrice L. Corkum*; the *Gobernador Bories*; the *Margaret*; the *Nor*; the *Sobraon*; the *Uruguay* (relief of Órcadas Station). **1907-09**: Shackleton's British Antarctic Expedition. **1908-09**: The *Admiralen*; the *Gobernador Bories*; the *Nor*; the *Ørn*; the *Sobraon*; the *Telefon*; the *Uruguay* (relief of Órcadas Station). **1908-10**: Charcot's French Antarctic Expedition. **1909-10**: The *Bombay*; the *Gobernador Bories*; the *Nor*; the *Ørn*; the *Sobraon*; the *Svend Foyn*; the *Uruguay* (relief of Órcadas Station). **1910-11**: The *Bombay*; the *Gobernador Bories*; the *Hvalen*; the *Ørn*; the *Roald Amundsen*; the *Ronald*; the *Sobraon*; the *Solstreif*; the *Svend Foyn*; the *Uruguay* (relief of Órcadas Station). **1910-12**: Amundsen's Norwegian Antarctic Expedition; Shirase's Japanese South Polar Expedition. **1910-13**: Scott's British Antarctic Expedition. **1911-12**: The *Bombay*; the *Falkland*; the *Gobernador Bories*; the *Hvalen*; the *Neko*; the *Ørn*; the *Powell*; the *Roald Amundsen*; the *Ronald*; the *Sobraon*; the *Solstreif*; the *Svend Foyn*; the *Thulla*; the *Tioga*; the *Undine* (relief of Órcadas Station); Filchner's German Antarctic Expedition. **1911-14**: Mawson's Australasian Antarctic Expedition. **1912-13**: The *Bombay*; the *Deutschland* (relief of Órcadas Station); the *Gobernador Bories*; the *Falkland*; the *Hanka*; the *Hektoria*; the *Hvalen*; the *Neko*; the *Normanna;* the *Ørn*; the *Paal*; the *Roald Amundsen*; the *Pisagua*; the *Ronald*; the *Sobraon*; the *Solstreif*; the *Svend Foyn*; the *Thule*; the *Tioga*. **1913-14**: The *Bombay*; the *Gobernador Bories*; the *Guvernøren*; the *Hektoria*; the *Horatio*; the *Hvalen*; the *Neko*; the *Normanna*; the *Ørn II*; the *Polynesia*; the *Roald Amundsen*; the *Ronald*; the *Solstreif*; the *Svend Foyn*; the *Svend Foyn I*; the *Thule*; the *Uruguay* (relief of Órcadas Station). **1914-15**: The *Benguela*; the *Bombay*; the *Falkland*; the *Guvernøren*; the *Hektoria*; the *Horatio*; the *Hvalen*; the *Neko*; the *Normanna*; the *Ørn II*; the *Polynesia*; the *Roald Amundsen*; the *Solstreif*; the *Svend Foyn I*; the *Uruguay* (relief of Órcadas Station). **1914-17**: Shackleton's British Imperial Transantarctic Expedition. **1915-16**: The *Benguela*; the *Bombay*; the *Carnegie*; the *Hektoria*; the *Horatio*; the *Hvalen*; the *Neko*; the *Ørn II*; the *Roald Amundsen*; the *Solstreif*; the *Svend Foyn I*; the *Uruguay* (relief of Órcadas Station). **1916**: The *Southern Sky*; the *Instituto de Pesca I*; the *Emma*; the *Yelcho* (all attempts to rescue Shackleton's men from Elephant Island). **1916-17**: The *Bombay*; the *Neko*; the *Ørn II*; the *Solstreif*; the *Svend Foyn I*; the *Undine* (relief of Órcadas Station); J. The *Explora*. A 1400-ton West German ship built in Elmsfleth, in 1973. In 1978, skippered by Heinz Wichels, she took down an expedition to the Weddell Sea, led by Karl Hinz (*see* **West Germany**). In 1979-80 she was at Victoria Land, on an expedition led by Karl-Heinz Koch. Heinz Wichels was still skipper. In 1987 she was bought by the Italians, as an Antarctic ship, and in 1987-88 took down an Italian geophysical expedition led by Daniel Nieto Yabar (*see* **Italy**). Skipper that season was Silvio Valles. This performance was repeated every season from then until the 1996-97 season (except 1992-93, when there was no such expedition; and 1995-96, when there was, but on the *Gelendzhik*, rather than the *Explora*), every season led by Sr. Nieto. For the first two seasons, 1987-88 and 1988-89, Silvio Valles was the skipper of the ship. In 1989-90 Giorgio Tomat was skipper, but Captain Valles was back in 1990-91, 1991-92, 1993-94. All these years were to the Ross Sea, but for 1994-95 (Capt. Marino Vranicich), 1995-96 (unknown skipper), and 1996-97 (Capt. Vranicich again), they went to the Weddell Sea. She took tourists down to the Ross Sea in 2005-06.

Explora Escarpment. 70°33' S, 15°00' W. An undersea feature. Named by Heinrich Hinze in Jan. 1997, for the *Explora* (q.v. and *also see* **Explora Knoll**, below). The name was accepted by international agreement in June 1997.

Explora Knoll. 72°00' S, 24°00' W. A submarine feature, with a least depth of 3605 m, in the Weddell Sea. Named by Heinrich Hinze in Jan. 1997, for the *Explora*, which, between 1977 and 1980, carried out geophysical research in this part of the Weddell Sea and also discovered this feature. The name was accepted by international agreement in June 1997.

Explorabucht. 70°47°S, 167°23' E. A bay indenting the SW side of Cape Dayman, on the S side of the entrance to Yule Bay, in Victoria Land. Named by the Germans, for the *Explora*.

The *Explorer* *see* **The *Lindblad Explorer***

The *Explorer II*. Built in the Ukraine in 1989, as a Soviet spy ship. Rebuilt in 1996 in Genoa, by Mariotti, she was renamed the *Minerva II*, sailing for Swan Hellenic for a few years. She was then bought by Atholl of Monaco, for cruising, and operated by V Ships. Registered in the Bahamas, she also sailed (in the northern hemisphere) as the *Alexander von Humboldt*. She could take 198 passengers (at least, in Antarctica; many more in the northern hemisphere). She had a crew of 195, under Capt. John Moulds. She was in Antarctic waters in 2003-04. She was bought by Abercrombie & Kent, and, on Nov. 23, 2007, renamed *Minerva*.

Explorers. For a somewhat complete list of leaders *see* **Expeditions**. Each explorer, leader or not, has his own entry in this Encyclopedia. For a guide as to who might be the most famous in history, one might use the *Encyclopaedia Britannica*. The bigger the entry, the more famous the explorer. Thus, in order of importance (and excluding such accidental but famous Antarctic visitors as Hooker and Murray on the *Challenger*), *Britannica* has: Captain Cook, Byrd, Dumont d'Urville, Scott, Shackleton, von Drygalski, Wilkes, Ellsworth, Wilkins, Ross, Hillary, von Bellingshausen, Amundsen, Nordenskjöld, Charcot, Filchner, Weddell, David, de Gerlache, Bransfield, Bentley, Smith, Borchgrevink, Frederick Cook, Fuchs, Mawson, and Bruce. This system shows the unreliability of bringing the general to bear on the specific. For example, Scott is much more famous than Dumont d'Urville, and so is Amundsen, and Finn Ronne should have an entry in *Britannica*. And, of course, fashions change. Shackleton is now, by far, the most famous of them all.

Explorers Cove. 77°34' S, 163°35' E. At the NW head of New Harbor, on the W side of McMurdo Sound, in Victoria Land. Named by US-ACAN in 1976, for the explorers who have worked near here.

Explorers Range. 70°50' S, 162°45' E. A large mountain range extending from Mount Bruce in the N to Carryer Glacier and McLin Glacier in the S, in the Bowers Mountains. Named by NZ-APC for the Northern Party of NZGSAE 1963-64, whose members carried out a complete topographical and geological survey of the area. Individual features in or near this range bear the names of party members. US-ACAN accepted the name in 1964.

Explosives. Sometimes used to clear a path in the ice, or to fill in a crevasse in order to render it passable, or to blow a ship free from the ice.

Exposure Hill. 73°32' S, 162°43' E. A low hill at the SW end of Gair Mesa, in the Mesa Range of Victoria Land. Named Exposure Hills by the Northern Party of NZGSAE 1962-63 because of the light-colored sandstone notably exposed on the W side. NZ-APC accepted the name, but US-ACAN accepted the singularized version, Exposure Hill, in 1964.

Exposure Hills *see* **Exposure Hill**

Exposure Rock *see* **Chata Rock**

[1]**The *Express***. Two-masted, 138-ton schooner, 76 feet, 9 inches long, built at Hudson, NY, in 1816, and registered on July 25, 1820. Nat Palmer was part owner during 1820-22 when the *Express* went to the South Shetlands on the two Fanning-Pendleton Sealing Expeditions of 1820-21 and 1821-22. With a crew of 17, Ephraim Williams was first commander, and Thomas Dunbar was his successor. At the end of the first expedition, she left the South Shetlands on Feb. 26, 1821, and arrived back in Stonington on April 29, 1821, after a 64-day trip from Yankee Harbor. Then she went down on the 2nd expedition, leaving the South Shetlands on Jan. 30, 1822, and arriving back in Stonington, Conn., on April 15, 1822, with 1000 seal skins and 600 barrels of oil.

[2]**The *Express***. American sealing schooner out of Stonington, Conn., commanded by Capt. Thomas Lynch, in the South Shetlands, South Orkneys, and around Trinity Peninsula, in 1879-80, looking for the lost *Charles Shearer*. In Jan. 1880, the *Express* found herself for a while in the company of the *Thomas Hunt*, and both ships continued the search for the *Shearer*. They landed on one of the South Shetland islands, taking 36 fur seals. Lynch took the *Express* as far south as 66°S, in the quest. In 1885-86 the *Express* was at South Georgia (54°S), under Andrew J. Eldred.

Express Cove. 60°42' S, 45°39' W. A small cove with a very indented shoreline and numerous offshore islands and rocks, N of Foca Point, on the NW coast of Signy Island, in the South Orkneys. Roughly charted in 1933 by the Discovery Investigations, and surveyed in 1947 by FIDS. Named by UK-APC on March 31, 1955, for the *Express* (Capt. Lynch). US-ACAN accepted the name in 1956.

Express Island. 62°27' S, 59°59' W. A narrow, craggy island, 1 km long, close off the NW shore of Greenwich Island, between that island and Livingston Island, due N of Greaves Peak, in the South Shetlands. Photographed aerially by FIDASE in 1956. BAS did work here in 1975-76. Named by UK-APC on Feb. 7, 1978, for the 1820s sealing schooner *Express*. US-ACAN accepted the name. It appears in the 1980 British gazetteer. This island was last plotted in late 2008, by the UK.

Roca Expuesta *see* **Chata Rock**

The *Exquisite*. London sealing schooner in the Falkland Islands in 1831-32, under the command of Capt. Adam Kellock. On March 3, 1832, she met up with the *Tula* and the *Lively* at New Plymouth, in the South Shetlands. On March 17, 1832, she left for England, with 2125 seal skins.

Arrecife Extensión *see* **Extension Reef**

Extension Reef. 65°58' S, 66°08' W. A reef encompassing a large number of small islands (including Clements Island) and rocks, and extending 16 km SW from the S end of Rabot Island, in Grandidier Channel, in the Biscoe Islands, off the W coast of the Antarctic Peninsula. First charted and named descriptively in Feb. 1936, by BGLE 1934-37, it appears on Rymill's 1938 map of that expedition, as well as on a British chart of 1948, and was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a Chilean chart of 1947 as Arrecife Extensión (which means the same thing), and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57. One can usually see a large number of icebergs run aground on this reef.

Extremadura Cove. 62°55' S, 60°40' W. A cove, about 700 m by 400 m, N of the head of Telefon Bay, Deception Island, in the South Shetlands. It was formerly a deep freshwater lake, formed during the volcanic eruptions of 1967. The lake was separated from Telefon Bay by a narrow bar about 50 m long, 2 m wide, and about 2 m above sea level, and this bar was found to be breached when visited by Spanish scientists in Dec. 2006, who named it (name means "back of beyond"). The cove forms part of ASPA #140, Subsite F, Telefon Bay. UK-APC accepted the name on Oct. 8, 2009.

Exum Glacier. 73°30' S, 94°14' W. A small glacier flowing N between Hughes Point and Bonnabeau Dome, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61, and named by them for Glenn Exum (1911-2000), legendary Wyoming mountain guide and climber, who trained the party (and their successors in 1961-62) in mountain climbing. His story is told in the book *Never a Bad Word, or a Twisted Rope*. US-ACAN accepted the name in 1963.

Eyeglass Cirque. 77°48' S, 161°57' E. A cirque, 3 km E of South America Glacier, on the S cliffs of the Kukri Hills, in Victoria Land. Named by NZ-APC in 1992, in keeping with the surveying motif used to name certain other features in this area. US-ACAN accepted the name in 1993.

Eyelash Crevasse. 79°47' S, 153°00' E. A crevasse, 2.5 km long, 20 km W of Turnstile Ridge, at the NW extremity of the Britannia Range. Named by US-ACAN on April 16, 2002, for the overall appearance and fissure pattern of the feature.

Eyer Peak. 78°09' S, 86°00' W. Rising to 3368 m in Probuda Ridge, 4.48 km ENE of Mount Anderson, 4.25 km E by S of Mount Bentley, and 4.42 km SSW of Mount Press, it is actually separated from the NNE part of Probuda Ridge by a saddle running at 2500 m above sea level. It surmounts Embree Glacier to the NW and N, and Ellen Glacier to the SE, in the north-central part of the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS in 1988. It was first climbed on Dec. 26, 2006, by an Australian-Chilean team led by Damien Gildea. Named by the Bulgarians on Sept. 14, 2010, for the Swiss-Bulgarian pedagogue, Louis-Emil Eyer (1865-1916), founder of the sports movement in Bulgaria.

Eyres Bay. 66°29' S, 110°28' E. Between the W side of Browning Peninsula and the front of Vanderford Glacier, at the S end of the Windmill Islands. First mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1962, for Ensign David L. Eyres, USN, at Wilkes Station in 1958. ANCA accepted the name on Oct. 23, 1962.

Eyrie Bay. 63°35' S, 57°38' W. A bay, 4 km wide at its mouth, it extends 5 km inland, just NW of Jade Point, Trinity Peninsula. It appears on an Argentine chart of 1959 as Bahía Edith, but, after a survey by Fids from Base D, UK-APC named it Eyrie Bay, on Feb. 12, 1964, in association with nearby Eagle Island to the SE. US-ACAN accepted this name in 1965. The name Bahía Edith does not appear in the Argentine gazetteer of 1970, but it does in the one of 1993.

Mont Eyskens *see* **Mount Eyskens**

Mount Eyskens. 71°32' S, 35°36' E. A large massif composed of rock and ice, rising to 2300 m, next northward of Mount Derom, in the Queen Fabiola Mountains. Discovered on Oct. 7, 1960, by BelgAE 1960-61, and named by Guido Derom as Mont Eyskens, for Albert Eyskens, pilot of one of the two reconnaissance aircraft used on that expedition. US-ACAN accepted the name Mount Eyskens in 1966.

Eyskenshuken *see* **Oyayubi-one**

Eyssen, Robert. b. April 2, 1892, Frankfurt, son of a German-Guatemalan coffee plantation owner. In the German Navy since 1911, he survived the explosion of the light cruiser *Karlsruhe* in 1914. Captain of the *Komet*, in Antarctic waters, in 1940-41, during which he was promoted to rear admiral. Later in 1941 he was awarded the Knight's Cross. He served out the War in Russia, Oslo, and Vienna, and died on March 31, 1960, in Baden-Baden.

Ensenada Ezcurra *see* **Ezcurra Inlet**

Estero Ezcurra *see* **Ezcurra Inlet**

Estrecho Ezcurra *see* **Ezcurra Inlet**

Fiord Ezcurra *see* **Ezcurra Inlet**

Ezcurra Inlet. 62°10' S, 58°32' W. The W arm of Admiralty Bay on King George Island, in the South Shetlands. The shores of the inlet are cliffed, except at Point Thomas, and the water in the inlet is clean and deep. Charcot charted it in Dec. 1909, while he was charting Admiralty Bay, during FrAE 1908-10, and named it Fiord Ezcurra, for Pedro de Ezcurra (1859-1911), Argentine minister of agriculture in 1908, who was of help to the expedition. It is seen on the expedition's maps as both Fiord Ezcurra and Fjord Ezcurra, and appears on a 1921 map as Ezcurra Fiord. Surveyed by the Discovery Investigations in 1927, it appears as Ezcurra Inlet on their 1929 chart, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. In 1956-57 FIDASE not only photographed it aerially, but surveyed it from the ground too. It appears on a 1947 Chilean chart as Estero Ezcurra (which means the same thing), and as Ensenada Ezcurra on a 1947 Argentine chart, that last name being the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer (the Chileans having rejected the proposed name Estrecho Ezcurra). This inlet was last plotted in late 2008, by the UK.

Nunatak Ezeiza. 82°25' S, 45°00' W. An isolated nunatak, NE of Support Force Glacier, in the Forrestal Range of the Pensacola Mountains. Named by the Argentines.

F. Ameghino Refugio *see* **Ameghino Refugio**

Islote F. Estay *see* **Estay Rock**

Mount F. Gjertsen *see* **Mount Gjertsen**

Mount F.L. Smith. 83°38' S, 169°29' E. Rising to 2635 m (the New Zealanders say 2550 m), 1.5 km NE of Mount Fox, and 25 km SW of Mount Hope, on the W side of the Beardmore Glacier, in the Queen Alexandra Range, at the head of the Ross Ice Shelf. Discovered in 1908 by BAE 1907-09, and named by Shackleton for Finlay Smith (1829-1911), Glasgow tobacco manufacturer, who, with his brother James, founded F & J Smith, Ltd, in 1858, and who, as one of the leading 13 British tobacco manufacturers, became part of British Imperial Tobacco, in an effort to thwart an American domination of the British tobacco market. US-ACAN accepted the name in 1949.

Fabre, Napoléon. Captain's and officer's cook on the *Astrolabe* during FrAE 1837-40. He left the expedition at Talcahuano, Chile, on May 9, 1838.

Fabre, Victor. b. Aug. 17, 1804, Ollioules, France. Cook on the *Zélée* during FrAE 1837-40.

Fabry, Noël-Eustache-Étienne. b. Dec. 26, 1810, Six-Jours, France. Ordinary seaman on the *Zélée* during FrAE 1837-40. He died on board on Nov. 23, 1839.

Fachon, Fritz *see* **Órcadas Station**, 1914

Bahía Factoría *see* **Factory Bay**

Caleta Factoría *see* **Factory Cove**

Fondeadero Factoría *see* **Factory Cove**

Factory Bay *see* **Borge Bay**

Factory Bluffs. 60°43' S, 45°36' W. Rising to 120 m above sea level, to the S of Signy Island Station and Factory Cove, on the E side of Signy Island, in the South Orkneys. Biological work was done here by BAS teams up to 1973. Named by UK-APC on Dec. 20, 1974, for the small shore-based whaling station that operated between 1920 and 1930 below the bluffs on the shore of Factory Cove. US-ACAN accepted the name in 1975.

Factory Cove. 60°43' S, 45°37' W. A small cove entered between Knife Point and Berntsen Point, it forms the SE arm of Borge Bay, on Signy Island, in the South Orkneys. The British Signy Island Station stands on its E side. Roughly surveyed and charted by Hans Borge

in 1913-14, it appears on Petter Sørlle's 1930 chart as Borge Havna, or Borge Harbour. Renamed in 1927, by personnel on the Discovery Investigations, as Factory Cove, for the ruins of the whaling factory built in 1920-21 by the Tønsbergs Hvalfangeri, which stand on its SE shore (the Falkland Islands government had leased this site to the company in 1920, but it was abandoned in 1926). It appears as such on the 1929 DI chart. It was further surveyed by the DI in 1933, and appears on their chart as Inner Harbour, and, in 1935, Jimmy Marr referred to it by the anachronistic name of Borge Harbour. Factory Cove was the name accepted by UK-APC on March 31, 1955, and by US-ACAN in 1956. It appears on a 1930 Argentine chart as Fondeadero Factoría, but on a 1958 Argentine chart as Bahía Factoría, and that latter name is the one listed in the 1970 Argentine gazetteer. The Argentines also call it Caleta Factoría.

Factory ships. *See* **Whaling**. The first modern floating factory ship was the *Admiralen*, operating in the South Shetlands in Jan. 1906.

Fadden Peak. 85°29' S, 142°43' W. Rising to 920 m, 3 km E of Cressey Peak, between the SE edge of the Ross Ice Shelf and the Watson Escarpment, between the Bender Mountains and the Harold Byrd Mountains. Named by US-ACAN in 1967, for Dean E. Fadden (b. 1934), USN, utilitiesman who wintered-over at Byrd Station in 1958, and who was (by this time a lieutenant) officer-in-charge of Pole Station in the winter of 1970 (where he was known as Big Boll Weevil).

The *Faddey Bellingshausen*. Russian ship that took part in SovAE 1967-69 (skipper unknown). She also took part in SovAE 1982-84, and during that expedition, in 1982-83, along with the *Admiral Vladimirskiy*, she retraced von Bellingshausen's expedition of 1819-21, and thus the two ships circumnavigated Antarctica. Nikolay Ivanovich Elin was skipper that year.

Fadum, Morten. b. March 16, 1883, Tønsberg, Norway, son of telegraph inspector Hans Pedersen Fadum and his wife Hella Andrea. In 1917, he was a whaler in South Georgia, working under Søren Berntsen at the Husvik station. He married Olga. He was manager of the *Teie*, 1920-21, in Antarctic waters, and was later manager for the Newfoundland Whaling Company, at Hawke Harbor, in Newfoundland, but was fired in 1937 when Salvesen took over the company.

Mount Faget. 71°44' S, 168°26' E. Rising to 3360 m, 6 km NW of Mount Adam, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Maxime Allan "Max" Faget (b. Aug. 26, 1921, British Honduras. d. Oct. 9, 2004, Houston), NASA engineer who designed the original spacecraft for Project Mercury, and who visited McMurdo Sound in 1966-67.

Fahnestock Glacier. 77°53' S, 149°41' W. Flows for about 50 km into the Sulzberger Ice Shelf. Named by US-ACAN in 2003, for Mark A. Fahnestock (b. 1962), on the faculty of the University of New Hampshire, who was a field and theoretical field researcher in Greenland and also in the West Antarctic Ice Stream area from the 1980s on.

Fairchild Peak. 83°52' S, 165°41' E. A conspicuous rock peak rising to 2180 m, 2.6 km SSE of Portal Rock, at the S side of the mouth of Tillite Glacier. Named by US-ACAN in 1966, for William W. Fairchild, USARP cosmic ray scientist at McMurdo in 1961.

Cabo Fairweather *see* **Cape Fairweather**

Cape Fairweather. 65°00' S, 61°01' W. A cape, 707 m above sea level, and ice-covered except for rocky exposures along its SE and E sides, midway between Drygalski Glacier and Evans Glacier, it forms the S tip of the Nordenskjöld Coast, and separates that coast from the Oscar II Coast, on the E coast of Graham Land. Surveyed and charted in Nov. 1947 by Fids from Base D, who named it for Capt. Alexander Fairweather. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on British charts of 1952 and 1957, and in the 1955 British gazetteer. It appears on an Argentine chart of 1953 as Cabo Fairweather, but on one of their 1954 charts as Cabo Sinclair. In 1955 FIDS surveyed it again. It appears on a 1957 Argentine chart with the totally translated name of Cabo Buen Tiempo (which suggests that someone had missed the point; after all, it's the person who should be honored, not merely the words that go to make up his name; *see* **Mount Fairweather**, below). This name hung around afor a few years, but both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer list the feature as Cabo Fairweather.

Mount Fairweather. 85°04' S, 166°32' W. A prominent mountain, rising to 1865 m, at the head of Somero Glacier, 6 km NE of Mount Schevill, in the Duncan Mountains, in the Queen Maud Mountains. Named by the Southern Party of NZGSAE 1963-64, who experienced a spell of unusually fine weather here. US-ACAN accepted the name in 1966.

Fairweather, Alexander. b. 1847, Dundee, son of cabinet maker James Fairweather and his wife Janet Fleming. He went to sea at 10, became an apprentice seaman at 13, an able seaman at 16, and "the mortal enemy of the whale" from the time he sailed on his first Arctic whaler, the *Tay*, in 1863. In 1866, after sailing to many parts of the world, he was again in the Arctic, as a harpooner on the whaler *Camperdown*. On Nov. 24, 1868, in Dundee, he married Helen Fleming Mitchell. He became 1st mate on the *Camperdown* in 1870, and in the early 1870s commanded the *Diana* for the relief of Baron Nordenskjöld (father of the great Antarctic explorer) in the Arctic. In 1874, back in Dundee, and now well-known, he took command of the *Active*, and made five very successful trips to the Arctic. He then commanded *Our Queen* (which went down with 16 whales aboard), and then the *Aurora*, the number one whaler of its day. Then came command of the *Thetis* and the *Terra Nova* (the same ship Scott would later use). In 1890 he retired to Wellgate Park, in Forgan, Fife, but emerged from retirement to be the commander of the *Balaena* during DWE 1892-93. Still skipper of the *Balaena*, he was in the Arctic in 1894 and 1895, and died of delirium tremens on board on May 31, 1896, in Greenland. His son was Jim Fairweather (see below). His younger brother James (1853-1933) was also a ship's captain, and sailed on the *Discovery* in 1916 to rescue Shackleton's men trapped on Elephant Island. He only got as far as the River Plate, in Argentina, before news came that the boys had been picked up by the *Yelcho*.

Fairweather, James "Jim." b. Oct. 3, 1872, Dundee, son of Capt. Alexander Fairweather (q.v.) and his wife Helen Fleming Mitchell. He went with his father on the *Balaena* to Antarctica on DWE 1892-93.

Mount Faith. 69°37' S, 64°29' W. A massive mountain, rising to 2650 m, 15 km N of Mount Hope, it is the northernmost of the 3 main peaks of the Eternity Range, between Graham Land and Palmer Land. Discovered and photographed aerially by Ellsworth on Nov. 21 and 23, 1935, and so named by him "because we had to have faith, and we hoped for charity in the midst of cold hospitality." American cartographer W.L.G. Joerg mapped it in 1936, from Ellsworth's photos. Surveyed by BGLE in Nov. 1936. Photographed aerially in Sept. 1940, by USAS 1939-41, and in Dec. 1947 by RARE 1947-48. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit later that year. There is a 1943 reference to it as Monte Fé (Spanish translation).

Nunatak Fakel. 72°58' S, 73°30' E. Due W of the Davey Nunataks, in the Grove Mountains, in Princess Elizabeth Land. Named by the Russians.

Caleta Falcón *see* **Gin Cove**

Falcon Island *see* **Table Island**

Falconar, John Richard. Name also seen as Falconer. b. ca. 1755. He went to sea very young, and after a series of ships, became an able seaman on the *Somerset*, from which he transferred on Feb. 5, 1772, again as able seaman, to the *Adventure*, for Cook's 2nd voyage, 1772-75. On April 1, 1773, he became master's mate, and kept a log of the trip. In 1779 he became a lieutenant, and was wounded in 1781 on the *Nonsuch*, in an engagement against the French. On Aug. 16, 1781, at Portchester, Hants, he married Anne McLeod.

Mount Falconer. 77°35' S, 163°06' E. Rising to 810 m, it surmounts Lake Fryxell, on the N wall of Taylor Valley, between Mount McLennan and Commonwealth Glacier, in the region of New Harbor, in Victoria Land. Named by Grif Taylor's Western Journey Party during BAE 1910-13 for Sir Robert Alexander Falconer (1867-1943), president of Toronto University. US-ACAN accepted the name in 1964.

Falcon's Island *see* **Table Island**

Monte Falda *see* **Celsus Peak**

[1]**The *Falk***. A 4390-ton Norwegian whaler, formerly the Nor Company's whaling factory ship *Roald Amundsen*. The Ørnen Company bought her in 1921 to replace the old *Bombay* (which had become the *Professor Gruvel*). She was in Antarctic waters every season between 1921-22 and 1930-31. In 1921-22, her first season, she inherited (for that season) the whale catcher *Odd II* when that catcher's factory, the *Guvernøren*, foundered in Nov. 1921, on her way south to Antarctic waters. Her manager from the 1926-27 season until the 1930-31 season, was Lars Andersen. She was based out of Whaler's Bay, in Deception Island, for all those three seasons. She helped the *Discovery* with coal during BANZARE 1929-31. She was broken up in Germany in 1936.

[2]**The *Falk***. A 307-ton, 125 foot 6 inch Norwegian whale catcher, built in 1937 at Framnaes Mek., in Sandefjord, for Thor Dahl's Ørnen Company, and completed in September of that year. She was catching in Antarctic waters in 1937-38, 1938-39, and 1939-40. In Nov. 1940 she was chartered by the British Navy as an anti-submarine vessel, and after the war, in 1946, was returned to Dahl. In 1955 she was sold to the Compañía Industrial, of Chile, and renamed the *Indus*.

Falkenhof Glacier. 85°02' S, 172°05' E. A tributary glacier, 11 km long, flowing W from the area of Tricorn Mountain into Snakeskin Glacier NW of Mount Clarke. Named by US-ACAN in 1966, for Jack Jerome Falkenhof (b. 1931), U.S. Weather Bureau electronics technician who wintered-over at Pole Station in 1963.

[1]**The *Falkland***. Built by Harland & Wolff, of Belfast, in 1890, as the *Gaekwar*, for Brocklebank's Indian route. In 1906 she transferred to the Shire Line (owned by Thomas Law of Glasgow), as the *Carnarvonshire*, and, although she was bought by the Royal Mail in 1907, she continued to operate for the Shire Line until 1911, when she was bought by Hans Fredriksen's Rethval Company, of Sandefjord, Norway, and converted into the 4353-ton whaling factory ship *Falkland*. She operated in the South Shetlands and South Orkneys in 1911-12 (that season she had 2 catchers, the *Funding* and the *Palmer*) and 1912-13 (her catchers that season were the *Palmer* and the *Powell*), under Capt. Nils Christoffersen, and manager Hans Fredriksen (*see also* **The *Thule***). In the 1912-13 season she was badly damaged on entering what is now Falkland Harbor, on Powell Island. She was one of the first whaling factories to be fitted with radio. She was traded to the Ørnen Company in 1913 in exchange for that company's *Ørn*. The *Ørn* (now belonging to Rethval) now became the second incarnation of the *Falkland*, while the first incarnation of the *Falkland* (now owned by the Ørnen Company) became the *Ørn II*.

[2]**The *Falkland***. Norwegian floating factory whaler, formerly the *Ørn*, and bought in 1913 by the Rethval Company, replacing that company's previous factory with the same name. The new one was wrecked on Nov. 12, 1913, off the coast of Uruguay, on her way to Antarctic waters for her second season, thus leaving Rethval without a whaler. Consequently the company had to charter the *Polynesia* for that season.

[3]**The *Falkland***. The third Rethval Whaling Company factory ship to bear this name, formerly the British ship *Batavia*, owned by the Anchor Line, of Glasgow, in Antarctic waters in 1914-15, being the only factory whaler operating in the South Orkneys that season. After that she went into the cargo trade.

Puerto Falkland *see* **Falkland Harbor**

Falkland Dependency *see* **British Antarctic Territory**

Falkland Harbor. 60°44' S, 45°03' W. Along the SW side of Powell Island, between that island and Christoffersen Island, in the South Orkneys. According to Jimmy Marr in 1935, it may have been discovered by Matt Brisbane in 1823. Used by the *Falkland* in 1911-12 and 1912-13, as an anchorage. Charted by Petter Sørlle in 1912-13, as Falklandhavna (i.e., "Falkland harbor"), named for the first of the 3 Rethval whaling ships named *Falkland*. It appears as Falklands Harbour on a 1916 British chart, and on a 1930 Argentine chart as Puerto Falkland. It was re-charted by the Discovery Investigations in 1933, as Falkland Harbour, and that was the name accepted by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1943 U.S. Hydrographic Office chart as Falkland Harbor (i.e., without the "u"), and that was the spelling that was accepted by US-ACAN in 1952, and which appears in the 1956 American gazetteer. Naturally, the Argentines could not let the British get away with this naming, and it appears on a 1957 Argentine chart as Puerto Malvinas, and that was the name accepted by the 1970 Argentine gazetteer (Malvinas being the Argentine name for the Falkland Islands, all of which led to a war, etc, etc).

Falkland Islands Dependencies Aerial Survey Expedition. 1955-57. Better known as FIDASE. Hunting Aerosurveys, Ltd., the shipping and aviation section of the Hunting Group, under contract to the British Colonial Office, conducted a program of vertical air photography (i.e., where the axis of the camera is directed vertically downwards) of the South Shetlands and northern Graham Land. The *Oluf Sven*, a Danish freighter commanded by Capt. J.C. Ryge, was chartered by the expedition to take the men to Deception Island, in the South Shetlands, for the 1955-56 summer season, then bring them back, then take them down again for the second, 1956-57 summer. The ship would also act as a mobile base for ground surveys conducted by FIDASE parties. Two Canso flying boats flew down independently from Canada, and were based at Deception Island. Two S.51 Westland Sikorsky helicopters, brought down on the *Oluf Sven*, were also used to assist ground control parties. Actually, one of the helos was used for flying and the other for spare parts. The second season these were replaced by a Bell 47D helicopter. Peter Mott (q.v.) led the entire expedition, and John Saffery (q.v.) was 2nd-in-command, and chief of flying operations. FIDASE photographed about 34,000 square miles of territory as far south as 68°S, taking a total of 10,753 vertical photos. Peter Mott's book, *Wings Over Ice* (published in 1986), tells the story. **Oct. 21, 1955**: The *Oluf Sven* left London. **Dec. 4, 1955**: The *Oluf Sven* dropped anchor in Whalers Bay, Deception Island. **Feb. 5, 1956**: The first fully operational flight. **Feb. 6, 1956**: Mott and Bancroft were dropped by helicopter on Mount Pond. That day, the two planes photographed Trinity Island, and part of the Palmer Land coast. **Feb. 11, 1956**: Another flight. **March 6, 1956**: Another flight. **March 13, 1956**: The two planes were damaged by high winds. **March 27, 1956**: The *Oluf Sven* returned to Deception Island. **April 7, 1956**: The *Oluf Sven* left with the men. **May 22, 1956**: The *Oluf Sven* arrived back in London. The first half of the expedition was completed, but the results were disappointing. **Oct. 15, 1956**: The two Cansos arrived at Stanley, in the Falklands, from Canada. **Oct. 20, 1956**: The *Oluf Sven* left Harwich. **Nov. 21, 1956**: The *Oluf Sven* arrived at Port Stanley. **Nov. 22, 1956**: The *Oluf Sven* left Port Stanley. **Nov. 26, 1956**: The *Oluf Sven* arrived at Deception Island. **Jan. 9, 1957**: One of the Cansos crossed the Antarctic Circle, and reached the southern limit of photography — 68°S. **Jan. 11, 1957**: Both aircraft made that flight. By mid-January 1957 the bulk of the photography had been done. **March 1, 1957**: All photographic work ceased. **March 4, 1957**: The Cansos returned to Stanley (they would then go on to Montevideo, and finally to Canada). Following is the team for 1955-56. Peter Mott (leader), and John Saffery (deputy leader and flying manager). The first Canso crew consisted of: Christopher Gavin Robinson (*see under* **G**) (captain), D.K. Banks (co-pilot), Egerton G.H. "Edge" Green (navigator and photographer; born 1930, Epping), Peter E. Davis (camera operator; b. Sept. 12, 1921), and Ron Keen (flight engineer). The second Canso crew consisted of: Jim Greenshields (captain; *see* **Greenshields Peak**), Leslie Terry (co-pilot; born Nov. 17, 1917, London; he had been flying since 1938; he died Nov. 1988, in Worthing), ex-wartime navigator Harry F. Lewis (navigator and photographer, technically responsible for the air photography and the processing of the films), William "Bill" Freeman (camera operator; b. Aug. 5, 1905; he had been a photographer with Aerofilms since the early 1930s), Mike Mugford (flight engineer; came from Kenting Aviation, in Toronto). Michael T. "Mick" Kane (b. Nov. 12, 1929, Cardiff) was ground engineer for both crews. The helicopter crew (from Autair Ltd) were: Bim Jacques (q.v.) (senior pilot), Stanley Arthur "Stan" Holdaway (pilot, ex-wartime; b. July 30, 1924, Windsor, Berks. d. Oct. 1990, Ilkeston, Derbys), T. "Jack" Frost and Tom Howie (engineers). The radio staff (from Inter-

national Aeradio Ltd) were: M.R. "George" Milburn (radio engineer and air traffic manager), John Corlett (radio engineer; b. Aug. 16, 1920, Cockermouth, Cumberland. d. May 1999, Glos), and Fred Shaw. Ground photographers were: Arthur H. Arkinstall (b. May 22, 1920) and Peter M. Remmers (b. June 10, 1933). The cine-photographer (from Seven Seas Films Ltd) was Brian R. Everett (the director of that company; b. March 4, 1927, Epsom). The geophysical team were Dr. Keith Burrows (b. May 30, 1930; from Manchester University) and Geoffrey Elms (assistant geophysicist; b. May 17, 1924; also an electronics engineer). The surveyors were: Tony Bancroft (senior surveyor; *see* **Bancroft Bay**), Ronny Mitchell, Colin Brown (q.v.—from FIDS), and Fred Sherrell (also geologist; *see* **Sherrell Point**). The met man on secondment from the Falklands Islands Met Office was Samuel Dinsmore "Sam" Glassey (b. March 1, 1928. d. March 1991, Kingston-upon-Thames). The doctor on secondment from FIDS was William Ewart McCready (who had been in private practice in Belfast). The cook on secondment from FIDS was Donald B. "Don" Exley; and the steward on secondment from the FIDS was David Lee. Following is the team for 1956-57. Peter Mott (leader), and John Saffery (deputy leader and flying manager). The first Canso crew consisted of: Christopher Gavin Robinson (captain), R.W. Brumwell (co-pilot), Edge Green (navigator and photographer), Peter E. Davis (camera operator), and Ron Keen (flight engineer). The second Canso crew consisted of: Robert N. "Bob" Pettus (captain), Colin Grant (co-pilot), John D.L. Symington (navigator and senior air photographer), Bill Freeman (camera operator), P. Nielsen (engineer). Mick Kane was ground engineer for both crews. Helicopter crew: Bim Jacques (senior pilot), Jan Patcha (pilot and engineer; *see* **Patcha Point**), B.G. Davey (engineer). Radio staff (from International Aeradio Ltd.): George Milburn, R. Murray McWhirter, and James "Jim" Moffat. Ground photographers were Arthur Arkinstall and R.A. "Timber" Wood. Cine-photographer was Brian Everett. Surveyors were: Tony Bancroft, and from the FIDS—Colin Brown (q.v.); John Cheal (q.v.), Jim Rennie (q.v.), and John Noble (q.v.). Marine engineer was J.F. Marsh. Meteorologist on secondment from the Falkland Islands Met Office was Brian Powell. The FIDS seconded three other men: Dr. H. Geoffrey Harding (medical officer), Don Exley (cook), and Geoff Stride (q.v.) (steward). Li-lo, the dog, was the permanent resident.

Falkland Islands Dependencies Survey. Better known as FIDS. A series of British government surveys conducted in the South Shetlands, South Orkneys, and the Antarctic Peninsula area between 1945 and 1962. In reality, it was the ongoing British scientific effort in the area of Antarctica claimed by the UK. In 1943 the British War Cabinet created Operation Tabarin (q.v.), a military-scientific investigation of the Antarctic area in question. This operation was the responsibility of the Admiralty, working for the Colonial Office. **July 1945**: Just after the end of World War II in Europe, even though supplies continued to come out of Navy stores for a while, responsibility for the bases (or stations) created by Operation Tabarin was transferred from the Admiralty to the Colonial Office itself, and FIDS was created. At that time the area of British Antarctica was part of what was called the Falkland Islands Dependencies. Andrew Taylor was still leading the second phase of Operation Tabarin, and was wintering-over in Antarctica, as leader of Base D, at Hope Bay. Strictly speaking, therefore, he became the first FIDS leader. **Oct. 1945**: The new batch of FIDS, i.e., the ones who would winter-over in 1946, were flown from London to Lisbon, where they joined the *Empire Might*, bound for Montevideo. Newspaper ads for likely lads normally began something like this: "Service in the Antarctic," and ended with the address to which to reply: "Under-Secretary of State for the Colonies, Room 2, 3rd Floor, Queen Anne's Chambers, Dean Farrar St., London, S.W.1." The new FIDS leader, E.W. Bingham, flew from London to South America, where he swore his wife to silence (the war was still very recent). The *Fitzroy* and the *William Scoresby* collected the new Fids from Montevideo. **Jan. 4, 1946**: The *Fitzroy* and the *William Scoresby* reached Port Stanley, in the Falklands. **Feb. 18, 1946**: Bingham arrived at Port Lockroy on the *Trepassey*, to inspect the base. Stewart Slessor was on board too, en route to Base E. The *Trepassey* then sailed to the Argentine Islands, so Bingham could examine his old BGLE hut, with a view to establishing Base F there the next year. The hut was flying the Argentine flag, installed there in Feb. 1942. Bingham removed it, of course. **Feb. 23, 1946**: Bingham arrived with his men at Stonington Island in the *Trepassey*. He relieved Taylor as leader of the British Antarctic effort, and is generally regarded as the first FIDS leader actually assigned in that role. **Feb. 24, 1946**: Bingham moved to USAS's old East Base (q.v.), and that same day began construction of Base E, 250 yards to the south of East Base. **March 13, 1946**: Base E was finished, and Bingham led the 1946 wintering party there, while John Featherstone led Base B, Mac Choyce led Base C (at Cape Geddes), Mike Hardy led Port Lockroy Station, and Vic Russell led Base D (at Hope Bay). **Feb. 5, 1947**: The *Trepassey* returned with a replacement FIDS crew, and Ken Butler, who had wintered-over with Bingham, now took over as leader for the 1947 wintering party at Base E, and as overall leader continued the FIDS mission—to explore, chart, plot, map, report, name features, and generally open up the area. Over the 1947-48 season FIDS cooperated with RARE led by Finn Ronne. On Sept. 15, 1947 Tommy Thomson (pilot), Bernard Stonehouse (meteorologist), and Reg Freeman (surveyor) set out in a FIDS-owned Auster Autocrat to look for a suitable site for a depot on the E side of the Antarctic Peninsula. A larger, RARE aircraft, carrying the depot's supplies, set out 15 minutes later, in order to meet them there. The Auster arrived safely in this uncharted territory, marked out a landing strip for the Americans' plane, and set up smoke bombs, which the Americans missed (they were flying south at 8000 feet). The Auster took off again, headed back for Base E, but ran into such bad weather that they had to make a forced landing on the sea ice. One of the skis broke, and they overturned, the plane being wrecked, and the party lost contact with base. Reg Freeman was slightly injured. The first 3 days they were confined to their tent due to a blizzard, and cut their food intake to 600 calories a day. A rescue party was sent out to look for them, but by that time the 3 men were already out looking for the rescue party, using their petrol tank as a sledge. On Sept. 18, 1947 they sighted Cape Berteaux, and on Sept. 23 they were in an American airplane. They lost an average of 20 pounds apiece in body weight. FIDS and RARE undertook a joint expedition, the Weddell Coast Sledge Party (q.v.). On Feb. 22, 1948 Vivian Fuchs arrived (late, due to pack ice and snow squalls) on the *John Biscoe* (newly-acquired by the FIDS), to replace Major Butler as FIDS leader, and in Oct. 1948 responsibility for the FIDS was transferred from the Colonial Office to the governor of the Falkland Islands, with headquarters at Stanley. Fuchs went on to lead the FIDS again from 1949 to 1953. For the drastic 1949 winter, *see* **Base E**. In 1955-57 the Falkland Islands Dependencies Aerial Survey Expedition (q.v.), better known as FIDASE, was carried out, and on Jan. 1, 1962 FIDS was renamed BAS (British Antarctic Survey—q.v.). FIDS is the organization; Fids is plural of Fid (i.e., a member of FIDS is called a Fid). A Fidlet was a newcomer to the group. Some of the lads came up with some interesting variations of the real meaning of the letters "FIDS" (fucking idiots down south, for example). Just a small note on the position of cook: each station had one until 1947, usually an RN rating, but after 1947 they did away with the role of cook, or rather all the men shared the task, one week at a time. After 1959 the position of cook was gradually re-introduced, and many years later (long after FIDS had become BAS) the term became "chef manager." What comes next is what might be called a FIDS checklist. It is an alphabetical list of all Fids (including BAS personnel; BAS personnel still refer to themselves as Fids) who have wintered-over in Antarctica, from the time of Operation Tabarin, during World War II (before they were known as Fids) to the present day. Last name, first name or names, nickname, year or years, and base call letter. For the purposes of this entry, SG signifies both South Georgia Station and Bird Island Station. I have made no distinction between the two, as both those bases fall outside the parameters of this book. However, the names are here for inclusivity. You go to the base in question for more details about

individual Fids, for example about their function on the base, and various other bits and pieces. When going to a base, A = Port Lockroy Station (find under P); F = Faraday Station (the former Argentine Islands Station) (find under F); H = Signy Island Station (find under S); K = Fossil Bluff Station (it is really KG, but appears in this list as K, for brevity) (find under F); R = Rothera Station (find under R); and Z = Halley Bay Station (later called Halley) (find under H). For the rest of the stations, one goes to the word "Base" (under B) in this book, then to the relevant letter. For example, for Base B you go to "Base B." For immediate clarification when using this index, B = Deception Island; C = Cape Geddes; D = Hope Bay; E = Stonington Island; G = Admiralty Bay; J = Graham Coast Station (or, later, Prospect Point); N = Arthur Harbour (or Anvers Island); O = Danco Coast Station (or Danco Island Station, or Paradise Harbour Station); T = Adelaide; W = Detaille Island; WH = Wordie House; and Y = Horseshoe Island. There are, of course, a few other bases, but they were not occupied during the winter. Abbey, William 87R; Abbott, Michael Anthony 87H, 88H; Abrahams, Simon Stuart "Si" 97R; Acheson, Kevin John "Kev" 72Z; Adams, Barry John "Charlie" 78Z; Adams, David 08R; Adie, Raymond John "Ray" 47D, 48E, 49E; Adlard, Jonathan Francis "Jo" 88Z, 89Z; Adlard, Stacey 09SG; Agger, Harry Edward 59F, 60F; Ainge, Jonathan David "Jon" 79SG; Ainscough, Stephen "Steve" 00R; Airey, Leonard Raymond "Len" 81F, 82F, 85Z; Airey, Richard Francis "Ric" 75SG, 76T, 79R; Airth, Ian William M. 03R, 04R; Aitkenhead, Neil 60D, 61D; Allan, Douglas George "Doug" 76H, 79H, 80H, 83Z, 87H; Allan, Thomas John "Tom" 66E; Allan, Thomas Noel Kingsley 58D; Allder, Simon John D. 93F, 94F; Allen, Adrian 60D, 61D; Allen, Keith 59D, 60D; Allen, Sidney "Sid" 75SG, 76SG; Allen, Terence Rodney "Terry" 69T; Allman, Andrew William "Andy" 75Z, 76Z, 78Z; Almond, Adrian Arthur J. 73E, 74T; Almond, Simon 94F, 95F; Amos, Stephen Christopher "Chris" 72H, 73H; Amphlett, Alfred "Alf" 63H, 65Z; Anckorn, John Fergus "Fergy" 73E, 74E; Anderson, John Harvie M. 81R; Anderson, John Hugh "Hughie" 47H; Anderson, Philip Stuart "Phil" 86Z, 91Z; Anderson, William Ellery MacMahon "Major Bill" 55D; Andrew, James Darby "Jim" 46D; Andrews, Christopher John H. 73T; Annatt, Margaret Mary "Maggie" 99R, 00R; Anthony, David I. "Dave" 06Z; Anthony, Richard William V. 75H, 76H; Apps, Adrian Linley 70F, 71T; Arajs, Roland Leons 77SG, 78SG; Ardus, Dennis Alexander 60Z, 61Z; Armstrong, Brian Michael F. 65Z, 66Z; Armstrong, Edward Barry 64T; Armstrong, Norman F. 87R, 88R; Armstrong, William 83Z; Arnold, Rodney John 90H; Arnould, John Peter Y. 91SG, 92SG; Artis, Stephen "Steve" 80R; Artis, Steve 05SG, 06SG; Artz, Gordon Martin 59Z; Ashburner, Jonathan 09SG; Ashford, Julian Robin 87H, 88H; Ashley, John 59D; Ashley, Robert 79F; Ashton, Lewis "Chippy" 44PL, 45D; Ashworth, Harold Dawson "Harry" 63B, 64T; Aslin, Paul Michael 86Z, 87Z; Aspey, Nik 99SG, 00SG; Aston, Felicity Ann D. 01R, 02R; Atkins, Malcom Windsor "Bill" 70F; Atkinson, Donald "Don" 55Y, 56Y; Atkinson, Richard "Rick" 76T, 77R; Atkinson, Robert 81R; Attew, Vernon Jon C. "Slack" 83Z, 84Z; August, Victor Adrian 77R, 78R, 81R; Auld, Victoria Jane "Vicky" 97Z, 98Z, 04SG; Ault, Steven "Steve" "Salty" 85Z, 86Z; Austen, Kingsley "Bunny" 60PL, 61PL; Austin, Michael Patrick "Mike" 97R; Avery, Keith Francis 72SG, 73T; Axtell, Francis George "Joe" 56H; Ayers, John Roland 67B, 68K; Ayling, Michael Edward 64T; Back, Eric Hatfeild 44PL, 45D; Back, E.K.P. 64T, 65T, 70T, 71T, 74H, 75Z, 77F, 78F; Bacon, Nigel Charles 65H, 66H; Badger, Robin David "Bodge" 91Z, 92Z; Bailey, Andrew David "Andy" 63H, 64H; Bailey, Carolyn 02R; Bailey, David R. "Dave" 94R, 95R; Bailey, Geoffrey Charles "Geoff" 90Z; Bailey, Jeremy Thomas 65Z; Bainton, Raymond Allan 78H; Baker, Anthony "Tony" "Pink Peril" 64Z, 65Z, 67Z; Baker, John Gerard 99R; Baker, John Harwood 66H, 67H; Baker, Martin John 77SG, 78SG, 80F; Bales, Christopher Michael 83R; Ball, David Arthur "Dave" 75H, 76T; Ball, John Anthony 68H; Balmer, Matthew James "Matt" 07R, 08R; Bamber, James Henry 91R; Bancroft, Stephen 88H, 89H; Banks, Roger James 53G, 54F; Banner, Robert Lionel 81F; Barber, John Arthur 54D; Barber, Kevin Peter 90F, 91F; Barber, Martin Richard 88Z, 89F, 91H, 92H; Baring-Gould, Michael Arthur "Slim" 67Z; Barker, Andrew "Andy" 03R, 05R, 07SG; Barker, Jonathan Peter 73SG; Barker, Roger Colin "Jon" 72SG, 73T, 75SG; Barlow, John 66B, 67T; Barlow, Kate E. 98SG; Barnes, Brian John G. 65Z, 66F; Barnes, Craig 99R; Barnes, David Keith A. 91H, 92H; Baron, David Simmons "Dave" 60D, 61B; Barrett, David Alfred 52PL, 53F; Barrett, Geoffrey C. "Geoff" 63B, 64B; Barrett, Richard Giles 74E; Barry, George Patrick John Bounal 48PL; Bartlett, Ian David 75F, 76F; Barton, Anthony Thomas 92F, 93F; Barton, Colin Munroe "Dick" 59G, 60G; Barton, Graeme Peter "Golden Bells" 03Z, 04Z; Barton, Peter 72F, 73F; Barton, Timothy Roy 89SG, 90SG; Bateman, Adrian Paul "Aids" 87Z, 88Z, 90Z; Bateman, Ian 74F, 75F, 77R; Bates, Colin Philip 85R; Bates, Peter Charles 60B; Bauguitte, Stephane 04Z; Bayliss, Graham Michael 84Z, 85Z; Bayliss, Peter Robert 89H, 90H; Bayly, Maurice Brian 56O; Bayman, Peter Christian F. "Pete" 78Z, 81SG; Bean, Stephen Paul "Steve" 70Z, 71Z; Beard, John David G. 67T; Beaumont, Jennifer Claire "Jenny" 99R, 00R; Beck, Brian 58H; Beck, Brian 04SG; Beck, John Roger 66H; Bedford, Jonathan 98Z; Beebe, George Douglas "Doug" 65Z, 66Z; Bell, Charles Michael 69K, 70T; Bell, Dennis Ronald "Tink" 58G, 59G; Bell, John Andrew 83R; Bell, John Edward 77H; Bell, Keith Roland 58F, 59F; Bell, Martin H. "Dozer" 94R, 95Z, 97Z; Bell, Robert David "Bob" 78SG, 79SG; Bellchambers, William Henry "Bill" 64Z, 65Z; Bennett, Nigel 86R, 87R; Bent, Frank 62Z, 63F; Bentley, Paul Ian 69E, 70E; Berman, Jade 06R; Berrow, Simon D. 96SG, 97SG; Berry, Alfred Thomas "Tom" 44PL, 45D; Berry, Raymond Arthur "Ray" 52B, 53H, 55F; Berry, Robert James 73SG, 74SG; Best, Andrew 79SG, 80SG; Best, Paul 05R; Bethell, Michael R. "Mike" 61Z, 62Z; Beynon, Arthur David Geoffrey "Dave" 63E; Bibby, John Selwyn 58D, 59D; Bienkowski, Christopher Hubert "Chris" 73Z, 74Z; Biggadike, David-John 66F, 67F; Biggs, Ian James 48G, 50SG, 51SG; Biggs, John K. 45PL; Biggs, Patrick Eric "Pat" 47H, 48B; Bingham, Edward William "Ted" 46E; Binney, David Alan 71F, 72F; Bird, Frederick George "Fred" 53PL, 54PL; Bird, Peter George 65B, 66T; Bird, Richard John 69T, 70T; Bird, Timothy John 92R; Bishop, James Francis "Jim" 73K, 74K; Bishop, Lyndsey D. 02Z; Bissell, Peter Howard 73H, 74H; Bithell, Mark Robert 86R, 87R; Black, Stanley Edward "Stan" 57H, 58Y; Blackie, James Robertson "Jim" 60Z; Blackwell, Bruce 71Z, 72Z; Blackwell, Michael James "Mick" 59Z; Blaiklock, Kenneth Victor "Ken" 48E, 49E, 52D, 53D; Blair, David Adamson 63B; Blake, Samuel Charles Bernard "Sam" 57D, 58D, 62K, 63E; Blakeley, Peter Rodney 62Z, 63F, 66Z; Blakley, Henry Joseph 69T, 70E; Blanshard, Geoffrey 66F; Blenkharn, Nigel 95F, 98R, 99R; Blissett, John Michael 90R; Blossom, David Charles "Charlie" 66Z, 67Z; Blowman, Scott 08R; Blundell, George 61Z, 62Z; Blunn, John W. 90R, 91R, 97Z, 01SG; Blyth, John "Johnny" 44PL, 45D, 48PL; Bond, Andrew Malcolm 88H, 89H; Bond, Jonathan James "John" 94Z; Bond, Peter Robert "Bob" 61B, 62B; Bone, Douglas Gordon "Doug" 67H, 68H; Bonner, Samuel "Sam" 45B; Boon, Daranee 01SG; Booth, Paul David 04R; Booth, Timothy 08R; Borland, Daniel "Danny" 50SG; Borthwick, Richard Drummond 00Z, 01Z; Bostelmann, Robert Walter "Bob" 73E; Boston, George Duncan 58O; Boteler, David Henry 74Z, 75Z; Bothma, Johannes 59Z; Bottomley, Alec 63B, 64T, 66E, 67T; Bottomley, John Stuart 74H; Boulding, Richard Andrew "Dick" 67E; Boulter, Kenneth Gordon S. "Ken" 62B; Boulton, Justin 10R; Boulton, Stephen 07R; Bowden, David Anthony "Dave" 01R, 02R; Bowen, David 67T, 68T; Bowen, Lowri 06R; Bowen, Nathan 10R; Bowler, Bryan Anthony 61E, 62E; Bowler, Robert Edward "Bob" 79F, 80R, 82Z, 83Z; Bowra, Gordon Trevor "Doc" 63Z, 64Z; Boyle, James 74SG, 75SG, 77F, 78H; Boyt, Trevor David 72Z, 73Z; Bracken, Nicholas Joseph "Nick" 90Z; Bradford, William John "J.B." 77Z, 78Z; Brading, Christopher Graham "Chris" 59D, 60D; Bramham, Philip 94H, 95H; Bramwell, Martyn John 68K, 69T; Bramwell, Thomas Rudy 82Z; Brand, Royston Thomas "Roy" 61B, 62B, 66B; Brangham, Paul Geoffrey "Chippy" 71Z, 72Z; Bravington, David Noel 67H, 68F, 75T; Brazier, David Paul 89H, 90H; Bregazzi, Paul Kneen 68H;

Falklandhavna *see* **Falkland Harbor**

Falklands Harbour *see* **Falkland Harbor**

Falkner Glacier. 73°45' S, 166°03' E. An east-flowing valley glacier, 6 km long, 3 km S of Oakley Glacier, in the Mountaineer Range of Victoria Land. It descends steeply to Lady Newnes Bay, where it forms a floating glacier tongue. Named by US-ACAN on Oct. 21, 2008, for Kelly K. Falkner, professor of chemical oceanography at Oregon State University, who served from 2006 as the first program director for the Antarctic Integrated System Science Program, in the Division of Antarctic Sciences, at the NSF's Office of Antarctic programs.

Fállico, Luis *see* **Órcadas Station**, 1927

Mount Falla. 84°22' S, 164°55' E. A prominent conical mountain rising to 3285 m, 5.5 km NE of Mount Stonehouse, between Prebble Glacier and Berwick Glacier, 16 km WSW of Mount Kirkpatrick, in the S sector of the Queen Alexandra Range. Discovered on Jan. 9, 1958, by the NZ party of BCTAE 1957-58, and named by them for Bob Falla. US-ACAN accepted the name in 1966.

Falla, Robert Alexander "Bob." NZ's most famous ornithologist. b. July 21, 1901, Palmerston, NZ, son of railway clerk George Falla and his wife Elizabeth Kirk. He married Molly Burton on May 18, 1928, at Te Aroha, and was assistant zoologist on both halves of BANZARE 1929-31 (his report on birds, published in 1937, is a classic). He was ornithologist at the Auckland War Memorial Museum, becoming assistant director in 1936. He was director of Canterbury Museum (NZ), 1937-47, and, somewhat simultaneously, was a coastwatcher in the Auckland Islands during World War II. He was director of the Dominion Museum, in Wellington, 1947-66, a member of the Ross Sea Committee for BCTAE 1955-57 (he did not go south this time), was knighted in 1973, and died on Feb. 23, 1979, at Eastbourne, NZ.

Falla Bluff. 67°34' S, 61°29' E. Also called Svarthovden. A prominent rocky coastal bluff at the head of Utstikkar Bay. Discovered on Feb. 14, 1931 by BANZARE, and named by Mawson for Bob Falla. US-ACAN accepted the name in 1947.

Costa Fallières *see* **Fallières Coast**

Terre Fallières *see* **Fallières Coast**

Fallières Coast. 68°30' S, 67°00' W. That portion of the W coast of the Antarctic Peninsula between the head of Bourgeois Fjord and Cape Jeremy, on the W coast of Graham Land, behind Marguerite Bay. First explored and roughly charted on Jan. 15, 1909, by FrAE 1908-10, and the stretch of coast between the S entrance of Bourgeois Fjord and the limit of French discoveries to that time (in about 69°S) was named by Charcot as Terre Fallières (i.e., "Fallières land"), for Clément-Armand Fallières (known as Armand Fallières) (1841-1931), president of France and supporter of Charcot's expedition. It appears on Shackleton's chart of 1919 as Fallières Coast, and also, as such, on a 1930 British chart. By 1924, certainly, the Argentines were referring to it as Tierra de Fallières. In 1936-37 the entire coast was re-surveyed by BGLE 1934-37, and this survey changed the concept of the coast, re-setting it between Cape Berteaux and the head of Bourgeois Fjord. In 1947, based on the BGLE survey, US-ACAN accepted the name Fallières Coast, and UK-APC followed suit on Nov. 21, 1949. It appears on an Argentine chart of 1946 as Costa de Fallières, and there is a 1948 reference to it as Tierra Fallières. Fids from Base E re-surveyed it in 1948-49, and once these surveys were analyzed, its limits were set at what we know them to be today. It first appears with these modern limits on a British chart of 1951, and also in the 1955 British gazetteer, the 1956 US-BGN gazetteer, and a 1961 British chart (misspelled on this last one as Faillières Coast). It appears as Costa Fallières on a 1949 Argentine chart, and that was the name accepted by the 1970 Argentine gazetteer, and also by the 1974 Chilean gazetteer. Originally plotted in 68°30' S, 66°30' W, it has since been replotted.

Fallières Land *see* **Fallières Coast**

Fallone Nunataks. 85°21' S, 142°54' W. A chain of nunataks, 16 km long, 16 km NE of the Harold Byrd Mountains, between the edge of the Ross Ice Shelf and the Watson Escarpment. Named by US-ACAN in 1967, for Lt. (jg) Paul R. Fallone, Jr., USN, aide to the commander, U.S. Naval Support Force, Antarctica, 1962.

Bahía Falsa *see* **False Bay**

Isla Falsa *see* **False Island**

Islote False *see* **False Island**

Pico Falsa Aguja *see* **Great Needle Peak**

Punta Falsa Isla *see* **False Island Point**

Falsa Punta Rancho. 63°01' S, 60°34' W. A point on the SE side of Deception Island, just E of South Point (the southernmost point on Deception Island), immediately W of Entrance Point, and immediately E of Låvebrua Island, in the South Shetlands. Named by the Argentines. Name means "False Rancho Point." The SCAR gazetteer also has a feature called Mount Galíndez in these same coordinates, and the gazetteer claims this as a Russian naming (it is an odd name for the Russians to be giving). However, it is likely that, even if this Mount Galíndez is a valid entry, that they are one and the same.

Punta Falsa Redonda *see* **False Round Point**

Caleta Falsa Salvesen. 64°24' S, 61°10' W. A cove just E of Salvesen Cove, and immediately N of Bleriot Glacier, at Hughes Bay, on the Danco Coast of the Antarctic Peninsula. Named by the Argentines. It means "False Salvesen Cove."

Bahía False *see* **False Bay**

Baie False *see* **False Bay**

False Bai *see* **False Bay**

False Bay. 62°43' S, 60°22' W. A bay, about 5.3 km wide, and of great depth, between Barnard Point and Miers Bluff, on the S coast of Livingston Island, in the South Shetlands. Conditions here are not favorable, due to the glaciers which discharge icebergs into the bay. On the SE coast is a beach made up of large pebbles, almost like cobblestones, which boats can land at only in the central part, near a salient point, where the coast changes direction. Probably first entered and charted by Palmer in Nov. 1820, and probably so named by him, for the possibility in thick weather of confusion between this bay and nearby South Bay (where Johnsons Dock was frequented by the early sealers). It appears on Fildes' chart of 1821, and that year Davis included it as part of what were occasionally called Elephant Bays (q.v.). A French translation of Powell's map shows it as Baie False. Weddell renamed it as Palmer's Bay, for the discoverer of this feature, and it is seen thus on his 1825 map, and also on Fildes' map of 1829. Palmer's chart of 1831 shows it as "Palmer's or False Bay." It appears as False Bay on a British chart of 1839, but an 1861 Spanish chart has it as Bahía de Palmer. Friederichsen's map of 1895 (reflecting the *Jason* expedition of two years before) shows it as False Bai. There is a 1908 Argentine reference to it as Bahía Falsa, and it appears on a 1948 Argentine chart as Bahía False, but Bahía Falsa was the name accepted by the 1970 Argentine gazetteer, and also by the 1974 Chilean gazetteer. Charcot's references of 1912 (reflecting his FrAE 1908-10) shows it as both False Baie and "Baie de Palmer ou False Baie." It was re-charted by the Discovery Investigations in 1935, and appears on a 1943 U.S. Hydrographic Office chart as "Palmer Bay (False Bay)." US-ACAN accepted the name False Bay in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a 1962 British chart. It was photographed aerially by FIDASE, 1956-57, and surveyed from the ground in 1958-59, by FIDS.

False Cape Renard. 65°02' S, 63°50' W. A rocky cape, 2.5 km WSW of Cape Renard, on the W coast of Graham Land. Charted on Feb. 12, 1898, by BelgAE 1897-99, when a landing was made nearby, and Henryk Arctowski named this point and Cape Renard collectively as The Needles. Since the two features are easily confused, a collective name was considered unsuitable, and during FrAE 1908-10, Charcot gave them the separate names, Cap Renard (*see* **Cape Renard**) and Faux Cap Renard, naming them thus so not to disturb too much Arctowksi's original intention. The feature was photographed aerially by FIDASE in 1956-57. UK-APC accepted the translated name False Cape Renard, on July 7, 1959, and US-ACAN followed suit in 1971. It appears as such on a British chart of 1960. Since just before 2000 a channel has separated False Cape Renard from a new island, Renard Island. *See also* **The Three Pigs**.

False Cerro Negro *see* **False Negro Hill**

False Island. 64°31' S, 62°53' W. The largest of 3 islands at the E side of Hackapike Bay, on the W side of the Schollaert Channel, off Parker Peninsula (on the NE coast of Anvers Island), in the Palmer Archipelago. FrAE 1903-05 roughly charted (but did not name) 2 islands here. Re-charted in 1927, by personnel on the *Discovery*, who nicely named this one as False Island (there was only one here, actually, not two). It appears as such on their 1929 chart. It was further charted in Jan. 1936, by BGLE 1934-37. It appears on one 1947 Argentine chart as Isla False, and on another from that year as Isla Falsa. It appears as False Islet on a 1947 U.S. Hydrographic Office chart, and on British charts of 1948 and 1950, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 20, 1955. After it was photographed aerially by FIDASE in 1956-57, UK-APC redefined it on July 7, 1959 to what it was originally, i.e., False Island, and it appears as such on a British chart of that year. US-ACAN followed suit with the new situation in 1963. It appears in the 1970 Argentine gazetteer as Isla Falsa. It appears on a Chilean chart of 1962 as Islote Falso, but in the 1974 Chilean gazetteer as Islote False.

False Island Point. 63°55' S, 57°20' W. A narrow, rocky headland, 1.5 km long and about 0.8 km wide, connected to the S side of Vega Island by a low, narrow, almost invisible isthmus of thick sand, it forms the SW entrance point of Pastorizo Bay, in Erebus and Terror Gulf, S of the NE end of the Antarctic Peninsula. Discovered and charted as an island in Feb. 1902 by SwedAE 1901-04 (apparently they did not name it). Re-defined (as a part of Vega Island) by Fids from Base D in 1945, and they named it. It appears on a British chart of 1949, and that was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. It appears as such in the 1955 British gazetteer. It appears on a Chilean chart of 1951 as Punta Isla Falsa, but the name accepted by the Chilean gazetteer (and also by the 1970 Argentine gazetteer) was Punta Falsa Isla.

False Islet *see* **False Island**

False Negro Hill. 62°39' S, 61°04' W. Also called False Cerro Negro. On the S side of Byers Peninsula, just to the W of Negro Hill, on Livingston Island, in the South Shetlands. Today, one will not find a reference to this anywhere — anywhere.

False Round Point. 61°54' S, 58°02' W. About 13.5 km W of North Foreland, and 3 km S of Ridley Island, it forms the W entrance point of Venus Bay, on the N coast of King George Island, in the South Shetlands. First roughly charted by the early sealers before 1822. In 1937 the personnel on the *Discovery II* recharted the N coast of this island, and named it for its similarity to Round Point, 20 km to the W. It appears on a British chart of 1938, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer, and on a British chart of 1962. It appears on a 1939 Argentine chart as Punta Falsa Redonda (which means the same thing), but on a 1949 Argentine chart as Punta False Round. FIDASE photographed it aerially in 1956-57, and FIDS surveyed it from the ground in 1957-58. The name accepted by the 1970 Argentine gazetteer was Falsa Punta Redonda. The Chileans tend to call it Punta Falsa Redonda. Originally plotted in 61°54' S, 58°02' W, it was replotted by the British in 2009.

Islote Falso *see* **False Island**

Île Famine *see* **Bob Island**

Îlot Famine *see* **Bob Island**

Fandens Brae *see* **Devils Glacier**

Fanfare Island. 65°13' S, 64°11' W. The most northeasterly of the Argentine Islands, 2.5 km S of Herald Reef, in the Wilhelm Archipelago. Surveyed by Fids from Base F in 1960. Named by UK-APC on Aug. 31, 1962, in association with Herald Reef. US-ACAN accepted the name later that year.

The Fang. 77°29' S, 167°13' E. Sometimes called Upper Fang (there is a Lower Fang, too, but both those names are unofficial). A distinctive toothlike peak, rising to 3159 m, which forms the highest point on Fang Ridge, on Mount Erebus, on Ross Island. Named descriptively by Frank Debenham, during BAE 1910-13, while he was making a plane table survey of the area in 1912. US-ACAN accepted the name in 2000, and NZ-APC followed suit on June 19, 2000.

Fang Buttress. 64°41' S, 63°21' W. A rock crag, immediately W of Molar Peak, near the S end of the Osterrieth Range, on Anvers Island, in the Palmer Archipelago. It has a small, but prominent, fang-like rock in front of it (hence the name given by UK-APC on July 7, 1959), and is a landmark for parties crossing William Glacier. Surveyed by Fids from Base N in 1955-57. It appears on a British chart of 1959, and US-ACAN accepted the name in 1971.

Fang Glacier. 77°29' S, 167°06' E. On the W side of Fang Ridge, halfway up Mount Erebus, it fills the valley (or trough) separating the old and new craters on that mountain, on Ross Island. It is much crevassed where it escapes from its symmetric valley onto the open mountainside, and its length before this escape is about 3 km, and its average width less than 0.8 km. Charted by Frank Debenham in 1912, while making his plane table survey of the mountain, during BAE 1910-13, and named by him in association with Fang Ridge. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Fang Peak. 67°48' S, 62°35' E. A very prominent conical peak, 1.5 km (the Australians say 3 km) S of Mount Parsons, in the David Range of the Framnes Mountains, in Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Later named by ANCA for its resemblance to a tooth. It was used as an unoccupied trigonometrical station by Chris Armstrong, surveyor who wintered-over at Mawson Station in 1959. US-ACAN accepted the name in 1965.

Fang Ridge. 77°29' S, 167°12' E. A conspicuous ridge connecting the Lower and Upper Fang, halfway up the NE slope of Mount Erebus, on Ross Island. It is a much denuded portion of the original caldera rim of that volcano, left by a catastrophic eruption. Named for its curved shape by Frank Debenham, while making his plane table survey in 1912, during BAE 1910-13. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Fannin, Peter. On Dec. 9, 1771 he became master of the *Adventure* during Cook's 1772-75 voyage. He retired after the expedition, and married Elizabeth Boothe in the Isle of Man, where he opened a school of navigation. In 1789 he produced *The Correct Plan of the Isle of Man*.

Cabo Fanning *see* **Cape Fanning**

Cape Fanning. 72°24' S, 60°39' W. Forms the N side of the entrance to Violante Inlet, on the Black Coast, on the E coast of Palmer Land. Discovered on Dec. 30, 1940, on a flight from East Base, during USAS 1939-41. Due to a USAS error in navigation, it appears on a 1942 USAAF chart plotted in 73°00' S, 59°10' W. Named by US-ACAN in 1947, for Edmund Fanning. They plotted it in 72°50' S, 58°55' W, and described it as lying between Gruening Glacier and Violante Inlet. It appears as such on a 1947 U.S. Hydrographic Office chart. In Nov. 1947 a combined FIDS — RARE sledging team re-surveyed it, and it appears on Ronne's expedition map in the position we know today. It appears on a 1952 Argentine chart as Cabo Fanning, and that is the name the Argentines tend to use today. It also appears as such in the 1974 Chilean gazetteer. It was photographed aerially by USN in 1969, and appears as Cape Fanning on the 1979 USGS sketch map of the N part of Palmer Land.

Fanning, Edmund. American sailor and explorer, "The Pathfinder of the Pacific," a seminal figure in early Antarctic history, even though he never got there (the closest he got

was South Georgia, in 1800-01). b. July 16, 1769, Stonington, Conn., son of Gilbert Fanning and Huldah Palmer. At sea at 13, and a ship's captain at 24, he made a fortune in the China trade, by catching seals, exchanging them in China, and selling the new products in the USA. He discovered the Fanning Islands in the Pacific, which were named for him. Long interested in the mysteries of the southern oceans, in 1812 he was about to set out on a government-sponsored expedition to look for Antarctica (one suspects he would have found it) in the *Volunteer* and the *Hope*, but was prevented by the war with the British. In 1815-17 he sailed around the world in the *Volunteer*, and in 1818 organized his own sealing outfit. He was agent for many commercial expeditions, some to Antarctic waters, the most famous being the Fanning-Pendleton Sealing Expeditions of 1820-21 and 1821-22 (see below for both expeditions), as well as the Palmer-Pendleton Expedition (q.v.) of 1829-31. His memoirs were published in 1833 (*see* the Bibliography). He died in NYC on April 23, 1841. He had married Sarah Sheffield on June 14, 1790, at Stonington, and was the father of William A. Fanning.

Fanning, William Axson. b. Jan. 4, 1794, Stonington, Conn., son of Edmund Fanning (see above). Owner-manager of the *Hersilia*, on which he went to the South Shetlands in 1819-20, as supercargo. In 1820-21 he was aboard the *Express* during the first Fanning-Pendleton Sealing Expedition, of which he was the managing agent. He was captain of the *Alabama Packet*, and second-in-command of the second Fanning-Pendleton Sealing Expedition, 1821-22. Immediately upon his return from this last expedition, he married Nat Palmer's sister Juliet, on May 31, 1822, in Stonington, and died on Feb. 26, 1826.

Fanning-Pendleton Sealing Expedition 1820-21. Five ships commanded by Ben Pendleton (with William A. Fanning a partner in the scheme) left Stonington, Conn., for the South Shetlands seal rush of 1820-21, under the aegis of Edmund Fanning. **May 14, 1820**: Pendleton left first, in the flagship *Frederick*, a week before the *Hersilia* returned from her pioneering 1819-20 expedition. Thomas Dunbar, skipper of the *Free Gift*, left next, and at this stage the *Hero* (under Nat Palmer) and the *Express* (under Ephraim Williams) were added to the fleet. **July 21, 1820**: The *Free Gift*, and the *Hersilia* (still under the command of James P. Sheffield) left. **Aug. 12, 1820**: The *Hero* and the *Express* sailed from Stonington. One of the crew on the *Hero* was Peter Harvey, a black man. William Fanning was aboard the *Express* as managing agent of the expedition, which had 70 men on it in toto. The expedition would spend almost 4 months in the South Shetlands, gathering seals. **Oct. 17, 1820**: The *Hero* and *Express* arrived at the Falklands. William Fanning was now aboard the *Hero*. They then sailed for Staten Island (off the east coast of Tierra del Fuego), and laid up there for 3 days. **Oct. 31, 1820**: The *Hero* and the *Express* pulled into Staten Island, at the tip of South America. **Nov. 1, 1820**: The *Frederick*, the *Free Gift*, and the *Hersilia*, arrived at Hersilia Cove, in the South Shetlands. **Nov. 4, 1820**: The *Hero* and the *Express* left Staten Island for the South Shetlands. **Nov. 10, 1820:** The *Hero* and the *Express* sighted "Mount Pesca [on Smith Island, in the South Shetlands], 30 miles away." They stayed in that position for 2 days. **Nov. 12, 1820**: The *Hero* and the *Express* left for Rugged Island, and the *Hero*, arriving first, was met at Hersilia Cove by a whaleboat from the *Hersilia*, with Capt. Sheffield aboard. The *Hero* anchored next to the *Hersilia*, and was joined a few hours later by the *Express*. The *Frederick* and the *Free Gift* were also there. **Nov. 15, 1820**: Palmer, in the *Hero* began a cruise along the southern shores of Livingston Island, to go sealing and to look for a better harbor. They found one — Yankee Harbor. They also went to Deception Island, and Palmer was the first man to explore inside this island. **Nov. 16, 1820**: Palmer sighted Trinity Island. **Nov. 17, 1820**: Palmer discovered Orléans Strait, and must have sighted the Antarctic Peninsula (maybe the *Hero*, with maybe Palmer and Pendleton aboard, but maybe another vessel altogether, may have explored the west coast of the Antarctic Peninsula to as far south as 68°S, but there is no proof of this). **Nov. 24, 1820**: The fleet relocated at Yankee Harbor. It took a total of 50,895 sealskins between Nov. 27, 1820 and Jan. 12, 1821, which works out at precisely 1131 seals a day. If 50 men out of the 70 did the killing, that is one seal butchered every 30 working minutes by each man for 45 days. **Feb. 4, 1821**: The *Free Gift* left for home, in company with the *Frederick*. **Feb. 22, 1821**: The other ships left. All except the *Hersilia* arrived back in Stonington between April 29 and May 8, 1821. For the fate of the *Hersilia*, see that entry in this book. The sequel to this very successful expedition was the Fanning-Pendleton Sealing Expedition of 1821-22 (*see* below).

Fanning-Pendleton Sealing Expedition 1821-22. Sequel to the Fanning-Pendleton Sealing Expedition 1820-21 (*see* above). This time the fleet had 85 men, and a few changes in vessels and leading players. They knew going in that there were not many seals left in the South Shetlands, and, as it turned out, the expedition was just profitable. Ben Pendleton again commanded the expedition, and William Fanning was his second-in-command. **July 25, 1821**: The *Frederick* (once again the flagship under Pendleton), the *Alabama Packet* (under Fanning), the *Express* (under Tom Dunbar), the *James Monroe* (under Nat Palmer), the *Free Gift* (under Ben Cutler), and the *Hero* (under Harris Pendleton) left Stonington. They based at Deception Island during the austral summer of 1821-22, and did much exploration for new seal beaches. Also in the area that season was British sealer George Powell, in the *Dove*, who was looking for the Seal Islands. Powell and Palmer ran across each other at Elephant Island. **Nov. 30, 1821**: Palmer and Powell teamed up for an exporation eastward. **Dec. 6, 1821**: Palmer and Powell discovered the South Orkneys. **Jan. 30, 1822**: The fleet left Deception Island, three of them (the *Express*, the *Free Gift*, and the *James Monroe*) going straight home and arriving in April 1822. A man had been lost off the *Alabama Packet*, in the South Shetlands. The three other vessels sailed for the Pacific coast of Chile and Peru, looking for hair sealskins (not as good as fur sealskins, but still profitable). They loaded the *Frederick* with 27,000 hair skins, and she sailed for home, arriving back in Stonington on Nov. 1, 1822. The *Hero* was sold in Coquimbo, on Oct. 11, 1822, and the crew returned on the *Alabama Packet*, down the Peruvian coast looking for more fur skins, and finally got back to Stonington on June 17, 1823.

Fannings Harbor *see* **Yankee Harbor**

Fanning's Islands. Collective name for Rugged Island, Snow Island, and Livingston Island. These three islands were discovered by the crew of the *Hersilia* on Jan. 22, 1820, and named for William A. Fanning. The name Fanning's Islands became obsolete soon afterward when it was found that the the 3 islands were part of the South Shetlands.

The *Fanny*. New Bedford whaler, commanded by Daniel Nye, in South Shetlands waters in 1852-53, along with the *Congress* and the *Silas Richards*. *See* **The *Silas Richards*** for the story. After the expedition, the *Fanny* headed to Guam, and then on to Russian waters.

Punta Fantasma *see* **Phantom Point**

Cabo Faraday *see* **Cape Faraday**

Cape Faraday. 60°38' S, 45°04' W. Forms the N tip of Powell Island, in the South Orkneys. Discovered and charted by Powell and Palmer on Dec. 11, 1821, and named by Powell, presumably after Michael Faraday, the scientist. It appears on Powell's 1822 chart. It was further charted by Weddell in Jan. 1823, and named by him as Brisbane's Bluff, after Capt. Matt Brisbane. It appears as such on Weddell's 1825 chart of that expedition. However, it appears as Cape Faraday on an 1839 British chart, and on the 1933 Discovery Investigations chart (the DI re-charted it that year). It was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953, and appears as such in the 1955 British gazetteer. The Argentines were calling it Cabo Faraday as early as 1908, and that was the name accepted by the 1970 Argentine gazetteer.

Faraday Station. 65°15' S, 64°16' W. British scientific station, 11 m above sea level at Marina Point, on Galíndez Island, in the Argentine Islands, off the W coast of Graham Land. It was a geophysical observatory, and atmospheric research was done here. Originally this station was on Winter Island, built there in 1947 by FIDS as Argentine Islands Station, or Base F, on the site of the old BGLE hut (which had been destroyed in 1946 by weather, possibly by a tidal wave). **Jan. 7, 1947**: The site was occupied. **Jan. 9, 1947**: Construction began on Wordie House, the main hut, named after

James M. Wordie. **Jan. 31, 1947**: Wordie House was finished. **Feb. 25, 1947**: The *John Biscoe* arrived. **Feb. 26, 1947**: The *John Biscoe* left. **1947 winter**: Oliver Burd (meteorologist and base leader), Gordon Stock (radioman), Bert Reive and Willie Watson (handymen). **1948 winter**: Jumbo Nicholl (leader), Dave Golton (meteorologist), Bill Thomas (radioman), Frankie Buse (handyman). **Feb. 22, 1949**: The *John Biscoe* arrived with Ken Pawson and Dan Jardine, who were there for the rest of the summer season. **March 28, 1949**: The *John Biscoe* came back. **March 30, 1949**: The *John Biscoe* left. **1949 winter**: Jumbo Nicholl (base leader), Jack Reid (meteorologist), Dennis Farmer (radioman), Jock Tait (handyman). **1950 winter**: Harry Heywood (base leader), Norman Broadbear (meteorologist), Peter Starling (radioman), Jock Tait (handyman). **1951 winter**: Johnny Green (base leader), Norman Broadbear and Joe Lewis (meteorologists), Peter Starling (radioman), Jock Walker (general assistant). **1952 winter:** Norman Petts (diesel electric mechanic and base leader), Allan MacArthur and Norman Thyer (meteorologists), Bill Kelley (radioman). **1953 winter**: David Barrett (meteorologist and leader), Fred Johnson and Harold Smith (meteorologists), Bill Kelley (radioman), Derek Clarke (diesel electric mechanic). In 1953 the site for the new Faraday Station was prepared on Galíndez Island, new buildings being erected (the main one being Coronation House, named after the coronation of Queen Elizabeth that year), and occupied on May 30, 1954, when the old Winter Island base was closed (it was, however, occupied in the winter of 1960, when personnel from Base T failed to reach their base on Adelaide Island and were forced to winter-over at the old Base F — *see* **Wordie House** for the Fids who wintered-over there that year). **1954 winter**: the first base leader on Galíndez Island was Ralph Lenton (also builder, radioman, and general assistant). Other personnel: Roger Banks, Fred Byrne, Sandy Graham, Eric Salmon, Sandy Simpson, and Ash Widgery (meteorologists), Jim Buckman (radioman), Ray Tanton (diesel electric mechanic), Johnny Raymond (general assistant and carpenter). **1955 winter**: Ross Hesketh (meteorologist and leader), Ray Berry, Fred Byrne, Laurie Catherall, Ash Widgery, and Taffy Winstone (meteorologists), Jim Buckman (radioman), Neville Ogley (diesel electric mechanic), and Geoff Cumming (general assistant and builder). **1956 winter**: Norman Hedderley (meteorologist and leader), George Ibbotson, Don McNab, Ronnie Tapp, and Roger Todd-White (meteorologists), Sandy Imray (medical officer), Ozzy Connochie (radioman), Derek Skilling (diesel electric mechanic), and Gerry Cutland (general assistant and cook). **1957 winter**: David Emerson (medical officer and leader), Taffy Hughes, George Ibbotson, Mario Nantes, and Ronnie Tapp (meteorologists), Joe Farman and David Simmons (geophysicists), Mike Royle (radioman), Graham Rumsey (diesel electric mechanic), Bill Nicholls (general assistant and meteorologist), and Gerry Cutland (general assistant and cook). During IGY meteorology, geomagnetism, oceanography, and seismology were studied. **1958 winter**: Joe Farman (geophysicist and leader), Brian Giles, Malcolm Hunt, Geoff Roe, Bod Shaw, and Cyril Smith (meteorologists), David Simmons (geophysicist), Dave Jones (medical officer), Ted Clapp (radioman), Keith Bell (diesel electric mechanic), and Clive Pearson (general assistant and cook). **1959 winter**: Keith Bell (diesel electric mechanic and leader), Brian Giles, Mario Nantes, Geoff Roe, Bod Shaw, and Cyril Smith (meteorologists), Harry Agger and Chris Horton (geophysicists), Alec Cumming (medical officer), Alan Piggott (radioman), and Clive Pearson (cook). **1960 winter**: Bill Murray (surveyor and leader), Alec Gallagher, Dudley Jehan, Pete Smith, Maurice Sumner, and Bob Thomas (meteorologists), Brian Wigglesworth (met forecaster), Harry Agger and Ivor Preece (geophysicists), Brian Sparke (medical officer), Alan Piggott and Tony Quinn (radiomen), Bob Harkness (diesel electric mechanic), and Tony Haynes (cook). **1961 winter**: Bob Harkness (diesel electric mechanic and leader), Alec Gallagher, Boyd Potts, Pete Smith, and Bob Thomas (meteorologists), Ivor Preece and John Kirwan (geophysicists), Alan Piggott and Fraser Whyte (radiomen), Walter Townsend and Jim Shirtcliffe (builders), Geoff Thompson (general assistant and electronics man), and Tony Haynes (cook). **1962 winter**: Ted Grimshaw (ionosphere physicist and leader), Charles Kimber, Tony Mack, Boyd Potts, and Tony Schärer (meteorologists), Bob Lewis and John Kirwan (geophysicists), Chips Vickerstaff (ionosphere physicist), Cedric Wade (radioman), George Straughan (radar tech), Brian Porter (diesel electric mechanic), Tony Reece (carpenter), and Tony Thorne-Middleton (cook). **1963 winter**: Ricky Chinn (leader), Frank Bent, Peter Blakeley, Charles Kimber, Tony Mack, and Tony Schärer (meteorologists), Christopher Davies and Bob Lewis (geophysicists), Chips Vickerstaff and Clive Slater (ionosphere physicists), Cedric Wade (radioman), Terry Tallis (diesel electric mechanic), George Straughan (radar tech), and Rod Dean (cook). **1964 winter**: Robert Corner (physiologist, medical officer, and leader), Dave Egerton, Derek Evans, Philip Hope, Andrew Lovejoy, and Raymond Tidey (meteorologists), Christopher Davies, Trefor Jones, and Frank Stacey (geophysicists), Barry Murton and Clive Slater (ionosphere physicists), Hugh O'Gorman (radioman), Neddy Brind (radar tech), Nick Sutton (diesel electric mechanic), and Michael Galletly (cook). **1965 winter**: Raymond Tidey (meteorologist and leader), Tony Bushell, Philip Hope, David Hughes, and Jeremy Thoday (meteorologists), Trefor Jones, Ian Sadler, and Frank Stacey (geophysicists), Colin Moretti and Barry Murton (ionosphere physicists), Mike Whitbread (radioman), Robert MacNee (radar tech), Terry Tallis (diesel electric mechanic), and Kenneth Darnell (cook). **1966 winter**: David Hughes (meteorologist and leader), Brian Barnes, Tony Bushnell, John Duff, and Jeremy Thoday (meteorologists), Peter Mitchell and Peter Morgan (geophysicists), Christopher Leigh-Breese and Colin Moretti (ionosphere physicists), Ronald Diamond (radioman), Brian Walker (radar tech), Geoffrey Blanshard (diesel electric mechanic), and David-John Biggadike (cook). **1967 winter**: Brian Swift (radar tech and base commander), Phil Cotterill, Richy Hesbrook, and Ian Tyson (meteorologists), Peter Mitchell and Peter Morgan (geophysicists), John Dudeney and Christopher Jefferies (ionosphere physicists), Ronald Diamond (radioman), Graham Jones (diesel electric mechanic), and David-John Biggadike (cook). **1968 winter**: John Dudeney (ionosphere physicist and base commander), Richy Hesbrook, Lew Philp, and Ian Tyson (meteorologists), Brian Gardiner and Brian Gilbert (geophysicists), Dick Kressman (ionosphere physicist), Anthony Feenan and Bob Davidson (radiomen), Paul Burns (radar tech), David Bravington (diesel electric mechanic), and Ken Portwine (cook). **1969 winter**: David Salter (base commander), Robin Chambers, Peter Mountford, and Lew Philp (meteorologists), Brian Gilbert, Allan Woods, and Brian Gardiner (geophysicists), Dick Harris and Dick Kressman (ionosphere physicists), Twiggy Walker (radioman), David Rumble (diesel electric mechanic), and Al Wearden (cook). **1970 winter**: Allan Woods (geophysicist and base commander), Adrian Apps, Peter Kinnear, Neil MacPherson, and Roger Tiffin (meteorologists), John Davies (geophysicist), Dick Harris and John Zerfahs (ionosphere physicist), Mike Hinchliffe (radioman), Joe Hall (radar tech), Bill Atkins (diesel electric mechanic), and Al Wearden (cook). **1971 winter**: Neil MacPherson (meteorologist and base commander), John Gauntlett, Peter Kinnear, and Colin Kynaston (meteorologists), John Davies and Robert Hall (geophysicists), David Binney and John Zerfahs (ionosphere physicists), Mike Hinchliffe (radioman), Anthony Hankins (radar tech), Ronald Gill (diesel electric mechanic), and Dave Clark (cook). **1972 winter**: Anthony Keeley (meteorologist and base commander), Peter Barton, Michael Butterfield, Kenny Hughson, and David Orchard (meteorologists), Robert Hall and Keith Webber (geophysicists), Peter Fitzgerald (ionosphere physicist), Robert Wade (radioman), Stuart Urquhart (diesel electric mechanic), and Alan McManus (cook). **1973 winter**: Kenny Hughson (meteorologist and base commander), Peter Barton, Michael Butterfield, Peter Fisher, and Alex Scott (meteorologists), Ken White (geophysicist), Peter Fitzgerald and Alan Rodger (ionosphere physicists), Brian Summers (radioman), Stephen Wellington (diesel electric mechanic), and Kenneth Hunt (cook). **1974 winter**: Alex Scott (base commander and meteorologist), Jeremy Carter, Peter Fisher, and Malcolm Freedman (meteorologists), David Francis and Ken White (physicists), Bruce Moreman and Alan Rodger (ionosphere physi-

cists), Ian Bateman (radioman), David Hope (diesel mechanic), and Roy Whitfield (cook). **1975 winter**: Jeremy Carter (base commander and meteorologist), Ian Bartlett, Malcolm Freedman, and Richard Johnson (meteorologists), David Francis, Graham Whitfield, and Brian Goodale (physicists), Bruce Moreman (ionosphere physicist), Ian Bateman (radioman), David Hope (diesel mechanic), and Mike Walker (cook). **1976 winter**: Brian Goodale (base commander and physicist), Simon Taylor, Geoff Hargreaves, Ian Bartlett, and Richard Johnson (meteorologists), Clifford Shelley and Graham Whitfield (physicists), Jim Turton (ionosphere physicist), Peter Wait (radioman), Justin Hyams (diesel electric mechanic), and Mike Walker (cook). **1977 winter**: Kenn Back (base commander and meteorologist), Clifford Shelley, Michael Smith, and Graham Stott (physicists), Jim Turton and David Williams (ionosphere physicists), Alan Cheshire (radioman), James Boyle (diesel mechanic), and Peter Holroyd (cook). Known as Argentine Islands Station until Aug. 15, 1977, when it officially changed its name to Faraday. **1978 winter**: Michael John Smith (meteorologist, physicist, and base commander), Mike Brettle, John Lewis, and Barry Gardiner (meteorologists and physicists), Allen Saunders (meteorologist), Clive Soutar and David Williams (ionosphere physicists), Andrew Hawkins (radio operator), Philip O'Brien (diesel mechanic), and Peter Holroyd (cook). **1978-79 summer**: Michael John Smith (base commander). **1979 winter**: John Nutt (builder and base commander), David Forsyth, Kevin Yallup, William Kerr, and Mike Brettle (meteorologists and physicists), Allen Saunders (meteorologist), John Moore and Kevin Byrne (ionosphere physicist), Andrew Hawkins (radio operator), Robert Ashley and Graeme Fergusson (builder), Timothy Nettleship (electrician), and Bob Bowler (diesel mechanic). **1980 winter**: Martin Baker (base commander), William Kerr, Peter Naylor, Neil Wickens, and Kevin Yallup (meteorologists and physicists), Timothy Newberry (meteorologist), Barry Butler and John Moore (ionosphere physicists), Andrew Denley (radio operator), Terry Dickinson (engineer), Alan Stevens, Barry Wheeler, and Keith Larratt (carpenter), Thomas Totten (electrician), Douglas Hume (diesel mechanic), Chris Jeffes (general assistant), and John McIlwraith (cook). **1980-81 summer**: John Nutt (base commander). **1981 winter**: Chris Jeffes (general assistant and base commander), Peter Naylor, Peter Salino, Neil Wickens, and Andrew Knox (meteorologists and physicists), Timothy Newberry (meteorologist), Len Airey and Barry Butler (ionosphere physicists), Ambrose Morgan (radio operator), Neil Shaw (engineer), Ian Davies (builder), Robert Banner (electrician), Geoffrey Leathers (diesel mechanic), and Geraint Hughes (cook). **1981-82 summer**: Martin Baker (base commander). **1982 winter**: Len Airey (ionosphere physicist and base commander), Justin Koprowski, Kevin Ockleton, Peter Salino, and Andy Sweetman (meteorologists and physicists), Martin Herbert (meteorologist), Colin Morrell (ionosphere physicist), Graham Hurst (medical officer), Ambrose Morgan (radio operator), Ian Davies (builder), Michael Burke (electrician), John Coll (diesel mechanic), and Roy Whitfield (cook). **1982-83 summer**: Martin John Baker (base commander). **1983 winter**: Mark Lewis (base commander), Peter Cotton, Justin Koprowski, Andy Sweetman, and David White (meteorologists and physicists), Martin Herbert (meteorologist), Michael Evans (ionosphere physicist), Brian Stanswood (radio operator), Andy Turner (builder), Michael Burke (electrician), Robert Cumberbirch (diesel mechanic), and Roy Whitfield (cook). **1983-84 summer**: Mark Lewis (base commander). **1984 winter**: Peter Cotton (meteorologist, physicist, and base commander), Robert Dixon and David White (meteorologists and physicists), Lewis Griffiths (meteorologist), Michael Evans (ionosphere physicist), Harry Horsley (paramedic), Mark Trotman (radio operator), Paul Humphries (builder), Allan Wood (electrician), Robert Cumberbirch (diesel mechanic), and Michael Rooksby (cook). **1984-85 summer**: Peter Cotton (base commander). **1985 winter**: Peter Stark (base commander), Robert Dixon and David Ferguson (meteorologists and physicists), Lewis Griffiths (meteorologist), Martin Dowson and Jonathan Buckingham (ionosphere physicist), Mark Clilverd (VLF technician), David Cutland (paramedic), Mark Trotman (radio operator), Dewi Edwards (builder), Allan Wood (electrician), Steve Eadie (diesel mechanic), and Michael Rooksby (cook). **1985-96 summer**: Peter Stark (base commander). **1986 winter**: Martin Dowson (iono and geo tech, and base commander), Baden Sparkes and David Ferguson (meteorologists and physicists), Jonathan Buckingham (iono and geomag technician), Mark Clilverd (VLF technician), Clive Harker (medical officer), Dewi Edwards (builder), David Mitchell (electrician), Steve Eadie (diesel mechanic), and Neil Merrick (cook). **1986-87 summer**: Peter Stark (base commander). **1987 winter**: David Mitchell (electrician and base commander), Baden Sparkes and Steven Welsh (meteorologists and physicists), Sean Crane and John Williams (iono and geomag technician), Graham Harvey (medical officer), Ian Hadden (radio operator), Crofton McDermott (builder), Keith Filmer (diesel mechanic), and Neil Merrick (cook). **1987-88 summer**: Peter Stark (base commander). **1988 winter**: Sean Crane (ionosphere physicist and base commander), Steven Welsh and Peter Kirsch (meteorologists and physicists), John Robertson (VLF physicist), John Williams (iono and geomag technician), Gregor Venters (medical officer), Peter Lomax (radio operator), Crofton McDermott (builder), Mark Cranney (electrician), Pete Rowe (diesel mechanic), and Martin Leader (cook). **1988-89 summer**: Peter Stark (base commander). **1989 winter**: Mark Cranney (electrician and base commander), Martin Cotterell and Peter Kirsch (meteorologists and physicists), John Robertson (VLF physicist), Thomas Rolfe and Timothy Hunt (iono and geomag technician), Alistair Leonard (medical officer), Peter Lomax (radio operator), James Whiffen (builder), Alasdair Gilbertson (diesel mechanic), and Martin Barber (cook). **1989-90 summer**: Peter Radford Stark (base commander). **1990 winter**: Alasdair Gilbertson (diesel mechanic and base commander), Iain Goodfellow (meteorologist and physicist), Derek Oldham (meteorologist ozone technician), Timothy Hunt and Thomas Rolfe (iono and geomag technicians), Stephen Evans (medical officer), Billy Gallacher (radio operator), Kevin Barber (builder), Michael Hirstwood (electrician), and Bernard Hoodless (cook). **1990-91 summer**: Peter Stark (base commander). **1991 winter**: Iain Goodfellow (meteorologist, physicist, and base commander), Simon Filer (meteorologist and physicist), John Croall (medical officer), Gavin Taylor (radio operator), Stuart Trower and Stephen Woods (electrical engineers and physicists), Kevin Barber (builder), Michael Hirstwood (electrician), Steven Jones (diesel mechanic), and Ian Townsend (cook). **1991-92 summer**: David Mitchell (base commander). **1992 winter**: Steven Jones (diesel mechanic and base commander), Simon Filer and Colin Wright (meteorologists and physicists), Stuart Trower and Stephen Woods (electrical engineers and physicists), Jonathan Dixon (medical officer), Gavin Taylor (radio operator), Graham Goodwin (builder), Anthony Barton (electrician), and Ian Townsend (cook). **1992-93 summer**: David Mitchell (base commander). **1993 winter**: Graham Goodwin (builder and base commander), Steven Cuthbertson and Colin Wright (meteorologists and physicists), James Mead and Simon Allder (electrical engineers and physicists), Andrew Rowlands (medical officer), Simon Townsend (communications manager), Anthony Barton (electrician), John Taylor (diesel mechanic), and Steven Whetnall (cook). **1993-94 summer**: Michael Ernest Dinn (base commander). **1994 winter**: Duncan Haigh (meteorologist, physicist, and base commander), Steven Cuthbertson (meteorologist and physicist), Simon Allder and James Mead (electrical engineers and physicists), Fionnbar Lenihan (medical officer), Simon Townsend (communications manager), Simon Almond (builder), Dave Thomas (electrician), John Taylor (diesel mechanic), and Steven Whetnall (cook). **1994-95 summer**: Michael Ernest Dinn (base commander). **1995 winter**: Brian Mallon (base commander), Duncan Haigh and Frank Hindle (meteorologists and physicists), Andrew Date (electrical engineer and physicist), Rory O'Connor (medical officer), Steven Cuthbertson (communications manager), Simon Almond (builder), Simon Higgins (electrician), Nigel Blenkharn (diesel mechanic), and Philip Crooks (cook). On May 19, 1995 Wordie House was designated Historic Site #62. Faraday was occupied continuously by

FIDS and BAS for 49 years and 31 days (a record) until it closed on Feb. 6, 1996, on which date the site was transferred to the Ukrainians, and re-named Vernadsky Station. Personnel from Vernadsky now maintain Wordie House. The BAS have periodically used two refuge huts, one, an Argentine refugio on Petermann Island, and the other Rasmussen Refuge (q.v.).

Il Faraglione. 74°43' S, 164°07' E. A granitic rock, 7 m in diameter, and rising to 8 m above sea level, about 50 m offshore, on a sea bed 15 m deep, 2.7 km E of Enigma Lake, and 2.5 km S of Mario Zucchelli Station, in Terra Nova Bay, Victoria Land. Discovered by Carlo Baroni in 1987, it was named by the Italians on July 17, 1997, for a similar feature off the isle of Capri (in Italy). The name means "the stack" in Italian.

Mount Faraway. 79°12' S, 28°49' W. A prominent, snow-covered mountain, rising to 1175 m (the British say 1180 m), marking the S extremity of the Theron Mountains (it is the highest peak in those mountains), in Coats Land. Discovered and surveyed by BCTAE in Dec. 1956, and so named by them because, while sledging toward it, they never seemed to get any closer to it for days. UK-APC accepted he name on July 7, 1959, and US-ACAN followed suit in 1960. The Norwegians call it Farawayfjellet (which means the same thing), and every other country with a vested interest has translated it in a similar fashion, according to their language.

Faraway Nunataks. 61°57' S, 57°40' W. Two small nunataks at the N end of Moby Dick Icefall, Destruction Bay, on the E side of King George Island, in the South Shetlands. Named by the Poles in 1984, to signify their distance by helicopter from Arctowski Station.

Farawayfjellet *see* **Mount Faraway**

Farbo Glacier. 75°50' S, 141°45' W. A tributary glacier flowing northeastward into Land Glacier, 13 km W of Mount McCoy, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1972, for Richard Riley Farbo (b. 1933), USN, equipment operator who wintered-over at McMurdo in 1959 and 1965, and at Pole Station in 1969.

Pointe Farewell *see* **Farewell Rock**

Roche(r) Farewell *see* **Farewell Rock**

Roches Farewell *see* **Farewell Rock**

Farewell Island *see* **Farewell Rock**

Farewell Mountain. 72°45' S, 160°30' E. A large, isolated mountain mass on the W margin of Rennick Glacier. So named by the Northern Party of NZGSAE 1962-63, partly because they ran out of time and could not visit it, and partly in keeping with Welcome Mountain, about 60 km to the N.

Farewell Rock. 63°52' S, 61°01' W. A rock in water, 0.8 km long (the Chileans say 2.5 km), rising to an elevation of 160 m above sea level, and completely covered in snow except for its high, black rock coastline, off the SW end of Spert Island, and 10 km (the Chileans say 8 km) NW of Skottsberg Point (the extreme SW point of Trinity Island), in the Palmer Archipelago. Roughly charted by Hoseason in 1824, and, together with the line of dangerous rocks extending out toward the NW and N for about 3 km, was named Farewell Rocks (the reason for the naming is lost to history). As such, it appears on Powell's chart of 1828, and on an 1839 British chart. FrAE 1837-38 charted the main rock as Roche Farewell, in 1838, but on their 1842 map it appears erroneously as a point, Pointe Farewell. It appears on an 1861 Spanish chart as Roca Farewell, and as Farewell Rock on British charts of 1864 and 1921. However, the rock and its outliers together appear as Roches Farewell on the 1902 chart prepared by BelgAE 1897-99, and the main rock appears on Charcot's 1912 map as Rocher Farewell. US-ACAN accepted the name Farewell Rock for the main rock, in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a 1961 British chart, but appears as Farewell Island on a 1961 U.S. Hydrographic Office chart. The Chileans and Argentines both call the main rock Isla Despedida (i.e., "farewell island").

Farewell Rocks *see* **Farewell Rock**

Isla Farías *see* **Challenger Island**

Punta Farias *see* **Skottsberg Point**

Mount Farley. 86°35' S, 152°30' W. A conspicuous rock peak, rising to 2670 m (the New Zealanders say 2133 m), the largest of a group of peaks 5 km E of McNally Peak, at the W side of Scott Glacier, between the head of that glacier and the head of Bartlett Glacier, in the Queen Maud Mountains. Discovered by Quin Blackburn's party in Dec. 1934, during ByrdAE 1933-35. Named by Byrd in 1935 for James Aloysius "Jim" Farley (1888-1976), U.S. Postmaster General under Roosevelt, 1933-40, and (later) undisputed Democratic party boss in New York. US-ACAN and NZ-APC both accepted the name.

Farley Massif. 70°13' S, 65°48' E. A massif, 1.5 km (the Australians say 3 km) N of Mount Jacklyn, in the Athos Range of the Prince Charles Mountains. Named by ANCA for John A. "Fosdick" Farley, surveyor who wintered-over at Mawson Station in 1964. US-ACAN accepted the name in 1967.

The *Farley Mowat*. A 648-ton, 52.4-meter ship, built by Mjellem & Karlsen, in Bergen, in 1957, as the Norwegian Fisheries research and enforcement vessel *Johan Hjort*. She went through various owners until she was acquired in Aug. 1996, in Edinburgh, by the Sea Shepherd Conservation Society, and renamed the *Sea Shepherd III*. In 1999 she was renamed the *Ocean Warrior*, and in 2002, the *Farley Mowat*, after Canadian writer and conservationist Farley Mowat (b. 1921). The flagship of their fleet, she was used by the Society to monitor infractions of the international fishing agreements. Any thoughts that conservation is for the timid must be dispelled by the fact that the Society claims that this vessel has sunk 10 ships.

Farman, Joseph Charles "Joe." b. 1930, Norwich. He graduated from Cambridge in mathematics and natural sciences, worked briefly in the aerospace industry, and, in 1956, joined FIDS as a geophysicist, wintering-over as geophysicist and senior physicist at Base F in 1957 and 1958, the second year also as base leader. In 1960 he was in London and Edinburgh, with Chris Horton and Harry Agger, writing up his Antarctic reports. He became head of the geophysics section at BAS, and, in 1984, he and colleagues discovered an ozone hole above the Antarctic. He was still with BAS in 1994, with the European Ozone Research Coordinating Unit, and now lives in Cambridge.

Farman Highland. 74°08' S, 61°30' W. A relatively smooth, ice-covered upland, rising to about 750 m, and forming the E part of the Hutton Mountains, between Wright Inlet and Keller Inlet, on the Lassiter Coast of Palmer Land. Mapped by USGS from USN air photos taken between 1961 and 1967. Named by UK-APC on May 13, 1991, for Joe Farman. US-ACAN accepted the name.

Farman Nunatak. 64°25' S, 61°07' W. Rising to 655 m, W of Mount Morton, in the Blériot Glacier, on the SE side of Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from aerial photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Portal Point between 1956 and 1959. Named by UK-APC on Sept. 23, 1960, for Henry Farman (1874-1958), Anglo-French aviator and aircraft designer who carried the first airplane passenger, in 1908. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Farmer, Dennis G. b. India. After service in the Merchant Navy during World War II, he was living in Enfield, in North London, when he joined FIDS in 1947, as a radio operator. He sailed from Tilbury on the *John Biscoe*, on Dec. 19, 1947, bound for Montevideo, and wintered-over at Base G in 1948, and at Base F in 1949. In 1965 he was living in Cheshunt, Hunts.

Farmer Glacier. 81°47' S, 159°48' E. Flows NW into Starshot Glacier, between Mount McKerrow to the N and Thompson Mountain to the S, at the S end of the Surveyors Range. Named by both US-ACAN and NZ-APC, for Douglas William Farmer, New Zealand technician working on the geomagntic project at Hallett Station during the winter of 1960. US-ACAN accepted the name in 2003, and NZ-APC on Feb. 27, 2003.

Farmer Island. 76°38' S, 147°04' W. An ice-covered island, 22 km long, 10 km N of Radford Island, in the Sulzberger Ice Shelf, along the coast of Queen Maud Land. First roughly mapped by USAS 1939-41. Named by US-ACAN in 1966, for Floyd L. Farmer, USN, senior ship fitter on the *Glacier* here in 1961-62.

Farnell Valley. 77°53' S, 160°39' E. An ice-free valley, 1.5 km long, a tributary to Beacon Valley, descending to it from the SE side, and leading toward Ferrar Glacier, in southern Victoria Land. Named by US-ACAN in 1964, for

James B.H. Farnell, who assisted in supplying field parties at McMurdo in 1960. NZ-APC accepted the name.

Roca Faro *see* **Column Rock**

Farquhar, Gordon Abraham. b. July 19, 1932, Canada, son of Scottish laborer Abraham Farquhar and his wife Lily. Back in Scotland from 1934, and raised in Musselborough, near Edinburgh. He joined FIDS in 1954, as a radio operator, and wintered-over at Base Y in 1955, and at Port Lockroy Station in 1957. In 1960 he had a London address, and on Jan. 6, 1969, left Southampton on the *Canberrra*, bound for Australia under the assisted passage scheme. In 1970, he is reported to have been a lecturer at the Kalgoorlie School on Mines, in Western Australia.

Farquharson Nunatak. 64°30' S, 59°42' W. Rising to about 22 m above sea level, 2.5 km NW of Mount Lombard, on Sobral Peninsula, on the Nordenskjöld Coast, on the NE coast of the Antarctic Peninsula. Named by UK-APC on May 13, 1991, for Geoffrey W. Farquharson, BAS geologist who worked in this area in 1979-80 and 1980-81 (he did not winter-over). US-ACAN accepted the name.

Farr Bay. 66°35' S, 94°23' E. A bay, 11 km wide, just E of Helen Glacier, on the coast of Queen Mary Land, in East Antarctica. Discovered in Nov. 1912 by the Western Base Party of AAE 1911-14, and named Depot Bay by Mawson. He later named it for Australian Dr. Clinton Coleridge Farr (1866-1943), the first professor of physicals at Canterbury College, in NZ, and a member of the expedition's advisory committee. US-ACAN accepted the name in 1947.

Farrant, Arthur Henry. b. Sept. 22, 1913, Wandsworth, London, son of Samuel Francis Farrant and his wife Ada Elizabeth Webb. Arthur followed his father as an employee of the General Post Office, but in 1951 began a startling rise from obscurity when he joined FIDS, as a surveyor, and wintered-over at Base B (Deception Island) in 1952 and 1953. On Nov. 17, 1953, the day the relief party came in on the *John Biscoe*, he went to the north side of the building, and, on the ice, shot himself in the head with a .45 pistol. Base leader Ian Clarke had just gone on board the *Biscoe* to give his season's report to Capt. Bill Johnston (skipper of the *Biscoe*), but everyone on base heard the shot, and thought it was a door slamming. Newly-arrived radioman Doug Mumford found Farrant, lying dead in a pool of blood. An investigation conducted by Ian Clarke and Capt. Bill found nothing to indicate why Farrant had done it. They looked specifically for a "dear John" letter from a fiancée, but never found one. It was assumed that that was it, and that Farrant had destroyed the letter before he shot himself. And that may be. There was certainly nothing in his behavior during the winter that gave any sign of his impending doom, and Ian Clarke would have picked up on it if there had been. There was one thing, though. Farrant had not anticipated spending a second winter in Antarctica after the 1952 one. At that point, two things happened. FIDS in Stanley ordered him to proceed to Base G, to be the diesel electric mechanic and base leader there for the 1953 winter, but the lads at Admiralty Bay didn't want him. In addition to that, the engines at Base B demanded an engineer with more skill than the scheduled Barry Golborne had, and Farrant returned to Base B, again on orders from Stanley. Golborne went to Base G. Antarctic winters can do strange things to people, and their reactions to them can be very varied. The 1953 winter was very stressful for everyone at Deception, the difficult conditions, the very hard work on the engines, and the Argentine crisis. Who knows? Farrant was 40, unmarried, worked for the Post Office, lived with his mother, and was trying to save enough money to make her comfortable. It may be that he had nothing to go back to. He was the only British person buried in the old Norwegian whaling cemetery at Whalers Bay. It took over 2 weeks to bury him. The permafrost was so impenetrable that a 6-foot grave was out of the question, so they had to dig a 4-foot deep trench and put rocks over him.

Lake Farrell. 68°32' S, 78°19' E. A small lake about 0.8 km SE of the E end of Ekho Lake, on Breidnes Peninsula, in the Vestfold Hills. It is an important landmark on the route from Davis Station to Platcha. Named by ANCA for Leo M. Farrell, who wintered-over as weather observer at Davis Station in 1970.

Mount Farrell. 78°21' S, 85°03' W. Rising to over 2600 m, just NW of Dater Glacier, and about 21.5 km E of Mount Shear, in the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Lt. (jg) Lawrence J. Farrell (b. 1934), USN, of Pensacola, Fla. (*see* **Deaths**, 1959).

Farrington, James Edward Butler Futtit "Fram." b. April 6, 1908, Dunmurry, co. Antrim, Ireland, son of a clergyman. As a boy he was known as Butler, but after a holiday to Framlingham-on-Sea, he became known as Fram. As a toddler he went to see the *Titanic* under construction, at Belfast. From 1921 he was in Yorkshire, and tried to enlist in the Army but was turned down due to color blindness. But he became a merchant marine radioman in 1929, and served with the P & O Line, eventually, in 1935-36, working as radio operator on the *William Scoresby* during the Discovery Investigations. He was on the *Scoresby* again in 1936-37, and 1937-38. He also produced the *Pelagic News*, the ship's journal. He married Eileen, and in 1939 became an Air Ministry inspector, based in Manchester. He was involved in hush-hush work to do with radar at Metro-Vickers, when he was selected for Operation Tabarin, being the radioman at Port Lockroy Station in the winter of 1944. Expecting to go to Hope Bay (the new Base D) for the 2nd winter (1945), he instead went to Deception Island (Base B). In 1946 he became a scientific officer with the Telecommunications Research Establishment, at Malvern, and in 1948 moved to Harwell, to the new electronics division at the Atomic Energy Research Establishment, from which he retired in 1975. In 1989 he moved back to Northern Ireland, and died there, at Lisburn, on Oct. 4, 2002.

Farrington Island. 67°15' S, 59°42' E. A small island, 6 km (the Australians say 9 km) NNE of Couling Island, and 2.5 km W of the Klakkane Islands, in the William Scoresby Archipelago, off the coast of Kemp Land. Discovered and named by the personnel on the *William Scoresby* in Feb. 1936, for Fram Farrington. US-ACAN accepted the name in 1947.

Farrington Ridge. 73°35' S, 94°20' W. An isolated linear ridge, 2.5 km long, and with continuous rock exposures along the crest, 3 km WNW of the Forbidden Rocks, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61, and named by them for Lt. Robert L. "Bob" Farrington, USN, co-pilot of the LC-47 Dakota which made the first landing in the Jones Mountains, on Dec. 9, 1960. He was also officer-in-charge of VX-6 at Byrd Station in 1961-62. US-ACAN accepted the name in 1963.

Farwell Island. 72°51' S, 91°05' W. An ice-covered island, 61 km long and 16 km wide, between McNamara Island and Dendtler Island, in the E section of the Abbot Ice Shelf. It was positioned by parties from the *Glacier* and the *Staten Island* in Feb. 1961, mapped by USGS from this information and from 1966 USN air photos, and plotted by them in 72°49' S, 91°10' W. Named by US-ACAN in 1968, for Capt. Arthur Frederick "Fred" Farwell, Jr. (b. July 11, 1915, Chicago. d. Feb. 18, 2006, Jacksonville, Fla.), chief of staff to the commander, U.S. Naval Support Force, Antarctica, during OpDF 68 (i.e., 1967-68) and OpDF 69 (i.e., 1968-69). It has since been replotted. Capt. Farwell's wife, Marlyn, has the distinction of being the first U.S. Navy wife to visit Antarctica (*see* **Women in Antarctica**).

Fasettfjellet. 72°33' S, 2°59' W. A mountain rising to 2425 m, in Regulakjeda, N of Flogstallen, in the NE part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them (name means "the facet mountain"). US-ACAN accepted the name, without modification, in 1966.

Fashion Lane. A particularly treacherous area full of crevasses, between 183.5 and 190.9 miles out of Little America V, on the trail to Byrd Station, the trail blazed by Merle Dawson's Army-Navy team in Nov. 1956. Named in early Dec. 1956 by the team, after the flags used to mark the safe edges of the lane. It took them 2 weeks to get through a 30-foot-wide, 7½-mile-long area (apparently they would not go around it).

Fast ice. Sea ice that is attached to land.

Fastook Glacier. 79°02' S, 156°45' E. A southern tributary to Mulock Glacier, about 30 km long and 8 km wide, it flows N from the N side of the Longhurst Plateau in the Cook Mountains, between Butcher Ridge and Finger Ridges, in the Transantarctic Mountains. Named by US-ACAN in 2001, for James L. "Jim" Fastook (b. Nov. 23, 1949), of the department of computer sciences and Institute for Quaternary Studies at the University of Maine at Orono. He was a USAP investigator of ice streams, ice shelves, and ice sheets over a 20-year period beginning about 1978.

Faulkender Ridge. 75°02' S, 115°00' W. An ice-covered ridge, 20 km long, W of Horrall Glacier, in the NW part of the Kohler Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1967, for DeWayne J. Faulkender (b. 1934), USGS topographic engineer here in 1966-67 with the Marie Byrd Land Survey party.

Faulkner, Michael James "Mike." b. Sept. 5, 1930, Portsmouth, son of Royal Navy telegraphist Kenneth John Faulkner and his wife Edith May Simmonds. As a very young child he moved to Chatham, and then to Shanghai, where his father was radio operator in the British consulate from 1936 to 1942. The family was brought to Mozambique on a Japanese liner, and from there to Liverpool, and on to Newport Pagnell, Mike's father working as a radio interceptor at nearby Bletchley Park. In late 1947 Mike went to work for the Royal Aircraft Establishment at Farnborough, and was with them until he retired in 1991. In those years he did other things, however. He was in the Navy from 1948 to 1950, based at Portsmouth, and in 1953 applied to FIDS. After training in ionospherics at Inverness, and at the Department of Scientific and Industrial Research, at Slough, he left London on a chartered vessel, bound for the Falklands, and took the *John Biscoe* from there, as the ionosphere physicist who wintered-over at Port Lockroy Station in 1954. After his tour he returned to Port Stanley, then on to Montevideo, where he caught the *Argentina Star* bound for London, arriving on Feb. 15, 1955, in company with Ron Mottershead, John Standring, and Barry Golborne. In 1962 he married Christine Mary Ackrill, and settled in Farnborough.

Faulkner Escarpment. 86°12' S, 156°00' W. An ice-covered escarpment with a crest line at about 3048 m above sea level, trending for about 50 km in a general N-S direction, and forming the E edge of the Nilsen Plateau and Fram Mesa, in the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35, and named by Byrd for his cousin Charles James Faulkner, Jr. (b. 1877), chief counsel of Armour & Co., patrons of the expedition. US-ACAN and NZ-APC both accepted the name.

Faulkner Nunatak. 69°36' S, 71°42' W. A distinctive nunatak, rising to about 200 m above sea level, just W of Beagle Peak, in the Lassus Mountains, at the head of Lazarev Bay, in the NW part of Alexander Island. It appeared in aerial photos taken by USN in 1966. Surveyed from the ground by BAS personnel from Fossil Bluff Station in 1975-76. Named by US-ACAN in 1978, for Harold T. Faulkner, USN, Leading Chief of the VXE-6 Photo Division, during OpDF 1969 (i.e., 1968-69). UK-APC accepted the name on June 11, 1980.

The Fault. 77°40' S, 166°44' E. A fault in the cliff face of Turks Head, Erebus Bay, Ross Island. Named by Frank Debenham when making his plane table survey in 1912, during BAE 1910-13. It appears in the 1958 NZ provisional gazetteer.

Fault Bluff. 79°18' S, 157°38' E. A notable rock bluff, rising to 2320 m (the Australians say 2345 m), about 14 km NE of Mount Longhurst, in the Cook Mountains, in the Transantarctic Mountains. Discovered in 1957-58 by the Darwin Glacier Party of BCTAE, and named by them for a geological fault here. US-ACAN accepted the name in 1962.

Fault Pass. 63°25' S, 57°00' W. An ice passage along a fault (hence the name given by the Poles on Sept. 1, 1999), between Mount Flora and The Pyramid, leading from Buenos Aires Glacier to Kenney Glacier, at Hope Bay, Trinity Peninsula.

Fauna. Animal life (not including human), of which there is not much in Antarctica, not on the ice anyway — but there is plenty in the sea. All Antarctic life is, perforce, cold-adapted. In the prehistoric period, however, there was abundant land life, as temperatures were tropical in those days. In the Beacon Sandstone formation, for example, there are many fossils, including large reptiles such as Lystrosaurus, and amphibians in Triassic Age rocks. Nowadays, though, native land fauna is wholly invertebrate (there are about 150 species of invertebrates in Antarctica), and they are all very small. The macrofauna consists entirely of arthropods. There are also 2 species of beetles, which may well be alien imports. George Meyer discovered the first Antarctic insects — springtails (q.v.), in 1959. The microfauna of Antarctica consists of heliozoans, rotifers, tardigrades, nematodes, ciliate protozoans, foraminifera, radialaria, etc. The Antarctic is a haven for birds (q.v.). The mammals are all marine, and include dolphins, seals, whales, and the occasional porpoise (see all these entries). Also in the sea are plankton, krill, fish, squid, cuttlefish, sessile hydrozoans, coral, sponges, bryozoans, pycnogonids, isopods, worms, echinoids, crustaceans, and mollusks (qq.v.). Imported animals have included dogs, goats (Ross took one named Billy on the *Erebus*), cats, sheep, chickens, and pigs. Scott's last expedition took a blue cat that had been mailed to the expedition in NZ, as well as a guinea pig, and a squirrel that had come from Cecil Rhodes's estate.

Islotes Faure *see* **Faure Islands**

Pasaje Faure *see* **Faure Passage**

Faure, Alfred. b. 1925. French meteorologist. Leader of the French Polar Expedition of 1959-61, and hence leader of the 1960 wintering party at Dumont d'Urville Station. In 1961-62 and 1962-63 he led the annual French expedition to the sub-Antarctic islands, and wintered-over as base leader at Îles Crozet in 1964. He also led the part of the French Polar Expedition to the sub-Antarctic islands in 1966-67. He died in 1968.

Fauré Inlet. 72°37' S, 70°48' W. An ice-filled inlet off the George VI Sound, on the S side of Monteverdi Peninsula, in the SW part of Alexander Island. Discovered and first charted by Ronne and Eklund during USAS 1939-41. Mapped by BAS cartographers from U.S. Landsat images taken in Jan. 1973, and named by UK-APC on Dec. 8, 1977, for French composer Gabriel Fauré (1845-1924). It appears in the 1980 British gazetteer, and on a British chart of 1984. US-ACAN accepted the name.

Faure Islands. 68°06' S, 68°52' W. A group of rocky islands and reefs, 5 km in extent, 32 km SW of Cape Alexandra (the SE end of Adelaide Island), in the N part of Marguerite Bay, S of Base T. They include Dismal Island, Lurker Rock, and Pipkin Rock. Discovered and charted in Jan. 1909, by FrAE 1908-10, and named by Charcot as the Îles Maurice Faure, for Émile-Louis-Maurice Faure (1850-1919; known as Maurice Faure), French scholar and statesman. The name appears as Maurice Faure Islands on British charts of 1914 and 1948. USAS 1939-41 incorrectly surveyed it as one island, and called it Maurice Faure Island, and that is how it appears on a 1942 USAAF chart. The group appears on a 1946 Argentine map as Islas Mauricio Faure, but incorrectly plotted in 67°57' S, 69°15' W. However, two Argentine charts, one from 1949 and one from 1956, show the group (or it may be the Kirkwood Islands; it is unclear) as Islotes Harriague, named for Capt. Silvano Harriague (q.v.). A 1949 Argentine chart shows them as Islotes Maurice Faure, but incorrectly plotted in 68°00' S, 69°05' W. In 1949 Fids from Base E surveyed the group. US-ACAN accepted the name Faure Islands in 1950, although a 1956 U.S. Hydrographic Office chart shows them as Maurice Faure (Faure) Islands. A French chart of 1954 shows them as Îlots Maurice Faure. The group appears as Islotes Faure on an Argentine chart, and on another of their charts, from 1957, it appears the same way, but is incorrectly plotted in 68°00' S, 69°07' W. A 1953 Argentine chart, however, shows the group as Islotes Mauricio Faure. In 1959 the Argentine government accepted the name Islotes Marinero Ciotti, named for a sailor who died aboard the Argentine hydrographic ship *Madryn* in 1942-43 (this ship was not in Antarctic waters), and that is how the group appears on a 1961 Argentine chart. However, a 1960 Argentine chart quite clearly shows the Kirkwood Islands with this name, and, indeed, that was the name chosen by the 1970 Argentine gazetteer to be their name for the Kirkwood Islands. The Faure Islands appear as just Marinero Ciotti on a 1963 chart,

but, in the end, the name chosen by the 1970 Argentine gazetteer was Islotes Faure, and with the correct coordinates. On March 31, 1955, UK-APC accepted the name Faure Islets, not accepting the American definition until July 7, 1959, and, so, the group appears on a British chart of 1961, as Faure Islands. The name Islotes Maurice Faure was the one chosen for the 1974 Chilean gazetteer.

Faure Islets *see* **Faure Islands**

Faure Passage. 68°14' S, 68°55' W. A marine channel running NW-SE between the Faure Islands and the Kirkwood Islands, in Marguerite Bay, off the W coast of Graham Land. Named Pasaje Faure by the Argentines, in association with the islands. The name was later translated by UK-APC on Dec. 20, 1974, after an RN Hydrographic Survey in 1973 from the *Endurance*. US-ACAN followed suit with the name Faure Passage, in 1975. It appears as such on a 1983 British chart.

Faure Peak. 85°42' S, 128°35' W. Rising to 3940 m, 5.5 km E of Mount Minshew, along the N side of the Wisconsin Plateau, in the Wisconsin Range of the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1966, for Gunter Faure (b. May 11, 1934), leader of the Ohio State University geological party here in 1964-65.

Fäustlingsporn. 71°29' S, 163°02' E. A spur, S of Mount Bradshaw, in the Bowers Mountains. Named by the Germans.

Faux Cap Renard *see* **False Cape Renard**

Favé Island. Somewhere in the W part of the Wilhelm Archipelago. It cannot yet be mapped among the many small, ice-capped islands in the aerial photos of the area.

Favela Rocks. 76°12' S, 145°21' W. A group of rocks at the NW end of the Phillips Mountains, 6 km NW of Mount June, in the Ford Ranges of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Rafael Favela, Jr., USN, equipment operator who wintered-over at Byrd Station in 1967.

Picos Faverio. 64°16' S, 62°26' W. A group of peaks to the SW of Mount Parry, in the central part of the W coast of Brabant Island, in the Palmer Archipelago. Named by the Chileans for Maj. Enrique Faverio Moroni, head of the Army's Antarctic section, who was in Antarctica on the *Maipo*, during ChilAE 1953-54. The Argentine call this feature Picos Goff.

Favreau, Louis. b. Aug. 7, 1823, Toulon. Cabin boy on the *Astrolabe* during FrAE 1837-40.

Favreau Pillar. 71°57' S, 171°07' E. A pillar rock in water, close E of Foyn Island, in the Possession Islands. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1963. Named by US-ACAN in 1969, for Robert D. Favreau, U.S. Marines, VX-6 navigator on the flight which photographed this feature on Jan. 18, 1958.

Fazekas Hills. 83°08' S, 163°10' E. Rugged, ice-free hills, trending in a N-S direction for about 14 km, just E of Mount Oona, on the E side of Lowery Glacier, in the Queen Elizabeth Range. Named by US-ACAN in 1966, for Stephen P. Fazekas, Sr. (b. Oct. 18, 1930. d. May 21, 1994, Hollywood, Fla.), U.S. meteorologist who wintered-over at Pole Station in 1958.

Mount Fazio. 73°23' S, 162°48' E. An ice-free mountain, rising to 2670 m, and marking the SW end of Tobin Mesa, in the Mesa Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for William Z. Fazio, USN, helicopter crew member in Antarctica for OpDF 66 (i.e., 1965-66), OpDF 67 (i.e., 1966-67), and OpDF 68 (i.e., 1967-68).

Monte Fé *see* **Mount Faith**

Fearn Hill. 67°47' S, 62°47' E. A small, detached conical hill about 2 km NW of Mount Ward, in the North Masson Range, and separated from the main massif by a small col containing a glacial lake (Lake Lorna). The peak is clearly visible standing out from the main massif to parties using the corridor between the Masson Range and the David Range. Discovered and climbed for the first time in Jan. 1956, by an ANARE party led by John Béchervaise. Named by ANCA, for Lorna Fearn, John Béchervaises's wife (*see also* **Lake Lorna**).

Mount Fearon. 75°05' S, 161°42' E. Rising to 1140 m, at the E side of Woodberry Glacier, 10 km NW of Mount Priestley, in the Prince Albert Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Colin Edwin Fearon, NZ biologist at McMurdo, 1962-63.

Mount Feather. 77°57' S, 160°21' E. An immense mountain with a broad, flattish, dome-shaped summit rising to 3010 m (formerly measured at 2985 m), on the N side of Skelton Névé, between Lashly Glacier and the head of Ferrar Glacier, just N of Mount Lister, at the S extremity of the Quartermain Mountains, in southern Victoria Land. It is cliffed by the main stream of Skelton Glacier on the south. A long ridge runs toward Tabular Mountain, and from this another ridge runs NE toward Beacon Heights. Named by BNAE 1901-04, for Taff Feather. US-ACAN accepted the name in 1961, and NZ-APC followed suit.

Feather, Thomas Alfred Forster "Taff." b. Nov. 27, 1869, Sea Palling, Yarmouth, Norfolk, son of grocer Alfred Feather and his wife Mary Ann Elizabeth Sadler Forster. He joined the Navy in the 1880s, and was petty officer 1st class and bosun on the *Boscawen*, when he transferred to the *Discovery* for BNAE 1901-04. In 1906, at Yarmouth, he married Maude St. Quinton Apps. In late 1910 he left NZ on the *Terra Nova*, in charge of sledges, for BAE 1910-13, but left the ship on the ship's return to NZ in early 1911, as unfit. He served on various ships during World War I, including the *Dreadnought*, and retired as a lieutenant in Aug. 1922. He died on July 1, 1943, in Norwich.

Featherstone, John Peverell. b. Aug. 21, 1924, Ipswich, Suffolk, son of Henry Peverell Featherstone and his wife Phyllis G. Brown. He was a sub lieutenant, RNVR, when he joined FIDS in 1945, and wintered-over as meteorologist and base leader at Base B in 1946. He and Dennis Crutchley were due to stay on for the winter of 1947, but they quit, in disgust (*see* **Base B**), heading back to Port Stanley, and from there to Montevideo. He and Crutchley left Montevideo on the *Condesa*, arriving back in London on April 5, 1947. He married Denyse Alergant in 1947, in London, which is where they lived. He died in Waveney, Suffolk, in 1974.

Mount Fedallah. 65°43' S, 62°52' W. Rising to about 1250 m above sea level, E of Pip Cliffs, on the N side of Flask Glacier, SW of Jeroboam Glacier, on the Oscar II Coast, on the E coast of Graham Land. Named by UK-APC on Feb. 15, 1988, for the *Moby Dick* character. US-ACAN accepted the name.

Paso Federico Puga Borne *see* **Croker Passage**

Lednik Fedorova *see* **Fedorovbreen**

Fedorovbreen. 73°20' S, 2°45' W. A glaciated area stretching from Amundsenisen to the Penck Trough, in the E part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for the *Akademik Fedorov*. The Russians, who seem to call it Lednik Fedorova (i.e., Fedorov Glacier, which means the same thing), plot it in 73°10' S, 2°30' W.

Feeley Peak. 85°26' S, 126°26' W. Rising to 1730 m, 5 km NW of Sheets Peak, between Davisville Glacier and Quonset Glacier, on the N side of the Wisconsin Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Keith E. Feeley (b. Sept. 25, 1925, Chicago), construction mechanic who wintered-over at Byrd Station in 1959.

Feeney Col. 85°37' S, 155°45' W. A col on the NE side of Feeney Peak, and which, despite its rather high elevation of 970 m above sea level and the fact that both sides are steep, provides a good route through the Medina Peaks, situated as it is near the central portion of those peaks, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Used by NZGSAE 1969-70, who named it in association with the peak. NZ-APC accepted the name, and US-ACAN followed suit in 1970.

Feeney Peak. 85°37' S, 155°50' W. Rising to 1210 m, near the center of Medina Peaks, 11 km N of Patterson Peak, on the E side of Goodale Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Robert Earl Feeney (b. Aug. 30, 1913, Oak Park, Ill. d. Sept. 21, 2006, Davis, Calif.), University of California at Davis biologist at McMurdo for several summer seasons between 1964-65 and 1968-69. He wrote *Professor on the Ice*.

Feeney Ridge. 69°40' S, 159°06' E. A ridge,

10 km long (the Australians say 13 km), and mainly ice-free along its crest, it parallels the SE side of Fergusson Glacier, about 13 km SE of Parkinson Peak, in the Wilson Hills of Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. Cdr. Edward J. Feeney, USN, aircraft commander on LC-130F Hercules planes during OpDF 68 (i.e., 1967-68). ANCA accepted the name.

Fegley Glacier. 83°24' S, 167°25' E. A tributary glacier, flowing into Lennox-King Glacier, in the Holland Range, 8 km NE of Mount Allen Young. Named by US-ACAN in 1966, for Lt. Charles E. Fegley III (b. 1935), USN, officer-in-charge of the nuclear power unit at McMurdo during OpDF 64 (i.e., 1963-64).

Cordón Fehrman. 68°10' S, 66°42' W. A mountainous chain on the N coast of Neny Fjord, about 11 km NE of Roman Figure Four Promontory, on the E coast of Marguerite Bay, on the W coast of the Antarctic Peninsula. Named by the Chileans for Óscar Fehrman Schefer, of the Chilean Army, who was at General Bernardo O'Higgins Station in 1957-58. The Argentines call it Acantilado Montura.

Feicui Bandao. 69°25' S, 76°04' E. A peninsula in the Larsemann Hills. Named by the Chinese.

Caleta Feijóo *see* **Adie Inlet**

Caleta Feilberg. 61°17' S, 54°12' W. A cove, immediately E of Escarpada Point, on Clarence Island, in the South Shetlands. Named by the Argentines for Valentín Feilberg, admiral in the Argentine Navy.

Feistmantel Valley. 76°43' S, 159°35' E. South of Shimmering Icefield, and W of Mount Watters, in the Allan Hills of Victoria Land. There are fossils here. Discovered by the NZARP Allan Hills Expedition of 1964, and named by them for paleontologist Professor Ottokar Feistmantel (1848-1891), who made pioneering studies of fauna in Gondwana (in India). NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Felder Peak. 79°33' S, 157°00' E. Rising to 1970 m between the terminus of McCleary Glacier and the W side of Starbuck Cirque, in the Cook Mountains, in the Transantarctic Mountains. Named by US-ACAN in 2002, for geology student Robert P. "Bob" Felder (b. 1956), of the Institute of Polar Studies, at Ohio State University, who, with Gunter Faure, made geological investigations in the nearby Brown Hills, in 1978-79. Mr. Felder has spent years since then in the mining industry.

Gora Feldkotter *see* **Mount Feldkotter**

Mount Feldkotter. 84°06' S, 56°06' W. Rising to 1510 m, 6 km S of Gambacorta Peak, in the S part of the Neptune Range, in the Pensacola Mountains. Mapped by USGS from ground surveys conducted between 1956 and 1966, and from USN air photos taken in 1963-64. Named by US-ACAN in 1968, for Henry Herman John Feldkotter (b. Jan. 20, 1918, Ill. d. April 23, 1987, Inverness, Fla.), who joined the U.S. Navy on July 2, 1942, and was an aviation electrician who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer. It appears on a 1972 Russian map as Gora Feldkotter (which means the same thing).

Cabo Félicie *see* **Félicie Point**

Cap Félicie *see* **Félicie Point**

Cape Félicie *see* **Félicie Point**

Punta Felicie *see* **Félicie Point**

Félicie Point. 64°42' S, 63°09' W. Forms the extreme S end of Lion Island, immediately off the SE end of Anvers Island, in the Palmer Archipelago. Charted on Feb. 8, 1898, by BelgAE 1897-99, and named by de Gerlache as Cap Félicie. It appears on Dr. Frederick Cook's English language map of the same expedition as Cape Félicie. It appears on a 1949 Argentine chart as Cabo Félicie, and on a 1969 chart of theirs as Cabo Félicio (evidently a misprint), and the 1970 Argentine gazetteer accepted the name Cabo Félicie. US-ACAN accepted the name Félicie Point in 1953, and it appears in the U.S. gazetteer of 1956. In 1955 Fids from the *Norsel* and from Base N re-surveyed it. UK-APC also accepted the name Félicie Point, on Sept. 4, 1957, and it appears on a 1960 British chart. It appears on a 1962 Chilean chart as Punta Félicie, and that was the name accepted by the 1974 Chilean gazetteer. Sometimes the Chileans apply the accent mark, other times not.

Cabo Félicio *see* **Félicie Point**

Cabo Feliz Encuentro *see* **Cape Well-met**

Mount Fell. 73°26' S, 62°16' W. Rising to about 1370 m, near the head of New Bedford Inlet, 13 km W of Mount Hemmingsen, in the N part of the Werner Mountains, on the Lassiter Coast of Palmer Land. Surveyed from the ground by a joint FIDS-RARE team in Dec. 1947. Mapped by USGS from ground surveys conducted between 1961 and 1965, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Jack Warner Fell (b. 1933), USARP biologist on the *Eastwind* (on a cruise along the Antarctic Peninsula) and at Palmer Station, 1965-66. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Punta Fellow. 64°23' S, 61°30' W. The extreme SE point of what the Chileans call Isla Gándara (and what the Americans call Murray Island, what the British call Bluff Island, and what the Argentines call Isla Murray; and not to be confused with Gándara Island), off the extreme S of Hughes Bay, on the W coast of the Antarctic Peninsula. The name appears for the first time on a Chilean chart of 1962.

Fellows, James Walter "Jim." b. 1929, Tamworth, Staffs, but raised partly in Sutton Coldfield, near Birmingham, son of Albert E. Fellows and his wife Lucy L. Riley. After seeing an ad in the *Times* for FIDS, he joined, in 1955. After a brief training period at the Met Office, and 2 weeks at Elmdon Airport, in Birmingham, studying maps and charts, he left England in October of that year, and wintered-over as a meteorological assistant at Base B in 1956, and at Base Y in 1957. In 1962, in Birmingham, he married Pauline A. Gill. He was back in 2000, as a tourist on a Russian icebreaker, along with two 1969 winterers at Signy Island Station, Eliot Wright and John Edwards. He retired to Shenstone, Staffs.

Felsinsel *see* [1]**Mount Hansen**

Felsite. A fine-grained volcanic rock, found in Antarctica.

Felsite Island. 72°26' S, 169°49' E. A rock island, 1.5 km long, and rising to 300 m above sea level, it lies at the head of Edisto Inlet, within the northward stream of, and partly surrounded by the terminal face of, Edisto Glacier. Named by NZGSAE 1957-58, as descriptive of several prominent dikes of cream-colored igneous rocks (felsite) which cut its otherwise dark sedimentary rock formation, a formation arranged in a prominent syncline. A few snow petrels nest here, and small gravel beaches are developed on its NE corner. A survey station on its summit is marked by a rock cairn. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Felson, Henry A. *see* **USEE 1838-42**

Cape Felt. 73°52' S, 116°23' W. An ice-covered cape marking the N end of Wright Island, on the Bakutis Coast of Marie Byrd Land. First mapped from air photos taken during OpHJ 1946-47, and plotted in 73°50' S, 116°10' W. Named by US-ACAN in 1967, for Admiral Harry Donald Felt (b. June 21, 1902, Topeka, Kansas. d. Feb. 25, 1992, Honolulu), USN, vice chief of naval operations in the late 1950s. From 1958 to 1964 he was the very influential and pro-American-involvement-in-Vietnam commander in chief of CINCPAC. NZ-APC accepted the name on June 29, 1967. The feature has since been replotted.

Felton Head. 67°17' S, 46°59' E. An extensive flat-topped, dark brown rock outcrop in the form of a headland, with an almost sheer seaward side, it rises a little above the level of the continental ice inland, 5.5 km E of Harrop Island, on the W side of Casey Bay, on the coast of Enderby Land. Plotted from 1956 ANARE air photos, and first visited by an ANARE party led by Syd Kirkby in Nov. 1960. Named by ANCA for Sgt. Kevin Vincent "Kev" Felton (b. Feb. 16, 1929. d. June 8, 1984), RAAF (since April 28, 1947), warrant officer engine fitter at Mawson Station in 1960. US-ACAN accepted the name in 1965.

[1]**The *Femern***. Name means "the fifth," in Norwegian. A 257-ton, 116 foot 4 inch Norwegian whale catcher built in 1932 by Framnaes Mek., in Sandefjord, for Thor Dahl's Odd Company. She was in Antarctic waters, working for the *Thorshavn*, in 1933-34. In 1940 she became part of the Dutch Navy, and in 1941 of the British Navy, working as a minesweeper in the West Indies. In 1945 she was returned to Dahl's, who sold her in 1946 to Kris Gjølberg, of Oslo, still as a catcher. In 1947, in the North

Atlantic, she caught a blue whale of 93 tons. In April 1949 she was renamed *Finnhval*, in 1956 *Arne Kalve*, and in 1957 *Steinevik*, and in 1962 her career as a catcher came to an end. In 1981 she was sold, and broken up in 2004.

[2]**The *Femern***. Norwegian whale catcher working for the *Thorshavet* in 1961-62 (her gunner that season was Kristian Slettsjø). She took 1 blue, 96 fins, and 59 sperm.

Fender Buttress. 64°34' S, 61°04' W. A rock buttress (or bluff), rising to over 1600 m (the British say about 1500 m), which projects from the S side of the Herbert Plateau into the head of Drygalski Glacier, in the north-central part of Graham Land. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base D in 1961-62. Named by UK-APC on July 1, 1964, for Guillaume Fender of Buenos Aires, inventor of an early type of track-laying vehicle. US-ACAN accepted the name later that year.

Fendley Glacier. 71°20' S, 168°45' E. A glacier, 27 km long, flowing NE from the Admiralty Mountains to enter the sea between Mount Cherry-Garrard and Atkinson Cliffs, on the N coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Technical Sgt. Iman A. Fendley, USAF (*see* **Deaths**, 1958).

Fendorf Glacier. 79°30' S, 84°49°W. A broad glacier flowing N from the E slopes of the Gifford Peaks, and merging with Dobbratz Glacier, in the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Lt. Cdr. James E. Fendorf (b. Nov. 11, 1928, Jefferson City, Mo. d. Feb. 2, 1999, Leavenworth, Kans.), USN, one of the first pilots to fly into Korea, in 1950, and later VX-6 pilot in Antarctica during OpDF 65 (i.e., 1964-65) and OpDF 66 (i.e., 1965-66), flying Hercules C-130 aircraft.

Fengbao Wan. 62°11' S, 58°59' W. A cove indenting Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Fenghuang Jiao. 62°14' S, 69°03' W. A cape on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Fenghuang Ling. 69°24' S, 76°15' E. A hill in the Larsemann Hills. Named by the Chinese.

Pico Fénix *see* **Phoenix Peak**

Fenrir Valley. 77°37' S, 161°56' E. A small, mainly ice-free valley, between the upper reaches of Heimdall Glacier and Rhone Glacier, in the Asgard Range of Victoria Land. Named jointly by NZ-APC and US-ACAN in 1976, for the mythological Norse wolf.

Fenriskjeften *see* **Fenriskjeften Mountain**

Fenriskjeften Mountain. 71°53' S, 8°18' E. A large, bare, rock mountain, which, from the air, looks like a hairpin. It forms the S portion of the Drygalski Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. First plotted from air photos taken during GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Fenriskjeften (i.e., "Fenrir's paw"), for its shape (*see* **Fenrir Valley**). US-ACAN accepted the name Fenriskjeften Mountain in 1967.

Fenristunga. 71°52' S, 8°17' E. A sloping field of ice within the rock walls of Fenriskjeften Mountain, in the Drygalski Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Fenristunga (i.e., "Fenrir's tongue"), in association with the mountain (*see also* **Fenrir Valley**). US-ACAN accepted the name without modification in 1967.

Mount Fenton. 74°20' S, 161°55' E. Rising to 2480 m from the N part of Skinner Ridge, 3 km NE of Mount Mackintosh, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Michael D. Fenton, geologist at McMurdo, 1965-66.

Fenton Glacier. 73°03' S, 61°48' W. Flows S into Mosby Glacier, just E of Mount Adkins, on the Lassiter Coast of Palmer Land. Mapped by USGS in 1968 and 1969, from ground surveys conducted during the period 1961-65, and from USN air photos taken between 1965 and 1967. It appears (apparently still unnamed) on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. Named by US-ACAN for Lt. (jg) Ernest R. Fenton (b. June 1946), USN, officer-in-charge of Palmer Station in 1971. UK-APC accepted the name on Dec. 20, 1974.

Fenwick Glacier. 77°17' S, 161°42' E. A glacier, 1 km long, between Mount Majerus and Tukeri Peak, on the headwall of Ringer Valley, in the Saint Johns Range of Victoria Land. Named by NZ-APC on Sept. 12, 2005, for John Fenwick, a Ministry of Works hydrology technician who led field parties on visits to this area in 1972-73 and 1973-74. US-ACAN accepted the name in 2006.

Fenwick Ice Piedmont. 71°45' S, 170°45' E. An ice piedmont, up to 10 km long and 4 km wide, formed from the numerous glaciers which flow gently seaward from an elevation of about 400 m along the E side of Adare Peninsula, to terminate at ice cliffs along the costline S of the Downshire Cliffs and N of Cape McCormick, near the NE extremity of Victoria Land. Named by NZ-APC on Nov. 15, 2005, for Rob Fenwick, chairman of the Antarctic Heritage Trust from 2000. US-ACAN accepted the name on July 17, 2007.

Cape Feoktistov. 67°39' S, 45°58' E. On Alasheyev Bight, in the Thala Hills of Enderby Land, about 5.5 km E of Molodezhnaya Station. Photographed aerially by ANARE in 1956, and by SovAE 1957. Named by the Russians as Mys Nikolaja Feoktistova, for Nikolay Ya. Feoktistov, Soviet meteorologist on the 1957 expedition. It was translated in English as Feoktistov Point. It was later decided that it was more of a cape than a point.

Feoktistov Point *see* **Cape Feoktistov**

Mount Feola. 77°30' S, 162°37' E. Rising to 1800 m at the head of Denton Glacier, just under 2 km WSW of Mount Newall, in the Asgard Range of Victoria Land. Named by US-ACAN in 1997, for Samuel D. Feola, VXE-6 helo pilot in the McMurdo Dry Valleys in 1976 and 1977. From 1990 on, he was director of logistics with Antarctic Support Associates, responsible for contractor planning, management, and operations of logistic and operational support for NSF's Antarctic program.

Feraud, Joseph. b. Sept. 27, 1822, Colignac, France. Cabin boy on the *Zélée* during FrAE 1837-40. On Sept. 29, 1838 he became an apprentice seaman.

Península Ferguslie *see* **Ferguslie Peninsula**

Ferguslie Peninsula. 60°43' S, 44°34' W. A peninsula, 2.5 km long, and terminating in Cape Geddes, between Browns Bay and Macdougal Bay, on the N coast of Laurie Island, in the South Orkneys. Charted in Nov. 1903, by ScotNAE 1902-04, and named by Bruce for the Paisley residence of James Coats, chief patron of the expedition. It appears on a British chart of 1930, and was re-surveyed by the Discovery Investigations in 1933. It appears on a 1933 Argentine chart as Península Ferguslie, and that was the name accepted by the Argentine gazetteer of 1970. US-ACAN accepted the name Ferguslie Peninsula in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer.

Mount Ferguson. 84°56' S, 168°35' W. An irregular, mound-shaped mass, rising to 1190 m (the New Zealanders say about 1100 m), it surmounts the S part of the Mayer Crags, on the W side of Liv Glacier and about 6 km N of that glacier's terminus, in the Prince Olav Mountains, in the Queen Maud Mountains. Discovered and photographed aerially by ByrdAE 1928-30, and named by Byrd for Homer Lenoir Ferguson (1873-1953), who graduated at the head of his class of 1892 from the Naval Academy, who was later president of the Newport News Shipbuilding and Dry Dock Co., of Virginia, and who repaired Byrd's ships. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Ferguson, David. b. 1857, Glasgow. He was a mining engineer and prospector in Persia in 1891, in Newfoundland in 1894, and in Africa in 1903-05. He studied geology and mineralogy at Glasgow University, 1905-07 [sic], and did mining surveys in Scotland, but never graduated from a university. Between 1911 and 1915 he was in South Georgia (54°S) doing geological surveys for the firm of Christian Salvesen and Co., out of Leith, Scotland, and, more specifically, in 1913-14 he was in the *Hanka* doing geological reconnaissance around the

Antarctic Peninsula and in the South Shetlands and South Orkneys. He returned to Glasgow, and died on March 8, 1936.

Ferguson, Robert. Skipper of the *Susanna Ann*, in the South Shetlands, 1824-25, and 1826-27.

Ferguson Channel *see* **Argentino Channel**

[1]**Ferguson Glacier**. 62°05' S, 58°24' W. A small corrie glacier and related snowfields in the S part of Keller Peninsula, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for David Ferguson.

[2]**Ferguson Glacier**. 77°28' S, 162°51' E. A glacier flowing immediately to the E of Gallagher Ridge, in the area of Mount Newall, in the Asgard Range of Victoria Land. The name was proposed as early as July 16, 1964, by NZ-APC, but not accepted officially by them until Oct. 7, 1998. US-ACAN accepted the name later in 1998. The name commemorates the passage of the Massey Ferguson tractors over the lower Wright Glacier en route to the Wright Valley, in 1967.

Ferguson Nunataks. 73°33' S, 63°48' W. A group of nunataks rising to about 1400 m, between the heads of Meinardus Glacier and Swann Glacier, on the Lassiter Coast of Palmer Land. Mapped by USGS from ground surveys conducted from 1961 onwards, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Charles L. Ferguson, USN, electrician who wintered-over at Palmer Station in 1965. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Ferguson Peak. 67°50' S, 62°49' E. About 1 km W of the main massif of the Central Masson Range, just N of Phillips Ridge, in Mac. Robertson Land. Named by ANCA for Oscar Ferguson, senior technician (electronics) who wintered-over at Mawson Station in 1962. He had already wintered-over at Macquarie Island in 1960.

Ferguson Ridge. 64°23' S, 59°48' W. A ridge running NNW-SSE and rising to 855 m, SW of the Nodwell Peaks, on the Nordenskjöld Coast of Graham Land. Surveyed by Fids from Base D in 1960-61. BAS did geological work here in 1978-79. Named by UK-APC on April 3, 1984, for Henry George "Harry" Ferguson (1884-1960), Irish pioneeer of tractor design from 1911 onwards, and who, in 1953 merged with Massey-Harris to become Massey-Harris-Ferguson (the name being shortened in 1958 to Massey Ferguson). US-ACAN accepted the name. It appears in the 1986 British gazetteer.

Fergusson Glacier. 69°38' S, 159°10' E. A tributary glacier flowing ENE between Serba Peak and Feeney Ridge, into Noll Glacier, in the Wilson Hills, on the coast of Oates Land, about 46 km E of Tomilin Glacier, in Victoria Land. Named by the Northern Party of NZGSAE 1963-64, for Sir Bernard Fergusson (1911-1980), the last British-born governor general of NZ, 1962-67 (he came from a long line of governors of NZ), who made a flight over the party during his visit to Antarctica. Fergusson, created Baron Ballantrae, in 1972, had been with Orde Wingate in Burma during World War II. NZ-APC accepted the name, as did US-ACAN in 1964. ANCA also accepted the name.

Bahía Ferin *see* **Ferin Head**
Cabo Ferin *see* **Ferin Head**
Cape Ferin *see* **Ferin Head**
Île Férin *see* **Ferin Head**
Morro Ferin *see* **Ferin Head**

Ferin Head. 65°58' S, 65°20' W. A headland, 6 km N of the entrance to Holtedahl Bay, on the Graham Coast, on the W coast of Graham Land. Discovered from a distance (in Pendleton Strait) by FrAE 1908-10, and charted by them as an island, which Charcot named Île Férin, for Alfred Férin, French vice-consul at Ponta Delgada, in the Azores, who assisted Charcot's expedition. This name became Ferin Island (sans accent) in English, appearing as such on British charts of 1916 and 1934. It appears on the 1929 American Geographical Society's map as Férin Island, and on Wilkins' 1929 map he shows it as Ferrin Island. It was redefined as a headland in 1935, by BGLE 1934-37, and it appears as Ferin Head on Rymill's 1938 map of that expedition, and also on a 1948 British chart. On a Chilean chart of 1947 it appears erroneously as Bahía Ferin (i.e., "Ferin bay"). On an Argentine chart of 1949 it appears as Cabo Ferin Head, but on one of their 1953 charts as Cabo Ferin, and that latter name was the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer (after the Chileans had rejected the name Morro Ferin). US-ACAN accepted the name Ferin Head in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. In 1956-57 it was photographed aerially by FIDASE, and surveyed from the ground by Fids from Base J. It appears as Cape Ferin on a 1961 U.S. Hydrographic Office chart.

Cabo Ferin Head *see* **Ferin Head**
Ferin Island *see* **Ferin Head**

The *Fernande*. French yacht, skippered by Pascal Grinberg, which visited the South Shetlands and the Antarctic Peninsula in 1994-95 and 1995-96. She was back at the Antarctic Peninsula in 1997-98 and 1998-99, both times with Mr. Grinberg, and was again in Antarctic waters in 2000-01 and 2002-03. She could take 3 crew (including the skipper) and 8 passengers.

[1]**Punta Fernández**. 63°15' S, 62°14' W. A point on the NW coast of Low Island, just NE of Jameson Point, in the South Shetlands. Named by the Argentines. The name is occasionally seen in English, as Fernandez Point (without the accent).

[2]**Punta Fernández**. 63°44' S, 61°43' W. A point on the coast of Hoseason Island, immediately W of the mountain the Argentines call Monte Norte, and which the Chileans call Monte Munizaga. Named by the Argentines.

Caleta Fernández Grellet *see* **Caleta Higueras**
Fernandez Point *see* [1]**Punta Fernández**
Isla Fernando *see* **Prevot Island**

Fernette Peak. 85°35' S, 176°58' W. Rising to 2700 m above the south-central part of the Roberts Massif, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1965. Named by US-ACAN for Gregory L. "Greg" Fernette (b. July 29, 1949), USARP geological field assistant in Antarctica in 1968-69.

Glaciar Ferrada *see* **Johnston Glacier**

Mount Ferranto. 76°32' S, 145°25' W. Forms the extreme SW projection of the main massif of the Fosdick Mountains, in the Ford Ranges of Marie Byrd Land. Discovered by a sledging party in Nov.-Dec. 1934, during ByrdAE 1933-35. Named by US-ACAN in 1947, for Felix Ferranto.

Ferranto, Felix Louis "Phil." b. Dec. 5, 1911, Brooklyn, son of coal merchant John J. Ferranto and his first wife Lucy. An insurance clerk and amateur radio operator, he enlisted in the Marines on Aug. 16, 1933, went through boot camp at Parris Island, then went into the 1st Signal Company at Quantico, as a private. In 1934 he was transferred to San Diego, and in 1935 to Guam, was promoted to pfc and stationed at Great Lakes, then in 1936 and 1937 was in Peking, where he was promoted to corporal, and then back at Quantico in the late 30s. He re-enlisted on Aug. 16, 1938, was posted to special duty at the Naval Research Laboratory at Bellevue, DC, and in Oct. 1939 was seconded to be radio and tractor operator at West Base during USAS 1939-41. Promotion to sergeant came with this move, and in 1940 to staff sergeant. Originally he had been one of the 4 men designated to look after the Snowcruiser (q.v.). He served in World War II and Korea, and was captured on Nov. 28, 1950, serving time as a pow in Korea. He was released on Nov. 6, 1953, and retired on Sept. 30, 1958 as a lieutenant colonel. He died on Oct. 20, 2002, in San Diego. His wife, Bernice Edith, died soon afterwards.

Ferrar, Hartley Travers "Harry." b. June 28, 1879, Dalkey, near Dublin, son of bank official John Edgar Ferrar and his wife Mary Hartley Holmes. He grew up in Durban, South Africa, and at 14 returned to Britain, to go to Oundle, then Cambridge. He was geologist and (after Shackleton was invalided home) seawater chemist, on BNAE 1901-04. From 1905 to 1913 he worked with the Survey Department of the Egyptian government, then moved to NZ, as a master at Christchurch College, and served in Palestine with the NZ Expeditionary Force in World War I. From 1919 until his sudden death at Wellington on April 19, 1932 he was with the NZ Geological Survey, much of the time as assistant director.

Ferrar, James Edward "Jim." b. 1937, Basford, Notts, son of Arthur Marchant Ferrar and his wife Dorothy Irene Sweet. In 1959, immediately upon graduation (in geography) from

the University of Sheffield he joined FIDS as a meteorologist, and went to Antarctica on the *Shackleton*, wintering-over at Base G in 1960 and 1961. He played piano, and, in the bar of the "*Shack*," would read chapters of *Lord of the Rings*, which had just come out. In 1963, in Basford, he married Janet E. Burton, and they raised a family in Southwell, Notts.

Ferrar Glacier. 77°45' S, 163°30' E. Also called New Harbor Glacier. At least 56 km long, and between 5 and 10 km wide, it flows NE from the plateau just W of the Royal Society Range, to a point opposite the E side of Knobhead, where it is joined in a Siamese twin-fashion to Taylor Glacier. From this point the Ferrar turns right (east) and flows E along the S side of the Kukri Hills, between those hills and the N end of the Royal Society Range, to enter New Harbor, in McMurdo Sound, in southern Victoria Land. The Taylor Glacier, on the other hand, turns left at Cavendish Rocks, and flows E along the N side of the Kukri Hills. Armitage discovered it in 1903, during BNAE 1901-04, and he climbed it. Scott climbed it the following year. Because the Ferrar and the Taylor are joined for a while, this expedition was of the belief that the lower part of the Ferrar (i.e., the part below Knobhead where it turns right) and the Taylor were one and the same. They called the upper part (i.e., above Knobhead) South Arm, and the term East Fork was applied to what is today the lower part of the Ferrar Glacier. During BAE 1910-13, Grif Taylor found that the glaciers are actually two glaciers (apposed, as they say), rather than one, and so re-defined the two glaciers pretty much as we know them today. Scott renamed the two glaciers at that stage. Hartley T. Ferrar was the man honored. However, on scientific maps of the expedition, the Ferrar is split up into the Upper Ferrar Glacier and the Lower Ferrar Glacier, but, based on further studies, it has been proved that the Ferrar is, in fact, one long glacier. US-ACAN accepted the name and the condition in 1947, and NZ-APC followed suit.

Gora Ferrara *see* **Mount Ferrara**

Mount Ferrara. 82°15' S, 41°25' W. Rising to 875 m (the British say 880 m), 4 km NE of Vaca Nunatak, in the Panzarini Hills of the Argentina Range, in the Pensacola Mountains. Discovered and photographed aerially on Jan. 13, 1956 (*see* **Operation Deep Freeze I**, for that date). Named by US-ACAN in 1957, for Chief Petty Officer Frederick John Ferrara (b. Dec. 19, 1918, Long Island. d. Aug. 16, 2000, Massapequa, NY), who joined the U.S. Navy in June 1939, and was chief aviation machinist's mate and crew chief of the Neptune which made the flight (he retired in Nov. 1959). On a 1957 map it is plotted in 81°00' S, 30°00' W. The U.S. gazetteer of 1960 has it in 82°00' S, 38°00' W. It also shows those coordinates on a 1962 map. The correct coordinates are shown on a USGS sheet of 1968. UK-APC accepted the name on Nov. 3, 1971, and the correct coordinates are shown in the 1974 British gazetteer. A Russian chart of 1961 shows it as Gora Ferrara (which means "Mount Ferrara"). It was surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66. About this time, the Argentines began calling it Nunatak San Rafael, and plotted it in 82°15' S, 41°17' W, the same coordinates given in a 1970 (British) *Polar Record* item, in which the feature is named as San Rafael Nunatak. The 1989 U.S. gazetteer also says that a variant name for Mount Ferrara is San Rafael Nunatak. However, by 1978 the Argentines were calling the feature Nunatak Pergamino, for the town in Argentina, and had re-applied the name San Rafael to Cerro San Rafael, a hill just to the NE.

Ferrari, Armando *see* **Órcadas Station**, 1943

Islas Ferraz. 65°07' S, 64°07' W. A group of islets immediately N of Hovgaard Island, between Booth Island and Petermann Island, off the Graham Coast of Graham Land. The existence of this group must be regarded with caution. The SCAR gazetteer lists it as a separate and distinct feature, but only gives name and coordinates, and that the Argentines named it. In other words, there is no descriptor. It is a fairly recent name too, and that, in itself, is a worry, in that any group of islets along the N coast of Hovgaard Island should have been discovered and named long ago.

Ferraz Station *see* **Comandante Ferraz Station**

Punta Ferré. 65°36' S, 65°40' W. A point on one of the islands in the Biscoe Islands. Named by the Argentines.

Cabo Ferreira. 64°36' S, 62°03' W. A cape on one of the islands in Wilhelmina Bay, probably Nansen Island. Named by the Argentines.

Ferrell Automatic Weather Station. 78°00' S, 170°48' E. An American AWS, named for helo pilot Woo Ferrell (*see* **Ferrell Buttress**), installed in Nov. 1978 on the Ross Ice Shelf, just S of Ross Island, at an elevation of 46 m. It never operated (no electronics package). A new one was installed on Dec. 10, 1980. It was visited in Nov. 2004 (when the tower was raised), and again on Feb. 4, 2005, Jan. 7, 2006, and Oct. 28, 2006.

Ferrell Buttress. 79°57' S, 159°02' E. A distinctive rock buttress, at an elevation of about 900 m above sea level, near the E end of Cranfield Icefalls, and near the terminus of the Darwin Glacier. Named by US-ACAN in 2000, for Lt. Cdr. (later Capt.) William F. "Woo" Ferrell, USN, a VXE-6 Iroquois helicopter pilot at the Darwin Glacier Field Camp in 1978-79. NZ-APC accepted the name on Feb. 20, 2001.

Ferrell Nunatak. 83°54' S, 54°53' W. A nunatak rising to about 1615 above sea level, and protruding from the ice surface on the W side of the Iroquois Plateau, 8 km NE of Elmers Nunatak, in the Neptune Range, in the Pensacola Mountains. Surveyed from the ground by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN in 1963-64, and mapped by USGS from these efforts. Named by US-ACAN in, 1968, for James T. Ferrell, construction mechanic who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Bajos Ferrer *see* **Ferrer Rocks**

Bancos Ferrer *see* **Ferrer Rocks**

Monte Ferrer *see* **Mount Aciar**

Punta Ferrer *see* **Ferrer Point**

Ferrer Point. 62°30' S, 59°42' W. An ice-free point, rising to a height of 46 m above sea level, in the S part of (i.e., at the head of) Discovery Bay, 1.7 km SW of Iquique Cove, between Ensenada Rodríguez and Montecinos Cove, Greenwich Island, in the South Shetlands. ChilAE 1946-47 named it Punta López, for Lt. Sergio López Angulo (*see* **López Point**), and it appears as such on their chart of 1947. Re-charted by ChilAE 1950-51, during their hydrographic survey of the area, and re-named by them as Punta Ferrer, for Primero teniente de navío (later Capitán de corbeta) Fernando Ferrer Fougá, hydrographic officer on the *Angamos* during that expedition, as well as on the earlier (1946-47) one. It appears on a 1961 Chilean chart as Punta Teniente Ferrer, but the shorter name was the one accepted by the 1974 Chilean gazetteer. It was further charted by an RN Hydrographic Survey unit on the *Protector*, in 1964. The name Ferrer Point appears on British charts of 1965 and 1968, and that name was accepted by UK-APC on Nov. 3, 1971, and by US-ACAN in 1972. It appears as such in the 1974 British gazetteer. Last plotted by the British, in 2008.

Ferrer Rocks. 64°42' S, 62°48' W. A group of rocks between Islote Adriana and Useful Island, W of Ketley Point (on Rongé Island), in the Gerlache Strait, off the Danco Coast, on the W coast of Graham Land. Charted by ChilAE 1950-51, and named by them as Bancos Ferrer, for Fernando Ferrer Fougá (*see* **Ferrer Point**). It appears as such on their 1951 chart. Photographed aerially by FIDASE in 1956-57. The Chilean gazetteer of 1974 accepted the name Bajos Ferrer, UK-APC accepted the name Ferrer Rocks, and that latter is how it appears in the 1980 British gazetteer.

Ferrero Bay. 73°28' S, 102°30' W. A body of water about 24 km wide, immediately W of the Cosgrove Ice Shelf, and occupying the outer (west) part of the embayment between King Peninsula and Canisteo Peninsula, in the E extremity of the Amundsen Sea. Mapped from air photos taken in Dec. 1946, during OpHJ 1946-47. Named by US-ACAN in 1968, for Lt. Cdr. Henry Hampton Ferrero (b. April 20, 1923, Napa, Calif. d. Sept. 9, 1990, San Diego), who joined the USNR in March 1942, and was communications officer on the staff of the commander, U.S. Naval Support Force, Antarctica, 1966-68. He retired in April 1973.

Ferri Ridge. 75°01' S, 113°41' W. A gentle ridge forming the W wall of Simmons Glacier, and terminating in Mount Isherwood, at the N side of the Kohler Range, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966.

Named by US-ACAN in 1976, for Guy Ferri (1922-1991), U.S. Department of State, chairman of the interagency committee on Antarctica, 1969-70.

Península Ferrier *see* **Ferrier Peninsula**

Ferrier Peninsula. 60°44' S, 44°26' W. A narrow peninsula, 2.5 km long, it forms the E extremity of Laurie Island, and terminates in Cape Dundas, in the South Orkneys. Roughly charted by Weddell in 1823. Surveyed in 1903 by ScotNAE 1902-04, and named by Bruce for James G. Ferrier, of Messrs Whitson & Methuen (*see* **Cape Whitson** and **Methuen Cove**), his long-time secretary, and honorary secretary in Scotland of the expedition (he organized the welcome home party in 1904). It appears on the expedition charts, and on a 1930 British chart, and was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1933 Argentine chart as Península Ferrier, but incorrectly refers to the peninsula terminating in Cape Whitson. However, on a 1945 Argentine chart it is shown again, named as such, but with the position corrected. It is shown on a 1953 Argentine chart as Península Foster (named, one would imagine, for Henry Foster), but today the generally accepted Argentine name for this feature is Península Ferrier.

Ferrigno Glacier. 78°08' S, 161°59' E. A broad glacier on the N side of Rampart Ridge, flowing WNW from Mount Lynch and Bishop Peak to the vicinity of The Spire, in Victoria Land. Named by US-ACAN in 1995, for Jane G. Ferrigno (b. Feb. 26, 1941), USGS geologist, specialist in the use of satellite imagery to study and map Antarctica, and other ice and snow areas throughout thre world. She was the author of *Satellite Image Map of Antarctica* (1996), and co-editor (with Richard S. Williams, Jr.) of *Satellite Image Atlas of Glaciers of the World*.

Ferrigno Ice Stream. 73°43' S, 83°49' W. More than 24 km long, it flows into Eltanin Bay, SW of Wirth Peninsula, at the coast of Ellsworth Land. Named by US-ACAN in 2003, for Jane Ferrigno (*see* **Ferrigno Glacier**).

Ferrin Island *see* **Ferin Head**

Lake Ferris. 69°24' S, 76°06' E. About 2.2 km N of Blundell Peak, in the Larsemann Hills. Named by ANCA on Nov. 24, 1987, for John Ferris, biologist at Davis Station during the summer seasons of 1985-86 and 1986-87, who advised the 1986-87 ANARE Larsemann Hills party. The Chinese call it Ziyang Hu.

Ferromanganese. Nodules of this are indicated below the Antarctic Convergence (*see* **Mineral exploitation**).

Gora Fersmana *see* **Ormeryggen**

Nunataki Fesenkova. 70°57' S, 66°58' E. A group of nunataks on the NE side of Mount Beck, in the Prince Charles Mountains. Named by the Russians.

Festefjell. 72°09' S, 25°41' E. A mountain at the S side of Winsnesfjellet, in the SE part of the Sør Rondane Mounatins. Named by the Norwegians ("fortress mountain").

Gora Festival'naja. 72°21' S, 19°16' E. A nunatak in the central part of the Sør Rondane Mountains. Named by the Russians.

Festive Plateau. 79°24' S, 157°30' E. An ice-covered plateau, between 16 and 19 km long, and between 5 and 6 km wide, and rising to about 2440 m, just N of Mount Longhurst, in the Churchill Mountains. Named by 2 members of the Darwin Glacier Party of BCTAE who spent Christmas Day of 1957 on the plateau. ANCA accepted the name on Nov. 24, 1961, and US-ACAN followed suit in 1965.

Festninga *see* **Festninga Mountain**

Festninga Mountain. 72°07' S, 3°43' E. A broad, mostly snow- and ice-capped mountain, rising to 2535 m, at the W of Mount Hochlin, at the W end of the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Festninga (i.e., "the fortress"). US-ACAN accepted the name Festninga Mountain in 1966. Modern-day geographers think that the two features that today we call Festninga Mountain and Øvrevollen Bluff combined, were what went to make up what Ritcher named Ruhnkeberg, during GermAE 1938-39 (*see* **Mount Ruhnke**).

Festningsporten *see* **Festningsporten Pass**

Festningsporten Pass. 72°05' S, 3°43' E. An ice-covered gap, between Vestvollen Bluff and Austvollen Bluff, in the middle of the N face of Festninga Mountain, leading to the mountain's flat summit, in the westernmost part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Festningsporten (i.e., "the fortress gate"). US-ACAN accepted the name Festningsporten Pass in 1966.

Mount Feury. 71°50' S, 98°19' W. Between Sikorsky Glacier and Frankenfield Glacier, on the NE side of Noville Peninsula, on Thurston Island. First delineated from air photos taken during OpHj 1946-47, thought to be a headland, and named Feury Head, for Jim Feury. US-ACAN accepted that name, with the coordinates 71°44' S, 98°26' W. Later, it was determined to be a mountain, and renamed by US-ACAN. Its coordinates were corrected.

Feury, James A. "Jim." b. Dec. 7, 1899, NYC, but raised in Paterson, NJ. Irish-American mechanic, he was with Byrd in the Arctic, and was with him again, as mechanic and snowmobile driver on ByrdAE 1928-30. He came back to NYC as a fireman on the *City of New York* in 1930. In 1932, in Paterson, he was hit by a dairy truck, and severely injured. He died on Dec. 30, 1977, in NJ.

Feury Head *see* **Mount Feury**

Feyerharm Knoll. 77°00' S, 125°46' W. An ice-covered knoll on the lower NE slope of Mount Sidley, in the Executive Committee Range of Marie Byrd Land. Surveyed by USGS during the Executive Committee Range Traverse of 1959. Named by US-ACAN in 1962, for William R. Feyerharm (b. Nov. 5, 1934), meteorologist at Byrd Station in 1960.

FIBEX. The First International BIOMASS Experiment. Held Jan.-Feb. 1981. The largest multi-ship experiment in biological oceanography ever undertaken in the southern ocean to that date, this was Phase I of BIOMASS (q.v.), and consisted of 18 ships from 11 countries (Japan — 4 ships; USSR — 3; West Germany — 3; and one each from Argentina, Australia, Chile, France, Poland, South Africa, USA, and the UK). Its main purpose was an acoustic survey of krill in Antarctic waters. The Second International BIOMASS Experiment was completed in 1984-85.

Ficheto Point. 62°28' S, 60°07' W. An ice-free point on the NE coast of Varna Peninsula, it forms the SE side of the entrance to Dragon Cove, 2.3 km SE of Williams Point, 800 m ESE of Sigritsa Point, 1.3 km E of Sayer Nunatak, and 2.9 km NW of Pomorie Point, on Livingston Island, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for Nikola Fichev (1800-1881), Bulgarian architect known as Kolyu Ficheto.

The Fid. 68°39' S, 65°58' W. A sharp peak, rising to 1640 m, at the E side of the mouth of Cole Glacier, W of the Mercator Ice Piedmont, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Photographed aerially on Sept. 28, 1940, during USAS 1939-41. Surveyed by Fids from Base E in in Dec. 1958, and again in 1960. Named by UK-APC on Aug. 31, 1962, for its shape. A fid is a conical wooden pin used in splicing, but of course, it is also a nod to the FIDS. US-ACAN accepted the name later in 1962.

FIDASE *see* **Falkland Islands Dependencies Aerial Survey Expedition**

Fidase Peak. 63°23' S, 57°33' W. A distinctive peak, rising to 915 m (the British say 880 m), 15 km E of Mount Jacquinot, at the W end of Mott Snowfield, on Trinity Peninsula. In association with Mott Snowfield, it was named by UK-APC on Feb. 12, 1964, for the Falkland Islands Dependencies Aerial Survey (FIDASE), who photographed it in 1956-57 (Peter Mott led the expedition). Fids from Base D surveyed it from the ground in 1960-61. US-ACAN accepted the name later in 1962. The Chileans call it Cerro Muga, and the Argentines call it Cerro Los Bucles.

Islote Fidel Estay *see* **Estay Rock**

Punta Fidelidad. 62°27' S, 60°47' W. A small point immediately E of the beach the Chileans call Playa Roquerío, on the N coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno during ChilAE 1991-92, because it was here they met a male penguin who fiercely defended the territory that included only himself and a dead female. Fidelidad means "faithfulness."

Bukhta Fidelja Kastro. 66°12' S, 51°20' E. A bay, on the SW side of Cape Biscoe, on the coast of Enderby Land. Named by the Russians for Fidel Alejandro Castro Ruz (b. 1926), former Cuban dictator.

Mount Fidjeland. 71°42' S, 25°36' E. Rising to 1630 m, close NE of Mehaugen Hill, on the W side of the mouth of Byrdbreen, in the N part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Fidjelandfjellet, for Tom Fidjeland. US-ACAN accepted the name Fidjeland Mountain in 1966.

Fidjeland, Tormod Finn Tom. Known as Tom. b. May 19, 1910, Iveland, Norway, but raised in Kristiansand, 20 miles down the road, on the Skaggerak, son of schoolteacher Stefan Ommundsen Fidjeland and his wife Targjerd Taraldsdatter. He was the flight mechanic of LCE 1936-37, and in 1939 was in Greenland, as a mechanic and radio operator. During World War II he was in the Royal Norwegian Air Corps, and after the war joined Scandinavian Airlines, with whom, well into the 1960s, he was on one flight after another from Stockholm to New York, as flight engineer. On Sept. 16, 1950, he married Linnea Tjellmander, and died on Nov. 28, 1999, in Hässelby, Sweden.

Fidjelandfjellet *see* **Mount Fidjeland**

FIDS *see* **Falkland Islands Dependencies Survey**

Fiebelman Nunatak. 74°57' S, 72°37' S. One of the Grossman Nunataks, it rises to about 1450 m above sea level, about 5 km ENE of Cheeks Nunatak, and ESE of the Lyon Nunataks, where the S part of Palmer Land meets Ellsworth Land. Mapped by USGS from USN air photos taken between 1965 and 1968. Named by US-ACAN in 1988, for Harold E. Fiebelman, USGS cartographer who worked in the field at Byrd Station and at Pole Station, 1972-73. UK-APC accepted the name on Feb. 15, 1988.

Mount Fiedler. 85°33' S, 140°41' W. Rising to 1140 m, in the Bender Mountains, between the edge of the Ross Ice Shelf and the Watson Escarpment. Named by US-ACAN in 1967, for Leonard G. Fiedler, electrician at Byrd Station in 1960 and 1964.

Fief Mountains *see* **Sierra DuFief**

Glaciar Field *see* **Field Glacier**

Mount Field. 80°53' S, 158°00' E. Rising to 3010 m (the Australians say 3030 m), 5 km SSE of Mount Egerton, just to the S of Byrd Glacier, about 37 km S of Mount Hamilton, in the Churchill Mountains. Discovered by BNAE 1901-04, and named by Scott. US-ACAN and ANCA both accepted the name.

Field Glacier. 67°08' S, 66°24' W. Flows W into Lallemand Fjord, 5 km S of Salmon Cove, on the Loubet Coast of Graham Land. Mapped by FIDS cartographers from aerial photography by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base W between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, for William Bradhurst Osgood Field, Jr. (1904-1994), glaciologist with the American Geographical Society. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Field.

Field ice *see* **Pack-ice**

Field Islands *see* **Hydrographer Islands**

Field Névé. 71°38' S, 167°00' E. A large névé between the Homerun Range and the Findlay Range, between the upper reaches of Ebbe Glacier (which flows NW) and the Tucker Glacier (which flows SE), in the Admiralty Mountains of Victoria Land. Named by NZ-APC in 1982, for Bradley Field, geologist with NZGSAE 1981-82. US-ACAN accepted the name in 1999.

Field Rock. 67°36' S, 62°54' E. A rock outcrop, 0.8 km S of Teyssier Island, on the coast of Mac. Robertson Land. Mapped by Australian cartographers from ANARE ground surveys and air photos, 1954-62. Named by ANCA for Ephraim David "Jack" Field (b. July 4, 1929), cook at nearby Mawson Station (it lies 2 km W of this rock) in 1957, at Wilkes Station in 1962, and again at Mawson in 1975. He had also been at Macquarie Island in 1953 and 1955. US-ACAN accepted the name in 1970.

Fielding Col. 68°52' S, 66°59' W. A pass, SE of Baudin Peaks, and running E-W at an elevation of about 550 m above sea level between those peaks and Hag Pike, on Rasmussen Peninsula, on the Fallières Coast, on the W coast of Graham Land. It is the best route to get to Morgan Upland from the coast, between Neny Fjord and the Wordie Ice Shelf. Surveyed by Fids from Base E between 1967 and 1969. Named by UK-APC on Nov. 3, 1971, for Harold Michael "Mike" Fielding (b. 1944), BAS surveyor who wintered-over at Base E in 1968 and 1969, and who carried out the survey. US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer.

Fields Peak. 75°59' S, 135°56' W. A small but distinctive peak, 4 km SE of Brandenberger Bluff, on the lower N slopes of Mount Berlin, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Master Sgt. Samuel J. Fields, U.S. Army, member of Merle Dawson's Army-Navy Trail Party which opened the way to Byrd Station in 1956-57.

Fields Strait *see* **Fildes Strait**

Fiennes, Ranulph "Ran." The British baronetcy has thrown up some extraordinary characters, some of them in this book. Ranulph Twisleton-Wykeham-Fiennes is one of them, the son of Lt. Col. Sir Ranulph Twistleton-Wykeham-Fiennes, 2nd Bart., so his last name (if, indeed, one chooses to think of it as a name, rather than, say, an essay — and Ran Fiennes did — then it should begin with T, and not F). His father was killed at Monte Cassino before Ran was born, so he inherited the title on birth, on March 7, 1944, in England. Raised in South Africa, he attended Eton, and, in 1963, went into his father's regiment, the Royal Scots Greys for 8 years, serving with the SAS. In 1970 he married Ginny Pepper (b. July 9, 1947. d. 2004). He was leader of the Antarctic leg of the Trans-Globe Expedition 1980-82, which crossed the continent through the South Pole (and the world through both Poles, thus effecting an unusual trans-world crossing). His wife wintered-over in both the Arctic and Antarctic (in 1980, at Ryvingen, the expedition's base in Queen Maud Land), as communications officer, and became the first woman to receive the Polar Medal. With Mike Stroud, the baronet tried to walk to the North Pole in 1988, 1989, and 1990. In 1993, in aid of multiple sclerosis, he and Stroud set out to walk across Antarctica, unaided (they did have a radio), from the Filchner Ice shelf, via the Pole, to the Ross Ice Shelf, a distance of 1487 miles. They got to the Ross Ice Shelf, but there faced a simple choice, radio for help or die. They chose the radio (an option that Scott, for example, never had, but if he had, would, perhaps, not have taken). He has written many books.

Fierle Bay *see* **McCarthy Inlet, Roberts Inlet**

Fierle Peak. 83°25' S, 50°58' W. A sharp peak rising to about 1960 m, 5 km ESE of Dyrdal Peak, at the S extremity of the Saratoga Table, in the Forrestal Range of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS in 1965-66, during their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Gerard R. "Jerry" Fierle (b. 1920, Detroit), ex-World War II Navy chief, U.S. Weather Bureau meteorologist with Arctic experience, who was in the first wintering-over party at Ellsworth Station in 1957 as the USARP meteorologist-in-charge. UK-APC accepted the name on Nov. 3, 1971, and it appears in he 1974 British gazetteer.

Punta Fierro *see* **Fierro Point**

Fierro Point. 62°30' S, 59°44' W. A point, SW of Vidal Rock, between Labbé Point and Correa Point, at Discovery Bay, Greenwich Island, in the South Shetlands. Surveyed by ChilAE 1947-48, it appears on their 1948 chart as Punta Fierro, for torpedoman Fierro of the Chilean Navy, a member of the expedition. The Chileans also called it Punta Iquique, after the *Iquique*. UK-APC accepted the name Fierro Point on May 11, 2005. Last plotted by the British in 2008.

Fifoot, Abraham "Jimmy." b. 1867, in Bristol, son of chemical works laborer Thomas Fifoot and his wife Caroline Martin. For some reason, Jimmy was placed on the Industrial School Ship *Formidable*, based at Portishead, near Bristol. This ship was used to train neglected and criminal boys in the art of seamanship. After his stint there, Jimmy became a seaman, and in 1887, in Bristol, married Emily Elizabeth Drury, and while he was away at sea, Emily lived in Keynsham, Somerset, with her parents. Jimmy gave up the sea, settled in Keynsham, as a laborer, and he and Emily had

two children, one in 1898 and one in 1900, the latter killing Emily in childbirth. Jimmy took the kids to Shirehampton, to stay with his in-laws, re-joined the Merchant Navy, and went to Bluff, NZ (on the extreme southern shore of South Island). He worked his way up quickly to bosun, and from 1907 to 1910 was in that capacity on Thomas Law's Glasgow vessel, the *Morayshire*, doing the Cape Town to Sydney run. Then he was one of the three able seamen aboard the Joseph Hatch penguin oil-getting schooner *Jessie Niccol*, that went down off Macquarie Island on Dec. 20, 1910. Three men drowned. Then he went over to another Hatch vessel, the *Clyde*, as cook, which also went sealing at Macquarie Island. In early Oct. 1911, the *Clyde* left Wellington, and, after being blown off course, finally reached Macquarie on Nov. 13, 1911, where she was wrecked in another storm. Jimmy and the others got ashore, and then the *Aurora* came by, on her first trip to Antarctica for AAE 1911-14. On Dec. 23, 1911, Fifoot was taken on as chief cook, at £9 per month. He left the expedition at Hobart, on March 12, 1912, and ultimately returned to Bristol, where he died in 1944. Neither of his two children married.

Figanières, Jean-Baptiste. b. 1800, Toulon. Steward on the *Zélée* during FrAE 1837-40. He left the expedition at Sambouangang, on Aug. 1, 1839.

Figaro Nunatak. 70°07' S, 70°44' W. An isolated nunatak, rising to about 200 m near the E end of the Mozart Ice Piedmont, in the N part of Alexander Island, 1.5 km S of Puccini Spur. Mapped in 1959-60 by Searle of the FIDS from 1947 air photos taken by RARE 1947-48, and plotted by him in 69°56' S, 70°57' W. In association with other features in the area named for classical composers, and especially, in this case, for Mozart, this nunatak was named by UK-APC on March 2, 1961, for the Mozart opera, *The Marriage of Figaro*. US-ACAN accepted the name later in 1961. It appears on a British chart of 1961. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and, with the new coordinates, it appears in the 1977 British gazetteer.

Islote Figueroa. 64°04' S, 61°02' W. A little island off the extreme S part of Cape Sterneck, Hughes Bay, in the Antarctic Peninsula. It is formed by 2 elevations looking from a distance like a camel's humps. Surveyed by ChilAE 1946-47, and named by them. It appears on their 1947 chart, and is still used today. The Argentines call it Islote Mansilla (*see* **Caleta Mansilla**).

Nunatak Figueroa. 66°03' S, 60°48' W. One of the numerous nunataks on Jason Peninsula named by the Argentines.

[1]**Punta Figueroa** *see* **Canto Point**

[2]**Punta Figueroa**. 63°19' S, 57°54' W. A point on the W coast of Trinity Peninsula, SE of Covadonga Harbor, and close to General Bernardo O'Higgins Station. Named by ChilAE 1949-50, for Sub Lt. Jorge Rafael Figueroa Yávar, artillery officer in the Chilean Navy, who was on the *Iquique* during that expedition. His younger brother, Juan Agustín, became a radical Chilean politician.

Figure IV Mountain *see* **Roman Four Promontory**

Gora Figurnaja *see* **Mount Twigg**

Figurnoe Lake *see* **Algae Lake**

Fikkan Peak. 71°31' S, 159°50' E. A peak about 6 km S of Big Brother Bluff, about midway between that bluff and Mount Burnham, along the W wall of the Daniels Range, in the Usarp Mountains of Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Philip R. Fikkan (b. Feb. 13, 1939), USARP geologist at McMurdo in 1967-68. ANCA accepted the name on July 31, 1972.

Gora Filatova *see* **Mjellbreståtene**

Barrera de Hielos Filchner *see* **Filchner Ice Shelf**

Cape Filchner. 66°27' S, 91°53' E. An ice-covered cape facing the Davis Sea, about 27 km WNW of Adams Island, and dividing Wilhelm II Land from Queen Mary Land. Discovered by the Western Base Party of AAE 1911-14, and named by Mawson for Wilhelm Filchner. US-ACAN accepted the name in 1947, and ANCA followed suit.

Plataforma de Hielo Filchner *see* **Filchner Ice Shelf**

Filchner, Wilhelm. b. Sept. 13, 1877, in Munich. At the age of 15 he entered the Prussian military academy, at 21 made a seven-week trip through Russia, and at 23 rode alone through the Pamirs. In 1903-05 he led an expedition to Tibet, and on his return began planning GermAE 1911-12. Independent of William S. Bruce he had conceived the idea of a trans-antarctic traverse to test the legend of the Ross-Weddell Graben, but neither his nor the Scotsman's traverses ever came off. After the expedition, he refused to take part in another Antarctic one (one that never came off), and basically returned to Asia, to explore and carry out scientific inquiry. After World War I he was much in Tibet and Nepal, and, indeed, in 1939 conducted a survey of the latter country. In the mid-30s, while establishing a chain of magnetic stations between Lanchow and Khotan, in Turkestan, he was captured by Chinese Muslims, and held prisoner for seven months (on the grounds that his passport was not in order). Finally released, he and his companion, Herr Haack crossed the Himalayas by mule, and when they arrived in Srinagar, they were in rags, and fairly worn out. Filchner's first words to the British authorities were, "Is there a war anywhere?" He spent the World War II years interned by the British in India, but a dedicated anti-Nazi. He wrote some books (*see* the Bibliography). He died of pneumonia on May 7, 1957, in a Zurich clinic, but not before he had sent his personal Antarctic diary to Vivian Fuchs.

Filchner Berge *see* **Filchner Mountains**

Filchner Eisschelf *see* **Filchner Ice Shelf**

Filchner Group *see* **Filchner Mountains**

Filchner Ice Front. 77°30' S, 40°00' W. The seaward face of the Filchner Ice Shelf. Named by UK-APC on Sept. 20, 1955, but the term as used then included also the Ronne Ice Front. However, following U.S. Landsat imagery from 1973 (and later, 1978, images), UK-APC redefined it with its present limits, on Feb. 7, 1978. US-ACAN does not recognize ice fronts as a separate feature.

Filchner Ice Shelf. 79°00' S, 40°00' W. The ice shelf, about 160 km wide, bounded to the E and S by Coats Land, between that land and the Ronne Ice Shelf, or (to put it another way) between Berkner Island and the Luitpold Coast, it fills the head of (i.e., the S side of) the Weddell Sea, and extends inland for perhaps up to 400 km to the escarpment of the Pensacola Mountains. It is fed by several glaciers, including Slessor Glacier, Recovery Glacier, and Support Force Glacier, all located E of Berkner Island. The E part of the ice shelf was discovered in Jan.-Feb. 1912, by GermAE 1911-12, and named by Filchner as the Weddell Barrier, in association with the Weddell Sea. All ice shelves were called "barriers," or "ice barriers," back then. Not long afterwards he renamed it the Wilhelm Barrier (in honor of the Kaiser). The Kaiser, however, renamed it yet again, in honor of Filchner, calling it the Filchner Barrier, or Filchner Ice Barrier. Over the years the name of this ice shelf has otherwise been seen variously in the English language as Wilhelm Ice Barrier, Wilhelm Shelf Ice, Wilhelm Ice Shelf, Filchner Shelf Ice, and Filchner Ice Shelf (its current name). The original name Filchner Ice Shelf applied to an area much larger than the Filchner Ice Shelf of today, extending, as it did then, from the Bowman Peninsula of Palmer Land to the Luitpold Coast of Coats Land. Finn Ronne staked his claim to the W half (i.e., the shelf to the W of Berkner Island), and called it Edith Ronne Land, for his wife. This "land" included the interior, behind the present-day Ronne Ice Shelf. In 1968 international agreement created the situation we know today (i.e., two ice shelves). The one to the W of Berkner Island was renamed the Ronne Ice Shelf, while the one to the E of Berkner Island retained the name Filchner Ice Shelf. Today, when one speaks collectively of this feature, one calls it the Filchner-Ronne Ice Shelf, or the Ronne-Filchner Ice Shelf. The Germans call it Ronne-Filchner Schelfeis. The two ice shelves combined add up to an area of 430,000 sq km, making it the second largest ice shelf in Antarctica, after the Ross Ice Shelf. It appears on two 1957 Argentine charts as, respectively, Barrera de Hielos Filchner and Barrera de Hielos del Weddell. It appears on a 1962 Chilean chart as Barrera de Hielos de Filchner. The Chilean gazetteer of 1974 accepted the name Barrera de Hielos Weddell.

Filchner Mountains. 72°03' S, 7°40' E. Also called the Filchner Group. A group of mountains, about 11 km SW of the Drygalski Mountains, at the W end of the Orvin Moun-

tains, in Fimbulheimen, in Queen Maud Land. Discovered aerially by GermAE 1938-39, and named by Ritscher as Filchner Berge, for Wilhelm Filchner. Remapped by Norwegian cartographers from 1958-59 air photos taken during the long NorAE 1956-60. US-ACAN accepted the name Filchner Mountains in 1966. The Norwegians call them Filchnerfjella (which means the same thing).

Filchner-Ronne Schelfeis *see* **Filchner Ice Shelf**

Filchner Shelf Ice *see* **Filchner Ice Shelf**

Filchner Station. 77°06' S, 50°24' W. Also called Wilhelm Filchner Station. West German summer-only scientific station on the Filchner Ice Shelf, established in 1982, and named after Wilhelm Filchner. It was open most summer seasons. On Oct. 13, 1998 a massive chunk of the Ronne-Filchner Ice Shelf calved off, taking the unmanned station with it as it floated out into the Weddell Sea. In Feb. 1999 a rescue operation was put into motion, and all the equipment was taken off in 10 days. It was replaced by the Georg von Neumayer Station on the Eckström Ice Shelf.

Filchner Trough. 77°00' S, 36°00' W. An undersea feature extnding N from the Filchner Ice Shelf. The name was proposed by Heinrich Hinze in Jan. 1997, and accepted by international agreement in June 1997.

Filchnerfjella *see* **Filchner Mountains**

Filchnerschelfeis *see* **Filchner Ice Shelf**

Bahía Fildes *see* **Maxwell Bay**

Estrecho Fildes *see* **Fildes Strait**

Península Fildes *see* **Fildes Peninsula**

Punta Fildes *see* **Fildes Point**

Fildes, Robert. Name pronounced like Fields. b. July 13, 1793, Liverpool, son of schoolmaster John Fildes and his wife Alice Wood. He went to sea, married Ellen Hogg (by whom he had several children) in Liverpool, on Dec. 6, 1812, and was a ship's captain by 1814. On Sept. 27, 1820, he was appointed skipper of the sealing brig *Cora*, and on Oct. 6, 1820, left England bound for the South Shetlands and the 1820-21 sealing season. On Dec. 14, 1820, he arrived in the South Shetlands, and on Dec. 16, 1820, he pulled into Blythe Bay (Desolation Island), where he found the *Dove* and the *Eliza* already moored. On Jan. 6, 1821 the *Cora* was wrecked in Blythe Bay, on the N coast of Livingston Island, and Fildes sailed around the South Shetlands for the remainder of the season, as a passenger on the ships of other sealing captains, making charts as he went, thus preparing the first sailing directions for the South Shetlands. He and part of his crew were taken back to Liverpool in the early part of 1821, on the *Indian*. Fildes was back in the South Shetlands in 1821-22, as captain of the *Robert*. However, that ship went down too. On Sept. 1, 1823, he became skipper of the Liverpool brig *Francis Ernest*, making 5 voyages to the Mediterranean. On his third such voyage, he went farther afield, to Odessa, and arrived back in Liverpool on Aug. 18, 1825. His 4th such voyage left Liverpool on Dec. 2, 1825, bound for Odessa, and he was back in Liverpool on June 9, 1826. He left on what would be his last voyage, to Odessa, on July 26, 1827, and on Dec. 28, 1827, on the way back from Odessa to Liverpool, he died. Many of his descendants are still alive.

Fildes Peninsula. 62°11' S, 58°57' W. A peninsula, 7.5 km long, forming the SW extremity of King George Island, in the South Shetlands. Roughly charted by 19th-century sealers. Surveyed by the Discovery Investigations in 1934-35, it appears on their chart of 1935, and was probably named by them, in association with Fildes Strait. UK-APC accepted the name on Sept. 23, 1960, and US-ACAN followed suit that year. Don Hawkes mapped it geologically in 1961, and it appears on a British chart of 1962. In 1967 it was designated SPA #12 (later redesignated SSSI #5). Bellingshausen Station and Presidente Frei Station were here, at Ardley Cove. Great Wall Station and Artigas Station were also in this area. Last plotted by the UK, in late 2008. The Argentines call it Península Fildes.

Fildes Point. 63°00' S, 60°34' W. Forms the N side of Neptunes Bellow, and the SE entrance point of Whalers Bay, on Deception Island, in the South Shetlands. Charted by Robert Fildes in 1820-21, and named by him for himself. It appears on his 1821 chart. It was re-charted by the Discovery Investigations in 1931 and 1935, and appears on a USAAF chart of 1942, on a 1944 Argentine chart (as Punta Fildes), and on a British chart of 1945. It was re-charted by an RN Hydrographic Survey unit in 1948-49. US-ACAN accepted the name Fildes Point in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. ArgAE 1952-53 surveyed it, and renamed it Punta Balcarce, for Gen. Juan Ramón Balcarce (1774-1836), Argentine patriot who fought in the war of independence. It appears as such on their 1953 chart. The Chilean gazetteer of 1974 accepted the name Punta Fildes.

Fildes Refugio or Fildes Station. 62°11' S, 58°55' W. This started out as a Chilean refugio called Refugio Fildes, at Maxwell Bay, King George Island, in the South Shetlands. Then it was upgraded to a station, and called Estación Marítima de Bahía Fildes (known as Bahía Fildes, or just Fildes). Then the name was changed to Escudero (*see* **Profesor Julio Escudero Station**).

Fildes Rocks *see* **Craggy Island**

Fildes Strait. 62°14' S, 59°00' W. A strait, barely 0.5 km wide at its narrowest, it extends in a WNW-ENE direction, and separates Fildes Peninsula (on King George Island) from Nelson Island, in the South Shetlands. On Robert Fildes' 1821 chart it appears as Fildes's Strait or Sound, and on Powell's chart, published in 1822, it appears as Field's Strait (the name Fildes is pronounced "Fields"). Named, obviously, for Robert Fildes (and probably by him, too). There have been slight variations of this name for years. On the 1829 chart drawn up by the *Chanticleer* Expedition of 1928-31, it appears as Fildes Strait, and that was the name that appears on a British chart of 1921. It was re-charted by the Discovery Investigations in 1934-35, and described them as "only a boat passage, and a very dangerous one at that." They charted it as The Narrows. It appears as such on their 1935 chart. It appears as Fildes Strait on a British chart of 1937, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears as Estrecho Fildes on Argentine charts of 1946 and 1958 (albeit misspelled on the latter, as Estrecho Filder), and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Filer, John Roger. Known as Roger. b. July 25, 1937, Blaenavon, Monmouthshire, son of William J. Filer and his wife Alice Broom. After doing rugby and track at school, he went to Swansea University College, studying zoology, geography, and geology. After graduating in 1959, he joined FIDS in 1960, as a biologist and meteorological observer, basically in order to study the sheathbill for his master's degree, and was set to winter over in 1961 when, on Feb. 13, 1961 he left Signy Island Station to visit Gourlay Peninsula, and was never seen alive again. He was found lying at the foot of a ravine near Pantomime Point. He had fallen 50 feet while trying to reach a sheathbill's nest (*see* **Deaths**, 1961). Nev Jones completed his work, and brought it to publication. His sister, Ann, married Derek Clarke (q.v.).

Filer Haven. 60°44' S, 45°35' W. A small cove between Pantomime Point and Pageant Point, on the E side of Gourlay Peninsula, Signy Island, in the South Orkneys. BAS did biological work here up to 1973. Named by UK-APC on Dec. 20, 1974, for Roger Filer. US-ACAN accepted the name in 1975.

Nunataki Filippova *see* **Haines Mountains**

Filla *see* **Filla Island**

Filla Island. 68°50' S, 77°50' E. A rocky island over 5 km (the Australians say about 4 km) long, and rising to a height of 88 m above sea level, in the N part of the Rauer Islands, it is the largest of that group. Photographed aerially by LCE 1936-37. Norwegian cartographers working from these photos in 1946, applied the name Filla (i.e., "the tatters") to this island and several smaller ones nearby, thinking the whole group to be one ragged island. In 1952 U.S. cartographer John H. Roscoe, working from aerial photos taken by OpHJ 1946-47, redefined the area, and gave the name Filla Island to the largest one. US-ACAN accepted that situation in 1956, and ANCA followed suit on Aug. 20, 1957.

Film *see* **Movies, Photography**

Filson Nunatak. 67°52' S, 63°03' E. A small nunatak about 7 km ESE of Dallice Peak and about 11 km ESE of Trost Peak, in the Central Masson Range, in the E part of the Framnes Mountains of Mac. Robertson Land. Photo-

graphed aerially by ANARE in 1958, but not plotted on a map. Named by ANCA for Rex B. Filson, carpenter at Mawson Station in the winter of 1962 (he was a member of Snow Williams' ANARE party who visited the feature in Dec. 1962, while collecting geological specimens and lichens in the Framnes Mountains), 1963-64, and in the Prince Charles Mountains in 1975. US-ACAN accepted the name in 1965.

Filsponen *see* **Filsponen Nunatak**

Filsponen Nunatak. 72°12' S, 14°25' E. A small nunatak, NE of Steinfila Nunatak, between that nunatak and Skruvestikka Nunatak, in the S part of the Payer Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Filsponen (i.e., "the filings"). US-ACAN accepted the name Filsponen Nunatak in 1966.

Filungen *see* **Kozo Rock**

Fimbul Canyon. 69°27' S, 1°20' E. An undersea feature, out to sea beyond the Fimbul Ice Shelf. Named by Heinrich Hinze in Jan. 1997, in association with the ice shelf. The name was accepted in June 1997, by international agreement.

Fimbul Ice Shelf. 70°30' S, 0°00'. About 200 km long and 100 km wide, it borders the coast of Queen Maud Land from 3°W to 3°E, and is fed by Jutulstraumen Glacier. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Fimbulisen (i.e., "the giant ice") by the Norwegians. US-ACAN accepted the translated name Fimbul Ice Shelf in 1966. Sanae III, the South African scientific station, was here.

Fimbulheimen. 72°00' S, 8°00' E. The mountain area between Jutulstraumen Glacier in the W to Borchgrevinkisen in the E. Named by the Norwegians ("fimbul" means "large" and "heim" means "home"). This is one of the two great divisions of Queen Maud Land (the other being Maudheimvidda).

Fimbulisen *see* **Fimbul Ice Shelf**

Fin Nunatak. 69°03' S, 64°03' W. Rising to 805 m, in the middle of Casey Glacier, near the E coast of Palmer Land. Photographed aerially on Dec. 20, 1928, by Wilkins, and roughly mapped from these photos by U.S. cartographer W.L.G. Joerg in 1936-37. Surveyed by Fids from Base E in Dec. 1960. Named by UK-APC on Aug. 31, 1962, for its shape. US-ACAN accepted the name later that year.

Fin whales. Order: Cetacea; sub-order: Mysticeti; family: balaenopteridae. *Balaenoptera physalus* is also called the common rorqual, the finner, the finback, and the razorback. It grows to 85 feet long, and 80 tons, and is the largest whale after the blue whale, but slimmer. It can swim fast — 23 mph for short distances, and can cruise at 14 mph for weeks on end. It can dive to 500 meters, deep for a baleen whale.

Islotes Final *see* **Final Island**

Final Island. 65°05' S, 64°29' W. The most westerly of the Myriad Islands, 5.5 km NW of Snag Rocks, in the Wilhelm Archipelago. Mapped by FIDS cartographers from 1956-57 air photos taken by FIDASE, and from photos taken by the *Protector*'s helicopter in March 1958. Named by UK-APC on July 7, 1959, for its position, and also because it is the most westerly of all the islands bordering French Passage. It appears on a 1960 British chart. US-ACAN accepted the name in 1971. The Argentines call this feature Islotes Final (i.e., in the plural).

Final Rock. 84°09' S, 56°10' W. An isolated rock on land, rising to 1075 m, 5 km S of Mount Feldkotter. In 1963-64, USN photographed it aerially and USGS surveyed it; it was then mapped by USGS from these efforts. So named by US-ACAN in 1968 because it is the southernmost exposed rock in the Neptune Range, in the Pensacola Mountains. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Finback Massif. 65°41' S, 62°25' W. Rising to over 1000 m, between (on the one hand) Starbuck Glacier and Stubb Glacier and (on the other) Flask Glacier, 10 km WNW of Tashtego Point, on the Oscar II Coast, on the E coast of Graham Land. Surveyed by BAS personnel from Base E in 1963-64. Named by UK-APC on July 21, 1976, for the type of whale. US-ACAN accepted the name later in 1976.

Finback whale *see* **Fin whale**

Mount Finch. 72°34' S, 167°23' E. Rising to 2100 m, on the W side of the mouth of Trainer Glacier, where that glacier enters Trafalgar Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Lt. Jerry L. Finch, USN, VX-6 project officer for infrared ice sounding equipment, and an aircraft commander during OpDF 68 (i.e., 1967-68).

Punta Findlay *see* **Findlay Point**

Findlay Point. 60°35' S, 45°23' W. A point, 3 km NW of Palmer Bay, on the NE coast of Coronation Island, in the South Orkneys. Discovered in Dec. 1821 by Palmer and Powell, and roughly charted by Powell. Surveyed by Fids from Signy Island Station between 1956 and 1958. Named by UK-APC on July 7, 1959, for Alexander George Findlay (1812-1875), British geographer and hydrographer who compiled charts of the South Orkneys from sailors' reports. US-ACAN accepted the name in 1964. The Argentines call it Punta Findlay.

Findlay Range. 71°39' S, 167°22' E. A range lying parallel to, and W of, the Lyttelton Range, extending between Grigg Peak and Sorenson Peak, in the Admiralty Mountains of Victoria Land. Named by NZ-APC in 1982, for Robert Findlay (*see* **Findlay Ridge**). US-ACAN accepted the name.

Findlay Ridge. 78°08' S, 164°00' E. A ridge separating Miers Valley and The Altiplano from Hidden Valley, on the coast of Victoria Land. Named by NZ-APC in 1980, for Robert Hamish "Rob" Findlay, NZ geologist with NZGSAE 1977-78, and leader of an NZARP party in 1981-82. US-ACAN accepted the name in 1995.

Punta Finger *see* [1]**Finger Point**

Finger Mountain. 77°45' S, 160°38' E. An elongated mountain rising to 1920 m (the New Zealanders say 2133 m), on the N side of Turnabout Valley, it is 8 km S of Beehive Mountain, on the S flank of Taylor Glacier, in the Quartermain Mountains of southern Victoria Land. So named by BNAE 1901-04 because a long tongue of dolerite between the sandstone strata has the appearance of a finger. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

[1]**Finger Point**. 62°06' S, 58°20' W. A small, finger-like, rocky promontory on the N coast of Lussic Cove, Martel Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named descriptively by the Poles in 1980.

[2]**Finger Point**. 65°15' S, 64°17' W. Forms the SW end of Skua Island, in the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted in 1935 by BGLE 1934-37, and named descriptively by them. It appears on a British chart of 1948. UK-APC accepted the name on Sept. 8, 1953, and it appears in the 1955 British gazetteer. US-ACAN followed suit with the naming in 1964. It appears on a 1958 Argentine chart as Punta Finger, and on a 1962 Argentine chart translated all the way as Punta Dedo. However, the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer was (rather surprisingly on all scores) Punta Finger.

[3]**Finger Point**. 77°00' S, 162°26' E. A narrow rocky point projecting into Granite Harbor, between Cuff Cape and Cape Geology, or, to put it another way, between the Mackay Glacier Tongue and Discovery Bluff, it forms the E extremity of The Flatiron, in southern Victoria Land. Mapped and named descriptively by BAE 1910-13. US-ACAN accepted the name in 1950, and NZ-APC followed suit.

Finger Ridges. 79°11' S, 156°58' E. About a dozen mainly ice-free ridges and spurs which extend for between 20 and 24 km in an E-W direction, in the NW part of the Cook Mountains, between Butcher Ridge and the Ross Ice Shelf, in the extreme S of Victoria Land. The individual ridges are relatively short (between 1.5 and 3 km long), and project northward from the higher ice-covered main ridge. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1963. Named descriptively by US-ACAN in 1965. ANCA accepted the name on Aug. 27, 1975.

Fingeren *see* **Fingeren Peak**

Fingeren Peak. 72°38' S, 3°47' W. Immediately NW of Høgskavlpiggen Peak, between that peak and Veten Mountain, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers

from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Fingeren (i.e., "the finger"). US-ACAN accepted the name Fingeren Peak in 1966.

Fingernagelsporn. 71°33' S, 163°10' E. A spur, just E of Indexsporn, between that spur and Kleiner Sledgergletscher, in the Lanterman Range of the Bowers Mountains, in Oates Land. Named by the Germans ("fingernail spur").

Fingertoppen *see* **Tensasi-mine**

Finland. Before 1988 there were Finnish researchers in Antarctica, and even Finnish dog drivers, and so on, but always with expeditions of other countries. Finland was ratified on May 5, 1984 as the 31st signatory of the Antarctic Treaty. A Finnish engineering party, led by Maati Haapanen, traveled to Antarctica on the *Akademik Federov*, as part of SovAE 1987-89. In 1988-89, helped by the Swedes, the Finns built Aboa Station and became a full-fledged Antarctican presence, so to speak. Olli-Pekka Nordlund led the expedition that season, on the *Stena Arctica*. Pentti Mälkki led the 1989-90 expedition, on the *Aranda*, and again occupied Aboa Station for the summer. A group wintered over at Aboa in 1990. From the 1991-92 season onwards, the Finns (and the Swedes and Norwegians) grouped together to form the Nordic Antarctic Research Program, and the three of them would go to Antarctica every summer season.

Finlandia Foothills. 69°56' S, 70°06' W. A rock massif, 16 km long and 5 km wide, rising to about 1130 m, at the W side of Sibelius Glacier, in the N part of Alexander Island. Mapped by Searle of the FIDS in 1959-60 from air photos taken during RARE 1947-48, and plotted by him in 69°56' S, 76°09' W. Surveyed by BAS between 1973 and 1977. Named by UK-APC on Dec. 8, 1977, for Sibelius' 1899 symphonic poem *Finlandia*. It appears in the 1980 British gazetteer. US-ACAN accepted the name. It has since been replotted.

Mount Finley. 85°01' S, 173°58' W. A prominent mountain, rising to 3470 m, on the ridge which extends S from Mount Wade, 8 km SSW of Mount Oliver, on the W side of the lower reaches of the Shackleton Glacier, at the E end of the Bush Mountains, in the Queen Maud Mountains. Discovered on the Nov. 1929 flights to the Queen Maud Mountains, during ByrdAE 1928-30, and named by Byrd for John Huston Finley (1863-1940), *New York Times* editor, and president of the American Geographical Society at the time of ByrdAE 1928-30 (in fact from 1925 until his death). US-ACAN accepted the name, and NZ-APC followed suit.

Sierra Finley *see* **Finley Heights**

Finley Glacier. 73°35' S, 165°38' E. A tributary glacier flowing N from the NW slopes of Mount Monteagle into the upper part of Icebreaker Glacier, in the Mountaineer Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Russell H. Finley, aviation bosun's mate with VX-6 during OpDF 66, OpDF 67, and OpDF 68.

Finley Heights. 69°13' S, 63°13' W. Rugged, snow-covered coastal heights, 11 km long, and rising to 1070 m (the Chileans say 945 m), between the mouths of Bingham Glacier and Lurabee Glacier, at the N end of the Wilkins Coast, across Stefanssson Strait from Hearst Island, S of Cape Hinks, on the Wilkins Coast, on the E coast of the Antarctic Peninsula. The E extremity of this feature was discovered and photographed aerially on Dec. 20, 1928, by Wilkins, who named it the Finley Islands, for John Finley (*see* **Mount Finley**). Wilkins thought that it was a group of 6 or more islands scattered in a great transverse channel across the Antarctic Peninsula. What he called the Finley Islands actually comprised what would become Briesemeister Peak, DeBusk Scarp, Engel Peaks, and, of course, Finley Heights. It appears as such on Wilkins' 1929 map, Wordie's 1929 map, and on a British chart of 1933. U.S. cartographer, W.L.G. Joerg, working from Wilkins' photos, and comparing them to Ellsworth's taken in 1935, as well as early reports from BGLE 1934-37, came to the conclusion that this feature was, in fact, joined to the mainland. Therefore, on his 1937 map, it is called Finley Peninsula. Following surveys conducted on flights and sledge trips in Nov.-Dec. 1940, during USAS 1939-41, this feature was renamed Cape Cross Massif, in association with Cape Hinks. It appears as such on a 1943 U.S. Hydrographic Office chart. In late 1947 it was again photographed aerially, by RARE 1947-48, and surveyed from the ground by a joint sledging team comprising RARE personnel and Fids from Base E. It was redefined as Finley Ridge, and as such was accepted by US-ACAN in 1948, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. Re-surveyed by Fids from Base E in 1960, when its true nature was determined. On Aug. 31, 1962, UK-APC renamed it Finley Heights, and US-ACAN followed suit that year. It appears on a Chilean chart of 1962, as Sierra Finley, and that name was accepted by the 1974 Chilean gazetteer.

Finley Islands *see* **Finley Heights**

Finley Peninsula *see* **Finley Heights**

Finley Ridge *see* **Finley Heights**

The *Finn Polaris*. Finnish icebreaker, chartered by the 3rd Indian Antarctic Expedition, 1983-85. Lasse Kauki Ilmari Kulju was skipper that season, and chief officer was Jartti Malmi. She also took down IndAE 83-84 and 1984-85. Skipper was again Capt. Kulju. She took down the Italian Antarctic expeditions of 1986-87 (Capt. Kulju) and 1987-88 (Capt. Antila Markku Tapani).

Finn Spur. 79°17' S, 156°37' E. A rock spur, 5.5 km NE of Mount Ayres, on the N side of the Longhurst Plateau, in the Cook Mountains. Named by US-ACAN in 2001, for Carol Finn, USGS geophysicist who was project chief on a cooperative USGS-German aeromagnetic survey over the area of Butcher Ridge, Cook Mountains, and Darwin Névé, in 1997-98. Additional aeromagnetic surveys from 1991, including seasons over the West Antarctic ice sheet from 1994 as a principal investigator and USGS chief. In July 2010, Miss Finn became president of the American Geophysical Union.

Finnemore Peak. 77°24' S, 160°51' E. A summit rising to 2050 m at the S end of the ridge that separates Albert Valley from the head of Wreath Valley, in the Apocalypse Peaks of Victoria Land. Named by US-ACAN in 2005, for Michelle Rogan Finnemore, who wintered-over at Pole Station in 1990, as USGS team leader for geology and seismology observations. She wintered-over again, this time at McMurdo in 1992, conducting satellite observations and ionospheric studies for the University of Texas, in Austin. She was later manager of Gateway Antarctica, the Centre for Antarctic Studies and Research, at the University of Canterbury, in Christchurch, NZ. NZ-APC accepted the name on Sept. 12, 2005.

Finner whale *see* **Fin whale**

Finneskoes. Or finnesko (singular and plural). Boots made completely of fur, including the soles. They are packed with the moisture-absorbing Norwegian hay called sennegrass. They are very warm, but do not have much traction.

Finney, William *see* **USEE 1838-42**

Finsterwalder Glacier. 67°18' S, 66°12' W. A glacier, 16 km long and 3 km wide, flowing SW from the central plateau of Graham Land toward the head of Lallemand Fjord, its mouth lying between the mouths of Haefeli Glacier and Klebelsberg Glacier, the 3 glaciers merging with Sharp Glacier where that glacier enters the fjord, on the Loubet Coast, on the W coast of Graham Land. First surveyed in its upper reaches from the plateau by Fids from Base E in 1946-47, and named by them for the German father and son glaciologists, Sebastian (1862-1951) and Richard Finsterwalder (1899-1963). UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1957, and was photographed aerially by FIDASE in 1956-57. The Americans plot it in 67°19' S, 66°20' W.

The *Fiona*. American yacht, skippered by Eric B. Forsyth, which visited the Antarctic Peninsula in 1998-99.

Île Fiorèse. 66°39' S, 139°59' E. One of the group of islands the French call les Sept-Îles, in the Géologie Archipelago. Named by the French as Le Taureau, for the astrological sign of Taurus. They changed the name in 1999, to honor Bruno Fiorèse, helo pilot who died in a crash on Feb. 8, 1999 (*see* **Deaths**, 1999).

Firaugnutane *see* **Yotsume Rocks**

Fire. A major hazard anywhere, and certainly in Antarctica, where the dryness and the wind spread a fire quickly. Water cannot be used to douse a fire because it tends to freeze, and snow-blowers are no good. All buildings (now) are made of fireprooof materials, but, even so, they do catch alight. There are Canadian CN-

110 fire trucks at McMurdo, and the McMurdo Fire Department has 44 firemen drawn from different parts of the USA. Scott Base, near to McMurdo, trains its staff before sending them to Antarctica. This is a list (not a complete list, by any means) of fires in Antarctica. *See also* **Deaths in Antarctica** and **Disasters**. **July 24, 1899**: A member of Borchgrevink's expedition (BAE 1898-1900) set fire to his mattress, during the winter-over, nearly burning down the hut. This would have killed them all, one way or another. **Jan. 27, 1915**: The whaler *Guvernøren* burned and sank. **March 16, 1932**: The whaler *Saragossa* caught fire, and sank. **March 16, 1934**: The gasoline tank in the administration building at Little America caught fire, but was extinguished. **Sept. 8, 1946**: The FIDS' Deception Island base (Base B) destroyed by fire. **Nov. 8, 1948**: The tragic FIDS fire at Hope Bay. **July 1951**: Almirante Brown Station partially destroyed by fire. **1951**: Capitán Fliess Refugio burned down. **Jan. 23-24, 1952**: The great Port-Martin fire. **June 30, 1952**: A fire at San Martín Station destroyed the main living quarters, 2 supply warehouses, and the radio station. **Nov. 29, 1956**: A fire on the Globemaster *State of Oregon*. There have been many fires on ships and planes in Antarctica, but this one threatened 3500 gallons of gasoline (see this date, under **Disasters**). **April 28, 1957**: Fire at McMurdo, in a garage, destroyed the garage and a tractor, as well as other pieces of equipment. Cause unknown. $106,000 worth of damage. **Aug. 10, 1958**: The living quarters at Luis Risapatrón Station burned down. **Oct. 15, 1958**: Esperanza Station destroyed by fire. **Feb. 2, 1959**: San Martín Station burned down. **April 3, 1959**: The powerhouse at Mawson Station burned. **July 4, 1959**: Taylor Glacier field station burned down. **Aug. 3, 1960**: Fire at Mirnyy Station. 8 men died. **Feb. 1, 1961**: Two buildings at McMurdo burned, including the electronics building. $225,000 damage. **March 6, 1964**: Original science building at Hallett Station destroyed along with the aurora tower. The station was then closed. **March 19, 1968**: Fire at Plateau Station destroyed a garage containing 3 generators, a Traxcavator, and other equipment. **Aug. 11, 1968**: The snow-melting building at Pole Station destroyed by fire. **Dec. 18, 1968**: Flash-fire at Palmer Station due to a faulty heater spilling oil. A Jamesway hut and certain equipment were destroyed. **Dec. 28, 1971**: Base N destroyed by fire. **Jan. 1974**: Trepassey House, on Stonington Island, was burned down, deliberately, by BAS, as it had become a liability. **Aug. 22, 1978**: The Chapel of the Snows burned down. Its replacement would also burn down. **1982**: Fire at McMurdo. $2 million worth of damage to the transportation building (which was destroyed) and vehicles. **1982**: A fire at Vostok Station destroyed the generator facility, and killed Aleksei Karpenko The 20 remaining men were forced to winter-over for 8 months, and survived by using diesel fuel candles and an ice-drill generator for power. The severe cold caused much damage to the station. The men carried on with their work, and were rescued in 1983. **April 12, 1984**: Almirante Brown partially destroyed by fire. **Oct. 28, 1985**: An explosion at Davis Station, inside a water tank, killed sprayer Stephen Bunning the following day. **April 26, 2001**: Firefighter Dave Tamo got injured at McMurdo, and had to be evacuated by the New Zealanders. **Sept. 2001**: A fire at Rothera Station. The Bonner Lab was completely destroyed. **Oct. 5, 2008**: A two-story building at Progress Station caught fire, killing one man and seriously injuring two others. The radio equipment was completely destroyed. **May 2009**: An A-frame hut at Scott Base burned down.

The Fire Boss. McMurdo's red fire truck in the 1960s, it carried 4000 pounds of Ansul (a dry chemical; liquids would freeze). Each track rested on 4 huge tires.

Fireman Glacier. 77°47' S, 160°16' E. Flows NW into Cassidy Glacier, in the W part of the Quartermain Mountains of Victoria Land. Named by US-ACAN in 1992, for Edward Leonard "Ed" Fireman (1922-1990), who, from 1956, was a physicist with the Smithsonian Astrophysical Observatory, in Cambridge, Mass., and an authority on the analysis and dating of extraterrestrial materials and space debris. From 1979 he conducted investigations on the dating and composition of Antarctic meteorites and Antarctic ice samples, including deep core ice obtained at Byrd Station. He was one of the first scientists to examine rocks brought back from the Moon in 1969.

The *Firern*. A Norwegian whale catcher, owned by Lars Christensen, which took part in LCE 1936-37, working for the *Thorshammer*. Captain Alf Jørgensen.

Firlej Cove. 62°11' S, 58°36' W. Between Zalewski Glacier and Rosciszewski Icefall, at Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Commodore Roman Firlej, sea-transport party leader of PolAE 1976-77 and PolAE 1977-78.

Firling Islands. 69°22' S, 76°01' E. A group of (presumably 4) small islands off the NW portion of the Larsemann Hills. They were photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named them Firlingane (i.e., "the quadruplets"). ANCA accepted the translated name Firling Islands. *See also* **Osmar Island**.

Firlingane *see* **Firling Islands**, **Firlingane Nunataks**

Firlingane Nunataks. 71°52' S, 27°07' E. Four nunataks between Bulken Hill and Hesteskoen Nunatak, N of Mount Balchen, in the E part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, using air photos taken during OpHJ 1946-47, and named by them as Firlingane (i.e., "the quadruplets"). Apparently, the Norwegians plotted them in 71°53' S, 27°24' E. US-ACAN accepted the name Firlingane Nunataks in 1966.

Firn snow. Also called névé. Old, partially compacted granular snow, transformed into dense snow with air spaces containing minute ice crystals. It is the intermediate stage between snow and glacial ice, and is found under the snow that accumulates at the head of a glacier.

Firnication. The rounding of large snowflakes through age and compression.

First Crater. 77°50' S, 166°39' E. On Arrival Heights, just over 1.5 km N of McMurdo Station, on Ross Island. Named by Frank Debenham in 1912, on his local survey of Hut Point Peninsula, during BAE 1910-13. US-ACAN accepted the name in 1972, and NZ-APC followed suit.

First Facet. 77°09' S, 162°30' E. A steep, ice-free escarpment-type bluff, just eastward of Second Facet, forming a part of the N wall of Debenham Glacier, in southern Victoria Land. Charted and named descriptively by BAE 1910-13. US-ACAN accepted the name in 1964.

First View Point. 77°01' S, 163°03' E. A small point just to the W of Cape Roberts, between that cape and Avalanche Bay, on the S coast of Granite Harbor, in southern Victoria Land. Named by the Granite Harbour Geological Party, led by Grif Taylor, during BAE 1910-13. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Firth, Charles Leslie. b. May 21, 1900, Buenos Aires, son of civil engineer Charles Firth and his wife Ethel May Crosby. After St. Paul's School, in London, he joined the RN, and 10 days before the end of World War I became a midshipman on the *Tiger*. On March 22, 1919, he joined the Royal Australian Navy, and was on the *Sydney*. In 1922 he returned to England, was promoted to lieutenant on April 15 of that year, and served on the Royal Yacht. He was promoted to lieutenant commander on April 15, 1930, to commander on June 30, 1935, and to captain on June 30, 1941. On May 6, 1941, in Yorkshire, he married Mrs. Margaret "Peggy" Wilson (née Holden), and they moved to Burdenshot Cottage, Worplesdon, Surrey, moving to Bermuda not long after the war, and having two children. He had won two DSOs during World War II, during which he commanded three destroyers, the *Imogen*, the *Jackal*, and the *Troubridge*. He was skipper of the *Glasgow*, in Antarctic waters, 1948-49. He retired on July 7, 1950, and died on July 8, 1971, in Richmond, Surrey.

Firth of Tay *see* **Tay**

Fisch, Max. b. Dec. 30, 1875, Thorn, West Prussia. Able seaman on the *Gauss* during GerAE 1901-03.

Fischer Nunatak. 67°44' S, 63°03' E. Also spelled (erroneously) as Fisher Nunatak. Rising to 750 m, about 3.5 km S of Mount Henderson, in the NE part of the Framnes Mountains of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Sørnuten (i.e., "the south peak"). This nunatak was the site of a remote weather station established by ANARE in 1955. Renamed

by ANARE for skier and mountain climber Henri-Jean-Louis Fischer (b. Oct. 17, 1936), cook at Mawson Station in 1958. ANCA accepted the new name on July 22, 1959, and US-ACAN followed suit in 1965.

Fischer Ridge. 71°58' S, 169°00' E. An ice-covered ridge trending NW-SE between Kirk Glacier and Ironside Glacier, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for William H. Fischer, atmospheric chemist at McMurdo in 1966-67.

Fish. 120 species of fish live in Antarctic waters. 90 percent of these live at the bottom of the sea, and 70 percent of these are Antarctic perches. 90 percent of the fish at the bottom are to be found nowhere else in the world. 65 percent of all Antarctic fish belong to the Nototheniodei. Also at the bottom are eel pouts, sea snails, rat-tailed fishes, and the giant Antarctic cod (also known as the Antarctic toothfish). *See also* **Dragon fishes**, **Ice fish, Pl**under **fishes**, **Rays**, and **Toothfish**. Non-bony types are hagfish and skate. Many deep sea species are known here, but only 3 stay — a barracuda and 2 lantern fishes. There are no sharks in Antarctica, which is strange. Antarctic fish are well adapted to the cold, those living at temperatures below the freezing level of their blood creating a glycoprotein that acts as an antifreeze (Dr. Arthur DeVries discovered this fact in the 1960s).

Islas Fish *see* **Fish Islands**

Islotes Fish *see* **Fish Islands**

Fish, John. Baptized on Nov. 4, 1750, in Epping, son of Jonathan Fish and his wife Elizabeth. On Feb. 23, 1772 he joined the *Adventure* as an able seaman for Cook's 2nd voyage, 1772-75. After the expedition he served under Tobias Furneaux on the *Syren*. He was serving on the *Sultan* in the East Indies, when he died in 1785.

Fish Islands. 66°02' S, 65°25' W. A group of small islands in the N part of the entrance to Holtedahl Bay, off Prospect Point, on the Graham Coast, on the W coast of Graham Land. Discovered and roughly charted in Sept. 1935, by BGLE 1934-37, and named by them. It appears as such on Rymill's 1938 map of the expedition. All the features within this group have fish names, such as Flounder Island, Mackerel Island, Perch Island, Plaice Island, Salmon Island, Trout Island, and The Minnows. They appear on a Chilean chart of 1947, singularized, as Isla Pescado. The name Fish Islets appears on a British chart of 1948, and that was the name accepted by US-ACAN in 1950, and by UK-APC on March 31, 1955. The islands were re-charted by Fids on the *Shackleton*, in 1957. On July 7, 1959, UK-APC redefined them as Fish Islands (which was Rymill's original name for them), and they appear as such on a British chart of 1960. US-ACAN accepted that new name in 1963. They appear on a 1949 Argentine chart as Islotes Fish, and that was the name accepted by the 1970 Argentine gazetteer. However, today, the Argentines tend to refer to the group as Islotes Peces (i.e., "fishes islets"), and the Chileans tend to call them Islas Fish.

Fish Islets *see* **Fish Islands**

Isla Fisher *see* **Midas Island**

Mount Fisher. 85°06' S, 171°03' W. A domed, snow-capped summit, rising to 4080 m at the SE end of the high massif extending to Mount Wade, 3 km NW of Mount Ray, in the Prince Olav Mountains, near the NW flank of the Liv Glacier, between that glacier and the Shackleton Glacier. Discovered aerially by Byrd on Nov. 1929 flights to the Queen Maud Mountains, during ByrdAE 1928-30, and named by him as the Fisher Mountains, for the Fisher brothers of Detroit, sponsors of the expedition. At that time, the feature was thought to be in the plural, and that it formed the W flank of the Liv. US-ACAN accepted the name in 1947, and NZ-APC followed suit. The Fisher Body Corporation was the world's largest manufacturer of automobile bodies. There were 7 brothers, all great philanthropists, and the last of them died in 1972. US-ACAN redefined this feature in the singular, in 1966.

Fisher Bastion. 78°21' S, 162°31' E. A high, rectangular massif, rising to 2650 m, between the upper reaches of Potter Glacier and Foster Glacier, 7 km SE of Mount Huggins, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1995, for Cdr. Dwight Fisher (*see* **Fisher Peak**).

Fisher Bay. 67°31' S, 145°45' E. An embayment, about 22 km wide, between the E side of the Mertz Glacier Tongue and the mainland of George V Land. Discovered by AAE 1911-14, and named by Mawson as Disappointment Bay. He later renamed it for Andrew Fisher (1862-1928), Scottish-born prime minister of Australia, 1908-09, 1910-14, 1914-15. US-ACAN accepted the name, and ANCA followed suit.

Fisher Glacier. 73°15' S, 66°00' E. A prominent W tributary of the Lambert Glacier, about 160 km long, it comes off Mac. Robertson Land, flows E past the N sides of Mount Menzies and Mount Rubin, to join the main stream of the Lambert just E of Mount Stinear. Discovered aerially in Oct. 1957, by Keith Mather, leader at Mawson Station in 1957. Named by ANCA on April 29, 1958, for Norman Henry Fisher (1909-2007), first chief geologist with the (Australian) Bureau of Mineral Resources, when that agency was founded in 1946. He became director in 1969, and retired in 1974. US-ACAN accepted the name in 1961.

[1]**Fisher Island**. 69°24' S, 76°15' E. A crescent-shaped island W of Broknes Peninsula, in the Larsemann Hills. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Sigdøy (i.e., "crescent island"). Renamed by ANCA on Sept. 29, 1988, for Morrie Fisher (*see* **Fisher Massif**), who carried out the first astrofix in the Larsemann Hills, near the W end of this island, Aug. 12-14, 1957. The Chinese call it Xiongmao Dao.

[2]**Fisher Island**. 77°08' S, 154°00' W. An ice-covered island, 11 km long, just N of Edward VII Peninsula, where it marks the W side of the entrance to Sulzberger Bay. Named by US-ACAN in 1966, for Wayne Fisher, of the U.S. Department of State.

Fisher Massif. 72°19' S, 67°40' E. A large rock exposure, about 26 km long and 8 km wide, at the W side of the Lambert Glacier, about 70 km S of the Aramis Range of the Prince Charles Mountains. Discovered by Bruce Stinear's ANARE party in Oct. 1957. Named by ANCA on April 29, 1958, for Morris Maxwell "Morrie" Fisher (b. Feb. 26, 1934), surveyor at Mawson Station in 1957. US-ACAN accepted the name in 1962. Originally plotted in 71°27' S, 67°40' E, it has since been replotted. *See also* [1]**Fisher Island**.

Fisher Mountains *see* **Mount Fisher**

[1]**Fisher Nunatak**. 77°43' S, 87°27' W. A nunatak with rock exposure, 22 km W of Mount Crawford of the Sentinel Range, in the Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse Party of 1957-58, led by Charles Bentley. Named by US-ACAN in 1960, for Diana D. Fisher, director, Glaciological Headquarters, US-IGY Program, 1956-59.

[2]**Fisher Nunatak** *see* **Fischer Nunatak**

Fisher Peak. 75°52' S, 68°23' W. Rising to about 1100 m, 8 km SE of Mount Leek, in the Hauberg Mountains, in the E part of Ellsworth Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Climbed in Dec. 1977, by members of a USGS field party. Named by US-ACAN in 1985, for Dwight Douglas Fisher (b. June 22, 1945), USN, command pilot on the first landing by an LC-130 Hercules aircraft on the English Coast, in Dec. 1984. From May 1984 to May 1985 Capt. Fisher was commanding officer of VXE-6, and was commanding officer of NSFA, 1987-89. He was naval officer on detail to the NSF, 1989-92; and deputy manager, Polar Operations Section, at the NSF's Office of Polar Programs, from 1992. UK-APC accepted the name on Nov. 13, 1985.

Fisher Point. 81°09' S, 160°43' E. A rock coastal point on the E margin of the Darley Hills, in the Churchill Mountains, it marks the S side of the mouth of the ice-filled Grazzini Bay, at the Ross Ice Shelf. Named by US-ACAN on Jan. 28, 2003, for photographer Franklin L. Fisher (1885-1953), chief of the illustrations division at *National Geographic* Magazine, from 1915, when the division was founded, until 1949. NZ-APC accepted the name on Feb. 27, 2003.

Fisher Spur. 71°09' S, 159°50' E. A rugged rock spur projecting northward from the W flank of the Daniels Range, immediately N of Mount Nero, about 27 km SSW of Lee Nunatak, in the Usarp Mountains of Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Dean F. Fisher, USARP geophysicist at McMurdo in 1967-68. ANCA accepted the name on July 31, 1972.

Fishhook Ridge. 64°27' S, 59°36' W. Rising to about 100 m on the E side of Sobral Peninsula, on the Nordenskjöld Coast, in the N part of the Antarctic Peninsula. The shape of the feature in plan view resembles that of a fishhook, hence the name given by UK-APC on May 13, 1991. US-ACAN accepted the name.

Fishing. Fishing in Antarctica is not commercially viable (neither is krill fishing, although much investigation into krill-fishing has gone on over the years), and, because of its lack of potential (*see also* **Economy**) has never been fully developed. However, toward the end of its life as an empire, the USSR was overfishing, and some stocks were drying up. As for fishing as a sport (!), it probably wouldn't be too much fun in the cold.

Fishtail Point. 78°57' S, 162°36' E. The most southerly point on Shults Peninsula, at the E side of the mouth of Skelton Glacier. Surveyed and named descriptively by the NZ party of BCTAE in Feb. 1957. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Fishtrap Cove. 68°11' S, 67°00' W. A small cove, about 160 m NW of Boulder Point, on the SW side of Stonington Island, in Marguerite Bay, close off the Fallières Coast, on the W coast of Graham Land. First surveyed by members of East Base during USAS 1939-41, it appears on Glenn Dyer's map of 1941. Surveyed again in 1946-47 by FIDS, who named it for the fishtraps which they set here. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. The Argentines call it Caleta Trampera, which means the same thing.

Fisk, John *see* **USEE 1838-42**

Cabo Fiske *see* **Cape Fiske**

Cape Fiske. 74°17' S, 60°39' W. Forms the E tip of Smith Peninsula, projecting from the Lassiter Coast into the Weddell Sea, on the E coast of Palmer Land. Photographed aerially in 1940, during USAS 1939-41, and again on Nov. 21, 1947, during RARE 1947-48. It was surveyed from the ground in Dec. 1947, by a joint sledging team of RARE personnel and Fids from Base E. Finn Ronne originally, in 1947-48, applied the name Cape Fiske to the SE extremity of Smith Peninsula, naming it for Larry Fiske. It appears that way on Ronne's map of 1948, and also on the American Geographical Society's map of that year. The name Cape Ketchum was given to the N extremity of Smith Peninsula, named for Jack Ketchum, and it appears that way on the 1948 AGS map. However, in 1948, Ronne changed Cape Ketchum to Cape Light, to honor Richard Upjohn Light (*see* **Mount Light**). It appears that way on Ronne's 1948 map, and on his 1949 map. That was the situation, regarding the 2 capes, that was accepted by US-ACAN, and by UK-APC on Sept. 8, 1953, and which appears on a British chart of 1954, and in the 1955 British gazetteer. The 2 capes also appear as such (but as Cabo Fiske and Cabo Light, resp.) on a 1952 Argentine chart. Following USN air photos taken between 1965 and 1967, the name Cape Light was deleted (the name Light was given to Mount Light) and the name Cape Fiske was transferred from the SE point of the pensinsuila to the E point; it appears that way on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted this situation on Dec. 20, 1974. Originally plotted in 74°21' S, 60°27' W, it has since been replotted.

Fiske, Clarence Oliver "Larry." b. Dec. 29, 1922. A former U.S. Navy aviator in Japan, he was attending the University of Buffalo when he was taken on to RARE 1947-48 as climatologist and general handyman. He was married at the time. He retired as a captain, and died on Feb. 17, 1992, in Keene, NH.

Fission Wall. 85°52' S, 155°12' W. A high granite cliff, rising to about 1400 m, on the N face of Mount Griffith, in the Hays Mountains, in the Queen Maud Mountains. It was climbed on Nov. 16, 1987, by a USARP-Arizona State University geological party led by Ed Stump, and so named by Stump for the granite samples collected on the wall at regularly-spaced intervals of 100 m, for dating using the fission-track method. US-ACAN accepted the name.

The Fist *see* **Wegger Peak**

Fitch Glacier. 72°01' S, 168°07' E. A tributary glacier flowing S along the E side of the McGregor Range, to enter Man-o-War Glacier, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Lt. E.E. Fitch, USN, medical officer at Hallett Station in 1963. NZ-APC accepted the name.

Bahía Fitchie *see* **Fitchie Bay**

Fitchie, John. b. 1848, Dundee, son of carter James Fitchie and his wife Janet. He left his wife Margaret in Dundee and went off as 3nd mate on the *Scotia* during ScotNAE 1902-04. In Jan. 1903, at the Falkland Islands, on the way to Antarctica, Allan Bryce Thomson left the expedition and Fitchie took his place as 1st mate.

Fitchie Bay. 60°45' S, 44°29' W. Between Cape Dundas and Cape Whitson, on the SE side of Laurie Island, in the South Orkneys. Charted on Sept. 25, 1903, by ScotNAE 1902-04, and named by Bruce for John Fitchie. It was re-surveyed by the Discovery Investigations in 1933, and appears on their 1934 chart. US-ACAN accepted the name in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1933 Argentine chart as Bahía Fitchie, and that name was accepted by the 1970 British gazetteer.

Fitton, Gordon Francis "Frank." b. 1932. He joined FIDS in 1959, as a general assistant, and wintered-over at Base B in 1960. He was also a member of the first party to winter-over at Base T, in 1961.

Fitton Rock. 67°46' S, 68°34' W. A flat-topped rock in water, rising to 8 m above sea level, SE of Cape Alexandra, off the S end of Adelaide Island. First charted by FrAE 1908-10. Used as a survey station by Fids from Base T in 1961. Named by UK-APC on Feb. 12, 1964, for Frank Fitton. US-ACAN accepted the name later that year. It appears on a British chart of 1964.

Fitz Roy *see* **Fitzroy**

Fitzgerald, Peter Hugh. b. Aug. 23, 1947. BAS ionosphere physicist who wintered-over at BASE F in 1972 and 1973, and at South Georgia in the summer of 1974-75, and the winter of 1976.

FitzGerald Bluffs. 74°03' S, 77°20' W. Prominent bluffs facing N, 14 km long, and rising to about 800 m, 50 km S of Snow Nunataks, and S of Carroll Inlet, on the English Coast of Ellsworth Land. Discovered and photographed aerially on Dec. 23, 1947, by RARE 1947-48, and mapped by them in about 74°S, and between 72°W and 79°W. Named by Finn Ronne as FitzGerald Escarpment, for Col. Gerald FitzGerald (1897-1981), chief topographic engineer with USGS, in Washington, DC, 1947-57. It appears as such on Ronne's maps of 1949 and 1950. Mapped by USGS from USN air photos taken in 1965-66, and renamed by US-ACAN as Fitzgerald Bluffs in 1968. It appears on the 1968 USGS sketch map of Bryan Coast-Ellsworth Land. UK-APC accepted the new name on Dec. 20, 1974, but as Fitzgerald Bluffs. UK-APC has subsequently corrected the spelling.

FitzGerald Escarpment *see* **FitzGerald Bluffs**

Fitzgerald Glacier. 77°33' S, 166°15' E. A large and prominent valley glacier flowing from the ice cascades on the S and W slopes of Mount Murchison, in Victoria Land. At its mouth it coalesces with Icebreaker Glacier about 1.5 km before its debouchement into Lady Newnes Bay. Explored by NZGSAE 1958-59, and named by NZ-APC for E.B. Fitzgerald (*see* **Fitzgerald Hill**). US-ACAN accepted the name in 1967.

Fitzgerald Hill. 77°16' S, 166°25' E. A glaciated hill, composed of basalt and red basalt agglomerate, rising to about 230 m, between the southernmost Adélie penguin rookery and the edge of the ice-cap on the ice-free lower W slopes of of Mount Bird, on Ross Island. To the S it slopes to Shell Glacier, and to the N to Fitzgerald Stream. Named by NZ-APC for surveyor E.B. Fitzgerald, of Dunedin, of the NZ Lands & Survey Department, deputy leader of NZGSAE 1958-59, who explored and mapped it. He had also been part of NZGSAE 1957-58. US-ACAN accepted the name in 1964.

Fitzgerald Nunataks. 66°15' S, 52°49' E. A group of 3 (the Australians say 4) isolated nunataks, 3 km (the Australians say 7 km) NE of Mount Codrington, at the NW end of the Napier Mountains, in Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named this feature Veslenutane (i.e., "the little peaks"). Photographed aerially by ANARE in 1956, first visited during an ANARE airborne reconnaissance of Enderby Land in Nov. 1959, and renamed

by ANCA on Oct. 11, 1960, for Brigadier Lawrence John Fitzgerald (1903-1988), director of military survey in the Australian Army, 1942-60. US-ACAN accepted the Australian name.

Fitzgerald Stream. 77°16' S, 166°21' E. A fairly large, bubbling stream draining the warm, sheltered valley between Fitzgerald Hill and Inclusion Hill, on the lower, ice-free, W slopes of Mount Bird, Ross Island, it flows across McDonald Beach to McMurdo Sound. It is the largest stream at Cape Bird, containing pleasant drinking water (unlike Harrison Stream), and might flow for several months each year (like the stream at the Marble Point airfield). Explored and mapped by NZGSAE 1958-59, and named by NZ-APC for E.B. Fitzgerald (*see* **Fitzgerald Hill**). US-ACAN accepted the name in 1964.

Fitzmaurice Point. 66°16' S, 63°43' W. On the NW side (i.e., at the head) of Cabinet Inlet, between Attlee Glacier and Bevin Glacier, on the Foyn Coast, on the E coast of the Antarctic Peninsula. Photographed aerially in Nov. 1947, during RARE 1947-48, and surveyed from the ground in Dec. 1947, by a joint sledging team of RARE personnel and Fids from Base E. Named by UK-APC on Nov. 13, 1985, for Sir Gerald Gray Fitzmaurice (1901-1982), 2nd legal adviser at the Foreign Office, 1945-53; legal adviser, 1953-60; and chairman of UK-APC, 1952-60. US-ACAN accepted the name.

Fitzpatrick Rock. 66°16' S, 110°30' E. A small, low, ice-capped rock in water, 0.8 km NW of Kilby Island, at the mouth of Newcomb Bay, in the N part of the Windmill Islands, about 1.5 km SW of Wilkes Station, off the Budd Coast. The area was photographed aerially by OpHJ 1946-47, and again in 1956 by ANARE and by SovAE. This particular island was first charted in Feb. 1957 by a party from the *Glacier*. Named by Lt. Robert C. Newcomb (*see* **Newcomb Bay**) for Bosun's Mate 2nd Class John A. Fitzpatrick, USN, member of the survey party. US-ACAN accepted the name in 1958, and ANCA followed suit on July 4, 1961.

The *Fitzroy*. A 391.9-ton steel-hulled British merchant ship, 200 feet long, formerly the *Lafonia*, belonging to the Falkland Islands Company. She was chartered by the British government to help take members of Operation Tabarin down to Antarctica in the 1943-44 season. Keith Pitt was captain that season. Jimmy Marr, leader of Tabarin, was on board until Feb. 7, 1944, when he transferred to the *William Scoresby*. Also on board the *Fitzroy* was Capt. David William Roberts, of the Falkland Islands Company (*see* **Mount Roberts** for an explanation of why Roberts went along). Most of the crew were Falkland Islanders. The *Fitzroy* was back in 1944-45 (i.e., for the 2nd phase of Operation Tabarin), with Capt. Pitt in command again. She was back in 1945-46, during the first FIDS season, again under Capt. Pitt. In 1946-47, Capt. Freddie White was skipper. James Peck was ship's cook, and his son Pat Peck (q.v.) was also a crewman. She arrived at Port Lockroy on Jan. 27, 1947, and at Base E on March 31, 1947, with the governor of the Falklands aboard. They left on April 5, 1947. Again under Capt. White she was back in 1947-48, reaching Deception Island on April 10, 1948, on a tour of FIDS bases. She left there on April 13, bound for Hope Bay, but was deterred by ice and had to go to Base G, where she arrived on April 14, 1948. She left there on April 15, again for Deception Island, but couldn't get in. She headed back to Port Stanley. That was her last season in Antarctic waters, but Freddie White was her skipper, working for the Falkland Islands Company, until at least 1953. In Jan. and Feb. 1953 she transported several Fids to London from Port Stanley. After 30 years of service she was replaced by the *Darwin*.

Cabo Fitzroy *see* **Fitzroy Point**

Cape Fitzroy *see* **Fitzroy Point**

Islote Fitzroy *see* **Fitzroy Island**

Fitzroy Island. 68°11' S, 66°58' W. An island, 0.8 km E of the S tip of Stonington Island, on the N side of Neny Bay, at the foot of Northeast Glacier (by which it is partially overridden), in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Presumably discovered by BGLE 1934-37, who roughly charted it, as did USAS 1939-41, in 1941. ChilAE 1946-47 incorrectly charted it as 3 islands, viz. Isla Bunster, Isla Estay, and Isla Teniente FACH Parodi ("FACH" meaning "Fuerza Aérea de Chile," or Chilean Air Force). They appear as such on the 1947 chart of that expedition. Surveyed in 1947 by Fids from Base E, who named it Fitzroy Islet, for the *Fitzroy*. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit in 1956. When, all of a sudden, the term "islet" went desperately out of fashion, UK-APC redefined it as Fitzroy Island, on July 7, 1959, and US-ACAN followed suit in 1963. On a British chart of 1967 it is shown as Fitzroy Point, and on a 1969 Chilean chart it appears as Punta Fitzroy. The British gazetteer of 1976 lists it as "Fitzroy Island (Fitzroy Point)." Do they suspect the island to be a point? There is nothing to tell us. *See also* **Punta Bunster**, **Estay Rock**, and **Teniente Arturo Parodi Station**.

Fitzroy Islet *see* **Fitzroy Island**

[1]**Fitzroy Point**. 63°11' S, 55°09' W. A low point (according to the U.S. gazetteer; the Chileans call it a high, prominent, snow-covered promontory; the British do not comment), forming the E entrance point of Fliess Bay, and the NE extremity of Joinville Island. Discovered and roughly mapped on Dec. 30, 1842, by Ross, who named it Cape Fitzroy, for Capt. (later Vice Adm.) Robert Fitzroy (1805-1865), RN, hydrographer and meteorologist who commanded the *Beagle* on her voyage around the world, 1831-36 (but not in Antarctic waters). It appears as such on Ross's map of 1847, and on British charts of 1893 and 1940. On Wilkins' map of 1929 it appears as Cape Fitsroy (sic), and on a British chart as Cape Fitz Roy. US-ACAN accepted the name Cape Fitzroy, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. Meanwhile, it was surveyed by Fids from Base D in Dec. 1953, and, after studying the results of these surveys, UK-APC renamed it Fitzroy Point on Sept. 4, 1957, and it appears as such on a British chart of 1962. US-ACAN accepted the new name in 1963. The name Cabo Fitzroy was accepted by both the 1970 Argnentine gazetteer and the 1974 Chilean gazetteer.

[2]**Fitzroy Point** *see* **Fitzroy Island**

Mount Fitzsimmons. 77°54' S, 154°55' W. Rising to 1066 m, between Mount Jackling and Mount Shideler, in the N group of the Rockefeller Mountains (it is the highest point in the Rockefellers), on Edward VII Peninsula. Discovered on Jan. 27, 1929, on a fly-over by Byrd during ByrdAE 1928-30. After USAS 1939-41, it was named by Byrd as Mount Margaret Wade, for Al Wade's mother, the former Margaret Carse Pope, adopted daughter of Cleveland iron man E.C. Pope. US-ACAN accepted the name in 1947, but in 1956 changed the name to Mount Fitzsimmons, for Roy Fitzsimmons. NZ-APC followed suit.

Fitzsimmons, LeRoy G. "Roy." Also known as "Fitz." b. June 1, 1915, Newark, NJ, son of butcher John F. Fitzsimmons and his wife Alice. A geophysicist, he was in the Arctic in 1937, on the Carnegie Institute's expedition led by Clifford MacGregor on the *Adolphus W. Greeley*, and was at West Base during USAS 1939-41 (he was one of two Newark boys on that expedition—*see also* **Jakobczyk, Walter John**). During that expedition, he was in charge of the Rockefeller Mountains Seismic Station during Nov. and Dec. 1940. He was with the USAAF from 1942, during World War II, did 6 months in India, and was killed on May 5, 1945, in Cuba.

Fitzsimmons Nunataks. 72°08' S, 161°42' E. A group of small nunataks, about 45 km ENE of Welcome Mountain of the Outback Nunataks, and 13 km SE of the Helliwell Hills. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for John M. Fitzsimmons, biologist at McMurdo in 1966.

Five Lakes Valley. 63°25' S, 57°01' W. A long valley between Mount Flora and the Scar Hills, running parallel with Hope Bay, Trinity Peninsula. Named by the Poles on Sept. 1, 1999, for the 5 small freshwater lakes here (including Hope Lake and Lake Boeckella).

Fivemile Rock. 63°29' S, 57°03' W. A small nunatak, rising to 375 m, just NW of Mineral Hill, on Tabarin Peninsula, on Trinity Peninsula. Surveyed and mapped by Fids from Base D in 1946. It was named by one of the Argentine Antarctic expeditions of the 1950s, probably 1955-56, as Dos Juancitos (i.e., "two little Johns"). It was surveyed again by Fids from Base D in 1956, and renamed by them as Fivemile Rock because it was 5 miles from their station (Base D), at Hope Bay, on the route to Duse Bay. UK-APC accepted the name on Sept. 26, 1957, and US-ACAN followed suit in 1963. The second Martín Güemes refugio was established here.

Massif Fizikov. 73°56' S, 65°22' E. The name given by the Russians to the massif upon which Mount Newton stands, in the southern Prince Charles Mountains. No one else has named this massif.

Fizkin Island. 65°31' S, 65°31' W. An island, 4 km SE of Pickwick Island, it is the most southeasterly of the Pitt Islands, in the Biscoe Islands. Photographed aerially by FIDASE in 1956-57. It appears (unnamed) on a 1957 Argentine government chart. Named by UK-APC on July 7, 1959, for the Dickens character in *Pickwick Papers*. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. It appears as Fizking Island (sic) in the 1974 British gazetteer.

Fjellimellom *see* **Fjellimellom Valley**

Fjellimellom Valley. 72°05' S, 2°29' E. An ice-filled valley between Jutulsessen Mountain, Terningskarvet Mountain, and Nupskammen Ridge, in the Gjelsvik Mountains, in the W part of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Fjellimellom (i.e., "between the mountains"). US-ACAN accepted the name Fjellimellom Valley in 1966.

Fjomet *see* **Fjomet Nunatak**

Fjomet Nunatak. 73°25' S, 2°55' W. A small, isolated nunatak, about 13 km ESE of Mount Hallgren, along the Kirwan Escarpment of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Fjomet (i.e., "the speck of dust"). US-ACAN accepted the name Fjomet Nunatak in 1966.

Flabellum Bastion. 62°08' S, 58°10' W. An upstanding rock feature on the NE side of Linton Knoll, on King George Island, in the South Shetlands. It is notable for the fact that it exposes several geological formations, including some fossiliferous ones which contain a rare occurrence of the coral Flabellum, hence the name given by UK-APC on Feb. 15, 1998. These are the new coordinates as provided by the UK in late 2008.

Fladerer Bay. 73°15' S, 80°20' W. A bay, 10 km wide, indenting the coast of Ellsworth Land for about 24 km between Wirth Peninsula and Rydberg Peninsula. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1968, for Capt. George W. Fladerer (b. April 26, 1919, Newark, NJ. d. June 1995, Toms River, NJ), who joined the merchant service just before World War II, worked his way up through the mate ranks to become a skipper, and who was commander of the *Eltanin*. In 1965 he was skipper of the the oceanographic ship *Sands* (not in Antarctica).

Ostrov Flag *see* **Flag Island**

Punta Flag *see* **Flag Point**

Flag Island. 68°50' S, 77°46' S. An irregular-shaped island, rising to an elevation of about 40 m above sea level, between the S ends of Hop Island and Filla Island, in the Rauer Islands. Charted by SovAE 1956, and named by them as Ostrov Flag. ANCA accepted the translated name on March 7, 1991.

Flag Point. 64°49' S, 63°31' W. A point, 0.5 km ESE of Damoy Point, it forms the N side of the entrance to Port Lockroy, on Wiencke Island, in the Palmer Archipelago. Discovered and roughly charted (but not named) by FrAE 1903-05. Surveyed by Operation Tabarin personnel in 1944, and named by them for the metal Union Jack erected at Port Lockroy Station when it was built here that year. UK-APC accepted the name on Nov. 21, 1949, and it appears on a British chart of 1950. US-ACAN accepted the name in 1951. It appears in the 1955 British gazetteer. It appears on a Chilean chart of 1955, as Punta Flag, and that was the name accepted by the 1974 Chilean gazetteer.

Ostrov Flagman *see* **Flagman Island**

Flagman Island. 66°04' S, 101°02' E. An island, immediately W of Draves Point (the westernmost point on Booth Island), in the Highjump Archipelago, N of the Bunger Hills. Charted by SovAE 1956, and named by them as Ostrov Flagman. ANCA accepted the translated name on Jan. 19, 1989.

Punta Flagon *see* **Flagon Point**

Flagon Point. 72°14' S, 60°41' W. A point surmounted by 2 peaks, rising to 295 m and 395 m respectively, marking the S end of the entrance to Schott Inlet, on the Black Coast, on the E coast of Palmer Land. Discovered and photographed aerially in Dec. 1940, during USAS 1939-41. Charted in Nov. 1947 by a joint sledging team of personnel from RARE 1947-48 and Fids from Base E, and so named by the Fids because the 2 peaks, when seen from the N or S, look like a flagon tilted on its side. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and on a U.S. Hydrographic Office chart of that year. It appears on the 1979 USGS sketch map of the N part of Palmer Land. The Argentines call it Punta Flagon. Not to be confused with Punta Almonacid.

Flagpole Point. 68°11' S, 67°01' W. About 320 m NW of Fishtrap Cove, it forms the S part of the W extremity of Stonington Island, in Marguerite Bay, close off the Fallières Coast, on the W coast of Graham Land. First surveyed in 1940-41, by USAS 1939-41, whose East Base was on Stonington. Re-surveyed by FIDS in 1946-47, and named by them for the flagpole erected by USAS on a rocky knoll about 14 m high, close NE of this point. It appears on Glenn Dyer's map of 1941. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears in the 1974 British gazetteer.

Flagship Mountain. 76°43' S, 161°30' E. A large, conical rock peak, rising to 1720 m, the highest and most prominent of a large nunatak-shaped rock mass (the mountain surmounts the SE corner of that mass) E of Northwind Glacier, between that glacier and Atka Glacier, 13 km ENE of Mount Razorback, in the Convoy Range of Victoria Land. Named by the NZ Northern Survey Party of BCTAE in 1957, for the *Glacier*, flagship of the convoy into McMurdo Sound in 1956-57. NZ-APC accepted the name, and US-ACAN followed suit in 1962. They were going to call it Glacier Mountain, but that seemed too awkward.

[1]**Flagstaff** *see* **Flagstaff Hill**

[2]**Flagstaff**. 77°33' S, 166°22' E. A hill, rising to 137 m, on Tent Island, in the Dellbridge Islands, in McMurdo Sound. Named by Frank Debenham in 1911, during his local survey. It appears in the 1958 NZ provisional gazetteer.

Mount Flagstaff *see* **Flagstaff Hill**

Flagstaff Glacier. 62°05' S, 58°24' W. A very small glacier, immediately N of Flagstaff Hill, it flows E on Keller Peninsula, King George Island, in the South Shetlands. Named about 1958 by British personnel doing glaciological studies here, in association with the hill. UK-APC accepted the name on Sept. 23, 1960, and US-ACAN followed suit that year. Last plotted by the British, in late 2008.

Flagstaff Hill. 62°03' S, 58°24' W. Rising to 265 m, 0.8 km N of Plaza Point, on Keller Peninsula, Admiralty Bay, King George Island, in the South Shetlands. Surveyed by FIDS in 1948, and named by them in 1952, for the 2 iron flagstaffs on the summit. Tony Bancroft (of FIDASE, 1956-57) referred to it in 1959 as Flagstaff. UK-APC accepted the name on Sept. 23, 1960, and US-ACAN followed suit that year. It appears on Krzysztof Birkenmajer's Polish map of 1980, as Mount Flagstaff.

Flagstaff Point. 77°33' S, 166°10' E. The seaward cliff at the S end of the Cape Royds headland, and at the NW entrance to Backdoor Bay, on the W side of Ross Island. Charted and named by BAE 1907-09, who erected a flagstaff here near their winter headquarters at Cape Royds. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Flagstone Bench. 70°50' S, 68°12' E. A large rock bench littered with slabs of sandstone which look like flagstones (hence the name given by ANCA on July 22, 1959). It borders the SE sides of Radok Lake and Beaver Lake, in the Prince Charles Mountains. Visited by ANARE survey parties in 1957, 1958, 1959, and 1969. US-ACAN accepted the name in 1961.

Flaherty, Ernest Melvin. b. May 14, 1905, Sturgeon Bay, Wisc. He joined the U.S. Navy, and was bosun's mate 1st class on the *Bear*, during both halves of USAS 1939-41. He continued to sail throughout the war, and retired to Revere, Mass. He later lived in Lewisville, Tex., and died on Nov. 8, 1985, in Sarasota, Fla.

Flame Point. 62°05' S, 57°58' W. A promontory formed of flame-like rock spires, W of Turret Point, on King George Island, in the South Shetlands. The descriptive name was suggested by Andrzej Paulo, a member of the

geological party here during PolAE 1979-80, and accepted officially by the Poles in 1981.

Flanagan Glacier. 79°29' S, 82°42' W. In the Pioneer Heights of the Heritage Range, flowing E from the Thompson Escarpment, between the Gross Hills and the Nimbus Hills, to the confluent ice at the lower end of Union Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1967, for Lt. Walter B. Flanagan, VX-6 assistant maintenance officer at McMurdo during OpDF 63 (i.e., 1962-63) and OpDF 64 (i.e., 1963-64).

Flanders Bay *see* **Flandres Bay**

Flanders Moraine. 68°38' S, 78°26' E. A loose, rock-covered area of stagnant ice, about 3 km long and 1 km wide, in the Vestfold Hills. The entire surface is unstable during the summer melt. Hummocks, lakes, and under-ice streams abound. The complete cover of loose rocks makes the area strikingly different from the bedrock areas of the Vestfold Hills. Named by ANCA on Dec. 3, 1984, for its remarkable similarity to the pock-marked battlefields of World War I, notably Flanders Field.

Bahía Flandes *see* **Flandres Bay**

Bahía Flandres *see* **Flandres Bay**

Baie de(s) Flandres *see* **Flandres Bay**

Flandres Bay. 65°02' S, 63°20' W. A large bay between Cape Renard and Cape Willems, along the Danco Coast, on the W coast of Graham Land. Explored and roughly charted on Feb. 10-11, 1898, by BelgAE 1897-99, and named by de Gerlache as Baie de Flandres (also seen on his charts as Baie des Flandres) for the area of Flanders (Flandres, in French, Flandes in Spanish). It appears in the 1900 English language translations of these maps and charts as Flandres Bay, but on Dr. Frederick Cook's 1900 map from the same expedition as Flemish Bay. Other versions of the maps give it as Flanders Bay. In Feb. 1904 it was charted again by FrAE 1903-05. The Argentines began calling it Bahía Flandes from the start, that name first appearing in print in 1908, and it was the name accepted by the 1970 Argentine gazetteer. Just after FrAE 1908-10 charted it yet again, the name Dallmann Bay was proposed for this feature, and is cited as such by American historian Edwin Swift Balch (who, contrary to received legend, was as prone to error as any other historian; the name Dallmann Bay had already been given to another bay — by Eduard Dallmann himself, in 1874). A 1946 Argentine map shows it as Bahía Flandres, and that name (i.e., not Bahía Flandes) was accepted by the 1974 Chilean [sic] gazetteer. Flandres Bay was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN in 1956. It appears as such on a British chart of 1974. It was photographed aerially by FIDASE in 1956-57.

Flank Island. 65°07' S, 64°21' W. The most southerly of the Myriad Islands, W of the Vedel Islands, and 3 km ENE of Snag Rocks, in the Wilhelm Archipelago. Mapped by FIDS in 1960 from aerial photos taken by FIDASE in 1956-57 and from the helicopter off the *Protector* in March 1958. Named by UK-APC on July 7, 1959, for its position. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Flånuten *see* **Mount Flånuten**

Mount Flånuten. 71°47' S, 11°17' E. Rising to 2725 m, between Livdebotnen Cirque and Vindegghallet Glacier, in the central part of the Humboldt Mountains, in the W part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted by NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Flånuten (i.e., "the flat summit"). US-ACAN accepted the name Mount Flånuten in 1970.

Flåodden *see* **Flåodden Cape**

Flåodden Cape. 66°01' S, 55°40' E. A prominent cape about 2 km SE of Cape Borley, on the coast of Kemp Land, in Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Flåodden (i.e., "the ledge point, or headland"). ANCA accepted the name Flåodden Cape on July 31, 1972.

Flårjuven *see* **Flårjuven Bluff**

Flårjuven Bluff. 72°02' S, 3°24' W. A flat topped, largely ice-free bluff, 1.5 km N of Storkletten Peak, in the SW part of the Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Flårjuven. US-ACAN accepted the name Flårjuven Bluff in 1966.

Flårjuvnutane *see* **Flårjuvnutane Peaks**

Flårjuvnutane Peaks. 72°01' S, 3°32' W. A group of small rock peaks, about 1.5 km W of Flårjuven Bluff, in the SW part of the Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Flårjuvnutane (i.e., "Flårjuven peaks"), in association with Flårjuven Bluff. US-ACAN accepted the name Flårjuvnutane Peaks in 1966.

Flask Glacier. 65°46' S, 62°25' W. A gently sloping glacier, about 40 km long, flowing E from the Bruce Plateau to enter Scar Inlet between Daggoo Peak and Spouter Peak, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. The lower reaches of this glacier were surveyed and photographed by Fids from Base D in Dec. 1947. The entire glacier was photographed aerially by FIDASE in 1955-56, and surveyed and mapped from the ground by FIDS in 1957. Named by UK-APC on Sept. 4, 1957, for the *Moby Dick* character. It appears on a British chart of 1961. US-ACAN accepted the name in 1963. It was re-surveyed by BAS personnel from Base E in 1964-65.

Flaskevika. 68°08' S, 79°00' E. A bay, NW of Murphy Rocks, in the area of the Vestfold Hills. Named by the Norwegians.

Isla Flat *see* **The Watchkeeper**

[1]**Flat Island** *see* **The Watchkeeper**

[2]**Flat Island**. 71°24' S, 169°18' E. A small but high, flat-topped island, 5 km long (the New Zealanders say 2.5 km), and rising to an elevation of 480 m above sea level (the New Zealanders say 333 m), at the terminus of Shipley Glacier, off the Pennell Coast, at the N of Pressure Bay, on the N coast of Victoria Land. Its NE tip, Cape Barrow, marks the W side of the entrance to Robertson Bay. Charted and named by BAE 1910-13. US-ACAN accepted this descriptive name in 1947, and NZ-APC followed suit.

Flat Islands. 67°36' S, 62°49' E. A small chain of islands, including Fletcher Island, Evans Island, Kerry Island, Jongens Island, Stinear Island, and Béchervaise Island, which extends for 4 km in a NE-SW direction, 4 km SW of Welch Island, in the E part of Holme Bay, about 3 km NW of Mawson Station. Photographed aerially by LCE 1936-37. Norwegian cartographers, working from these photos in 1946, named the group at the S end of the chain as Flatøyholmane (i.e., "the Flat Island islets"), and the islands at the N end as Flatøynalane (i.e., "the Flat Island needles"). On Feb. 15, 1958, ANCA extended the name to the entire chain, as the Flat Islands. US-ACAN accepted the Australian naming in 1961.

Flat Isle *see* **The Watchkeeper**

Flat Iron Valley *see* **Flatiron Valley**

[1]**Flat Rock** *see* **The Watchkeeper**

[2]**Flat Rock**. 71°32' S, 68°14' E. A plain in the Prince Charles Mountains. The SCAR composite gazetteer says it was named by the Russians, but it seems an odd name for the Russians (or anyone else) to give.

Flat Spur. 77°36' S, 161°30' E. A rock spur descending NE from Brunhilde Peak, between the N and S branches of Sykes Glacier, in the Asgard Range of Victoria Land. Named descriptively by NZ-APC. US-ACAN accepted the name in 1976.

[1]**Flat Top** *see* **Pardo Ridge**

[2]**Flat Top**. A peak on Fildes Peninsula, on King George Island, in the South Shetlands. This is not an official name.

[3]**Flat Top**. 80°27' S, 28°16' W. A distinctive table mountain (hence the name given by BCTAE, who discovered it during early reconnaissance flights) rising to 1335 m, with steep, rocky cliffs, 6 km NE of Lister Heights, in the NW part of the Shackleton Range. Visited, surveyed, and mapped by BCTAE in Oct. 1957. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960.

[4]**Flat Top**. 84°42' S, 171°50' E. A prominent, ice-covered mountain or ridge, with a broad, flat summit area (hence the name given by the Southern Polar Party during BAE 1910-13), rising to 4053 m, just E of the head of Osicki Glacier, between Mount Patrick and Mount Deakin, on the E side of the Beardmore Glacier. It is the highest point in the Commonwealth Range. US-ACAN accepted the name in 1966, and NZ-APC followed suit.

Península Flat Top *see* **Flat Top Peninsula**

Flat Top Island *see* **Flat Top Peninsula**

Flat Top Peninsula. 62°13' S, 59°02' W. A small, flat-topped peninsula (hence the name given by the personnel on the *Discovery II*, in 1935), on the W coast of Fildes Peninsula, 1.5 km N of the SW end of King George Island, in the South Shetlands. Roughly charted by early 19th-century sealers, it appears on William Henry Goddard's 1821 chart as Tableland. It appears on a 1930 British chart as Table Land. Re-charted by the Discovery Investigations in 1935, they renamed it Flat Top Peninsula. That name, and Flat-Top Peninsula (i.e., with the hyphen), both appear on the expedition's 1935 charts. With the hyphen it appears on a British chart of 1942, and without on a British chart of 1948. Fids from Base G incorrectly charted it as an island, named it Flat Top Island, and that is how Geoff Hattersley-Smith mapped it in 1951. It appears on an Argentine chart of 1949 as Península Flat Top. It appears on 2 Chilean charts of 1951 as Monte Plano (i.e., "flat mountain") and Morro Plano (i.e., "flat hill"), resp. On an Argentine chart of 1953, it appears as Península Morro Chato (which means the same thing), and that name was the one accepted by the Argentine gazetteer of 1970. The name Flat Top Peninsula was the one accepted by UK-APC on Sept. 8, 1953. It was photographed aerially by FIDASE in 1956-57, and surveyed by FIDS between 1956 and 1959. It appears on a Chilean chart of 1962 as Península Morro Plano, and that name, and Morro Plano, were both accepted by the Chilean gazetteer of 1974. US-ACAN accepted the name Flat Top Peninsula in 1965. On Grikurov and Polyakv's 1968 SovAE map, it appears as Mys Zherlovyj (i.e., "cape crater"), and this appeared on a 1971 English language map as Cape Zherlovyy. On the 1974 Brazilian map of the Fildes Peninsula, it appears as Peninsula Flat Top.

Flatcap Point. 64°07' S, 58°07' W. On the E side of the N arm of Röhss Bay, on James Ross Island. There are two relatively flat-topped rock cliffs in this location. This one is the more northerly. Mapped by FIDS cartographers from surveys conducted by Fids from Base D between 1958 and 1961. Named descriptively by UK-APC on Feb. 12, 1964. US-ACAN accepted the name later in 1964. The Argentines call it Punta Ibáñez, for radio operator Héctor Óscar Ibáñez, who was killed on the Avro Lincoln B019 over Tierra del Fuego after returning from an Antarctic flight, on March 22, 1950.

The Flatiron. 77°01' S, 162°23' E. A rocky, triangular-shaped granite headland, about 1.5 km long, and about 335 m high, from which the glacier ice has receded, overlooking the SW part of Granite Harbor, about 2.5 km S of the Mackay Glacier Tongue, in southern Victoria Land. Discovered and charted by Grif Taylor's Granite Harbour Geological Party during BAE 1910-13, and named by them for the famous NYC skyscraper of that name. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Flatiron Lake. 70°54' S, 68°27' W. At the S end of Flatiron Valley, on Alexander Island. Named by UK-APC on Jan 18, 2002, in association with the valley.

Flatiron Valley. 70°54' S, 68°29' W. Name also seen spelled as Flat Iron Valley. A valley, running N-S, it includes a lake, in the S part of Ganymede Heights, marginal to Jupiter Glacier, on Alexander Island. Field work was done here in 1978-79 by personnel from the department of geography at the University of Aberdeen, supported by BAS. Named by UK-APC on Dec. 9, 1981, for the triangular slope facets between prominent gullies on the W side of the valley. US-ACAN accepted the name.

Flatnes *see* **Flatnes Ice Tongue**

Flatnes Ice Tongue. 69°16' S, 76°44' E. It forms the W limit of Hovde Cove, in the SE part of Prydz Bay, is fed by local drainage from the Ingrid Christensen Coast, and extends for 5 km into Prydz Bay. Named Flatnes (i.e., "flat point") in 1946, by the Norwegian cartographers who mapped it working from aerial photographs taken by LCE 1936-37. John Roscoe, the U.S. cartographer working from OpHJ photos taken in 1946-47, re-defined this feature in 1952. US-ACAN accepted Mr. Roscoe's definition in 1956.

Flatøyholmane *see* **Flat Islands**

Flatøynalane *see* **Flat Islands**

Flattunga. 68°51' S, 40°00' E. A small ice tongue, 7 km wide, protruding into the sea between Tottsuki Point and Tensoku Point, NE of the Flatvaer Islands, at the W end of the Prince Olav Coast, in Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it ("the flat tongue"). US-ACAN accepted the name without modification in 1968.

Flatvaer *see* **Flatvaer Islands**

Flatvaer Islands. 69°01' S, 39°33' E. A group of small islands, of which Ongul Island is the largest, at the E side of the entrance to Lützow-Holm Bay, on the Prince Olav Coast. Others in the group include Utholmen Island (the most northwesterly), Meholmen, Nesøya, Polholmen, the Te Islands, and East Ongul Island. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named them Flatvaer (i.e., "flat islands"). US-ACAN accepted the name Flatvaer Islands in 1968. On March 12, 1977, the Japanese coined the term Ongulsyoto (i.e., "Ongul Islands") for the islands between 68°55' S and 69°05' S, and between 39°25°E and 39°40' E, which pretty much takes in the Flatvaers.

Punta Flauta. 64°37' S, 62°05' W. A point forming the NW end of Brooklyn Island, in Wilhelmina Bay, off the W coast of Graham Land. Named by the Argentines.

Fleas. There is one species of flea in Antarctica—*Siphonateptera*.

Flechtenbach. 62°14' S, 58°57' W. A little stream flowing on Fildes Peninsula. Named by the Germans.

Fleck, James "Paddy." 1st mate on the *William Scoresby* during Operation Tabarin, 1943-45. He was officially part of the operation, even though he did not winter-over (of course; as he was on the ship).

Fleece Glacier. 65°54' S, 63°10' W. A tributary glacier that flows SE into Leppard Glacier on its N side, about 2.5 km E of Moider Peak, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. Surveyed by BAS personnel from Base E in 1964-65. Named by UK-APC on July 21, 1976, for the *Moby Dick* character. US-ACAN accepted the name later that year.

Fleet, Michael "Mike." b. April 4, 1940, Cambridge. After Southampton University, in 1961, he joined FIDS, and sailed south in Oct. 1961, on the *John Biscoe*, as geologist who wintered-over at Base D in 1962. For the summer of 1962-63 and the winter of 1963, he was at Base E, now a member of BAS (FIDS had become BAS while he was on the ice). He was part of the Larsen Ice Shelf Party of 1963-64. In May 1964 he returned to the UK on the *John Biscoe*, and went to work at the BAS geology unit at Birmingham University, from where he got his PhD. On March 31, 1967 he left FIDS. He lives in Reading, Berks, and never married.

Fleet Glacier. 64°19' S, 57°49' W. A southward-flowing glacier on James Ross Island, W of, and confluent with, part of Swift Glacier, in association with which it was named by UK-APC on Nov. 15, 2006.

Fleet Point. 67°37' S, 65°24' W. A rocky point, 6 km NW of Tent Nunatak, on the S side of Whirlwind Inlet, on the Bowman Coast, on the E coast of Graham Land, it has a rocky spine ranging from 260 m to 870 m in height. It appears on air photos taken by USAS 1939-41, by RARE 1947-48, and by USN in 1968. Surveyed and mapped by the BAS Larsen Ice Shelf Party of 1963-64. Named by UK-APC on Dec. 20, 1974, for Mike Fleet (q.v.), one of the party. US-ACAN accepted the name in 1975. It appears in the 1976 British gazetteer.

The *Fleetwood*. A medium Boston clipper, built in 1852 by George Raynes of Portsmouth, NH, expressly for the China trade. Frank Dale was her only skipper. She arrived in Boston from the yard on Nov. 13, 1852, and set out on her maiden voyage, bound for San Francisco, and from there on to Shanghai. On her return to Boston, she traversed the world the other way, and, on March 12, 1854, in the Atlantic, she came across a schooner standing south, painted black with a full poop, and showing a white flag with the letter "L" in the center of it. This schooner had her starboard bulwarks and rail carried away, as if she had been in collision with some other vessel. There was no one aboard. Eight days later the *Fleetwood* fell in with the Boston schooner *Hope*, which was sinking. The lads from the *Fleetwood*, at great peril to themselves, rescued the crew. These two incidents are mentioned more than anything as a foreshadowing of things to come for the *Fleetwood*. For the next few years, she was trading

between Boston and Calcutta, and on Feb. 15, 1859, left Boston, bound for the Society Islands, with 16 men and one passenger aboard, as well as Capt. Dale's wife and child (perhaps an Antarctic first on both scores). Reaching Cape Horn in 64 days, she was rounding the Horn when a terrific nor'westerly, which lasted for three weeks, blew her south to 60°S, 71°10' W, and on the night of May 2, 1859 (during the Antarctic winter), she struck an iceberg. It stove in the vessel's bows, and carried away her stern, jib-boom, bowsprit and other parts. She was leaking bad, and the captain ordered the men to the pumps, while others threw overboard all excess baggage in order to lighten the ship and find out where the leaks were coming from. They kept this up for 20 hours, the sea rolling as high as mountains, and the gale unabated, until exhaustion and the cold took their toll. The captain did not know whether to launch the boats or perish with the ship, but finally decided on the former course. He took one half of the crew, while Mr. Babson, the first mate (who was from Newburyport, Mass.), took the other boat. The captain's wife and child, and the only passenger on board, a Bostonian gentleman, were all ordered into the captain's boat. While they were launching the mate's boat, it got damaged, and only five crewmen were induced to get in — Mr. Babson, William Flynn (of Boston), Warren Brown (of Ipswich, Mass.), Harry Smith, and William Johnson. It was now early morning on May 4, 1859, and dark. The arrangement was for the mate's boat to wait for the captain's boat, and then they would voyage together to their fate, whatever that was to be. But the mate's boat was carried away in the storm, and by 3 A.M. they could see nothing of the ship. At 3.30 A.M., however, they saw fire flash lights coming from the area of the *Fleetwood*, but Babson's boat was in no condition to get to them. By daylight, when they were able to make their way back to the *Fleetwood*, the ship was a wreck and the water was covering her decks, but there was no one to be seen. Those lost included: the skipper (and his wife and child), the Bostonian passenger, Mr. Morey (2nd mate), Jack Robertson (of Boston), William Harden (cook; from Boston), Charles Smith (of Beverly, Mass.), David Nelson (sailmaker; of Boston), Michael Foley (of Fall River), and William Sewall (of Virginia). Meanwhile, in the small boat, Mr. Babson had a compass, and was determined to find land. With very little to eat or drink, and with the cold intense, the five men battled their way north (and out of Antarctic waters) through incredible seas. On the night of May 9 they saw a ship, but to their inexpressible frustration, were unable to signal her. An hour later, in the early hours of May 10, another ship bore down on them, which proved to be the British barque *Imogene* (Capt. Williams), bound from Valparaíso to Liverpool. The five men were so exhausted and frostbitten that they had to be lifted out of their small, battered boat. They were well-cared for aboard the *Imogene*, and were dropped off at Pernambuco, in Brazil, on June 3, where the American consul sent them to the hospital. Harry Smith's feet were frozen off, and the others were suffering so bad from frostbite that they could not walk for three weeks. A little while later, President Buchanan presented a splendid gold chronometer to Capt. Williams, out of gratitude. *See also* **The *Jenny***.

Flein Island. 69°45' S, 39°05' E. A small island, 0.7 km due N of Berr Point, in the SE part of Lützow-Holm Bay, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who plotted it as two islands. They called the larger one Fleinøya (i.e., "the bare island"). Later, based on JARE ground surveys conducted between 1957 and 1962, Japanese cartographers re-defined this feature, and continued the use of the Norwegian name (at least the "Flein" part). US-ACAN accepted the name Flein Island in 1966.

Fleinøya *see* **Flein Island**

Fleinøyholmen. 69°45' S, 39°05' E. A small island S of Flein Island, in the SE part of Lützow-Holm Bay, on the Prince Olav Coast. Named by the Norwegians in association with Flein Island.

Fleinskallen *see* **Bozu Peak**

Fleiss Bay *see* **Fliess Bay**

Glaciar Fleming *see* **Daspit Glacier**, **Fleming Glacier**

Mount Fleming. 77°33' S, 160°08' E. A high mountain, rising to over 2200 m, on the SW side of Airdevronsix Icefalls and Wright Upper Glacier, at the head of the Wright Valley, about 5 km NE of Horseshoe Mountain, in the Quartermain Range, in southern Victoria Land. The NZ Northern Survey Party of BCTAE established a survey station on its summit, and named the mountain for Charles Alexander Fleming (1916-1987), senior paleontologist of the NZGS, and chairman of the Royal Society's Antarctic Research Committee. NZ-APC accepted the name, and US-ACAN followed suit in 1962. The Americans installed an automatic weather station here, at an elevation of 1950 m, in Nov. 2006.

Punta Fleming *see* **Fleming Point**

Ventisquero Fleming *see* **Daspit Glacier**

Fleming, Bernard Lucas. b. Nelson, NZ. A machinist by trade, in late 1933, at Wellington, he signed on to the *Jacob Ruppert* as assistant to the scientific staff on ByrdAE 1933-35. He worked for 3 months on the tractors, and then spent the rest of the time on Poulter's scientific staff with John Dyer. Stuart Paine, in his published diary, says Fleming was a member of the previous expedition, but that is doubtful. On Feb. 20, 1935, he arrived back in Dunedin, on the *Bear of Oakland*.

Fleming, James. Seaman and deckhand on the *Eagle*, during the 2nd phase of Operation Tabarin, 1944-45.

Fleming, William Launcelot Scott. b. Aug. 7, 1906, Edinburgh. Dean of Trinity Hall, Cambridge, who went twice to the Arctic, and also on BGLE 1934-37 as chaplain, geologist, and glaciologist. A Navy chaplain in World War II. Later Bishop of Portsmouth (from 1949), Bishop of Norwich (1959-71), and Dean of Windsor (from 1971). He was director of the Scott Polar Research Institute, 1947-49. He retired in 1976, and was knighted that year, dying on July 30, 1990, in Dorset.

Fleming Glacier. 69°25' S, 66°40' W. A broad glacier, about 40 km long, on the W side of the Antarctic Peninsula, flowing WNW and terminating in Forster Ice Piedmont to the E of the Wordie Ice Shelf, on the Fallières Coast, on the W coast of Graham Land. Probably seen by Ellsworth, during his fly-over on Nov. 23, 1935. Surveyed from the ground in 1936 by BGLE 1934-37, it appears on Stephenson's 1940 map of the expedition, and on a 1940 British chart. On Sept. 29, 1940, it was photographed aerially by USAS 1939-41, and appears on a 1943 U.S. Hydrographic Office chart. Surveyed by Fids from Base E in 1947-48. Finn Ronne, during RARE 1947-48, switched the name Fleming Glacier to this one. Until then the name had been used for what would become Daspit Glacier. It had been named for W.L.S. Fleming of BGLE 1934-37. The new situation was accepted by US-ACAN in 1949, and by UK-APC on Jan. 28, 1953. It appears as such in the 1955 British gazetteer. The feature was further surveyed by Fids from Base E between 1957 and 1962. The Chilean gazetteer of 1974 accepted the name Glaciar Fleming, and the Argentines also use that name.

Fleming Glacier Bay *see* **Trail Inlet**

Fleming Head. 75°10' S, 162°38' E. A prominent rock headland which marks the S side of the terminus of Larsen Glacier, where that glacier enters the Ross Sea, on the coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1962. Named by US-ACAN in 1968, for electrical engineer John P. Fleming (b. June 5, 1928, Fort Worth, Tex. d. Nov. 4, 2008, Hershey, Pa.), senior chief construction electrician, USN, who wintered-over at McMurdo in 1962 and 1966.

Fleming Peaks. 77°15' S, 144°30' W. A small group of peaks, 10 km ESE of Bailey Ridge, on the N side of Boyd Glacier, in the Ford Ranges of Marie Byrd Land. Discovered and mapped by USAS 1939-41. Named by US-ACAN in 1966, for Bernard Fleming.

Fleming Point. 64°20' S, 62°35' W. A point, 7 km NE of Humann Point, on the W side of Brabant Island, in the Palmer Archipelago. Roughly charted by FrAE 1903-05, and photographed aerially by FIDASE in 1956-57, being mapped by FIDS cartographers in 1959 from the FIDASE photos. Named by UK-APC on Sept. 23, 1960, for Sir Alexander Fleming (1881-1955), Scottish discoverer of penicillin in 1928. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961. The Argentines call it Punta Fleming.

Fleming Summit. 84°20' S, 166°18' E. A peak rising to over 4200 m, 2.5 km W of Mount Kirkpatrick, in the Queen Alexandra

Range. Named by US-ACAN in 1995, for Thomas H. Fleming, geologist at Ohio State University, who conducted field research in this area in 1985-86 and 1990-91.

Flemish Bay *see* **Flandres Bay**

Flenserne (Rocks) *see* **Flensing Islands**

Rocas Flensing *see* **Flensing Islands**

Flensing Icefall. 70°55' S, 163°44' E. A large icefall at the E side of the Bowers Mountains, S of Platypus Ridge, at the junction of Graveson Glacier and Rastorguev Glacier with Lillie Glacier. So named by the Northern Party of NZGSAE 1963-64 because the icefall's longitudinal system of parallel crevassing looks like the carcass of a whale being flensed (*see* **Flensing Islands**). NZ-APC accepted the name, and US-ACAN followed suit in 1964. Originally plotted in 70°52' S, 163°45' E, it has since been replotted.

Flensing Islands. 60°42' S, 45°41' W. A group of 4 small islands 1.5 km W of Foca Point, on the W side of Signy Island, in the South Orkneys. Petter Sørlle named them Flenserne in 1912-13, and they appear on his and Hans Borge's chart of that year, as well as on Capt. Moe's chart of 1913. Flensing is the process of stripping skin and blubber from whales, and it may be that these islands were used as a place for flensing by Norwegian whalers. They appear as Flenserne Rocks on a British chart of 1916. The personnel on the *Discovery II* re-surveyed them in 1933, and they appear on their 1933 chart as Flenserne Rocks. However, on their 1934 chart, the feature appears as Flensing Islets, but on a British chart of 1938 they appear as Flensing Islands. They appear as Rocas Flensing on a 1945 Argentine chart, and that was the name accepted by the 1970 Argentine gazetteer. The name Flensing Islets was accepted by US-ACAN in 1952, and by UK-APC on Sept. 20, 1955. On July 7, 1959, UK-APC renamed them Flensing Islands, and US-ACAN followed suit in 1963.

Flensing Islets *see* **Flensing Islands**

Flesa *see* **Flesa Rock**

Flesa Rock. 72°29' S, 2°25' W. An isolated rock on land (the Norwegians describe it as a small nunatak), between Viddalen Valley, Penck Trough, and Jutulstraumen Glacier, 11 km E of the NE end of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Flesa (i.e., "the low-lying islet"). US-ACAN accepted the name Flesa Rock in 1966.

Cape Fletcher. 67°41' S, 65°35' E. A minor projection of the ice-covered coast of Mac. Robertson Land, S of Martin Reef, and between Strahan Glacier and Scullin Monolith. Discovered on Feb. 13, 1931, during BANZARE 1929-31, and named by Mawson for Harold Fletcher. US-ACAN accepted the name in 1947, and ANCA followed suit.

Lake Fletcher. 68°27' S, 78°15' E. A curious hypersaline, stratified (i.e., the upper water is always fresher than the lower water), meromictic lake in the Vestfold Hills. It has a connection with the sea. Named by ANCA on July 26, 1983, for Lloyd Fletcher (q.v.), who, while he was the doc at Davis Station in 1978, assisted with the water-sampling program, despite difficult weather conditions.

Fletcher, David Donald William "Dave." b. June 28, 1948. BAS general assistant who wintered-over at Halley Bay Station in 1972, and at Signy Island Station in 1973. From 1974 he was base commander at Rothera Station for 5 summer seasons.

Fletcher, Frank Douglas. b. 1888, Sydney, son of David John G. Fletcher and his wife Lillias Moore Thomson. He went to sea, became an able seaman on merchant ships, and by 1910 was a 2nd mate with the Adelaide Steamship Company. On April 18, 1912, in Sydney, he signed on to the *Aurora* as chief officer, at £14 per month, for the first two runs to Antarctica during AAE 1911-14. He was replaced by John H. Blair on Sept. 17, 1913. After he returned from his part in the expedition, he married Lilian M. Manchin, in Manly, in Sydney, in 1913, and returned to his employers, becoming a skipper, and remaining with them until 1932. After retiring he went to Melbourne as wharf superintendent, and died in 1936, in Waverley, Sydney.

Fletcher, Harold Oswald. b. Feb. 26, 1903, Sydney. Assistant paleontologist at the Australian Museum, in Sydney, when he went on both halves of BANZARE 1929-31, as assistant biologist and zoologist. In 1939 he was 2nd in command of an expedition that crossed Australia's Simpson Desert on camels. In 1943 he became curator of the Australian Museum, and retired in 1967. He died on Aug. 3, 1996, aged 93.

Fletcher, Lloyd. Medical officer who wintered-over at Davis Station in 1978, at Mawson Station in 1980, at Macquarie Island in 1982, at Casey Station in 1986, and at Mawson again in 1990. In 2008 he was back at Davis, as medical officer, 30 years after he had last been there. *See also* **Floyd Bluff**.

Fletcher, Robert *see* **USEE 1838-41**

Fletcher Bay. 68°31' S, 78°17' E. Part of Langnes Fjord, in the Vestfold Hills. It holds fast-ice in some years even when the ice has gone from other areas of the fjord. It is a pupping site of Weddell seals. Named by ANCA on July 26, 1983, for Lloyd Fletcher (q.v.), who, while medical officer at Davis Station in 1978, "did a magnificent job in tagging seals" in Langnes Fjord. "Without him the work would not have been done."

Fletcher Bluff. 67°36' S, 68°42' W. A rock-faced, snow-backed bluff, rising to about 800 m, 5 km WNW of the summit of Mount Liotard, on the E margin of the Fuchs Ice Piedmont, on Adelaide Island. Surveyed by Fids from Base T in 1961-62. Geological work was done here by BAS in 1980-81. Named by UK-APC on April 3, 1984, for Dave Fletcher. US-ACAN accepted the name.

Fletcher Ice Rise. 78°20' S, 81°00' W. A large ice rise, 160 km long, 60 km wide, and (obviously) ice-covered, at the SW side of the Ronne Ice Shelf, between Rutford Ice Stream and Carlson Inlet. Discovered, photographed, and roughly sketched in the course of an LC-130 flight on Dec. 14-15, 1961, by Lt. Ronald F. Carlson, USN, as he flew from McMurdo to Eights Station and back. Subsequently mapped in detail by USGS from U.S. Landsat images taken in Jan. 1974, it appears as Fletcher Ice Rise on the 1976 USGS satellite image map of the Ellsworth Mountains, and is seen as such in the 1977 American gazetteer, named by US-ACAN for Joseph Otis Fletcher (b. May 16, 1920, near Ryegate, Mont., but raised mostly in Oklahoma, son of Clarence Bert Fletcher and his wife Margaret Mary Mathers. d. July 6, 2008, Sequim, Wash), NSF director of polar programs, 1971-74. A meteorologist and World War II fighter pilot, Mr. Fletcher led an air expedition which landed at the North Pole in 1952, possibly the first group ever at the North Pole. He retired from the Air Force in 1963. The feature was traversed in Jan. 1975, on a BAS radio echo-sounding flight from Siple Station, but, before the results of this flight could be analyzed, UK-APC named the feature Fletcher Promontory, on Feb. 7, 1978. When the echo-sounding results came in, they defined the feature as peninsula, and on June 11, 1980, renamed it Fletcher Peninsula. Since then, however, the British have reverted to Fletcher Promontory.

Fletcher Island. 66°53' S, 143°05' E. A rocky island, 0.4 km across, it is the largest of the Fletcher Islands, in the E part of Commonwealth Bay, 10 km WSW of Cape Gray, on the coast of George V Land. Discovered by AAE 1911-14, and named by Mawson for Frank Fletcher. US-ACAN accepted the name in 1963, and ANCA followed suit.

[1]**Fletcher Islands**. 66°53' S, 143°05' E. A small group of islands, 10 km WSW of Cape Gray, in the E part of Commonwealth Bay, on the coast of George V Land. Discovered by AAE 1911-14. Mawson named the largest of these islands Fletcher Island (see above). Photographed aerially during OpHJ 1946-47, and delineated from these photos by U.S. cartographer Gard Blodgett in 1955. In 1956, US-ACAN extended the name to the group.

[2]**Fletcher Islands**. 72°40' S, 94°10' W. Just to the E of Thurston Island, in the Bellingshausen Sea. A term no longer used.

Fletcher Nunataks. 74°54' S, 72°47' W. Two nunataks, rising to about 1450 m above sea level, 3.3 km SW of Barker Nunatak, ESE of the Lyon Nunataks, in the Grossman Nunataks, where Ellsworth Land meets southern Palmer Land. Mapped by USGS from USN air photos taken between 1965 and 1968, and from U.S. Landsat images taken in Feb. 1974. Named by US-ACAN for James B. Fletcher, USGS cartographic technician at Pole Station in 1972-73, and who, with Kenneth Barker, formed the USGS satellite surveying team at Pole Station

during the winter of 1977. UK-APC accepted the name on Feb. 15, 1988.

[1]**Fletcher Peninsula**. 72°45' S, 88°50' W. A broad, ice-covered peninsula, extending into the Bellingshausen Sea, between the Abbot Ice Shelf and the Venable Ice Shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1968, for Frederick Charles "Fred" Fletcher (1874-1958) of Boston, a contributor to USAS 1939-41.

[2]**Fletcher Peninsula** *see* **Fletcher Ice Rise**

Fletcher Promontory *see* **Fletcher Ice Rise**

Mount Flett. 68°09' S, 49°12' E. Between Mount Marriner and Mount Underwood, in the central Nye Mountains, about 19 km ESE of Amphitheatre Lake. Plotted from 1956 ANARE air photos. Named by ANCA for Alynn Stuart Flett, radio officer who wintered-over at Wilkes Station in 1959. US-ACAN accepted the name in 1965.

Flett, William Roberts "Finkle." b. 1900, Stromness, Orkneys, Scotland, son of fishing boat captain James A. Flett and his wife Margaret Robertson. He got his BSc in geology at Glasgow University, and became a geologist. In the 1930s he studied the geology of, among other places, Donegal, and was lecturer in petrology at Glasgow University when drafted for Operation Tabarin, during World War II. On Feb. 6, 1944, he became leader at Base B, on Deception Island, and then again (after a return to the Falklands) for the winter of 1944, all as part of Tabarin. His titles were actually: magistrate, coroner, deputy receiver of wrecks, deputy controller of customs, and postmaster in the South Shetlands. In 1944 he recorded a rookery of gentoo penguins on the W side of Port Foster. On May 5, 1944 he was out geologizing with Jock Matheson and they both fell heavily, taking some time to recover from their injuries. This put a stop to serious geology for the winter. In Dec. 1944 he transferred as geologist to Port Lockroy Station, made a geological map of Goudier Island and adjacent islands, and then, in Jan. 1945 he moved on to Hope Bay Station (Base D), for the winter of 1945, as 2nd-in-command. Again, all of this as part of Tabarin (or FIDS, as it had become in July 1945). He left Hope Bay in Jan. 1946. After the war he was a Carnegie Teaching fellow at the Royal Technical College, Glasgow. In 1952 he was elected to the Royal Society of Edinburgh, and in 1957 was elected president of the Geological Society of Glasgow. After being in ill health for some time, he died on Aug. 22, 1979.

Flett Buttress. 64°07' S, 57°49' W. A rock crag rising to 905 m, NW of Mount Haddington, on James Ross Island. It provides the highest exposure of volcanic rock on the island. Named by UK-APC on Feb. 15, 1988, for Finkle Flett. US-ACAN accepted the name.

Flett Crags. 80°39' S, 23°35' W. Rock crags rising to about 1500 m on the N slope of the Read Mountains, 8 km N of Mount Wegener, in the Shackleton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS from these efforts. Named by UK-APC on Jan. 5, 1972, for Sir John Smith Flett (1869-1947), who worked on Scottish geology and volcanoes. He was director of the Geological Survey and Museum of Practical Geology (later called the British Geological Survey), 1920-35. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Fletta *see* **Fletta Bay**

Fletta Bay. 69°45' S, 37°12' E. Indents the SW shore of Lützow-Holm Bay, immediately W of Botnneset Peninsula, on the Prince Harald Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Fletta (i.e., "the pigtail"). US-ACAN accepted the name Fletta Bay in 1964.

Flettehögda. 69°52' S, 37°00' E. An ice-height SW of Fletta Bay, on the Prince Harald Coast. Named by the Norwegians in association with Fletta Bay.

Fletteholmane. 69°50' S, 37°00' E. A group of islands on the flat ice in the S part of Fletta Bay, on the Prince Harald Coast. Named by the Norwegians in association with the bay.

The *Fleur Australe*. French yacht, skippered by Philippe Poupon, which visited the South Shetlands and the Antarctic Peninsula in 1994-95, 1995-96, 1997-98, and 1999-2000.

The *Fleurus*. A 406-ton former steam escort trawler belonging to the Tønsbergs Hvalfangeri, of Norway, she was chartered by the government of the Falkland Islands in 1924, contracted to make 5 voyages per season between Port Stanley and South Georgia, and one to the South Shetlands, to aid postal communication (i.e., run mail) and stimulate trade (i.e., run cargo) between those three places. She was also a tourist ship, and actually advertised tourist berths on board. She made her first Antarctic trip that season, 1924-25, to the South Shetlands and the South Orkneys, under the command of Capt. H. Nygaard. She was back in the South Shetlands and South Orkneys in 1925-26, again under the command of Capt. Nygaard. She was in at Deception Island in March 1927, under the command of Capt. Lauritz Karlsen. The skipper in 1927 (in South Georgia) was Capt. Adamsen, and in 1927-28 Capt. Karlsen took her back to Deception Island. On Feb. 2, 1928 she left Port Stanley, with Governor Hodson aboard. On Feb. 12, she arrived at Deception Island, and on Feb. 17 in the South Orkneys. She also visited the Palmer Archipelago. On Feb. 22, 1928 she was back in South Georgia, and in Port Stanley on March 2. She was off the W coast of Graham Land, notably in Wilhelmina Bay, in 1928-29, and that season also assisted the Wilkins-Hearst expedition. Capt. Karlsen was still her skipper in 1929, but the vessel was not in Antarctic waters in 1929-30. 1930-31 was her last season in Antarctic waters (under the command of Capt. Fredrik Aas), being in at Deception Island in April 1931. She was taken out of service in 1933, and in 1934 replaced by the *Lafonia*. The *Fleurus* then became the *Thorodd*, and, as such, served during World War II as a British minesweeper, with a Norwegian crew. In 1952 she was converted into a purse seiner (a fishing vessel using a large net), and sank off Norway in 1955.

Fleurus Island. 64°34' S, 62°12' W. An island, 0.8 km S of Delaite Island, and off the W coast of Nansen Island, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Shown (unnamed) on an Argentine chart of 1950. It was surveyed by Fids on the *Norsel* in April 1955. Named by UK-APC on Sept. 4, 1957, as Fleurus Rock, after the *Fleurus*. Photographed aerially by FIDASE in 1956-57. Renamed by UK-APC on Sept. 23, 1960, as Fleurus Island, and it appears as such on a 1961 British chart. US-ACAN accepted the new name in 1965.

Fleurus Rock *see* **Fleurus Island**

Flies. *Belgica antarctica* is a wingless chironomid fly living in the N parts of the Antarctic Peninsula. It is really a midge, and is the only true insect found in Antarctica, the largest truly terrestrial creature found in Antarctica. It is only 2 to 6 mm long, and lives for 2 years. Allan Ashworth (*see* **Ashworth Glacier**) discovered the only known fly fossils, in the Dominion Range.

Caleta Fliess *see* **Fliess Bay**

Punta Fliess. 62°35' S, 59°51' W. A point in the South Shetlands, apparently on Livingston Island. Named by the Argentines.

Fliess, Felipe. b. 1878, Argentina. Naval ensign, part of the group detached by the Argentine Navy in 1903, on the *Uruguay*, to lead the search for Nordenskjöld's party. He was promoted to lieutenant after this expedition, and was later an admiral. He died in 1952.

Fliess Bay. 63°12' S, 55°10' W. Also seen spelled (erroneously) as Fleiss Bay. Immediately W of Fitzroy Point, along the N coast of Joinville Island. Named by the Argentines in 1957 as Caleta Almirante Fliess for Felipe Fliess. However, on another Argentine chart from that year it appears as Bahía Almirante Fliess. The name accepted by the 1970 Argentine gazettteer was Caleta Almirante Fliess, but today, the Argentines call it Caleta Fliess. It was surveyed by Fids from Base D in 1960-61. UK-APC accepted the name Fliess Bay on Feb. 12, 1964, and US-ACAN followed suit that year. The Chileans call this feature Bahía Wiegand, for Capitán de corbeta Jorge Wiegand Lira, skipper of the *Lientur* during ChilAE 1955-56.

Fliess Refugio *see* **Capitán Fliess Refugio**

The Flight Deck *see* **Flight Deck Névé**

Flight Deck Névé. 76°47' S, 161°30' E. An elevated and unusually flat glacier névé in the form of a large plateau, about 8 km by 5 km, between Flagship Mountain and Mount Razorback, in the Convoy Range of Victoria Land. It is the primary source of ice to the east-flowing Benson Glacier at Scuppers Icefalls. Christopher Burgess propoed the name Waterhouse Névé, but US-ACAN rejected that name.

Trevor Chinn proposed The Flight Deck, but US-ACAN insisted on the word "névé" being added to it, so NZ-APC accepted the name The Flight Deck Névé in 1994, while US-ACAN accepted the name without the definite article, in 1995.

Pico Flinders *see* **Flinders Peak**

Flinders Peak. 69°20' S, 66°40' W. A conspicuous triangular mountain peak, rising to 960 m, on the W end of Bristly Peaks, it overlooks Forster Ice Piedmont, near the Fallières Coast, on the W coast of Graham Land. Photographed aerially on Feb. 1, 1937, during BGLE 1934-37, and again in Dec. 1947, during RARE 1947-48. Surveyed from the ground by Fids from Base E in Dec. 1958. Named by UK-APC on Aug. 31, 1962, for British navigator Matthew Flinders (1774-1814). US-ACAN accepted the name later in 1962. The Argentines call it Pico Flinders.

Glaciar Flint *see* **Flint Glacier**

Mount Flint. 75°45' S, 129°06' W. A prominent, rounded, and mainly snow-covered mountain, rising to 2695 m, 16 km NW of Mount Petras, in the McCuddin Mountains of Marie Byrd Land. Lichens are to be found here. Discovered on Dec. 15, 1940, on Flight G from West Base, during USAS 1939-41, and named by that expedition as Mount Gray, for Pappy Gray. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Re-named by US-ACAN in 1966, for electrical engineer Robert B. "Rob" Flint, Jr. (b. 1940, Wilmington, Del.), former Yale student (graduated 1962), USARP geomagnetist at Byrd Station in 1964, scientific leader at Plateau Station in 1966, and exchange scientist at Vostok Station in 1974. In 1970 and 1976 he was at Siple Station, working on the long wire research antenna, and, employed by various universities, he helped instal automatic weather stations in Adélie Land, in 1979, 1985, 1989, and 2001, in concert with the French. Pappy Gray's name was re-allocated to Mount Jane Wade, to become Mount Gray.

Flint Glacier. 67°20' S, 65°25' W. Flows S into Whirlwind Inlet between Demorest Glacier and Cape Northrop, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Discovered aerially by Wilkins on Dec. 20, 1928. Photographed aerially in Dec. 1940, during USAS 1939-41. Charted in 1947 by Fids from Base E, who named it for glaciologist Richard Foster Flint (1902-1976), professor of geology at Yale, 1940-70. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1954, and in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Glaciar Flint, and that was the name accepted by the 1970 Argentine gazetteer. The Chileans call it Glaciar Yáñez, for Parmenio Yáñez Andrade (*see under* **Y**). The British plot it in 67°15' S, 65°29' W.

Flint Hill. 77°31' S, 163°02' E. Rising to 995 m E of Sagittate Hill, it is the central summit on Flint Ridge, in the Asgard Range of Victoria Land. Named by US-ACAN in 1997. NZ-APC accepted the name.

Flint Peninsula *see* **Churchill Peninsula**

Flint Ridge. 77°31' S, 163°02' E. A ridge trending N-S, and rising to 995 m at its highest point (in Flint Hill), immediately N of the Commonwealth Glacier, in the Asgard Range of Victoria Land. Named by US-ACAN in 1973, for Lawrence A. Flint, manager of the USARP Berg Field Center, at McMurdo, in 1972. There is a USGS tablet fixed in a rock slab at the top of this ridge, marked "Flint ET 1971-72," by the USGS Electronic Traverse of that season.

Flisa. 72°16' S, 27°55' E. A small nunatak SE of Balchen Mountain, in the E part of the Sør Rondane Mountains. Named by the Norwegians ("the splinter").

Flisbrekka. 75°04' S, 12°31' W. An ice-slope, 6 km long, between Flisegga and the peak the Norwegians call Cottontoppen, in the Tottan Hills, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the splinter slope"), in association with Flisegga.

Flisegga. 75°02' S, 12°28' W. A mountain ridge in the S part of the Tottan Hills, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians after the mountain of the same name in Telemark, in Norway (it actually means "the splinter edge").

Flog Glacier *see* **[2]Endurance Glacier**

Flogeken *see* **Flogeken Glacier**

Flogeken Glacier. 72°04' S, 4°25' E. A deeply entrenched glacier flowing NW between Mount Grytøyr and Langfloget Cliff, in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Flogeken (i.e., "the rock wall spoke"). US-ACAN accepted the name Flogeken Glacier in 1966.

Flogstallen. 72°36' S, 2°59' W. A flat, ice-capped mountain with steep rock sides, just NE of Jøkulskarvet Ridge, in the Regula Range, in the NE portion of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Flogstallen (i.e., "the rock wall stable"). US-ACAN accepted the name without modification in 1966.

Flood, B.B. b. May 22, 1915, Appomattox, Va. A well-connected young mess man on the *Jacob Ruppert* during the 2nd half of ByrdAE 1933-35. He was actually Bolling Byrd Flood, Admiral Byrd's first cousin, i.e., son of lawyer and politician Henry Delaware Byrd (who wrote the resolution declaring war on Germany in 1917) and his wife Annie Portner. He married Marie, and was a correspondence coordinator in the U.S. Senate Post Office, in 1966 leaving Washington, DC, for St. Pete, Fla, which is where he died on Dec. 21, 2000. He was buried in the Flood family mausoleum, at Appomattox Court House.

Flood Range. 76°03' S, 134°30' W. A range of snow-covered mountains, extending in an E-W direction for about 100 km, and forming a right angle with the S end of the Ames Range, in Marie Byrd Land. It contains Mount Berlin and Mount Moulton. Discovered from a great distance in 1934 during ByrdAE 1933-35, and Byrd named the main mountain in the group as Mount Hal Flood, for his uncle, Henry Delaware Flood (1865-1941) (*see* **Flood, B.B.**, above). Later, US-ACAN applied the name Hal Flood to the range, and it became known as the Hal Flood Range, and the mountain which Byrd had named became Mount Berlin (q.v.). The name of the range was shortened by US-ACAN in 1966.

Vulcano di Fango Flop. 61°05' S, 56°45' W. A submarine mud volcano, with an area of about 75 sq km, rising to a height of about 115 m from the ocean floor, about 2363 m below the sea, W of Elephant Island, in the South Shetlands. Discovered during Project BSR, on the *Explora*, in 2003-04. The name was suggested by the female leader of the expedition (*see* **Monte Cjavals**), after Mt. Flop, in the Alps. The Italians accepted the name on Dec. 6, 2007.

Flora. There is not much vegetation on land (so to speak) in Antarctica, but there is in the sea (like fauna; and like fauna, it is all cold-adapted). Long ago it was much warmer in Antarctica (and may become that way again some day), and there was much more flora in those days, jungle even. However, with the onset of glaciation, about 50 million years ago, most plant life was forced north. Growth now occurs in the remaining plant life in short summer bursts. Native flora goes as far south as 87°S, but contributes little to soil formation. Spore reproduction characterizes the plants here. There are about 850 species of plants in Antarctica. 350 are lichens (q.v.), 100 or so are bryophytes (q.v.) (i.e., mosses, liverworts — qq.v.), and there are numerous species of molds, yeasts, and other fungi (qq.v.), as well as freshwater algae and bacteria (qq.v.). There are only two species of vascular plants in Antarctica — both on Lagotellerie Island, and also in the South Shetlands and South Orkneys — *Deschampsia antarctica* and *Colobanthus quitensis* (*see* **Benguela Gully**). This completes the list of indigenous Antarctic continental flora. Humans have introuced a number of species to the continent. In the seas, however, there is plankton (which is really neither flora nor fauna, yet is both), particularly productive near the coasts, and there is an abundance of diatoms, a form of algae. Leonard Kristensen discovered the first flora ever south of the Antarctic Circle — a lichen — on Possession Island, in 1895, during Henryk Bull's expedition in the *Antarctic*. Borchgrevink collected it.

Mont Flora *see* **Mount Flora**

Monte Flora *see* **Mount Flora**

Mount Flora. 63°25' S, 57°01' W. Rising to 527 m, on the N tip of the Antarctic Peninsula, 0.8 km SE of the head of Hope Bay, on Trinity Peninsula, at the NE end of the Antarctic Peninsula. It contains a well-defined cirque which faces NE. Discovered and roughly mapped in 1902, by SwedAE 1901-04, and named by Dr. J. Gunnar Andersson of that expedition, as Flora-Berg, or Floras Berg, for the flora fossils of the Jurassic period found in certain strata of this mountain. Note: Nordenskjöld had a sister named Flora. He had another sister, named Ruth, for whom he named a feature (*see* **Ruth Ridge**). Gourdon, in 1908 (during FrAE 1908-10), refers to it as Mont Flora. Re-surveyed by Fids from Base D between 1945 and 1947. UK-APC accepted the name Mount Flora on Nov. 21, 1949, and it appears as such on a 1950 British chart. US-ACAN accepted that name in 1952. It appears in the 1955 British gazetteer, and was re-surveyed by FIDS that year. The Argentines had been calling it Monte Flora since at least 1907, and it appears as such in the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Flora-Berg *see* **Mount Flora**

Flora Glacier. 63°25' S, 57°00' W. A small glacier filling a deep cirque in Mount Flora, at Hope Bay, on Trinity Peninsula. It terminates northeastwards with huge moraines. Named by the Poles on Sept. 1, 1999, in association with the mountain.

The *Florence*. A New London sealer, owned by C.A. Williams. She left New London on Aug. 5, 1872, in company with the *Franklin* and the *Nile*, all three bound for the South Shetlands and the 1872-73 sealing season, and also to look for Mr. King and his party, who had been stranded in the South Shetlands the previous winter (off the *Franklin*). The crew of the *Florence* that season were: George Athearn (skipper), John F. Smith, Albert G. Glass, Thomas Rogers, Antone Perry, Daniel Dillon, George W. Mallam, John Francis, Christian Montaro, Julio de Lomba, Carl Lehmann, George Lescher, Theodore Purdy, Anton Enos, and José Baptista. That trip reportedly made $300,000 in fur seal skins, and the skipper got $69,000 as his share. She was in the South Shetlands in the 1876-77 season, under the command of Capt. Sanford Stoddard Miner, during the era of the revival of sealing in Antarctica. *See* **The *Lizzie P. Simmons*** for details. The *Florence* was lost in the Arctic in 1879.

Floras Berg *see* **Mount Flora**

Île Florence *see* **Florence Island**

Roca Florence *see* **Florence Rock**

Florence, Edwin. b. Dec. 6, 1872, Peterhead, Aberdeenshire, son of boat builder James Florence and his wife Barbara Seller. A sailor, he spent a lot of time in northern seas. On March 1, 1899, in Aberdeen, he married Jessie Stewart Thomson, an illegitimate girl born in the poor house of Aboyne, who had been adopted by her stepfather George Davidson. Leaving Jessie to take in laundry in Peterhead, he sailed from Dundee as chief cook on the *Scotia* for ScotNAE 1902-04. Midway through the expedition, at Buenos Aires, in Jan. 1904, when chief steward Tom Mackenzie was discharged sick, Florence stepped into that role. In 1910 he and his large family moved to Sioux Lookout, Ontario, where he went to work on the construction of the Canadian National Railway. In 1918 he opened a bakery shop, and his wife and family came over in 1920. He retired in 1935, and died in Sioux Lookout on Feb. 10, 1945.

Florence Island. 66°38' S, 140°05' E. A small, rocky island, 0.7 km S of Derby Island, near the N extremity of Astrolabe Glacier Tongue, S of the Dumoulin Islands. Charted by the French in 1951, and named by them as Île Florence. It was not named for the Italian city, but rather for a particular girl. Alas, we may never know who. US-ACAN accepted the translated name in 1962.

Florence Nunatak. 62°13' S, 58°36' W. A conspicuous nunatak, rising to 280 m (the British say 340 m), 2.8 km ENE of the head of Potter Cove, in the SW part of King George Island, in the South Shetlands. Surveyed by ArgAE 1948-49, it appears on their 1949 chart as Nunatak Yamana, named after the *Yamana*. That was the name accepted by the 1970 Argentine gazetteer. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, for the *Florence*. It appears on a British chart of 1962. US-ACAN accepted the name in 1962. The Chileans call it Nunatak Cedomir, for Cedomir Marangunic Damianovic (b. 1937), geologist from the Instituto Antártico Chileno, who was in Antarctica conducting glaciological studies in 1971-72. *See also* **Glaciar Marangunic**. Last plotted in late 2008, by the British.

Florence Rock. 60°46' S, 44°35' W. A rock in water, about 160 m long, and rising to about 25 m above sea level, it has a smaller rock off its NE end, on the E side of the entrance to Scotia Bay, 1.3 km SW of Cape Anderson, off the S coast of Laurie Island, in the South Orkneys. Surveyed and charted by ScotNAE 1902-04, and named by them. Re-charted by personnel on the *Discovery II* in 1933, it appears on their 1934 chart. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on an Argentine chart of 1945 as Roca Florence, but on one of their 1954 charts as Islote Florencia, and on a 1958 chart as Roca Florencia. The last name was the one accepted by the 1970 Argentine gazetteer. However, today, it seems the Argentines call it Roca Florence.

Islote Florencia *see* **Florence Rock**

Roca Florencia *see* **Florence Rock**

Florentino Ameghino Refugio *see* **Ameghino Refugio**

Barrera de Hielos Flores *see* **Bach Ice Shelf**

Flores, Ismael Tomás A. *see* **Órcadas Station**, 1949

The *Florida*. An oil tanker owned by the Texas Oil Company, chartered at $1000 a day to take off whale oil from, and supply fresh water to, the *Ulysses*, during the latter's voyage in Antarctic waters in 1937-38. The *Florida* left Durban on Jan. 9, 1938, and later that month, and also in Feb. 1938, was in contact with the *Ulysses*, in and around Antarctic waters. There was an accident (*see* **The *Ulysses***), and on Feb. 5, 1938, the *Florida* set sail back to the USA.

Flory Cirque. 77°39' S, 160°52' E. Between West Groin and East Groin, on the N side of Taylor Glacier, in Victoria Land. Named by US-ACAN in 1976, for Robert B. Flory, USARP geologist at McMurdo in 1968-69, 1969-70, and 1970-71.

Mar de (la) Flota *see* **Bransfield Strait**

Flotsam Moraines. 76°51' S, 161°40' E. The moraines trailing NE from Mount Morrison, trapped in the ice eddies between Midship Glacier and ice from local mountainside glaciers, in the Prince Albert Mountains of Victoria Land. So named by a 1989-90 NZARP field party, in association with Jetsam Moraine, and also because all supraglacial moraines are "floating" on the glacier ice, and therefore drift in a manner similar to marine flotsam and jetsam. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Flotte, Paul-Louis-François-René *see under* **De Flotte**

Flounder Island. 66°01' S, 65°24' W. The largest of the Fish Islands (hence the name given by UK-APC on July 7, 1959), at the N side of Holtedahl Bay, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. Surveyed by Fids from Base J in 1957. Named by UK-APC on July 7, 1959, for the fish. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Mount Flower. 70°12' S, 67°53' W. A mountain with 2 summits, the highest being 1465 m, on the N side of Mount Chapman, 11 km inland from Carse Point and the N end of George VI Sound, next to Mount Dixey, on the Antarctic Peninsula. It lies partially within the margin of area first photographed aerially by Ellsworth on Nov. 23, 1935, and its N extremity was mapped from these photos in 1936-37, by U.S. cartographer W.L.G. Joerg. Photographed from the air in 1936, by BGLE 1934-37, and roughly surveyed by them from the ground later in that year. It appears on Stephenson's 1940 map of that expedition. Re-surveyed by Fids from Base E in 1949, and named by them for Lt. Cdr. Geoffrey Chambers Flower, RNR (b. Jan. 8, 1896, London. d. 1975, London), who helped work out the BGLE surveys. He was instructor in survey at the Royal Geographical Society, 1933-40. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year.

Flowers Hills. 78°24' S, 84°10' W. A group of hills, 30 km in extent, and with peaks of 1240 m and 1390 m, S of the terminus of Dater Glacier, in the E part of the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS

from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Edwin Calvin "Ed" Flowers (b. Jan. 13, 1927, Hershey, Pa. d. Oct. 2, 2010, Sun City, Ariz.), meteorologist from Maryland, who wintered-over at Pole Station in 1957. He was also scientific leader at Pole Station for the winter of 1960.

The *Floyd Bennett*. NX4542. Byrd's famous Ford Tri-motor airplane which flew to the South Pole and back on Nov. 28-29, 1929, during ByrdAE 1928-30. The standard 220 hp engine in the nose had been replaced with a 550 hp Wright Cyclone engine, and the plane could carry a 6-ton load at 125 mph. The plane was named by Byrd for Floyd Bennett, his friend and companion on their 1926 North Pole flight. Bennett had died in 1927. Balchen flew the plane on that November day in Antarctica, and his passengers were Byrd, McKinley, and June. The plane was recovered during ByrdAE 1933-35, and brought back to the USA.

Floyd Bennett Bay. On the W coast of the Bay of Whales, 10 km NW of Little America I. Named by Byrd for his old friend Floyd Bennett (*see* **The *Floyd Bennett***). Along with the original configuration of the Bay of Whales, it is gone now.

Floyd Bluff. 69°23' S, 76°23' E. A small bluff, adjacent to Law-Racovitza Station, in the Larsemann Hills. Named by ANCA. The feature was a bluff, and they decided to use a "bluff," by naming it for Lloyd Fletcher (i.e., F., Lloyd").

Fløymannen *see* **Fløymannen Nunatak**

Fløymannen Nunatak. 73°09' S, 2°14' W. Just N of the W end of the Neumayer Cliffs, in the Kirwan Escarpment, in Mauheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Fløymannen (i.e., "the flankman"). US-ACAN accepted the name Fløymannen Nunatak in 1966.

Fluguerto, Carlos A. *see* **Órcadas Station**, 1936

Fluke Ridge. 65°45' S, 62°28' W. A narrow rock ridge rising to about 300 m on the N side of Flask Glacier, near its terminus, on the Oscar II Coast, on the Antarctic Peninsula. Named by UK-APC on Feb. 15, 1988, after the character in the novel *Moby Dick*. US-ACAN accepted the name.

Fluted Peak. 85°37' S, 176°40' W. A fluted snow peak at the SE end of Roberts Massif. It is the only snow peak on the massif, and is visible as a distinctive landmark for many miles to the south. Surveyed by the Southern Party of NZGSAE 1961-62, and named descriptively by them. NZ-APC accepted the name, and US-ACAN followed suit.

Fluted Rock. 67°34' S, 46°21' E. A column-like rock on land, on the NE side of Spooner Bay, in Enderby Land. Photographed aerially by ANARE in 1956. An ANARE party led by Don Styles on the *Thala Dan* passed close by here in Feb. 1961, and they named it for its fluted appearance when seen from the sea. ANCA accepted the name on July 4, 1961, and US-ACAN followed suit in 1965.

Flutter Island. 68°33' S, 77°58' E. An irregular-shaped island in Prydz Bay, between Trigwell Island and Breidnes Peninsula, in the Vestfold Hills, about 5 km N of Davis Station. Photographed aerially by LCE 1936-37, and mapped as 2 islands by the Norwegian cartographers working from these photos in 1946. This is an understandable error, as the island is almost divided in two. ANARE re-defined it in 1957-58, and ANCA named it on Aug. 11, 1958, for Maxwell John "Max" Flutter (b. July 17, 1917), Bureau of Meteorology weather observer and officer-in-charge at Davis in the winter of 1958. He was also in and out of Mawson Station that season. He retired from the Bureau in 1981. US-ACAN accepted the name in 1965.

Flutter Rookery. 67°50' S, 69°52' E. An emperor penguin rookery in a group of icebergs on fast-ice adhering to the E side of Bjerkø Peninsula, on the coast of Mac. Robertson Land. Discovered on Aug. 3, 1958, by Flight Lt. Bill Wilson (*see* **Wilson Bluff**), while on a flight from Mawson Station to Davis Station. Named by ANCA on July 22, 1959, for Max Flutter.

The *Flying Cloud*. Stonington, Conn., sealer which left home port on July 28, 1853 as tender to the *United States*, bound for the South Shetlands and the 1853-54 season, under the command of Capt. Hidden. Somewhere along the line Capt. Craig took over command. The vessel was lost, along with the *Sarah E. Spear*, in a gale off the Falklands, on Oct. 9, 1853, before they got to Antarctica. All crew were saved.

[1]**The *Flying Fish***. American pilot boat of 96-ton displacement, a length of 70 feet 3 inches, and a beam of 19 feet 9 inches, with 8 foot depth in hold, 2 guns, and a crew of 15. She was the sister ship to the *Sea Gull*, both vessels taking part in USEE 1838-42. Lt. Walker was commander on the first Antarctic cruise, and, by late 1839, had been succeeded by Lt. Pinckney. On all non-Antarctic cruises the vessel was commanded by Lt. Samuel R. Knox. In early 1840, due to unseaworthiness, the *Flying Fish* was taken back to NZ by Pinckney. She continued to be part of the expedition, and was sold in Singapore in late Feb. 1842.

[2]**The *Flying Fish***. A New London sealing schooner that plied the South Seas in the 1870s. Under Capt. Alfred Turner she was at South Georgia (54°S) in 1870-71, then on Aug. 9, 1872, Simeon Church came out of retirement to take her out of New London for a trip to the South Shetlands, for the 1872-73 sealing season. J.R. Rogers was 1st mate, George L. Baker was 2nd mate, and George Raisbeck was 3rd mate. The rest of the crew were: James Erickson, C. Pervais, W.S. Stockwell, Michel Connor, A.C. Mathewson, Neal Tompkins, Frank R. Bennett, Henry H. Church, John Morris, John C. Outley, Joshua W. Burgess, James Henry Burke, Charles H. Lawton, and two sailors from Cape Verde — Manuel Montaro and Antone DeBar. For the next season, Simeon Church's brother James, took the *Flying Fish* out of New London on July 21, 1873, again bound for the South Shetlands and the 1873-74 season. Nathan M. Church was 1st mate, George L. Baker was 2nd mate again, and H.J. Crouch was 3rd mate. The crew were: Thomas McGringle, Philip H. Saxton, Richard Martin, N.H. Bennett, Joseph Francis, and several Portuguese sailors — Manuel Fonseca, Elias Barbosa, Laurens Lopez, Petu Lopez, Felipe Gomes, Bernardino Fonellis, Fregardo Gomes, João Fernando, João L. Terceira, Lutus de Andra, and Manuel Gonsales. The ship was at Heard Island (53°S) under Capt. Joseph B. Neale, in 1874-76, again in 1876-77 under James M. Holmes, and finally in 1877-79 under William Dunbar. On Oct. 8, 1878, under Capt. Dunbar, she foundered off Cape Horn. Although she was in at South Georgia, she was not in Antarctic waters during these last few seasons.

Cape Flying Fish. 72°03' S, 102°20' W. An ice-covered cape, the most westerly point of Thurston Island. Discovered aerially by Byrd in Feb. 1940 on a flight from the *Bear*, during USAS 1939-41, and named by him as Cape Dart, for Justin Dart (*see* **Cape Dart**). Renamed by US-ACAN in 1952, for the *Flying Fish*, Wilkes' vessel during USEE 1838-42. Originally plotted in 72°06' S, 102°29' W, it has since been replotted.

Flying Fish Cove. 72°05°S, 102°20' W. The SCAR gazetteer lists this as separate feature, with these coordinates as given by the Russians. It actually gives the feature as Cove Flying Fish, which is unacceptable, in English, anyway. If there is really a cove here, then it indents Cape Flying Fish, the westernmost point on Thurston Island. However, it may all be a mistake, and perhaps should say Cape Flying Fish.

Flynn Glacier. 81°31' S, 159°21' E. About 16 km (the Australians say 19 km) long, it flows eastward from the vicinity of Mount Albert Markham and Mount Nares in the Churchill Mountains, and enters Starshot Glacier just S of the Kelly Plateau. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Cdr. William F. Flynn, USN, Seabee commander who wintered-over at McMurdo in 1957. ANCA accepted the name on Aug. 27, 1975.

Rocas Flyspot *see* **Flyspot Rocks**

Flyspot Rocks. 68°35' S, 68°06' W. A group of rocks in water, rising to 37 m above sea level, and ice-covered on their S sides, but mainly ice-free on their N sides, NW of Cape Berteaux, and 22 km W of the Terra Firma Islands, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. In 1909, Charcot, from a position slightly northwestward, charted a "doubtful" island in essentially this position, during FrAE 1908-10. On Feb. 1, 1937, a flight was made over here during BGLE 1934-

37, and these islands were roughly sketched, the feature appearing on Stephenson's 1940 map of the expedition. Named about 1940 as Flyspot Rocks, because of their indistinct appearance as shown on the BGLE sketch. Visited and surveyed in Jan. 1949 by Fids from Base E. ArgAE 1952-53 named them Isolotes Zapiola, for Comandante Zapiola (*see* **Comandante Zapiola Refugio**), and they appear on the 1953 expedition chart. UK-APC accepted the name Flyspot Rocks on March 31, 1955, and US-ACAN followed suit that year. On two 1957 Argentine charts they appear as, respectively, Islotes Primer Teniente Patrignani and Islotes Teniente Patrignani, named for 1st Lt. Domingo Aldo Patrignani, of a FATA mobile detachment, who was killed on active service (not in Antarctica). The Argentine gazetteer of 1970 accepted the longer of the two names, but, today, the Argentines call the feature Islotes Patrignani. The feature appears on a 1962 Chilean chart as Rocas Flyspot, and that was the name accepted by the 1974 Chilean gazetteer (they considered, but rejected, Islas Iquique).

The *F'Murr*. French yacht, skippered by Jean-Jacques Argoud, which visited the South Shetlands and the Antarctic Peninsula in 1983-84.

Fnugget. 72°10' S, 20°15' E. A small nunatak between the nunatak the Norwegians call Knøttet and the 3 crags they call Tonyknausane, NE of Tussebreen, in the W part of the Sør Rondane Mountains. Named by the Norwegians ("the speck of dust").

Foale Nunatak. 70°16' S, 65°20' E. A nunatak, about 6 km ENE of Moore Pyramid, on the N side of Scylla Glacier, in the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos. Named by ANCA for Ronald Alan "Ron" Foale (b. April 5, 1937, Bridgetown, Western Australia), radio operator at Davis Station in 1963. US-ACAN accepted the name in 1971.

[1]**The *Foca***. A 199-ton whale catcher, 113 feet long, built in 1921 in Skelvik, Norway, for the Compañía Argentina de Pesca, in Buenos Aires. The name means "seal." She was in the South Orkneys in Dec. 1926. She was sold in 1929 to the Atlas Whaling Company, of Larvik, Norway, sold again in 1931, and in 1932 re-named *Forlandet*.

[2]**The *Foca***. A 281-ton Norwegian whale catcher, built in 1930, in Oslo, and owned by the Compañía Argentina de Pesca. She was 119 feet 4 inches long, and 24 feet 3 inches wide, with 101 nhp. She was in Antarctic waters in 1940-41.

Farallones Foca *see* [1]**Seal Islands**
Islas Foca *see* [1]**Seal Islands**
Nunataks Foca *see* **Seal Nunataks**
Pointe Foca *see* **Penguin Point**
Punta Foca *see* [1]**Seal Point**
Roca Foca *see* [1]**Seal Point**

Foca Cove. 60°42' S, 45°39' W. Just SE of Foca Point, on the W side of Signy Island, in the South Orkneys. A FIDS refuge hut was built near the head of the cove in 1959-60, and they called it Foca Hut. BAS did biological work here up to 1973. Named by UK-APC on Dec. 20, 1974, in association with the point. US-ACAN accepted the name in 1975.

Foca Hut *see* **Foca Cove**

Foca Point. 60 42 S, 45 40 W. A rocky point forming the N entrance point of Foca Cove, and the S side of the entrance to Express Cove, on the W side of Signy Island, in the South Orkneys. Surveyed in 1947 by FIDS, and named by UK-APC on March 31, 1955, for the *Foca* (i.e., the first whale catcher with that name). US-ACAN accepted the name in 1956.

Potok Foczy *see* **Seal Creek**

Fog Bay. 77°40' S, 168°10' E. A small Ross Ice Shelf indentation into the S side of Ross Island, just to the E of Windless Bight, and WNW of Terror Point. Named by Wilson and his Winter Journey Party of July 1911, for the thick white fog here. US-ACAN accepted the name in 1972.

Fog bows. Phenomena often seen near coasts and on ice shelves, wherein small, supercooled cloud droplets cause diffraction of light in the fog, and produce a wide, white band that may be tinged with red or orange along its outer edge. *See also* **Phenomena**.

Fogg Highland. 72°45' S, 60°50' W. An ice-covered upland, about 30 km long and 16 km wide, terminating on the NE in Cape Herdman, and bounded on the N by Violante Inlet, on the S by Clowes Glacier, and on the W by Heezen Glacier, on the Black Coast, on the E coast of Palmer Land. It was photographed aerially in 1940, by USAS 1939-41, again in Nov. 1947, by RARE 1947-48, and by USN between 1965 and 1967. In 1947-48 it was surveyed from the ground by a joint sledging expedition comprising RARE personnel and Fids from Base E. Named by UK-APC on Dec. 9, 1981, for Gordon Elliott "Tony" Fogg (1919-2005), professor of marine biology at University College of North Wales, at Bangor, 1971-85, who conducted research in the Antarctic Peninsula area, in conjunction with BAS, in 1966, 1974, and 1979. He was chairman of the BAS scientific advisory committee, 1970-86.

Foggy Pass. 71°59' S, 164°50' E. A pass running NE-SW between (on the N) the Leitch Massif and (on the S) the West Quartzite Range and the East Quartzite Range, in the Concord Mountains. Named by NZ geologist Malcolm Laird for the weather conditions encountered here. NZ-APC accepted the name in 1982, and US-ACAN followed suit.

Foggydog Glacier. 79°47' S, 158°45' E. A large, prominent tongue of blue ice, which plunges between Blank Peaks and Mount Rich, into the central part of the Brown Hills. Discovered and mapped by VUWAE 1962-63, and so named by them because, in plan, the feature is shaped like the head and neck of a dog, with a transverse zig-zag moraine suggesting the collar, and a proglacial lake suggesting the ears. There is fog coming here regularly off the Ross Ice Shelf. NZ-APC accepted the name, and US-ACAN followed suit in 1965. ANCA also accepted the name.

Fogle Automatic Weather Station. 77°48' S, 166°39' E. An American AWS, at an elevation of 202 m, installed on Jan. 24, 1984 at Arrival Heights, Ross Island. Formerly called Arrival Heights AWS, it was renamed for Benson T. "Ben" Fogle (*see* **Fogle Peak**), former program manager at NSF. It was removed on Jan. 10, 1985.

Fogle Peak. 77°57' S, 162°34' E. A distinctive, pointed peak, rising to 2475 m, at the head of Kamb Glacier, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1992, for Benson T. "Ben" Fogle, program manager for upper atmospheric research at the NSF's Division of Polar Programs, 1976-85.

Föhn Bastion. 69°31' S, 68°36' W. A landmark mountain, rising to 915 m, about 13 km SE of Cape Jeremy, on the Rymill Coast, on the Fallières Coast, on the W coast of Graham Land. Surveyed by FIDS between 1948 and 1950, and again by BAS personnel from Base E between 1970 and 1973. Named by UK-APC on Dec. 8, 1977, for the föhn, the warm wind coming off the Alps in Europe. Several features in this area are named for the world's famous winds. US-ACAN accepted the name. It appears in the 1980 British gazetteer.

Föhnhalbinsel. 74°51' S, 163°58' E. A peninsula, SE of Mount Abbott, in the Northern Foothills of Victoria Land. Named by the Germans.

Fokker Rocks. 78°04' S, 155°10' W. Rock outcrops just S of Mount Schlossbach, in the Rockefeller Mountains, on Edward VII Peninsula. Named by US-ACAN in 1971, for the Fokker airplane damaged and left on the S side of nearby Washington Ridge during ByrdAE 1928-30. The plane was visited on Dec. 31, 1966, by Charles Morrison of USGS.

Fokknuten *see* **Fokknuten Nunatak**

Fokknuten Nunatak. 71°56' S, 23°15' E. A small nunatak, 6 km E of Perlebandet Nunataks, in the NW part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Fokknuten (i.e., "the spray peak"). US-ACAN accepted the name Fokknuten Nunatak in 1966.

Folch Bonafont, Ramón. A teniente de navío in the Uruguayan Navy, he was chief engineer on the *Instituto de Pesca No. 1*, when that vessel tried unsuccessfully to rescue Shackleton's men stranded on Elephant Island, in 1916.

Fold Island. 67°17' S, 59°23' E. Also called Folda Island. An offshore island, 10 km long and 5 km wide, which, with smaller islands close southward, separates Stefansson Bay to the W from William Scoresby Bay to the E, off the coast of Enderby Land. Discovered by the personnel on the *William Scoresby*, in Feb. 1936, and mapped as part of the mainland. LCE 1936-37 photographed it aerially in Jan.-Feb. 1937, and the Norwegian cartographers who worked from these photos in 1946 determined

it to be an island, naming it Foldøya (i.e., "fold island"). US-ACAN accepted the name Fold Island in 1953. ANCA accepted the name on Aug. 20, 1957.

Fold Lake. 69°21' S, 76°19' E. A small oval lake on Manning Island, in the Larsemann Hills. So named by the 1986-87 ANARE field party because of marked folding in the sides of the valley in which the lake is situated. ANCA accepted the name on Nov. 24, 1987.

Folda Island *see* **Fold Island**

Folded Cliff. 64°56' S, 62°50' W. A steep NE cliff of Mount Inverleith, at Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. It has exposures of folded metasediments. Named by the Poles on Sept. 1, 1999.

Foldøya *see* **Fold Island**

Foley, M. On Oct. 10, 1913, he signed on to the *Aurora*, as an able seaman, at £5 per month, for the 3rd and last run to Antarctica during AAE 1911-14. He left the expedition on March 19, 1914, with a £5 bonus.

Foley Glacier. 71°58' S, 101°10' W. About 6 km long, it flows N from the W end of Thurston Island, just E of Cape Peterson. Named by US-ACAN in 2003, for Kevin M. Foley, USGS computer specialist, a team member of the Glaciological and Coastal-Change Maps of Antarctica Project.

Foley Nunatak *see* **Brusen Nunatak**

Foley Promontory. 68°57' S, 69°24' E. An ice-covered promontory, about 8 km N of Landon Promontory, on the W side of the Amery Ice Shelf. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA for Noel Edward [i.e., not Edwards, as is often seen] "Ted" Foley (b. Dec. 25, 1927), weather observer at Macquarie Island in 1959. He was weather observer-in-charge at Mawson Station in 1962, and was a member of Dave Carstens' ANARE party which first visited this feature in November that year. He was back in the same capacity at Mawson in 1965. US-ACAN accepted the name in 1967. *See also* **Brusen Nunatak**.

Cape Folger. 66°08' S, 110°44' E. An ice-covered cape forming the E side of the entrance to Vincennes Bay, about 19 km NNE of Casey Station. This could be the Budd's High Land (q.v.) discovered and named by Wilkes in 1840, during USEE 1838-42, or rather it might be the W end of it. Photographed aerially by OpHJ 1946-47, and first delineated from those photos. Named by US-ACAN in 1955, for Edward C. Folger, Jr. It was re-photographed aerially in 1956 by ANARE and SovAE. ANCA accepted the name.

Roca Folger *see* **Folger Rock**

Folger, Edward Clinton, Jr. b. May 9, 1907, Avon Town, Mass., son of shoe factory workers Edward Clinton Folger and his wife Rena Crowell. He joined the U.S. Navy, and was a commander when he became skipper of the *Edisto* and commander of the icebreaker astronomical control stations in the Windmill Islands during OpW 1947-48. He died on Nov. 14, 1987, in Riverside, Calif.

Folger, Tristan. b. Nantucket, Mass. Captain of the *William and Nancy* from May 2, 1820 to April 21, 1821.

Folger Rock. 62°16' S, 59°14' W. A rock in water, 4 km N of Harmony Point, off the NW side of Nelson Island, in the South Shetlands. Photographed aerially by FIDASE in 1956. Named by UK-APC on Aug. 31, 1962, for Tristan Folger. It appears on a British chart of 1962. US-ACAN accepted the name in 1966. The Chileans call it Roca Folger, but they seem to ascribe the name to Edward C. Folger (which would be wrong, of course). Last plotted in late 2008, by the British.

Folk Ridge. 73°09' S, 161°49' E. Just SE of Moore Ridge, and parallel to it, in the Caudal Hills of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for John E. Folk, biolab technician at McMurdo, 1965-66.

Folkertssee. 80°16' S, 28°47' W. A lake, ENE of Mount Skidmore, in the Shackleton Range. Named by the Germans.

Foltz Nunatak. 74°08' S, 76°20' W. Rising to about 800 m, 1.5 km N of Schwartz Peak, where Ellsworth Land meets southern Palmer Land. It is part of a group of nunataks discovered and photographed aerially by Ellsworth in Nov. 1935. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1968, and also from U.S. Landsat images taken in Feb. 1974. Named by US-ACAN in 1987, for Gary F. Foltz, USGS cartographic technician, who wintered-over as a member of the USGS satellite surveying teams at Pole Station in 1978 and 1984. UK-APC accepted the name on Feb. 15, 1988.

Fomalhaut Nunatak. 70°58' S, 66°40' W. An isolated, flat-topped nunatak rising to about 900 m, near the head of Ryder Glacier, 10.7 km E of Mount Alpheratz, E of the Pegasus Mountains of Palmer Land, at George VI Sound. Surveyed by BAS between 1962 and 1972. Named by UK-APC on July 21, 1976, for the star. US-ACAN accepted the name later that year. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Mount Fonda. 76°59' S, 145°15' W. Rising to 695 m, in the NW part of the Swanson Mountains, 10 km S of Greegor Peak, in the Ford Ranges of Marie Byrd Land. Mapped during USAS 1939-41, and named by Byrd for Howard Breese Fonda (1896-1964), who had contributed medical supplies to ByrdAE 1928-30 and ByrdAE 1933-35. He was later president of Burroughs Welcome. US-ACAN accepted the name in 1970.

Isla Fondeadero. 64°19' S, 62°56' W. A tiny island opposite the central W coast of Eta Island, in the Melchior Islands. The name has been in use by the Chileans since 1947 (when it appears on one of their charts). The Argentines call it Islote Amarra (but, *see also* [1]**Anchorage Island**).

Caleta Fontaine *see* **Cierva Cove**

Fontaine Bluff. 79°35' S, 159°42' E. A bluff, 6.5 km W of Cape Murray, and 6 km N of Cheney Bluff, on the S side of Carlyon Glacier. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1959 and 1963. Named by US-ACAN in 1965, for Lt. Cdr. Richard K. Fontaine, USN, a graduate of the Naval Academy in June 1951; assistant navigator on the *Mount Olympus* for a year; operations officer on the R.*A. Owens*; commander of the *Parrot*; and executive officer and navigator on the *Cromwell*. In Feb. 1963 he took command of the *Hissem*, for OpDF 64 (i.e., 1963-64), plying between Christchurch, NZ, and McMurdo Sound that season, in support of aircraft flights. ANCA accepted the name on Aug. 27, 1975.

Fontaine Heights. 65°48' S, 64°28' W. A line of heights rising to about 1800 m, and extending from Mount Dewey to Cape García, on the SW side of Bigo Bay, on the Graham Coast, on the W coast of Graham Land. This feature includes Index Peak and Mount Dewey. Mapped by FIDS cartographers from 1956-57 FIDASE air photos and from ground surveys conducted over the same period by Fids from Base J. Named by UK-APC on July 7, 1959, for Henri-Marie La Fontaine (1854-1943), Belgian documentalist who created the Universal Decimal Classification. He won the Nobel Peace Prize in 1913. It appears on a British chart of 1960. US-ACAN accepted the name in 1965.

Fontaine Nakin, Leopoldo. Hydrographer, leader of ChilAE 1948-49. From 1958 to 1962, by now a vice admiral, he was commander-in-chief of the Chilean Navy.

Fondeadero Fontana *see* **Port Foster**

Punta Fontana *see* **Collins Point**

Fontes, Elena María Martínez. Argentine biologist and hydrographer, head of the marine invertebrate section at the Rivadavía Museum of Natural Sciences, in Buenos Aires. In 1968-69 she became one of the first women to work in Antarctica (*see* **Women in Antarctica**).

Food. Captain Cook was the first navigator into Antarctic regions, during his voyage of 1772-75. He had already discovered a cure for the dreaded scurvy — fresh meat and vegetables. On this trip he took 27 tons of biscuits and over 14,000 pieces of salt pork, 9 tons of sauerkraut, and 3 tons of salted cabbage. Over the next century and a half, though, with civilization becoming more and more streamlined, processed food, looking like fresh meat and vegetables, became the mainstay of all European ships, and scurvy ran rampant among crews as late as the 1920s. Ross, during his expedition of 1839-43, took concentrated soup, preserved meat, and masses of vegetables (including 5 tons of carrots and 4 tons of pickles). There are many stories of explorers in the pioneer, early 20th-century, days of land traversing, half-crazed through lack of food, scurvy-ridden, and desperate to get their men back to base, killing and eating dogs, ponies, seals, penguins. Although there have been no reports of cannibalism in Antarctica, not even whispers, it is not improbable, given the isolation and

need for food, that a bit of that has gone on from time to time. Dogs have reverted easily to cannibalism in Antarctica on many occasions. The big foods of those early pioneers were pemmican (q.v.), hoosh (q.v.), and above all porridge (oatmeal). Scott used Oxo on BAE 1910-13, and so did Shackleton on his later expeditions. Below is Scott's daily ration for his men on BNAE 1901-04: 12.7 oz of biscuit (*see* **Sledging biscuit**); 1.6 oz of oatmeal; 8.8 oz of pemmican; 2.7 oz of bacon and pea flour; 2.0 oz of plasmon (q.v.); 2.1 oz of cheese; 1.0 oz of chocolate; 0.7 oz of cocoa; and 3.5 oz of sugar. Each three-man crew received a further weekly allowance of 12.3 oz of tea; 8.8 oz of onion powder; 4.4 oz of pepper; and 7.0 oz of salt. ScotNAE 1902-04 had for breakfast hot porridge (they were Scotsmen), bacon, biscuits, and cocoa. Lunch was biscuits, butter, cheese, and chocolate. Dinner was biscuits, meat, and tea. BAE 1907-09 took pemmican, made by Beauvais in Copenhagen. These lists illustrate how underfed these men were in Antarctica, the most inhospitable place on earth. Those who manhauled unbelievably heavy sledges hundreds of miles across ice, surviving on food inadequate even for the sedentary, are remembered constantly in this book. The discovery of vitamins ended most of the food scourges, and today, the food that is taken down to Antarctica is plentiful and good.

Foolsmate Glacier. 74°01' S, 161°55' E. A small, heavily crevassed tributary glacier flowing NE through Halfway Gap on the S side, into Priestley Glacier, 17.5 km W of Shafer Peak, in Victoria Land. Named by the Southern Party of NZGSAE 1962-63. NZ-APC accepted the name, and US-ACAN followed suit in 1968.

The Football. 72°30' S, 169°42' E. A prominent, bare rock scar, shaped like a football (a NZ football, that is), on the N side of Football Mountain, on the ridge separating Edisto Inlet from Tucker Glacier. The scar is surrounded by an unbroken snow slope, and it seems to form because the snow on this lee slope is removed over a small area by a wind-eddy. The feature is said to be always visible, though occasionally lightly covered by snow for short periods, and is consequently a landmark for pilots and other personnel at Hallett Station. At the base of The Football there is a prominent rock knob and a small lake, with a train of medial moraine running from it down the center of Edisto Glacier. Named descriptively by NZGSAE 1957-58. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Football Mountain. 72°31' S, 169°42' E. Rising to 822 m, on the ridge that separates Edisto Inlet from Tucker Glacier, in Victoria Land. The Football (see entry, above), in association with which it was named by NZGSAE 1957-58, is on its N side. That NZ expedition occupied a survey station here, marking it with a large rock cairn. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Football Saddle. 72°31' S, 169°46' E. A broad pass, at an elevation of 700 m above sea level, 3 km ESE of Football Mountain, on the ridge that separates Edisto Inlet from Tucker Glacier, 5.5 km WNW of Mount Vernon Harcourt. It is an all-snow route that can be crossed by sledge, but there are 2 other saddles close E and W which are no higher but which are more easily crossed on foot, though more difficult by sledge because they are steeper and have stretches of bare rock. Named by NZGSAE 1957-58, in association with The Football (see above). NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Rocas Foote *see* **Foote Islands**

Foote, Brian Leonard Hodson. b. 1926, Liverpool. He joined FIDS in 1956, as a radio mechanic and surveyor, and wintered-over at Base N in 1957, and at Base W, as surveyor and base leader, in 1958. He left for Australia in 1960, and died there in 2002. In 2006 a book called *Have Sleeping Bag Will Travel: The Life of an Adventurer* came out, self-published in Rosny, Tasmania, by his widow Joan Margaret Marr.

Foote Islands. 66°12' S, 66°12' W. A small group of snow-capped islands and several rocks, 20 km SE of Cape Leblond (which is on Lavoisier Island), in Crystal Sound, between the S part of the Biscoe Islands and the Graham Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by RARE 1947-48 and by FIDASE in 1956-57, and also from ground surveys conducted by Fids from Base W in 1958-59. Named by UK-APC on Sept. 23, 1960, for Brian Foote (q.v.), who made surveys of Crystal Sound. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call them Rocas Foote.

Footscrew Nunatak. 77°54' S, 160°57' E. Rising to 1865 m, to the SW of Windy Gully, about 2 km SE of Altar Mountain, in the Quartermain Mountains of Victoria Land. Named by NZ-APC in 1992. A footscrew is a leveling screw of a tripod. Many features in this area are named after surveying terms. US-ACAN accepted the name in 1993.

Footsteps of Scott Expedition *see* **In the Footsteps of Scott Expedition**

Fopay Peak. 83°03' S, 161°47' E. A peak, 8 km NW of Mount Macbain, on the S side of Cornwall Glacier, in the Queen Elizabeth Range. Named by US-ACAN in 1966, for Charles F. Fopay, Weather Central (q.v.) meteorologist at Little America V in 1958.

Pasaje Foqueros *see* **Sealers Passage**

Foraminifera. Microfauna of Antarctica (*see also* **Fauna**).

Glaciar Forbes *see* [2]**Forbes Glacier**

Punta Forbes *see* **Forbes Point**

Forbes, James "Sails." b. Jan. 27, 1870, Dundee, son of journeyman tailor Robert Forbes and his wife Mary Edwards. He apprenticed as a sailmaker, and went on DWE 1892-93, as the sailmaker on the *Polar Star*. On July 27, 1911, at Cardiff, he was taken on, at Capt. John King Davis's urging, on the *Aurora*, for AAE 1911-14, at £7 a month, and after the expedition was specially recommended by Capt. Davis. He spent 5 years ashore, and was then sailmaker on the *Discovery*, during the first of the Discovery Investigations, 1925-27. He is described as 5'4", dark hair, blue eyes, fresh complexion. In 2010, ANCA named James Forbes Glacier for him.

Forbes, John Graham. b. July 16, 1908, London, son of Dr. James Graham Forbes (known as Graham; principal assistant medical officer to the London County Council) and his wife Muriel Watson (they later moved to Tunbridge Wells). J.G. (as the son was invariably known) went to the Royal Naval Colege, at Dartmouth, passing out in 1925. On Aug. 2, 1934, he was promoted to lieutenant, and on March 13, 1935, went to the *Dorsetshire*. On May 4, 1937, he went to the *Curlew*, on April 1, 1938 was promoted to lieutenant commander, and later that year, in Guernsey, he married Channel Islander Angèle Echlin, and they went to live in Northumberland. On June 30, 1943, he was promoted to commander, and, after the war was in Antarctic waters, as captain of the *Snipe*, 1947-48. In 1954 he went to the plans division of the Admiralty, and on his 50th birthday retired to his home in Sussex, still a commander. He died in Bodmin, Cornwall, in Nov. 1997.

[1]**Forbes Glacier**. 67°39' S, 62°22' E. A glacier entering the W part of Holme Bay, to the N of the Casey Range, in the Framnes Mountains, about 22 km W of Mawson Station, on the coast of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Brygga (i.e., "the wharf"). Re-named by ANCA on Nov. 28, 1955, for Alastair "Jock" Forbes, ANARE dog handler who perished on a field trip on Heard Island on May 26, 1952. US-ACAN accepted the nme on Oct. 20, 2009.

[2]**Forbes Glacier**. 67°48' S, 66°44' W. A glacier, 16 km long and 6 km wide in its central part, and 3 km wide at its mouth, it flows W into the NE corner of Square Bay, on the Fallières Coast, on the W coast of Graham Land. The lower reaches of the glacier were first roughly surveyed in 1936, by BGLE 1934-37, and it appears on Rymill's 1938 map of the expedition. The survey was completed by Fids from Base E between 1946 and 1948, and they named it for James David Forbes (1809-1868), Scottish physicist and glaciology pioneer. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a 1957 British chart. The Argentines call it Glaciar Forbes. The British plot this feature in 67°44' S, 65°33' W.

Forbes Hill *see* **Forbes Point**

Forbes Point. 64°53' S, 62°33' W. Forms the E side of the entrance to Lester Cove, at Andvord Bay, on the Danco Coast, on the W coast of Graham Land. A corner (or spur) of the plateau escarpment S of today's point was roughly charted by David Ferguson in 1913-14,

and named by him as Forbes Hill, probably for J.D. Forbes [*see* [2]**Forbes Glacier**]. It appears as such on Ferguson's chart of 1918, and on his map of 1921. However, subsequent investigations (including air photos taken by FIDASE in 1956-57) found no definable feature that corresponded with this. But, from where Ferguson said it was, a ridge runs down to a prominent point useful for reference purposes, and so, on Sept. 23, 1960, UK-APC applied the name to this point. It appears as such on a British chart of 1961. US-ACAN accepted that situation in 1965. From 1978, it has been appearing on Argentine charts as Cabo Vidal, named by one of the Argentine Antarctic expeditions for the so-called Panadería de Vidal, one of the two early (1811) Argentine congresses assembled to forge Argentine independence from Spain.

Forbes Ridge. 80°09' S, 157°30' E. A ridge, about 12 km long, in the Britannia Range, it extends northward from Mount McClintock, along the E side of Hinton Glacier. Mapped by USGS from USN air photos. Named by US-ACAN in 1965, for Robert B. Forbes of the University of Alaska, geologist in the McMurdo Sound area in 1955-56 and 1962-63. ANCA accepted the name on Aug. 27, 1975.

Forbidden Plateau. 64°47' S, 62°05' W. A long, narrow plateau, rising to about 2000 m, and extending SW from Charlotte Bay to Flandres Bay, SE of Andvord Bay and Wilhelmina Bay, on the Danco Coast, on the W coast of Graham Land. In 1956-57 it was photographed aerially by FIDASE, and it was surveyed in its N part by Fids from Base O. FIDS cartographers mapped it from these efforts. So named by UK-APC on Sept. 23, 1960, because of the extraordinary difficulty experienced in getting to it (the FIDS were the first to do so, in 1957, when they found a difficult route up Bayly Glacier). It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Forbidden Rocks. 73°36' S, 94°12' W. A line of rocks, 1.5 km long, on the W edge of Christoffersen Heights, between Haskell Glacier and Walk Glacier, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61, and so named by them because crevasse fields made their approach to the rocks impossible from the NW. US-ACAN accepted the name in 1963.

Forbidden Valley. 85°59' S, 154°00' W. A valley, partly covered by glacier and moraine, to the S of Citadel Peak, it runs ENE from Mount Crockett to Scott Glacier, in the Hays Mountains, in the Queen Maud Mountains. Visited in Dec. 1987 by a USARP-Arizona State University geological party led by Ed Stump. The mouth of the valley is blocked by a moraine which denies easy access, hence the name given by Stump. US-ACAN accepted the name.

Mount Ford. 70°57' S, 162°52' E. A prominent mountain, rising to 2580 m, 3 km N of Miller Peak, and 6 km WSW of Mount Ashworth, in the Explorers Range of the Bowers Mountains. Explored by the Northern Party of NZGSAE 1963-64, and named by them for Malcolm Roding James Ford (b. May 10, 1939, Christchurch. d. July 4, 1996, Sussex, England), who was surveyor and deputy leader of this northern party. NZ-APC accepted the name, and US-ACAN followed suit in 1964. For more on Mr. Ford *See also* **Ford Peak**, and **Ford Rock**.

Ford, Arthur Barnes "Art." b. Sept. 4, 1932, Seattle, but raised in Enumclaw, Wash., son of a mining engineer. After getting all three degrees at the University of Washington, and his high school sweetheart Carole, whom he married in 1955, he became an assistant geology professor at San Diego State College in 1958. He and Pete Bermel led the Thiel Mountains Expedition to Antarctica in 1960-61, and Ford was leader of the 1961-62 expedition to the Thiels and also the 1962-63 expedition to the Pensacola Mountains. In Dec. 1961, his party found the third-ever meteorite in Antarctica. In 1964 he joined USGS's Alaskan branch, in Menlo Park, Calif., working a lot in Alaska and also finding time to continue his Antarctic petrological work in the Pensacola Mountains (1965-66, during the Pensacola Mountains Project). In 1970-71, he was on the Lassiter Coast. In 1972-73 he was the geologist on the first Deep Sea Drilling Project, on the *Glomar Challenger*, and in 1973-74 was back in the Pensacolas. In 1976-77 he was an exchange scientist with the Russians at Druzhnaya Station, for studies of the Shackleton Range, and was back in the Pensacolas in 1978-79. In 1986-87 he was a member of the joint USGS-BAS team that surveyed the Black Coast, on the Antarctic Peninsula. He retired from USGS in 1995, and became a ship's lecturer on Arctic and Antarctic cruises. In 2007 he was elected president of the Antarctican Society.

Ford, Charles Reginald. Known as Reginald. b. Feb. 4, 1880, Shepherds Bush, London, son of butler Charles Matthew Ford (known as Matthew) and his wife Ellen Catherine McDonald. He joined the RN at 14, and was a ship's steward and clerk on the *Vernon* when he transferred (with Frank Wild) to the *Discovery* for BNAE 1910-04, as acting ship's chief steward, and in charge of stores. He broke his leg while skiing, the first man in the Antarctic to do that. On his return to the UK he was in charge of the expedition's finances, and was Scott's secretary during the leader's lecture tour. He moved to Canada, then Australia, and finally in 1906 to Christchurch, NZ, lecturing as he went. On Sept. 2, 1908, in Christchurch, he married Edith Christine Smith Badger, and that year wrote a book about the *Discovery* expedition—*Antarctica: Leaves from a Diary Kept on Board an Exploring Vessel*. After a turn as land agent and farmer, he became an architect in 1913, moved to Wanganui, and went into partnership in 1919. In 1923 he moved to Auckland, where he and William Gummer formed Gummer & Ford, which became one of the famous firms in NZ. One of their buildings was Auckland Railway Station. In 1926 he wrote a first of its kind, *Earthquakes and Building Construction*, as well as a book on English ceramics, a subject he was an authority on. His wife died in 1937, and he re-married, on July 10, 1939, in Auckland, to Daphne Jessie Dannefaerd. He retired in 1961 to Auckland, where he died on May 19, 1972, the last survivor.

Ford Ice Piedmont. 82°10' S, 50°00' W. A large ice piedmont, northwestward of the Dufek Massif and the Forrestal Range, between the lower ends of the Foundation Ice Stream and Support Force Glacier, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN for Art Ford. UK-APC accepted the name on May 21, 1979.

Ford Island. 66°24' S, 110°31' E. Also called Bathurst Island. A rocky island, about 2 km long, between O'Connor Island and Cloyd Island, and about 3 km E of Holl Island, in the S part of the Windmill Islands. First mapped from air photos taken in 1947 during OpHJ 1946-47 and in 1948 during OpW 1947-48. Named by US-ACAN in 1956, for Homer D. Ford, photographic officer with the Eastern Task Group of OpHJ, and assistant photographic officer on OpW, both times working in this area. In Jan. 1956 Phil Law led an ANARE party here.

Ford Massif. 85°05' S, 91°00' W. A broad, essentially flat, snow-topped massif, 24 km long, 8 km wide, and rising to 2810 m, it terminates in steep rock cliffs in all but the S side, and is the major feature in the N part of the Thiel Mountains. Named by US-ACAN in 1962, for Arthur B. Ford.

Ford Nunataks. 85°35' S, 131°30' W. A cluster of nunataks and low peaks rising above a network of ice-drowned ridges 4 km in extent, 11 km NW of Maurtaugh Peak, in the Wisconsin Range, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Franklin E. Ford, USN, construction mechanic who wintered-over at Byrd Station in 1961 and at Pole Station in 1965.

Ford Peak. 75°43' S, 160°27' E. A rock peak, rising to 1830 m between Wise Nunataks and Mount Bowen, 10.5 km W of Mount Billing, in the Prince Albert Mountains of Victoria Land. Named by the Southern Party of NZGSAE 1962-63, for M.R.J. Ford, assistant surveyor with that party. He had wintered-over at Scott Base in 1962 (*see also* **Mount Ford**, and **Ford Rock**).

Ford Ranges. 77°00' S, 145°00' W. Also called Ford Range. The mountain groups and ranges E of the Sulzberger Ice Shelf and Block Bay, or between the Flood Range and Edward VII Peninsula, in the NW part of Marie Byrd Land. They comprise the Fosdick Mountains, the Clark Mountains, the Haines Mountains, the Chester Mountains, the Swanson Moun-

tains, and the Mackay Mountains, as well as Mount Woodward, Mount Cooper, Mount Rea, Mount Corey, and Saunders Mountain. They are made up mostly of cretaceous granite-granodiorite platons, and are an older, thick sequence of quartzites, slates, and phyllites. Discovered aerially by Byrd on Dec. 5, 1929, during ByrdAE 1928-30, and named by him as the Edsel Ford Ranges, for automaker Henry Ford's son Edsel Ford (1893-1943), a supporter of the expedition. The name was later shortened, and, as such, was accepted by US-ACAN in 1966.

Ford Rock. 77°46' S, 166°53' E. A prominent rock halfway up Hut Point Peninsula, 1.5 km NE of Cone Hill, and N of Castle Rock, on James Ross Island. Scott named it Cone Hill II (what Scott called Cone Hill I, later became just Cone Hill). A USN Hydrographic Office Survey unit established a survey beacon on this rock in 1955-56, and named it Station Route, a name inspired by the words "Route to Cape Evans" written in this area on the BAE 1910-13 map of Hut Point Peninsula. Later it was renamed by A.J. Heine, of the McMurdo Ice Shelf Project 1962-63, for M.R.J. Ford, NZ surveyor who established a survey beacon network for the project (*see also* **Mount Ford**, and **Ford Peak**), including a beacon on this rock. US-ACAN accepted the name in 1964.

Ford Spur. 84°51' S, 173°50' E. A prominent rocky spur, a most distinctive landmark, rising to about 2700 m above sea level, marking the SW end of the Haynes Table, and projecting from that table into, and standing about 600 m above, Keltie Glacier, and also serving to mark the confluence of that glacier with Brandau Glacier, in the Queen Maud Mountains. Surveyed by the Southern Party of NZGSAE 1961-62, and named by them for Reginald Ford. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Mount Forde. 76°53' S, 162°05' E. A dome-shaped mountain, rising to over 1200 m (the New Zealanders say about 1100 m), at the head of Hunt Glacier, and at the E side of Cleveland Glacier, between 2.5 and 3 km NW of Mount Marston, just to the N of Mackay Glacier, in Victoria Land. Mapped by BAE 1910-13, and named by them for Robert Forde. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Forde, Robert. b. Aug. 29, 1875, Moviddy, Co. Cork, son of George Forde and his wife Charity Payne. He joined the Royal Navy at 16, and reached petty officer. He had served with Teddy Evans on the *Talbot* when he went to Antarctica as part of BAE 1910-13, on which he was a member of the Western Geological Party. He suffered frostbite on his hands. He left Antarctica with the *Terra Nova* in Feb. 1912, and, upon his return to Britain, was promoted to chief petty officer, and, during World War I, served on the *Vivid* and other ships. In 1919 he retired to Cobh, co. Cork, where he died on March 13, 1959.

Mount Fordell. 80°19' S, 82°09' W. Rising to 1670 m, it marks the S end of the Marble Hills, in the Heritage Range. Named by US-ACAN in 1966, for Lt. William D. "Bill" Fordell, USN pilot (*see* **Deaths**, 1966).

Mount Forecast. 70°40' S, 64°18' E. A large mountain comprising several peaks, just NE of Mount Brown-Cooper, in the Bennett Escarpment, 21 km SW of Mount Pollard, and about 37 km SW of the Crohn Massif, in the Prince Charles Mountains. Syd Kirkby photographed it from the ground in 1956, and ANARE photographed it aerially in 1965. Named by ANCA for Mark James Forecast (b. Dec. 12, 1940), the most appropriately-named weather observer ever to winter-over at Wilkes Station, which he did in 1965. He was at Mawson Station in 1967, and at Macquarie Island in 1969. US-ACAN accepted the name in 1970.

Forecastle Summit. 76°46' S, 161°08' E. Rising to 2040 m, it is the highest mountain summit in the N part of Staten Island Heights, with a rounded top that gives a commanding view of Fry Glacier and Benson Glacier, in the Convoy Range of Victoria Land. Named by an NZARP field party here in 1989-90, in keeping with the practice of naming several features in this area after nautical terms. NZ-APC accepted the name in 1992, and US-ACAN followed suit in 1993.

Forefinger Point. 67°37' S, 48°04' E. A prominent rock point, between McKinnon Island to the W and Rayner Glacier just to the E, at the head of Casey Bay, in Enderby Land. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA for the fact that, from the air, it looks like a pointing left hand.

Forel Glacier. 67°28' S, 66°28' W. A glacier, 2.5 km wide and 6 km long, flowing SSW into Blind Bay, at Bourgeois Fjord, between the Loubet Coast and the Fallières Coast, on the W coast of Graham Land. First roughly surveyed in 1936, by BGLE 1934-37, it appears on Rymill's 1938 map of the expedition. Its lower reaches were surveyed by Fids from Base E in Nov. 1949, and they named the glacier for François-Alphonse Forel (1841-1912), Swiss glacier physicist of the 19th century. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1957. Following air photos taken by FIDASE in 1956-57, and ground surveys conducted by Fids from Base Y that same season, it was determined by FIDS cartographers that this glacier is continuous with Sharp Glacier (q.v. at this point in the story).

Cabo Foreland *see* **[2]North Foreland**

Cape Foreland *see* **[2]North Foreland**

Isla Foreland *see* **Foreland Island**

Foreland Island. 61°56' S, 57°36' W. An island, rising to an elevation of 45 m above sea level, 1.5 km ESE of Taylor Point, and N of Destruction Bay, off the E side of King George Island, in the South Shetlands. It was known by sealers as early as 1821, and was named (probably by them) in association with North Foreland, 5.5 km to the NW. Surveyed by the Discovery Investigations in 1937, it appears on their charts of 1937 and 1938. It appears on an Argentine chart of 1946, as Isla Foreland, and on a 1947 Chilean chart translated all the way as Isla Promontorio. It appears on a 1948 British chart as Foreland Islet, and that name was accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. It appears on a 1953 Argentine chart as Islote Promontorio, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. On July 7, 1959, UK-APC renamed it Foreland Island, and US-ACAN followed suit in 1963. Last plotted in late 2008, by the British.

Cabo Foreland Norte *see* **[2]North Foreland**

Foreman, Kinnard *see* **USEE 1838-42**

Foreman Glacier. 69°18' S, 71°22' W. Flows SSE from the Havre Mountains into Palestrina Glacier, in the N part of Alexander Island. Surveyed by BAS personnel from Fossil Bluff in 1975-76. Named by UK-APC on June 11, 1980, for David Alexander Foreman (b. 1947), BAS aircraft mechanic at Base T, 1973-76 (he did not winter-over). US-ACAN accepted the name in 1995.

Foreman Peak. 85°45' S, 138°24' W. Rising to 2050 m, 3 km W of Dzema Peak, on the N side of the Watson Escarpment. Named by US-ACAN in 1967, for Donald L. Foreman, VX-6 mechanic who wintered-over at Little America in 1958, and at McMurdo in 1960.

Forests. In ancient days there were forests of trees in Antarctica which we now call *Glossopteris* (q.v.). *See also* **Flora**.

Forge Islands. 65°14' S, 64°17' W. A group of small islands (including Smooth Island), NE of the Barchans, NW of Faraday Station, and 0.8 km NW of Grotto Island, in the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of the Antarctic Peninsula. Charted by BGLE 1934-37, and named by them as the Horseshoe Islands because their distribution resembles the shape of a horseshoe. The feature appears as such on a 1947 British chart, and was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. The largest of the islands appears on a 1953 Argentine chart as Isla Herradura (i.e., "horseshoe island"), but on one of their 1958 charts group appears as Islas Herradura, and that was the name accepted by the 1970 Argentine gazetteer. On July 7, 1959, UK-APC changed their name from Horseshoe Islands to Forge Islands, in order to avoid confusion with the other feature of a similar name — Horseshoe Island, not too far away. The new name keeps the same theme. US-ACAN accepted the new name later in 1959. It appears as such on a British chart of 1960. It appears as Horseshoe Island (sic) on a 1963 U.S. Hydrographic Office chart. The Chileans call this group Islas Hipólito, after fireman 1st class Hipólito Aris C., on the *Yelcho* in 1916. *See also* **Punta Amoroso** (under **A**).

Forgotten Hills. 72°59' S, 164°00' E. A small group of hills, 10 km SE of Intention Nunataks, at the W side of the head of Astro-

naut Glacier. So named by the Southern Party of NZGSAE 1966–67, because all of the parties who had come here up until then, had not had the time to examine these hills. US-ACAN accepted the name in 1968.

Fork Point. 74°45' S, 164°06' E. Running in a N-S direction, it forms the S tip of a peninsula about 5 km NE of Adélie Cove, in the Northern Foothills, overlooking Terra Nova Bay. It branches, hence the name given by the Italians on July 17, 1997.

Forkastingsvatnet. 70°45°S, 11°34' E. A lake W of Sundsvassheia, in the Schirmacher Hills. Named by the Norwegians (name means "the fault lake").

Forlidas Pond. 82°27' S, 51°21' W. A round, frozen pond, 100 m in diameter, lying in a morainal valley E of the NW end of Forlidas Ridge, in the Dufek Massif, it is the only pond in the N part of the Pensacola Mountains, and therefore of much interest to biologists. The pond was discovered and briefly investigated in Dec. 1957, by a party from Ellsworth Station, during IGY. Following USGS geological work here by Art Ford in 1978–79, he suggested the name, in association with Forlidas Ridge. US-ACAN accepted the name, and UK-APC followed suit on May 21, 1979.

Forlidas Ridge. 82°29' S, 51°16' W. A rock ridge rising to about 930 m, and forming the W side of Davis Valley, it runs NW from the Dufek Massif, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965–66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Charles W. Forlidas, radioman who wintered-over at Ellsworth Station in 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Forman Glacier. 84°39' S, 177°10' W. A tributary glacier, 6 km long, it flows E to enter Shackleton Glacier between Mount Franke and Mount Cole, in the Queen Maud Mountains. Named by US-ACAN in 1966, for John H. Forman (b. Dec. 31, 1928. d. Oct. 20, 2007, East Greenwich, RI), USN, who wintered-over as construction mechanic at McMurdo in 1959 and 1964.

Punta Formas. 64°37' S, 62°31' W. A point projecting toward the NW from the head of Orne Harbor, dividing the harbor into 2 parts, on the NW coast of Arctowski Peninsula, on the Danco Coast, on the W coast of Graham Land. Named by the Chileans for Iván Formas C., of the Chilean Air Force, who was on the *Piloto Pardo* during ChilAE 1970–71. The Argentines call it Punta Urturbey.

Montes Fornet *see* **Merrick Mountains**

Ostrov Forpost *see* **Forpost Island**

Forpost Island. 68°53' S, 77°36' E. A small island in the extreme SW part of the Rauer Islands, off the Ingrid Christensen Coast. Photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers. Re-photographed aerially during OpHJ 1946–47, again by SovAE 1956, and by ANARE in 1956 and 1957. Named by the Russians as Ostrov Forpost. ANCA accepted the name Forpost Island.

Forposten *see* **Vorposten Peak**

Forrest, Charles Robert "Doc." He graduated BM in 1942, and in 1953 actually became a doctor after graduating from Glasgow that year. He lived in Southern Rhodesia, and joined FIDS in 1959, as a medical officer, and wintered-over at Halley Bay in 1960. He was a medical attaché with the Canadian Foreign Service, a captain in the RAMC, and later moved to Hong Kong, where he worked for the government. He retired there.

Forrest Pass. 75°54' S, 132°34' W. A broad, ice-filled pass, between Mount Bursey (in the Flood Range) and the S elevation of the Ames Range (in Marie Byrd Land). Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Robert B. Forrest, USARP glaciologist with the Byrd Station Traverse of 1962–63.

Forrestal Avenue. One of the main streets at McMurdo. Named in May 1956.

Forrestal Range. 83°15' S, 50°00' W. A major range, 105 km long, and largely snow-covered, E of the Dufek Massif and the Neptune Range, or, to put it another way, between the Neptune Range and the Argentina Range, in the Pensacola Mountains. Mount Lechner (2030 m) is the highest point in the range. Discovered and photographed aerially on the Jan. 13, 1956 round-trip flight from McMurdo to the Weddell Sea (*see* **Operation Deep Freeze I**). What we now know as the E part of the Forrestal Range was named by US-ACAN in 1957, for the *Forrestal*, first supercarrier of the U.S. Navy (not in Antarctica), and it was that E part that appeared on the 1957 U.S. National Geographic Survey map of 1957, and on the 1962 American Geographic Survey map. On a 1961 map prepared by Finn Ronne, a part of the range appears as the Diamante Mountain Range (he actually spelled it Diamonte, which is wrong). The full extent of the Forrestal Range was discovered in the early 1960s, and, on Feb. 12, 1964, UK-APC accepted the name for the range as we now know it. USN photographed the entire Pensacola Mountains in 1964, and from these photos, and also from 1965–66 USGS ground surveys (conducted during the Pensacola Mountains Project), USGS mapped this feature (and, of course, the others as well) in 1967 and 1968. The Argentines have been experimenting with names for this feature, or rather, portions of it, for decades. This experimentation seems to be confused and confusing. Finn Ronne's 1961 chart, referring to a portion of the Forrestal Range as the Diamante Mountain Range, comes from the fact that, even by that stage, the Argentines were calling part of the range Cordillera Diamante, presumably after Diamante, the town in Argentina. The SCAR gazetteer tells us that the term Cordillera Diamante appears on a 1964 Argentine chart, and also in the 1970 Argentine gazetteer, as "presumably" referring to the central portion of the Forrestal Range as we know it today. In other words, they don't know for sure that this is what the term Cordillera Diamante is referring to. The SCAR gazetteer also tells us that the the 1970 Argentine gazetteer accepted the name Montes Comandante Luis Piedrabuena "presumably" for the central portion. Either the 1970 Argentine gazetteer accepted two names for the same portion, or someone made an error. It is unlikely that the Argentines would still, by 1970, be using a compound name such as Montes Comandante Luis Piedrabuena. Montes Piedrabuena is much more likely, and, indeed, it is more likely that that term refers to the S portion of the range (the SCAR gazetteer does tell us that on a 1964 Argentine chart, "presumably" the S portion of the range is referred to by that very name). However, the SCAR gazetteer does tell us that by 1978 the Argentines were referring to the S portion as the Cordillera Forrestal. Whatever the truth of the matter, Comandante Luis Piedrabuena (1833–1883) was a naval hero and pioneer of Antarctic sovereignty in Antarctica.

Forrester Island. 74°09' S, 132°13' W. An ice-capped island, 5.5 km long, 22 km NNE of Shepard Island, in the Getz Ice Shelf, or rather just N of it, off the coast of Marie Byrd Land. Discovered and charted from the *Glacier* on Feb. 5, 1962. Named by US-ACAN in 1962, for Lt. Cdr. John J. Forrester, USN, executive officer on the *Glacier* that season.

Forsdick, William *see* **USEE 1838–42**

Pik Forshteven'. 71°48' S, 8°15' E. A peak, NW of Fenriskjeften Mountain, in the Drygalski Mountains of Queen Maud Land. Named by the Russians.

Førstefallet. 72°01' S, 2°28' E. The first icefall (that's what it means in Norwegian) on the way out of Troll Station, in the N part of the Gjelsvik Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007. cf **Andrefallet**.

Førstefjell. 71°50' S, 5°43' W. An isolated nunatak, about 8 km N of Førstefjellsrabben, on the NW slope of Giaever Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and named by them as Førstefjell (i.e., "the first mountain"). US-ACAN accepted the name without modification, in 1966.

Førstefjellsrabben. 71°55' S, 5°49' W. A small, isolated nunatak, about 8 km S of Førstefjell, on the NW slope of Giaever Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and named by them as Førstefjellsrabben (i.e., "the first mountain hill"), in association with Førstefjell. US-ACAN accepted the name without modification in 1966.

Førstefjellsryggen *see* **Giaever Ridge**

Forster, George. b. Nov. 26, 1754, in

Nasenhuben, Prussia, as Johann George Adam Forster. He was on the *Resolution* during Cook's voyage of 1772–75, along with his father, John Forster (see below). He published his father's account of the trip 6 weeks before Cook published the official narrative of the voyage, in 1777 (*cf.* **John Marra**). He died of pneumonia, in poverty in Paris, on Jan. 10, 1794, after an eventful international career in science, academia, sailing, and politics.

Forster, John R. b. Oct. 22, 1729, in Dirschau, Prussia, as Johann Reinhold Forster. A preacher, sailor, writer, translator, and scientist, he settled in London in 1766. He was naturalist on the *Resolution* during Cook's voyage of 1772–75, and his son, George (see above) was also on the trip. Just after he got back to London, his house was robbed, and a few weeks after that he was robbed by highwaymen. The Admiralty forbade him to publish his account of the expedition before Cook published the official version, so his son published it, in 1777 (*cf.* **John Marra**). He died on Dec. 9, 1798, in Halle, Germany.

Forster, Peter Derek "Pete." b. Dec. 5, 1935, Brentford, Mdsx, son of Ronald C. Forster and his wife Beatrice A. Hills. He joined FIDS in 1957, as a surveyor, and wintered-over at Base E in 1958, and at Base Y in 1960, the second year also as base leader. In 1964, in Hendon, Mdsx, he married Annette C. Mitchell, and died in Nov. 1996, in Hammersmith, London.

Förster Cliffs. 64°01' S, 57°35' W. Cliffs ENE of Stark Point, running E–W for between 3 and 4 km, and rising to 550 m in the N part of James Ross Island. Named by UK-APC on Feb. 15, 1988, for Reinhard Förster (1935–1987), West German geologist, from the University of Munich, a member of the BAS field party to this area in 1985–86. US-ACAN accepted the name.

Forster Ice Piedmont. 69°22' S, 66°57' W. An ice piedmont lying landward (i.e., SE) of the Wordie Ice Shelf, on the Fallières Coast, on the W coast of Graham Land, it is formed by the confluence of Airy Glacier, Seller Glacier, Fleming Glacier, and Prospect Glacier, and is about 40 km long from N to S, and 20 km wide. First surveyed from the ground by BGLE 1934–37, it appears on Stephenson's 1940 map of that expedition. Surveyed again by Peter Forster (for whom it was named) and Peter Gibbs of FIDS, from Base E, in 1958. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Förster Valley. 63°59' S, 57°32' W. An ice-free valley on James Ross Island, trending E–W for about 2 km, 2.5 km S of Terrapin Hill, and at the N base of Förster Cliffs, in association with which it was named by UK-APC on Nov. 15, 2006.

Forsyth Peak. 77°18' S, 161°10' E. Rising to 1500 m, 0.8 km (the New Zealanders say 3 km) E of Loewenstein Peak, in the Cruzen Range of Victoria Land. Named by NZ-APC on Sept. 12, 2005, for geologist Jane Forsyth, a member of the geological mapping parties in this area during 5 seasons from 1988, including the western Asgard Range, the Willett Range, the Clare Range, and Victoria Valley, and the areas of the Mackay Glacier and the Wilson Piedmont Glacier. US-ACAN accepted the name in 2006.

Forsythe Bluff. 71°16' S, 159°50' E. A rock bluff rising to more than 2500 m above sea level at its highest, about 13 km S of Fisher Spur, and 17.5 km N of Big Brother Bluff, along the W edge of the Daniels Range, in the Usarp Mountains, in Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Warren L. Forsythe, USARP geologist at McMurdo, 1967–68. ANCA accepted the name.

Roca Fort *see* **Fort Point**

Fort Point. 62°33' S, 59°35' W. A salient rocky point, rising to 85 m (the Chileans say 106 m) above sea level, which forms the SE extremity of Greenwich Island, in the South Shetlands. Roughly charted by early 19th-century sealers, and named Deception Rocks (it appears as such in Capt. Davis's log of March 30, 1821). During the British Imperial Antarctic Expedition of 1920–22, Lester referred to it as Greenwich Point. Surveyed by the Discovery Investigations personnel in 1934–35, and the highest rock at the seaward end of this point was named by them descriptively as Castle Rock, which they charted as an offshore rock. On a 1943 U.S. Hydrographic Office chart the actual point appears incorrectly as Point Hardy. On a 1947 Chilean chart the rock part of the feature appears as Roca Castillo (i.e., "castle rock"), and that was the name accepted by the Chilean gazetteer of 1974 (for the rock part, that is). On a 1948 Argentine chart, the rock part of this feature is shown as Roca Castle, while the actual point is called Punta Hardy. On a 1953 Argentine chart of 1953, the rock part is called Roca Peñón (i.e., "crag rock"), and that name was accepted by the 1970 Argentine gazetteer. On March 31, 1955, UK-APC renamed the rock part as Fort Rock, in order to avoid confusion with the other Castle Rock, close westward of Snow Island (just 100 km away). It appears that way in the 1958 British gazetteer. On a USHO chart of 1956, the point appears as Hardy Point. Air photos taken by FIDASE in 1956, showed that the feature is not an isolated sea feature, but that it is connected to Greenwich Island. UK-APC accepted this new situation, and the new name Fort Point, on Aug. 31, 1962, and US-ACAN followed suit in 1963. It appears that way on a 1962 British chart. For the actual point, both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the name Punta Hardy. Last plotted by the UK in late 2008. *See also* **Sartorius Point**.

Fort Rock *see* **Fort Point**

[1]**Fort William** *see* **Canto Point**

[2]**Fort William**. 62°22' S, 59°43' W. A steep-sided, flat-topped headland in the form of a cape, rising to 100 m above sea level, which forms the extreme NW end of Coppermine Peninsula, itself forming the extreme W end of Robert Island, in the South Shetlands. Early sealers used this feature as a landmark as they entered what is now called English Strait from the north. In 1820–22 Robert Fildes described it as being where it is now, i.e., as the E side of the entrance to English Strait. In his 1829 report he described the feature in detail, but this time put it on the other side of the strait, i.e., on Greenwich Island. What aided and abetted the error was that a Discovery Investigations survey in 1934–35 also put the feature on Greenwich Island, but more than that, they renamed it Cape Morris, for Alfred Morris (*see* **Morris Rock**). It appears as such on a British chart of 1942. UK-APC adopted this situation on Sept. 20, 1953, and US-ACAN followed suit that year. It appears as such in the British gazetteer of 1955. The name Fort William was applied to what is now Canto Point (i.e., what the British call Spark Point, on the W side of English Strait). This situation appears on a 1949 Argentine chart, with Cape Morris being called Cabo Morris, and that was the name accepted by the 1970 Argentine gazetteer and also by the 1974 Chilean gazetteer. However, UK-APC, knowing things weren't quite right, really worked at this problem, and studied Fildes' sailing directions in minutest detail, comparing these with 1956 aerial photos taken by FIDASE, and, on Aug. 31, 1962, concluded that Fort William should be on Robert Island, as originally identified. So, Fort William is now on Robert Island again, where it belongs. US-ACAN went along with the change. It appears as such on a British chart of 1962. The British were the last to plot Fort William, in late 2008.

Punta Fort William *see* **Canto Point**

Fortenberry Glacier. 70°48' S, 166°57' E. On the N side of Tapsell Foreland, in Victoria Land, it flows N into Yule Bay, 5 km E of Ackroyd Point. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. Ralph Morgan Fortenberry (b. 1932), USN, medical officer at McMurdo in 1960. Dr. Fortenberry later practiced in Oak Vale, Miss.

Forti, Reynaldo A. b. 1903, Buenos Aires. He went to sea at 17, and worked his way up through the mate ranks. He was skipper of the *Rata*, 1933–34, in Antarctic waters. After World War II he was working for the Flota Mercante de Estado (out of Buenos Aires), plying the Atlantic as captain of the *Río Paraná* (his son, same name, born 1927, was a stoker on the same ship).

Fortín Rock. 62°29' S, 60°44' W. A conspicuous rock (or sea stack) lying off Black Point, 3 km SE of Cape Shirreff, off the N coast of Livingston Island, in the South Shetlands. Surveyed by the Discovery Investigations in 1935 and 1937, and called by them (in error) Scarborough Castle. Named descriptively as Roca Fortín by ArgAE 1952–53. Fortín is Spanish for a small fort. That name was accepted by the 1970 Argentine gazetteer. Photographed

aerially by FIDASE in 1956-57. On Aug. 31, 1962, UK-APC accepted the name Crab Stack, named for Benjamin Crab, an Englishman who first started the manufacture of spermaceti candles in the USA, at Rhode Island, in 1750. US-ACAN accepted the name Fortín Rock in 1965.

[1]**The Fortress** *see* **Mount Pendragon**

[2]**The Fortress**. 77°18' S, 160°55' E. A platform of Beacon Sandstone dissected to form a series of 4 promontories bordered by cliffs rising to over 300 m, on the shoulder to the NE of Webb Glacier, they form part of the divide between that glacier and Victoria Upper Glacier, on the N side of Barwick Valley, in Victoria Land. Named for its appearance by VUWAE 1959-60. NZ-APC accepted the name, and US-ACAN followed suit in 1976.

Fortress Hill. 63°56' S, 57°31' W. Rising to 120 m (the British say about 200 m), 3 km N of Terrapin Hill, near the entrance to Croft Bay, in the N part of James Ross Island. Surveyed in Feb. 1902 by SwedAE 1901-04, but apparently not named by them. Re-surveyed and charted by Fids from Base D in April 1946, and named descriptively by them. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears in the 1955 British gazetteer.

Fortress Rocks. 77°51' S, 166°41' E. A cluster of low rock summits, between The Gap and Middle Crater, 0.8 km N of the summit of Observation Hill, and a like distance E of McMurdo Station, on Ross Island. Named descriptively in 1911 by Scott, during BAE 1910-13. They now form McMurdo Station's quarry. US-ACAN accepted the name in 1972, and NZ-APC followed suit.

The *Fortuna*. A 164-ton whale catcher built in 1904, at Framnaes Mek., in Norway, and owned by the Compañia Argentina de Pesca. Her skipper and gunner in 1912-13 was Lars Andersen. She was wrecked in Cumberland Bay, South Georgia, on May 14, 1916.

Punta Fortuna. 62°09' S, 58°28' W. A point projecting into Admiralty Bay, and separating Half Moon Cove from Arctowski Cove, on the coast of King George Island, in the South Shetlands. Named by the Argentines.

Forwood, William Garland, Jr. b. Dec. 5, 1911, Westerville, Custer Co., Nebraska, but raised partly in Soukup, Wyo., son of farmer turned headstone salesman William G. Forwood and his wife, schoolteacher Clara E. Copsey. In the 1920s, the family moved to Spokane, and the son, after a short but unrewarding career working in a gas station, joined the USAAF. In 1945-46, as a lieutenant colonel, he was temporary commander of Baer Field, and, on Oct. 12, 1955, was promoted to colonel. He was commander of the 61st Troop Carrier Group which handled the enormous airlift/airdrop operation for OpDF, during IGY. After retirement, he moved to Greenville, SC, and worked as a state right-of-way agent, and died there on April 8, 1996.

Potok Fosa *see* **Fosa Creek**

Fosa Creek. 62°12' S, 58°27' W. A creek carrying meltwater from Tower Glacier and Baranowski Glacier to Staszek Cove, in the area of Admiralty Bay, King George Island in the South Shetlands. Its highest point is 200 m above sea level, and its lowest point is sea level itself. This feature was formed since the 1980s, due to glacial thawing. Named by the Poles as Potok Fosa. The name was translated into English.

Fosdick Mountains. 76°32' S, 144°45' W. An E-W trending mountain range with marked serrate outlines, standing along the S side of Balchen Mountain, at the head of Block Bay, and at the neck of Guest Peninsula, in the Ford Ranges of Marie Byrd Land. They are made up of metamorphic rocks containing mineral assemblages of the medium- to high-amphibolite facies. Individual features within these mountains include: Mount Iphigene, Mount Ferranto, Mount Avers, Mount Lockhart, Mount Colombo, Mount Richardson, Mount Perkins, Marujupu Peak, and Ochs Glacier. Discovered by Byrd in 1929, during ByrdAE 1928-30, and named by him as the Raymond Fosdick Mountains, for Raymond Blaine Fosdick (1883-1972), president of the Rockefeller Foundation. Originally plotted in 76°00' S, 145°00' W, they have since been replotted.

Acantilado Fósil *see* **Fossil Bluff**

Promontorio Fósil *see* **Fossil Bluff**

Bahía Fósiles *see* **Fossil Bight**

Cabo Fossati *see* **Cape Lookout**

Nunatak Fossi. 66°18' S, 61°06' W. One of the numerous nunataks on Jason Peninsula named by the Argentines.

Bahía Fossil *see* **Fossil Bight**

Fossil Bight. 64°18' S, 56°52' W. A shallow recession in the N coast of Seymour Island, 1.5 km NNE of Cape Lamas, and E of Picnic Passage. USARP researchers called it Fossil Bay, for the fossils found here in 1982, and Argentines called it Bahía Fósiles. The term bight is more apt than bay, and was thus accepted by UK-APC on May 13, 1991, and subsequently also by US-ACAN.

Fossil Bluff. 71°20' S, 68°17' W. A prominent rock bluff on the E coast of Alexander Island, it marks the N side of the mouth of Uranus Glacier, where that glacier enters George VI Sound. Probably first seen by Ellsworth, who flew directly over it, and photographed segments of the coast in this vicinity, on Nov. 23, 1935. Roughly surveyed in 1936 by BGLE 1934-37, and named by them as Fossil Camp, because the first fossils from Alexander Island were found in the rock here (they were from the Jurassic period). It appears on Rymill's 1938 map of the expedition, and also on Stephenson's 1940 map of the same expedition. Re-surveyed by Fids from Base E in 1948, and renamed by them as Fossil Bluff. UK-APC accepted the name on Sept. 8, 1953, and it appears in the 1955 British gazetteer. US-ACAN accepted the name in 1955. It appears on an Argentine chart of 1957 as Fósil Bluff. It appears on a 1962 Chilean chart translated as Acantilado Fósil, and that was the name accepted by the Chilean gazetteer of 1974. Today, the Argentines call it Promontorio Fossil Bluff. The FIDS' Fossil Bluff Station was here.

Promontorio Fossil Bluff *see* **Fossil Bluff**

Fossil Bluff Glacier *see* **Khufu Corrie**

Fossil Bluff Station. 71°20' S, 68°17' W. Sometimes known as Base K, but more often as Base KG, or better still, Fossil Bluff. A British scientific base at Fossil Bluff, near Uranus Glacier, on Alexander Island. Intermittently operative from Feb. 20, 1961 to today, as an advance station for field parties from Base E, Adelaide Station (Base T), and (later) Rothera Station, doing surveying, geology, glaciology, and field geophysics. The main hut, Bluebell Cottage, was occupied during the winters of 1961, 1962 and all the winters from 1968 to 1975. **1961 winter**: Cliff Pearce and John Smith (meteorologists), and Brian Taylor (geologist). **1962 winter**: Jim Shirtcliffe (officer-in-charge and general assistant), Rod Walker (meteorologist), Brian Taylor (geologist), and Sam Blake (radioman). **1968 winter**: Rod Ledingham (meteorologist and officer-in-charge), Martyn Bramwell (meteorologist), Charles Smith (geologist), John Ayers (pilot), John Walsh (air fitter). **1969 winter**: Andy Wager (glaciologist and officer-in-charge), George Kistruck (glaciologist), Charles Bell and Michael Elliott (geologists). **1970 winter**: George Kistruck (glaciologist and officer-in-charge), Paul Gurling (surveyor), Brian Hill (general assistant), Malcolm Macrae (general assistant and tractorman). **1971 winter**: Dick Walker (officer-in-charge, general assistant and tractorman), Martin Pearson and Ian Rose (glaciologists), Roger O'Donovan (general assistant). **1972 winter**: Martin Pearson (glaciologist and officer-in-charge), Ian Rose and Andy Wager (glaciologists), Graham Whitworth (general assistant). **1973 winter**: Andrew Jamieson (glaciologist and officer-in-charge), James Bishop (glaciologist), Simon Hobbs and Roger Tindley (general assistants). **1974 winter**: James Francis Bishop, Frederick Tourney, and Jonathan Walton (glaciologists), and Roger Tindley (general assistant). **1975 winter**: Jonathan Walton (glaciologist and leader), Pete Lennon and Frederick Tourney (glaciologists), and Timothy Stewart (tractorman). It was closed for the 1976 winter when Rothera became fully operational. It has been occupied intermittently for summer seasons since then. It is supplied by air from Adelaide and Rothera, and by land from Base E. In Jan. 2005, an automatic weather station was installed here, at an elevation of 63 m.

Fossil Camp *see* **Fossil Bluff**

Fossil Hill. 62°12' S, 58°59' W. A low hill, oriented E-W, about 1.5 km W of the Ardley Island isthmus, on Byers Peninsula, King George Island, in the South Shetlands. The name, in use since the 1980s, was accepted by UK-APC on Jan. 17, 2001. Plotted last in late 2008 by UK.

Fossil Wood Point. 70°50' S, 68°02' E. A point of land between Bainmedart Cove and Radok Lake, in the E part of the Aramis Range

of the Prince Charles Mountains. The area was visited several times in Jan.–Feb. 1969 by Alex Medvecky, geologist with the Prince Charles Mountains Survey Party of that year. Named by ANCA on May 18, 1971, for the deposits of fossil wood found here. US-ACAN accepted the name in 1973.

Fossilryggen. 73°23' S, 13°03' W. A mountain crest in the ice ridge E of Plogbreen, in the Kraul Mountains of Maudeheimvidda, in Queen Maud Land. Named by the Norwegians for fossils (it means "fossil ridge").

Fossils. Jonathan Winship may have been the first to discover fossils in Antarctica, during his 1820–21 season in the South Shetlands. In 1830 James Eights was the first scientist to find Antartcic fossils. In 1892 Carl Anton Larsen found fossils, as SwedAE 1901–04 did, and several other expeditions did over the ensuing years, but it was not until 1967 that the fossil explosion in Antarctica really began. That year, Peter Barrett (q.v.) found a lizard jawbone at Graphite Peak (q.v. for further details of the find). This was a labyrinthodont, about 220 million years old. As other labyrinthodonts had been found in other parts of the world, this suddenly made Gondwanaland (q.v.) a more acceptable theory. In 1982, on Seymour Island, the first fossil remains of an Antarctic land mammal were found by a team of U.S. scientists. The bones were those of a small marsupial, about the size of a rat. Unless it is a hoax, this supports the theory of marsupial migration from the Americas to Australia, via Antarctica, which can only imply that the continental shift theory is correct. In 1986 Argentine scientists discovered dinosaur fossils on James Ross Island, that were 70 million years old, and the same year, U.S. teams near the Beardmore Glacier discovered more than 350 vertebrate bones from 190–225 million years ago, including 4 new amphibians and reptiles. In 1987, on Seymour Island, were discovered fossils of crocodiles, a 6 foot 6 inch flightless bird (probably a primordial penguin), and a 32-foot-long whale (discovered by Ewan Fordyce, the NZ paleontologist, on Jan. 3, 1987, and the largest fossil ever recovered in Antarctica). Fossils teem in the Beacon Sandstone formation, for example, including freshwater fish fossils in Devonian Age rocks. Seymour Island and James Ross Island are rich in fossils, and geologically young fossils have been found in the Transantarctic Mountains. In 1987 the beak of an enormous bird was discovered on Seymour Island. Larry G. Marshall called it the "Terror Bird." An alligator fossil has also been found on Seymour Island, as have 50 lobster fossils. The largest carnivorous dinosaur found to date in Antarctica is Cryolophosaurus, the only specimens being in the Fryxell Geology Museum, at Augustana College, in Rock Island, Ill.

Cabo Foster *see* **Cape Foster**

Cape Foster. 64°27' S, 57°59' W. A cape, 3 km SE of Carlsson Bay, it forms the S point of James Ross Island. Discovered and roughly charted on Jan. 7, 1843, by RossAE 1839–43, and named by Ross for Henry Foster. It appears on Ross's chart of 1844. It appears on an 1861 Spanish chart as Cabo Foster, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Surveyed and mapped in Oct. 1903, during SwedAE 1901–04. All of the interested countries show it as Foster (but with their own word for "cape"). It appears on a British chart of 1937. It was re-surveyed by Fids from Base D in 1948. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It was surveyed again by Fids from Base D in 1955.

Monte Foster *see* **[2]Mount Foster**

[1]Mount Foster *see* **Mount Pisgah**

[2]Mount Foster. 63°00' S, 62°33' W. A double mountain peak, the higher — southern — height rising to 2105 m in the Imeon Range, almost 7 km SW of Mount Pisgah, and forming the highest point of Smith Island, in the center of that island, in the South Shetlands. The feature was known to sealers in the 1820–21 period, but see **Mount Pisgah** and **Smith Island** for more details of this early period. Foster visited it in 1829, and named it Mount Beaufurt (a name also seen as Mount Beaufort), for Capt. Francis Beaufort (*see* **Beaufort Island**). The name Mount Foster soon became more popular, however, and it appears as such on a British chart of 1839. On a 1935 Discovery Investigations chart it appears misspelled as Mount Forster. Mount Foster was the name accepted by UK-APC on Sept. 8, 1953, and it appears as such in the 1955 British gazetteer. US-ACAN accepted that name in 1956 (they considered, but rejected, both Mount Beaufurt and Mount Pisgah). It was photographed aerially by FIDASE in 1956–57. It appears on a British chart of 1962. The Argentines had been calling it Monte Foster from at least 1908, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Long thought to be triple-peaked, its duplicity was determined on Jan. 17–30, 1996, when Greg Landreth's NZ team made the first ascent (they had shipped in on the yacht *Northanger*). The third peak (which turned out to be not part of this feature at all) became Antim Peak.

Península Foster *see* **Ferrier Peninsula**

Port Foster. 62°57' S, 60°39' W. The central part of Deception Island, in the South Shetlands, it is a basin-like harbor, or more specifically a drowned breached crater within the volcano commonly referred to as Deception Island. 8 km long and 5 km wide, its bays include Whalers Bay, Pendulum Cove, Primero de Mayo Bay, and Telefon Bay. Discovered by Palmer on Nov. 15, 1820, and charted by Fildes in 1921, as Harbour of Deception. In 1821 Fanning and Pendleton referred to it as Deception Harbour. That same year (1821), Capt. Clark called it Port William, presumably meant to say Port Williams, named after Capt. William Smith's ship the *Williams*. In Capt. Davis's log of Dec. 30, 1821, it appears as Bay of Deception. Pendleton's log of Jan. 30, 1822, has it as Deception Bays (sic). Another early name (probably wrongly applied) was Yankee Harbor, for the number of American sealers here (not to be confused with Yankee Harbor, the real Yankee Harbor, as it were). Also, around 1821–22, it was sometimes called Dunbar's Harbor, or Port Dunbar. It was renamed officially and universally as Port Foster, for Henry Foster, and appears that way on an 1839 British chart. US-ACAN accepted that name in 1947. It was charted by an RN Hydrographic Survey unit in 1948–49, and appears as Port Foster on their 1949 chart. UK-APC accepted that name on Sept. 8, 1953, and it appears as such in the 1955 British gazetteer. The Argentines have been calling it Puerto Foster since at least 1908, and that was the name accepted not only by the 1970 Argentine gazetteer, but also by the 1974 Chilean gazetteer. However, over the years, there have been some other names given to this feature. Charcot, on his 1910 map, shows it as Bassin Intérieur, and the names Yankee Harbour, Deception Harbor, and Port Williams persisted as alternatives well into the 1940s. On a 1963 Argentine chart appears Fondeadero Fontana, referring to either this feature or Whalers Bay. The shores of Port Foster were designated SSSI #27. Of interest because of the volcanics, it became a study area on Dec. 31, 1967.

Puerto Foster *see* **Port Foster**

Foster, Carroll B., Jr. Known as "Chink." b. Jan. 11, 1908, Norfolk, Va., son of Virginia state pilot Carroll B. Foster and his first wife Annie. Former amateur middleweight boxer at the University of Pennsylvania, he was taken on as an emergency fireman on the *Eleanor Bolling* at Norfolk (where he was then living) during ByrdAE 1928–30. He was only meant to go as far as Panama, but stayed on. He remained in NZ between the halves of the expedition. After the expedition, he went back to stay with his parents in Norfolk for a while, then began a two-year career exhibiting and lecturing on the expedition. It wasn't plain sailing for Foster during this period. In mid-May 1932, he enrolled in the Missouri School of Journalism summer session, and on May 28, 1932, he was driving through Missouri with a 20-year-old University of Missouri student, Ted Yohe, when their car crashed near Columbia. Ted was killed, and Foster was pretty badly beaten up. In 1933 he became an announcer, was a reporter for the *Spokane Daily Chronicle*, and was a lieutenant commander in the U.S. Navy between 1941 and 1945. After the war he worked for years as the assistant to the president of a Seattle radio and TV station, and finally, in 1956, joined the U.S. Information Service, as an officer on the ship *Dacca*. He died on Oct. 29, 1989.

Foster, Henry. b. Aug. 1796, Woodplumpton, Lancs, son of the incumbent, Henry Foster and his wife Alice Croft. His father wanted him to be a priest, but instead, at 16, he joined the Navy, and sailed with Morton on the *York*. He was promoted to sub lieutenant in 1815, sailed

under various captains, including Ross in the Arctic, Basil Hall in South America, and Smith on the *Williams* in 1819-20, and was therefore one of the first to sight the South Shetlands, of which he made a drawing. In 1824 he was promoted to lieutenant, and was the astronomer with Parry on the Northwest Passage expedition of 1824-25, and also on Parry's 1827 expedition to the North Pole, and was promoted to commander on his return. He was a fellow of the Royal Society. He was back south in 1828-31, as leader of the *Chanticleer* Expedition (q.v. for details). During the evening of Feb. 5, 1831 he was dozing in his canoe while it was floating on the Chagres River in Panama, and he fell out, and drowned. His body was found 4 days later, and buried on the banks. There was a rumor that he met his death at violent hands, but that was untrue.

Foster, Richard Arthur "Dick." b. 1929, Worcester, son of John S. Foster and his wife Ivy Tugela Stamp. FIDS general assistant who left Southampton in 1955, bound for Montevideo, and from there to winter-over as base leader at Base O in 1956 and 1957.

Foster Bluff. 66°25' S, 110°37' E. A conspicuous rock bluff surmounting the shore in the SW part of Herring Island, in the Windmill Islands. First mapped from air photos taken in 1947 by OpHJ 1946-47, and in 1948 by OpW 1947-48. Named by US-ACAN in 1963, for Danny L. Foster, meteorologist at Wilkes Station in 1962.

Foster Crater. 78°24' S, 162°58' E. An unglaciated volcanic crater in scoria cone, at the S end of Highway Ridge, at Foster Glacier, in the Royal Society Range of Victoria Land. Named by NZ-APC in 1980, in association with the glacier. US-ACAN accepted the name in 1995.

Foster Glacier. 78°24' S, 162°50' E. A glacier, 6 km S of Mount Kempe, in the Royal Society Range, it flows SE into Koettlitz Glacier, in Victoria Land. Named by US-ACAN in 1963, for Maj. James Foster, U.S. Marine Corps, assistant air operations officer for Task Force 43 in Antarctica during OpDF 60 (i.e., 1959-60). NZ-APC accepted the name. Originally plotted in 78°25' S, 162°55' E, it has since been replotted.

Foster Island. 66°04' S, 100°16' E. A rocky island, 0.5 km long, about 12 km WNW of Currituck Island, at the NW end of the Highjump Archipelago, N of the Bunger Hills. First delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1961, for Hubert C. Foster, motion picture photographer on OpHJ 1946-47. ANCA accepted the name on May 18, 1971. The Russians call it Severnyj Holm.

Foster Nunatak. 71°06' S, 71°40' E. A horseshoe-shaped rock outcrop in the S part of the Manning Nunataks, on the E side of the Amery Ice Shelf. The Mannings were photographed aerially by OpHJ 1946-47, and again by ANARE in 1957. They were visited by SovAE 1965, and by ANARE in 1969. Named by ANCA for Allan Lawrence Foster (b. Nov. 21, 1944), electronics engineer at Mawson Station in 1970 (in Jan. of that year, he was a member of the Amery Ice Shelf traverse party), and 2 years since then in Antarctica during summer seasons. US-ACAN accepted the name in 1973.

Foster Peninsula. 71°18' S, 61°10' W. A high, ice-covered peninsula, between Palmer Inlet and Lamplugh Inlet, on the Black Coast, on the E coast of Palmer Land. Mapped by USGS in 1974 from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for Theodore D. Foster, USARP oceanographer on the International Weddell Sea Oceanographic Expedition of 1969. He was also party leader on the Weddell Sea Investigations of 1972-73 and 1974-75. UK-APC accepted the name on July 21, 1976.

Foster Plateau. 64°43' S, 61°25' W. A plateau, about 80 sq miles in area, between Drygalski Glacier and Hektoria Glacier, SE of Charlotte Bay, on the Danco Coast, on the W coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and from ground surveys by Fids from Portal Point, who traversed it in Oct.—Nov. 1957. Named by UK-APC on Sept. 23, 1960, for Dick Foster of the FIDS. It appears on a 1961 British chart. US-ACAN accepted the name in 1965. The British plot it in 64°45' S, 61°30' W.

Fothergill, Ian Ledgard. b. July 15, 1937, Wakefield, Yorks, son of Bennett Fothergill and his wife Gertrude Ledgard. He joined FIDS in 1959, as a meteorological assistant, and spent 3 consecutive winters at Base D —1960, 1961, and 1962, the last two also as base leader. In 1965, in Birmingham, he married Gillian M. "Jill" Biddle, and they raised a family in Aberdovey, Wales, where he worked for Outward Bound. Then on to Sheffield, and in 1984 to Little Brington. In the 1990s he was director of Outward Bound, in Rugby. He was giving a talk about Antarctica to the History Society on Feb. 17, 2009, when, all of sudden, he dropped dead.

Fothergill Point. 64°35' S, 60°12' W. A low, rocky coastal point, 8 km NE of Cape Worsley, on the Nordenskjöld Coast, on the E side of Graham Land. Roughly surveyed in Feb. 1902, by SwedAE 1901-04, and (this is almost certainly the feature) named by Nordenskjöld as Kap Ruth (i.e., Cape Ruth; named for his sister; *See also* **Ruth Ridge**). Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base D in 1960-61. Re-named by UK-APC on Feb. 12, 1964, for Ian Fothergill. US-ACAN accepted the new name in 1964.

Fougner, Anton Simonsen. b. 1870, Ringebu, Norway, son of Simen Hansen Fougner and his wife Anna Tokler. Educated at the University of Christiania, he was an office clerk when he went as scientific assistant and general factotum on BAE 1898-1900. He wintered-over with Borchgrevink, making the sledges and doing other carpentry work. He died in 1932.

Punta Foul *see* **Foul Point**

Foul Point. 60°32' S, 45°29' W. The N point of a small island forming the W entrance to Ommanney Bay, on the north-central side of Coronation Island, in the South Orkneys. Roughly charted in Dec. 1821 by Powell and Palmer, the name first appears on Powell's chart published in 1822, named presumably for its off-lying rocks. It also appears on a British chart of 1839. It was charted by Petter Sørlle in 1912-13. It appears on an Argentine chart of 1930, as Punta Peligrosa (i.e., "dangerous point"), on one of their charts of 1947 as Punta Foul, and again on a 1952 chart as Punta Peligrosa, which was the name accepted by the Argentine gazetteer of 1970. It was re-charted by the Discovery Investigations in 1933, and appears on their 1934 chart as Foul Point, which was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was surveyed from the ground by Fids from Signy Island Station between 1956 and 1958.

Foundation Ice Stream. 83°15' S, 60°00' W. A major ice stream, flowing northward for about 240 km along the W side of the Patuxent Range and Neptune Range, in the Pensacola Mountains, to enter the Ronne Ice Shelf westward of the Dufek Massif. It was seen from the air by Grupo Aereonaval UT 78, on the first Argentine flight to the Pole, in Jan. 1962, and named by them as Glaciar Bahía Buen Suceso, for their ship, the *Bahía Buen Suceso*. It appears as such on an Argentine map of 1964. Mapped by USGS from USN air photos taken in 1964, and from ground surveys conducted by USGS during their Pensacola Mountains Project of 1965-66. Named by US-ACAN in 1968, for the National Science Foundation (q.v.). UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Founders Escarpment. 79°15' S, 86°15' W. A prominent escarpment, W of Founders Peaks, in the Heritage Range, it extends from Minnesota Glacier to Splettstoesser Glacier, in the Ellsworth Mountains. Named by the University of Minnesota Geological Party of 1963-64 for the nearby peaks. US-ACAN accepted the name in 1966. Originally plotted in 79°12' S, 86°21' W, it has since been replotted.

Founders Peaks. 79°10' S, 86°15' W. A cluster of sharp peaks and ridges just E of the Founders Escarpment, and between Minnesota Glacier and Gowan Glacier, in the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1964, in continuation of the heritage theme.

Fountain, Gordon Hillman. b. July 16, 1913, Los Angeles, but raised in Brooklyn, son of New York lithographic clerk Gideon Fountain and his wife Mabelle Cubberley. Through Norman Vaughan he became a messman on the *Jacob Ruppert*, during ByrdAE 1933-35, but was

rejected and never sailed. However, he worked his way down to NZ on the *Port of Hobart*, to take part. He married Marjorie, and died on Feb. 9, 1997, in Oakland, Calif.

Fountain Automatic Weather Station. An American AWS, at an elevation of 17 m, installed in Oct. 2005, on the Drygalski Ice Tongue. Named after Matt Lazzara's grandfather.

Fountain Glacier. 77°41' S, 161°38' E. Between Nylen Glacier and Catspaw Glacier, it flows S into Pearse Valley, in the Asgard Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN on July 14, 2004, for Andrew G. Fountain, of the department of geology at Portland State University, in Portland, Oreg., USAP investigator in glacier mass balance studies at the McMurdo Dry Valleys, from 1993 on. NZ-APC accepted the name on Nov. 30, 2004.

Four Brothers Rocks. 62°05' S, 57°55' W. Four rock stacks off Three Sisters Point (the W side of the entrance to Sherratt Bay), on the S coast of King George Island, in the South Shetlands. Named by the Poles in 1981.

Four Ladies Bank. 67°30' S, 77°30' E. A submarine feature, N of Prydz Bay, just off the Ingrid Christensen Coast. Discovered by LCE 1936-37, and named by international agreement in 1964, for the 4 ladies on that expedition (*see* **Women in Antarctica**).

Four Mile Cliff. 77°11' S, 162°25' E. A rock cliff, 4 miles long (hence the name), and rising to 600 m above sea level, it flanks the S side of, and rises 150 m above, Debenham Glacier, N of Mount Bevilacqua, in Victoria Land. Named by US-ACAN on Jan. 15, 2008. The name was accepted by NZ-APC on April 7, 2008.

Four Ramps. 84°42' S, 177°35' E. A group of 4 small rock spurs (or ridges), roughly parallel, which project through the snow surface, and which form the NE part of Sullivan Ridge (the New Zealanders say they are located just N of the N tip of Sullivan Ridges), on the W side of, and at right angles to, Ramsey Glacier. Discovered aerially on Feb. 16, 1947, during OpHJ 1946-47. Named descriptively by US-ACAN in 1962. NZ-APC accepted the name.

Mount Fourcade. 64°36' S, 62°30' W. A mountain rising to 215 m, at the N end of the Arctowski Peninsula, 3 km SW of Cape Anna, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base O. Named by UK-APC on Sept. 23, 1960, for Henry Georges Fourcade (1865-1948), French-born South African surveyor, botanist, and photogrammetry pioneer. US-ACAN accepted the name in 1965.

Fourcade Glacier. 62°13' S, 58°40' W. A glacier flowing SW into the head of Potter Cove, Maxwell Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Néstor H. Fourcade, of the Instituto Antártico Argentino, who made detailed geological investigations of Potter Cove and Fildes Peninsula, in 1957-58, 1958-59, 1959-60, and 1960-61. UK-APC accepted the name on July 8, 2003, and US-ACAN followed suit that year. It was last plotted by the British, in late 2008.

Île Fourier *see* **Fourier Island**

Fourier Island. 66°48' S, 141°30' E. A small rocky island about 90 m off the ice coast of East Antarctica, and 1.2 km ENE of Cape Mousse, between Port-Martin and Cape Découverte. Charted in 1951 by the French, and named by them as Île Fourier, for Jean-Baptiste Fourier (1768-1830), French geometrician. US-ACAN accepted the name Fourier Island in 1962.

The *Fournier*. A 554-ton, 59-meter Argentine minesweeper, built by Sánchez & Co., in Buenos Aires, and launched on Aug. 5, 1939. She could do 16 knots, but cruised at 12, and had a crew of 70. On Oct. 13, 1940, she was commissioned by the Argentine Navy, as the second ever ship of that name in the Argentine Navy, both ships named for César Fournier, corsair and hero of the war against Spain. Under the command of Lt. Ernesto del Mármol, she was destined for the Minesweeper fleet, and her first posting was at Port Belgrano Naval Yard. She took part in ArgAE 1942-43, and was back in Antarctica in May 1947, under the command of Capt. Emilio L. Díaz, doing ice investigation work in the Drake Passage and the northern Antarctic Peninsula. In late 1948 she was back in those same regions, doing the same thing, but under the command of Capt. Domingo G. Luis. In 1949, under Capt. Carlos Negri, she did patrol and salvage work off Ushuaia, and on Oct. 4, 1949, under Capt. Armando H. Llambi, she went down in mysterious circumstances off Dawson Island (54°10' S), in the Straits of Magellan, with all crew lost.

Bahía Fournier *see* **Fournier Bay**

Baie Fournier *see* **Fournier Bay**

Isla Fournier *see* **Fournier Island**

Islote Fournier *see* **Fournier Island**

Fournier Bay. 64°31' S, 63°06' W. A bay, 5 km wide, indenting the NE coast of Anvers Island for 13 km immediately W of Briggs Peninsula, between Thompson Peninsula and Guépratte Island, in the Palmer Archipelago. The coasts are formed of ice-cliffs, with an immense discharge from glaciers which makes the bay difficult to navigate due to the cover of floating ice. Probably discovered by Dallmann, in 1873-74. Charted on Jan. 4, 1905, by FrAE 1903-05, and named by Charcot as Baie E. Fournier, for Vice Admiral François-Ernest Fournier (1842-1934; known as Ernest Fournier) of the French Navy. On Charcot's 1906 map it appears that way, and also as Baie Fournier, but on his 1908 chart it appears as Baie de l'Amiral Fournier. On a 1909 British chart it appears as Fournier Bay, which was the name accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1959. It was photographed aerially by FIDASE in 1956-57. On a 1947 Chilean chart it appears as Bahía Fournier, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Fournier Island. 64°33' S, 62°49' W. A small island in the S part of the Schollaert Channel, 0.8 km off the E extremity of Anvers Island, NE of Ryswyck Point, on Parker Peninsula, in the Palmer Archipelago. Charted (but not named) by FrAE 1903-05. Charted by the Discovery Investigations in 1927, and again, from the *Snipe*, in Jan. 1948. Named by ArgAE 1948-49, as Isla Fournier, for the *Fournier* (the Chileans optimistically say it was named in assocation with Fournier Bay), but it appears on a 1953 Argentine chart as Islote Fournier. The name accepted by the Argentine gazetteer of 1970 was Isla Fournier. Photographed aerially by FIDASE in 1956-57. On July 7, 1959, UK-APC named it (for themselves only) as Ryswyck Island, and it appears as such on a 1959 British chart. US-ACAN accepted the name Fournier Island in 1965. Interestingly, the name Ryswyck Islands appears on a 1963 American chart, signifying this island and nearby rocks.

Fournier Ridge. 69°34' S, 72°42' W. A ridge, 14 km long in an E-W direction, rising to about 1000 m (in Enigma Peak) in the W part of the Desko Mountains, on Rothschild Island, off the NW coast of Alexander Island. Surveyed by BAS between 1975 and 1977. Named by US-ACAN for James M. Fournier, of the U.S. Coast Guard, exec of the *Burton Island* during OpDF 71 (i.e., 1970-71), and skipper of the same ship during OpDF 76 (i.e., 1975-76) and OpDF 77 (i.e., 1976-77). UK-APC accepted the name on June 11, 1980.

Islotes Fowler *see* **Fowler Islands**

Fowler, Robert Blaisdell "Bob." b. June 15, 1914, at 243 Powderhouse Blvd., Somerville, Mass., the very last child of newspaper foreman Frank L. Fowler and his wife Edith (who painted china). No sooner had Bob graduated from Somerville High than he read about ByrdAE 1933-35. The *Bear of Oakland* was in dock at East Boston, and Bob rode over there on his motorcyle and sidecar, secured a job with the deck crew, tried to get signed to Antarctica, but failed, and then, when the ship pulled into Newport News, he hitched down there, and stowed away in the peak hold. He was discovered 2 days later, and the skipper, Bob English, after securing radio permission from the boy's parents, signed him on as a messboy, the youngest member of the expedition. He did both halves of the expedition. They made a big deal of him when he got back to Somerville. Subsequently, he went to work for the *Boston Globe*, as a pressman, like his father, and was there 42 years before retiring in 1979. He died in Billericay, Mass., on Jan. 24, 1990.

Fowler Ice Rise. 77°30' S, 78°00' W. A very large ice rise between Evans Ice Stream and Carlson Inlet, in the SW part of the Ronne Ice Shelf. It seems to be completely ice-covered, except for the Haag Nunataks, which protrude above the ice surface in the NW portion. Discovered during an LC-130 flight from McMurdo

to Eights Station on Dec. 14-15, 1961. Traversed on a radio echo-sounding flight by BAS from Siple Station in Jan. 1975, and mapped as a peninsula rather than an ice rise. Re-mapped by USGS from U.S. Landsat images taken in 1973-74, and named by US-ACAN as Fowler Ice Rise, for Capt. Alfred N. Fowler, USN, Commander, U.S. Naval Support Force, Antarctica, 1972-74, and later deputy director of polar programs at the National Science Foundation. The British still seem to call it Fowler Peninsula.

Fowler Islands. 66°25' S, 66°26' W. A group of small islands between the Bernal Islands and the Bragg Islands, in Crystal Sound, between the S part of the Biscoe Islands and the Loubet Coast, on the W coast of Graham Land. Mapped by FIDS cartographers using air photos taken by RARE 1947-48 and by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base W in 1958. Named by UK-APC on Sept. 23, 1960, for physicist Sir Ralph Howard Fowler (1889-1944), professor of applied mathematics at Cambridge, 1932-44. With J.D. Bernal (*see* **Bernal Islands**) he wrote a classic paper on the structure of ice which suggested the location of the hydrogen atoms. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Fowler Knoll. 84°47' S, 99°14' W. A notable, snow-covered knoll, rising to 2465 m, with an abrupt south-facing cliff, in the W central part of the Havola Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1961. Named by US-ACAN in 1962, for CWO George "Featherfoot" Fowler, U.S. Army, navigator on the Byrd — South Pole Traverse (q.v.), which passed near here on Dec. 25, 1960. He also led the 840-mile trek from Byrd to Eights (Task Group 43.5), between Dec. 20, 1962 and Jan. 31, 1963.

Fowler Peninsula *see* **Fowler Ice Rise**

Fowlie Glacier. 71°40' S, 168°04' E. A tributary glacier, 21 km long, in the Admiralty Mountains of Victoria Land. Forming a common head with Dennistoun Glacier (with which it has sometimes been confused), it flows NW between Mount Ajax and Mount Faget, entering the main flow of the Dennistoun at the SE base of the Lyttelton Range. Named by NZ-APC in 1983, for Walter Fowlie of the NZ Antarctic Division, field assistant with a 1981-82 NZARP geological party to this area, led by R.H. Findlay. US-ACAN accepted the name in 1995.

[1]**Mount Fox**. 69°59' S, 64°03' E. Rising to 1980 m, in the Anare Nunataks, in Mac. Robertson Land. Snow slopes extend to the summit on the N and W with exposed brown rock on the E side dropping sheer into an ice valley. Discovered by an ANARE part led by John Béchervaise on Nov. 30, 1955. Named by ANCA for Leon Jennings-Fox (q.v.).

[2]**Mount Fox**. 83°38' S, 169°15' E. Rising to 2820 m (the New Zealanders say 2682 m), 1.5 km SW of Mount F.L. Smith, just to the W of Beardmore Glacier, about 27 km SW of Mount Hope, in the Queen Alexandra Range. Discovered in Dec. 1908, by BAE 1907-09, and named by Shackleton, for a friend and sponsor, Agnes Susan Fox (1857-1913). It overlooks the place where Edgar Evans died in 1912, on his return down the Beardmore from the Pole, as a member of Scott's fateful party. US-ACAN accepted the name in 1949, and NZ-APC followed suit.

Fox, John Lawrence. b. Jan. 8, 1811, Salem, Mass., son of Ebenezer Fox and his wife Susanna Patterson. He was awarded his doctorate in medicine from Harvard in 1835, and lived in Narragansett, Mass. On Sept. 6, 1837 he was commissioned into the U.S. Navy as an assistant surgeon, and as such was on the *Vincennes* during USEE 1838-42, joining the *Porpoise* at San Francisco in Oct. 1841. He married, on June 15, 1847, Elizabeth Amory Morris, daughter of Commodore Charles Morris, and later that year was promoted to full surgeon. In 1850 he left the sea, and was appointed to head the Chelsea and Brooklyn hospitals. He was fleet surgeon with the North Atlantic Blockade Squadron during the Civil War, and died on Dec. 17, 1864, in Roxbury, Mass.

Fox, Leonard John "Len." He joined FIDS in 1955, as an ionosphere physicist, went to Antarctica on the *Shackleton*, and wintered-over at Port Lockroy Station in 1956 and 1957.

Fox Glacier. 66°15' S, 114°25' E. Flows from the area northeastward of Law Dome, to the coast, 20 km N of Williamson Glacier, and forms a small glacier tongue at its terminus, about 105 km SE of Cape Poinsett, on the Budd Coast of Wilkes Land. Delineated in 1955 by U.S. cartographer Gard Blodgett from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Dr. John L. Fox. ANCA accepted the name on Oct. 22, 1968.

Fox Ice Stream. 73°28' S, 85°29' W. About 10 km long, it flows into Eltanin Bay SW of Wirth Peninsula. Named by US-ACAN on Jan. 31, 2003, for Adrian Fox, of BAS, part of the BAS-USGS project.

Fox Ridge. 70°47' S, 67°53' E. A rock ridge on the McLeod Massif, about 8 km W of Beaver Lake, in the E part of the Aramis Range, in the Prince Charles Mountains. Mapped from ANARE air photos. The ridge was the site of a tellurometer station during the ANARE Prince Charles Mountains Survey of 1969. Named by ANCA for J. Fox, technical officer (survey), the leader of one of the survey parties in the Prince Charles Mountains. US-ACAN accepted the name in 1973.

Foxton, John Greenlaw. b. at sea in Jan. 1811, baptized at Port Royal, Jamaica, but grew up in Greenwich, son of Capt. John Foxton, RN (who was killed at St. Helena in 1817) and his wife Wilhelmina Townsend. On April 4, 1822, in Lewisham, his mother married again, to Robert Jones, and they moved to Australia. John Greenlaw Foxton was navigator on the *Hopefull* in 1833-34. He settled in Port Phillip (Melbourne) in 1841, and became a customs house agent, a commission agent, and an insuranace broker, and finally, an accountant, also starting the original *Argus* newspaper. He married Isabel Elizabeth Potts in Melbourne, in 1848. He moved to Queensland, and then retired to London, with Isabel and their daughter Kate, living first in Paddington, then at Earls Court. It is reputed that in 1892 he wrote an account of the 1833 voyage, but as he calls the ship *Hopewell*, this must be regarded in one of two ways. He died in Earls Court in 1903. Isabel died in 1909. His son was the politician Col. Justin Fox Greenlaw "Chinese" Foxton (1849-1916).

Cape Foyn *see* **Cape Alexander**

Costa Foyn *see* **Foyn Coast**

Isla Foyn *see* **Foyn Point**

Puerto Foyn *see* **Foyn Harbor**

Punta Foyn *see* **Foyn Point**

Foyn Coast. 66°40' S, 64°20' W. Now known to be an island, about 30 km long, and running from NE to SW, on the E side of Graham Land, between Cape Alexander and Cape Northrop. Discovered by Larsen in 1893, and named by him as Svend Foyn Land, for Svend Foyn (b. July 9, 1809, Tønsberg. d. Nov. 29, 1894, Nøtterøy), Norwegian inventor of the harpoon gun. This name was later shortened to Foyn Land, but even before that name-shortening, it had been re-defined as a coast, the Svend Foyn Coast, a name, in turn, later shortend to Foyn Coast, a name accepted by US-ACAN in 1947, and by UK-APC on Jan. 22, 1951. It is one of the delightful oddities reflecting the flexibility and unpredictability of bureaucracy, that, even though this feature was finally determined to be an island, and not a coast or a land, as Larsen and others had thought, it has remained the Foyn Coast. The Chileans and the Argentines both refer to it as Costa Foyn.

Foyn Harbor. 64°33' S, 62°01' W. An anchorage between Nansen Island and Enterprise Iasland, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Surveyed by Lester and Bagshawe of the British Imperial Antarctic Expedition of 1920-22, and named by whalers here as Svend Foyn Harbor, for the *Svend Foyn*, moored here that summer. However, on David Ferguson's chart of 1921, it appears as Graham Harbour. On a U.S. Hydrographic Office chart of 1943, it appears as Svend Foyn Harbor. Photographed aerially by FIDASE in 1956-57. On a 1957 Argentine chart it appears as Entrada Svend Foyn, but on one of their 1958 charts as Puerto Svend Foyn. On Sept. 23, 1960, UK-APC accepted the name Foyn Harbour, and it appears as such on a British chart of 1961. US-ACAN accepted that name (without the "u" in "harbour," of course) in 1965. The Chilean gazetteer of 1974 accepted the name Puerto Svend Foyn. Today, the Argentines call it Puerto Foyn.

[1]**Foyn Island** *see* **Foyn Point**

[2]**Foyn Island**. 71°56' S, 171°04' E. The second largest island in the Possession Islands, 6 km NW of Possession Island itself. Named by Henryk Bull in 1895, as James Ross Island, for

Sir James Clark Ross. He later changed the name (to avoid confusion with the more prominent island of that name), to Svend Foyn Island, honoring Svend Foyn (*see* **Foyn Coast**), primary backer of Bull's expedition. The name was later shortened. US-ACAN accepted the name Foyn Island in 1962, and NZ-APC followed suit.

Foyn Land *see* **Foyn Coast**

Foyn Point. 65°15' S, 61°38' W. Surmounted by a peak rising to 525 m, it marks the N side of the entrance to Exasperation Inlet, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. Wilkins, from photos he took aerially on Dec. 20, 1928, named it Foyn Island, in association with what was then still called Foyn Land. He later plotted it in 66°30°S, 62°30' W. In 1929, Wordie mapped a feature in 67°05' S, 62°00' W, and called it New Island. However, it seems as if that was the same as Wilkins' "Foyn Island." Wilkins' feature appears as Isla Foyn on a 1946 Argentine chart. It appears on British charts of 1940 and 1948 as Foyn Island. Fids from Base D charted this coast in Dec. 1947, and a comparison of these charts with Wilkins' photos, shows that, although this point is about 165 km NNE of the coordinates indicated by Wilkins, it is almost certainly one and the same feature. So, the name Foyn Point was given by UK-APC on Jan. 22, 1951, to the SE point of what they then still thought was an island. US-ACAN accepted that situation in 1952, and it appears that way in the 1955 British gazetteer, and also on a British chart of 1961. It appears on an Argentine chart of 1953 as Punta Foyn, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. A survey by Fids from Base D in 1955, showed that this feature is the SE point of a promontory, and not of an island.

Frachat. Motor engineer on the *Pourquoi Pas?* during FrAE 1908-10.

Frachat Glacier. 69°08' S, 70°58' W. Flows SW from the Rouen Mountains into Russian Gap, in the N part of Alexander Island. Surveyed from the ground by BAS personnel from Fossil Bluff in 1975-76. Named by UK-APC on June 11, 1980, for Frachat. US-ACAN accepted the name in 2006.

FrAE *see* **French Antarctic Expeditions**

Puerto Fragata Covadonga *see* **Covadonga Harbor**

The *Fragola*. Italian yacht, skippered by Galileo Ferraresi, which visited the South Shetlands in 1999-2000.

Mount Frakes. 76°48' S, 117°42' W. A prominent mountain, rising to 3675 m, it is the highest point in the Crary Mountains, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Lawrence Austin Frakes (b. 1930), USARP geologist in Antarctica in the mid-to-late 1960s. Lichens are found here.

The *Fram*. Norwegian ship designed by Norwegian engineer Colin Archer, following the directions of Arctic explorer Fridtjof Nansen, and which was built specifically for Nansen and the Arctic, being launched on Oct. 26, 1892. The name Fram means "forward" in Norwegian. The ship was 402 tons gross, 307 tons net, had a 102-foot-long keel, was 113 feet long at the waterline and 128 feet long on deck. She was 36 feet wide, 17 feet deep, and had a draft of between 12½ and 15 feet. She had a reinforced bow and stern, and 220 hp engines, which gave a speed of between 6 and 7 knots. Nansen gave the vessel to Amundsen in 1910, and she took Amundsen and NorAE 1910-12 to the Bay of Whales, reaching 78°41' S, the farthest south ever reached by a ship. The *Fram* was commanded by Capt. Thorvald Nilsen, and after the expedition she sailed home, and in 1936 was installed in an Oslo museum. Oscar Wisting (q.v.) died aboard the ship while it was in the museum.

Îles Fram *see* **Fram Islands**

Fram Bank. 67°18' S, 70°00' E. A submarine feature projecting from the Lars Christensen Coast of Mac. Robertson Land, N of Mackenzie Bay. It was located on Dec. 27-28, 1929, by BANZARE, and extended by further observations in Feb. 1931, during the same expedition. Explored on Feb. 4, 1931, by the Norwegians, and named by Lars Christensen for the *Fram*. US-ACAN accepted the name in July 1964, and ANCA followed suit.

Fram Inlet *see* **Nantucket Inlet**

Fram Islands. 66°38' S, 139°50' E. A small group of rocky islands and rocks, extending toward the N, in the W portion of the Géologie Archipelago, in the middle of Baie Pierre Lejay, 3 km NNW of Cape Géodésie, and NW of the Astrolabe Glacier. The area was photographed aerially by OpHJ 1946-47. This particular island was charted by the French in 1949-51, and named by them as Îles Fram, for the *Fram*. US-ACAN accepted the name Fram Islands in 1955.

Fram Mesa. 86°08' S, 156°28' W. A high, ice-capped mesa, 16 km long, and between 1.5 and 5 km wide, forming the NE portion of the Nilsen Plateau, in the Queen Maud Mountains. It may have ben seen by Amundsen, and it was certainly observed and partially mapped by ByrdAE 1928-30 and ByrdAE 1933-35. Mapped in detail by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for the *Fram*.

Fram Peak. 68°04' S, 58°27' E. The most northerly peak in the Hansen Mountains, in Kemp Land, in Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946, by Norwegian cartographers, who named it Framfjellet (i.e., "the forward peak"). Its position was fixed by Graham Knuckey's ANARE sledge party in Jan. 1959. ANCA translated the name on July 22, 1959, and US-ACAN followed suit in 1962.

Frame Ridge. 78°05' S, 165°26' E. A small straight ridge in the central part of Brown Peninsula, just N of the small central lake on the peninsula, and extending northward down to Tuff Bluff, in Victoria Land. Named by NZ-APC for Alec O. Frame, paleontology technician here with VUWAE 1964-65. US-ACAN accepted the name in 1970.

Framheim Station. 78°30' S, 164°00' W. Amundsen's base on the Bay of Whales during NorAE 1910-12. A hut with fourteen 16-man military tents around it constituted the camp, whose name meant "the home of the *Fram*," the *Fram* being the expedition's ship. Prestrud came up with the name Framheim on Feb. 4, 1911. In 1928, when Byrd got to the Bay of Whales, during ByrdAE 1928-30, and set up Little America only 3 miles away, Framheim had been wiped out by 16 years of snow.

Framfjellet *see* **Fram Peak**

Cape Framnaes *see* **Cape Framnes**

Framnaesodden *see* **Framnes Head**

Framnäs *see* **Cape Framnes**

Cabo Framnes *see* **Cape Framnes**

Cape Framnes. 65°57' S, 60°33' W. The most northeasterly point of Jason Peninsula, on the Oscar II Coast, on the E coast of Graham Land. Discovered by Larsen on Dec. 1, 1893, charted by him in 66°00' S. 60°00' W, and named by him as Kap Framnaes, or Kap Framnes. The names both mean "forward point" in Norwegian; it was the most advanced piece of land which he saw there. In addition, the *Jason* (Larsen's ship) had been built at the legendary Framnaes Mek. Verksted, in Sandefjord. It appears as such on the expedition's maps of 1894, and on Friederichsen's 1895 map. It appears on a British chart of 1901 as Cape Framnaes. The Argentines began calling it Cabo Framnaes as far back as 1908. US-ACAN accepted the name Cape Framnes in 1949, with coordinates in 66°06' S, 60°48' W, and UK-APC accepted those coordinates on Sept. 4, 1957, but with the name Cape Framnaes. Fids from Base D surveyed Jason Island in 1953, and it was found by them that the coordinates of this feature are actually remarkably close to those given by Larsen, and were amended accordingly. On Sept. 23, 1960, UK-APC accepted those new coordinates (with the name amended to Cape Framnes), and US-ACAN followed suit. It appears that way in the 1974 British gazetteer. It appears on a Chilean chart of 1962 as Cabo Framnes, and that was the name accepted by the 1974 Chilean gazetteer.

Punta Framnes *see* **Cape Framnes**

Framnes Head. 68°47' S, 90°42' W. A small rock point in Sandefjord Cove, on the coast the Norwegians call Lazarevkysten, on the W side of Peter I Island. Charted by Nils Larsen in the *Norvegia*, who made the first landing on the island at this point, in Feb. 1929. He named it Framnaesodden (i.e., "the Framnaes cape"), for the famous shipyard Framnaes Mek. Verksted, in Sandefjord. US-ACAN accepted the name Framnes Head in 1952. Although the name is short for Framnaes Mekaniske Verksted, it was always known by the shortened name. Founded by Chris Christensen in 1898, it built such ships as *Ørnen*, *Suderøy*, *Laboremus*, *Endurance* (Shackleton's ship), *Thor I*, and many of the whale catchers.

Framnes Mountains. 67°50' S, 62°35' E. A group of mountains in Mac. Robertson Land, behind Mawson Station, they comprise the Casey Range, the Masson Range, and the David Range, as well as adjacent peaks and mountains. Discovered by BANZARE in Feb. 1931. This coast was also sighted by Norwegian whalers that same season (1930-31). Photographed aerially in Jan. 1937, by LCE 1936-37, and named by Lars Christensen as Framnesfjella, for Framnesfjellet, a hill near his home in Norway. Mapped from these photos in 1946 by Norwegian cartographers. US-ACAN accepted the name Framnes Mountains in 1947, and ANCA followed suit on Feb. 15, 1958.

Framnesfjella *see* **Framnes Mountains**

Framrabben *see* **Framrabben Nunatak**

Framrabben Nunatak. 72°29' S, 3°52' W. About 5 km WNW of Borg Mountain, on the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Framrabben (i.e., "the forward nunatak"). US-ACAN accepted the name Framrabben Nunatak in 1966.

Framranten *see* **Framranten Point**

Framranten Point. 73°49' S, 5°13' W. A rocky point in the form of a hill, extending northwestward from Kuvungen Hill, in Uhligberga, in the N part of the Urfjell Cliffs, near the SW end of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Framranten (i.e., "the forward-projecting hill"). US-ACAN accepted the name Franranten Point in 1966.

Framryggen *see* **Framryggen Ridge**

Framryggen Ridge. 72°30' S, 3°54' W. A small rock ridge, on the N side of Borggarden Valley, about 5 km W of Borg Mountain, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Framryggen (i.e., "the forward ridge"). US-ACAN accepted the name Framryggen Ridge in 1966.

Framskotet *see* **Framskotet Spur**

Framskotet Spur. 72°30' S, 3°41' W. A rock spur forming the NW extremity of Borg Mountain, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Framskotet (i.e., "the forward bulkhead"). US-ACAN accepted the name Framskotet Spur in 1966.

Fran Inlet *see* **Nantucket Inlet**

Franca Glacier. 68°23' S, 65°34' W. Flows NE into the head of Solberg Inlet, S of Houser Peak, at the Larsen Ice Shelf, on the Bowman Coast, on the E coast of Graham Land. Photographed aerially by USAS 1939-41, and surveyed from the ground by Fids from Base E between 1946 and 1948. Re-photographed aerially by USN in 1966. Named by US-ACAN in 1977, for Fernando E. Franca, medical officer and station manager at Palmer Station in 1974. It appears on the 1979 USGS sketch map of the N part of Palmer Land. UK-APC accepted the name on May 21, 1979.

The *Français*. Charcot's famous ship of FrAE 1903-05. The Argentine government bought the ship, re-named her the *Austral*, and used her as a relief vessel for Órcadas Station. In 1907 she was navigating the Río de la Plata, when, surprised by a pampero wind, she was driven onto Ortiz Bank, and wrecked. She was unable to be re-floated.

Anse (du) Français *see* **Français Cove**

Caleta Français *see* **Français Cove**

Cap Français *see* **Français Rocks**

Ensenada Français *see* **Français Cove**

Langue Glaciaire du Français *see* **Français Glacier Tongue**

Mont (du) Français *see* **Mount Français**

Monte Français *see* **Mount Français**

Mount Français. 64°38' S, 63°27' W. A majestic, snow-covered mountain, rising to 2760 m (the British say 2825 m, and the Chileans say 2822 m), it is the highest point on Anvers Island, in the Osterrieth Range, SE of the center of the island, at the S end of the Trojan Range, about 12 km NNE of Börgen Bay, in the Palmer Archipelago. Discovered by BelgAE 1897-99, who surveyed the SE coast of the island in Feb. 1898. Roughly charted by FrAE 1903-05, and named by Charcot as Mont du Français, or Sommet du Français, for his ship, the *Français*. It appears both ways on his 1906 map. On a British map of 1908 it appears as Mount Francais (without the accent mark). It is reported that on Charcot's 1911 map it appears as Frenchman Hill, but this hardly seems credible. On a British chart of 1916 it appears as Mont Français. On David Ferguson's chart of 1921 it appears as Mount Francis, but that is a simple spelling error. It appears on the Discovery Investigations chart of 1929 as Mount Français, and that was the name accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a 1959 British chart. It appears on a Chilean chart of 1947 as Monte Francés, but on a Chilean chart of 1949 as Monte Français, that latter name being the one accepted by the 1974 Chilean gazetteer. It appears on a 1953 Argentine chart as Monte Française (sic). It was surveyed and first climbed on Dec. 7, 1955, by John Thompson and John Bull of FIDS, or was it Shewry, Rennie, and Hindson? They said Mount Francis, but it has to be Francais!! And who DID climb it first? The Argentine gazetteer of 1970 accepted the name Monte Teniente Ibáñez, named for 1st Lt. Francisco Ibáñez, killed while climbing in the Himalayas.

Pasaje Français *see* **French Passage**

Paso Français *see* **French Passage**

Punta Français *see* **Français Rocks**

Sommet du Français *see* **Mount Français**

Français Anchorage *see* **Français Cove**

Français Bight *see* **Français Cove**

Français Cove. 65°04' S, 64°02' W. Also called Français Bight. A small cove at the W side of Port Charcot, it indents the N end of Booth Island, in the Wilhelm Archipelago. Discovered and charted by FrAE 1903-05, and named by Charcot as Anse Français, or Anse du Français, for his ship, the *Français*, which moored here during the 1904 winter. It appears as such on Charcot's maps of 1906 and 1908. It appears on a 1916 British chart as Anse du Française (sic), on a 1930 British chart as Français Anchorage, on a 1949 Argentine chart as Caleta Français, and on another Argentine chart, from 1953, as Ensenada Français. US-ACAN accepted the translated name Français Cove in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a 1958 British chart. The Argentine gazetteer of 1970 accepted the name Ensenada Français, while the Chilean gazetteer of 1974 accepted Caleta Français. However, it seems that today the Argentines also call it Caleta Français.

Français Glacier. 66°30' S, 138°10' E. About 20 km long, and 6 km wide, at the very SW of Commonwealth Bay, on the coast of Adélie Land, it flows NNE from the continental ice to the coast close W of Ravin Bay. In 1840, during FrAE 1837-40, Dumont d'Urville named a feature in this spot as Baie des Ravins (i.e., "bay of ravines"), but saw no glacier. Members of the Main Base Party in Dec. 1912, during AAE 1911-14, saw no glacier here either, and they would have, had it been here, as they camped on the upland slopes close of where this glacier is. It was here during OpHJ 1946-47 (it was first delineated from air photos taken during that expedition), so had to have been formed between 1913 and 1946, surely. In 1952-53, a French party led by Mario Marret sledged W on the sea ice to the ice cliffs close E of the glacier, and they named it Glacier Endurance, for Shackleton's famous ship. In order to avoid confusion with the other Endurance Glacier, it was renamed for Charcot's ship, the *Français*. US-ACAN accepted the name in 1955.

Français Glacier Tongue. 66°31' S, 138°15' E. A broad glacier tongue, about 5 km long, it is the seaward extension of Français Glacier, in association with which it was named in 1951 by the French, who charted it that year. US-ACAN accepted the name in 1962.

Français Point *see* **Français Rocks**

Français Rocks. 63°02' S, 56°00' W. A group of fringing rocks off the NE coast of d'Urville Island. During a rough charting of d'Urville Island by FrAE 1837-40, Dumont d'Urville applied the name Pointe des Français (i.e., "point of the French") to the NE point of the island, the island at that time being believed to be continuous with Joinville Island. It appears as such on his 1838 chart, and on Charcot's map of 1912, following FrAE 1908-10. On

an 1861 Spanish chart, this was translated as Punta de los Franceses, and on a British chart of 1893 as Français Point. On Friederichsen's 1895 map it appears as Cap Français. It appeared in those early years of the 20th century variously misspelled as Française and François. It appears on Irízar's 1907 Argentine map as Cabo Français, and on a 1908 Argentine map translated all the way as Cabo Francés. Surveys conducted by Fids from Base D between 1945 and 1947 resulted in the coastline in this area being shifted on the maps about 15 km to the SSW. It appears on a Chilean chart of 1947 as Punta Francés, and that name was accepted by the 1974 Chilean gazetteer. The coastline was further surveyed by Fids from Base D between 1952 and 1954, and was photographed aerially by FIDASE in 1956-57. A study of these efforts did not reveal a definable point in this area, so, on Feb. 7, 1978, UK-APC applied the name to these fringing rocks. US-ACAN accepted this name (i.e., Français Rocks). It appears as such in the 1980 British gazetteer. It appears by error as Cabo King on a 1958 Argentine chart (*see* **King Point**); however, the Argentine gazetteer of 1970 accepted the name Punta Français. An obvious note, perhaps, but one worth putting in: As the name honors the French, and not Charcot's ship the *Français*, the name Francés is perfectly acceptable.

France. Jean-Baptiste Charles Bouvet de Lozier was an early explorer who sailed as far south as 54°26' S, 3°24' E, and discovered Bouvet Island on New Year's Day 1739 in an attempt to prove or disprove the existence of the "Great Southern Continent." Capt. Yves Kergeúlen-Trémarec followed him in 1771-72, and discovered Kerguélen Island (50°S), which he named New France. France's earliest actual Antarctic explorers were Dumont d'Urville (FrAE 1837-40) and Charcot (FrAE 1903-05 and FrAE 1908-10), and on April 1, 1938 France claimed Adélie Land, between 136°E and 142°E, her only Antarctic claim south of 60°S, and which was administered as part of Les Terres Australes et Antarctiques Françaises, and controlled by the governor of Madagascar until the signing of the Antarctic Treaty in 1959, of which France was one of the 12 original signatories. The USA and the USSR (as it was then) never recognized France's claim to Adélie Land, and the two super powers called this territory the Adélie Coast. In 1948-49 France attempted an expedition to Antarctica but they couldn't get to land due to the ice. At that time French polar exploration fell under the direction of the Expéditions Polaires Françaises, but, on Feb. 27, 1947, it became an organ of the National Center for Scientific Research. The first successful French Polar Expeditions took place in 1949-53. In 1950 the first base, Port-Martin, was established, but that was consumed by fire in 1952, and replaced by Dumont d'Urville Station in 1956, set up by Robert Guillard's 1955-56 expedition. Dumont d'Urville Station and Charcot Station were France's only two IGY stations. Bertrand Imbert led the 1956-57 program, and Gaston Rouillon led the program through IGY itself, 1957-59. Robert Faure was leader of the 1959-61 expedition. Concordia (or Dome C) is a French-Italian station. For a list of the modern expeditions, *see* **French Polar Expeditions**.

Cape Frances. 67°30' S, 164°45' E. On the E side of Sturge Island, in the Balleny islands. In 1841, Ross, from a distance, thought that Sturge Island was 3 individual islands, and named the central one Frances Island. Scott, in 1904, rectified this situation, and re-defined everything, naming this cape in order to preserve the name Frances in the area. US-ACAN accepted that situation in 1947, and the name appears in the 1958 NZ gazetteer.

Pasaje Francés *see* **French Passage**

Paso Francés *see* **French Passage**

Punta Francés *see* **Français Rocks**

The *Frances Charlotte*. Cape Town sealer, employed on the Cape to Calcutta run. She left Bengal in 1820 for the 1820-21 sealing season in the South Shetlands, under the command of Capt. Samuel Massingham. She reached Buenos Aires on March 25, 1821, and returned to Calcutta in 1822.

Frances Island *see* **Cape Frances**

Francey Hill. 70°43' S, 67°02' E. A low, snow-covered rock feature, about 6 km S of Mount McKenzie, in the Aramis Range of the Prince Charles Mountains. Plotted by Australian cartographers from 1960 ANARE air photos. Named by ANCA for Roger J. Francey, cosmic ray physicist at Mawson Station in 1964. US-ACAN accepted the name in 1967.

Isla Francis *see* **Francis Island**

[1]**Mount Francis** *see* **Mount Français**

[2]**Mount Francis**. 72°13' S, 168°45' E. A massive, prominent, ridge-like mountain rising to 2160 m, it overlooks Tucker Glacier from the N, between Tyler Glacier and Staircase Glacier, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Henry Sayles Francis, Jr., National Science Foundation director of international cooperation and information. He wintered-over at Little America in 1958, and was in Antarctica in certain subsequent seasons. NZ-APC accepted the name.

Francis, Samuel John. Known as John Francis. b. Nov. 15, 1915, Falmouth, Cornwall. He trained with the Ordnance Survey, joined the Royal Engineers, and served in World War II, as a lieutenant. He joined FIDS in 1945, as a surveyor, and wintered-over at Base D in 1946 and 1947. He left Antarctica in 1948, returned to Port Stanley, and there caught the *Lafonia* back to London, arriving there on April 21, 1948. From 1948 he was surveyor to the Worcestershire County Architect. He died on Sept. 11, 1983, in Worcester.

The *Francis Allyn*. New London sealing schooner, with an auxiliary steam engine. **July 5, 1872**: She was towed from New London to New York, to be converted at the Delamater Iron Works into a steamer, and fitted for a sealing voyage to the South Shetlands. **July 28, 1873**: She left New London, Conn., bound for the South Shetlands and the 1873-74 sealing season, under the command of Robert H. Glass. The crew were: Denis Mahoney (1st mate), Moses I. Fuller (2nd mate), Frank Louis, Luke P. Gray, Joseph Enos, John Kokny, Pat Hanley, Jean Delasky, Edward Smith, Joseph Martin, Julio De Lomba, Manuel Antone, John Sands, Gido Antone, James Lowe, Peter Williams, Peter Christiansen, Henry I. Cannington, W.D. Studson, and Henry M. Lester. **June 16, 1875**: She arrived back in New London, with 1150 sealskins. **Fall 1875**: She set out again for the Antarctic, again with Glass as skipper, for the 1875-76 and 1876-77 sealing seasons. The rest of the crew were: Gilbert B. Soudeker (1st mate), David Gavitt (2nd mate), George H. Williams, Albert E. Cook, George F. Goddard, Peter Williams, Thomas S. Peckham, Charles A. McCrackin, Fred N. Brown, George H. Lawton, Frank Bennett, Edward E. Smith, Frank Williams, J.K. Hardey, Fred C. Brown, Thomas Clifford, John Edwards, William Buchanan, John Bohen, and James McGill. **Aug. 28, 1877**: She left New London again, this time with Desolation Island as her destination, and again with Glass as captain. She also visited the South Shetlands again, for the 1877-78 sealing season. Crew: J.R. Rogers (1st mate), John Glass (2nd mate), John R. Fuller, Luke P. Gray, Henry Chappel, Christian Kaukes, Frederick Burr, Jeremiah Spelman, Thomas C. Crocker, Charles L. Gittore, Otis J. Lamb, Charles F. Howland, Herbert A. Gorton, Joaquin Antone, and Manuel da Souto. **1879**: She returned to New London, after a Southern Ocean trip that does not seem to have included Antarctic waters. **1887-89**: The *Francis Allyn* was at the Crozet Islands, the Kerguélen Islands, and South Georgia (none of which are in Antarctica), under Capt. Joseph J. Fuller. **1893-94**: Fuller brought her to the Kerguélens and Bouvetøya (neither of which is in Antarctica).

Francis Island. 67°37' S, 64°45' W. An irregular-shaped island (but roughly triangular), 11 km long and 8 km wide, off Whirlwind Inlet, 20 km ENE of Cape Choyce, and 24 km off the Bowman Coast, on the E coast of Graham Land, it rises to 707 m above the Larsen Ice Shelf. It is completely snow-covered except for patches of bare rock on its steep coasts, and the rock peaks which rise to its summit. Probably seen from the air by Wilkins on Dec. 20, 1928, and by Ellsworth in Nov. 1935. Discovered officially and photographed aerially in Dec. 1940, during USAS 1939-41, and described by them as 2 separate islands. It appears that way on a 1943 U.S. Hydrographic Office chart and photograph. Charted as one island by Fids from Base E in 1946-47. Re-surveyed by Fids from Base D in Dec. 1947. It was named by both FIDS and RARE 1947-48. Finn Ronne, leader of RARE, named it Robinson Island, supposedly for W.S. Robinson (*see* **Robinson Group**), and it appears as such on his 1949 map. FIDS named it Francis Island,

for John Francis (*see* **Francis, Samuel John**), who surveyed the island. UK-APC accepted that name (i.e., Francis Island), and US-ACAN followed suit in 1952. It appears as such on a 1952 British chart, and also in the 1955 British gazetteer. The British occasionally misspelled it as Frances Island. It appears on a 1952 Argentine chart as Isla Robinson, but on one of their 1957 charts as Isla Francis, the latter name being the one accepted by the 1970 Argentine gazetteer and also by the Chilean gazetteer of 1974.

Francis Peaks. 67°39' S, 50°25' E. A group of peaks and ridges, 1.5 km SE of Mount Gordon, and about 11 km NE of Simpson Peak, in the Scott Mountains of Enderby land. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA on Nov. 24, 1961, for Robert J. "Bob" Francis, physicist at Mawson Station in 1961 and again in 1964. US-ACAN accepted the name in 1965.

The *Francisco de Gurruchaga*. Argentine tug, built in Charleston, SC, and launched as the *Luiseno* on March 17, 1945. her name was subsequently changed to *Francisco de Guruchaga*. She took part in ArgAE 1976-77 (Capt. Carlos A. Coli); ArgAE 1977-78 (Captain Ricardo Horacio Aumann); ArgAE 1978-79 (Captain Pedro Luis Galazi); ArgAE 1979-80 (Captain Miguel A. Piccinini); ArgAE 1988-89 (Capt. Juan C. Mezzavoce), ArgAE 1989-90 (Capt. Rafael G. Molini); ArgAE 1990-91 (Capt. Marcelo G. Genne); ArgAE 1992-93 (Capt. Juan G. Gómez Meunier); ArgAE 1998-99 (Capt. Gustavo Castillo); and ArgAE 1999-2000 (Capt. Gustavo I. Barreto Neuendorf). She has been back in Antarctic waters every year since.

Francisco de Gurruchaga Refugio. 62°14' S, 59°10' W. Argentine Navy refuge hut opened on Dec. 6, 1953, as Refugio Armonía (i.e., "Harmony refuge"), on a rock surface, on the W side of Harmony Cove, Nelson Island, in the South Shetlands. On Dec. 15, 1954, its name was changed to Refugio Naval Francisco de Gurruchaga, to commemorate Francisco Bruno de Gurruchaga y Fernández Pedroso (1766-1846), who fought at Trafalgar, and was the first deputy from the province of Salta, in the newly-formed country of Argentina. However, it was usually known as Base Gurruchaga, or just Gurruchaga. It was used temporarily in 1954-55 and again in 1957-58, and then closed. In 1997-98 it was used as a temporary base, but then closed again.

Franck Nunataks. 71°32' S, 72°22' W. A scattered group of small rock outcrops, 5 km in extent, and rising to a height of about 250 m at the base of Beethoven Peninsula, in the SW part of Alexander Island. Mapped by Searle of the FIDS in 1959-60, working from air photos taken by RARE 1947-48, and plotted by him in 71°26' S, 72°20' W. He also tended to spell it Frank Nunataks. Named by UK-APC as Franck Nunataks, on March 2, 1961, for the Belgian-French composer César-Auguste-Jean-Guillaume-Hubert Franck (1822-1890). US-ACAN accepted the name later in 1961. It appears on a 1962 U.S. Hydrographic Office chart. The feature has since been replotted from U.S. Landsat images taken in Jan. 1973, and these new coordinates were accepted by UK-APC on Dec. 20, 1974, and appear in the 1977 British gazetteer.

The *Frango*. Built as the turbine steamer *Golaa* in 1917 by the Chester Shipbuilding Co., in Pennsylvania, for the Norwegians. 401 feet 10 inches long. In 1927, Haldor Virik's Frango Company bought her, and converted her into a 6400 ton floating whaling factory, and renamed her the *Frango*. She was in Antarctic waters, whaling pelagically, in 1928-29 and 1929-30. In 1930 she was bought by Bryde & Dahl's American Whaling Company (managed by Lars Christensen), and her engines were replaced by a triple expansion steam engine. That year she was the first American whaler in Antarctica for years (she began flying an American flag that year so she could import oil to the USA without paying duty). She was back whaling in Antarctica in 1930-31, but that was her last season there. In 1940 she was re-named the *Clifford*, and in 1941 was seized by the Japanese, and re-named the *Hakko Maru*. On Jan. 4, 1944 she was sunk by USS *Bluefish*, 200 miles north of Great Natuna Island.

Mount Frank Houlder *see* **Mount Houlder**

Frank Newnes Glacier. 71°28' S, 169°19' E. A short glacier descending steeply from the high plateau of northern Victoria Land, to discharge into the head of Pressure Bay, in the area of Robertson Bay. First charted by BAE 1898-1900, and named by Borchgrevink for Frank Hilliard Newnes (1876-1955; succeeded his father in 1910, as 2nd Baronet Newnes; with Sir Frank, the baronetcy became extinct), only (surviving) son of the expedition's sponsor, Sir George Newnes. US-ACAN accepted the name, and NZ-APC followed suit.

Frank Nunataks *see* **Franck Nunataks**

Mount Franke. 84°37' S, 177°04' W. A prominent mountain, rising to 1600 m, with much rock exposed on its N side, between Mount Wasko and Mount Cole, along the W side of Shackleton Glacier, in the Bush Mountains, in the Queen Maud Mountains. Discovered and photographed aerially on Flight C, Feb. 29-March 1, 1940, during USAS 1939-41. Surveyed by Bert Crary in 1957-58, and named by him for Lt. Cdr. Willard J. Franke, USN, with VX-6 at Little America in 1958. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Frankenfield Glacier. 71°52' S, 98°13' W. A small glacier in the NE part of Noville Peninsula, on Thurston Island, it flows ENE into the Bellingshausen Sea between Mount Feury and Mulroy Island. First roughly delineated from air photos taken in Dec. 1946, during OpHJ 1946-47. Named by US-ACAN in 1960, for Lt. (jg) Chester Frankenfield, meteorologist on the Bellingshausen Sea Expedition, who established an automatic weather station on Thurston Island, in Feb. 1960. Originally plotted in 71°46' S, 98°18' W, it has since been replotted.

Frankengletscher. 71°07' S, 165°57' E. A glacier, just NE of Peterson Bluff, in the Anare Mountains. Named by the Germans.

Frankiewicz, Edward J. "Eddie." b. March 16, 1919, Rutland, Vt., son of painter Stephen Frankiewicz and his wife Julia. His parents had just married when they come to the USA in 1913 from Poland. Eddie was working in a chemical factory in Waterbury, Conn., when he enrolled in the Civilian Pilot Training Program in 1940. He was with Pan Am in Africa, and in 1942 joined the U.S. Navy, working for VR-1, the first naval air transport squadron, flying across the North Atlantic. He married, in 1946, was in Korea and Okinawa, and in 1955 he volunteered for VX-6, to go to Antarctica. He was aircraft maintenance when he flew down to NZ for OpDF I (1955-56). He was in one of the planes that turned back to NZ, so did not make it to Antarctica. However he was aircraft maintentance officer, and a lieutenant commander, on OpFD II (1956-57), during which he flew the four men to establish Beardmore Glacier Camp (q.v. for more details), and also piloted the supporting plane on Oct. 31, 1956 that flew to Beardmore Glacier Camp to await Gus Shinn's plane after the first historic landing at the Pole. He also supported the tractor train laying the trail from Little America to Byrd Station. He was back for OpDF III (i.e., 1957-58). Then he flew jets out of Kingsville, Texas, and was later transferred to Washington, DC in the mid to late 1960s. He died on May 9, 2003, in San Diego, where he was buried at El Camino Burial Park. That such a major Antarctic figure never had a feature named after him (at least not by 2009) is beyond the reasoning ability of this author.

The *Franklin*. New London sealing schooner. **1871-72**: She left new London on Aug. 25, 1871, and was in the South Shetlands, as a tender to the *Peru*. Crew of the *Franklin*: James M. Holmes (captain), James H. Glass (1st mate; a Tristan da Cunhan, living in New London), Mortimer H. Cassidy (2nd mate; b. 1848, Stonington), H. Schickeslantz (a German living in NJ; there is, of course, no such name in real life, which means the name has been transcribed wrong), Henry Hunt (b. 1850, NY), Johan Tornick (a German living in NY), William Hess (a German living in Camden, NJ), James McKay (a Scotsman living in Providence, RI), Pedro Montaro da Silva (a Cape Verde Islander, from Bravo, now living in New London), James A. King (q.v.), Rufus Lomba (a Cape Verde Islander, living in New London), José Baptista (a Cape Verde Islander, aged 16, living in New London; he would be on the *Florence*, the next season, also in Antarctic waters), Manuel Fonsack (b. 1839; a Cape Verde Islander, living in New London; his real name is almost certainly Fonseca), Charles Johnson (b. 1848, Boston), George Chasey (b. 1850, Sandy Hook, Conn.), and Jeremiah Gray (b. 1850, Wilton, Conn.). *See* **King, James A.**, for the

remarkable story of Mr. King's party who were forced to winter-over. **1872-73**: The *Franklin* left New London on Aug. 3, 1872, under Capt. James W. Buddington, in company with the *Florence* and the *Nile*, the fleet out to find King and his party back in the South Shetlands, where they would also seal for the 1872-73 winter. The crew that season were: James B. Neale (captain), Henry C. Tooker, James Rounds, Bradford H. Neale, A.G. Manwaring, James P. Bransfield, Herman Depken, George W. Patrick, Francis Gilbertson, Thomas Bartlett, Samuel Connover, Louis Fritz, William Crosby, Frank K. Bishop, William Bull, George Martin, John W. Slack, John J. King, Charles G. Acrer, Adolphius Culver, Charles A. Miller, Theodore Apperman. **1873-74**: The *Franklin* left New London on July 22, 1873, for another voyage to the South Shetlands, for the 1873-74 season, under the command of Charles W. Chester. Her crew were: John Glass (1st mate; a Tristan da Cunhan, living in New London), Thomas M. Near (b. 1845, Callais), James A. King (q.v.) (3rd mate), E.O. Newton (b. 1854, Cincinnati), Manuel Joaquan (a Cape Verde Islander, living in New London), William A. Adkins (b. 1838, Sag Harbor, NY), John Miller (a German, originally named Müller, from Hanover, living in NY), C.W.E. Kistan (a German, from Berlin, living in NY), William W. Boyington (b. 1854, New London), Manus Cherry (b. 1853, living in Norwich, Conn.), S.B. Hazand (b. 1846, New London), Joseph Smith (b. 1828, NY), José Mantano (a Cape Verde Islander, living in New London), James C. Towne (b. 1851, New London), Juan Francisco de Tomás (a Cape Verde Islander, living in New London), Andrew Jacobs (b. 1854, NY), and Henry Schostenfels (a German, living in NY). **1874-75**: She left New London on July 16, 1874, bound for the South Atlantic, and the South Shetlands. Crew: James W. Buddington (master), Joseph B. Neale (1st mate), John Glass (2nd mate), James Finn (3rd mate), Henry Feisler, John H. Holmes, George H. Pomeroy, Charles McIntyre, Thomas Foster, Charles A. Smith, William H. Pearce, William Pastnoye, John Williams, William Koestlin, and William Cupples.

Cape Franklin *see* **Franklin Point**

Mount Franklin. 78°05' S, 154°57' W. Between Breckinridge Peak and Washington Ridge, at the S end of the N group of the Rockefeller Mountains, on Edward VII Peninsula, in Marie Byrd Land. Discovered aerially on Jan. 27, 1929, during ByrdAE 1928-30. Named by members of West Base, during USAS 1939-41. They established a seismic station camp on the peak. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Franklin D. Roosevelt Sea *see* **Amundsen Sea**

Franklin Island. 76°05' S, 168°19' E. A small, rocky, volcanic pile, 11 km long (the New Zealanders say 20 km) in a N-S direction, about 10 km wide, 243 m high, and covered by a thin ice-cap, in the Ross Sea, about 130 km E of Cape Hickey, Victoria Land, and about 100 km N of Cape Bird (on Ross Island). Discovered and landed on by Ross on Jan. 27, 1841, and named by him for Sir John Franklin (*see* **Franklin Point**), the Arctic explorer, who, as governor of Van Diemens Land, had royally entertained the party at Hobart, on its way to Antarctica in 1840. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Franklin Island Automatic Weather Station *see* **Whitlock Automatic Weather Station**

Franklin Point. 63°56' S, 61°29' W. A conspicuous point forming the SW end of Intercurrence Island, in the Palmer Archipelago. Roughly charted by Foster in 1829, during the *Chanticleer* Expedition of 1828-31, and named by him as Cape Franklin, possibly after Sir John Franklin (1786-1847), the Arctic explorer. It appears on the expedition's chart of 1829, and also on a British chart of 1839. Photographed aerially by FIDASE in 1956. The feature was re-defined by UK-APC on Sept. 23, 1960, as Franklin Point. US-ACAN accepted the name later in 1960. It appears as such on a British chart of 1961. For more on Sir John Franklin, *see* **Franklin Island**.

Franklin Shoal. 75°50' S, 169°00' E. A submarine feature off the coast of Oates Land. Later found not to exist.

Franklin Shoals. 75°50' S, 169°00' E. A submarine feature of the Ross Sea, around Franklin Island, in association with which it was named by international agreement in June 1988.

Franko Escarpment. 83°02' S, 49°00' W. An escarpment, mostly snow-covered, rising to about 1250 m, running N-S for 6 km, and forming the NE edge of the Lexington Table, in the Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1979, for Stephen J. Franko, grants and contracts officer with NSF, from 1967, with responsibility for all USARP contracts. UK-APC accepted the name on May 21, 1979.

Franks, James Leonard "Jim." b. Feb. 9, 1933, Hampton Wick, Mdsx, but raised in Kingston, Surrey, son of local council employee (public baths) William Henry Franks and his wife Doris Irene Hawkins. From 1949 to 1954 he did an engineering apprenticeship with Vickers Armstrong Aircraft, in Weybridge, Surrey, and then, at 21, for his national service, joined the Navy as an able seaman, becoming a submariner, 1955-57. He then joined the Merchant Navy, made one run to the Baltic on a BP tanker, and on his return found a letter from FIDS. He had applied a year before but had heard nothing. So, now, after a 6-week met course at Stanmore, he left Southampton on Oct. 1, 1957, on the *Shackleton*, bound for Montevideo. That was the season Asian flu broke out on board ship, and Franks had to steer the ship into Montevideo Harbor on Nov. 1, 1957, a feat that immediately became somewhat legendary in FIDS circles. He wintered-over as senior meteorologist at Base G in 1958. In 1959 he had to be flown in to Base Y by Otter, and wintered-over there that year as senior met man and dogman. In 1960 he had to be flown out by Otter to the *John Biscoe*, and from there, after a tour around the bases, he accompanied the *Biscoe* to Montevideo and back, to pick up a wing for the *Kista Dan*'s Beaver aircraft that had lost that part of its anatomy. It was late in the season, May 1960, when they left Antarctic waters, and Franks returned to the UK in June 1960. On the recommendation of Wee Georgie McLeod (q.v.), he moved to Glenmore Lodge, in Aviemore, where he worked the 1960-61 winter. He got married to a nurse, and in late 1961 he sailed south again, and wintered-over in 1962 as a general assistant, observer, and dogman at Base D. He handled 68 dogs that season, and in 1963 sailed from Hope Bay on the *Kista Dan*, with several dogs, to Halley Bay, dropped the dogs off there, and sailed home on the *Kista Dan*. Back in Aviemore, he tried a few odd jobs, was unemployed, then became an interior decorator for 6 years. Then he went to Quebec, as the senior lab met observer at the McGill Sub-Arctic Station, and, in actual fact, managed the lab for 2 years in the absence of the director. He worked in civil engineering in the private sector in Toronto from 1972 to 1976, and then had a car crash (hit by a 57 Chevy). After several months convalescence, he and his wife moved back to Aviemore, and he became a stock controller for the Aviemore Centre. He stayed in that job until 1983, but in 1981 opened up a gift and craft store in Aviemore, with his wife and daughter, which they ran until 1991. Then he went back to school, graduating with honors in 1995 from Bournemouth University, with a degree in environmental protection.

Franz, Karl. b. Dec. 11, 1877, Pekatel, Mecklenburg. Able seaman on the *Gauss* during GermAE 1901-03.

Monte Franzetti *see* **Monte Argento**

Punta Fraser *see* **Fraser Point**

Fraser, Arthur Gilmour. b. Aug. 1, 1937. After Aberdeen University, he joined FIDS on July 13, 1959, and sailed south on the *Kista Dan* in Dec. 1959, as geologist bound for Base T. However, he wound up wintering-over at Wordie House instead, in 1960, and at Base E in 1961. He returned to the UK in May 1962, and his FIDS contract was extended until Sept. 30, 1964, while he did research and writing at the BAS geology unit at Birmingham University. That year, 1964, he got his PhD from Birmingham, for his thesis on the petrology of Stonington Island and Trepassey Island.

Fraser, Francis Charles. Scottish zoologist, expert on whales and dolphins. b. June 16, 1903, younger son of James and Barbara Ann Fraser, of Dingwall, Ross and Cromarty. He was zoologist on the *Discovery*'s cruise of 1925-27, studying plankton and krill, and based in South Georgia (54° S), although in 1927 he got into Antarctic waters. In 1928-29 he was based at

South Georgia again as part of the *William Scoresby*'s second cruise, before being transferred to the *Discovery II* in 1929 for that ship's first cruise south in 1929-31. He played an important part in the development of the zoology department at the Natural History Museum in London, and died on Oct. 21, 1978, in Bromley, Kent.

Fraser Island. 64°43' S, 64°08' W. In Wylie Bay, NE of Halfway Island, on the SW coast of Anvers Island, in the Palmer Archipelago. Named by US-ACAN on Sept. 25, 1998, for William R. "Bill" Fraser, of Montana State University, who studied seabird ecology on the Antarctic Peninsula for over 20 years. UK-APC had already accepted the name on April 23, 1998.

Fraser Nunatak. 81°47' S, 155°55' E. Rising to 2070 m, 22 km SW of the Wilhoite Nunataks, and W of the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for Graham Fraser, of the physics department at the University of Canterbury, NZ, who led geomagnetic pulsation research for 11 seasons from 1989. US-ACAN accepted the name. The gazetteers says Dr. Fraser has some 45 years of Antarctic experience.

Fraser Point. 60°41' S, 44°31' W. It forms the E entrance point of Marr Bay, and lies between that bay and Mackintosh Cove, on the N coast of Laurie Island, in the South Orkneys. Mapped in 1903 by ScotNAE 1902-04, and again by Petter Sørlle in 1912-13. Re-mapped in 1933 by the personnel on the *Discovery II*, who named it for Francis C. Fraser. It appears on their 1934 chart. It appears on a 1943 U.S. Hydrographic Office chart of 1943, as Frazier Point. US-ACAN accepted the name Fraser Point in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears on a 1947 Argentine chat as Punta Fraser, and that was the name accepted by the 1970 Argentine gazetteer. Note: The name Fraser is Scottish, and, although not an uncommon name in the USA, is almost invariably pronounced Frazier, as in "Frazier fir."

The *Fraternitas*. Formerly the first *Sir James Clark Ross*, bought in 1930 by the Fraternitas Company, and in Antarctic waters in 1930-31 and again in 1936-37.

Mount Frazier. 77°53' S, 154°58' W. The most northerly of the Rockefeller Mountains, it is almost submerged in an ice-cap, 1.5 km N of Mount Jackling, on Edward VII Peninsula, in Marie Byrd Land. Discovered aerially on Jan. 27, 1929, during ByrdAE 1928-30, and later named Mount Irene Frazier, for Irene Johnson, the Canadian wife of Dr. Russell G. Frazier. That name was accepted by US-ACAN in 1947. The name was later shortened, and, as such, accepted by US-ACAN in 1966, and, subsequently by NZ-APC.

Frazier, Capt. Edmund Fanning (q.v.) claimed that a navigator of this name had sighted the South Shetlands in 1712 and named them South Iceland or New South Iceland.

Frazier, Lawrence. A whaling captain, he was appointed commander of the *Sprightly* on Aug. 8, 1820, and a week later took her out of London for her first South Shetlands tour, 1820-21.

Frazier, Paul Wilson. b. April 1, 1920, Fulton, Mo., son of John W. Frazier and his wife Frances Vandiver. After attending the University of Missouri, he joined the U.S. Navy in 1940, and on Sept. 27, 1944, maried Marcella A. Summers. He was navigator and projects officer on OpW 1947-48. He was head of ship operations during OpDF I (1955-56), and during OpDF II (1956-57) was leader of the traverse which left Little America V to set up Byrd Station, 600 miles away. He retired from the Navy in 1965, and managed a brokerage firm in Columbia, Mo. He and his wife lived in Arkansas between 1986 and 2003, before returning to Columbia, where he died, on July 17, 2009, at the Boone Hospital Center. He wrote the book *Antarctic Assault*, in 1957.

Frazier, Russell George "Doc." b. July 5, 1893, Fraziers Bottom, Teays Valley, West Virginia, son of dry goods merchant John Robert Frazier and his wife Lelia Adelaide George, and a descendant of John Paul Jones. On June 28, 1919, in Louisville, Ky., where he was a medical student, he married Canadian Irene Johnson. He was chief medical officer of USAS 1939-41, during which he did a study on acclimatization and the effects of cold on the human body. In 1951 he retired after 32 years as physician to the Utah Copper Mines. A noted Klansman, he died of cancer at Salt Lake City, on Jan. 14, 1968. He wrote *Bingham Canyon Through the Eyes of a Company Doctor*. There are some pretty awful stories about Doc Frazier's Klan activities in Utah, which may or may not be true.

[1]Frazier, William *see* **USEE 1838-42**

[2]Frazier, William *see* **USEE 1838-42**

Frazier Glacier. 77°05' S, 161°25' E. Between the Clare Range and Detour Nunatak, it flows northeastward to join the Mackay Glacier E of Pegtop Nunatak, in Victoria Land. Named by US-ACAN in 1964 for Lt. (jg) W.F. Frazier, officer-in-charge at Byrd Station in 1963. NZ-APC accepted the name.

Frazier Islands. 66°14' S, 110°10' E. A group of 4 rocky islands, including Nelly Island (the largest; it has several rookeries of giant petrels), Dewart Island, and Charlton Island, in the E part of Vincennes Bay, 13 km WNW of Clark Peninsula. First photographed aerially by OpHJ 1946-47. First visited on Jan. 21, 1956, by an ANARE party led by Phil Law. Named by US-ACAN in 1957, for Cdr. Paul W. Frazier. ANCA accepted the name on Aug. 11, 1958.

Frazier Point *see* **Fraser Point**

Frazier Ridge. 79°09' S, 86°25' W. A sharp ridge on the W side of Webster Glacier, extending N from the Founders Escarpment to Minnesota Glacier, in the Heritage Range. Named by the University of Minnesota Geological Party of 1963-64, for Sgt. Herbert J. Frazier, radioman with the 62nd Transportation Detachment who helped the party. US-ACAN accepted the name in 1966.

Frazil ice. Canadian term for ice-spikes formed in water moving fast enough to prevent the formation of a sheet of ice. Tiny crystals, they become pancake ice in the calm sea.

Freaker, Ronald Clifford. b. June 25, 1903, Clapham, son of clerk Herbert Edwin Freaker and his wife Agnes Mary Unett. He went to sea at 16, and as RNR, got his wings in 1932, and was 1st officer on the *William Scoresby*, 1934-37, and skipper, 1937-38. He was a highly decorated hunter of U-boats during World War II (as a lieutenant commander, he was skipper of the corvette *Nasturtium*, 1941-42, and the frigates *Exe*, 1942, *Jed*, 1942-44, and *Eck*, 1944-45). In 1945 he joined the Suez Canal Pilotage Service, retiring as senior pilot in 1956. He then became a Board of Trade examiner of masters and mates, at Southampton, and died in Dec. 1991, in the New Forest.

Frechberg. 72°53' S, 167°07' E. A peak, SW of Mount Burrill, in Victoria Land. Named by the Germans.

Frecker Ridge. 70°49' S, 166°13' E. A ridge, about 8 km long (the New Zealanders say 4 km), that rises abruptly along the W side of Kirkby Glacier, at the junction of that glacier with Ludvig Glacier, just W of Mount Elliot, in the Anare Mountains of Victoria Land, and which terminates in the N at Mount Gale. Named by ANARE for Corp. (acting Sgt.) Ron Frecker, RAAF, an electrical fitter, a member of the Antarctic Flight, on the ANARE flights from the *Thala Dan* here in 1962. He was based at Wilkes Station. ANCA accepted the name. US-ACAN also accepted the name, in 1964, and NZ-APC followed suit.

Fred Cirque. 72°34' S, 0°25' E. A large, ice-filled cirque in the W side of Roots Heights, in the southernmost part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Fredbotnen, for Fred Roots. US-ACAN accepted the translated name Fred Cirque in 1966.

Fredbotnen *see* **Fred Cirque**

The *Frederick*. American sealing brig of 147 tons, built at Guilford, Conn., in 1815, and registered by William A. Fanning on Sept. 30, 1818 (Fanning had bought the vessel in New Haven). In 1819-20 she made a successful sealing voyage along the W coast of South America, with Ben Pendleton as captain, and a crew of 21. She was re-registered on May 2, 1820, and was flagship on the Fanning-Pendleton Sealing Expeditions of 1820-21 and 1821-22, both times with Pendleton as skipper. Amos Barnes was on the 1820-21 trip. During the 1821-22 season, Jonathan Pendleton was 1st mate, Nathaniel Durfy was 2nd mate, and a man named Cullom was 3rd mate.

Rocas Frederick *see* **Frederick Rocks**

Frederick, David Henderson. b. May 8, 1873, Montrose, Forfarshire, but grew up in

Benholm, Kincardineshire, son of salmon fisherman William Frederick and his wife Helen Henderson, and brother of John Frederick (*see* below). In the late 1880s the family moved to Dundee. He himself became a fisherman, and was a mate on the *Polar Star* during DWE 1892-93. He married Margaret Hall, raised a family in Dundee, and was an able seaman on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04.

Frederick, John. b. 1876, Montrose, Forfarshire, son of William Frederick and his wife Helen Henderson, and younger brother of David H. Frederick (*see* above). He lived in Dundee, and was a fireman on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04.

Frederick H. Rawson Mountains *see* **Rawson Mountains**

Frederick Rocks. 62°33' S, 60°56' W. A group of rocks in water, in Barclay Bay, off the N coast of Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for the *Frederick*. US-ACAN accepted the name in 1960. One of the Argentine Antarctic expeditions named it Rocas Campastri, for Cabo principal Omar Campastri, who died in the crash of a Neptune aircraft (*see* **Deaths**, Sept. 15, 1976). It began appearing as such about 1978. Last plotted in late 2008, by the British.

Isla Fredriksen *see* **Fredriksen Island**

Fredriksen, Hans. From Stabekk, Christiania, Norway. Manager of the Rethval Company, and also manager (but not skipper) of the *Falkland* 1911-12 and 1912-13. That last season, 1912-13, he also managed the *Thule*, and again in 1913-14. Apparently he was also in Antarctic waters in 1914-15.

Fredriksen Island. 60°44' S, 45°00' W. An island, 4 km long and 0.8 km wide, it lies 0.8 km SE of Powell Island, in the South Orkneys. Discovered and roughly surveyed by Palmer and Powell in Dec. 1821. Used as a whaling anchorage in the early 20th century. Re-charted by Petter Sørlle in 1912-13, and named by him as Fredriksens Ø. It appears as such on his 1912 chart. On his and Hans Borge's chart of 1913, it appears as Frederiksens Øya, and on Sørlle's 1930 chart as Fredriksen Øya. On a British chart of 1916 it appears as Fredriksen's Island. On a 1930 Argentine chart it appears as Isla Frederiksen, and that was the name accepted by the 1970 Argentine gazetteer. It was surveyed by the Discovery Investigations in 1933, and appears on their 1934 chart as Frederiksen Island, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears a susch in the 1955 British gazetteer. On a 1943 USAAF chart it appears erroneously as Coffer Island, and, as a consequence, as Isla Coffer on an Argentine chart of 1958. In 1967 it became part of SPA #15.

Fredriksens Ø *see* **Fredriksen Island**

The *Free Gift*. A two-masted, 52-ton schooner, 56 feet, 7 inches long, built at Pawtucket, RI, in 1807. She was registered on May 15, 1820, and was one of the vessels on the Fanning — Pendleton Sealing Expeditions of 1820-21 and 1821-22, under the command of Capt. Ben Cutler, and with a crew of 11.

Freeborn Johnston Glacier *see* **Johnston Glacier**

Mount Freed. 71°29' S, 164°20' E. Rising to 2120 m, it surmounts the divide between Champness Glacier and McCann Glacier, in the S part of the Bowers Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Cdr. (later Capt.) Maitland Guy Freed (b. July 9, 1932, Washington, DC. d. Jan. 4, 1995, Virginia Beach, Va.), who joined the U.S. Navy in Sept. 1956, and was legal officer on the staff of the commander, U.S. Naval Support Force, Antarctica, 1966-68. He retired from the Navy in June 1985.

Freeden Bank. 76°20' S, 28°50' W. An undersea bank, off the Luitpold Coast. In Jan. 1997, Heinrich Hinze proposed the name, after Wilhelm von Freeden (1822-1894), founder of Norddeutsche Seewarte (the forerunner of the German Hydrographic Office). The name was accepted by international agreement in June 1997.

Cabo Freeman *see* **[2]Cape Freeman**

[1]Cape Freeman. 67°20' S, 164°35' E. Forms the N end of Sturge Island, in the Balleny Islands. Named for Capt. Thomas Freeman. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

[2]Cape Freeman. 67°59' S, 65°22' W. A cape, marking the E end of the peninsula separating the S end of Seligman Inlet from the N end of Trail Inlet, on the Larsen Ice Shelf, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Probably first seen aerially by Wilkins on Dec. 20, 1928. Photographed aerially by Ellsworth on Nov. 21, 1935, it was roughly mapped by U.S. cartographer W.L.G. Joerg from these photos in 1936, and appears on his 1937 map. Re-photographed aerially in 1940, and surveyed from the ground, during USAS 1939-41. It appears on a USAAF chart of 1942, and in a 1943 U.S. Hydrographic Office photograph. Re-surveyed and charted by Fids from Base D and Base E in 1947, Reg Freeman leading the guide party which met the Base D sledge party in 68°S, 65°W, in Dec. 1947. That year it was named three times, by the Americans, the British, and the Chileans. ChilAE 1946-47 named it Punta 21 de Mayo, for the date of the famous battle of Iquique in 1879. It appears as such on their 1947 chart. Finn Ronne, leader of RARE 1947-48, named it Cape Engel, for Bud Engel (*see* **Engel Peaks**). It appears as such on Ronne's map of 1949. The Fids named it Cape Freeman, for Reg. UK-APC accepted the name Cape Freeman on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears as such on a British chart of 1952, and in the 1955 British gazetteer. On an Argentine chart of 1957, it appears as Cabo Freeman, and that name was the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. However, on an Argentine chart of 1959, it appears as Cabo Balcarce, for Gen. Balcarce (*see* **Fildes Point**). It was further surveyed by BAS personnel from Base E, in 1963-64.

Mount Freeman. 72°43' S, 168°21' E. A prominent mountain, rising to 2880 m, it surmounts the base of Walker Ridge, 3 km NW of Mount Lepanto, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Lt. Elliott R. Freeman, USNR, helicopter commander in Antarctica during OpDF 68 (i.e., 1967-68).

Point Freeman *see* **Freeman Point**

Freeman, J.D. Sail maker on the *Peacock* during USEE 1838-42. He later joined the *Porpoise* at Columbia River, toward the end of the expedition. He seems to have been from New Jersey, and seems to be somewhat interchangeable with Isaac D. Freeman. Both were sailmakers in the U.S. Navy. Isaac was on the *Erie* in the period 1827-30, along with T.T. Craven and Edwin de Haven (both of whom would later be on USEE). On July 9, 1838, Isaac was promoted to assistant sailmaker. However, there can be no question that the man who took part in USEE was named John D. Freeman. Both Isaac and John seem to have been on the *Missouri* in 1843, when it sank, and the crew were brought back to Boston on the *Rajah*. In 1845 John was detached from a receiving ship in Boston Harbor, and transferred to the *Marion*, and from 1845 to 1848 Isaac was on the *Marion*. A John Freeman, sailmaker, went down with the British steamship *Circassian* off Long Island, on Dec. 11, 1876, but that may well be another John Freeman.

Freeman, Maurice John. Known as John Freeman. b. Jan. 1, 1929. Electrical fitter at Mawson Station in 1962, and at Wilkes Station in 1964.

Freeman, Reginald Leonard "Reg." b. July 31, 1913, South Stoneham, Hants, son of George Freeman and his wife Florence Tyler. He was in the Royal Engineers before and during World War II — North Africa and Italy — and emerged as a lieutenant. He had also done survey work in Jamaica. At the time he joined FIDS in 1945, as a surveyor, he was living in Southampton. He wintered-over at Base E in 1946 and 1947. He came back to England in 1948 on the *Lafonia*, and later surveyed on the Kariba Dam project in Africa. He married Elisabeth, lived in the Cotswolds, worked for a while at Worcester City Council, and died at home, near Oxford, in Dec. 1988, of carcinoma of the prostate.

Freeman, Thomas. Commander of the *Sabrina* during the Balleny Expedition, 1838-39. He was lost with his ship in Antarctic waters, on March 24, 1839.

Freeman Glacier. 66°10' S, 132°24' E. A channel glacier flowing to the W side of Perry Bay, immediately E of Freeman Point, on the coast of Wilkes Land. Delineated from air photos taken during OpHJ 1946-47. Named by

US-ACAN in 1955, for J.D. Freeman. ANCA accepted the name on Oct. 22, 1968.

Freeman Peak. 66°25' S, 162°30' E. A mountainous peak on Young Island, in the Balleny Islands. Discovered on Feb. 9, 1939, by the Balleny Expedition, and named by Balleny for Thomas Freeman. NZ-APC accepted the name.

Freeman Point. 66°09' S, 132°06' E. An ice-covered point, close W of Freeman Glacier, on the Wilkes Coast. Delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for J.D. Freeman. ANCA accepted the name on May 18, 1971.

Point of Freeseland *see* **Barnard Point**

Freesland Point *see* **Barnard Point**

Freeth Bay. 67°44' S, 45°39' E. A bay, 8 km wide, on the coast of Enderby Land, 19 km W of Spooner Bay, in Alasheyev Bight. Plotted from 1956 ANARE air photos. Visited by Don Styles's ANARE party from the *Thala Dan* in Feb. 1961, and named for Gordon Freeth (1914-2001), Australian minister for the interior, 1958-63, and later an ambassador. US-ACAN accepted the name in 1965.

Bahía Frei *see* **Recess Cove**

Frei Station *see* **Presidente Frei Station**

Freimanis Glacier. 72°05' S, 168°15' E. A tributary glacier, flowing WNW for 40 km, for the last stretch along the S side of Novasio Ridge, and it is between that ridge and Mount Greene that it enters Tucker Glacier, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Harry Freimanis (b. May 1939), aurora scientist and scientific leader at Hallett Station in 1962-63. NZ-APC accepted the name.

Fremouw Peak. 84°17' S, 164°20' E. A prominent peak, rising to 2550 m, it forms the S side of the mouth of Prebble Glacier, in the SW sector of the Queen Alexandra Range. Named by US-ACAN in 1966, for Edward Joseph Fremouw (b. 1934), aurora scientist at Pole Station in 1959.

Caleta French *see* **Caleta Corthorn**

French, Daniel. b. 1879, Connecticut. He was a crewman on the *Huron*, in the South Shetlands, in 1820-22.

French, Theodore *see* **USEE 1838-42**

French Antarctic Expedition 1837-40. Abbreviated in this book to FrAE 1837-40. The first French Antarctic expedition, led by Jules-Sébastien-César Dumont d'Urville (*see under* **Dumont**). **Sept. 7, 1837**: The expedition left Toulon with two corvettes, the *Astrolabe* and the *Zélée*. On the *Astrolabe* were 17 officers and 85 men: Dumont d'Urville (captain); Lt. Louis de Roquemaurel (1st officer, and 2nd-in-command of the ship); François-Edmond-Eugène Barlatier de Mas (2nd officer); Joseph-Antoine Duroch, Jacques-Marie-Eugène Marescot du Thilleul, and Jean-Marie-Émile Gourdin (ensigns); Louis-Jacques Ducorps (purser); Jacques-Bernard Hombron (naturalist and surgeon); Pierre-Marie-Alexandre Dumoutier (assistant naturalist and phrenologist); Louis-Emmanuel Le Maistre Duparc, Charles-François-Eugène Gervaize, and Pierre-Antoine Lafond (élèves); Louis Le Breton (draftsman and surgeon's aide); César Desgraz (Dumont d'Urville's secretary); Félix-Balthasar Simon, Pierre-Sébastien Long, Pierre Pinaud, and Victor-Pierre-Joseph Douilliet (pilots); Paul Plagne, Jean-Baptiste Roux (gunner); Honoré-Isidore Daniel, and Michel-Antoine Boutin (carpenters); Charles-Henri Kosmann (helmsman); Jacques Rougier (sailmaker); Antoine-Henri Aude and Jean-Paulin Samat (caulkers); Pierre Garnier, Pierre Surin, François-Joseph Marin, and Jean Tauziet (able seamen); François-Marie Renaud, Jean-Nicolas Carlot, Mathieu Gregory, Gervais-Rose-Guillaume Roche, Yves Le Déan, Pierre-Auguste Rectin, Balise-Germain Masily, Pierre Avril, Léonard-François Niel, Laurent Rabère, François-Daniel Grouhand, Jean-Marie Coste, Toussaint-Michel Lainé, and Félix-Joseph-Olivier Calvé (ordinary seamen — many of these lads would be promoted to able seaman during the voyage); Jonny Jourdain, Victor Tabella, Joseph-Louis Le Doux, Louis-Marie Brasquern, Auguste-Constant Malusieux, Julien-François Bajean, Joseph Le Jaune, Pierre-Célestin Costiou, Louis Clo, Eugène Le Prince, Pierre-Léon Bernard, André Geolier, Joachim Bouchet, Joseph-Philippe Tesson, Victor Eveno, François-Gustave Rousseau, Pierre Lartigaux, Raimond de Nogaret, Antoine-Clément-Édouard Duffourc, Pierre-Paul-Adeline Saint-Martin, Jean-Marie-Louis Le Blanc, François-Marie Camus, and Jean-Léopold Massé (junior seamen); Joseph Chedeville, Théodore-Charles le Lieur de Laubepin, Elzéard-Alfred Lonclas (apprentice seamen); Jean-Baptiste-Paul Dourille, Lazare-Joseph Gavot, Jean-Baptiste-Dominique Simon, Haldéric-Victor Vilmain, Louis Favreau, and André-Alexandre Savatier (cabin boys); Frédéric Moser (armorer and smith); Charles Baur (magasinier); Lazare-Benoît Imbert (food supply officer); Ferdinand Marret (baker); Joseph Michel (cook); Baptiste Dubord and Joseph Camagne (stewards); Napoléon Fabre (captain's & officers' cook); André Perry (élèves' steward). On the *Zélée* were 14 officers and 68 men: Charles-Hector Jacquinot (captain), Joseph-Fidèle-Eugène du Bouzet and Charles-Jules-Adolphe Thanaron (lieutenants), Louis-François-Marie Tardy de Montravel, Antoine-Auguste-Thérèse "Tony" Pavin de la Farge, and Auguste-Élie-Aimé Coupvent-Dubois (ensigns), Félix-Casimir-Marie Huon de Kermadec (purser), Élie-Jean-François Le Guillou (draftsman, artist, and surgeon's aide); Ernest-Auguste Goupil (artist); Jean-Edmond Gaillard, Germain-Hector Perigot, and Joseph-Emmanuel Prosper Boyer (élèves), Honoré Jacquinot (naturalist and surgeon 3rd class); Jean-Gaspard Gras, Honoré-Antoine-Étienne Argelier, Jean-Joseph Fugairon, Jean-Hippolyte Richieu, and Louis Bernard (pilots), Pierre-Joseph Augias (coxswain); Joseph-Marie-Antoine Coutelenq and Joseph-Antoine Vidal (carpenters); Thomas-Pascal Salusse and Pascal-Jean-Baptiste Abram (caulkers); Julien Pupier (armorer); Rémond-Pierre Robert (gunner); Charles-Louis Bernard (sailmaker); Simon-Jean Touchard, Joseph Bidet, Pierre Daguien, Louis Lagord, André Perron, Jean-Baptiste Pied, Jean-Baptiste-Édouard Goguet, Lazare Michel, Léon-Pierre Roy, Jean Sureau, Defundini-Maurice Rubaudo, and Jean-Louis Provost (able seamen); François-Marie Le Mestre, Yves-Sylvain Le Bris, Louis-Léon Le Moigne, Guillaume Bouchet, Jean Monié, Honoré-Marius Gueillet, Théophile-François-Flavien Millet, Gilles-Lazare Bajat, Léonard Brunet, Constantin Tavera, François Got, Jean-François Le Cerf, Aristide-Robert Le Preux, Jean-Louis Cornu, Casimir-Jean-Marie Rouxel, Antoine-Barthélemy Affre, Alexandre Deniel, Étienne-Victor Albert, Charles Rochefort, Évariste-Guinolet Peltier, Jean-Jules Minderman, Noël-Eustache-Étienne Fabry, Jacques-Eugène de Lorme, Jean Beaupertuis, Paulin-Justin Mauvoisin, and Édouard-Alexandre Roquet (ordinary seamen); Frédéric Sthal (junior seaman); Victor Martini, Jean-Louis Gérard, Joseph Feraud, Placide-Adolphe Poiron, Marius Coulomb, Pierre Moreau (cabin boys); Joseph-Fortune Reboul (magasinier); Zoïle Worms (medical attendant); Lazare Lion (food supply officer); Joseph Leveng (baker); Victor Fabre (cook), Joseph Meunier, Louis Pflaum, and Jean-Baptiste Figanières (stewards); Jean Gall (élèves' steward). Dumont d'Urville had fiscal incentive to offset his horrendous gout. The emperor Louis-Philippe had offered him a reward for every degree south he passed beyond 67°S, and anything he wanted if he got to the Pole. Once they reached 75°S — if they reached it — each man would receive 100 francs, and another 20 francs for every degree south of that. **Sept. 8, 1837**: They passed Minorca. **Sept. 13, 1837**: They passed Mallorca. **Sept. 16, 1837**: They were passing along the southern coast of Spain. **Sept. 19, 1837**: They sighted Gibraltar. **Sept. 20, 1837**: Through the Straits of Gibraltar. **Sept. 22, 1837**: In the Atlantic. **Sept. 29, 1837**: They sighted the Canaries. **Oct. 1, 1837**: They pulled into Teneriffe. **Oct. 9, 1837**: They left Teneriffe. **Oct. 12, 1837**: Martini, the cabin boy, became an apprentice sailor. **Oct. 28, 1837**: They crossed the Equator. **Nov. 13, 1837**: Le Maistre Duparc left the expedition at Rio, sick. **Dec. 12, 1837**: They entered the Straits of Magellan. Here they spent a month in the Straits of Magellan, studying hydrography and natural history. **Jan. 5, 1838**: The expedition rescued two stranded seal hunters, John Niederhauser, who went on the *Astrolabe*, and George Berdine, who went on the *Zélée*. **Jan. 8, 1838**: They left the Straits of Magellan the way they had come in. **Jan. 14, 1838**: They saw their first icebergs, in 58°S. **Jan. 15, 1838**: They passed into Antarctic waters. **Jan. 17, 1838**: They passed some miles to the E of Clarence Island, which they were unable to see due to fog. For 2 days the two ships lost sight of each

other because of the fog. **Jan. 20, 1838**: They were in 62°03' S, 49°55' W. **Jan. 22, 1838**: The ships got stopped by thick pack-ice. They skirted it for 240 miles or so until they got to north of the South Orkneys. On one occasion they tried to break through the ice, and almost got trapped. **Jan. 24, 1838**: The two ships were in 63°23' S, getting closer and closer to the money. **Jan. 25, 1838**: They were in 64°42' S. **Jan. 28, 1838**: They spotted the South Orkneys. Unable to get through the pack ice, they laid over in the South Orkneys, doing survey work. **Feb. 2, 1838**: They left the South Orkneys, headed south. **Feb. 4, 1838**: In 62°S, the 2 ships got caught in the pack ice for 5 days. **Feb. 9, 1838**: The 2 ships broke free and sailed westward. **Feb. 20, 1838**: They were back at the South Orkneys, again doing survey work. **Feb. 23, 1838**: They left the South Orkneys. **Feb. 25, 1837**: They spotted the South Shetlands. **Feb. 26, 1838**: They were at Bridgeman Island, doing survey work. **Feb. 27, 1838**: They discovered Louis-Philippe Land and Joinville Island, at the north of the Antarctic Peninsula. They charted and mapped the north of Graham Land. **March 2, 1838**: At Astrolabe Island. **March 4, 1838**: At the Dumoulin Rocks. **March 6, 1838**: They arrived at Deception Island. **March 7, 1838**: They left Deception Island and rapidly headed north, because there were 30 cases of scurvy aboard the *Zélée*. The *Astrolabe* had 15 severe cases, including Vincendon-Dumoulin and Barlatier de Mas. **April 1, 1838**: Le Preux died of scurvy aboard the *Zélée*. **April 7, 1838**: They made Chile, with 40 men on the *Zélée* with scurvy, another 40 in bed, and 7 or 8 on their last legs. **April 8, 1838**: They docked at Talcahuano, where they were all rushed to a Chilean hospital. **April 11, 1838**: Jules Jouanard embarked on the *Zélée* as an ordinary seaman. **April 18, 1838**: Niederhauser left the *Astrolabe*, and Berdine left the *Zélée*. Rochelor came aboard the *Zélée* as an ordinary seaman. **April 20, 1838**: Seaman Rouxel died. **April 22, 1838**: Joseph Michel, the cook, ran. **May 1, 1838**: Frédéric Moser ran, and Worms, the medic on the *Zélée*, left. Baronnet replaced him as medic that day. **May 3, 1838**: Seaman Le Mestre ran. **May 9, 1838**: Baptiste Dubord, the steward, and captain's cook Napoléon Fabre, left. **May 12, 1838**: Seaman Le Prince and Perry, the steward, ran. **May 13, 1838**: Seaman Brasquern ran. **May 15, 1838**: Marret, the baker, ran. **May 17, 1838**: Seaman Peltier ran. **May 21, 1838**: Pierre Loupy joined the *Zélée* as an ordinary seaman. **May 22, 1838**: Jean-François-Désiré Gain, new élèves's steward, came aboard the *Astrolabe*, to replace Perry. **May 23, 1838**: Gall, the steward, ran. The expedition left Talcahuano. **May 25, 1838**: They docked in Valparaíso. **May 26, 1838**: Charles Bidal replaced the recently deserted Gall as élèves' steward on the *Zélée*. **May 28, 1838**: Seamen Le Cerf, Minderman, and Rochefort left the *Zélée*, sick. Jean-René Heliès and Auguste-Joseph-François Billoud, ordinary seamen, joined. Jean-Baptiste Beaudoin joined as junior seaman. **May 29, 1838**: Seaman Rectin left the *Astrolabe* and the expedition, and was replaced by Blaise Innard. Apprentice seaman Ferdinand-Léopold Schmidt also joined the *Astrolabe*. Cabin boy Gérard became an apprentice seaman. More important, Antoine-Armand Dupuis came aboard the *Astrolabe* as new cook. Perigot left the *Zélée*, sick, and Jean-Baptiste Pousseau joined the *Zélée* as an able seaman. **May 30, 1838**: They headed out into the Pacific. **June 1, 1838**: They spotted Juan Fernandez Island. **July 1, 1838**: Seaman Innard became an able seaman. **Sept. 1, 1838**: An Englishman whom Dumont d'Urville lists with the impossible name of Frederick Cuwths, joined the *Astrolabe* at Nouka-Hiva. **Sept. 9, 1838**: They docked at Tahiti. **Sept. 15, 1838**: At Tahiti, Paul de Flotte joined the *Zélée* as an élève. **Sept. 27, 1838**: Joseph Poso, a Chilean, joined the *Astrolabe* at Opolu. **Sept. 29, 1838**: Cabin boy Feraud became an apprentice seaman. **Oct. 9, 1838**: Charles Simonet and Mafi-Kelefi joined the *Astrolabe* at Vavao. They then sailed for Samoa, the Solomons, Guam, the Philippines, Amboina, the Banda Islands, New Guinea, Batavia. **Jan. 1, 1839**: Seaman Avril became a sailmaker and ordinary seaman Albert became an AB. **Jan. 10, 1839**: Seamen Touchard and Le Bris ran at Guam. **Feb. 12, 1839**: The mysterious Engishman Cuwths left the *Astrolabe* at Amboina, thus never making Antarctic waters. Gain, the steward, also left. **March 6, 1839**: Gaillard promoted to ensign. **March 20, 1839**: De Montravel promoted to lieutenant commander. **May 8, 1839**: Cabin boy Roiron became an apprentice seaman. **July 15, 1839**: Seaman Pied died on board the *Zélée*. **July 23, 1839**: Cabin boy Coulomb became an apprentice seaman. **July 24, 1839**: Kakou, a Malayan slave, came aboard the *Zélée* at Holo. **Aug. 1, 1839**: Figanières, the steward on the *Zélée*, left at Sambouangang. **Aug. 5, 1839**: Sailmaker Avril died on board the *Astrolabe*. **Aug. 10, 1839**: Boyer promoted to ensign. **Aug. 20, 1839**: Duroch promoted to lieutenant commander, Tardy de Montravel to lieutenant, and Gervaize, Boyer, Lafond, and de Flotte to ensigns. **Sept. 7, 1839**: Mafi-Kelefi died on board the *Astrolabe*. **Sept. 25, 1839**: Lafond put ashore sick at Semarang. **Sept. 28, 1839**: Kakou, the Malayan slave, left the *Zélée* at Samarang. **Oct. 12, 1839**: Martini, the apprentice seaman and former cabin boy, became a junior seaman. **Nov. 3, 1839**: Pflaum, the steward, died aboard the *Zélée*. **Nov. 5, 1839**: Roux, the gunner, died on board the *Astrolabe*. **Nov. 6, 1839**: Seaman Bajat died aboard the *Zélée*. **Nov. 7, 1839**: Seaman Heliès died aboard the *Zélée*. **Nov. 10, 1839**: Salusse died aboard the *Zélée*. **Nov. 17, 1839**: Seaman Goguet died on the *Zélée*. **Nov. 23, 1839**: Marescot-Duthilleul died on board the *Astrolabe,* and seamen Fabry and de Lorme died aboard the *Zélée*. **Nov. 27, 1839**: Tony Pavin de la Farge died on board the *Zélée*. **Dec. 8, 1839**: Gourdin died on board the *Astrolabe*. **Dec. 11, 1839:** They spotted Tasmania. **Dec. 13, 1839**: They anchored in Hobart Town. Clément-Adrien Vincendon-Dumoulin came aboard as hydrographer. Coupvent-Desbois transferred to the *Astrolabe*. Constant Gondoin came aboard the *Zélée* as a junior seaman. **Dec. 15, 1839**: William Cobans, new élèves' steward, joined the *Astrolabe*, and Canadian William Macpherson joined the *Zélée* as an ordinary seaman, as did François Noché. **Dec. 21, 1839**: Moreau, the cabin boy, died. **Dec. 23, 1839**: Simon, the pilot, died in Hobart. **Dec. 24, 1839**: John Roberts joined the *Zélée* as a 6-piaster sailor. **Dec. 25, 1839**: François-Ferdinand Andro joined the *Zélée* as a steward. **Dec. 26, 1839**: Joseph Priceley (another unlikely name) joined the *Zélée* as a 6-piaster sailor and John Jones joined the same ship as a junior seaman. **Dec. 27, 1839**: Pierre-Charles David, a junior seaman, joined the *Astrolabe*. **Dec. 28, 1839**: William Baker, a 6-piaster sailor, joined the *Astrolabe*, and John Lloyd joined the *Zélée* as a junior seaman. Boyer transferred to the *Astrolabe*. **Dec. 30, 1839**: Anthelme Dumoulard joined the *Zélée* as an ordinary seaman, and Pierre Voisin, John Watson, and Williams Willon (yet another unlikely name; Dumont d'Urville did not speak English, so his rendering of certain English names can be inaccurate, even if amusing) joined as a junior seaman. **Dec. 31, 1839**: Adolphe-Alphonse Poidecoeur, a junior seaman, joined the *Astrolabe*. **Jan. 1, 1840**: Seaman Coste became a helmsman and able seaman Albert became a gunner. **Jan. 4, 1840**: Goupil died as they left Tasmania for Antarctica, in search of the South Magnetic Pole. **Jan. 8, 1840**: Coutelenq died on the *Zélée*. **Jan. 16, 1840**: They passed into Antarctic waters. **Jan. 17, 1840**: They were now in 62°05' S, 139°55' E. **Jan. 18, 1840**: Able seaman Pousseau died aboard the *Zélée*, in 63°48' S, 138°48' E. **Jan. 19, 1840**: They sighted the continent itself in 65°40' S, 139°03' E (around the same time, and in roughly the same area of East Antarctica as Wilkes did on USEE 1838-42). **Jan. 21, 1840**: Du Bouzet led a party onto an islet off the shore of Adélie Land, and claimed this coast for France. **Jan. 26, 1840**: They left the area of Adélie Land. **Jan. 29, 1840**: They met the *Porpoise* from Wilkes' fleet but, due to a misunderstanding of signals on both sides, made no communication, even though the commanders (Ringgold and Dumont d'Urville) both wanted to. **Jan. 31, 1840**: They discovered the Clarie Coast. **Feb. 4, 1840**: They headed north out of Antarctic waters, thus forfeiting the reward. **Feb. 15, 1840**: They spotted Tasmania. **Feb. 18, 1840**: They arrived back at Hobart. Pierre Texsier and Pierre Sivade joined the *Zélée* as junior seamen, as did 3 apprentice seamen — Charles Barrois, Charles Desmaretz, and Charles La Coste. **Feb. 19, 1840**: Argelier and Deniel left the *Zélée*, sick. Seaman Willon also left. **Feb. 20, 1840**: Jean-Pierre Le Gard and Jean-Louis Noyon joined the *Zélée* as junior seamen. **Feb. 21, 1840**: Alexandre Piquenot, a junior seaman, joined the *Astrolabe*, and John Jones left the *Zélée*. **Feb. 24, 1840**: Bidal, the steward, ran. Joseph Digs

joined the *Zélée* as a junior seaman. They left Hobart. **Feb. 25, 1840**: 3 stowaways were found on the *Zélée*—John Jones (not the recently departed junior seaman), George Bassell, and Thomas Webb. **March 25, 1840**: They spotted NZ. **March 31, 1840**: They docked at Otago. **April 3, 1840**: Seaman Le Gard ran, and two of the stowaways, Jones and Webb, were put ashore. **April 4, 1840**: Seaman Innard left the expedition. **April 13, 1840**: Noché ran at Otago, and seaman Voisin transferred to the *Pauline*. **April 29, 1840**: Boyer put ashore sick at NZ. **May 3, 1840**: Cobans, the steward, left the expedition, and John Roberts and Andro, the steward, ran. **May 4, 1840**: They left NZ. Marin, the able seaman, transferred to the *Zélée* as a pilot, and gunner Étienne-Victor Albert transferred to the *Astrolabe*. **May 26, 1840**: They were off the SE coast of New Guinea. **May 30, 1840**: They were at the Torres Strait. **June 19, 1840**: They arrived at Timor. **June 24, 1840**: John Watson left the *Zélée* at Coupang. **July 21, 1840**: Gaillard, Malusieux, and Douilliet put ashore sick at Bourbon (later called Réunion). **Aug. 14, 1840**: They spotted Africa. **Aug. 24, 1840**: They rounded the Cape of Good Hope into the Atlantic. **Sept. 7, 1840**: They docked at Saint Helena. **Sept. 10, 1840**: They left Saint Helena. **Sept. 19, 1840**: They crossed the Equator. **Oct. 20, 1840**: They spotted the Azores. **Oct. 31, 1840**: They passed through the Straits of Gibraltar. **Nov. 1, 1840**: Seaman Tabella became a sailmaker. **Nov. 7, 1840**: They arrived back in Toulon. 22 men had died, and 27 deserted.

French Antarctic Expedition, 1903-05. Abbreviated in this book to FrAE 1903-05. What started as Charcot's personal expedition to Greenland in the ship *Français*, changed rapidly when news came that Swedish explorer Nordensjköld was missing in the Antarctic. *Le Matin* got behind it, and raised 450,000 francs by private subscription, and the French government rallied too. It became the French Antarctic Expedition, its main aim to rescue the Swedes, and to explore Antarctica. **Aug. 15, 1903**: At 3 P.M., 21 men left Le Havre on the *Français*, amid the booming of cannon, the strains of "La Marseillaise," and the cheers of 20,000 people. 6 unpaid officers and 14 men (paid). Charcot (leader); Lt. André Matha (hydrographer and 2nd-in-command); Ernest Cholet (ship's captain); Paul Pléneau (engineer and photographer); Sub Lt. Joseph J. Rey (meteorologist); Ernest Goudier (chief engineer); F. Libois (2nd engineer, mechanic, stoker, and carpenter); Jacques-François Jabet (boatswain); A. Besnard (assistant boatswain); Robert Paumelle (steward); F. Rolland, Jacques Guéguen, E. Maignan, F. Hervéou, and Raymond Rallier du Baty (seamen); Pierre Dayné (Italian alpine guide); Louis Poste and François Guéguen (stokers); J. Bonnier and C. Perez (naturalists); and Toby the pig. Two minutes out of port, Maignan was struck by the hawser of the steam tug towing the *Français*, and was killed. The ship returned to port. **Aug. 27, 1903**: The ship left again, with Adrien de Gerlache aboard as adviser. Arrving at Brest, they took on 100 tons of coal donated by the Ministry of Marine. **Aug. 31, 1903**: They left Brest. **Sept. 16, 1903**: At Funchal they met the *Frithiof*, then en route to rescue Nordenskjöld. **Sept. 26, 1903**: They arrived at Cape Verde. **Oct. 19, 1903**: They arrived at Pernambuco, where de Gerlache left and returned to Belgium. The two naturalists, Perez and Bonnier, after a disagreement about their work, left here, and would return to France. **Nov. 16, 1903**: They arrived at Buenos Aires, where they received news that Nordenskjöld had been rescued. **Dec. 8, 1903**: Jean Turquet (zoologist and botanist) and Ernest Gourdon (geologist and glaciologist), the two replacement naturalists, arrived from France. **Dec. 23, 1903**: They left Buenos Aires. M. Rozo (Argentine cook) had joined the expedition, as had 5 Greenland dogs left by Nordenskjöld. **Jan. 15, 1904**: They reached Ushuaia, in Patagonia. **Jan. 26, 1904**: They reached Orange Harbor, in Patagonia. **Jan. 27, 1904**: They left Orange Harbor for the south. **Feb. 1, 1904**: They arrived at Smith Island, in the South Shetlands, then on to Low Island. **Feb. 5, 1904**: The engine started to give trouble, and they sheltered in Biscoe Bay, off Cape Errera. **Feb. 7, 1904**: They arrived at Flandres Bay. **Feb. 18, 1904**: They left Flandres Bay. **Feb. 19, 1904**: They discovered Port Lockroy. **Feb. 26, 1904**: They arrived at Pitt Island. They got as far south as 65°05' S, 64°W, and wintered-over at Port Charcot, Booth Island (then known as Wandel Island). **May 30, 1904**: Charcot took a party for a picnic to neighboring Hovgaard Island. **Late Dec. 1904**: They broke out of the ice. **Dec. 31, 1904**: With the world worried for the expedition's safety, the *Uruguay* arrived at Laurie Island, in the South Orkneys, searching for Charcot. **Jan. 11, 1905**: The Frenchmen sighted Alexander Island. **Jan. 14, 1905**: The *Français* struck a rock, which necessitated constant pumping from then on. **Jan. 29, 1905**: They just made it back to Port Lockroy where, for 10 days, repairs were carried out. **Feb. 15, 1905**: The ship was struggling past Smith Island, in the South Shetlands. **March 5, 1905**: They called at Patagonia, with 75 cases of collected materials from Antarctica, as well as scientific notes. It was only at this point that the world learned that Charcot was safe. **May 5, 1905**: After selling the ship in Buenos Aires to the Argentines, Charcot and his crew left for France on the *Algérie*. It had been a successful expedition.

French Antarctic Expedition, 1908-10. Abbreviated in this book to FrAE 1908-10. This was Charcot's 2nd expedition to Antarctica. **May 18, 1908**: The *Pourquoi Pas?*, Charcot's new ship, was launched. There were 250 applications from sailors to join the crew. **Aug. 15, 1908**: The *Pourquoi Pas?* left Le Havre with 30 men and two women (Charcot's new wife, Meg, and Madame Waldeck-Rousseau, a supporter) on board, and 30,000 persons shouting "bon voyage" from the quay. Many of those on board had been with Charcot to the Antarctic in 1903-05. Charcot (leader, geographer, and bacteriologist), Ernest Gourdon (geologist and glaciologist), Louis Gain (zoologist and botanist), Jacques Liouville (assistant medical officer and zoologist), Albert Senouque (terrestrial magnetism and photography). The crew were: Ernest Cholet (captain); Maurice Bongrain (1st officer, hydrographer, astronomer, pendulum expert, and seismologist, as well as 2nd-in-command of the expedition); Jules Rouch (2nd officer, and meteorologist and oceanographer); René-Émile Godfroy (ship's ensign and tidal observer and hydrographer); F. Rosselin (chief engineer); Louis Poste (2nd engineer); F. Libois (3nd engineer and carpenter); Frachat (motor engineer); Jacques-François Jabet (boatswain); A. Besnard (assistant boatswain); Monsimet, Gonéry L'Hostis, and François Guéguen (stokers); Modaine (cook); Robert Paumelle (steward); and the following sailors: Aveline, Benoît Boland (he would be promoted from élève to lieutenant), Denais, Celestin Dufrèche, Jacques Guéguen, Hervé, Louis Lerebourg, Jacques Nozal (he would be promoted to lieutenant), and Thomas. **Aug. 27, 1908**: Because of high winds, the *Pourquoi Pas?* put into Cherbourg. **Aug. 31, 1908**: Despite continued high winds, the *Pourquoi Pas?* sailed out of Cherboug. **Sept. 5, 1908**: The *Pourquoi Pas?*, beset by gales in the Channel, left Guernsey, where she had been forced to put in. She was now bound for Madeira, and then across the Atlantic to Buenos Aires, where Madame Waldeck-Rousseau was dropped off. **Dec. 10, 1908**: They reached Punta Arenas, Chile. Henrik Van Acken, a Belgian living in Punta Arenas, was taken on as 2nd steward. **Dec. 16, 1908**: They left Punta Arenas, where Meg had been dropped off. Charcot had arranged that, if no news had been heard from him by April 1909, then André Matha should organize a relief expedition. **Dec. 22, 1908**: They were at Smith Island, in the South Shetlands, where they encountered their first iceberg, and later that day they met the Norwegian whaler *Ravn*, which accompanied them to Deception Island, where that evening Charcot and his men were socializing with Norwegian whalers. **Dec. 24, 1908**: Charcot saved the life of a Norwegian whaler's wife by amputating four of her gangrenous fingers. **Dec. 25, 1908**: Charcot left Deception Island, after charting the island in detail, and headed for Port Lockroy. **Dec. 29, 1908**: Charcot reached his old wintering-base at Booth Island. "I feel as though I've never been away." **Jan. 1, 1909**: The *Pourquoi Pas?* anchored in Port Circumcision, Petermann Island. **Jan. 4, 1909**: Charcot, Gourdon, and Godfroy left the ship in a launch to scout the coast near Cape Tuxen. It was meant to be only a short trip of a few hours, but it was 3 days before they got back to the ship—barely alive. **Jan. 8, 1909**: The ship hit a rock. **Jan. 15, 1909**: Charcot discovered the Fallières Coast. After crossing the Antarctic Circle, they cruised along Adelaide Island,

charting it in detail, and proving it to be much longer than was previously thought. They discovered Marguerite Bay (which Charcot named for Meg), and Charcot continued his charting of the Antarctic Peninsula. He froze the ship in at Port Circumcision, and wintered-over, building 4 huts on Petermann Island. **Dec. 27, 1909**: They were back at Deception Island. **Jan. 7, 1910**: They left for the south again. **Jan. 10, 1910**: They discovered Charcot Land (later proved to be an island), then headed W along the pack-ice toward Peter I Island. It was during this period that they reached 70°30' S, their farthest south. **Jan. 22, 1910**: They headed north. **Feb. 11, 1910**: They arrived at Punta Arenas. **May 31, 1910**: They arrived at Guernsey, in the English Channel. **June 4, 1910**: They arrived back in Paris.

French Pass *see* **French Passage**

French Passage. 65°10' S, 64°20' W. A marine passage running in a NW-SE direction through the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Petermann Island, the Stray Islands, the Vedel Islands, and the Myriad Islands, are on the N of it, while the Argentine Islands, the Anagram Islands, the Roca Islands, and the Cruls Islands, are on the S of it. As far as anyone knows, it was first navigated in Jan. 1909 by the *Pourquoi Pas?*, during FrAE 1908-10, and because of that so named by BGLE 1934-37, who roughly charted it in Feb. 1936. It appears on Rymill's 1938 map of that expedition, and also on a 1948 British chart. It appears on an Argentine chart of 1946, as Pasaje Francés, on a 1946 USAAF chart as French Pass, on a 1947 Chilean chart as Paso Francés, and there is a 1948 Argentine reference to it as Paso Français, and another in 1949 as Pasaje Français. US-ACAN accepted the name French Passage in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a 1960 British chart. It appears on a 1957 Argentine chart as Canal Français. In March 1958, it was photographed from a helicopter off the *Protector*, and re-surveyed by an RN Hydrographic Survey unit on the *John Biscoe*, in 1958-59. The 1970 Argentine gazetteer accepted the name Pasaje Français, while the 1974 Chilean gazetteer accepted Paso Francés.

French Naval Expedition 1837-40 *see* **French Antarctic Expedition 1837-40**

French Polar Expeditions. These are the post-war French expeditions (FrPE). **FrPE 1948-49**: Known by the French as TA1 (Terre Adélie 1). The idea was born in Oslo in 1946 when Yves Valette, Robert Pommier, and André-Paul Martin responded to a negative news article which had claimed that France was not interested in Antarctica. Enlisting the aid of Paul-Émile Victor, the hero of Greenland, they initiated the Expéditions Polaires Françaises (E.P.F.), which in 1947 became an organ of the National Centre for Scientific Research. They went to the USA to acquire the 1943 minesweeper *Lancewood*, which they re-named the *Atiette* (a little later renaming her the *Commandant Charcot*), bringing her back to Le Havre for re-fitting. On Sept. 14, 1948, the *Commandant Charcot*, skippered by Max Douguet, left St. Malo, headed for Brest, and left that port on Nov. 26, 1948. Guillon was 2nd-in-command of the ship. The expedition was led by André Franck Liotard. Pommier, Valette, and Martin also went, as did Maurice Harders (radio operator), Bertrand Imbert (ship's ensign and hydrographer), Raymond Jallu (meteorologist), Mario Marret (radioman), André Paget (in charge of construction), Jean Sapin-Jaloustre (surgeon), Pierre Vincent (geologist and 2nd radioman), Jacques Dequecker (colonial administrator), and Pierre Dubart (journalist). On Dec. 1, 1948 the *Commandant Charcot* arrived at Casablanca, leaving there on Dec. 3, 1948, bound for Durban, where they arrived on Dec. 28, 1948. On Dec. 31, 1948, they left Durban, bound for Hobart, where they arrived on Jan. 25, 1949. They left Hobart on Feb. 5, 1949, heading south, and on Feb. 12, 1949 they arrived at the edge of the pack-ice. But it was a bad year for ice, and the longer they failed to penetrate it the smaller their window of opportunity became in which to make the Adélie Coast before winter set in. On March 1, 1949, in 66°10' S, their farthest south, and only 35 miles from the coast (which they could make out), they had to turn back, heading for the Balleny Islands, which they visited. On March 12, 1949 they were at Macquarie Island, and on March 20, 1949 they were back at Hobart. On June 11, 1949 they arrived back in Brest. **FrPE 1949-51**. Led by Pierre Sicaud. On Sept. 20, 1949, the *Commandant Charcot* (again under Max Douguet), left Brest, with 250 tons of equipment, including prefabricated huts and caterpillar tractors. The crew and expedition had basically the same members as for the aborted 1948-49 mission, except that François Tabuteau replaced Imbert as seismologist, Henri Boujon replaced Jallu as meteorologist, and René Gros replaced Vincent as second radioman. Georges Schwartz was also on this expedition, as was Luc-Marie Bayle. Andre Liotard was to be winter leader at Port-Martin. This time they took a flying boat, to help reconnoiter a place for the ship to land. After going via Madeira and Tenerife, they arrived at Dakar on Sept. 30, 1949, leaving there on Oct. 6, 1949, bound for Cape Town, which they reached on Oct. 22, 1949, in time to bury J.A. Martin, the film operator, who had died at sea, of a heart attack, aged 38. Then on to Durban. On Dec. 1, 1949, they arrived at Melbourne, where they did work on the *Commandant Charcot*, and took aboard the dogs they had left behind there on their previous retreat. On Dec. 8, 1949 they arrived at Hobart, leaving there on Dec. 21, 1949, heading south. On Dec. 28, 1949 they met the pack ice, and on Jan. 4, 1950 seaplane reconnaissance began. On Jan. 17, 1950, after 13 days of seaplane reconnaissance, the ship found a passage through the ice, and they landed on that day, even though Jan. 20, 1950, the date the site for Port-Martin Station was chosen, is the official date of their landing, this being done because that was the date, 110 years before, that Dumont d'Urville discovered Adélie Land. On Feb. 3, 1950, the ship was unloaded, and on Feb. 8, 1950 the *Commandant Charcot* left, leaving behind 11 men — Liotard, Boujon, Harders, Gros, Marret, Paget, Pommier, Sapin-Jaloustre, Schwartz, Tabuteau, and Valette. On June 10, 1950, the *Commandant Charcot* made it back to Brest. In Antarctica, Yves Valette's team studied emperor penguins. **FrPE 1950-52**. Led by Michel Barré. By now the E.P.F. had decided to maintain a permanent establishment in Antarctica, rotating personnel every year. The *Commandant Charcot* left Brest on Oct. 3, 1950, taking down a new expedition to relieve the 1949-50 expedition still down there under Liotard. The ship went by way of Algiers, Port Said, Djibouti, Fremantle (where it docked between Nov. 29 and Dec. 3, 1950), and Hobart (Dec. 12-28, 1950). On Jan. 9, 1951 they arrived at Port-Martin, when Liotard was relieved. The *Commandant Charcot* left with the previous winterers on Feb. 5, 1951, leaving behind Barré, Imbert (seismologist), Jean Cendron (doctor and biologist), Paul Perroud (cartographer), Claude Tisserand and Paul Rateau (radio operators), Jacques Dubois and René Dova (mechanics), Roger Kirchner, Robert Le Quinio, Fritz Loewe, Pierre-Noël Mayaud, Jean Bouquin, André Prud'homme, and Raoul Desprez. Tabuteau and Schwartz stayed over from the previous winter. The *Commandant Charcot* made it to Hobart by Feb. 20, 1951, then to Melbourne (where she docked from March 3 to March 10, 1951), then by way of the South Seas, through the Panama Canal, and arrived back in Brest on June 1, 1951. During the 1951 winter Dr. Cendron operated on Tisserand's bowels. He had never done such an operation. Rateau was the anesthetist, Imbert took blood pressure, and the rest, including Barré himself, assisted. Tisserand lived another 30 years. Barré was the first human to see emperor penguins incubating. **FrPE 1951-53**. The *Commandant Charcot* was too old now, and the *Tottan* replaced her as the expedition ship. On Oct. 10, 1951 the *Tottan* left France with a new expedition on board to replace Barré's 1950-52 expedition still in Antarctica. On Dec. 17, 1951, they left Hobart, heading south, and on Dec. 23, 1951 they hove into view of Port-Martin, but it was not until Jan. 14, 1952 that the ship was able to penetrate the pack-ice and land. On Jan. 22-23, 1952, René Garcia was due to take over from Barré as leader at Port-Martin, but Port-Martin went up in flames. The ship, meanwhile, had cruised around to Pointe Géologie, where Marret set up a winter camp to study emperor penuins. It was no longer possible to conduct the expedition as planned, so it was decided to quit, leaving behind only 7 men at Pointe Géologie, under Marret — Rivolier, Prévost, Vincent, Duhamel, Lépineux, and Dovers. On Jan. 31, 1952, the *Tottan* arrived at Hobart, and on Feb.

3, 1952 at Melbourne. The French called a halt to the permanent settlement idea in Antarctica, and so the *Tottan* came down empty to pick up Marret's crew, arriving at Pointe Géologie on Jan. 2, 1953 to pick up the 7 men. The ship left the base unoccupied on Jan. 14, 1953. On Jan. 19 she passed Macquarie Island, and Auckland Island on the 22nd, arriving in Hobart on Jan. 25, 1953. This was the last French Antarctic expedition until IGY, three years later. **FrPE 1955-57**. Led by Paul-Émile Victor and Bertrand Imbert. This was the first French Antarctic expedition since 1953, and was designed to prepare the bases for the French participation in IGY of the following year. On Dec. 19, 1955, the *Norsel* left Melbourne, on Dec. 26, 1955 she left Hobart, and on Jan. 1, 1956, she landed at Adelie Land. Imbert returned on the *Norsel* (and then by air; he arrived back in Paris on Feb. 10, 1956) leaving Robert Guillard as chef de mission and 13 other men in the field — Maurice Grisoni (surveyor and 2nd-in-command), Jean Laroque and Pierre Dill (meteorologists), Jean-Marie de Souza-Macquin (ionosphere physicist), Jean Prévost (biologist), Gérard Bazile (doctor), Roger Thurieau and Maurice Sebbah (radiomen), Jacques Quinquet (engineer/mechanic), Georges Couly (in charge of power station), Mathurin Evanno and Lucien Faivre (technicians), and Guy Duffau (cook). The group established Dumont d'Urville Station at Pointe Géologie, on Pétrel Island, in the Géologie Archipelago, and also Charcot Station inland. They also built a railroad to haul the supplies from the coast to the main base. This expedition was relieved in Jan. 1957 by the French Polar Expedition 1956-58, the first real French IGY expedition to Antarctica, led by Imbert again. Guillard arrived back in Paris on Feb. 27, 1957, via the USA. **FrPE 1956-58**. Led by seismologist Bertrand Imbert. The *Norsel* left Le Havre on Oct. 6, 1956, with 25 scientists and technicians on board, as well as 350 tons of equipment and a helicopter. The group included: Sidney Emery (hydrographer and 2nd-in-command), Jacques Gilbert, Robert Magniez, and Michel Plantier (meteorologists), Maurice Grisoni (surveyor), Gilbert Weill, José Daguillon, Kenneth Bullough, and Félix Lazarus (aurora specialists), André Lebeau (magnetician), Gilbert Goy (doctor), René Merle and Pierre Manuel (radiomen; Merle was chief radio officer), Fernand Jardel (mechanic), René Dova (in charge of power station), Marcel Renard and René Renard (technicians), Jacques Masson (photographer), and Jean Lapostolle (cook). In Jan. 1957, at Dumont d'Urville Station, this expedition relieved the French Polar Expedition 1955-57 (which had been led on the ground by Robert Guillard). This was the French contribution to IGY, and its missions were to find and occupy the South Magnetic Pole, to measure the variations of the terrestrial magnetic field, and to study meteorological phenomena. Imbert and Grisoni made 2 explorations to a depth of 300 miles. 3 scientists — Jacques Dubois, Roland Schlich, and Claude Lorius — wintered-over at Charcot Station (which was established during this expedition), about 300 km inland from the coast. **FrPE 1957-59**. Led by Gaston Rouillon, on the *Norsel*. Other personnel included André Cornet (surveyor and 2nd-in-command) and André Prud'homme (one of the 4 meteorologists). The expedition arrived at Dumont d'Urville Station on Jan. 7, 1958, on the *Norsel*, to relieve the French Polar Expedition 1956-58 (which had been led on the ground by Bertrand Imbert). The 3 men who wintered at Charcot Station were René Garcia, Henri Larzillière, and Guy Ricou. Gaston Rouillon was, in turn, relieved in Jan. 1959 by the French Polar Expedition 1958-60, led by René Merle. **FrPE 1958-60**. Led by René Merle, on the *Norsel*. They arrived at Dumont d'Urville Station in Jan. 1959 and relieved the French Polar Expedition 1957-59, which had been led on the ground by Gaston Rouillon. In Dec. 1959 they were relieved by the incoming French Polar Expedition 1959-61, led by Alfred Faure. **FrPE 1959-61**. The 10th French Expedition. Led by Paul-Émile Victor on the *Norsel*. Alfred Faure would be leading the men on the ground, at Dumont d'Urville Station, for the winter. 22 men, 13 scientists. In Nov. 1959 they left France on the *Norsel*, and in Dec. 1959 arrived at Dumont d'Urville Station, to relieve the French Polar expedition 1958-60, which had been led on the ground by René Merle. In Dec. 1960 they were relieved by the incoming French Polar Expedition 1960-62, led by Fernand Digeon. **FrPE 1960-62**. Led by Fernand E. Digeon, on the *Norsel*. They arrived at Dumont d'Urville Station in Dec. 1960, to relieve the French Polar Expedition 1959-61, which had been led on the ground by Alfred Faure. Digeon led the 1961 winter party at Dumont d'Urville. **FrPE 1961-63**. Led by Paul-Émile Victor on the *Magga Dan*. Alfred Faure led the part of the expedition that went to the sub-Antarctic islands. René Merle led the winter party at DuDu (the French nickname for Dumont d'Urville Station). **FrPE 1962-64**. Led by Robert Guillard on the *Magga Dan*. Alfred Faure led a summer expedition to the Îles Crozet (not in Antarctica). **FrPE 1963-65**. Led by Paul-Émile Victor on the *Thala Dan*. **FrPE 1964-66**. Led by Claude Lorius. **FrPE 1964-65**. Led by Paul-Émile Victor on the *Thala Dan*. Reconstruction of Dumont d'Urville Station was begun. **FrPE 1965-66**. Led by Paul-Émile Victor on the *Thala Dan*. **FrPE 1966-67**. Led by Paul-Émile Victor on the *Thala Dan*. Alfred Faure led the expedition part to the sub-Antarctic islands. **FrPE 1967-68**. Led by Paul-Émile Victor on the *Thala Dan*. **FrPE 1968-69**. Led by Paul-Émile Victor on the *Thala Dan*. **FrPE 1969-70**. Led by Robert Guillard on the *Thala Dan*. **FrPE 1970-71**. The *Thala Dan*. **FrPE 1971-72**. The *Thala Dan*. **FrPE 1972-73**. The *Thala Dan*. **FrPE 1973-74**. The *Thala Dan*. **FrPE 1974-75**. The *Thala Dan*. **FrPE 1975-76**. The *Thala Dan*. **FrPE 1976-77**. The *Thala Dan* struck a rock off DuDu, and managed to get off after 3 weeks, and headed for Melbourne for repairs. **FrPE 1977-78**. The *Thala Dan*. **FrPE 1978-79**. The *Thala Dan*. **FrPE 1979-80**. The *Thala Dan*. Robert Guillard was back, conducting a summer glaciological investigation. **FrPE 1980-81**. The *Thala Dan*. Guillard was back again, same purpose. **FrPE 1981-82**. The *Thala Dan*. Guillard was back, same purpose. **FrPE 1982-83**. The ship was the *Lady Franklin*. Construction began on a hard runway at DuDu. **FrPE 1983-84**. The ship was the *Lady Franklin*. **FrPE 1984-85**. The ship was the *Polarbjørn*. **FrPE 1985-86**. The ship was the *Polarbjørn*. **FrPE 1986-87**. The ship was the *Polarbjørn*. **FrPE 1987-88**. The ship was the *Polarbjørn*. **FrPE 1988-89**. The ship was the *L'Astrolabe*. **FrPE 1989-90**: The ship was the *L'Astrolabe*. **FrPE 1990-91**: The ship was the *L'Astrolabe*. **FrPE 1991-92**: The ship was the *L'Astrolabe*. **FrPE 1992-93**: The ship was the *L'Astrolabe*. Investigations of Dome C were made. The landing strip at Dumont d'Urville Station was completed. **FrPE 1993-94**: The ship was the *L'Astrolabe*. Concorde Station was opened at Dome C. **FrPE 1994-95**: The *L'Astrolabe*. **FrPE 1995-96**: The *L'Astrolabe*. **FrPE 1996-97**: The *L'Astrolabe*. **FrPE 1997-98**: The *L'Astrolabe*. **FrPE 1998-99**: The *L'Astrolabe*. On Feb. 8, 1999 there was a helo crash while Dumont d'Urville Station was being relieved. 3 men died. **FrPE 1999-2000**: The *L'Astrolabe*. There continue to be French expeditions.

Frenchman Hill *see* **Mount Français**

Cape Freshfield. 68°22' S, 151°05' E. An ice-covered cape, between Deakin Bay and the Cook Ice Shelf, on the coast of George V Land. At one time in the early 20th century this was thought to be the Cape Hudson (q.v.) discovered by Wilkes in 1840, during USEE 1838-42. Mapped in 1912 by the Far Eastern Party of AAE 1911-14, and named by Mawson for geographer Douglas William Freshfield (1845-1934), president of the Royal Geographical Society, 1914-17. He was also a mountain climber, in the Caucasus and the Himalayas. US-ACAN accepted the name in 1947, and ANCA followed suit. When Mawson mapped it, it was the northernmost point of a prominent peninsula. By 1958, when Phil Law's 1958 ANARE party visited it, the point of Cape Freshfield was found to have broken away.

Freshfield Nunatak. 80°28' S, 24°53' W. An isolated nuatak, rising to about 1450 m (the British say about 1250 m), to the SE of the Herbert Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS from these efforts. Named by UK-APC on Jan. 5, 1972, for Douglas Freshfield (*see* **Cape Freshfield**). US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Isla Fresia *see* **Mügge Island**

Freud Passage *see* **Pampa Passage**

Frey, Johann. Engineer's assistant on the *Schwabenland* during GermAE 1938-39.

Mount Freya. 77°36' S, 160°51' E. A prominent peak, rising to 2225 m, E of Mount Thor, and S of The Labyrinth, in the Asgard Range of Victoria Land. Named by VUWAE 1958-59, for the Norse goddess. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Freyberg Mountains. 72°15' S, 163°45' E. A system of mountain ranges in Oates Land, on the upper right bank of Rennick Glacier, and bounded by that glacier, by the Bowers Mountains to the N (and separated from them by the Canham Glacier), by Black Glacier, and by Evans Névé. The easternmost range in the Freybergs is the Salamander Range. Other notable features within the Freyberg Mountains include the Alamein Range, Monte Cassino, Mount Baldwin, the Black Stump, and Gallipoli Heights. Named by the Northern Party of NZGSAE 1963-64, for Lord Bernard Cyril Freyberg (1889-1963), the most famous of all the NZ generals. He was governor general of NZ, 1946-52, and was raised to the peerage as Baron Freyberg, in 1951. NZ-APC accepted the name, and US-ACAN followed suit in 1964. Originally plotted in 72°10' S, 163°45' E, the feature has since been replotted.

The *Freydis*. German yacht, skippered by Erich Wilts, which visited the South Shetlands and the Antarctic Peninsula in 1981-82. She was back in Antarctic waters in 1990-92, skippered by Herr Wilts and Heidi Wilts. The vessel was partially crushed by ice, and was forced to winter-over at the Argentine summer station at Deception Island in 1991, until rescued by the Argentine navy. Heidi Wilts wrote *Stranded in the White Hell* (translated title). The Wiltses were back on the *Freydis* in 1992-93, 1993-94, 1995-96, and 1997-98, visiting the South Shetlands and the Antarctic Peninsula.

Cabo Freytag. 67°39' S, 67°02' W. A cape in Bourgeois Fjord (which divides the Loubet Coast from the Fallières Coast, on the W coast of Graham Land). Named by the Argentines.

Peak of Frezeland *see* **Mount Friesland**

Friar Island. 64°55' S, 63°55' W. Immediately NE of Manciple Island, in the central part of the Wauwermans Islands, in the Wilhelm Archipelago. Shown on an Argentine government chart of 1952, but not named. Charted by an RN Hydrographic Survey unit on the *Protector*, in 1956-57. Named by UK-APC on July 7, 1959, for the *Canterbury Tales* character. It appears on a British chart of 1960. US-ACAN accepted the name in 1960.

Frickeberg. 73°29' S, 165°57' E. A peak in the Mountaineer Range of Victoria Land. Named by the Germans.

Glaciar Fricker *see* **Fricker Glacier**

Fricker Glacier. 67°03' S, 65°00' W. A glacier, 16 km long, close N of Monnier Point, it flows NE into the SW side of Mill Inlet, on the Foyn Coast, on the E coast of Graham Land. In 1947 it was surveyed from the ground and charted by Fids from Base D, and photographed aerially by RARE 1947-48. Ronne named it Wilson Glacier, for Gen. R.C. Wilson (*see* **Mount Wilson**). It appears as such on Ronne's 1949 map. However, the Fids named it Fricker Glacier, for Karl Victor Fricker (1830-1907), German Antarctic historian. His ground-breaking book *Antarktis* came out in 1898. UK-APC accepted that name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears as such on a British chart of 1954, and also in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Glaciar Fricker, and, today, both the Argentines and the Chileans call it that. The British map it in 67°05' S, 65°08' W.

Mount Fridovich. 85°27' S, 148°12' W. A small mountain, rising to 440 m, at the N side of the terminus of Leverett Glacier, it marks the W limit of the Harold Byrd Mountains. Named by US-ACAN in 1967, for Lt. (jg) Bernard Fridovich, USN, meteorologist who wintered-over at McMurdo in 1957. In July 1957, he got hurt in a helo crash, was in sick bay until October, and flew out on the first available plane back to the US.

The *Fridtjof* *see* **The *Frithiof***

Estrecho Fridtjof *see* **Fridtjof Sound**

Île Fridtjof *see* **Fridtjof Island**

Îlot Fridtjof *see* **Fridtjof Island**

Isla Fridtjof *see* **Fritdtjof Island**

Islote Fridtjof *see* **Fridtjof Island**

Paso Fridtjof *see* **Fridtjof Sound**

Fridtjof Island. 64°53' S, 63°22' W. An island, rising to an elevation of about 100 m above sea level, 2.5 km NE of Vazquez Island, off the SE side of Wiencke Island, in the Gerlache Strait, in the Palmer Archipelago, off the Danco Coast, on the W coast of Graham Land. Discovered and roughly charted on Feb. 10-11, 1898, by BelgAE 1897-99, and named by de Gerlache as Îlot Fridtjof, presumably for Fridtjof Nansen, the great Arctic explorer. It appears as such on Lecointe's 1899 map of the expedition. Even on other maps of this expedition, there are spelling variations of this name, but all are instantly recognizable. The name Fridtjof Island first appears on Dr. Frederick Cook's 1900 English language version map of that expedition, and it shows up as such again on a British chart of 1901, and was the name accepted by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. US-ACAN accepted the name in 1965, and it appears as such on a British chart of 1974. Although it appears variously spelled on some Argentine charts before 1949, that was the year it first appears as Isla Fridtjof, the name that was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. However, it does appear on a 1953 Argentine chart as Islote Fridtjof. Between 1959 and 1967 it was re-charted from the *John Biscoe*.

Mount Fridtjof Nansen. 85°21' S, 167°33' W. Also seen as Mount Nansen (there is another Mount Nansen, though). A massive mountain, rising to 4070 m, which dominates the area between the heads of Strom Glacier and Axel Heiberg Glacier, and which forms the E flank of Liv Glacier, at the head of the Ross Ice Shelf, in the Queen Maud Mountains. Discovered by Amundsen in 1911, first named by him as Olavshøi, and later renamed for the famed Arctic explorer. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Fridtjof Sound. 63°34' S, 56°43' W. A sound, clear and deep, 3 km wide, and 10 km long in a N-S direction, it separates Andersson Island and Jonassen Island to the E from Tabarin Peninsula to the W, at the NE end of the Antarctic Peninsula. Navigation is difficult due to the presence of a great quantity of ice which covers its waters. Discovered and charted on Jan. 15, 1902, by SwedAE 1901-04, and named by Nordenskjöld as Frithiofs Sund, for the *Frithiof* (q.v.). Spelling variations abound, even in Sweden, but all references to this feature over the years are instantly recognizable. The spelling Fridtjof Sound appears on a British chart of 1921, and was accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer. Surveyed by Fids from Base D between 1945 and 1947. It appears on a Chilean chart of 1947 as Paso Fridtjof, and that name was accepted by the 1974 Chilean gazetteer. On an Argentine chart of 1949, it appears as Estrecho Fridtjof, and that was the name accepted by the 1970 Argentine gazetteer.

Friedburg-Insel *see* **Vedel Islands**

Glaciar Friederichsen *see* **Friederichsen Glacier**

Friederichsen Glacier. 66°38' S, 64°09' W. A glacier, 11 km long, it flows E into Cabinet Inlet, close N of Mount Hulth, on the Foyn Coast, on the E coast of Graham Land. Surveyed from the ground, and charted, by Fids from Base E in 1947, and that year also photographed aerially by RARE 1947-48. Named by those Fids for German cartographer Ludwig Friederichsen (1841-1915) (*see* **Mapping of Antarctica** and **The *Jason***). Finn Ronne called it Bailey Glacier, after Clay Bailey, and it appears as such on his 1949 map. UK-APC accepted the name Friederichsen Glacier on Jan. 22, 1951, and it appears as such on a 1954 British chart, and also in the 1955 British gazetteer. US-ACAN followed suit with that naming, in 1952. It appears on a 1957 Argentine chart as Glaciar Friederichsen. The British plot it in 66°38' S, 64°18' W.

Friedmann Nunataks. 70°55' S, 65°28' W. A small group of nunataks, rising to about 1765 m, 10 km SE of the Braddock Nunataks, on the W margin of the Dyer Plateau, near the head of Ryder Glacier, at George VI Sound, on the Antarctic Peninsula. Mapped by USGS in 1974 from USN air photos taken between 1966 and 1969, and from ground surveys conducted by BAS personnel from Fossil Bluff between 1970 and 1972. Named by US-ACAN in 1976, for Herbert Friedmann ornithologist from the Smithsonian Institution, author of the article, "Birds of the United States Antarctic Service Expedition 1939-41," in the *Proceedings of the American Philosophical Society*, vol. 89; 1945. UK-APC accepted the name on July 21, 1976.

It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Friedmann Peak. 79°51' S, 156°45' E. A prominent peak, rising to 1920 m, in the central part of Kennett Ridge, in the Darwin Mountains. Named by US-ACAN in 2001, for Roseli Ocampo Friedmann (b. Nov. 23, 1937, Manila), professor of biology at Florida A & M (*see* **Friedmann Valley**).

Friedmann Valley. 77°54' S, 160°30' E. A valley, W of Rector Ridge, at the head of Beacon Valley, in the McMurdo Dry Valleys, in the Quartermain Mountains of Victoria Land. Named by US-ACAN in 1992, for astrobiologist E. Imre Friedmann (b. Dec. 20, 1921, Budapest. d. July 11, 2007), of the Polar Desert Research Center, Florida State University, a usarp in Antarctica virtually every summer between 1976-87. His wife, Roseli Ocampo-Friedmann (*see* **Friedmann Peak**) was with him in the last 4 summers there.

The *Friedrich Engels*. Name also seen as the *Fridrikh Engel's*. Tanker used by the Russians in 1966 to supply Mirnyy and Molodezhnaya Stations. Capt. I.A. Man (q.v.). Also during the 1965-67 Soviet expedition, V.F. Ivanov skippered the ship.

Friends, Frederick *see* **USEE 1838-42**

Friends of the Earth. An environmental group which, in 1984, began their involved concern with the future of Antarctica.

Friendship Peak. 69°24' S, 76°24' E. One of the highest peaks seen to the E of Law-Racovitza Station, in the Larsemann Hills, on the Ingrid Christensen Coast of Queen Maud Land. Its N slope is gentle, but the S profile drops off steeply. It overlooks what was then Law Base and Progress Station (i.e., the Australian and Russian bases respectively), thus seeming to unite them in friendship. Named by ANCA.

Mount Fries. 80°57' S, 156°36' E. A prominent peak, rising to 1983 m above sea level, just S of the mouth of Zeller Glacier, it is one of the westernmost summits along the S wall of Byrd Glacier. Named by US-ACAN in 1965, for Robert H. Fries, aurora scientist who wintered-over at Pole Station in 1963. ANCA accepted the name.

Mount Friesland. 62°40' S, 60°11' W. Rising to 1790 m (the British say 1650 m), 5 km ENE of the head of False Bay, it is the highest peak on Livingston Island, in the South Shetlands. It was known to sealers in 1820-21, and was variously known as Peak of Frezeland (it appears as such in Burdick's log of Feb. 15, 1821), Fris Land Peak (Palmer, 1820-21), Friezland Peak, and Peak of Friezland (both by Fildes, 1821), Mount Freesland (Capt. Davis's log of Oct. 18, 1821), Friezlands Pik (Fildes, 1827), and Friesland Peak (Powell's chart of 1831). On Dumont d'Urville's chart of 1842 it appears as Pic Friesland. The name of Bernard, or Barnard (after Capt. Charles Barnard) began to be applied to this feature in the mid-1800s. It appears as Pic Bernard in an 1851 reference by Vincendon-Dumoulin (on Weddell's chart, published in Aug. 1825, the name Barnard Peak had been applied to nearby Needle Peak). Continuing the error, Petermann's map of 1867 shows it as Barnards Peak, a British chart of 1901 shows it as Barnard Peak, de Gerlache's 1902 chart shows it as Pic Barnard, and on a 1933 Discovery Investigations chart it appears as Mount Barnard. It appears on a 1943 U.S. Hydrographic Office chart as "Friesland Peak (Mount Barnard)," on Argentine charts of 1946 and 1954 as Monte Barnard (but referring only to the westernmost summit), and on a French chart of 1951 as Mont Barnard. On a 1954 Argentine chart, two of the individual summits on this mountain are referred to as Pico Aguja and Pico Falsa Aguja. Mount Barnard was the name accepted by both US-ACAN and UK-APC, and it appears as such in the 1955 British gazetteer. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS between 1957 and 1959. On July 7, 1959, UK-APC restored the name Mount Friesland to this entire mountain, re-applying the name Barnard to Barnard Point (q.v.). US-ACAN accepted this situation in 1960. The 1961 British gazetteer has "Mount Friesland (Barnard)." It appears on a 1963 Argentine chart as Monte Bernard, and on a Chilean chart of 1966 as Monte Benard (sic), but both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the name Monte Barnard (for the entire feature). Last plotted in late 2008, by the British.

Friesland Island *see* **Livingston Island**

Friesland Peak *see* **Mount Friesland**

Friesland Point *see* **Renier Point**

Friesland Ridge. 62°40' S, 60°11' W. A ridge, 5 km wide, it is the W ridge of the Tangra Mountains, and runs 15.5 km in a NE direction from Botev Point to Shipka Saddle, 3.52 km ESE of the summit of Pliska Ridge, and 9.52 km ESE of Sinemorets Hill, on Livingston Island, in the South Shetlands. It has 6 main peaks on it, Mount Friesland (1684 m) being the northwesternmost, as well as the highest peak on Livingston Island. Roughly mapped by the British in 1968, and in more detail by the Spanish in 1991, it was surveyed in detail by the Bulgarians in 1995-96. It was already being called Friesland Ridge when the Bulgarians named it as such officially (Hrebet Frisland) on March 15, 2002, in association with Mount Friesland.

Frietus, Isaac *see* **UEE 1838-42**

Frietus, Vincent *see* **USEE 1838-42**

Frigate Range. 82°48' S, 162°20' E. A high range, rising to over 3048 m, and extending E for 20 km from Mount Markham, in the Queen Elizabeth Range. Named by the Northern Party of NZGSAE 1961-62 for the NZ frigates in Antarctic waters. Peaks in this range were named after some of these individual vessels—*Pukaki*, *Rotoiti*, and *Hawea*. US-ACAN accepted the name in 1966.

Frigga Peak. 66°25' S, 64°00' W. Rising to 1570 m, on the S side of Anderson Glacier, between that glacier and Sleipnir Glacier, about 10 km WNW of Balder Point, on the Foyn Coast, on the E coast of Graham Land. In late 1947 it was photographed aerially by RARE and surveyed from the ground by Fids from Base E, who also charted it. In association with nearby Mount Odin, it was named by FIDS in 1947 for Frigga, the cloud-spinning goddess in Norse mythology. Clouds formed on this peak earlier than on any other in the area. UK-APC accepted the name on Jan. 22, 1951, and it appears on a British chart of 1952, and also in the 1955 British gazetteer. US-ACAN accepted the name in 1952. The Chileans call it Montaña Orión, after Adolf Andresen's whaling factory ship *Orión* (not in Antarctic waters) of ca. 1914. It appears on a 1957 Argentine chart simply translated as Pico Frigga, but by 1978 the Argentines were calling it Montaña Newbury, for Dr. Eduardo Federico Newbery (sic) (1872-1908), an Argentine dentist of American descent, an aerostat (i.e., balloon) pilot, and founder of Argentina's first aero club. He and Eduardo Romero disappeared in their aerostat *Pampero*, the first Argentines to die in an air accident (if, indeed, they did die). His brother, George Newbery, was an even more famous aviator.

Friis-Baastad, Kåre. First name also seen, of course, as Kaare. b. Oct. 13, 1913, Oslo, Norway, son of Dr. Wilhelm Adam Johan Friis Baastad and his wife Ina Wulff-Engh. The hyphen seems to have been added later. On June 17, 1942, he married the writer Ellinor Margrethe "Babbis" Blauenfeldt, and they had four children. After World War II, he started the first seaplane route in northern Norway, and was a captain in the Norwegian Air Unit during NBSAE 1949-52. He was still alive in 1957. Babbis died of pneumonia in 1970, aged 49.

Friis-Baastad Peak. 72°53' S, 3°18' W. One of the ice-free peaks at the S side of Frostlendet Valley, 1.5 km SE of Mana Mountain, on the W side of Penck Trough, in the S part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Friis-Baastadnuten, for Capt. Kåre Friis-Baastad. US-ACAN accepted the name Friis-Baastad Peak in 1966.

Friis-Baastadnuten *see* **Friis-Baastad Peak**

Friis Hills. 77°45' S, 161°25' E. A cluster of ice-free hills, 10 km in extent, and rising to 1750 m, at the N side of the bend in Taylor Glacier, in Victoria Land. Named by US-ACAN in 1975, for geographer and archivist Herman Ralph Friis (b. Dec. 11, 1905, Chicago. d. Sept. 23, 1989), director of the Center for Polar Archives, in the National Archives. He was a member of US-ACAN, 1957-73, and was U.S. exchange scientist at Showa Station in 1969-70.

Friis Hills Automatic Weather Station. 77°45' S, 161°31' E. Installed in Nov. 2003, by the Taylor Glacier Project, at 1581 m, in the Friis Hills.

Fringe Rocks. 66°04' S, 65°55' W. A group

of rocks forming the W limit of the Saffery Islands, off Cape Evensen, on the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. In 1956-57 this feature was photographed aerially by FIDASE and surveyed from the ground by Fids from Base J. Named by UK-APC on July 7, 1959, for their position on the fringe of the ships' passage between the Saffery Islands and the Trump Islands. US-ACAN accepted the name in 1971.

Frio Peak. 78°08' S, 162°52' E. Rising to 2606 m (the New Zealanders say 2005 m), 2.5 km E of Salient Peak, on the S side of the upper part of Salient Glacier, in the Royal Society Range of Victoria Land. The name was suggested by Ken Brodie (*see* **Brodie Ponds**), a member of R.H. Findlay's NZARP field party to this area in 1979-80, for the piercingly cold wind here ("frío" being Spanish for "cold"). NZ-APC accepted the name on Dec. 1, 1993, and US-ACAN followed suit in 1995.

Mount Frishman. 71°20' S, 166°56' E. A small, pointed mountain, rising to 1880 m, in the E part of Robinson Heights, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Steven A. Frishman (b. Sept. 1944), USARP biologist at Hallett Station in 1966-67.

Hrebet Frisland *see* **Friesland Ridge**

The *Frithiof*. Also seen as the *Fridtjof*. A 250-ton three-master, 40 meters long, with a 50 hp engine capable of 8 knots, built in 1884, at Stokke, on Oslo Fjord, Norway. Over the years she changed hands many times, and was used on the Baldwin-Ziegler expedition to the Arctic (*see* **Jacobson, John**), as well as several other Arctic expeditions from 1898 onwards. In May 1903 Capt. Gyldén, acting for the Swedish government, chartered her for an Antarctic trip, in an effort to find and rescue the lost SwedAE 1901-04. Sub Lt. Axel Blom was 1st officer, and under him were two sub lieutenants, S.R. Bergendahl and Johan Menander. Also aboard were Dr. Jacob Torgersrud and the scientist Baron Axel Klinckowström (with his dog Resi), 2 engineers, and a steward, a cook, and 2 firemen — there were 23 men aboard all told. The *Frithiof* left Stockholm on Aug. 17, 1903, and going via Bremerhaven and Plymouth, arrived at Funchal, where she met Charcot's expedition on the *Français*. The two ships left Funchal together that same evening, bound for Buenos Aires, where the *Frithiof* arrived on Nov. 2, 1903. The *Français* arrived on Nov. 16. There the *Frithiof* picked up an Argentine observer named Pérez, and a crewman named Bianchi, Jr. She reached Snow Hill Island in late 1903, only to discover that the *Uruguay* had already rescued the expedition. The *Frithiof* went down off Iceland on Oct. 5, 1907, killing all but one of the 17-man crew.

Cabo Fritsche *see* **Mount Fritsche**

Cape Fritsche *see* **Mount Fritsche**

Mount Fritsche. 66°00' S, 62°42' W. A snow-capped coastal mountain with many steep rock faces, rising to about 990 m, on the N side of Richthofen Pass, and on the W side of Scar Inlet, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. Probably discovered in Oct. 1902, by SwedAE 1901-04, during the time of the discovery of Richthofen Pass. Wilkins photographed it aerially on Dec. 20, 1928, and named it Cape Fritsche, for Carl B. Fritsche, of Detroit, Mich. He saw it as the N entrance of the pass in about 65°50' S, 62°15' W. It appears as such on his 1929 map, as well as on a 1934 British chart. However, on Aagaard's 1930 map it appears as Jasonfjellet (i.e., "Jason mountain"), named in association with the peninsula. So, Aagaard, at least, knew it for what it was, i.e., a mountain rather than a cape. On an Argentine chart of 1946 it appears as Cabo Fritsche. Surveyed by Fids from Base D in 1955. In the 1956 U.S. gazetteer, it appears erroneously as Cape McCarroll. On March 3, 1958, UK-APC re-defined it as Mount Fritsche, and it appears that way on a British chart of 1961. As such the name was accepted by US-ACAN in 1963. It appears on a 1963 U.S. chart as "Cape (Mount) Fritsche."

Fritsen Valley. 77°28' S, 161°25' E. An upland valley to the N of the summit area of Mount Hercules, and W of Harris Ledge, in the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN on July 14, 2004, for microbiologist Christian H. Fritsen, of the Division of Earth and Ecosystem Sciences, at the Desert Research Institute, in Reno, Nev., USAP investigator of pack ice and lake ice from about 1992. NZ-APC accepted the name on Nov. 30, 2004.

Fritter Glacier. 77°08' S, 162°35' E. Between Mount Curtiss and Mount Jensen, flowing E to the Wilson Piedmont Glacier, in the Gonville and Caius Range, in Victoria Land. Named by US-ACAN on May 18, 2000, for Capt. Charles Taylor "Charlie" Fritter (b. Aug. 14, 1909, Morristown, Ohio. d. Aug. 30, 1970, Los Angeles), USN, skipper of the *Curtiss* in 1956-57. NZ-APC had already accepted the name, on Nov. 4, 1999.

Nunatak Fritz. 66°14' S, 61°49' W. Immediately NE of Nunatak Brebbia, it is one of a large group of nunataks on Jason Peninsula, all named by the Argentines.

Fritz, James *see* **USEE 1838-42**

Plateau Fritz Loewe. 66°59' S, 141°34' E. Part of the continental glacial plateau, S of Port-Martin, in the Géologie Archipelago. Named by the French in 1977, for Fritz Loewe.

Fritze, Max. On Nov. 19, 1913, at Hobart, he signed on to the *Aurora*, as 2nd engineer, at £10 per month, for the 3rd and last voyage south during AAE 1911-14. He left the expedition on Feb. 27, 1914.

Fritzson, Frank William. b. Sept. 11, 1883, New Britain, Conn., son of Swedish parents. He was a U.S. Navy electrician, had worked his way up to chief petty officer, had been with Byrd in the Arctic (as an able seaman on the *Chantier*), and was a member of the Fleet Reserve Association, when he became an oiler on the *City of New York*, for ByrdAE 1928-30. He never married, and died on March 16, 1966, in Newington, Conn.

Frizzell, George J., Jr. b. April 9, 1910, Boston, son of teamster George J. Frizzell and his wife Helen. After a spell as a machinist, he went to sea, and replaced Virl Davenport as machinist on the *Bear of Oakland*, during both halves of ByrdAE 1933-35. He died on Nov. 28, 1983, in Weymouth, Mass.

Froa *see* **Couling Island**

Mount Frödin. 64°50' S, 62°50' W. Rising to about 600 m, 0.8 km ESE of Waterboat Point, at Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Lester and Bagshawe climbed it in 1921, during the British Imperial Antarctic Expedition, had lunch on top, roughly mapped it, and called it Mount Lunch-Ho! ChilAE 1950-51 renamed it Monte Bertil Frödin, after Bertil Frödin, and the name was later shortened to Monte Frödin. The name was also seen as Mount Bertil Frödin. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base O in 1957-58. UK-APC accepted the name Mount Frödin on Feb. 7, 1978, and it appears that way in the 1980 British gazetteer. US-ACAN also accepted that name. For more details *see* **Vidaurrazaga Glacier**.

Frogman Cove. Unofficial name for a little bay near Vincennes Bay.

Cabo Froilán González *see* **Tindal Bluff**

Frölich Peak. 65°32' S, 63°48' W. Rising to 1035 m, above Holst Point, at the head of Beascochea Bay, on the Graham Coast, on the W coast of Graham Land. Charted (but apparently not named) by FrAE 1908-10, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Theodor Christian Brun Fröhlich (1870-1957), Norwegian biochemist who, in 1907, with Axel Holst, first produced experimental scurvy and laid the foundations for future work on vitamins. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Frolosh Point. 64°19' S, 63°09' W. Forms the N side of the entrance to Galata Cove, on the NE coast of Anvers Island, 4.5 km SSE of Cape Bayle, and 7 km W of Lambda Island, in the Melchior Islands, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for the settlement of Frolosh, in western Bulgaria.

Frolov Ridge. 70°45' S, 162°09' E. A prominent ridge, running in a N-S direction for about 17.5 km, just W of Arruiz Glacier, between that glacier and Álvarez Glacier, in the Bowers Mountains. Photographed aerially during OpHJ 1946-47. Surveyed by SovAE 1958, and named by the USSR in 1960-61, as Hrebet Frolova, for Soviet polar meteorologist Vyacheslav Vasil'yevich Frolov (1902-1960), from 1950 director of the Arctic Research Institute, in Leningrad (later designated the Arctic and Antarctic Scientific Research Institute). US-ACAN accepted the translated name Frolov Ridge in 1964, and NZ-APC followed suit.

Hrebet Frolova *see* **Frolov Ridge**

Front Door Bay. 77°33' S, 166°08' E. A small cove on the W side of Flagstaff Point, near Cape Royds, Ross Island. Named by BAE 1907-09 (*see also* **Back Door Bay**). It appears in the 1958 NZ provisional gazetteer.

Frontier Mountain. 72°59' S, 160°20' E. A large, mainly ice-free massif, rising to 2805 m, about 32 km SSE of Roberts Butte, in the Outback Nunataks, and about 17.5 km WNW of the Sequence Hills. Named by the Northern Party of NZGSAE 1962-63, for its location near the edge of the featureless interior ice plateau. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Frontier Nunataks. 78°21' S, 88°06' W. A small isolated group of nunataks, about 32 km W of the Sentinel Range, in the Ellsworth Mountains. Visited by geologist Thomas Bastien (*see* **Bastien Range**), and so named by US-ACAN in 1966 because they are the extreme W outlier of the Ellsworth Mountains. Originally plotted in 78°19' S, 88°04' W, they have since been replotted.

The *Frontier Spirit*. A 6700-ton, 360-foot cruise ship, built in 1990 at Kobe, by Mitsubishi Heavy Industries, she was in Antarctic waters in 1990-91 (Capt. Heinz Aye), in at Adélie Land and the Ross Sea. In 1991-92 she was in the South Shetlands, the South Orkneys, and the Antarctic Peninsula area, under the command of Capt. Aye and Capt. Leif Skog. She was at the same places in 1992-93, again under Capt. Aye. Then she became the *Bremen* (q.v.).

Mount Frontz. 85°46' S, 131°46' W. A prominent mountain, rising to 2010 m, in the W part of the Wisconsin Range, between Mount Vito and Griffith Peak, on the E side of Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. Cdr. Leroy Frontz, Jr. (b. June 7, 1934, Cooksburg, Pa.), who joined the U.S. Navy in Jan. 1955, and was aircraft commander in Antarctica during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67). He retired from the Navy in Jan. 1977.

Mount Frosch. 72°46' S, 167°55' E. A mainly snow-covered mountain, rising to 2750 m, 5 km NE of Mount Riddolls, at the head of Borchgrevink Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1973, for Robert A. Frosch, assistant secretary of the Navy for research and development, 1971-72, and administrator at NASA in 1978.

Mount Frost. 81°12' S, 158°19' E. Rising to 2350 m, in the Churchill Mountains, 6 km S of Mount Zinkovich, at the S side of the head of Silk Glacier. Named by US-ACAN in 1965, for Lt. Col. Foy B. Frost, USAF, commanding officer of the 9th Troop Carrier Squadron, which provided Globemaster airlift support between NZ and Antarctica, and from McMurdo to Byrd Station, Eights Station, and Pole Station during OpDF 62 (i.e., 1961-62).

Frost, John. Bosun on the *Porpoise* during USEE 1838-42.

Frost Cliff. 75°13' S, 135°43' W. A steep, partly ice-covered cliff, 3 km E of Mount Steinfeld, on the S side of the divide between the upper reaches of Hull Glacier and Kirkpatrick Glacier, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Cdr. William L. Frost (b. March 2, 1928, Stoneham, Mass.), who joined the U.S. Navy in June 1951, and was officer-in-charge of Antarctic Support Activities at McMurdo in 1970. He retired from the Navy in Sept. 1973.

Frost Glacier. 67°05' S, 129°00' E. A channel glacier that flows to the head of Porpoise Bay, on the Banzare Coast of Wilkes Land, in East Antarctica. Delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for John Frost.

Frost Rocks. 65°15' S, 64°20' W. A cluster of rocks, rising to a height of about 5 m above sea level, on the SW side of the southern Argentine Islands, and about 0.8 km SW of the Whiting Rocks, off the Graham Coast, on the W coast of Graham Land. Named by UK-APC on Nov. 3, 1971, for Richard Frost (b. 1946), survey assistant of the RN Hydrographic Survey unit on the *Endurance*, in Feb. 1969, which surveyed these rocks. US-ACAN accepted the name in 1972. The feature appears in the 1974 British gazetteer, and also on a British chart of that year.

Frost Spur. 82°33' S, 51°59' W. A rock spur, rising to about 1200 m, on the NW side of the Dufek Massif, between Lewis Spur and Alley Spur, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS in 1974 from these efforts. Named by US-ACAN in 1968, for Charles Frost, NSF logistics specialist with the Office of Antarctic Programs. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974.

Frostbite. The freezing of living tissue in any part of the body. It does not always act as expected (*see* **Hare, Clarence**). The first sign is white patches on the face. If this is noted in one's companion (one should never be out in Antarctica on one's own) it should be dealt with immediately as a medical emergency. Frostbite was a major plague to the pioneers, and many of them suffered or died because of it. By the 1940s FIDS were using Rosnol quite effectively. During USAS 1939-41, one of the members of East Base developed frostbite — it was Finn Ronne's. A similar case to Ronne's was Brian Gilpin's, in the mid-1950s, at Deception Island. There were only 3 cases of frostbite during 1967-68 at McMurdo, an example of the greater care taken in recent times.

Frostbite Spine. 78°06' S, 163°00' E. A prominent ridge, 8 km long, between Hooker Glacier and Salient Glacier, on the E side of the Royal Society Range, in Victoria Land. The name was proposed by R.H. Findlay, whose NZARP geological party worked in the area of this ridge in 1978-79. There were two reasons for the name: The ridge has vertebrae-like knobs suggesting a spine, and a member of the party suffered frostbite injury here and had to be replaced. NZ-APC accepted the name in 1982, and US-ACAN followed suit.

Frostlendet *see* **Frostlendet Valley**

Frostlendet Valley. 72°46' S, 3°18' W. An ice-filled valley running from NW to SE for about 24 km, along the S side of Høgfonna Mountain, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Frostlendet (i.e., "the frost ground"). US-ACAN accepted the name Frostlendet Valley in 1966.

Frostman Glacier. 75°08' S, 137°57' W. A broad, low-gradient glacier, discharging into the S side of Hull Bay, just W of Konter Cliffs, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Thomas O. "Tom" Frostman (b. May 1943), meteorologist with the Earth Science Laboratory, at the U.S. Army Natick Labs, who wintered-over at Plateau Station in 1968.

Frozen Lake. 69°25' S, 76°07' E. A large lake, about 1 km N of Blundell Peak, in the Larsemann Hills. Very steep ice cliffs border the lake's N and W shores. Named by ANCA on Nov. 24, 1987. The Chinese call it Bing Hu.

Frozen Sea Expedition. 1982-84. Led by David Lewis, in the *Dick Smith Explorer*, with the intention of spending a winter in Antarctica doing scientific research. Sydney's Channel 7 TV was a principal supporter, as were Dick Smith, and the *National Geographic*. The sponsor was Lewis's own Oceanic Research Foundation. Out of the 100 people who volunteered to contribute $3000 toward the cost of the expedition, Lewis took the following: Mimi George, 31, American anthropologist, photographer, and 2nd-in-command; Gill Cracknell, 24, British geographer, and 3rd-in-command — she became the biological projects coordinator; Jannik Schou, 29, a Danish gamekeeper; Jamie Miller, 25, Australian zoologist; Norman Linton-Smith, 57, an engineer/radio operator, who signed on at the last moment. Lewis himself was then almost 64, had a stainless-steel hip joint, and a surgically re-attached retina. **Nov. 14, 1982**: They left Sydney. **Late Jan. 1983**: They entered the polar ice-pack, after 5750 miles of sailing. Their first port of call was Davis Station, but before that they had problems in the ice, and had to be pulled out first by the *Polar Star*, and then by the *Kapitan Markov*. **Feb. 1983**: They finally iced-in deliberately in what they called Winterover Bay (but *see* **Winter Bay**), in a cove of Filla Island, in the Rauer Islands. **March 4, 1983**: The sea froze. **March-April 1983**: Lewis and George

went off on a sledging expedition for 8 days. Miller and Linton-Smith found life in Antarctica too difficult and, according to the others, spent most of their time in the base. **May-June, 1983**: Ice expeditions. **Early July 1983**: Lewis and George went to Davis Station by sledge for fuel, and spent 2 days there. **July-Aug. 1983**: The 4 active members of the expedition established depots along the Ingrid Christensen Coast. **Sept.-Oct. 1983**: They did scientific research there. **Nov. 1983**: They began lichen study and plateau reconnaissance trips. **Mid-Dec. 1983**: Miller was dispatched to Davis Station for insubordination, and thence back to Sydney. **Jan. 1984**: Lichen studies and plateau reconnaissance trips ended. **Jan. 26, 1984**: The ship sailed out of Filla Island. **March 11, 1984**: The ship arrived back in Sydney, after a stop at Davis Station.

Fruitcake Bluff. 71°33' S, 160°29' E. A steep rock outcrop in the form of a bluff 100 m high, extending in a NE-SW direction for 1.5 km in the SE portion of the Thompson Spur, in the Daniels Range. Recorded by U.S. geologists Carlos Plummer and Scott Babcock, who made a geological reconnaissance of the Daniels Range in Dec. 1981. Descriptively named by US-ACAN, for the prevalent intrusive rock on the bluff which has the appearance in color and (seeming) texture of a fruitcake. NZ-APC has accepted the name.

Frustration Dome. 68°00' S, 64°33' E. A very large, heavily crevassed ice-dome, 58 km SE of Mount Henderson, and about 72 km SE of Onley Hill, in Mac. Robertson Land. The dome was the site of a tellurometer station established during an ANARE survey traverse from Mawson Station to Mount Kjerka, in 1967, led by John Manning, surveyor at Mawson that year. So named by ANCA, for the frustration experienced here by that party, due to vehicle breakdown, forcing them to postpone completion of the survey until the following spring. US-ACAN accepted the name in 1971.

[1]**Frustration Ridge**. 71°40' S, 168°15' E. A ridge trending NW for 14 km from Mount Adam, in the Admiralty Mountains. Named by the NZ Geodetic Survey party of 1982, whose work received numerous frustrating delays caused by minor mechanical problems. NZ-APC accepted the name.

[2]**Frustration Ridge**. 82°12' S, 158°38' E. Forms the N extremity of the Cobham Range, in the Churchill Mountains. So named by the Holyoake, Cobham, and Queen Elizabeth Ranges Party of NZGSAE 1964-65 who experienced great difficulty in climbing it, even though, from below, it had looked easy. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Mount Frustrum *see* **Mount Frustum**

Mount Frustum. 73°23' S, 162°55' E. Also seen spelled (erroneously) as Mount Frustrum. A large pyramid-shaped table mountain, rising to 3100 m, between Mount Fazio and Scarab Peak, in the S extremity of Tobin Mesa, in northern Victoria Land. Named by the Northern Party of NZGSAE, 1962-63 for its frustum-like shape (a frustum is a truncated pyramid, i.e., a pyramid with its top lopped off). NZ-APC accepted the name, and US-ACAN followed suit.

Fry, Walter Frederick. b. July 26, 1914, Strathfield, NSW, son of Walter Arnold Le Roy Fry and his wife Amy G. White. He was scientific assistant on the *Discovery II*, 1933-39. He served with the Australian Army during World War II, retiring as a captain in 1949. He married Nancy Clare Checkley in Sydney, in 1943, and died in 1978, in Sydney.

Fry Glacier. 76°38' S, 162°18' E. A long, deep outlet glacier, about 3 km wide, and with vertical, smooth rock walls, which flows from the slopes at the NE corner of the Convoy Range, along the S end of the Kirkwood Range, to merge with the Albrecht Penck Glacier about 40 km S of the Nordenskjöld Ice Tongue, just to the N of Mackay Glacier, at Tripp Bay, in Victoria Land. Named by Shackleton during BAE 1907-09, for Albert Magnus Fry (1857-1938), of the famous Bristol chocolate family, a patron of the expedition. US-ACAN accepted the name, and NZ-APC followed suit.

Fry Peak. 71°03' S, 63°40' W. A sharp-pointed peak rising to about 2400 m, it is the most southerly peak in the Welch Mountains of Palmer Land. Mapped by USGS in 1974, from USN air photos taken between 1966 and 1969. Named by US-ACAN for Lt. Frederick M. Fry, USN, flight surgeon and VX-6 pararescue officer during OpDF 69 (i.e., 1968-69) and OpDF 70 (i.e., 1969-70). UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Fry Saddle. 76°33' S, 161°05' E. A narrow ice saddle at the head of Fry Glacier, about 6 km (the New Zealanders say 8 km) WSW of Mount Douglas, in Victoria Land. At periods of more intense glaciation, ice doubtless flowed E into the Fry Glacier through this gap, but at present an ice slope descends several hundred feet westward from the saddle. Discovered in Dec. 1957, by the NZ Northern Survey Party of BCTAE, and named by them in association with the glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Fry Strait *see* **Fyr Channel**

Lake Fryxell. 77°37' S, 163°11' E. A small lake, 5 km long and 1.5 km wide, between Canada Glacier and Commonwealth Glacier, at the lower end of Taylor Valley, in southern Victoria Land. Mapped (but not named) during BAE 1910-13. Visited by geologist Troy L. Péwé in 1957-58, and named by him for Dr. Fritiof M. Fryxell, glacial geologist of Augustana College, Illinois. US-ACAN accepted the name in 1964, and NZ-APC followed suit. The Americans built a refuge hut (a Jamesway hut) here in 1998-99, in 77°36' S, 163°07' E. It was called the Lake Fryxell Hut.

Mount Fuchík. 71°52' S, 14°26' E. Rising to 2305 m, it is the central and highest peak of Kvaevefjellet Mountain, in the N part of the Payer Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed by GermAE 1938-39, and first plotted from these photos. Mapped anew by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and also from 1958-59 air photos taken during the same long expedition. Mapped yet again by SovAE 1960-61, and named by the USSR in 1963 as Gora Fuchika (at least that was the best transliteration from their Cyrillic alphabet), for Julius Fučík (1903-1943), Czech journalist and author. US-ACAN accepted the name Mount Fučík in 1970. The Norwegians called it Fučík-toppen. Striking a blow for freedom against the tyranny of the Czech alphabet, US-ACAN decided on a new spelling, Mount Fuchík, and the Norwegians went with Fuchiktoppen.

Gora Fuchika *see* **Mount Fuchik**

Fuchiktoppen *see* **Mount Fuchik**

Pie de Hielo Fuchs *see* **Fuchs Ice Dome**

Fuchs, Arved *see* **The *James Caird II***

Fuchs, Vivian Ernest "Bunny." b. Feb. 11, 1908, Kent. British geologist, one of the greatest explorers of all time, son of Ernst (later Ernest) Fuchs, a German farmer who had come to Britain as a child. The explorer's mother was Violet Ann Watson. He studied natural sciences at Cambridge under Sir James Wordie, and was with his tutor in Greenland in 1929. He became famous in the 1930s as an expedition leader in Africa, and in 1933 married Joyce Connell. He served as an officer in World War II, and was overall FIDS leader (1948-50), and FIDS leader at Base E, in the summer of 1947-48, led the wintering party there in 1948, and, due to severe conditions in which no relief was possible by ship, was forced to winter over again in 1949, during which time he conceived the idea of a transantarctic traverse. He returned to Southampton on April 16, 1950, on the *Andes*, from Santos, Brazil, and was immediately appointed head of the FIDS scientific bureau. In the mid-50s he got his BCTAE (British Commonwealth Transantarctic Expedition) together, and in 1958 became the first man to cross Antarctica by land, for which feat he was knighted. From 1958 to 1973 he was director of FIDS (called BAS after 1962). He visited Antarctica several times during this period, always during the summer (e.g. he was on the *Kista Dan* in 1959-60, when that vessel got stuck in the ice and had to be rescued by the *Glacier*; he visited Base B in Jan. 1964, on the *Shackleton*; he was back on the ice in 1966-67; he visisted Base E in 1972-73). He was president of the Royal Geographical Society, 1982-84. In 1990 his wife died, and in 1991, aged 82, he married Mrs. Eleanor Honnywill. He died on Nov. 11, 1999, in Cambridge, following a long illness.

Fuchs Dome. 80°35' S, 27°50' W. A large, ice-covered snowfield in the shape of a dome, rising to over 1525 m, between Stratton Glacier and Gordon Glacier, in the west-central portion of the Shackleton Range. First surveyed and mapped in 1957 by BCTAE personnel from Shackleton Base, and named by them for

Vivian Fuchs. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Fuchs Ice Piedmont. 67°10' S, 68°40' W. An ice piedmont, about 110 km long, it extends in a NE-SW direction along the entire W coast of Adelaide Island. First roughly mapped in Jan. 1909, by FrAE 1908-10, it appears on Charcot's 1912 map of the expedition. Further surveyed in part by Fids from Base E, and photographed aerially by RARE 1947-48. Named by those Fids for Vivian Fuchs. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a 1959 U.S. Hydrographic Office chart, and also on a British chart of 1961. Re-photographed aerially by BAS, in 1963. The Argentines call it Pie de Hielo Fuchs (which means the same thing).

Mount Fučík *see* **Mount Fuchik**

Pasaje Fuelles de Neptuno *see* **Neptunes Bellows**

Paso Fuelles de Neptuno *see* **Neptunes Bellows**

Islote de la Fuente *see* **Fuente Rock**

Fuente Island *see* **Fuente Rock**

Fuente Rock. 62°30' S, 59°41' W. A low rock, rising to about 9 m above sea level, and surmounted by a navigational beacon, 0.7 km NE of Ferrer Point, in Discovery Bay, Greenwich Island, in the South Shetlands. ChilAE 1946-47 surveyed it, and named it Isla Don Jorge. It appears as such on their 1947 chart, and some other Chilean charts in the few years thereafter. ChilAE 1950-51 renamed it Islote De la Fuente, after Capitán de corbeta Alberto de la Fuente, 2nd-in-command on the *Iquique* during the earlier expedition. It appears as such on their 1951 chart, and that was the name accepted by the Chilean gazetteer of 1974 (after they had rejected the name Islote Capitán de la Fuente). Further surveyed by an RN Hydrographic Survey unit on the *Protector* in 1964, it appears on their 1965 chart as Fuente Rock, and also as such on a 1968 British chart. That name was accepted by UK-APC on Nov. 3, 1971, and appears in the 1974 British gazetteer. US-ACAN accepted the name in 1966. The British were the latest to plot this rock, in late 2008.

Punta Fuenzalida *see* **Borge Point**

Dorsal Fuerte *see* **Ravelin Ridge**

Glaciar Fuerza Aérea *see* **Fuerza Aérea Glacier**

Fuerza Aérea Glacier. 62°29' S, 59°39' W. Flows W into Discovery Bay, on Greenwich Island, in the South Shetlands. ArgAE 1946-47 named the N half of this glacier as Glaciar Arquitecto Ripamonti Barros, for Julio Ripamonti Barros (*see* **Julio Ripamonti Base**, and **Picnic Passage**). They named the S half Glaciar Fuerza Aérea, for the Argentine Air Force. From 1949 onwards, the name Glaciar Fuerza Aérea appeared on Argentine charts for the entire glacier. UK-APC accepted the translated name on July 8, 2003, and US-ACAN followed suit that year. Latest plotting done by UK in late 2008.

Fuerza Aérea Argentina No. 1 Refugio. 69°31' S, 62°29' W. Argentine refuge hut (actually an estación de apoyo — a support hut), opened April 20, 1965, in the area of the Larsen Ice Shelf. It has since been covered with ice.

Islotes Fuga *see* **Runaway Island**

Fugairon, Jean-Joseph. b. Jan. 7, 1810, Antibes. Pilot on the *Zélée* during FrAE 1837-40.

Fuglefjellet. 72°17' S, 0°46' E. A mountain, 11 km E of Mount Roer, in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them ("the bird mountain"). US-ACAN accepted the name without modification in 1966.

Fuglehommen. 71°58' S, 4°50' E. A small, ice-filled valley on the N side of Petrellfjellet, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the bird valley").

Fuhu Ling. 69°22' S, 76°23' E. A hill in the Larsemann Hills. Named by the Chinese.

The *Fuji*. The first modern icebreaker produced by Japan. 7760 tons displacement, 27 foot draft, 330 feet long, 73 foot beam, she had diesel electric engines which gave 12,000 hp maximum, 15 knots cruising speed, and a maximum speed of 17 knots. She could break ice up to 19 feet thick. Commissioned in June 1965, as the replacement for the *Soya* as the relief ship for Showa Station. She carried JARE down in these years: 1965-66 (Capt. Toshiharu Honda; she also visited Roi Baudoin Station and Molodezhnaya Station); 1966-67 (Capt. Mitsutoshi Matsuura); 1967-68 (Capt. Honda); 1968-69 (Capt. Shigeo Matsushima); 1969-70 (Capt. Hideo Isobe); 1970-71 (Capt. Masato Omori); 1971-72 (Capt. Fuyuki Maeda); 1972-73 (Capt. Maeda); 1973-74 (Capt. Mamoru Morita); 1974-75 (Capt. Morita); 1975-76 (Capt. Tsunezo Kuramoto); 1976-77 (Capt. Kuramoto); 1977-78 (Capt. Genki Tanabe); 1978-79 (Capt. Tanabe); 1979-80 (Capt. Shigeru Nei); 1980-81 (Capt. Nei); 1981-82 (Capt. Syuichi Takeuchi); 1982-83 (Capt. Takeuchi). That was the last season for the *Fuji*. She was replaced by the *Shirase*.

Fuji Kaitei-koku. 69°00' S, 39°40' E. A drowned glacial trough, deeper than 600 m, beneath Ongul Sound, it extends northward from Langhovde Glacier, between the E shore of Lützow-Holm Bay and the Flatvaer Islands. Mapped by Japanese cartographers from soundings taken by JARE between 1959 and 1974, and named by them on Oct. 23, 1989 (name means "submarine valley"), for the *Fuji*.

Fujirenna *see* **Fuji Kaitei-koku**

Fukuro Cove. 69°12' S, 39°39' E. Also spelled Hukuro Cove. A cove, 1.5 km SW of Mount Choto, it indents the N part of the Langhovde Hills, on the coast of Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Re-mapped by Japanese cartographers from ground surveys and air photos taken by JARE between 1957 and 1962, and named by them on June 22, 1972, as Hukuro-ura, or Fukuro-ura (i.e., "pouch cove"). US-ACAN accepted the nme Fukuro Cove in 1975.

Fukuro-ura *see* **Fukuro Cove**

Mont Fukushima *see* **Mount Fukushima**

Mount Fukushima. 71°21' S, 35°40' E. Rising to 2470 m, it is the highest massif in the Queen Fabiola Mountains, just N of Yamato Glacier, 1600 m above the surrounding ice surface, and with many ragged peaks. Discovered in 1960 by BelgAE led by Guido Derom, and named by him as Mont Fukushima, for Shin Fukushima (*see* **Deaths**, 1960), geophysicist on JARE 1960-61. JARE also surveyed it in 1960. The Japanese accepted the name Fukushima-dake on Feb. 1, 1961. US-ACAN accepted the name Mount Fukushima in 1966.

Fukushima, Yoshiji. b. 1893, Chiba, Japan. A seaman on the *Kainan Maru* during Shirase's Japanese South Polar Expedition of 1910-12. He died in 1943.

Fukushima-dake *see* **Mount Fukushima**

Fukushima Peak. 78°34' S, 85°34' W. A high, pointed peak rising to 4634 m on the S edge of the Vinson Plateau, on the Vinson Massif, 3 km S of Mount Vinson itself. Named by US-ACAN in 2006, for Eichii Fukushima, a member of the U.S. Mountaineering Expedition of 1966-67, the first party up Mount Vinson.

Fukusima *see* **Fukushima**

Fulcrum. 78°02' S, 161°07' E. A small peak, at Creagh Icefalls, in the Wilkniss Mountains of Victoria Land. So named by US-ACAN in 1995, because its position suggests a fulcrum upon which the Lever Nunataks (extending in a linear arrangement from the feature called Fulcrum), may metaphorically act. NZ-APC accepted the name.

Fulgham Ridge. 84°54' S, 177°25' E. A narrow, ice-free ridge, 6 km long, it forms the SE side of Bowin Glacier, in the Queen Maud Mountains. Named by US-ACAN in 1966, for Aviation Bosun's Mate Donald Ray Fulgham (b. March 22, 1940. d. April 17, 2000; buried in Arlington National Cemetery), who joined the U.S. Navy in Aug. 1958, and was with Antarctic Support Activity, at McMurdo, during OpDF 64 (i.e., 1963-64). He retired from the Navy in Nov. 1988.

Fullastern Rock. 67°37' S, 69°26' W. An isolated, submerged rock in the central-western side of Johnston Passage, 11 km WNW of Cape Adriasola, Adelaide Island. A danger to shipping, it compelled the *John Biscoe* to go full astern to avoid it during an RN Hydrographic Survey here in 1963, hence the name that appears on their 1964 chart. UK-APC accepted the name on Feb. 12, 1964, and US-ACAN followed suit that year.

Mount Fuller. 77°52' S, 162°21' E. A peak, rising to 1925 m, in Cathedral Rocks, between the lower portions of Zoller Glacier and

Darkowski Glacier, in the Royal Society Range of Victoria Land. In association with the Chaplains Tableland, it was named by US-ACAN in 1992, for Lt. Cdr. William C. Fuller, USN, who wintered-over as chaplain at McMurdo in 1964.

Fuller, Joseph John, Jr. b. Oct. 13, 1839, Tristan da Cunha, son of Joseph John Fuller and his Tristanian wife Mary Ann Glass (*see* **Glass, Robert Hill**). The family moved to Danvers, Mass., and he was in the U.S. Navy during the Civil War, after which he was a New London sealing captain several times in Antarctic waters (according to Balch), although he is best remembered at Desolation Island (the Kerguélens). He married Jane M. Adams. By 1904 he was lighthouse keeper at Stonington. In 1893 he was on the *Francis Allyn*, at Bouvet Island (not in Antarctica). He was still alive in 1920. There was a book published in 1980, *Master of Desolation: The Reminiscences of Capt. John J. Fuller, a Tristanian Whaling Captain*, edited by Briton Cooper Busch. Also *The Romance of Joseph J. Fuller and Mary Glass on the Island of Tristan da Cunha*, by Frank C. Damon (1943).

Fuller Dome. 86°38' S, 156°18' W. A dome-shaped, ice-covered mountain rising to 2850 m, at the NW end of the Rawson Mountains, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for C.E. Fuller, VX-6 storekeeper during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67).

Fuller Island. 66°12' S, 101°00' E. An island, 6 km long and 2.5 km wide, 3 km S of Thomas Island, in the Highjump Archipelago, on the S side of Cacapon Inlet, off the NE part of the Bunger Hills, on the Knox Coast. Mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1956, for Harold Francis Fuller (b. March 25, 1920. d. July 12, 2006, Tarpon Springs, Fla.), from Dunedin, Fla., chief machinist's mate who worked on David Bunger's plane in Feb. 1947, during OpHJ 1946-47. ANCA accepted the name on May 18, 1971. The Russians call this feature Ostrov Kashalot.

Fuller Rock. 68°10' S, 68°54' W. A rock awash, one of the principal dangers to ships on the N side of Faure Passage, S of the Faure Islands, in Marguerite Bay, about 6.3 km SSW of Dismal Island, off the Fallières Coast, on the W coast of Graham Land. Charted by an RN Hydrographic Survey unit on the *John Biscoe* in 1973, and named by them for Lt. Andrew Clement Fuller, RN (b. 1949), who directed the survey. UK-APC accepted the name on July 21, 1976. It It appears on a British chart of 1983. US-ACAN accepted the name.

Ensenada Fulmar *see* **Fulmar Bay**

Fulmar Bay. 60°37' S, 46°01' W. A bay, 1.5 km wide, between Moreton Point and Return Point, at the W end of Coronation Island, in the South Orkneys. Discovered and roughly charted by Powell and Palmer in Dec. 1821. Surveyed by the Discovery Investigations in 1933. Re-surveyed by Fids from Signy Island Station between 1947 and 1949, and again in 1950-51. Named by UK-APC on March 31, 1955, for the Antarctic petrels (actually fulmars—*see* **Fulmars**) here. US-ACAN accepted the name in 1956. The Argentines call it Ensenada Fulmar.

Fulmar Crags. 60°38' S, 45°11' W. Crags rising to about 245 m, and surmounting East Cape (the NE extremity of Coronation Island), in the South Orkneys. Fids from Signy Island Station surveyed them in 1956-58, and UK-APC named them on July 7, 1959, for the Antarctic petrels (actually fulmars—*see* **Fulmars**) which breed here. US-ACAN accepted the name in 1964.

Fulmar Island. 66°33' S, 93°01' E. A small island, just S of Zykov Island, and about 2.5 km S of Haswell Island, in the Haswell Islands. Discovered by the Western Base Party of AAE 1911-14, and they plotted Fulmar Island and Zykov Island as one island, and called it Fulmar Island, for the rookery of southern giant fulmars here. The Soviets re-defined this area in 1956, and retained the name Fulmar for the S one. ANCA accepted that situation on Oct. 11, 1960, and US-ACAN followed suit in 1962.

Fulmars. The fulmar is a type of petrel. There are several varieties seen in Antarctica: the silver-gray fulmar (*Fulmarus glacialoides*); the southern giant fulmar (*Macronectes giganteus*); the northern giant fulmar (*Macronectes halli*); the Antarctic petrel (*Thassaloica antarctica*); the snow petrel (*Pagodroma nivea*); and the pintado petrel, cape pigeon, or petrel damero (*Daption capensis*), all of which, except the northern giant fulmar (which breeds in lower latitudes), breed on the Antarctic continent. Scavengers, fulmars feed mostly on plankton, fish, penguins, and other birds.

Mount Fulton. 76°53' S, 144°54' W. Rising to 900 m, between Mount Passel and Mount Gilmour, in the Denfeld Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41. Named by Byrd during that expedition for R. Arthur Fulton (1887-1962), Canadian-born founder and chairman of the R.A. Fulton Insurance Brokerage of New York, who helped get insurance for the *Jacob Ruppert*, one of the ships used during ByrdAE 1933-35. US-ACAN accepted the name in 1970.

Fumarolas (Bay) *see* **Primero de Bayo Bay**

Fumarole Bay *see* **Primero de Mayo Bay**

Fumaroles *see* **Ice fumaroles**

The *Fumi Maru No. 18*. A 650-ton, 62-meter Japanese krill-fishing trawler, built by Hayashikane, at Shimonoseki, in 1956, for Taiyo Gyogyo, and seen occasionally in Antarctic waters in the 1980s.

The *Funding*. Norwegian whale catcher working for the *Falkland* in 1911-12. She was replaced for the 1912-13 season by the *Powell*.

Cabo Funes *see* **Stranger Point**

Fungi *see* **Bacteria, Flora, Molds, Yeast**

Funk Glacier. 65°34' S, 63°46' W. Flows W into Beascochea Bay to the S of Frölich Peak, on the Graham Coast, on the W coast of Graham Land. Charted by FrAE 1908-10. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Polish biochemist Casimir Funk (1884-1967), pioneer in vitamins. It appears on a British chart of 1960. Roughly surveyed by Fids from Base D in 1960-61. US-ACAN accepted the name in 1971.

Nunatak Fur. 66°14' S, 61°03' W. One of the numerous nunataks on Jason Peninsula named by the Argentines.

Fur Seal Cove. 60°44' S, 45°36' W. Between Lenton Point and Gourlay Peninsula, on the S side of Signy Island, in the South Orkneys. So named by UK-APC on May 13, 1991, because a large number of fur seals frequent the coast and adjacent shore. US-ACAN accepted the name.

Fur seals. *Arctocephalus gazella*. The fur seals under discussion here are the Southern fur seals, also known as eared seals. They are Otariids, and therefore not true seals, which are Phocids. They are the only Otariids to breed in the Antarctic. They grow to 4-6 feet long on average. By the 1870s they had been virtually wiped out (*see* **Sealing**), then a few were seen again, and then they were—as far as the world was concerned—exterminated completely, an extinct species. In the 1920s, however, some were seen again, obviously having hidden from human predators. They are now growing in numbers, but regeneration is slow. There are about 30,000, which is still dangerously few.

Furdesanden *see* **Furdesanden Moraine**

Furdesanden Moraine. 71°48' S, 9°37' E. A long area of moraine extending in a N-S direction for 28 km along the W side of the Conrad Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Furdesanden (i.e., "the furrow of sand"). US-ACAN accepted the name Furdesanden Moraine in 1970.

Furlong, Patrick "Nick." Chief steward on the *Eagle*, in 1944-45, during the 2nd phase of Operation Tabarin.

Furlong Creek. 77°39' S, 163°07' E. A glacial meltwater tributary stream, 2.6 km long, flowing N from Howard Glacier into Delta Stream, in the Taylor Valley of Victoria Land. Spaulding Pond lies along this watercourse. The name was suggested by Diane McKnight (*see* **McKnight Creek**), for hydrologist Edward Furlong, a member of the field team that established stream-gaging stations on streams flowing into Lake Fryxell, in 1990-91. US-ACAN accepted the name in 1992.

Furman, Robert *see* **USEE 1838-42**

Furman Bluffs. 74°06' S, 113°53' W. A line of steep ice bluffs which form the SE side of Philbin Inlet, on Martin Peninsula, on the coast of Marie Byrd Land. First delineated from air photos taken by OpHJ 1946-47. Named by

US-ACAN in 1967, for Master Chief Quartermaster James L. Furman, USN, staff assistant with Task Force 43 in 1964-67.

Furmanczyk Point. 62°06' S, 58°28' W. A small rocky promontory S of Crépin Point, and E of Commandor Peak, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Kazimierz Furmanczyk, who photogrammetrically surveyed Admiralty Bay during PolAE 1978-79.

Furneaux, Tobias. Baptized on Aug. 21, 1735, at Swilly, Devon, son of William Furneaux and his wife Susanna Wilcox. He joined the Royal Navy at 20, and served in the Caribbean, and also off the North African coast, during the last half of the Seven Years War. He went around the world as a 2nd lieutenant on the *Dolphin* with Samuel Wallis in 1766-68, an expedition that had been sent out by the Admiralty to find Terra Australis Incognita. Instead they discovered Tahiti. The first man to circumnavigate the world in both directions, Furneaux was a lieutenant, and commander of the *Adventure*, on Cook's 1772-75 voyage, during which he charted much of the Tasmanian coastline. Promoted to captain in 1775, he commanded the *Syren* during the American Revolutionary War, fought at Charleston and New Orleans, and died on Sept. 19, 1781, in his home town.

Glaciar Furness *see* **Furness Glacier**

Furness Glacier. 61°07' S, 54°52' W. A small glacier, flowing between Cape Belsham and Point Wild, to the N coast of Elephant Island, in the South Shetlands. Charted and named by BITE 1914-17. US-ACAN accepted the name in 1953. The Argentines and Chileans both call it Glaciar Furness.

Furnheim, N. *see* **Órcadas Station**, 1916

Furong Hu. 69°23' S, 76°15' E. A lake in the Larsemann Hills. Named by the Chinese.

Islote Furque. 62°59' S, 55°51' W. The largest island in the group of islets the Argentines call Islotes Furque, and also in the group to which Islotes Furque belong, i.e., the Wideopen Islands, N of Joinville Island. Charted by AAE 1953-54, and named by them for Segundo Furque, able seaman on the *Uruguay*, 1903. It appears on an Argentine chart of 1957.

Islotes Furque. 62°59' S, 55°51' W. The NE sub-group of the Wideopen Islands, N of Joinville Island. Charted by ArgAE 1953-54, and named by them for Segundo Furque (*see* **Islote Furque**). The group appears on an Argentine chart of 1957.

Furse, John Richard "Chris." b. June 10, 1935, Chippenham, Wilts, into a family of artists (he would become one too, and an ornithologist), only child of John Paul W. Furse (known as Paul) and his wife Cicely Rathbone. He joined the RN in 1953, and became an engineer officer. He was deputy leader (as well as boatman and ornithologist) of the British Joint Services Expedition of 1970-71, was promoted to commander in 1973, and in 1976-77 was deputy leader on Malcolm Burley's British Joint Services Expedition to Elephant Island, in the South Shetlands. In 1979 his book *Elephant Island; an Antarctic Expedition*, was published. He then became the head of the diesel engine section of the Admiralty, at Bath, and led the British Joint Services Expedition to Brabant Island, in 1984-85, when he was in his mid-40s. In the 1980s and 1990s he led five British Schools Exploring Society expeditions to the Arctic, often with his artist wife Vikky. Much later they were both lecturers on polar ships, to both northern and southern regions.

Furse Peninsula. 61°29' S, 55°28' W. The E part of Gibbs Island, E of The Spit, in the South Shetlands. The names Narrow Isle and Narrow Island were used by Powell for the entire island (it appears in those ways on his chart published that year). As such it appears on Dumont d'Urville's 1842 chart (as Île Narrow). As for the peninsula, it was called Narrow Island on British charts of 1839 and 1916, and appears as Narrow Insel on Friederichsen's 1895 map. The Argentines were calling it Isla Narrow from at least 1908. It was surveyed by the Discovery Investigations in Jan. 1937, when a landing was made, and it was found that the reason earlier explorers had thought it was an island is that it is connected to Gibbs Island by The Spit, which "dries at low water" (1937 DI chart). There is a 1939 DI reference to it as Narrow Island Peninsula. It appears on an Argentine chart of 1949 as Islote Narrow, and there is a 1950 translated reference to it as Isla Estrecha. The Argentines translated it as Islote Angosto on one of their 1953 charts, and that name was accepted by the 1970 Argentine gazetteer. On a 1966 Chilean chart of 1966 it appears as Islote Harrow (a mere misspelling), and the Chilean gazetteer of 1974 accepted the name Islote Narrow. In subsequent years the term Narrow Peninsula was used for this peninsula, and in Jan. 1977, further surveys by the British Joint Services Expedition showed that The Spit is a storm beach rising about 2 m above sea level at high tide, although awash in heavy seas, and the peninsula was renamed by UK-APC on June 11, 1980, as Furse Peninsula, for Chris Furse. US-ACAN accepted the name in 1993. Last plotted by the UK, in 2008.

Furubotnnabben. 74°32' S, 11°26' W. A partly snow-covered hill in the most northwesterly part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Peder Lorentz Furobotn (1890-1975), Communist Resistance leader during World War II.

Playa Fuschloger *see* **Fuschloger Beach**

Fuschloger Beach. 62°11' S, 58°59' W. A shingle raised beach adjacent to an unnamed cove immediately S of Bothy Bay, Fildes Peninsula, King George Island, in the South Shetlands. About 1984, the Chileans named it Playa Fuschloger. UK-APC acknowledged the name Fuschloger Beach, on June 6, 2007.

Fusco Nunatak. 80°02' S, 80°09' W. The most westerly of the Wilson Nunataks, just W of Hercules Inlet, at the SE end of the Heritage Range. Named by US-ACAN in 1966, for aviation electrician Thomas A. Fusco, USN, air crewman on the first flight from McMurdo to Plateau Station, on Dec. 13, 1965.

Mount Futago. 69°12' S, 39°44' E. Also spelled Mount Hutago. A small mountain with 2 peaks, the N one being 240 m, and the S one being 245 m, in the N part of the Langhovde Hills of Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Re-mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on June 22, 1972, as Hutago Yama, or Futago-yama (i.e., "twin mountain"). US-ACAN accepted the name Mount Futago in 1975.

Futago-yama *see* **Mount Futago**

Mount Fyfe. 82°32' S, 155°10' E. A prominent peak rising to 2260 m, 5 km N of Quest Cliffs, on the edge of the plateau, in the Geologists Range of Victoria Land. Discovered by the Northern Party of NZGSAE 1961-62, and named by them for Horace Edwin Fyfe (1900-1977), of Otago, chief geologist of NZGS. NZ-APC accepted the name, and ANCA followed suit. US-ACAN accepted the name in 1966.

Fyfe Hills. 67°22' S, 49°12' E. A group of low coastal hills extending SSE from the coast, S of Dingle Dome, and immediately E of the Hydrographer Islands, at the head (i.e., near the NE corner) of Casey Bay, in Enderby Land. Discovered by Bruce Stinear's ANARE party of Oct. 1957. Named by ANCA on April 29, 1958, for Wallace Vernon Fyfe (1894-1982; known as Vernon), surveyor general of Western Australia. US-ACAN accepted the name in 1961.

The *Fyr*. Chilean steam whaler built in Norway for the Corral Company (*see* **Sociedad Ballenera Corral**), and which was in Antarctic waters in 1911-12 and 1912-13, operating mainly in the South Orkneys with her sister whaler, the *Corral*, both out of their factory ship, the *Tioga*.

Fyr Channel. 60°44' S, 45°41' W. A marine channel, about 310 m wide, running in a NW-SE direction between Moe Island and the SW end of Signy Island, in the South Orkneys. Named in 1912 by Petter Sørlle, as Fyr Strait, for the *Fyr*, it appears as such (actually as "Fyr Str.") on his chart of that year. On Capt. Moe's charts of 1913, it appears variously as Fyr Pasage (sic), Fyr Pasagen, and Fyr Passage. On Sørlle and Hans Borge's 1913 chart it appears as "Fyr Strait." Re-surveyed by the Discovery Investigations in 1933, it appears on their chart of that year as Fyr Channel, which was a correct definition, because it is smaller than a strait. However, on their 1934 chart it appears as Fyr Strait. Sooner or later it was bound to appear as Fry, and it did, on a 1943 U.S. Hydrographic Office chart, as Fry Strait. UK-APC accepted the name Fyr Channel on March 31, 1955, and US-ACAN followed suit later that year. It appears as such on a 1967 British chart.

Fyr Passage *see* **Fyr Channel**

Fyr Strait *see* **Fyr Channel**

Gabbibotnen. 74°35' S, 10°04' W. A corrie

between Storsveenfjellet and Rasmussenegga, in XU-fjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians after Gabrielle "Gabbi" Kielland Holst (b. Nov. 2, 1899, Stavanger, Norway. d. Feb. 28, 1952), wife (since 1927) of Axel Christian Zetlitz Sømme (son of consul Andreas Sømme), and part of the Norwegian Resistance in the Stavanger area during World War II. In 1950 Gabbi married Leif Dreyer, and died on Feb. 28, 1952.

Gabbro Crest. 83°23' S, 50°22' W. Rising to 1750 m, it is the crest of the mountain spur between Sheriff Cliffs and Vigen Cliffs, on the SE edge of the Saratoga Table, in the Forrestal Range, at the N end of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground in 1965-66 by USGS, during their Pensacola Mountains Project, and mapped by USGS from these efforts. Art Ford suggested the name, the Forrestals being composed mainly of gabbro rock. US-ACAN accepted this name in 1979, and UK-APC followed suit on May 21, 1979. *See* **Gabbro Hills** (below) for a description of gabbro.

Gabbro Hills. 84°42' S, 173°00' W. A group of rugged ridges and coastal hills rising to 1500 m, and bordering the Ross Ice Shelf between Barrett Glacier and Gough Glacier, and extending inland to Ropebrake Pass, N of Mount Llano. Named by the Southern Party of NZGSAE 1963-64, for the gabbro (a dark, plutonic rock) here. US-ACAN accepted the name in 1966.

Gabbro Islands *see* **Kirkwood Islands**

Mount Gaberlein. 75°04' S, 162°04' E. Rising to 1210 m, 5.5 km NNW of Mount Bellingshausen, in the Prince Albert Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1962. Named by US-ACAN in 1968, for William E. Gaberlein (b. March 22, 1934. d. May 21, 2007, New Castle, Del.), USN, chief construction electrician who wintered-over at McMurdo in 1962 and 1964.

Ensenada Gabinete *see* **Cabinet Inlet**

Gabites Glacier. 77°21' S, 160°32' E. On the headwall of Caffin Valley, 0.5 km W of Walker Glacier, in the Willett Range of Victoria Land. Named by NZ-APC on Sept. 12, 2005, for consultant landscape ecologist Helen Isobel Gabites (known as Isobel), a member of the VUWAE geological party to Mount Bastion and the Allan Hills, in 1982-83. In 1985 Miss Gabites got her Masters degree with a thesis based on her research here: *Triassic Palaeoecology of the Lashly Formation, Transantarctic Mountains, Antarctica*. US-ACAN accepted the name in 2006.

Gablenz Range. 72°00' S, 4°30' E. A range, 21 km long, between the Luz Range and the N part of the Preuschoff Range, in the Mühlig-Hofmann Mountains of Queen Maud Land, it includes Skigarden Ridge, Mount Grytøyr, and associated features. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Gablenz Rücken, for aviator Carl August, Baron von Gablenz (1893-1942), a founder and director of the Lufthansa Corporation, the first pilot to fly over the Pamir Mountains and the Hindu Kush, in Asia. US-ACAN accepted the name Gablenz Range in 1966.

Gablenz Rücken *see* **Gablenz Range**

Península Gabriel. 68°20' S, 67°05' W. Separates Neny Fjord to the N from Rymill Bay to the S, on the E coast of Marguerite Bay, on the W coast of the Antarctic Peninsula. Named by the Chileans for Capitán de fragata Gabriel Rojas Parker (*see* **Vázquez Island**). The Argentines call it Península Las Heras, for Juan Gregorio de las Heras (1780-1866), the great general and one of the heroes of Argentine independence.

Gabriel de Castilla Station. 62°59' S, 60°41' W. Spanish summer-only scientific station opened as a refugio in 1989-90, 15 m above sea level, and 80 m inland from the SW coast of Port Foster, Deception Island, in the South Shetlands, and named Refugio Gabriel de Castilla, in honor of Gabriel de Castilla (*see under* **D**). Leader of the base in 1994-95 and 1995-96 was Julián Higueras. Leaders in 1996-97 were Fernando del Barro and Manuel Paz Neira. In 1997-98 the leaders were Victoriano Mateo Casteneyra and Carlos Marina Alegre. It was upgraded in 1998-99 to full base status. Volcanics is the main study. Unlike Juan Carlos I Station (which is run by civilians), this base is operated by the Spanish military. The living area can accommodate 14 persons, and there is a medical module, scientific module, engine room, and mechanical workshop, as well a a store and emergency module. In 2000-01 it was all modernized. Decepción Station was only 1.5 km away.

Gabriel González Videla Station *see* **Presidente Gabriel González Videla Station**

Gabriel Peak. 65°36' S, 62°39' W. Rising to 1220 m, at the confluence of Starbuck Glacier and Jeroboam Glacier, on the Oscar II Coast, on the E coast of Graham Land. Surveyed by BAS personnel from Base E in 1963-64, and named by UK-APC on July 21, 1976, after the *Moby Dick* character, Dick Gabriel. US-ACAN accepted the name later in 1976.

Vrah Gabrovo *see* **Gabrovo Knoll**

Gabrovo Knoll. 62°44' S, 60°18' W. A peak, rising to 500 m, on Friesland Ridge, 2.3 km WSW of Shumen Peak, and 1 km NE of the summit of Veleka Ridge, it surmounts Charity Glacier to the N and Tarnovo Ice Piedmont to the SE, in the Tangra Mountains of Livingston Island, in the South Shetlands. Named Vrah Gabrovo by the Bulgarians on March 15, 2002, after the Bulgarian town of Gabrovo. Most of the world has accepted the translated name Gabrovo Knoll.

Gadarene Lake. 71°24' S, 67°35' W. A meltwater lake, 1.5 km long, below Swine Hill, on the George VI Ice Shelf, in George VI Sound. Its E shore bounds the exposed rocks of the W coast of Palmer Land. In summer a considerable volume of water enters the lake from the ravine immediately N of Swine Hill. Discovered and surveyed by FIDS in 1948. When their dogs saw the water they tried to plunge down the steep ice slopes into it (Biblical reference to the Gadarene swine). US-ACAN accepted the name in 1956.

Gadarene Ridge. 76°44' S, 159°33' E. Extends southward from Ship Cone in the Allan Hills of Victoria Land. Discovered by the NZARP Allan Hills Expedition of 1964, who named it for its swine-backed profile (*see also* **Lake Gadarene**). US-ACAN accepted the name in 1965.

Gaddsvaet. 72°02' S, 7°07' E. A bare mountain slope, S of Klevegadden, in the Filchner Mountains, at the W end of the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Norwegians.

Gadsden Peaks. 71°38' S, 167°24' E. A line of peaks, rising to 2500 m, they trend NE on a ridge for 8 km, and stand 8 km WSW of Lange Peak in the Lyttelton Range, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1969, for Michael "Mike" Gadsden, radio science researcher with the National Bureau of Standards, who was at McMurdo Station in 1965-66 and 1967-68. He was there on a grant from the NSF, to study "the distribution of sodium at high latitudes, the spectral distribution of polar cap aurora, and auroral luminosity pulsations."

Gadzhiev Bay. 68°26' S, 153°18' E. Just W of Cape Hudson, on the coast of George V Land. Photographed aerially by OpHJ 1946-47, and by SovAE 1958, and named by the latter as Bukhta Gadzhieva, after Prof. Il'yas Mamedovich Gadzhiev (1935-2006), doctor of biological sciences at the Institute of Soil Science and Agrochemistry, in Novosibirsk. ANCA translated the name.

Bukhta Gadzhieva *see* **Gadzhiev Bay**

Gagarin Mountains. 71°57' S, 9°23' E. A group of mountains, 16 km long, trending in a linear N-S direction, between the Kurze Mountains in the W and the Conrad Mountains in the E, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped from ground surveys and 1958-59 air photos, all taken during the long NorAE 1956-60, and named by the Norwegians as Kurzefjella (not be confused with the Kurze Mountains, q.v.). Remapped from new surveys and air photos taken by SovAE 1960-61, and named by the USSR as Hrebet Jurij Gagarina, for the first man in space, Yuriy Alexeyevich Gagarin (1934-1968). Because the Kurze Mountains already existed as a feature, US-ACAN accepted the Russian naming in 1968, but as Gagarin Mountains.

Gora Gagarina. 70°47' S, 66°20' E. Hills, close to Mount Bunt, in the Aramis Range of the Prince Charles Mountains. Named by the Russians, for cosmonaut Yuriy Gagarin (*see* **Gagarin Mountains**).

Cabo Gage *see* **Cape Gage**

Cape Gage. 64°10' S, 57°05' W. A rocky, snow-topped promontory, rising to 300 m, forming the E extremity of James Ross Island, and the W side of the N entrance to Admiralty Sound. Discovered on Jan. 6, 1843 by RossAE 1839-43, and named by Ross for Vice Admiral Sir William Hall Gage (1777-1864), 2nd sea lord,

and son of General Thomas Gage of American Revolutionary War fame. It appears on an 1861 Spanish chart as Cabo Gage. It was further charted in 1902-03, by SwedAE 1901-04. Fids from Base D surveyed it in 1945-47 and again in 1952-54. US-ACAN accepted the name Cape Gage in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as Cabo Gage in both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Gage, Harry Vernon William Brasier. b. Sept. 4, 1909, Brighton, Sussex, son of Harry Brasier Gage. A steward in the Merchant Marine since 1925, when he shipped out of Southampton on the *Aquitania* as a waiter, he was assistant steward on the *Discovery* during the 1st half of BANZARE 1929-31. After his part in the expedition, he took the *Bendigo* from Melbourne, and arrived back in London on June 25, 1930. He was still a sailing steward during and just after World War II. He died in Dec. 1985, at his home in Southampton.

Gage Ridge. 66°54' S, 51°16' E. A broken and partly snow-covered ridge, 11 km long, 4 km W of Mount Selwood, and 14 km NNW of Pythagoras Peak, in the Tula Mountains of Enderby Land. Plotted from ANARE air photos taken in 1956. Named by ANCA for Harry Gage. US-ACAN accepted the name in 1965.

Punta Gagge *see* **Gagge Point**

Gagge Point. 66°20' S, 66°54' W. The S extremity of Lavoisier Island, in the Biscoe Islands. Photographed aerially by FIDASE 1956-57, and mapped by FIDS cartographers from these photos. Named by UK-APC on Sept. 23, 1960, for Adolph Pharo Gagge (known as Pharo) (b. Jan. 11, 1908, Columbus, O. d. Feb. 13, 1993, Branford, Conn.), U.S. biophysicist specializing in the cold. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Punta Gagge.

Gaillard, Jean-Edmond. b. 1815, Marennes, France. An élève on the *Zélée* during FrAE 1837-40. Promoted to ensign on March 6, 1839, he left sick at Bourbon (now known as Réunion) on July 21, 1840, and died there in 1842.

Gain, Louis. b. 1883. Zoologist and botanist (specifically an algologist) on the *Pourquoi Pas?* with Charcot, during FrAE 1908-10. He left a 400-page unpublished diary. His sister married Jules Rouch, with whom Gain had a running feud. In May and June 1914 Gain and his brother Gustave were in Turkestan. Later he became director of the French National Meteorological Office. He died in 1963.

Gain Glacier. 71°01' S, 61°25' W. A large glacier on the E coast of Palmer Land, it flows NE from Cat Ridge, and enters the Larsen Ice Shelf at the Weddell Sea between (on the one side) Imshaug Peninsula and (on the other) Morency Island and Kvinge Peninsula. Surveyed by BAS personnel from Base E in 1972-73, and mapped by USGS in 1974. Named by US-ACAN in 1976, for Louis Gain. UK-APC accepted the name on July 21, 1976, but with different coordinates — 71°07' S, 61°38' W, neither being incorrect.

Gair Glacier. 73°03' S, 166°32' E. A tributary glacier, anywhere between 16 and 32 km long, flowing from close SE of Mount Supernal, in the Mountaineer Range of Victoria Land, and entering Mariner Glacier just N of Bunker Bluff. Named by the Northern Party of NZGSAE 1962-63 for Henry Stephen Gair, geologist and leader of the party. NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Gair Mesa. 73°28' S, 162°52' E. The most southerly mesa in the Mesa Range, in Victoria Land. Named Gair Tableland by the Northern Party of NZGSAE 1962-63 for their leader, Henry Stephen Gair (*see* **Gair Glacier**). In 1967, US-ACAN accepted the name Gair Mesa.

Gair Tableland *see* **Gair Mesa**

Gaisser Valley. 77°19' S, 161°07' E. A mostly ice-free valley descending S for 2.5 km from Vashka Crag, bounded to the E by Peterson Terrace, and terminating as a hanging valley 0.8 km NW of Lake Vashka, in the Cruzen Range of Victoria Land. Named by US-ACAN in 2005, for University of Delaware physics professor Thomas Korff "Tom" Gaisser (b. March 12, 1940, Evansville, Ind.), of the Bartol Research Institute, principal USAP investigator for the study of cosmic ray showers at Pole Station, 1991-2005. NZ-APC accepted the name on Sept. 12, 2005.

Cerro Gajardo. 62°27' S, 60°47' W. A hill on Punta Boreal (the extreme N point of Cape Shirreff), on Livingston Island, in the South Shetlands. Named by the Chileans for lawyer and diplomat Enrique Gajardo Villaroel (1899-1994), who represented Chile at the preparatory meeting of the Antarctic Treaty, in 1958, and who was a great supporter of the Antarctic marine mammal investigations conducted by ChilAE 1965-66.

Gora Gajdara *see* **Cumulus Mountain**

Gora Gakkelja. 73°11' S, 63°14' E. An isolated nunatak in the southern Prince Charles Mountains. Named by the Russians for Yakov Yakovlevich Gakkel (1901-1965), oceanographer and a director of the Soviet Arctic and Antarctic Institute.

Monte Galain *see* **Monte Galaz**

Galan Ridge. 73°10' S, 62°00' W. A prominent ridge, at an elevation of about 1000 m above sea level, that forms the NE rampart of the Dana Mountains, on the SW side of Mosby Glacier, with Mount Cummings at the SE end, on the Lassiter Coast, in Palmer Land. Mapped by USGS from ground surveys, 1961-67, and from air photos taken by USN, 1965-67. Named by US-ACAN in 1968, for USARP engineer Michael P. "Mike" Galan (b. June 1946, Oakland, Calif.), at McMurdo Station in 1967, an undergraduate student working for the NSF through the University of Wisconsin, and a member of South Pole — Queen Maud Land Traverse III (1967-68). It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Caleta Galápagos. 62°27' S, 59°44' W. A cove at the extreme NE of Punta Fort William, between that point and Canto Point, Discovery Bay, Greenwich Island, in the South Shetlands. Named by the Ecuadorians on July 6, 1990, for the famous Galápagos Islands (off the coast of Ecuador).

Galata Cove. 64°19' S, 63°10' W. A cove, 1.7 km wide, indenting the NE coast of Anvers Island for 2 km, S of Frolosh Point, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, after Galata Point, on the Black Sea coast of Bulgaria.

Galatos Peak. 71°58' S, 163°43' E. A prominent peak, rising to 2045 m, that marks the NW extremity of the Salamander Range, in the Freyberg Mountains, in Oates Land, Victoria Land. Named by the Northern Party of NZGSAE 1963-64, for the Cretan village of Galatos, forever associated with NZ general Lord Freyberg in World War II. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Monte Galaz. 65°31' S, 63°46' W. Rising to 1036 m above the point which marks the central part of the head of Beascochea Bay, between Lever Glacier and Cadman Glacier, S of Cape Pérez, on the W coast of Graham Land. Named by the Chileans for Group Captain Ernesto L. Galaz Guzmán, of the Chilean Air Force, who relieved ChilAE 1956 at Presidente Gabriel González Videla Station. The Argentines call it Monte Galain, for Francisco Galain, 2nd stoker on the *Uruguay*, 1903.

Nunatak Galcano. 66°02' S, 60°33' W. One of several nunataks on the N coastline of Jason Peninsula, in Graham Land. Named by the Argentines.

Mount Gale. 70°46' S, 166°12' E. A prominent, mostly ice-covered peak, at the S end of Frecker Ridge, at the S side of the confluence of Ludvig Glacier and Kirkby Glacier, in the Anare Mountains, S of Yule Bay, in northern Victoria Land. Named by ANCA for Cdr. d'Arcy Thomas "Tom" Gale, RAN (b. July 27, 1911, Orange, NSW), hydrographic surveyor with ANARE here in 1962, and later officer-in-charge of the Antarctic Mapping Branch, Australian Division of National Mapping. US-ACAN accepted the name in 1966. *See also* **Gale Escarpment**.

Gale, Peter Ronald. b. 1932, Portsmouth. He trained as an engineer, worked for a while for the British India Sea Navigation Company, and in 1954 moved to the Falklands, and worked as a farm laborer, mostly with horses. It was there that a girl he had met in a dance hall suggested FIDS, and he applied in 1956, and was accepted, as general assistant and 2nd diesel electric mechanic. He arrived at Port Lockroy Station on the *Shackleton* on March 1, 1957, to winter-over that year. In 1958 he returned to the UK. He now lives in Inglewood, Taranak, NZ.

Gale Escarpment. 72°55' S, 75°23' E. A NW-facing escarpment of rock and ice, eastward of Wilson Ridge, and 24 km E of Mount Harding, in the Grove Mountains of Princess Elizabeth Land. Plotted from ANARE air photos taken between 1956 and 1960. Named by ANCA for Tom Gale (*see* **Mount Gale**). US-ACAN accepted the name in 1967.

Gale Ridge. 83°41' S, 56°27' W. A ridge, 20 km long, it extends in a NW-SE direction from

Mount Dover, in the Neptune Range, in the Pensacola Mountains, and rises to 1245 m in Mount Cowart. Photographed aerially by USN in 1964, surveyed from the ground by USGS in 1965-66, during their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1965, for Phillip E. Gale, Australian meteorologist with the U.S. Weather Bureau, who wintered-over at Ellsworth Station in 1962. The coordinates accepted were 83°41' S, 56°15' W, but by 1969 it had been replotted. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Galen Peak. 64°22' S, 62°26' W. Rising to 1520 m, 5 km W of Buls Bay, at the S side of Hippocrates Glacier, in the Solvay Mountains, in the S part of Brabant Island, in the Palmer Archipelago. First mapped by BelgAE 1897-99. Photographed aerially by FIDASE 1956-57, and re-mapped by FIDS cartographers from these photos. Named by UK-APC on Sept. 23, 1960, after Galen (138-201), the Roman doctor. US-ACAN accepted the name later in 1960.

Gales *see* **Winds**

Les Galets *see under* **L**

Galiche Rock. 62°24' S, 59°21' W. A large rock, extending 300 m in a NW-SE direction and 180 m in a NE—SW direction, off the E coast of Robert Island, 150 m NE of Somovit Point, 780 m S of Kitchen Point, and 900 m N of Batuliya Point, in the South Shetlands. Mapped by the British in 1968, and again by the Bulgarians in 2009. Named by the Bulgarians on Sept. 14, 2010, for the settlement of Galiche, in northwestern Bulgaria.

Galicia Peak. 78°30' S, 85°42' W. Rising to 4500 m in the Vinson Massif, 840 m N of Branscomb Peak, 2.62 km NNW of the summit of Mount Vinson itself, 5.02 km S of Mount Shinn, and 5.5 km ESE of Knutzen Peak, it surmounts Jacobsen Valley to the E, and Branscomb Glacier to the N and W, in the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS in 1988. Named by the Bulgarians on Sept. 14, 2010, for the Spanish region of Galicia, in connection with Miguel Ángel Vidal, who climbed it on Dec. 28, 2004.

Galileo Cliffs. 70°46' S, 68°45' W. A line of cliffs, rising to about 1300 m above sea level, and running in an E-W direction for 8 km, between Grotto Glacier and Jupiter Glacier, 11 km W of Ablation Point, in the E part of Alexander Island, at George VI Sound. Mapped by Searle of the FIDS in 1959-60, from air photos taken in late 1947 by RARE 1947-48, and from ground surveys conducted by FIDS between 1948 and 1950. Re-surveyed by BAS personnel from Fossil Bluff between 1961 and 1973. Named by UK-APC on Dec. 20, 1974, in association with Jupiter Glacier, after the Italian astronomer Galileo Galilei (1564-1642), who discovered the first four satellites of the planet Jupiter. US-ACAN accepted the name in 1975.

Île(s) Galíndez *see* **Galíndez Island**

Isla Galíndez *see* **Galíndez Island**

Mount Galindez. 63°01' S, 60°34' W. On the SE side of Deception Island, in the South Shetlands. Named by the Russians (at least, that's what is claimed by the SCAR gazetteer, which gives no descriptor and no accent mark on Galindez). *see* **Falsa Punta Rancho** (under **F**).

Galíndez, Ismael F. b. July 28, 1871, Córdoba, Argentina. Naval commander, leader of the expedition to Laurie Island, in the South Orkneys, in 1904-05. This was the expedition which took over Omond House from ScotNAE 1902-04, when that expedition left that season, and Galíndez set about the reconstruction and expansion of the station into Órcadas Station. Also that season he led a search party on the *Uruguay* to find the lost Charcot, when FrAE 1903-05 was feared lost. He was later a vice admiral, director of the Naval Academy, and died on April 15, 1948, in Buenos Aires.

Galíndez Island. 65°15' S, 64°15' W. An island, 0.8 km long, immediately E of Winter Island, in the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. This island, and adjacent islands, were discovered and roughly charted by FrAE 1903-05, and named collectively by Charcot as Îles Galindez, for Ismael F. Galíndez. During FrAE 1908-10, the main island was individualized as Île Galindez. Re-charted in 1935-36, by BGLE 1934-37. The main island appears on a 1943 Argentine chart as Isla Galíndez, and that is the name that appears in the 1970 Argentine gazetteer, and also in the 1974 Chilean gazetteer. It appears on a 1947 British chart as Galindez Island, and that was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. Faraday Station is here. The island was photographed aerially by FIDASE 1956-57. Note: The accent mark on "Galindez" was always there when Spanish-speaking persons were writing it, but until only recently, all other nationalities printed the name without one.

Punta Galindo *see* **Davey Point**

Galkin, Nikolay Aleksandrovich. Surgeon on the *Mirnyy* during von Bellingshausen's expedition of 1819-21. He kept a journal.

Galkin Island. 67°31' S, 47°41' E. A small island about 3.7 km N of the Shaw Islands, in Casey Bay, Enderby Land. Photographed from the air by ANARE in 1956, and also by SovAE 1957. Named by the Russians as Ostrov Galkina, for Nikolay Galkin. ANCA translated the name as Galkin Island.

Galkin Nunatak. 73°27' S, 65°55' W. An isolated nunatak, rising to about 1500 m above sea level, W of Meinardus Glacier, and 56 km NW of Mount Coman, it surmounts the interior ice plateau, at the Lassiter Coast, near the base of Palmer Land. Mapped by USGS from ground surveys taken between 1961 and 1967, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for William L. Galkin (b. 1939), meteorologist with the National Weather Service, who summered at Byrd Station in 1965-66. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974. It is rumored that the Russians translate this name as Nunatak Galkina, presumably supposing that it was named after Nikolay Galkin. However, this hardly seems likely.

Nunatak Galkina *see* **Galkin Nunatak**

Ostrov Galkina *see* **Galkin Island**

Gall, Jean. b. Sept. 8, 1814, Tarascon. Élèves' steward on the *Zélée* during FrAE 1837-40. He ran from the scurvy ship at Talcahuano, Chile, on May 23, 1838.

Mount Galla. 75°56' S, 125°52' W. A snow-capped mountain rising to 2520 m above the Usas Escarpment, 50 km E of Mount Petras, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1962, for Lt. Edward J. Galla.

Galla, Edward John. b. Oct. 7, 1930, Bridgeport, Conn., son of John J. Galla and his wife Gazel. He graduated as a doctor from St. Louis University Medical School in 1956, and spent 2 years in the U.S. Navy, as a lieutenant, during which time he was medical officer and officer-in-charge at Byrd Station for the winter of 1959, taking over from Lt. Peter Ruseski. In 1960 he began 5 years at the Albany Medical Center, in NY, studying neurosurgery, and on Oct. 28, 1961 he married Cynthia Leahy. From 1965 to 1984 he practiced neurosurgery in Pittsfield, Mass., then from 1984 to 1994 practiced emergency medicine, and in 1994 retired to Block Island, RI. In 2007 he moved to Palm Beach Gardens, Fla., where he died on Feb. 20, 2008.

Gallacher, Joseph H. "Joe." b. 1921, Middlesbrough, Yorks, son of John Gallacher and his wife Mary Woods. He became a shepherd in Arisaig, in Scotland, and in 1948 left England for the Falklands, becoming a shepherd there. In 1949 he joined FIDS, as a handyman, wintering-over at Base G in 1950. In 1951 he returned to Port Stanley, and from there went to Montevideo, where he caught the *Andes* bound for London, in company with Alex Hewat. He arrived in Tilbury Docks on Feb. 26, 1951, and went back to Arisaig.

The *Gallad II*. French yacht, in at the South Shetlands and the Antarctic Peninsula in 1995-96, under the command of Capt. Yves Bouyx.

Gallagher, Alexander William "Alec." b. 1935, London, son of Henry Gallagher and his wife Gwendoline Mary Tickner. He joined FIDS in 1959, as a meteorologist, and wintered-over at Base F in 1960 and 1961. In 1964, in London, he married Diana B. Roberts. He lives in Wells-next-the-Sea, in northern Norfolk.

Gallagher Knob. 72°43' S, 64°09' E. A small peak on the W end of Mount Cresswell, in the S part of the Prince Charles Mountains, in Mac. Robertson Land. Photographed aerially by ANARE in 1958, it was used as a navigation marker for ANARE parties in the area. Named by ANCA for Peter B. Gallagher, senior diesel mechanic at Mawson Station in the winter of 1971.

Gallagher Ridge. 77°28' S, 162°49' E. Trends NE from Mount Newall, in the Asgard Range, and descends to the lower Wright Valley to the

E of Dekker Glacier, in Victoria Land. Named by US-ACAN in 1970, for Charles "Chuck" Gallagher (b. 1946), command master chief, U.S. Naval Support Force, Antarctica, at McMurdo in 1991-92, 1992-93, 1993-94, and 1994-95. Then he retired from the U.S. Navy, joined Antarctic Support Services, Inc., and was housing co-ordinator at McMurdo in 1995-96 and 1996-97. He also wintered-over there in 1997, but became sick, and died, on May 1, 1997.

Gallaher, Fergus *see* **USEE 1838-42**

Gallaher Peak. 85°27' S, 138°18' W. Rising to 1005 m, in the Berry Peaks, between the SE edge of the Ross Ice Shelf and the Watson Escarpment. Named by US-ACAN in 1967, for James T. Gallaher, electrician who wintered-over at Byrd Station in 1958.

Gallant, Joseph A. b. 1910. Of Chicago. USN. Messman on the *Jacob Ruppert* during ByrdAE 1933-35.

Gallardón, José *see* **Órcadas Station**, 1943

Cabo Gallegos *see* **Cabo América**

Gallen Nunatak. 75°48' S, 128°36' W. On the S side of Balchunas Pass, 2.5 km NW of Putzke Peak, in the McCuddin Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1969. Named by US-ACAN in 1974, for Lt. (jg) Kevin P. Gallen (b. 1946), with the U.S. Navy Civil Engineer Corps, officer-in-charge of Pole Station in 1971. He got his law degree from Harvard Law School in 1975, and was later in the public utilities business.

Gallipoli Heights. 72°26' S, 163°48' E. A group of peaks and ridges, their center being about 12 km SSE of Monte Cassino, in the Freyberg Mountains of Oates Land, in Victoria Land. Named by NZGSAE 1963-64 in association with the Freyberg Mountains (Lord Freyberg, the famous NZ World War II general, the "Salamander"). NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Punta Gallows *see* **Gallows Point**

Gallows Point. 64°20' S, 62°59' W. An elongated point made of black stone, it is the northern of 2 low, parallel points which mark the NE extremity of Gamma Island, in the Melchior Islands, in the Palmer Archipelago. Sketched by the personnel on the *Discovery* in 1927, and probably named by them. It appears on their 1929 chart. Surveyed by ArgAE 1942, ArgAE 1943, and ArgAE 1948. It appears on a 1946 Argentine chart as Punta Gallows, and that was the name that appeared in the 1970 Argentine gazetteer, and also in the 1974 Chilean gazetteer. The Argentine station Melchior was established S of this point in 1947. UK-APC accepted the name Gallows Point on Sept. 8, 1953. It appears as such in the British gazetteer of 1955, and on a British chart of 1956. US-ACAN accepted the same name in 1956.

Gallsworthyryggen. 80°40' S, 19°25' W. A small mountain in the Pioneers Escarpment, the easternmost part of the Shackleton Range, in the most southwesterly part of Queen Maud Land. Named by the Norwegians for John M. "Golly" Gallsworthy (b. 1940, Cuckfield, Sussex), BAS carpenter who wintered-over at Halley Bay Station in 1967 and 1968, and at South Georgia in 1970. Name means Gallsworthy Ridge. *See also* **Nobleknausane**, **Carterknattane**, and **Riley-ryggen**.

Gallup Glacier. 85°09' S, 177°50' W. A broad glacier, 20 km long, it flows E between Mount Rosenwald and Mount Black, into Shackleton Glacier, just N of Matador Mountain. Named by US-ACAN in 1966, for Cdr. Frederick S. "Fred" Gallup, Jr. (b. Aug. 8, 1921, New Haven, Conn. d. Aug. 29, 1984, Miami), USN, VX-6 commander during OpDF 1965 (i.e., 1964-65).

Galtefjellet. 68°16' S, 58°35' E. The SE of 2 rock outliers on the S side of Purka Mountain, in the Hansen Mountains. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it ("boar mountain"). US-ACAN accepted the name without modification in 1967.

Galten *see* **Galten Islands**

Galten Islands. 66°23' S, 56°25' E. Two small islands separated by a narrow channel about 18 m wide, in the E part of Magnet Bay, 16 km W of Cape Davis. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named the feature Galten (i.e., "the boar"). Bruce Stinear led an ANARE party here in Sept. 1957. US-ACAN accepted the name Galten Islands in 1961, and ANCA followed suit.

The *Galvarino*. Built at the Aukra Bruk shipyards, in Norway, for the Danish company Maersk, she was launched in Aug. 1974. With an ice-strengthened hull, she was designed especially for the support of petroleum platforms in deep sea. She was acquired by Chile in 1987, arrived in Valparaíso in Jan. 1988, and became the 2200-ton, 58.3-meter rescue and salvage tug *Galvarino* (not the first tug to bear that name). Capable of 12 knots, she was used on ChilAE 1990-91 (Captain Pedro Urrutia Bunster); ChilAE 1991-92 (Captain Gonzalo López Pérez); ChilAE 1992-93 (Captain López); ChilAE 1993-94 (Captain Juan Sir R.; that season she also helped take down the Ecuadorian Antarctic Expedition); ChilAE 1994-95 (Captain Marcelo Asenjo Boegel); 1995-96 (Captain Asenjo); ChilAE 1996-97 (Captain Asenjo); ChilAE 1997-98 (Captain Ruggero Cozzi Paredes); and ChilAE 1998-99 (Captain Cozzi), and every season since.

Laguna Galvarino *see* **Kroner Lake**

Rocas Galvarino *see* **Quintana Island**

Ensenada Galvez *see* **Covadonga Harbor**

Galyshev Nunatak. 71°36' S, 12°28' E. At the SW foot of Store Svarthorn Peak, in the Mittlere Petermann Range of the Wohlthat Mountains, in Queen Maud Land. Discovered by GermAE 1938-39, and originally plotted from air photos taken by that expedition. NorAE 1956-60 surveyed it, and in 1958-59 they flew over it, photographing as they went. The Norwegians mapped it anew from these photos. SovAE 1960-61 re-mapped it, and it was named by the Russians in 1966, as Skala Galysheva, for Arctic pilot Viktor L. Galyshev, who died in a purge in 1938, in Yakutia. US-ACAN accepted the name Galyshev Nunatak in 1970. The Norwegians call it Galyshevhamaren (which means approximately the same thing).

Skala Galysheva *see* **Galyshev Nunatak**

Galyshevhamaren *see* **Galyshev Nunatak**

Punta Gam *see* **Gam Point**

Gam Point. 61°55' S, 57°57' W. A rocky point, on the N side of Esther Harbor, Venus Bay, 3 km SE of False Round Point, on the N coast of King George Island, in the South Shetlands. In 1913-14 David Ferguson roughly charted it (but did not name it) as a small rocky island separated from the ice cliffs of King George Island by a channel 400 feet wide. And he was right — then. However, in later years the area re-configured (*see* **Pyrites Island**), and the channel disappeared, transforming this feature from an island into a point. FIDASE found this to be the case when they photographed aerially in 1956. Named by UK-APC on Sept. 23, 1960, as Gam Point. A gam is an informal visit between gangs of whalers or sealers. US-ACAN accepted the name later in 1960. The Argentines call it Punta Gam. Originally plotted in 61°55' S, 58°00' W, it was replotted by the British in late 2008.

Gamage Point. 64°46' S, 64°04' W. A rock point marking the N side of the entrance to Hero Inlet, Arthur Harbor, on the SW side of Anvers Island. Palmer Station is on this point. Named by US-ACAN in 1974, for the Harvey F. Gamage Shipyard in South Bristol, Maine, which built the *Hero*, Palmer Station's supply ship. UK-APC accepted the name, on Dec. 20, 1974. It appears in the British gazetteer of 1976.

Bukhta Gamajunova. 66°35' S, 110°00' E. A bay on the Budd Coast of Wilkes Land, S of the Windmill Islands. Named by the Russians, for scientist N.I. Gamayunov, of the Kalinin Polytechnic.

Gora Gamalei. 72°10' S, 26°02' E. A mountain in the E part of the Sør Rondane Mountains. Named by the Russians, for Platon Gamaleya (*see* **Gamaleya Rock**). The Norwegians call it Gamalejafjellet.

Skala Gamalei *see* **Gamaleya Rock**

Gamalejafjellet *see* **Gora Gamalei**

Gamalejahamaren *see* **Gamaleya Rock**

Gamaleya Rock. 71°44' S, 10°43' E. A rock, 3 km SE of Smirnov Point, marking the extremity of a line of rocks that extend E from the Shcherbakov Range, in the W and N part of Somoveken, in the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39, and plotted roughly from these photos. In 1958-59 the Norwegians made new air photos, as well as ground surveys, during the long NorAE 1956-60, and new maps were drawn up. Re-mapped in 1960-61 by the Russians, and named by them in 1966, as Skala Gamalei, for navigation scientist and writer Platon Yakovlevich Gamaleya (1766-1817), naval officer, and professor at the naval academy in St. Petersburg, at the turn of the 19th century. In 1970, US-ACAN accepted the name Gamaleya Rock. The Norwegians call it Gamalejahamaren.

Gambacorta Peak. 84°02' S, 56°03' W. Rising to 1840 m, 6 km E of Mount Kaschak, at the S end of the Neptune Range, in the Pensacola Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1965, for Capt. Francis Michael Gambacorta (b. July 8, 1913, Sicily. d. Dec. 1, 2000, Williamsburg, Va.), captain of the *Wyandot*, 1956-57. He graduated from the U.S. Naval Academy in 1935, was a distinguished submarine commander in the Pacific during World War II, and after his retirement was a professor of languages and student administration, at Long Island University. His specialty was Dante's *Inferno*. Originally plotted in 84°02' S, 55°44' W, it was replotted by 1968. UK-APC accepted the name on Nov. 3, 1971.

Gamble Cone. 77°28' S, 169°14' E. Rising to about 400 m, 1 km SSE of Post Office Hill, in the Kyle Hills of Ross Island. Phil Kyle suggested the name, US-ACAN accepted it on June 19, 2000, and NZ-APC followed suit on Feb. 20, 2001. Irish professor and vulcanologist John Alan Gamble was a reader in geology at VUW (Victoria University of Wellington) from 1980; from 2002 he was chair of geology at University College Cork. He took part in three USAP field projects led by Kyle—1981-82, 1982-83, and 1984-85, and in 1989-90 was part of NZARP's West Antarctic Volcano Exploration project (WAVE).

Gamble Glacier. 81°06' S, 156°45' E. Flows NW from Chapman Snowfield, between Green Nunatak (at the SW) and Keating Massif (at the NE), in the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for John Gamble (*see* **Gamble Cone**). US-ACAN accepted the name later in 2003.

Gambole, John J. b. April 27, 1892, Mass. Baker on the *North Star* during USAS 1939-41. By early Feb. 1940 he had cracked up, was threatening to off himself, and had to be watched closely. In the late 1940s and early 1950s his wife Leona had a poultry farm in Hampton, NH. He died in May 1976, in Exeter, NH. Leona died in 1996.

Gambone Peak. 71°45' S, 164°14' E. Rising to 1620 m, 11 km SW of Coronet Peak, at the junction of Leap Year Glacier and Black Glacier, in the Bowers Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Lt. (jg) (later Capt.) Joseph C. Gambone (b. 1934), operations administrative assistant on the staff of the commander, U.S. Naval Support Force, Antarctica, 1967 and 1968.

Podlëdnye Gory Gamburceva *see* **Gamburtsev Subglacial Mountains**

Gamburtsev Mountains *see* **Gamburtsev Subglacial Mountains**

Gamburtsev Subglacial Mountains. 80°30' S, 76°00' E. Also called Gamburtsev Mountains. A major group of subglacial mountains, buried beneath between one and three km of ice, under Dome Argus, and extending in a N-S direction beyond that area, toward the general areas of the South Pole and American Highland. Discovered by the Russians in 1958, and mapped by them using seismic reflections through the East Antarctic Ice Sheet. Named by the USSR as Gory Podlëdnye Gamburceva, for geophysicist Grigoriy Aleksandrovich Gamburtsev (1903-1955). US-ACAN accepted the name Gamburtsev Subglacial Mountains, in 1975. The presence of these mountains was confirmed by a team of international scientists in 1977-78. In 2005 the Chinese determined that the ice overlaying these mountains was, in places, 1000 feet thick, and therefore it might be possible to do core-sampling. In 2007-08, it was determined that the mountains are about the same size and shape as the Alps, in Europe. Several peaks rise above 2000 m in height. Originally plotted in 81°00' S, 76°00' E, they have since been re-plotted.

Games, Jorge A. b. Argentina. In 1911, as an ensign, he was a guest officer on the U.S. cruiser *Maryland*. As a teniente de navío, he was skipper of the *Uruguay*, in Antarctic waters in 1918-19. In 1928, by now a capitán de navío, he became skipper of the cruiser *Buenos Aires*, and was later a naval attaché in London.

Gamle Hjem *see* **Admiralty Bay**

Isla Gamma *see* **Gamma Island**

Gamma Hill. 63°34' S, 56°47' W. A distinctive, ice-covered hill, rising to about 300 m, on Tabarin Peninsula, on the W shore of Fridtjof Sound, at the E extremity of Trinity Peninsula. Fids from Base D surveyed this area between 1959 and 1961, and much geophysical work was done here between 1959 and 1961. Gamma signifies not only the letter "g" in the Greek alphabet, but also a former unit of magnetic intensity. UK-APC accepted the name on Feb. 12, 1964, and US-ACAN followed suit that year.

Gamma Island. 64°20' S, 63°00' W. An island, 2.7 km long, and completely covered with a thick mantle of ice, with regular features, a smooth summit rising to 140 m in the center of the island, and with shores formed of high ice-cliffs, it marks the SW extremity of the Melchior Islands, in the Palmer Archipelago. FrAE 1903-05 discovered it, and roughly charted it, and Charcot named it Île Gouts (a name that has not survived), for Capitaine de frégate Gouts, of the French Navy. The personnel on the *Discovery* roughly surveyed the area in 1927, and were probably the ones who re-named it, for the Greek letter. It appears on their 1929 chart. The island was surveyed by ArgAE 1942, ArgAE 1943, and ArgAE 1948. It appears on a 1946 Argentine chart as Isla Gamma, but on a 1948 Argentine chart as Isla Observatorio (i.e., "observatory island"), and the latter is the name that appears in the 1970 Argentine gazetteer. Melchior Station was built here. The island's principal geographic feature is Gallows Point. It appears on a 1952 British chart as Gamma Island, and that was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN in 1956. It appears on a 1949 Chilean chart as Isla de Gamma, but the name that appears in the 1974 Chilean gazetteer is Isla Gamma.

Montaña Gana. 66°09' S, 63°45' W. A mountain rising to about 1640 m, about 8 km N of the mouth of Attlee Glacier, to the N of Cabinet Inlet, on the E coast of the Antarctic Peninsula. Named by the Chileans for Brigadier General Jorge Gana Eastman, of the Chilean Air Force, who took part in ChilAE 1952. The Argentines call it Monte Candelaria.

Cerro Gancedo *see* **Levassor Nunatak**

Île Gand *see* **Gand Island**

Isla Gand *see* **Gand Island**

Gand Island. 64°24' S, 62°51' W. A flat, ice-covered island, 5 km long and 2.5 km wide, at the N end of Schollaert Channel, between Anvers Island and Brabant Island, in the Palmer Archipelago. Its peak is surrounded by a moderate elevation. Discovered by BelgAE 1897-99, roughly charted by them on Jan. 30, 1898, and named by de Gerlache as Île Gand, for the town of Gand (Ghent) in Belgium, where subscription drives were held to help finance his expedition. It appears on the BAE 1898-1900 chart as Gand Island. It appears on a Chilean chart of 1947 as Isla Gand, and that is the name used in both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Gand Island in 1952, and UK-APC followed suit on Sept. 8, 1953. It was photographed aerially by USN in 1968-69.

Gandalf Ridge. 78°21' S, 164°07' E. A very hard volcanic rock ridge, part of the McMurdo Volcanics, at the NW end of Hurricane Ridge, to the N of Mount Morning, on the Scott Coast of southern Victoria Land. Phil Kyle examined the ridge in Dec. 1977, and proposed the name, after the wizard in Tolkien's *Lord of the Rings*. US-ACAN accepted the name in 1999, and NZ-APC followed suit on Nov. 4, 1999.

Isla Gándara *see* **Murray Island**

Islote Gándara *see* **Gándara Island**

Gándara Island. 63°19' S, 57°56' W. A tiny island, 250 m long, 100 m wide, and trending E-W, immediately SW of, and very close to, Kopaitic Island, in the Duroch Islands, in Covadonga Harbor, just S of Cape Legoupil, in Trinity Peninsula, off the W coast of Graham Land. Discovered during FrAE 1837-40. Charted by ChilAE 1947-48, and named by Capt. Ernesto González Navarrete as Isla Comandante Escuadrilla González Rojas, after pilot and leader of the expedition, René González Rojas, of the Chilean Air Force. Even the Chileans knew this name was too long, and in 1951 it was shortened to Isla González Rojas. Chile themselves renamed it Islote Gándara, for Comodoro Jorge Gándara Bofill, captain of the *Covadonga* during ChilAE 1947-48 and 1948-49. As a commodore, Don Jorge was leader of ChilAE 1954-55, and by 1960 was a rear admiral, and commander-in-chief of the First Naval Zone. *See also* **Punta Mary**. The new name Islote Gándara appears on a 1959 Chilean government chart, and is the name listed in the 1974 Chilean gazetteer. US-ACAN accepted the name Gándara Island in 1964, and UK-APC followed suit on Dec. 15, 1982. Not to be confused with Murray Island (what the British call Bluff Island).

Gandfluga. 72°21' S, 19°23' E. A nunatak in the N part of Gandrimen, on the W side of

Tussebreen, in the W part of the Sør Rondane Mountains. Named by the Norwegians, "gand" meaning "spells performed by the Sami people of Lapland."

Gandrimen. 72°26' S, 19°19' E. A glaciated ridge, 26 km long, with 3 small nunataks on it (Gandfluga, Bergekongen, and Bergtussen), W of Tussebreen, in the W part of the Sør Rondane Mountains. Named by the Norwegians (*see* **Gandfluga**). *See also* **Nunataki Bratsva**.

Gane, Edward John. b. Jan. 25, 1930, Bristol, son of Wilfred Gane and his wife Maisie V. Harris. He joined the RAF, and was a sergeant when he became senior radio mechanic during the 3rd part (i.e., 1957-59) of the British Royal Society Expedition. He went south on the *Tottan*, and wintered-over at Halley Bay Station in 1958. At the end of the expedition, he left Cape Town on the *Kenya Castle*, arriving back in London on Feb. 27, 1959. Now deceased.

Gäng, Edgar. b. 1913, Germany. On July 8, 1937, at Bremerhaven, he went to sea for the first time, as an engineer's assistant on the *Bremen* for her trip to New York. After doing that for a year, back and forth, week after week, and rising to 3rd engineer, he became 4th engineer on the *Schwabenland* during GermAE 1938-39. Back in Germany he signed on to the *Europa*, again plying the Atlantic. Then came the war and this author has been unable to track him after that.

Gangbrekka *see* **Gangbrekka Pass**

Gangbrekka Pass. 72°15' S, 0°20' W. A mountain pass in the form of an ice slope, between Jutulrøra Mountain and Brekkerista Ridge, in the Gburek Peaks, in the W part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. NBSAE 1949-52 surveyed it from the ground, and also photographed it aerially. It was also photographed aerially in 1958-59, during NorAE 1956-60, and from all these efforts it was mapped by Norwegian cartographers, and named by them as Gangbrekka ("the hallway slope"). US-ACAN accepted the name Gangbrekka Pass in 1966.

Ganin, Honoré. b. Dec. 18, 1816, Agde, France. Ordinary seaman on the *Zélée* during FrAE 1837-40.

Gannon Nunataks. 70°43' S, 69°28' W. A notable twin-peaked nunatak, rising to about 750 m, with several smaller rock outcrops, between the Lully Foothills and the N part of the LeMay Range, on the NE coast of Alexander Island. In 1959-60, Searle of the FIDS mapped this feature from aerial photos taken in late 1947 by RARE 1947-48. Named by UK-APC on Dec. 8, 1977, for Anthony E. "Tony" Gannon (b. 1945, Smethwick, Staffs), who wintered-over as a BAS meteorological observer at Halley Bay Station in 1971 and 1972, was then at South Georgia, then wintered-over at Base E in 1973 and 1974. In 1973, he took part in a plane-table survey of the N part of Alexander Island. US-ACAN accepted the name.

Gannutz Glacier. 70°24' S, 162°11' E. A smooth glacier flowing N from the Bowers Mountains into the E part of Rennick Bay, between Weeder Rock and Stuhlinger Ice Piedmont. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1965. Named by US-ACAN in 1970, for Theodore P. Gannutz, biologist at Hallett Station in 1966-67, and scientific leader at Palmer Station in 1968.

GANOVEX. A series of 10 (to date) West German Antarctic Northern Victoria Land Expeditions. The first one, **GANOVEX I**, or GANOVEX 79, was the first German expedition to set foot in Antarctica since Ritscher's GermAE 1938-39. The expedition, led by scientist Franz Tessensohn, left NZ on the *Schepelsturm*, bound for Cape Adare, in late 1979, and studies of the Robertson Bay area began on Dec. 12, 1979. Sedimentology was the main study, with petrography, geochemistry, tectonics and volcanic geology as well. Two Hughes 500-D helicopters and a 558 Sikorsky helicopter were used. The last field camp was evacuated on Feb. 20, 1980, and the ship returned to NZ. **GANOVEX II**. 12 scientists, led by Franz Tessensohn. Detlef Damaske was also part of the expedition. When the expedition ship *Gotland II*, sank in Yule Bay on Dec. 18, 1981, the expedition was called off. **GANOVEX III**. 15 scientists, led by Franz Tessensohn, its aim was to continue the work begun by GANOVEX I and the aborted GANOVEX II. It lasted from early Dec. 1982 to early March 1983. The *Polar Queen*, which took the expedition down from Wellington, NZ, returned with the expedition to Wellington, with 12 tons of rock samples. Other members of the expedition were: geologists Georg Kleinschmidt, Heinz Jordan, Greg Mortimer, Norbert W. Roland, Michael Schmidt-Thomé; logistics manager Jürgen Kothe; Canadian helo pilot Steve McGovarin; Dr. George M. Gibson, Anthony Crawford, Stephan Engel, Dr. Robert H. Findlay, David H. Green, Wolfgang Schubert, Peter Müller. **GANOVEX IV**. Summer of 1984-85. 30 scientists, led by Detlef Damaske. Two Dornier aircraft supported them, and one of them was shot down over Western Sahara while flying back to West Germany. **GANOVEX V**. 1988-89. 33 scientists, led by Detlef Damaske, on the *Polar Queen*. They took two Dornier 228s and 4 helos. **GANOVEX VI**. 1990-91. 19 scientists, led by Franz Tessensohn on the *Polar Queen*. Detlef Damaske was deputy leader. T.F. Redfield, of the USGS, was USARP representative. **GANOVEX VII**. 1992-93. A multinational expedition of 33 scientists, on the *Polar Queen*. Detlef Damaske led the aeromagnetic program. Geologists: Christine Smith, Bruce P. Luyendyk. **GANOVEX VIII**. 1999-2000. A joint German-Italian expedition of 24 scientists, led by Detlef Damaske on the *Polar Duke*. Their mission was to conduct aeromagnetic surveys, geology, and gps mapping. They used 4 helicopters. The scientists included: Heinz Dieter Möller, Fausto Ferraccioli, Emanuele Bozzo, Massimo Chiappini, Franco Talarico, Egidio Armadillo, Giorgio Caneva, Wilfried Korth, Gernot Reitmayr, Marco Cattaneo, Francesco Mancini, Christian Rolf, Norbert W. Roland, Friedhelm Henjes-Kunst, Andreas Läufer, Federico Rossetti, Frank Lisker, Georg Kleinschmidt, Martin Olesch, Volkmar Damm, Dieter Eisenburger. **GANOVEX IX**. 2005-06. 8 scientists, led by Dr. Norbert W. Roland, on the *L'Astrolabe*. The geologists were Dr. Roland, Andreas Läufer, Frank Lisker, Benjamin Bomfleur, Jörg Schneider, Robert Schöner, and Lothat Viereck-Götte. The geophysicists were Detlef Damaske, Dieter Möller, and Felix Goldmann. Jürgen Kothe was station manager, and Jan Storp was station tech. The 5-man NZ helicopter crew were: Steve Barry, Ash Clarke, Shane Bond, Angus Taylor, and Robert Gits. The Twin Otter plane crew were: Monica Dauenhauer, Bob Baldwin, and Rob McLeod. Public affairs personnel were: Michael Trapp and Henrik Wagner. **GANOVEX X**. 2009-10. 21 scientists, led by Andreas Läufer and Detlef Damaske, on the *Italica*.

GANOVEX-Kette. 70°55' S, 166°15' E. A range of mountains in the Anare Mountains. Named by the Germans.

Gansevoort, Henry *see* **USE 1838-42**

Mount Ganymede. 70°51' S, 68°27' W. Rising to 600 m, on Ganymede Heights, between Jupiter Glacier and Ablation Valley, on the E side of Alexander Island, it is the highest mountain in the area. Named by UK-APC on Jan. 18, 2002, in association with Ganymede Heights, for the largest of the planet Jupiter's satellites.

Ganymede Heights. 70°52' S, 68°26' W. Heights consisting of rounded ridges with extensive rock outcrops rising to 600 m or more (i.e., Mount Ganymede), between Jupiter Glacier and Ablation Valley, on the E side of Alexander Island, at George VI Sound. Flatiron Valley is here, in the S part of the heights. Mapped by Searle of the FIDS in 1959-60, from air photos taken during RARE 1947-48. Surveyed by BAS personnel from Fossil Bluff between 1961 and 1973. Mapped by the (British) Directorate of Overseas Surveys from NASA and USGS satellite images. Named by UK-APC on Dec. 20, 1974, for Ganymede, the largest of the planet Jupiter's satellites. US-ACAN followed suit with the naming in 1975. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Gaoshan Hu *see* **Gaoshan Lake**

Gaoshan Lake. 62°13' S, 58°58' W. A permanent lake between Clement Hill and Yanou Lake, S of Great Wall Station, on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese as Gaoshan Hu, the name was translated by UK-APC on June 6, 2007. The British were the latest to plot this feature, in late 2008.

[1]**The Gap** *see* **The Gateway**, **Neptunes Window**

[2]**The Gap**. 77°51' S, 166°43' E. The gap, which is actually a col between Crater Hill and Observation Hill, and which effectively separates Cape Armitage, Crater Hill, Observation Hill, McMurdo Station, Pram Point, Scott Base, and Hut Point from the rest of Hut Point Peninsula, on Ross Island. It runs 3 km from Hut Point to Scott Base, and one can cross the peninsula at a relatively low level here. Discovered in 1902 by

BNAE 1901-04, and named by Scott, whose sledging parties did, indeed, use this passage to make such trips across the S end of Hut Point Peninsula. US-ACAN accepted the name in 1952. It was later used as the main route between Scott Base and Williams Field.

Gap Nunatak. 67°54' S, 62°30' E. A small nunatak, rising to 1030 m, just about in the center of Hordern Gap, in the David Range of the Framnes Mountains, between Mount Coates and Mount Hordern, in Mac. Robertson Land. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who called it Metoppen (i.e., "the middle peak"). ANARE, who have been the latest to plot this feature, renamed it Gap Nunatak, for its location in Hordern Gap. US-ACAN accepted that name in 1965.

GAP Project. GAP stood for Glaciology of the Antarctic Peninsula. An idea dreamed up by BAS, and executed as a British effort, under the auspices of SCAR, in the 1980s to derive a 1000-year climatic record for the peninsula, from evidence of impurities in ice-cores. Argentina, Chile, and Norway were also involved in the project.

Mount Gara *see* **Mount Cara**

Gara-dake. 72°33' S, 31°18' E. A peak, 2247.3 m above sea level, in the N part of the Belgica Mountains. Photographed aerially by JARE 1976, and surveyed from the ground by JARE 1979-80. Named by the Japanese on Nov. 24, 1981 (name means "looking like a mountain").

Mount Garan. 67°32' S, 98°56' E. Marked by a cluster of small peaks, it stands 15 km SW of Mount Strathcona, near the head of Denman Glacier. Mapped from air photos taken during OpHJ 1946-47, and named by US-ACAN in 1955, for E.M. Garan, of Miami, aerial photographer on crew #2, under David Bunger, during OpHJ 1946-47.

Cabo Garay *see* **Bottrill Head**

Cabo García *see* **Cape García**

Cap García *see* **Loqui Point**

Cape García. 65°44' S, 64°40' W. A cliffed hill at the N side of the entrance to Barilari Bay, entirely covered in ice, rising up abruptly from the sea to a height of about 500 m above sea level, it is also the SW entrance to Bigo Bay, on the Graham Coast, on the W coast of Graham Land. Discovered by FrAE 1903-05, roughly charted by them, and named by Charcot as Cap Loqui. He named the S side of the entrance to Barilari Bay as Cap Garcia, for Rear-Adm. García of the Argentine Navy who, as president of the Centro Naval, had been able to assist FrAE 1903-05. This situation is reflected in a 1908 British map, where the northern cape is called Cape Loqui. However, Charcot's maps made during his later FrAE 1908-10, show Cap Garcia as the N feature, and that situation went into force cartographically almost immediately. On those 1908-10 maps Charcot did not use the name Cap Loqui at all, but since then the S feature has been named Loqui Point (q.v.). BGLE 1934-37 charted it in 1935-36, and it appears as Cape Garcia on Rymill's 1938 map of the expedition. It appears on an Argentine chart of 1946 as Cabo Loqui, but the Argentine gazetteer of 1970 shows it as Cabo García. It appears on a Chilean chart of 1947, as Cabo García, and that is how it appears in the Chilean gazetteer of 1974. It appears on a 1948 British chart as Cape Garcia, and that was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears as such in the British gazetteers of 1955 and 1959. FIDASE photographed it aerially in 1956-57. Note: It is only since the early 1970s that the accent mark has been used by anyone other than the South Americans.

Ensenada García. 63°47' S, 61°41' W. An inlet on the S side of Hoseason Island, in the Palmer Archipelago. Named by the Argentines.

Mont Garcia *see* **Mount Zdarsky**

Pico García *see* **Pilot Peak**

García, Onofre. Chilean ship's pilot 2nd class, who was on the *Yelcho* when she accompanied the *Emma* south to try to rescue Shackleton's men from Elephant Island.

Garcia, René. French scientific leader who was due to relieve Barré when the *Tottan* landed at Adélie Land on Feb. 2, 1952. However, the fire at Port-Martin prevented this (*see* **French Polar Expeditions**). Later, in 1958, Garcia relieved Jacques Dubois as leader of Charcot Station, for the last winter at that station.

Isla García Fernández. 64°45' S, 62°17' W. An island in Wilhelmina Bay, off the W coast of Graham Land. Named by the Argentines.

Garcia Point. 85°14' S, 170°16' W. A conspicuous point forming the S side of the terminus of DeGanahl Glacier, where that glacier enters Liv Glacier, in the Queen Maud Mountains. Named by US-ACAN in 1966, for Leopoldo Garcia, USARP meteorologist with the U.S. Weather Bureau, who wintered-over at Pole Station in 1965.

Garcie Peaks. 69°32' S, 66°48' W. A group of 3 small peaks, the highest rising to 960 m, 8 km SE of Mount Leo, on the S side of Fleming Glacier, SE of the Forster Ice Piedmont, on the Fallières Coast, in the W central part of the Antarctic Peninsula. Surveyed in Dec. 1958 by Fids from Base E, and plotted by them in 69°31' S, 66°45' W. Named by UK-APC on Aug. 31, 1962, for Pierre Garcie, 15th-century pioneer French navigator. US-ACAN accepted the name later in 1962. It has since been replotted.

Garczynski Nunatak. 85°24' S, 124°48' W. Cone-shaped, the highest in a cluster of nunataks close W of Mount Brecher, on the N flank of Quonset Glacier, in the Wisconsin Range, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1960. Named by US-ACAN in 1962, for Carl J. Garczynski (b. 1936), meteorologist who wintered-over at Byrd Station in 1961.

Islotes Garde *see* **Garde Islands**

Garde Islands. 65°51' S, 66°22' W. A small group, 8 km WNW of Lively Point, off the SW side of Renaud Island, in the Biscoe Islands. Photographed aerially by FIDASE in 1956-57, and first accurately shown on an Argentine government chart of 1957. Named by UK-APC on July 7, 1959, for Vilhelm Garde (1859-1926), Danish oceanographer who began sea-ice reporting in the Arctic in 1899. It appears on a British chart of 1961. US-ACAN followed suit with the naming in 1971. The Argentines call this feature Islotes Garde.

Garden Spur. 84°33' S, 174°45' W. On the W side of Longhorn Spurs, on the E side of Massam Glacier, 5 km S of Cape Surprise. So named by the Southern Party of NZGSAE 1963-64 because of the mosses, algae and lichens here. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Gardening. The only place in Antarctica where this activity is usually possible is the Antarctic Peninsula, sometimes referred to as "The Banana Belt" because of its warmer temperatures during the summer (sometimes as high as 59°F). Then it was only likely as a hobby after bases had been built. For example, as early as 1911 kelp was successfully planted at Granite House (q.v.). Ivan Mackenzie Lamb made a garden for the wild plants brought to Base B (Deception Island) on the *William Scoresby* during Operation Tabarin, in 1944. Base E, on Stonington Island, in 1946, built a greenhouse to grow flowers and vegetables hydroponically. There was also, later, quite a flourishing greenhouse at Arctowski Station. At Davis Station the Australians began a hydroponic indoor garden in 1969.

Mount Gardiner. 86°19' S, 150°57' W. A ridge-like, granitic mountain rising to 2480 m, 5 km E of Mount Ruth, just S of the point in the Queen Maud Mountains where Bartlett Glacier runs into Scott Glacier. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35, and named by Byrd for Joseph T. Gardiner, of Wellington, NZ, agent for ByrdAE 1928-30 and ByrdAE 1933-35. US-ACAN accepted the name.

Gardiner, Brian Gerard. b. Feb. 18, 1945. Joined BAS on July 3, 1967, and wintered at Base F in 1968 and 1969, and summered at Halley Bay Station in 1979-80. The Ozone hole was his specialty, and he is recognized as one of the 3 British scientists who discovered the Ozone Hole (with Joe Farman and Jonathan Shanklin).

Gardiner, Captain *see* **The *Alliance***

Gardiner Glacier. 86°01' S, 131°48' W. At the S side of the Quartz Hills, flowing E from the Watson Escarpment into Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Richard D. Gardiner, construction electrician who wintered-over at Byrd Station in 1962.

Gardiner Ridge. 75°39' S, 132°26' W. Extends from Mount Kauffman to Mount Kosciusko, in the Ames Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for James Edward Gardiner (b. Oct. 28, 1929, Hatch, N.M.), USN, construction driver and member of Merle

Dawson's Army-Navy Trail Party which established Byrd Station in 1957.

Cime Gardino. 79°56' S, 81°50' W. A ridge comprising 3 rocky peaks (the name means "Gardino summits"), the first being situated 3.3 km ESE of Parrish Peak, and forming a wall on the NE side of the glacier between Parrish Peak and Lippert Peak. Named by the Italians on Feb. 22, 2002, for Paolo Gardino, the first to climb it, in 1997.

Bahía Gardner *see* **Gardner Inlet**

Ensenada Gardner *see* **Gardner Inlet**

[1]**Mount Gardner**. 70°24' S, 65°54' E. A prominent peak, rising to about 1991 m, 49 km ESE of Mount Béchervaise, in the central part of the Porthos Range, in the Prince Charles Mountains. Two slight peaks rise at the E end of the crest, and the W half of the N face is snow-covered. Visited by the ANARE Southern Party led by Bill Bewsher in Dec. 1956, and named by ANCA for Lin Gardner.

[2]**Mount Gardner**. 78°23' S, 86°02' W. Rising to 4685 m, 2.5 km W of Mount Tyree, in the W central part of the Sentinel Range, in the Ellsworth Mountains. Discovered by Charles Bentley during the Marie Byrd Land Traverse of 1957-58. Named by US-ACAN in 1961, for Lt. Harvey Eugene "Dutch" Gardner (b. Sept. 1, 1928), USN, of Bountiful, Utah, and Redwood City, Calif., pilot in Antarctica in 1957-58 and 1958-59, during the latter expedition being killed at Marble Point on Jan. 4, 1959 (*see* **Deaths**, 1959).

Gardner, John A. *see* **USEE 1838-42**

Gardner, Lionel George "Lin." b. Oct. 18, 1924. Diesel mechanic who wintered-over at Heard Island (not in the Antarctic) in 1954, and as senior diesel mechanic at Mawson Station in 1956, at Davis Station in 1958, and again at Davis (as leader) in 1971.

Gardner Bay *see* **Gardner Inlet**

Gardner Glacier *see* **Ketchum Glacier**

Gardner Inlet. 74°58' S, 62°52' W. A large, ice-filled inlet, at the SW side of Bowman Peninsula, between Cape Adams and Cape Schlossbach, it forms the extreme N part of the Ronne Ice Shelf, at the foot of Mount Austin, on the Lassiter Coast, on the E coast of Palmer Land. Discovered from the air on Nov. 21, 1947, by RARE 1947-48. Its N part was surveyed from the ground in Dec. 1947 by a combined team from RARE and Base E Fids. It was named by Finn Ronne as American Geographical Society Bay, and it appears as such on the society's map of 1948. Ronne named a glacier nearby as Irvine Gardner Glacier, for Irvine Clifton Gardner (1889-1972), physicist at the National Bureau of Standards, and pioneer in optics as applied to aerial photography. Gardner had helped get RARE 1947-48 off the ground. However, almost immediately, Ronne made changes to this situation. In 1948 the glacier was renamed Ketchum Glacier (q.v.), while the bay was renamed Gardner Bay, and it appears as such on maps of 1949 and 1950. It appears on an Argentine chart of 1952 as Bahía Gardner. In 1953, US-ACAN accepted the name Gardner Inlet, but only for the N part of the present feature. UK-APC followed suit on Jan. 28, 1953. It appears as such on a British chart of 1954, and in the British gazetteer of 1955, plotted in 75°01' S, 62°56' W. It also appears as such on a 1955 U.S. Hydrographic Office chart. It appears on an Argentine chart of 1957 as Ensenada Gardner. The feature was mapped by USGS from air photos taken by USN between 1965 and 1967, and, as a consequence, the name Gardner Inlet was extended to the size and shape of the present feature, it appearing as such for the first time on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. The Chileans, who toyed with the name Seno Gardner, have fallen in line with the Argentines, with Ensenada Gardner, and that is how it appears in their 1974 gazetteer.

Gardner Island. 68°35' S, 77°52' E. An island, 1.2 km (the Australians say 2 km) long and 1 km wide, 3 km W of Heidemann Bay, off Breidnes Peninsula, 4 km W of Davis Station, in the Vestfold Hills. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named this feature Breidneskollen (i.e., "the broad point knoll"). Re-named by ANCA for Lin Gardner. US-ACAN accepted the Australian naming in 1970.

Gardner Nunatak. 74°26' S, 72°46' W. Rising to about 1670 m, 9 km WSW of Tollefson Nunatak, in the Yee Nunataks, on the English Coast of Ellsworth Land. Mapped by USGS from ground surveys, from USN air photos taken between 1961 and 1968, and from U.S. Landsat images taken in 1973-74. Named by US-ACAN in 1988, for Robert N. Gardner, USGS cartographer who participated in surveys at Cape Crozier, Pole Station, McMurdo, and Palmer Station, in 1973-74. The name was accepted by UK-APC on Feb. 15, 1988.

Gardner Ridge. 86°57' S, 148°24' W. An ice-free ridge, 6 km SE of the Davis Hills, at the S side of Klein Glacier, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Eric T. Gardner, of VX-6, photographer here during OpDF 1966 and OpDF 1967.

Lago Gardo. 74°58' S, 162°30' E. A lake, 90 m by 50 m, with a depth of 1.5 m, and with seasonal ice-covering, 174 m above sea level, 2.8 km NE of Mount Gerlache, on the NE side of Larsen Glacier, behind Terra Nova Bay, in Victoria Land. Surveyed by Vittorio Libera during ItAE 1988-89, and named by him for Prof. Edgardo "Gardo" Baldi (1899-1951), first director of the Italian Institute of Hydrobiology.

Gårekneet *see* **Gårekneet Ridge**

Gårekneet Ridge. 72°04' S, 14°48' E. A rock ridge in the shape of a small mountain, 5 km S of Gårenevkalven Nunatak, in the E part of the Payer Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Gårekneet (i.e., "the wave knee"), in association with Gårenevet. US-ACAN accepted the name Gårekneet Ridge in 1966. The Russians call it Gora Struve.

Gårenevet. 71°59' S, 14°43' E. A small mountain, E of Gårenevslottet, in the central part of the Payer Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them ("the wave mountain"). The Russians call it Gora Grigor'eva.

Gårenevkalven *see* **Gårenevkalven Nunatak**

Gårenevkalven Nunatak. 72°00' S, 14°47' E. Rising to 2250 m, S of Gårenevet, and 5 km N of Gårekneet Ridge, in the E part of the Payer Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Photographed by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Gårenevkalven (i.e., "the wave mountain calf"), in association with Gårenevet. US-ACAN accepted the name Gårenevkalven Nunatak in 1966. The Russians call it Gora Mesjaceva.

Gårenevslottet. 71°59' S, 14°40' E. A mountain in the central part of the Payer Mountains, in the Hoel Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them ("the wave mountain castle").

Garfield Glacier. 74°57' S, 136°35' W. A glacier, 10 km long, flowing between Peden Cliffs and Cox Point, to the E side of Hull Bay, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Donald E. Garfield, deep-core driller at Byrd Station in 1967-68.

Gargan, Philip M. "Phil." b. 1903, NYC, of Irish parents, police patrolman John Gargan and his wife Mary Anne Grealish (known as Anna). He joined the merchant marine when he was 16, and worked his way up through messboy to become an experienced oiler. He was in Northern Ireland in 1933, and was just about to sail on the *Caledonia* back to NY, when he caught a faster ship to make it in time to be an oiler on the *Jacob Ruppert*, during ByrdAE 1933-35. He did not winter-over.

Canal Garganta *see* **The Gullet**

Primera Garganta *see* **Channel Glacier**

Segunda Garganta *see* **Thunder Glacier**

Gargoyle Bastion. 67°28' S, 60°08' W. An upstanding arcuate rocky headland with subvertical cliff faces to seaward, and flanked to the N and S by rock cliffs (including Morton Cliffs), it rises above the adjacent cliffs to a height of

about 60 m above sea level, on Livingston Island, in the South Shetlands. Named by UK-APC on Dec. 12, 1997, for the mythical gargoyle. US-ACAN accepted the name in 1998. The British were the latest to re-plot this feature, in late 2008.

Gargoyle Ridge. 82°24' S, 159°30' E. A high rock ridge forming the S end of the Cobham Range, in the Churchill Mountains. Mapped from ground surveys conducted by NZGSAE 1960-61 and 1961-62, and from USN air photos. So named by the Holyoake, Cobham, and Queen Elizabeth Ranges Party of NZGSAE 1964-65, because of the curiously wind-carved, gargoyle-shaped buttresses on top of the ridge. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Gargoyle Turrets. 77°10' S, 161°38' E. A group of 3 prominent sandstone buttresses, rising to about 1300 m at the top of steep cliffs above Miller Glacier, 1.5 km SW of (and opposite) Queer Mountain, in the NW portion of the Saint Johns Range, in Victoria Land. So named by NZ-APC on Nov. 8, 2006, because the massive upper sandstone unit has weathered into steep and cavernously sculptured tors which, when seen from below, look like gargoyles. US-ACAN accepted the name on Jan. 15, 2008.

Caleta Garibaldi *see* **Spiller Cove**

Garland Hershey Ridge *see* **Hershey Ridge**

Garmen Point. 62°59' S, 62°36' W. A point formed by an offshoot of Mount Foster, on the NE coast of Smith Island, 13 km NNE of Cape James, and 18.3 km SW of Cape Smith, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the town of Garmen, in southwestern Bulgaria.

Garner, C.J. b. NZ. Crewman on the *Bear of Oakland*, 1934-35, i.e., during the 2nd half of ByrdAE 1933-35.

Punta Garnerin *see* **Garnerin Point**

Garnerin Point. 64°41' S, 62°10' W. The SW entrance point of Plata Passage, it projects into Wilhelmina Bay, SE of Pelseneer Island, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57, and that same season was surveyed from the ground by Fids from Base O. Named by UK-APC on Sept. 23, 1960, for André-Jacques Garnerin (1769-1823), French aeronaut who, on Oct. 22, 1797, became the first man to make a successful descent by parachute from a free balloon. It appears on a British chart of 1961, and on an American chart of 1963. US-ACAN accepted the name in 1965. The Argentines call it Punta Garnerin, and the Chileans tend to call it Punta Z.

Cape Garnet *see* **Garnet Point**, **Cape Granat**

Garnet Hill. 60°44' S, 45°38' W. A rocky hill, rising to 225 m above the E side of McLeod Glacier, and forming the S end of a line of rock and ice cliffs which separate McLeod Glacier from Orwell Glacier, in the S part of Signy Island, in the South Orkneys. Surveyed by FIDS in 1947, and named by them for the abundance of garnets found here in pink quartz veins. It was used by them in 1949 as the site of a meteorological screen. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Garnet Knob. 69°24' S, 76°21' E. A dark rock outcrop, rising to about 150 m, projecting from the ice plateau at the S edge of the Larsemann Hills, about 1.8 km SSW of Law Base. So named by the 1986-87 ANARE field party here, because of the abundance of garnets. ANCA accepted the name on Nov. 24, 1987. The Chinese call it Qingcheng Shan.

Garnet Point. 66°56' S, 143°46' E. Also called Cape Garnet. A rocky coastal point consisting of garnet gneiss, and lying at the W side of the entrance to Watt Bay, about 20 km SE of Cape Gray, on the coast of George V Land. Discovered by AAE 1911-14, and named descriptively by Frank Stillwell. US-ACAN accepted the name in 1952.

Garnet Rocks. 68°21' S, 67°04' W. A group of 3 rocks in water, 3 km E of the Refuge Islands, on the N side of Rymill Bay, on the Fallières Coast, on the W coast of Graham Land. Surveyed by Fids from Base E in 1948-49, and named by them for the garnet in the rocks. The Argentines call them Rocas Granate (which means the same thing). UK-APC accepted the name Garnet Rocks on March 31, 1955, and US-ACAN followed suit that year. There is an ephemeral 1955 reference to this feature as Skua Gull Islands, probably a FIDS reference, possibly originating with Jumbo Nicholls. But it means next to nothing. It is only mentioned for the sake of inclusion.

Garnuszewski Peak. 62°05' S, 58°31' W. A nunatak, rising to about 300 m above sea level, W of Wegger Peak, in Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for the *Antoni Garnuszewski*.

Cabo Garra de León. 63°45' S, 60°48' W. A cape just N of, and forming the foot of, Lyon Peak, Trinity Island, in the Palmer Archipelago. Named by the Argentines ("the lion's claw"). Hopefully a deliberate play on words was intended.

[1]**Garrard Glacier**. 84°07' S, 169°35' E. A valley glacier flowing eastward from the névé between Mount Lockwood and Mount Kirkpatrick, through a narrow gap in the foothills, descending in icefalls into the main stream of the Beardmore Glacier, S of Bell Bluff, in the Queen Alexandra Range. The name Garrard Glacier (for Apsley Cherry-Garrard) had been applied inadvertently by Scott, during BAE 1910-13, to a glacier to the SW, which Shackleton had already called Bingley Glacier (q.v.) in 1908. Scott's naming took hold, and it became Garrard Glacier. The Southern Party of NZGSAE 1961-62 surveyed this area, and in so doing, decided that the glacier that Scott had called Garrard Glacier should henceforth be called Bingley Glacier, as Shackleton had intended. That left the name Garrard Glacier vacant, and so NZGSAE applied it to this (heretofore unnamed) glacier, and plotted it in 84°07' S, 169°40' E. It has since been replotted.

[2]**Garrard Glacier** *see* **Bingley Glacier**

Cerro Garrido *see* **Cairn Hill**

Garrier, Pierre. b. Jan. 22, 1800, Saujon, France. Able seaman on the *Astrolabe* during FrAE 1837-40.

Garrigan, Matthew *see* **USEE 1838-42**

Garrison, Francis *see* **USEE 1838-42**

Cabo Gorrochátegui *see* **Cape Wiman**

Cabo Garry *see* **Cape Garry**

Cape Garry. 63°22' S, 62°15' W. The most southwesterly of the points on Low Island, in the South Shetlands. It is also the most southerly portion of the island. Roughly charted, and named, by Foster in 1829, during the *Chanticleer* Expedition of 1828-31. This name was given for the Cape Garry in the Canadian Arctic, named in 1825 by Parry for Nicholas Garry (1782-1856), deputy governor of the Hudson Bay Company, 1822-35, who, unfortunately, passed the last 21 years of his life as a lunatic. Surveyed again by the Discovery Investigations team in 1930-31. Photographed aerially in 1956 by FIDASE, and mapped from these photos by FIDS in 1960. UK-APC accepted the name on Aug. 31, 1962, and it appears on a British chart of 1962. US-ACAN followed suit with the naming in 1965. It appears on a 1946 Argentine chart as Cabo Wallace, but that is because they confused it with Cape Wallace, the NW tip of Low Island. The Russians picked up the error and ran with it (still run with it, apparently), and the Chileans not only also followed suit, but also made Cabo Wallace the official name for this feature in their 1974 gazetteer. The Argentines have realized their error, and now call it Cabo Garry, but it seems the Chileans have yet to discover the truth. The British were the latest to re-plot this feature, in late 2008.

GARS *see* **German Antarctic Receiving Station**

Garvan Point. 63°29' S, 57°20' W. A rocky point forming the E side of the entrance to Retizhe Cove, 7.18 km N by E of View Point, 5.82 km ENE of Boil Point, 8.6 km SE of Camel Nunataks, and 8.23 km WSW of Mount Cardinall, on the coast of Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlements of Garvan, in northern and northeastern Bulgaria.

Lake Garwood. 78°02' S, 164°17' E. A small lake between Garwood Glacier and Koettlitz Glacier, in Victoria Land. Named by Grif Taylor, during BAE 1910-13, in association with the glacier. US-ACAN accepted the name in 1995.

Garwood Glacier. 78°01' S, 163°57' E. It occupies the head of (i.e., the NW part of) Garwood Valley, near Wright Valley, between Salmon Hill and the dry valley near Terminus Mountain, on the E side of southern Victoria Land. Mapped during BNAE 1901-04, and named in 1911 by Grif Taylor, during BAE 1910-13, for Edmund Johnston Garwood (1864-1949), professor of geology and mineralogy at the University of London. US-ACAN accepted the name in 1960.

Garwood Point. 74°14' S, 110°36' W. Marks the N extremity of Gurnon Peninsula (a NE arm of Bear Peninsula), on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from aerial photos taken in 1947 by OpHJ 1946–47. Named by US-ACAN for James W. Garwood, USN, metalsmith, crew chief at Williams Field and at Christchurch, NZ, and maintenance shop supervisor in 8 different OpDF deployments.

Garwood Valley. 78°02' S, 164°10' E. A mostly dry valley which opens on the coast of southern Victoria Land just S of Cape Chocolate, in the area of Wright Valley. It is occupied, near its head, by Garwood Glacier. Named in association with the glacier by Grif Taylor, during BAE 1910–13. US-ACAN accepted the name in 1960.

The *Gary* *see* **The *Thomas J. Gary***

Gary Peaks. 70°54' S, 162°35' E. Two peaks, they form a portion of the N wall of Sheehan Glacier, 6 km WSW of Mount Hager, in the Explorers Range of the Bowers Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1965. Named by US-ACAN in 1970, for Gary F. Martin, USN, machinery repairman at Pole Station in 1965.

Punta Garzón *see* **Garzón Point**

Garzón Point. 64°55' S, 62°53' W. Between Oscar Cove and Skontorp Cove (it is, in fact the S entrance point of Skontorp Cove), in the S part of Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Roughly charted by the British Imperial Antarctic Expedition of 1920–22, and Lester's expedition map of 1922 shows it as South Point. In 1956–57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base O. It was explored by the Argentines, and named by them in 1956, as Punta Garzón, for Gen. Eugenio Garzón (1796–1851), a hero of the Argentine war of independence. It appears as such on one of their 1957 charts, but on another of their charts from the same year it appears as Punta Mariana. However, the name chosen for their 1970 gazetteer was Punta Garzón. UK-APC accepted the name Garzón Point, on Feb. 7, 1978, and US-ACAN followed suit.

Gash. FIDS slang for garbage and trash. Hence a gashman.

Gash Cove. 60°42' S, 45°35' W. A small cove S of Berntsen Point, on Signy Island, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1947 and 1950, and photographed aerially by the RN in 1968. So named by UK-APC on Sept. 29, 2004 because this was where FIDS and BAS gash was dumped on a daily basis until 1991, when BAS began a waste management procedure to comply with the protocol on environmental protection.

Mount Gass. 80°27' S, 29°30' W. A conspicuous rock mountain, rising to about 1160 m, in the Haskard Highlands, on the E side of Blaiklock Glacier, 10 km SE of Mount Provender, in the W part of the Shackleton Range. First surveyed and mapped by BCTAE in Oct. 1957, and named by them for Sir Neville Archibald Gass (1893–1965), chairman of BP, 1957–60, a financial supporter of the expedition. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Punta Gassano. 64°36' S, 62°08' W. A point in the central part of the SW coast of Nansen Island, in the entrance to Wilhelmina Bay, off the W coast of the Antarctic Peninsula. Named by the Chileans for Juan Gassano, cook who took part in the construction of General Bernardo O'Higgins Station during ChilAE 1947–48.

Île Gaston *see* **Gaston Islands**

Îlot Gaston *see* **Gaston Islands**

Isla Gastón *see* **Gaston Islands**

Islote Gastón *see* **Gaston Islands**, **Tetrad Islands**

Mount Gaston. 70°25' S, 65°47' E. A mountain, 0.8 km SE of Mount Tarr, and about 1 km W of Mount Gardner, in the Porthos Range of the Prince Charles Mountains. Plotted from 1965 ANARE air photos. Named by ANCA for Joe J. Gaston, aircraft engineer with the ANARE Prince Charles Mountains Survey Party of 1969. US-ACAN accepted the name in 1971.

Mont Gaston de Gerlache *see* **Mount Gaston de Gerlache**

Mount Gaston de Gerlache. 71°44' S, 35°49' E. The most southerly massif in the Queen Fabiola Mountains, it rises to 2400 m. Discovered on Oct. 7, 1960 by BelgAE 1960–61, under Guido Derom, who named it Mont Gaston de Gerlache, for Gaston de Gerlache. US-ACAN accepted the name Mount Gaston de Gerlache in 1966.

Gaston Islands. 64°28' S, 61°50' W. Two islands and off-lying rocks, 1.5 km NW of the tip of Reclus Peninsula, off the Danco Coast, on the W coast of the Antarctic Peninsula. First charted on Jan. 28, 1898, when a landing was made on one of the islands by BelgAE 1897–99. This island was named by de Gerlache as Îlot Gaston, for his brother Gaston de Gerlache (1867–1915), later a major in the Belgian Carabiniers, who died of wounds received in World War I. Arctowski, on his map of the same expedition, refers to the individual island as Gaston Islet (i.e., a translation of de Gerlache's naming). Dr. Frederick Cook (during the same expedition) thought the group might be the "supposed Larsen Islands," i.e., those island discovered by Carl Anton Larsen on the Nordenskjöld Coast (*see* **Seal Nunataks**). BAE 1898–1900 mapped the individual island as Gaston Island, but also the entire group as the Gaston Islands, although FrAE 1903–05 charted the one island as Île Gaston. Gaston Islet appears on a British chart of 1948, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1947 Argentine chart as Isla Gastón, and that was the name chosen for the 1970 Argentine gazetteer. However, after FIDASE aerial photography in 1956–57, and ground surveys by Fids from Portal Point, 1956–58, UK-APC, on Sept. 23, 1960, extended the name to the entire group, as the Gaston Islands, doing away with the naming of the individual island. The feature appears as such on a British chart of 1961. US-ACAN followed suit with the change. The individual island appears on a 1962 Chilean chart as Islote Gastón, and that was the name chosen by the 1974 Chilean gazetteer.

Gaston Islet *see* **Gaston Islands**

Mount Gate. 66°51' S, 53°18' E. An outcrop about 6 km E of Mount Cordwell, in Enderby Land. Named by ANCA for Keith Gate, technical officer (radio), who wintered-over at Mawson Station in 1975, and who was a member of the ANARE Enderby Land Survey Party of early 1976.

Cape Gates. 73°35' S, 122°38' W. An ice-covered cape forming the NW extremity of Carney Island, in the Getz Ice Shelf, along the coast of Marie Byrd Land. First mapped by USGS from air photos taken in Jan. 1947 by OpHJ 1946–47. Named by US-ACAN in 1967, for Thomas Sovereign Gates, Jr. (1906–1983), under-secretary of the U.S. Navy, 1953–57; secretary of the Navy, 1957–59; deputy secretary of defense, 1959–59; and finally secretary of defense, 1959–61. NZ-APC accepted the name on June 29, 1967.

Gates of Hell. A pass in Devil's Glacier, at the top of the Axel Heiberg Glacier. Discovered and named descriptively by Amundsen on Nov. 29, 1911.

The Gateway. 83°31' S, 170°58' E. Also called The Gap. A low, snow-filled pass between Cape Allen and Mount Hope, at the NE extremity of the Queen Alexandra Range, allowing passage from the Ross Ice Shelf to the mouth of the Beardmore Glacier westward of Mount Hope. Discovered by Shackleton in Dec. 1908, during his trek to the Pole on BAE 1907–09, and so named by him because it was used to enter the Beardmore. Scott named it The Gap on his map of BAE 1910–13. US-ACAN accepted the name The Gateway in 1966, and NZ-APC followed suit.

Gateway Hills. 71°40' S, 163°28' E. A prominent pair of hills, rising to 2000 m, immediately W of Husky Pass, at the head of Sledgers Glacier, in the Bowers Mountains. So named by NZ-APC in 1982, following Malcolm Laird's suggestion, because the hills bound the S entrance to Sledgers Glacier. US-ACAN accepted the name.

Gateway Nunatak. 77°01' S, 160°15' E. A prominent nunatak near the head of Mackay Glacier, at the end of a long line of icefalls extending across the glacier from the S, 15 km (the New Zealanders say 17.5 km) W of Mount Gran, in Victoria Land. Surveyed by the NZ Northern Survey Party of BCTAE in Nov. 1957, and so named by them because it marks the most obvious gateway through the upper icefalls for parties traveling W up Mackay Glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Gateway Pass. 71°40' S, 68°47' W. About 8 km long, between Astarte Horn and Offset Ridge, and leading from the W arm of Venus Glacier (at George VI Sound) into the interior of the E part of Alexander Island. Surveyed by BAS personnel from Fossil Bluff, between 1961

and 1973. Mapped by the (British) Directorate of Overseas Surveys from those surveys, and from satellite images provided by NASA, in cooperation with USGS. So named by UK-APC on Dec. 20, 1974, because it provides a route to the interior of Alexander Island from the head of Venus Glacier. US-ACAN accepted the name in 1975.

Gateway Ridge. 64°43' S, 63°33' W. A serrated rock ridge, rising to 715 m, and running N-S, SE of Mount Rennie, on Anvers Island, it separates Hooper Glacier from William Glacier where the two glaciers enter Börgen Bay from the S; the snow col at the N end of the ridge provides the only sledging route between these two glaciers. Surveyed from the E by Operation Tabarin personnel from Port Lockroy Station in 1944 and 1945, and descriptively named by them. It appears on a 1953 Argentine chart with the equally descriptive name of Orejas Negras (i.e., "black ears"). Re-surveyed by Fids from Base N in 1955. UK-APC accepted the name Gateway Ridge on Sept. 4, 1957, and it appears on a 1958 British chart. US-ACAN accepted the name in 1965.

Gatlin Glacier. 85°10' S, 173°30' W. A tributary glacier, 11 km long, it flows NW between the Cumulus Hills and Red Raider Rampart into the S side of McGregor Glacier. Named by US-ACAN in 1966, for Harold Oad Gatlin (b. April 17, 1933, Wheeler, Texas; his father was Oad McCalley Gatlin), meteorologist with the U.S. Weather Bureau, who wintered-over at Pole Station in 1964.

Gatlin Peak. 70°47' S, 63°18' W. A prominent but somewhat detached snow-covered peak, rising to about 1950 m, 7.5 km NE of Steel Peak, it is the most northeasterly peak in the Welch Mountains, in Palmer Land. Mapped by USGS in 1974 from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Lt. Donald H. Gatlin (b. July 24, 1941, Hays, Kans.), who joined the USNR in Aug. 1962, and who was a navigator in Antarctica, on LC-130 photographic flights during OpDF 68 (i.e., 1967-68) and OpDF 69 (i.e., 1968-69). He retired from the Navy in June 1985. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Isla Gato *see* **Cat Island**

Islote Gato *see* **Cat Island**

Gatson Ridge. 79°43' S, 158°51' E. A jagged ridge, 5 km long, that runs E from the S part of the Bowling Green Plateau, in the Brown Hills, in the Cook Mountains. Named by US-ACAN in 2000, for Karl W. Gatson, of USGS, topographic engineer on the 1975-76 joint USGS-BAS project to establish control points for Landsat mosaics of Palmer Land; also to establish geodetically tied independent survey nets in the Ellsworth Mountains and Antarctic Peninsula into a worldwide reference system using Doppler satellite control. NZ-APC accepted the name on Feb. 20, 2001.

Bahía Gauche *see* **Lanusse Bay**

Cerro Gaucho. 63°48' S, 58°27' W. A hill, immediately S of Cerro Madre and immediately E of Cerro Pardo, NNE of Mount Reece, on the E coast of the Antarctic Peninsula. Named by the Argentines.

Gaudin Point. 65°05' S, 63°22' W. The E entrance point to Lauzanne Cove, in Flandres Bay, on the Danco Coast, on the W coast of Graham Land. First charted by FrAE 1903-05, but not named by them. ArgAE 1953-54 named it Punta Corcho, a descriptive name because of its shape, resembling a cork. It appears on their 1954 chart. Photographed aerially by FIDASE in 1956-57. On Feb. 7, 1978, UK-APC, in keeping with features named in this area for photography pioneers, named this one for Marc-Antoine Gaudin (1804-1880), who took the first instantaneous photographs of moving objects, in 1841. It appears as such in the 1980 British gazetteer. The Argentines today call it Punta Liniers, for Santiago de Liniers (1753-1810; real name Jacques de Liniers; he was of the noble military family from Poitou, in France), Spanish viceroy of Río de la Plata, who recaptured Buenos Aires from the British in 1806. He was executed.

Gaudio, D. *see* **Órcadas Station**, 1930

Cape Gaudis. 67°41' S, 45°46' E. An ice cape on Alasheyev Bight, about 2.5 km W of Molodezhnaya Station, on the coast of Enderby Land. Photographed aerially by ANARE in 1956. It was re-photographed by SovAE 1957, who named it Mys Gaudisa, for Soviet hydrograhpher A.I. Gaudis, who died with V.S. Suvorov in a plane crash at Cape Shegalskiy, in the Arctic, on Aug. 10, 1959.

Mys Gaudisa *see* **Cape Gaudis**

Massif Gaudry *see* **Mount Gaudry**

Monte Gaudry *see* **Mount Gaudry**

Mount Gaudry. 67°32' S, 68°37' W. Rising to 2316 m, close SW of Mount Barré, W of Ryder Bay, 8 km WNW of Mount Liotard, and 16 km SSW of Mount Mangin, in the S part of Adelaide Island. The summit is generally covered with clouds, and projects toward the SW a series of mountainous spurs separated by glaciers. Discovered by FrAE 1903-05, mapped by them as part of Graham Land, and named by Charcot as Sommet A. Gaudry, for Jean-Albert Gaudry (known as Albert) (1827-1908), French geologist and paleontologist, and president of the Académie des Sciences in 1903. He was also a member of the Comité de Patronage of Charcot's 2nd expedition to Antarctica — FrAE 1908-10 — and signed the instructions for that expedition. That 2nd expedition remapped the feature (correctly), and renamed it Massif Gaudry. It appears on a 1914 British chart as Mount Gaudry, and that is the name that was accepted by UK-APC on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. All other countries with a vested interest in this feature's cartography have used the name Mount Gaudry in one linguistic form or another (and sometimes with the most astonishing spelling errors). It appears as Monte Gaudry in both the 1970 Argentine and the 1974 Chilean gazetteers. The mountain was photographed aerially by RARE 1947-48, and during that season was also surveyed from the ground by Fids from Base E. The mountain was climbed for the first time on Jan. 9, 1963, in 10 hours in an ice blizzard, by Johnny Green (q.v.) and 2 Marines off the *Protector* — Capt. Terry Wills (aged 33; of Hove, Sussex) and Terence McAuliffe (of Burgess Hill, Sussex). They made it back to base camp 44 hours after setting out.

Sommet Gaudry *see* **Mount Bridgman, Glen Peak**

Gaul, Kenneth Mitchell "Ken." b. Sept. 4, 1925, in Lincoln. Mitchell was his mother's name. He became an Army cadet during World War II, and was graduated, becoming a 2nd lieutenant on Oct. 14, 1944. He joined FIDS in 1954, and was the first leader of Base Y, in the winter of 1955. In 1958, in Hampstead, London, he married Trixy L. Ware, and died in Dec. 1994, at Ludlow, Salop.

Gaul Cove. 67°49' S, 67°11' W. Indents the NE side of Horseshoe Island, in Marguerite Bay, off the Fallières Coast of Graham Land. Surveyed by FIDS between 1955 and 1957, and named by UK-APC on July 7, 1959, for Ken Gaul. US-ACAN accepted the name in 1964. Interestingly the Argentines chose to call it Caleta Exley, after Jim Exley.

Rocas Gaunt *see* **Gaunt Rocks**

Gaunt Rock *see* **Gaunt Rocks**

Gaunt Rocks. 65°17' S, 64°20' W. A small, compact group of numerous rocks in water, desolate and gaunt looking (hence the name), rising to around 3 m above sea level, 3 km W of Barros Rocks, 3 km SW of Black Island, and SW of the Argentine Islands (to which they are joined by an extensive region of dirty water, where numerous rocks are awash), in the Wilhelm Archipelago, on the NW side of the Grandidier Channel, off the Graham Coast, on the W coast of Graham Land. Roughly charted by BGLE 1934-37, but more accurately charted by FIDS cartographers in 1959, from air photos taken by FIDASE in 1956-57 and from an RN Hydrographic survey conducted in 1957-58. Named descriptively by UK-APC on July 7, 1959. They appear on a British chart of 1960. The Chilean translated name, Rocas Gaunt, first appears on a chart of 1962, and was the name chosen for their 1974 gazetteer. US-ACAN accepted the name Gaunt Rocks in 1971. A British chart of 1984 shows the feature wrongly as Gaunt Rock.

Gauntlet Ridge. 73°25' S, 167°35' E. Flat-topped and mainly ice-covered, it is actually a peninsula which separates the mouths of Nascent Glacier and Ridgeway Glacier where they discharge into Lady Newnes Bay, in Victoria Land. So named by NZ-APC in 1966, because in plan it looks like a gauntlet. US-ACAN accepted the name that year.

The *Gauss*. Von Drygalski's expedition ship for GermAE 1901-03. She was built especially for the Antarctic, and was named for Prof. Karl Friedrich Gauss, the German mathematician who, in 1838-39, predicted the position of the South Magnetic Pole. 164 feet long and 37 feet wide, the vessel had a 650-ton capacity, and a 1442-ton displacement. She was icebound (no damage) off the Wilhelm II Coast between Feb.

1902 and Feb. 1903, and after the expedition was sold to Canada. For more on Herr Gauss, *see* **Gauss Glacier**.

[1]**Mount Gauss** *see* **Gaussberg**

[2]**Mount Gauss**. 76°19' S, 162°02' E. A massif with a cap of black rock, about 5 km NE of Mount Chetwynd, on the S side of Mawson Glacier, it is the most northerly peak in the Kirkwood Range, in the Prince Albert Mountains of Victoria Land. Discovered by BNAE 1901-04, and named by Scott for Professor Karl Gauss (*see* **The *Gauss*** and **Gauss Glacier**). Both US-ACAN and NZ-APC accepted the name.

Gauss Glacier. 77°58' S, 163°45' E. A steep glacier on the N side of Datum Peak, descending W from the SW extremity of Hobbs Ridge into Blue Glacier, in Victoria Land. Named by NZ-APC in 1992, for German astronomer and mathematician Johann Carl Friedrich Gauss (1777-1855; known as Karl). US-ACAN accepted the name in 1993. *See also* **The *Gauss***.

Gaussberg. 66°48' S, 89°12' E. An extinct volcanic cone, rising to 369 m, fronting on the Davis Sea, immediately W of Posadowsky Glacier, on the W side of Posadowsky Bay, Wilhelm II Coast. Discovered in Feb. 1902 by GermAE 1901-03, and named by von Drygalski for Karl Gauss (*see* **Mount Gauss**, **Gauss Glacier**, and **The *Gauss***). US-ACAN accepted the name in 1947, and ANCA followed suit.

Gaussberg Abyssal Plain. 65°00' S, 80°00' E. A submarine feature beneath the Davis Sea, off the Leopold and Astrid Coast.

Gaussiran Glacier. 80°00' S, 159°10' E. It flows N from the saddle with Merrick Glacier to a junction with Darwin Glacier between Cranfield Icefalls and Nebraska Peaks, in the E part of the Britannia Range. Named by US-ACAN in 2000, for Lt. Charles Douglas "Charlie" Gaussiran (b. March 1944), USN, a VXE-6 pilot at the Darwin Glacier Field Camp in 1978-79. He retired from the Navy after 20 years, and became a tennis pro, a referee, and a tester, in Florida. NZ-APC accepted the name on Feb. 20, 2001.

Pointe Gauthier *see* **Gauthier Point**

[1]**Punta Gauthier**. 63°14' S, 62°12' W. A point on Low Island (the most southerly of the main islands in the South Shetlands). Named by the Argentines, for François-Mathurin Gautier (sic) (*see* **Gauthier Point**).

[2]**Punta Gauthier** *see* **Gauthier Point**

Gauthier Point. 64°50' S, 63°36' W. It forms the extreme NW extremity of Doumer Island, as well as the NE entrance point to Security Bay, off the SE coast of Anvers Island, in the Palmer Archipelago. Discovered by FrAE 1903-05, charted by them, and named by Charcot as Pointe Gauthier (incorrect spelling), for François-Mathurin Gautier (sic) (1832-1918), of the famous French family of shipwrights. Not only did M. Gautier fight in the Crimean War, he built over 400 ships, including (at his Saint-Malô shipyards) the *Français* and (Charcot's later vessel) the *Pourquoi Pas?* FrAE 1908-10 maps have it as Pointe Gautier (correct spelling). Operation Tabarin personnel from Port Lockroy Station re-surveyed the point in 1944. UK-APC accepted the name Gauthier Point (incorrect spelling), on Nov. 21, 1949, and as such the feature appears on a British chart of 1950, in the British gazetteer of 1955, and on a 1958 British chart. US-ACAN followed suit with the misspelled name in 1951. It appears on a 1949 Argentine chart as Punta Gautier (correct spelling), but on a 1960 Argentine chart as Punta Gauthier (incorrect spelling). The name accepted by the 1970 Argentine gazetteer was Punta Gautier (correct spelling). The Chileans chose Punta Gauthier (incorrect spelling) for their 1974 gazetteer. The astute reader may notice that an attempt has been made here to drive home a spelling point.

Pointe Gautier *see* **Gauthier Point**

Punta Gautier *see* **Gauthier Point**

Mount Gavaghan. 70°26' S, 65°27' E. In the Porthos Range of the Prince Charles Mountains, between Mount Kirkby and Mount Creighton. Plotted by Australian cartographers from ANARE air photos. Named by ANCA for Eamonn Joseph "Joe" Gavaghan, radio operator from St Albans, Vic., who wintered-over at Mawson Station in 1963 and 1965. US-ACAN accepted the name in 1967.

Monte Gavilán. 64°10' S, 59°24' W. About 12 km NNE of Mount Brading, and about 14 km N of the extreme N of Larsen Inlet, on the E coast of the Antarctic Peninsula. Named by the Chileans for Suboficial mecánico de aviación Daniel Gavilán Garrido, a member of the Chilean Air Force contingent on the *Angamos*, during ChilAE 1946-47. The Argentines call it Monte Biedma.

Gavin Ice Piedmont. 63°44' S, 59°00' W. About 24 km long and between 5 and 10 km wide, on Trinity Peninsula, it extends from Charcot Bay to Russell West Glacier, or, to put it another way, from Cape Kjellman to the E side of Bone Bay. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base D in 1960-61. Mapped by FIDS cartographers from these efforts, and named by UK-APC on Feb. 12, 1964, for Christopher Gavin Robinson. US-ACAN accepted the name later in 1964.

Gavin Robinson, Christopher Brathwaite. b. 1911, with no hyphen, son of Ralph Spencer Gavin Robinson and his wife Winifred Mary Dodgson. RAF pilot officer. On Nov. 4, 1939, at Sanderstead, Surrey, he married Norah Gilbert Dutton, and they lived in Croydon. He was promoted to wing commander during World War II, and won the Air Force Cross. After the war he worked as a pilot for Morton Air Services, and was a pilot for FIDASE in 1956-57. His second wife was Vyvyen Gowler.

Cerro Gaviota. 62°28' S, 60°48' W. A little hill, about 25 m high, about 110 m N of Punta El Hallazgo, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel of the Instituto Antártico Chileno, during ChilAE 1990-91, because here is to be found a colony of common gulls.

Punta Gaviota. 64°19' S, 62°53' W. A point hard by Punta Soldaditos, in exactly the same coordinates as Islote Ballena and Islote Colin, in Dallmann Bay, in the Melchior Islands. Named by the Argentines.

Islote Gaviotín *see* **Gaviotín Rock**

Islotes Gaviotín *see* **Gaviotín Rock**

Gaviotín Rock. 63°08' S, 56°01' W. Rising to about 300 m above sea level, near the NE entrance of the Larsen Channel, about 0.4 km N of the coastal ice cliffs on the N coast of Joinville Island, and 3 km N of Saxum Nunatak. Roughly charted by ArgAE 1946-47, and named by them as Islote Gaviotín, "gaviotín" being the Argentine name for what is more commonly called "charrán" in the Spanish-speaking world, i.e., the tern *Sterna hirundo*. It appears as such on a 1956 Argentine government chart. Fids from Base D surveyed it between 1958 and 1961, and UK-APC decided to name it (inaccurately), on Feb. 12, 1964, as Gull Island. It is the word "gaviota" that means "seagull." There is no group of persons anywhere in the world better educated than UK-APC, so, obviously, the misnomer was deliberate (the original had been an Argentine naming, after all). US-ACAN accepted the name Gaviotín Rock in 1965. Oddly, it appears in the 1970 Argentine gazetteer as Islotes Gaviotín.

Gavlen *see* **Gavlen Ridge**

Gavlen Ridge. 72°39' S, 0°27' E. Forms the S extremity of Roots Heights, in the S part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Gavlen (i.e., "the gable"). US-ACAN accepted the name Gavlen Ridge in 1966.

Gavlpiggen *see* **Gavlpiggen Peak**

Gavlpiggen Peak. 73°58' S, 5°47' W. A low, isolated nunatak, 3 km SW of Klakknabben Peak, in the SW part of the Urfjell Cliffs, just N of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and also from 1958-59 air photos taken during NorAE 1956-60, and named by them as Gavlpiggen (i.e., "the gable peak"). US-ACAN accepted the name Gavlpiggen Peak in 1966.

Gavot, Lazare-Joseph. b. March 31, 1822, Toulon. Cabin boy on the *Astrolabe* during FrAE 1837-40. On Aug. 1, 1838 he became an apprentice seaman.

Gora Gavrilova. 80°23' S, 29°40' W. A somewhat isolated nunatak, due E of Mount Provender, in the W part of the Shackleton Range. Named by the Russians.

Gavronski, William *see* **Gawronski, William G.**

Mount Gawn. 71°55' S, 165°11' E. A prominent snow peak, rising to 2190 m, SE of Mount Mannering, in the central part of the King Range, in the NW part of Victoria Land. Named by the Northern Party of NZGSAE 1963-64 for

Ted Gawn (q.v.), who maintained radio schedules with the party. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Gawn, John Edward "Ted." b. 1919, Lyall Bay, Wellington, NZ. He joined the Merchant Navy in 1941, and served on a hospital ship during World War II. From 1947 to 1952 he was a radio tech with the NZ Broadcasting Service, but went back to sea, as radio operator on various ships in the Pacific, and was on the *Hinemoa*, plying between the NZ islands, when he was selected to be 2nd radio officer at Scott Base for the winter of 1957, and was with the NZ party of BCTAE 1957-58. He was also radio operator at Scott Base in 1963-64.

Gawn Ice Piedmont. 79°58' S, 160°12' E. An ice piedmont and snow slope occupying the coastal platform between Darwin Glacier and Byrd Glacier. Named by the Darwin Glacier Party of BCTAE in 1957-58 for Ted Gawn. NZ-APC accepted the name, and US-ACAN followed suit in 1965.

Gawne Nunatak. 76°03' S, 135°24' W. On the E side of Wells Saddle, between Mount Berlin and Mount Moulton, in the Flood Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1974, for Steven P. Gawne, a member of the USARP team that studied ice sheet dynamics in the area NE of Byrd Station in the summer of 1971-72.

Gawronski, William George "Billy." b. Sept. 12, 1910, Bayside, Queens, NYC, son of Rudolph Gawronski, a recent immigrant Polish-American merchant seaman cum upholsterer and his wife Frances. At the age of 17, keen to join ByrdAE 1928-30, Bill swam the Hudson River at night and stowed away on the *City of New York*, but they caught him and threw him off. Then he made his way to Norfolk, Va., and stowed away on the *Eleanor Bolling*. It wasn't until they had cleared the Panama Canal that he was found, high on the after-mast, and only came down when Capt. Brown took a rifle and threatened to speed up his descent. A fair-skinned, blue-eyed wise-cracking, flapper-chasing 18-year-old, they liked him, he changed his name to Bill Gavon (for this trip, anyway) , and was made mess boy and coal passer. He left the Little America base for NZ on the *City of New York* on Feb. 22, 1929, and, rather than hang around in NZ for 6 months waiting for the next phase of the expedition, he departed Wellington on the *Tahiti* with several others, bound for San Francisco, which he reached on April 12, 1929. He, especially, of all the boys who were fêted everywhere they went, became momentarily famous, and then he went back to Antarctica for the next half of the trip. The adventure inspired him to make the sea his career. He was, of course, a success (with a small blip, *see* **King, Harry**), working his way up through the ranks, from able seaman to captain, skippering several merchant marine ships during World War II. He was living in Cape Elizabeth, Maine when he died on May 18, 1981 in Portland.

Gay, Byron Sturges. b. Aug. 28, 1886, Ill., but raised partly in Missouri, Winfield, Kans., and Los Angeles, eldest child of ice-plant manager Cassius Marcellus Gay and his wife Julia Iona Fessenden. He was a classmate of Richard Byrd at the Naval Academy, and became a famous songwriter ("Oh!," "Avalon"). In 1931 came a sticky divorce from Mildred, among accusations of "wild parties' and "other women." In 1933 he went to Antarctica as part of ByrdAE 1933-35, resigned in Feb. 1934, left Auckland on the *Mariposa* on April 7, 1934, and arrived back in Los Angeles on April 22, 1934. He later married Ethel, and died at White Memorial Hospital in Los Angeles, on Dec. 22, 1945.

Gaylord, Lyman A. *see* **USEE 1838-42**

Gaylord Nunatak. 74°56' S, 72°08' W. Rising to about 1500 m (the British say about 1400 m), 2.2 km ESE of the Lyon Nunataks, and 2.5 km NNE of Schmutzler Nunatak, in the SE end of the Grossman Nunataks, in Ellsworth Land, at the base of Palmer Land. Mapped by USGS from ground surveys, USN air photos taken between 1961 and 1968, and U.S. Landsat images taken in 1973-74. Named by US-ACAN in 1988, for Chauncey L. Gaylord (1921-1995), USGS cartographer and photogrammetrist, 1942-76, chief of the Compilation Unit in the Branch of Special Maps, who, for years, worked on Antarctic sketch maps and topographic sheets. UK-APC accepted the name on Feb. 15, 1988.

Gaylord Ridge. 80°02' S, 159°16' E. A solitary ridge, running N-S for 3 km, 5 km NW of Eilers Peak, in the W part of the Nebraska Peaks. Named by US-ACAN in 2000, for David R. Gaylord, of the University of Nebraska, a member of the USARP glaciological team during the Ross Ice Shelf Project, 1973-74. NZ-APC accepted the name on Feb. 20, 2001.

Gaynor, William Parker. b. Oct, 1893, Boston, son of printer William Gaynor and his wife Gertrude C. Parker. The father died, leaving Gertrude with 5 children. She and the eldest, also named Gertrude, had to go to work as waitresses in a cafe, while young William went out as an office clerk. He joined the U.S. Navy, and later went into the Naval Reserve. He was a fireman on the *Jacob Ruppert*, during ByrdAE 1933-35. He did not winter-over in Antarctica.

Gazal-1. 67°55' S, 44°31' E. North Korea's only scientific station, a summer base only, built during the 2nd North Korean Antarctic expedition, 1990-91. It comprises 4 huts, adjacent to the Russians' Molodezhnaya Station.

Gazdzicki Islet. 62°09' S, 58°07' W. A small island in Polonez Cove, between Low Head and Mazurek Point, in the Bransfield Strait, off King George Island, in the South Shetlands. Named by the Poles in 1980, for Prof. Andrzej Gazdzicki, geologist with Polish and Argentine Antarctic expeditions since 1978-79.

Gazdzicki Sound. 62°00' S, 57°38' W. Between Trowbridge Island and King George Island, in the South Shetlands. Named by the Poles in 1984, for Andrzej Gazdzicki (*see* **Gazdzicki Islet**).

Gaze, Irvine Owen. b. July 5, 1889, Sydney, son of merchant Frederick Owen Gaze and his wife Constance Scott. Educated at Scotch College, in Perth, he became a boot manufacturer in Armadale, Melbourne. A cousin of Spencer-Smith (q.v. for the connection), who had arrived to take part in BITE 1914-17, as one of the Ross Sea Party, Gaze went to see him, volunteered for the expedition, and was enlisted by Aeneas Mackintosh as a member of the Ross Sea party. He was one of the four at Cape Evans during the 1915 winter, and again one of the seven for the 1916 winter. He went to England and joined the Royal Flying Corps, qualified as an instructor, and was shot down and captured by the Germans a week before the Armistice. In 1919, in Chichester, England, he married Freda Sadler, and, on his return to Australia, he became an executive with the Clifton Shoe Company, in Clifton Hill, Vic. Freda died on June 11, 1939, in Armadale, and their son, Pilot Officer Irvine Scott Owen Gaze, 19, was shot down in 1941, during World War II. During the war, Gaze Sr. became an instructor in charge of a training school for the RAAF, with the rank of squadron leader, and later became a sheep farmer in Western Australia. He died in 1978. His other son, Tony, was a World War II air ace and later a racing driver.

Gazert, Hans. b. May 15, 1870, in Harburg, but raised in Coburg, son of a doctor. Surgeon on the *Gauss* during GermAE 1901-04. He died on Nov. 27, 1961, in Garmisch-Partenkirchen.

Gburek, Leo. b. 1910. Geophysicist with the Earth Magnetic Institute at Leipzig, who, after Arctic experience, went as geophysicist on GermAE 1938-39. On Jan. 17, 1941, during World War II, he took off from Bremen in a Heinkel, as weather man. All was fine until they were over Fair Isle, between the Shetlands and the Orkneys, when two RAF Hurricanes appeared on their tail and shot them down. Although some of the crew survived, Gburek was killed instantly.

Gburek Peaks. 72°11' S, 0°15' W. A group of rocky elevations forming the W end of the Sverdrup Mountains of Queen Maud Land, they include Mount Jutulrøra and Mount Straumsvola and those in between. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Gburekspitzen, for Leo Gburek. The original Gburek Peaks were more extensive than the ones plotted today, the current term applying only to the more westerly of the original, larger group, the new feature being more clearly definable from NBSAE 1949-52 air photos, and from explorations and photos conducted by Norwegian expeditions. The Russians call this feature Gburek Spitzen, and the Norwegians call it Gburekfjella. US-ACAN accepted the name Gburek Peaks in 1966.

Gburek Spitzen *see* **Gburek Peaks**

Gburekfjella *see* **Gburek Peaks**

Gburekspitzen *see* **Gburek Peaks**

GC41. 71°36' S, 111°16' E. An Australian automatic weather station, also known as Radok, that was installed on Oct. 29, 1984, at an elevation of 2761 m. It was closed on Dec. 30, 2005.

GC46. 74°08' S, 109°50' E. An Australian automatic weather station, also known as P. Schwerdtfeger (not be confused with the American AWS, Schwerdtfeger), installed on Nov. 17, 1984, at an elevation of 3096 m, on the Casey—Vostok traverse route. It was closed on April 30, 2001. Named for Prof. Peter Schwerdtfeger, who joined the department of meteorology at Melbourne University in 1961.

Gdansk Icefall. 62°11' S, 58°36' W. An outlet of the Warszawa Icefield, at Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, after their town of Gdansk (Danzig).

Gdynia Point. 62°10' S, 58°33' W. The E point of Dufayel Island, in Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for their great Baltic port of Gdynia. UK-APC accepted the name on April 3, 1984, and US-ACAN followed suit. The British plotted this feature in late 2008.

Gealy Spur. 84°38' S, 165°13' E. A high rock spur which descends NE from Mount Marshall to terminate in Willey Point, on the W side of the Beardmore Glacier. Discovered by the Southern Journey Party in Dec. 1908, during BAE 1907-09. Named by US-ACAN in 1972, for William James Gealy (b. Sept. 7, 1925, Tokyo, Japan. d. Oct. 20, 1994, Chicago), stratigrapher with the Ohio State University Geological Expedition in this area in 1969-70, who worked on this spur and found tetrapod fossils.

Mont des Géants *see under* **D**

Geburtstagrücken. 70°48' S, 167°00' E. A ridge on the W side of McMahon Glacier, in the Anare Mountains of Victoria Land. Named by the Germans. It means "birthday ridge."

The *Gedania*. Polish yacht, skippered by Dariusz Bogucki, in the area of the South Shetlands and Antarctic Peninsula during the 1975-76 summer, as she made an Arctic to Antarctic cruise. She was in company with the Belgian yacht *Trismus*.

Cabo Geddes *see* **Cape Geddes**

Cape Geddes. 60°42' S, 44°35' W. Forms the N end of Ferguslie Peninsula and the E entrance point of Browns Bay, on the N coast of Laurie Island, in the South Orkneys. Probably sighted by Weddell in 1823. Charted in Nov. 1903 by ScotNAE, and named by Bruce for Prof. Patrick Geddes (1854-1932), Scottish biologist and sociologist (later knighted). It was re-surveyed in 1933 by the Discovery Investigations, and appears on their 1934 chart. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1930 Argentine chart as Punta Geddes, and on a 1947 Argentine chart as Cabo Geddes, but Punta Geddes was the name listed in the 1970 Argentine gazetteer. FIDS had their Base C here just after World War II.

Punta Geddes *see* **Cape Geddes**

Geddes Crag. 81°32' S, 155°47' E. Immediately S of All-Blacks Nunataks, 10 km NW of Rutland Nunatak. Named by NZ-APC on Feb. 27, 2003, for Dave Geddes, involved in operational work for DSIR Antarctic Division and for NZARP, 1986-95. US-ACAN accepted the name later in 2003.

Arrecife Gedges *see* **Gedges Rocks**

Gedges Reef *see* **Gedges Rocks**

Gedges Rock *see* **Gedges Rocks**

Gedges Rocks. 65°20' S, 64°32' W. A group of 4 rocks, shaped like little peaks, rising to a mean of 5 m above sea level (the highest is 19 m), 5.5 km NNW of Grim Rock, SW of the Argentine Islands, and about 18 km WSW of Cape Tuxen, off the Graham Coast, on the W coast of Graham Land. Discovered in Feb. 1936 by BGLE 1934-37, who named them Gedges Reef, after The Gedges, a dangerous reef off the mouth of the River Helford, in Cornwall. The feature appears as such on a 1946 U.S. Hydrographic Office chart, on a 1948 British chart, and was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. In 1969 an RN Hydrographic Survey unit on the *Protector* determined the feature to be rocks rather than a reef, and on Dec. 23, 1971, UK-APC changed the name to Gedges Rocks. US-ACAN followed suit in 1972. The feature appears on a 1947 Chilean chart as Arrecife Gedges (i.e., "Gedges reef"), and that is the name seen in the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Geelan Ice Piedmont. 69°29' S, 72°41' W. It forms the N end of Rothschild Island, off the N end of Alexander Island. Surveyed by BAS between 1975 and 1977, and named by UK-APC on June 11, 1980, for Patrick John Michael Geelan (b. Aug. 18, 1926, Rochford, Essex), secretary of the PCGN (Permanent Committee on Geographical Names), 1955-59; a member of UK-APC from 1955, and chairman from 1992.

Gega Point. 63°20' S, 58°42' W. On the W coast of Astrolabe Island, 1.15 km NW of Sherrell Point, and 3.35 km SE of Raduil Point, it forms the SE side of the entrance to Mokren Bight, in the Bransfield Strait. Named by the Bulgarians on Nov. 23, 2009, after Gega, the settlement in southwestern Bulgaria.

Mount Geier. 71°34' S, 62°25' W. The dominant, largely snow-covered peak in the N part of the Schirmacher Massif, rising to about 1675 m, W of Odom Inlet, near the Black Coast, on the E coast of Palmer Land. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel in 1972-73, and mapped by USGS in 1974 from these efforts. Named by US-ACAN in 1976, for Frederick Joseph "Fred" Geier (b. 1939), topographic engineer with the USGS geological and mapping party to the Lassiter Coast, in 1969-70. UK-APC accepted the name on July 21, 1976.

Península Geiger. 64°18' S, 62°54' W. The peninsula that projects from the extreme NE of Eta Island, in the Melchior Islands, in the Palmer Archipelago. Named by the Chileans for Capitán de navío Augusto Geiger Stahr, commodore of the Antarctic Task Group aboard the *Piloto Pardo*, during ChilAE 1964-65. The Argentines call it Península Carmen.

Geikie Glacier *see* **Geikie Inlet**

Geikie Inlet. 75°30' S, 163°00' E. An inlet, 11 km wide at is entrance, it lies between the cliffs of Drygalski Ice Tongue on the N, and Lamplugh Island and the seaward extension of Clarke Glacier on the S, on the S coast of Victoria Land. Discovered by BNAE 1901-04, and named by Scott for the Scottish geologist, Sir Archibald Geikie (1835-1924), director general of the Geological Survey of the United Kingdom, who helped prepare the expedition. One occasionally sees the name Geikie Glacier for this feature, but it is, indeed, an inlet.

Geikie Land *see* **Geikie Ridge**

Geikie Nunatak. 80°24' S, 25°52' W. Rising to about 1100 m, 5 km W of Mount Absalom, in the SW portion of the Herbert Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed by BAS personnel from Halley Bay Station between 1968 and 1971. In association with several features in this area named for glaciologists, this one was named by UK-APC on Jan. 5, 1972, for James Geikie (1839-1915), professor of geology at Edinburgh from 1882, one of the first to recognize that many glaciations occurred during the Pleistocene period. US-ACAN accepted the name.

Geikie Point *see* **Geikie Ridge**

Geikie Ridge. 71°44' S, 169°36' E. A massive mountain ridge, 30 km long and 10 km wide, rising to 457 m above sea level, and terminating as a divide between Dugdale Glacier and Murray Glacier, in the Robertson Bay area, in the Admiralty Mountains of northern Victoria Land. During BAE 1898-1900, Borchgrevink charted it, and named the high land between these glaciers as Geikie Land, for Sir Archibald Geikie (*see* **Geikie Inlet**). However, the term "land," as applied to this feature has since been, rightly, determined to be inappropriate for such a small feature, and it was re-defined, first as Geikie Point, and then later still as Geikie Ridge. US-ACAN and NZ-APC both accepted this situation.

Geipelstein. 73°46' S, 161°35' E. A rock, due E of the spur the Germans call Liebigsporn, in Victoria Land. Named by the Germans.

Mount Geissel. 80°25' S, 81°47' W. Rising to 1430 m, 5 km S of Mount Simmons, in the Independence Hills of the Heritage Range. Named by US-ACAN in 1966, for Robert H. "Bob" Geissel (b. 1940), geomagnetist and seismologist at Plateau Station in the winter of 1966.

Ostrov Gek *see* **Gek Island**

Gek Island. 66°04' S, 101°11' E. In the Bunger Hills, on the coast of Queen Mary Land. Charted by SovAE 1956, and named by them as Ostrov Gek, after Chuk i Gek, the leading character in a story of the same name by children's short story writer Arkadi Petrovich Gaidar (1904-1941), real name Arkadi Golikov. ANCA translated the name as Gek Island.

Gela Point. 62°44' S, 60°13' W. The point on the SE coast of Rozhen Peninsula, on Livingston Island, 5.1 km ENE of Botev Point, and 4.1 km WSW of Samuel Point, in the South Shetlands. As a result of a recent retreat of the adjacent Prespa Glacier to the NE, the point was formed as an offshoot of Yambol Peak, which stands 700 m to the WNW. Surveyed by the Bulgarians

during their Tangra survey of 2004-05, and named by them on Dec. 15, 2006, for the settlement of Gela, in the central part of the Rhodope Mountains, in Bulgaria.

The *Gelendzhik*. Russian ship that took part in SovAE 1974-76 and SovAE 1976-78 (the captain both times was Mikhail Stepanovich Rugayev). She was back again in 1994-95, taking down to the Weddell Sea the Italian geophysics voyage led by Daniel Nieto Yabar.

Gelnhausental. 80°45' S, 27°00' W. A valley in the Shackleton Range. Named by the Germans.

Baie des Gémeaux *see under* **D**

Gemel Peaks. 62°12' S, 59°00' W. Two peaks, rising to about 100 m, 2 km NE of Horatio Stump, on Fildes Peninsula, King George Island, in the South Shetlands. In 1935 the personnel on the *Discovery II* named and charted them as both Twin Peaks and Twin Peak. The pluralized version appears on a 1948 British chart, and was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. Following FIDASE aerial photography of the area in 1956-57, the feature was re-named Gemel Peaks, by UK-APC on Sept. 23, 1960, in order to avoid Twin Peaks, the same name as another feature found in Antarctica. US-ACAN accepted the new name later in 1960. Gemel means "twin." The British re-plotted this feature in late 2008.

Nunatak Gémenis *see* **Gemini Nunatak**

The *Gemini*. Polish fish processing vessel in Antarctic waters in 1976-77, her skipper that season being Zbigniew Dzwonkowski. This was part of the expedition led by Zbigniew Karnicki, and she was in company with the *Professor Siedlecki*, the *Tazar*, the *Manta*, and the *Rekin*. The *Gemini* was back in 1977-78, along with the *Sagitta*, the *Sirius*, the *Manta*, and the *Professor Bogucki*, on the expedition led by Zbigniew Ziembo.

Nunatak Gemini *see* **Gemini Nunatak**

Gemini Nunatak. 66°08' S, 62°30' W. It consists of 2 almost ice-free peaks, one 465 m and the other 490 m (hence the name given by FIDS, after the constellation Gemini, which contains the twin stars Castor and Pollux), connected by a narrow rock ridge about 2 km long, 6 km S of Borchgrevink Nunatak, on the SW side of Philippi Rise, on the Oscar II Coast, on the E coast of Graham Land. In 1947-48, this feature was surveyed from the ground and charted by Fids from Base D, and photographed from the air by RARE 1947-48. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1954, and also in the 1955 British gazetteer. It appears on a Chilean chart of 1962, as Nunatak Gemini, and that was the name accepted by the 1974 Chilean gazetteer. Further surveyed by BAS personnel from Base E in 1964-65.

Gemini Nunataks. 84°42' S, 176°38' W. Two nunataks of similar size and appearance, in a prominent position near the W wall of Shackleton Glacier, just SE of Mount Cole. Named for the constellation by Al Wade in 1962-63 during the Texas Tech Shackleton Glacier Expedition. US-ACAN accepted the name in 1964.

Monte Genecand *see* **Mount Genecand**

Mount Genecand. 66°06' S, 64°39' W. Rising to about 1200 m, on the W side of the Bruce Plateau, at the head of Barilari Bay, between Lawrie Glacier and Weir Glacier, on the NW coast of Graham Land. Photographed aerially by FIDASE in 1955-57, and mapped from these photos by FIDS cartographers. Named by UK-APC on July 7, 1959, for Félix-Valentin Genecand (1879-1957), Swiss jeweler and mountain climber who invented the tricouni nail for climbing boots just before World War I. US-ACAN accepted the name later in 1959. The Argentines call it Monte Genecand.

Cabo General Alvorado *see* **Cape Shirreff**

Puerto General Arenales *see* **Inverleith Harbor**

The *General Artigas*. Uruguyan ship that resupplies Artigas Station. She also took down the 2nd Venezuelan Antarctic Expedition in 2008-09.

General Artigas Station *see* **Artigas Station**

Isla General Baquedano *see* **Jason Peninsula**

Meseta General Barrios *see* **Laclavère Plateau**

General Belgrano Bank *see* **Belgrano Bank**

General Belgrano Station. 78°03' S, 30°00' W. Known officially as Base de Ejército General Manuel Belgrano (General Belgrano Army Base), but more commonly known as Base Belgrano. Argentine scientific station built by ArgAE 1954-55, on the Filchner Ice Shelf, and opened on Jan. 18, 1955. Named for the patriot Manuel Joaquín del Corazón de Jesús Belgrano (1770-1820), it was a year-round station. The *General San Martín* brought in the first personnel. **1955 winter**: Gen. Hernán Pujato (leader). **1956 winter**: Gen. Hernán Pujato (leader). **1957 winter**: Cavalry Maj. Jorge Edgard Léal (leader). **1958 winter**: Engineer Lt. Col. Jorge Antonio de Marzi (leader). **1959 winter**: Infantry Capt. Pedro Pascual Pancracio Arcondo (leader). **1960 winter**: Infantry Capt. Pedro Pascual Pancracio Arcondo (leader). **1961 winter**: Infantry Capt. José María Toribio Vaca (leader). **1962 winter**: Engineer Capt. Ernesto Juan Peyregne (leader). **1963 winter**: Artillery 1st Lt. José Tramontana (leader). **1964 winter**: Artillery 1st Lt. José Tramontana (leader). **1965 winter**: Infantry Capt. Gustavo Adolfo Giró Tapper (leader). **1966 winter**: Infantry 1st Lt. Óscar Roberto Sosa (leader). **1967 winter**: Engineer Maj. Ignacio Carro (leader). **1968 winter**: Artillery Capt. Óscar Horacio Cao (leader). **1969 winter**: Infantry 1st Lt. Hugo Augusto Vidarte (leader). **1970 winter**: Communications 1st lt. Héctor Luis Repetto (leader). **1971 winter**: Infantry Lt. Juan Carlos Manzella (leader). **1972 winter**: Infantry 1st Lt. Carlos Gustavo Fontana (leader). **1973 winter**: Infantry 1st Lt. Edberto González de la Vega (leader). **1974 winter**: Infantry 1st Lt. Juan Enrique Salaverry (leader). **1975 winter**: Engineer Lt. Col. Ignacio Carro (leader). **1976 winter**: Infantry Maj. Hugo Augusto Vidarte (leader). **1977 winter**: Communications Maj. Alberto Hipólito Acevedo (leader). **1978 winter**: Engineer Maj. Héctor Raúl Papa (leader). **1979 winter**: Infantry 1st Lt. José Conrado Antonioni (leader). **1980 winter**: Medical Capt. Luis Antonio Zbucki (leader). It was closed after the 1980 winter, and replaced by General Belgrano Station II. In 1985 it drifted out into the Weddell Sea.

General Belgrano Station II. 77°54' S, 34°36' W. This Argentine station began as a seasonal station called Label, built in Jan. 1970, on bedrock on Bertrab Nunatak, in Vahsel Bay, on the Luitpold Coast of Coats Land. **Feb. 5, 1979**: Label was converted into a permanent station by ArgAE 1978-79 with the plan of eventually replacing the original General Belgrano Station. **1979 winter**: 1st Lt. Ramón Alberto Varela (leader), 1st Lt. Antonio Donato Silvestris (medical officer). **1980 winter**: Capt. Luis Antonio Zbucki (medical officer and leader). This station and the original Belgrano operated together for this winter. It has operated continually since 1980, as the southernmost of all the Argentine bases. **1981 winter**: Infantry Maj. Jorge Antonio Fernández (leader). Belgrano II and III operated together for this winter, and for the winters of 1982 and 1983. **1982 winter**: Engineer Capt. Leopoldo Diamante Díaz (leader). **1983 winter**: Cavalry Maj. Victor Rubén Córdoba (leader). **1984 winter**: Infantry 1st Lt. Marcelo Hugo Filippa (leader). **1985 winter**: Infantry 1st Lt. Jorge Hipólito Villamayor (leader). **1986 winter**: Artillery 1st Lt. Facundo S. Sonzini Astudillo (leader). **1987 winter**: Cavalry Maj. Raúl Ayala Torales (leader). **1988 winter**: Infantry Maj. Luis Alberto Dupuy (leader). **1989 winter**: 1st Lt. Daniel Guillermo Lorente (radioman and leader). **1990 winter**: Infantry Capt. Hugo Alonso (leader). **1991 winter**: Infantry 1st Lt. Lautaro José Jiménez Corbalán (leader). **1992 winter**: Infantry 1st Lt. Carlos Alberto Pérez (leader). **1993 winter**: Infantry Capt. Mauricio Diego Añaños (leader). **1994 winter**: Infantry Capt. Luis Eduardo López (leader). **1995 winter**: Infantry 1st Lt. Jorge Fabián Berredo (leader). **1996 winter**: Artillery Capt. Luis Alberto Balochi (leader). **1997 winter**: Engineer Capt. Fernando José Isla (leader). **1998 winter**: Lt. Col. Carlos Exequiel Moreno (medical officer and leader). **1999 winter**: Artillery Maj. Víctor Hugo Figueroa (leader). **2000 winter**: Infantry Capt. Óscar Alfredo Acosta (leader). **2001 winter**: Infantry Lt. Col. Néstor Encina (leader). **2002 winter**: Infantry Capt. Rolando Labrousse (leader). **2003 winter**: Infantry 1st Lt. Marcos Miguel Copertino (leader). **2004 winter**: Infantry Capt. Fernando Gabriel Estevez (leader). **2005 winter**: Infantry Maj. Ernesto Dario Vivares (leader). **2006 winter**: Infantry Maj. Orlando Rubén Interlandi (leader), 1st Lt. Julián Eduardo Pérez Conci (doctor). **2007 winter**: Infantry Capt. Gustavo Ernesto Quiroga (leader). **2008 winter**: Capt. Mariano Fernando Godoy (medical officer and leader). **2009 winter**: Infantry 1st Lt. Jorge Adrián Schunck (leader).

General Belgrano Station III. 77°54' S, 45°47' W. On the N end of Berkner Island, in the Filchner-Ronne Ice Shelf. **Jan. 30, 1980**: Opened by ArgAE 1979-80, not as a replacement, but as a temporary additional base. **1980 winter**: Infantry Maj. Carlos Alberto Retamozo (leader). **1981 winter**: Infantry 1st Lt. Carlos Hugo Casela (leader). **1982 winter**: Infantry 1st Lt. Eduardo Ezequiel Alonso (leader). **1983 winter**: Infantry 1st Lt. Ernesto Hugo Kishimoto (leader). **Jan. 16, 1984**: The station was closed, because the ice upon which it was built was breaking up.

General Bernardo O'Higgins Station. 63°19' S, 57°54' W. Year-round Chilean scientific station, more properly known as Base Libertador General Bernardo O'Higgins Riquelme, sometimes known as Bernardo O'Higgins Station, and, more popularly, as just O'Higgins. **Feb. 18, 1948**: The station (the 2nd Chilean one in Antarctica) was set up by ChilAE 1947-48, on Schmidt Peninsula, near Cape Legoupil, on Trinity Peninsula, right at the top of the Antarctic Peninsula. González Videla, the president of Chile, inaugurated the station that day, during the Presidential Antarctic Expedition. **1948 winter**: 6 men. Capt. Hugo Schmidt Prado was the first commander of the base. Originally there were 4 builings, to accommodate 10 persons. Others who wintered-over that year were Carlos Toro Mazote Granada (Air Force lieutenant), Lt. Jorge Araos Santibáñez, José Miguel Landeros, Luis Sura Mesias (radioman), and Luis A. Sabaño (cook). **1949 winter**: 6 Army men, Capt. Arístides Migueles Jáuregui (base leader), Lt. Jorge Moroni Bocca, Lt. Carlos Olguín Muñoz, Vice primero aspirante Georges de Giorgio (from RARE 1947-48; he was there that winter, doing his national service as a technical adviser), Sgt. Armando Bustamante Herrera, Sgt. Luis Escobar Fuentes, and Corp. Ramón Alfonso Galaz, and Pedro Carpio Chaverte. **1950 winter**: 6 men. Major Roberto Labra Muñoz (leader; *see* **Morro Labra** and **Muñoz Point**), Lt. Fernando Pino Valdéz (2nd-in-command), "Brigadier" Enrique Araya Osses (assistant), Vice sergeant 1st class Luis Vilches San Martín (radio operator), Cabo 2nd class Arturo Gómez Oviedo (sick berth attendant), and Soldier Óscar Núñez Herrera (cook). **1951 winter**: 7 men. Sergio Möller Escala (leader). **1952 winter**: Aquiles López Barrenechea (leader). **1953 winter**: Mario Stock Gilabert (leader). **1954 winter**: Capt. Luis Arellano Stark (leader). **1955 winter**: Luis Valdés Leiva (leader). **1956 winter**: Guillermo Chacón Perucich (leader). **1957 winter**: Luis A. Ovando Palet (leader). **1958 winter**: Jorge Sanhueza Romero (leader). **1959 winter**: Tarcisio Rosas Thomas (leader). **1960 winter**: Eric Bachler Becaomas (leader). **1961 winter**: Sergio López Rubio (leader). **1962 winter**: Sergio Alvárez Ramírez (leader). **1963 winter**: Iván Dobud Urqueta (leader). **1964 winter**: Victorino Gallegos (leader). **1965 winter**: Arnoldo Ojeda Acevedo (leader). **1965-66 summer**: Reconstruction of the station began, under the command of Lt. Óscar López Bustamante. There was no wintering party in 1966. **1967 winter**: Patricio Ibertti Armijo (leader). **1968 winter**: Luis H. Opazo Rodríguez (leader). **1969 winter**: Héctor Carvacho Stein (leader). **1970 winter**: Armando Cordero Rusque (leader). **1971 winter**: Raúl Godoy Casas Cordero (leader). **1972 winter**: Nelsón Carvallo Andrade (leader). **1973 winter**: Jorge Chovén G. (leader). **1974 winter**: Bernardo Riffo Torres (leader). **1975 winter**: Juan Madrid A. (leader). **1976 winter**: Juan Uribe (leader). **1977 winter**: Kenny Aravena Sepúlveda (leader). **1978 winter**: Sergio París Davinson (leader). **1979 winter**: René Rojas G. (leader). **1980 winter**: Juan Morales Serón (leader). **1981 winter**: Juan Morales Serón (leader). **1982 winter**: Eduardo Cruz Adaro (leader). **1983 winter**: Francisco Acevedo Acosta (leader). **1984 winter**: José Llanos Rojas (leader). **1985 winter**: Hyram Díaz Milovic (leader). **1986 winter**: Sergio Velásquez (leader). **1987 winter**: Rodrigo Martínez González (leader). **1988 winter**: Hugo Fuenzalida Leyton (leader). **1989 winter**: Hugo Serrano Steel (leader). **1990 winter**: Ricardo Osses Araneda (leader). **1991 winter**: Sergio Contreras Anguita (leader). **Oct. 9, 1991**: A German-Chilean satellite station was stationed here too, and has been since. **1992 winter**: Nelson Cáceres Retamal (leader). **1993 winter**: Justo Reyes Arancibia (leader). **1994 winter**: Iván Sepúlveda Vilches (leader). **1995 winter**: Juan González Gutiérrez (leader). **1996 winter**: Luis Arías Ringele (leader). **1997 winter**: Silvio Salgado Garro (leader). **1998 winter**: Bernardo Orrego Suárez (leader). **1999 winter**: Pedro Vázquez Celedón (leader). **2000 winter**: Sergio Flores Delgado (leader). The station remains open (as of 2010). Today there are 6 buildings which can accommodate 70 persons in the summer and an average of 23 in the winter. A skiway, 2500 meters long, lies about 4 km from the station, and is serviced by a Twin Otter DHC-6. There is also a heliport at the back part of the base.

General Erskine Bay *see* **Erskine Iceport**

Nevado General H. Carmona Vial *see* **Mount Jacquinot**

General Jorge Boonen Rivera Station *see* **General Ramón Cañas Montalva Station**

Base General José Artigas *see* **Artigas Station**

The *General Knox*. U.S. sealing ship of 266 tons, 96 feet long, built in 1810 at Thomaston, Mass. (now a part of Maine), and owned by William Fettyplace, Joseph White, Stephen White, John Dodge, Gideon Barstow, John W. Treadwell, and Capt. William B. Orne. Registered in Salem, Mass., on Aug. 15, 1818, she left, under the command of Capt. Orne, for the Falklands, in 1818, as part of the Salem Expedition (q.v.), and was joined there by the *Nancy*, whose captain told Orne of the discovery of the South Shetland Islands. The Salem Expedition was in the South Shetlands for the 1820-21 season.

Islotes General Levene *see* **Moss Islands**

General Pedernera Refugio. 63°45' S, 58°12' W. Argentine refuge hut, opened by the Army on Aug. 12, 1966, just E of Azimuth Hill, near the N end of Long Island, S of Russell East Glacier, Trinity Peninsula. More commonly called Pedernera Refugio, or just Pedernera.

General Ramon Cañas Montalva Station. 63°32' S, 57°23' W. Chilean Army sub-scientific station (really a refugio) in Duse Bay, Trinity Peninsula, Graham Land, 17 km from O'Higgins Station. It was formerly the British Base V, and was transferred to Chile on July 29, 1996. *See also* **Islote Cañas**. On Sept. 11, 1997 its name was changed to General Jorge Boonen Rivera Station.

The *General San Martín*. Argentine research ship/icebreaker of 4854 tons, built in 1953, especially for Antarctic relief work, and launched on June 24, 1954. First sent to Antarctic waters in 1954-55, to set up General Belgrano Station. Her captains were: Luis Tristán de Villalobos (1954-55); Luis M. Iriate (1955-56); Jorge A. Bofill (1956-57); Luis R.A. Capurro (1957-58); Jorge E.H. Pernice (1958-59); António Revuelto (1959-60; took tourists down); Luis González Castrillón (1960-61); Fulgencio M. Ruíz (1961-62); Atilio A. Barbadori (1962-63); Jorge Edgardo Zimmerman (1963-64); Gonzalo Demetrio Bustamente (1964-65); José Ángel Alvárez (1965-66); Benjamín H. Aguirre (1966-67); Alfredo Bernardo Astiz (1967-68); Aldo de Rosso (1968-69); Alberto González Riesco (1969-70); Dalton Alurralde (1970-71); Alberto Julio Compte (1971-72); Hugo Andrade (1972-73); Ricardo Oreste Renella (1973-74); Carlos A. Bonino (1974-75); Ernesto Manuel López Fabre (1975-76); Alberto L. Padilla (1976-77); Jorge Fausto Newton (1977-78); Adolfo Arduino (1978-79); Alejandro José Giusti (1979-80); in 1981 and 1982 she was not in Antarctic waters; Manuel G. Videla (1983-84); Miguel A. Piccinini (1984-85).

General San Martín Station *see* **San Martín Station**

The *General Scott*. Sealing brig from Sag Harbor, NY, in the South Shetlands, 1821-22, under the command of Capt. Sayre. She took in 500 fur seal skins and 270 barrels of oil, and arrived back in Sag Harbor in May 1822.

Estrecho General Zenteno *see* **Wilkins Sound**

Generators. Scott used an acetylene-gas generator during BNAE 1901-04, as did Shackleton for BAE 1907-09. For FrAE 1908-10 Charcot used a gasoline-driven electric generator. All of these provided light.

The *Geneva*. A schooner, under the command of Capt. Alex Paddack, which went sealing in the South Shetlands in company with the *Sailor's Return* in 1836-37. The two ships left Newport, RI, together.

Genghis Hills. 80°44' S, 28°02' W. Rising to 1305 m, to the S of Fuchs Dome, and 6 km W of Stephenson Bastion, in the W part of the Shackleton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS in 1974 from these efforts. Named by UK-APC on Jan. 5, 1972, for Graham Keith "Genghis" Wright (b.

1944, Croydon), BAS general assistant who wintered-over at Halley in 1969 and 1970, and who took part in the survey in 1969–70. Mr. Wright was back in Antarctica for 2 more winters at Base E, in 1972 and 1974. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Cima Genova. 79°52' S, 82°43' W. A massive peak, with its W and N walls made of sheer ice, 3 km NE of Schoeck Peak. Four main ridges make up its summit, which is not much higher than the east col (1840 m above sea level). Named by the Italians on Feb. 22, 2002, for the town of Genova (Genoa in English), home of the Alpine Club, a member of which was Paolo Gardino, the first man to climb this peak ("cima" means "peak"), in 1997.

Islote Gentile. 63°20' S, 62°14' W. A small island, just NW of Cape Wallace (the SE extremity of Low Island), in the South Shetlands. Named by the Argentines.

Gentile Point. 81°07' S, 160°48' E. A rounded, ice-covered, point 11 km N of Cape Parr, it projects into the sea from the Darley Hills, on the W side of the Ross Ice Shelf. Named by US-ACAN in 1965, for Peter A. Gentile, captain of the *Alatna* during OpDF 1961 (i.e., 1960–61), and of the *Chattahoochee* during OpDF 1963 (i.e., 1962–63). In that latter season, the ship made 4 fuel-carrying trips from Christchurch, NZ to McMurdo.

Gentle Glacier. 76°46' S, 161°15' E. A small, diminished glacier, really a glacial lobe, to the E and immediately below Forecastle Summit, and which, though a part of the Northwind Glacier-Fry Glacier system, flows back S into the deglaciated Barnacle Valley, in the Convoy Range of Victoria Land. Named descriptively by NZ geologist Christopher J. Burgess, it also describes the excellent helicopter support provided to his 1976-77 field party by the U.S. Navy, "Gentle" being their code name. US-ACAN accepted the name in 1993.

Gentle Valley. 76°47' S, 161°12' E. In the immediate area of Gentle Glacier, in the Convoy Range of Victoria Land. Named by NZ-APC, in association with the glacier.

Gentner Peak. 69°23' S, 76°18' E. A hill, about 115 m high, about 2.6 km W of Law-Racovitza Station, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for Neil Gentner, senior diesel mechanic who wintered-over at Davis Station in 1986, and who took part in the establishing of Law Base (as it was called then) after traveling across Sørsdal Glacier. The Chinese call it Ziyun Shan.

Gentoo Cove. 63°24' S, 57°00' W. A small cove at the entrance to Five Lakes Valley, Hope Bay, on the tip of the Antarctic Peninsula. Named by the Poles on Sept. 1, 1999, for a gentoo penguin colony.

Gentoo penguin. *Pygoscelis papua*. Also called johnny penguin, juanito, pingüín de pico rojo, and often confused with the rockhopper and the jackass penguin. The gentoo inhabits the N shores of the Antarctic Peninsula, the Balleny Islands, the South Shetlands, the South Orkneys, and Peter I Island. He builds large nests on low, flat areas, and is the only penguin with conspicuous white markings on the top of his head. He grows to about 30 inches tall, weighs about 13 pounds, and can dive to 350 feet or more. Discovered by John R. Forster.

Gentoo Rocks. 64°53' S, 62°57' W. A group of small islets and skerries at the E entrance to Argentino Channel, Paradise Harbor, on the Danco Coast of Graham Land. The Poles found a gentoo penguin rookery here in 1984–85, and they officially accepted the name on Sept. 1, 1999.

GEO3 *see* **Phillpot Automatic Weather Station**

Geode Nunataks. 69°50' S, 70°05' W. A group of small nunataks, rising to an elevation of about 1500 m above sea level, near the head of (and on the W side of) Sibelius Glacier, N of the Finlandia Foothills, in the NE part of Alexander Island. Surveyed by BAS from 1968. So named by UK-APC on Dec. 8, 1977, because the nunataks are composed of lava flows with abundant geodes (cavities within the rock containing quartz and calcite crystals). It appears in the 1980 British gazetteer. US-ACAN accepted the name. Originally plotted in 69°50' S, 70°08' W, it has since been replotted.

Cap Géodésie *see* **Cape Géodésie**

Cape Géodésie. 66°40' S, 139°51' E. A low, ice-covered point, marked by prominent rock outcrops at its NE end, 5 km NW of the mouth of Astrolabe Glacier. This area was photographed aerially during OpHJ 1946–47. This particular point was charted by the French in 1951–52, and named by them as Cap Géodésie, for the extensive geodetic program carried out here. US-ACAN accepted the name Cape Géodésie in 1955.

Geodetic Glacier. 77°45' S, 163°48' E. Flows E from Bettle Point along the N side of Thomas Heights into Bowers Piedmont Glacier, on the Scott Coast of northern Victoria Land. Named by NZ-APC in 1993, for the discipline of geodesy. US-ACAN accepted the name.

Massif Geodezistov. 71°11' S, 67°25' E. A massif, NE of Mount Lanyon, and due W of Mount Meredith, in the Prince Charles Mountains. Named by the Russians.

Geoffrey Bay. 66°17' S, 110°32' E. A cove just E of Budnick Hill, on the N side of Bailey Peninsula, in the Windmill Islands, off the Budd Coast. First mapped from air photos taken during OpHJ 1946–47. Photographed aerially again by SovAE 1956, and by ANARE in 1956, 1962, and 1963. Named by ANCA for Geoffrey Denys Probyn "Geoff" Smith, senior technical officer (buildings) with the Antarctic Division, Melbourne, who helped plan and supervise the construction of Casey Station (which lies just to the E). He had also been carpenter at Mawson Station in 1961. US-ACAN accepted the name in 1971.

Geoffrey Hills. 67°37' S, 48°36' E. A group of hills on the S side of Thyer Glacier, at the W end of the Raggatt Mountains, in Enderby Land. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA for Geoff Smith (*see* **Geoffrey Bay**, above). US-ACAN accepted the name in 1965.

Mount Geoffrey Markham. 72°23' S, 170°07' E. A sharply conical basalt cinder cone, rising to 1700 m, on the summit of Hallett Peninsula, above Hallett Station, and at the crest of a long ridge which rises steadily from Cape Hallett. An astro station was built on it by the survey team of NZGSAE 1957–58, who named it for Geoffrey Will "Geoff" Markham (1907–1997), from 1956 secretary of the NZ interdepartmental committee for IGY, and a prime mover in obtaining support for the expedition, especially the assistance of the U.S. Navy, and in organizing the NZ scientific effort at Hallett Station. He retired as superintendent of DSIR's Antarctic Division in 1965 (he had been named to that post in 1959). Naming bodies these days do not like compound names, but Mr. Markham's first name is included in order to avoid any confusion with Sir Clements Markham or Sir Albert Markham.

Gora Geofizikov. 74°02' S, 5°35' W. A nunatak SE of Gavlpiggen Peak, in Queen Maud Land. Named by the Russians.

Bukhta Geografov *see* **Geographers Cove**

Poluostrov Geografov *see* **Geografov Peninsula**

Geografov Peninsula. 66°05' S, 100°40' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Poluostrov Geografov. The name was translated by ANCA.

Geographenbach. 62°13' S, 59°01' W. A stream flowing into Geographers Cove, Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Geographeninsel. 62°13' S, 59°01' W. A tiny island in Geographers Cove, Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Geographensee. 62°13°S, 59°01' W. A small lake in Geographers Cove, off Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Geographers Cove. 62°13' S, 59°01' W. Between Flat Top Peninsula and Exotic Point, on the SW side of Fildes Peninsula, King George Island, in the South Shetlands. Following surveys conducted by the Soviets from Bellingshausen Station, it was named by them in 1968 as Bukhta Geografov (i.e., "geographers' bay"), for the geographers of all nations who have worked in this area. It appears as such on a Russian map of 1973. UK-APC accepted the name Georgraphers Cove, on Feb. 7, 1978, and it appears as such in the 1980 British gazetteer. US-ACAN also accepted the name. The British were the last to plot this cove, in late 2008.

Geographers Creek. 62°30' S, 58°29' W. Flows into Petrified Forest Creek, near Arctowski Station, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, after the geographers on PolAE 1977-78.

Geographic South Pole *see* **South Pole**

Geography [general] *see* **Antarctica**

Geoid Glacier. 77°48' S, 163°47' E. Flows S from Thomas Heights to the W of Ellipsoid Hill, into Blue Glacier, in Victoria Land. Named by NZ-APC in 1993, for the geoid, the equipotential

surface which coincides with mean sea level. US-ACAN accepted the name.

Geolier, André. b. Nov. 24, 1799, Palais, France. Junior seaman on the *Astrolabe* during FrAE 1837–40.

The *Geolog Dmitriy Nalivkin*. A 71.7-meter Russian research ship, built in 1985, in Turku, Finland. Skippered by Al'bert Moiseyevich Antonov, she took part in SovAE 1986–88, SovAE 1988–90, and SovAE 1989–91. She was re-equipped in 1992.

Glacier Géologie *see* **Astrolabe Glacier**

Pointe Géologie *see* **Géologie Archipelago**

Géologie Archipelago. 66°39' S, 139°55' E. A small archipelago of rocky islands and rocks, close N of Cape Géodésie and the Astrolabe Glacier Tongue, off the coast of Adélie Land. It extends from Hélène Island on the W to the Dumoulin Islands on the E. It includes the following features: the Dumoulin Islands, Hélène Island, Marégraphe Island (Île du Marégraphe in the original French), Rostand Island (Île Jean Rostand), Carrel Island (Île Alexis Carrel), Lamarck Island (Île Lamarck), Gouverneur Island, Pétrel Island (Île des Pétrels), Bernard Island (Île Claude Bernard), Lion Island (Île du Lion), Buffon Island (Île Buffon), Curie Island, the Fram Islands, Cuvier Island (Île Cuvier), and Ifo Island. In Jan. 1840, FrAE 1837–40 landed on Débarquement Rock (now in the Dumoulin Islands). Because of the rock samples collected, they named a nearby coastal point as Pointe Géologie (modern day geographers believe that this coastal point corresponds with portions of the cluster of islands close N of the Astrolabe Glacier Tongue). This gave its name to the archipelago in 1952 (named by the French as Archipel de Pointe-Géologie). The archipelago was first delineated from air photos taken during OpHJ 1946–47. The French established a camp here in 1952. US-ACAN accepted the name Géologie Archipelago in 1955.

Geologists Cove. 62°11' S, 58°17' W. A small bay between Chabrier Rock and Cape Syrezol, in front of Penderecki Glacier, at the junction of Admiralty Bay and the Bransfield Strait, at King George Island, in the South Shetlands. Named by the Poles in 1980, for the geologists at Arctowski Station during PolAE 1978–79.

Geologists Island. 62°13' S, 58°57' W. An island, 400 m long, S of Ardley Island, in the entrance of Hydrographers Cove, Fildes Peninsula, King George Island, in the South Shetlands. Surveyed by the Russians from Bellingshausen Station from 1968, and named by them that year as Ostrov Geologov, a name also seen on their maps as Geologov Island. UK-APC accepted the translated name Geologists Island on Feb. 7, 1978, and US-ACAN followed suit. It appears in the 1980 British gazetteer. The British were the last to plot this island, in late 2008.

Geologists Range. 82°30' S, 155°30' E. A range, about 56 km long, consisting of partly separated nunataks, on the N side of the head of the Nimrod Glacier, between that glacier and the head of Lucy Glacier, and overlooking the Ross Ice Shelf opposite the Miller Range. Discovered by the Northern Party of NZGSAE 1961–62, and named by them for all geologists in Antarctica. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA also accepted the name.

Massif Geologov. 70°55' S, 67°45' E. A massif, SW of Battye Glacier, in the E part of the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Ostrov Geologov *see* **Geologists Island, Geologov Island**

Geologov Island. 66°11' S, 100°51' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ostrov Geologov (i.e., "geologists island"), for the geologists of Antarctica. ANCA translated the name.

Geology. Geologically Antarctica is probably 3 billion years old. When it was (theoretically) part of the supercontinent of Pangaea, it was Precambrian. There are 4 geological provinces in Antarctica: Andean Province, which is the Antarctic Peninsula and the coast of Marie Byrd Land; Ellsworth Province, which is the Ronne Ice Shelf and through the Ellsworth Mountains and Marie Byrd Land to the Ross Ice Shelf; Ross Province, which is a thin corridor running from the Weddell Sea to the Ross Sea, with its major constituent being the Transantarctic Mountains; and the East Antarctic Shield, which is all of East Antarctica.

Cape Geology. 77°00' S, 162°32' E. A low, gravel-covered point marking the W limit of Botany Bay, on the S shore of Granite Harbor, in southern Victoria Land. Charted and named by the Western Geological Party during BAE 1910–13, who arrived here on Nov. 30, 1911, and established their base. US-ACAN accepted the name in 1952, and it appears in the 1958 NZ gazetteer.

Geomagnetic South Pole *see* **South Geomagnetic Pole**

Poluostrov Geomorfologov *see* **Geomorfologov Peninsula**

Geomorfologov Peninsula. 66°07' S, 101°15' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Poluostrov Geomorfologov (i.e., "geomorphologists peninsula"), for all geomorphologists. ANCA translated the name.

Geophysicists Cove. 62°09' S, 58°20' W. A small bay in front of Viéville Glacier, immediately N of Manczarski Point, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for the geophysicists at Arctowski Station during PolAE 1977–78.

Georg Forster Station. 70°46' S, 11°51' E. East Germany's first scientific station in Antarctica, built in the summer of 1975–76, in the Schirmacher Hills, on the Princess Astrid Coast of Queen Maud Land, extremely close to the Soviets' Novolazarevskaya Station, and opened on April 21, 1976, without being named, as such. It was called simply DDR Station, or East Germany's base. It was finally named, on Oct. 25, 1987, after Georg Forster (q.v.). Earth and atmospheric studies were conducted here, and ozone soundings were taken every year until 1992. **1976 winter**: Hartwig Gernandt (leader). **1977 winter**: Harald Lücke (leader). **1978 winter**: Gerhard Strauch (leader). **1979 winter**: Klaus Peukert (leader). **1980 winter**: Ulrich Wand (leader). **1981 winter**: Volkmar Damm (leader). **1982 winter**: Wieland Bürger (leader). **1983 winter**: Klaus Peukert (leader). **1984 winter**: Peter Junghans (leader). **1985 winter**: Peter Plessing (leader). **1986 winter**: Peter Kowski (leader). **1987 winter**: Eckard Grass (leader). **1987–88 summer**: Reiner Frey (leader). **1988 winter**: G. Peters (leader). **1988–89 summer**: Rudolf Meier (leader). **1989 winter**: G. Taraschewski (leader). **1989–90 summer**: G. Taraschewksi (leader). In 1990, after East Germany became part of a unified Germany again, the station was taken over by the Alfred Wegener Institute. **1990 winter**: G. Schlosser (leader). **1990–91 summer**: G. Schlosser (leader). **1991 winter**: Gerold Noack (leader). **1991–92 summer**: Günther Stoof (leader). **1992 winter**: Günter Stoof (leader; Herr Stoof was the last winterer, literally; he was the only winterer that season. He closed the station on April 14, 1993). With the Germans working out of Novolazarevskaya, dismantling of the station began in 1993, it was open during the summer of 1994–95 (for that purpose), and dismantling was finished in 1996. All that remains there today is a commemorative plaque.

Georg von Neumayer Station. 70°35' S, 8°21' W. Year-round West German scientific station, built at Atka Iceport, in the northernmost part of the Ekström Ice Shelf, on the Princess Martha Coast of New Schwabenland, in Queen Maud Land, in the summer of 1980–81. **March 1981**: The station was completed, and named for one of the promoters of the First International Polar Year, 100 years before, in 1882–83. This station was a replacement for the aborted Filchner Station, and was supplied by the *Polarstern*. **1981 winter**: Ekkehard Müller-Heiden (leader). **1982 winter**: Holger Dietz (leader). **1983 winter**: Rolf Hochgrebe (leader). **1984 winter**: Werner Herold (leader). **1985 winter**: Hans Wortmann (leader). **1986 winter**: Friedrich Schuster (leader). **1987 winter**: Rüdiger Schmidt (leader). **1988 winter**: B. Ruhnke (leader). **1989 winter**: Eberhard Kohlberg (leader). **1990 winter**: Monika Puskeppeleit (leader). This was an entirely female group. **1991 winter**: Friedrich Schuster (leader). **March 1992**: The station was now buried by ice, and so a new one was built, about 10 km from the old one, in 70°39' S, 8°15' W, and renamed simply Neumayer Station. The old one was dismantled. **1992 winter**: Norbert Müller (leader). **1992–93 summer**: Rüdiger Schmidt (leader). **1993 winter**: Wolfgang Etspüler (leader). **1994 winter**: Friedrich Schuster (leader). **1995 winter**: Johannes Lowenstein (leader). **1996 winter**: Helga Schubert (leader). **1996–97 summer**: Norbert Müller (leader). **1997 winter**: Friedrich Schuster (leader). **1998 winter**: Jochen Ams (leader). **1999 winter**: Eberhard Kohlberg (leader). **2000 winter**: Ursula Stüwe (leader). The station has remained open every winter since.

Lednik Georga VI *see* **George VI Ice Shelf**

[1]**The *George***. A snow of 247 tons, built in France, she was taken as a prize during the Napoleonic Wars, and wound up in Liverpool, in the hands of Capt. John Richards, and two merchants, John Guthrie and Thomas Mather (Richards & Co.). She was rebuilt, and made two voyages to Buenos Aires, under Richards, before going to the South Shetlands for the 1820-21 sealing season, again under the command of Richards. Before going to Antarctic waters, she operated out of the Falkland Islands for a while, hoping to kill several wild cattle for provisions. But they were too difficult to catch, so the crew killed 142 wild geese and a bear. On Nov. 25, 1820 she left the Falklands, heading south, arriving in the South Shetlands on Dec. 1, 1820. She was still there in Jan. 1821, and the crew found the skeleton of a whale on a mountain. On Feb. 23, 1821, she was blown off the coast, losing her boats, anchors, and sails, and the following day, Feb. 24, 1821, after securing 9000 seal skins (taking them at the rate of 1000 a week), the *George* left Antarctic waters, in company with the *Hetty* (Capt. Bond). This was her only trip that far south. A fairly good narrative of the voyage was given by one of the officers in a letter he wrote on Jan. 3, 1821 (the letter went to London via a British cutter leaving on Jan. 4).

[2]**The *George***. Sealing schooner out of Stonington, Conn., and owned by W.W. Rodman. She was in the South Shetlands for the 1821-2 season, and left Antarctic waters on Jan. 20, 1822, being the first of that season's New South Shetland sealers to arrive back in Stonington (she made the trip back from the South Shetlands in 80 days), on April 12, 1822, with 400 seal skins and 150 barrels of elephant seal oil.

Mount George. 67°44' S, 50°00' E. Rising to 1555 m, close W of Simpson Peak, in the Scott Mountains of Enderby Land. Named by Biscoe in 1832 for one of the Enderby Brothers, his employers. At least, a mountain in this general area was so named. Modern geographers cannot identify with accuracy Biscoe's Mount George, so they selected this particular mountain to bear the name of Mr. Enderby. Plotted by Australian cartographers from air photos taken by ANARE in 1956 and 1957, and named by ANCA in 1962. US-ACAN accepted the name in 1965.

George, David John. Known as John. b. Aug. 22, 1928, Llanwrtyd Wells, Wales, one of the smallest towns in Britain, and the only place where kites (birds) still flew in Britain. He joined FIDS in 1952, as a meteorologist, and wintered-over at Base B in 1953, and was leader at Base G in the winter of 1954. He married Margery N. Holloway, in Llanelly, in 1957, and died in 2000, in Basingstoke.

George Bay. A term no longer used. It was a bay on Livingston Island, in the South Shetlands, named by Bransfield for George III, when the *Williams* anchored here on Jan. 18, 1820.

Costa George Bryan *see* **Bryan Coast**

George Bryan Coast *see* **Bryan Coast**

The *George IV*. A 56-ton, 71-foot British sloop, built in 1808, in Greenwich, and owned by John Milner, a mast maker at Ratcliff (he also owned the *John*). She was in the South Shetlands in 1820-21, under the command of Capt. Thomas Duell. Next season, on Aug. 18, 1821, she left London, under the command of Capt. John Alexander (who had been appointed skipper 10 days earlier), bound for the South Shetlands and the 1821-22 sealing season. She was based out of Clothier Harbor for the season, and left the South Shetlands on March 7, 1822, traveling in company with the *Tartar* (Capt. Pottinger). On March 20, 1822, the *George IV* was struck by lightning, but made it to South Georgia, and then back to Britain, arriving at Falmouth on May 30, 1822, at Gravesend on June 4, 1822, and at London on June 5, with 860 sealskins and 30 casks of oil — not a good season for the *George IV*. On July 4, 1822, she left London, again under Alexander, left Gravesend on July 6, and left Deal on July 8, 1822, and was back in the South Shetlands for the 1822-23 season. On Aug. 11, 1823, she arrived back in Gravesend with 25 casks of oil and 1304 sealskins.

George IV Sea *see* **Weddell Sea**

George V Coast *see* **George V Land**

George V Land. 68°30' S, 148°00' E. To the E of Adélie Land, it runs from Commonwealth Bay to Oates Land, between the Cook Ice Shelf and the Mertz Glacier Tongue, or more specifically, between Point Alden (142°02' E) and Cape Hudson (153°45' E). Discovered by AAE 1911-14, who explored it as far as 153°E, and named it King George V Coast, for George V, Rex, Imp., Fid. Def. Mawson claimed it for the UK in 1930-31, and the name became George V Coast. Now recognized (athough not everywhere) to be a land, rather than a coast.

George VI Ice Front. 69°00' S, 69°55' W. The seaward front of the George VI Ice Shelf. Named by UK-APC on Dec. 8, 1977. It appears in the British gazetteer of 1980. The Americans do not recognize the term "ice front."

George VI Ice Shelf. 71°45' S, 68°00' W. An extensive ice shelf that occupies George VI Sound between Alexander Island and the Antarctic Peninsula (i.e., it almost entirely covers the sound), and extends from Ronne Entrance and Spaatz Island (at the SW end of the sound) to Niznik Island, about 50 km S of the N entrance of the same sound, between Cape Brown and Cape Jeremy. There is a 1955 German reference to it as König-Georg-VI Schelfeis (named in association with the sound), and it appears on a 1961 Russians chart as Lednik Georga VI, which, if translated, would be "George VI Glacier." A 1966 Russian chart has it more accurately as Shel'fovyj Lednik Georga VI. UK-APC accepted the name George VI Ice Shelf on Dec. 20, 1974, and US-ACAN followed suit in 1975. It appears as such in the 1976 British gazetteer. There is a 1980 British reference to it as George VI Sound Ice Shelf.

George VI Sound. 71°00' S, 68°00' W. A major fault depression, 500-km-long and 30 km wide on average, and shaped like a scimitar, separating Alexander Island from the W coast of the Antarctic Peninsula. It extends from Marguerite Bay to Ronne Entrance, or, more specifically, from an imaginary line joining Cape Brown and Cape Jeremy in the N, to Ronne Entrance in the S. It is filled with the ice of the George VI Ice Shelf. Discovered and photographed aerially in its central part by Ellsworth on Nov. 23, 1935, and first mapped from these photos in 1936-37 by U.S. cartographer W.L.G. Joerg. It was seen from the air at its N end by BGLE 1934-37, and recognized by them to be a major feature. They traced it 75 km southwards on flights of March 13, 1936, Aug. 15, 1936, and Sept. 4, 1936. In Oct.-Nov. 1936 they surveyed it from the ground as far S as 72°S, and named it King George the Sixth Sound, for the new king, George VI (1895-1952; the present queen's father). It appears that way on the expedition maps, but it also appears on their maps as King George VI Sound, and King George VI Channel. It was the realization of the extent of this floating ice shelf which led BGLE to determine that Alexander I Land was not a land at all, but an island (Alexander Island). The sound was surveyed along its length, down to Ronne Entrance, from Nov. 1940 to Jan. 1941, during USAS 1939-41. It appears as George VI Sound on a 1943 U.S. Hydrographic Office chart of 1943, and that was the name accepted by US-ACAN in 1947. It appears on a 1946 Argentine chart as Estrecho Rey Jorge VI, and on a 1947 Chilean chart as Seno Rey Jorge VI. Between Oct. and Dec. 1949, Fids from Base E re-surveyed it along its length as far as the Eklund Islands. It appears on a 1953 Argentine chart as Canal Seaver, named for Lt. Col. Benjamín Seaver. It appears on a 1954 Russian chart as Proliv Shokal'skogo (*see* **Schokalsky Bay**). However, the Russians had, for some time, been calling it George VI Sound (or their translation of that). There are also South American references to it as Canal George VI. King George VI Sound was the name accepted by UK-APC on Sept. 8, 1953, and it is how it appears in the 1955 British gazetteer. UK-APC went over to the American naming on July 7, 1959, and it appears as George VI Sound on a British chart of 1961. All other countries used a suitably translated name of one or the other of those names. It appears on a 1957 Argentine chart as Canal Presidente Sarmiento, named for Domingo Faustino Sarmiento (1811-1888), president of Argentina, 1868-74, and that was the name accepted by the Argentine gazetteer of 1970. However, today, the Argentines generally call it Canal Sarmiento, or Canal Jorge VI. It appears on a 1962 Chilean chart as Canal Jorge VI, and that was the name accepted by the 1974 Chilean gazetteer. In 1966, the Russians named the part of the sound N of the George VI Ice Front as Zaliv Simonova, for Ivan Simonov.

George VI Sound Ice Shelf *see* **George VI Ice Shelf**

George Getz Shelf Ice *see* **Getz Ice Shelf**

George Glacier. 70°41' S, 164°15' E. A valley glacier in the W part of the Anare Mountains, it rises E of Mount Burge and flows NW past Mount Kelly into Lillie Glacier Tongue, on the coast. Mapped by USGS from ground surveys,

and USN air photos taken between 1960 and 1965. Named by US-ACAN in 1970, for Robert Y. George (b. 1936), zoologist at McMurdo in 1967-68.

Mount George Murray. 75°54' S, 161°50' E. A flat-topped, mainly ice-covered mountain, between the heads of Davis Glacier and Harbord Glacier, in the Prince Albert Mountains of Victoria Land. Discovered by BNAE 1901-04, and named by them for George R.M. Murray (*see* **Cape Murray**) of the British Museum, who helped define the scientific aims of the expedition. US-ACAN accepted the name in 1951, and NZ-APC followed suit.

George Nunatak. 85°35' S, 145°26' W. Rising to 1050 m, midway between the E part of the Harold Byrd Mountains and Leverett Glacier. Named by US-ACAN in 1967, for Paul George, a member of the U.S. Army helicopter unit which supported the USGS Topo West and Topo East surveys here in 1962-63.

The *George Porter*. Nantucket sealer, in the South Shetlands in the 1821-22 season, under the command of Capt. Prince B. Moores. She was in company with the *Harmony*, commanded by Isaac Hodges.

George Rayner Peak *see* **Rayner Peak**
Cabo Georges *see* **Georges Point**
Cap Georges *see* **Georges Point**
Cape Georges *see* **Georges Point**
Georges Bay *see* **King George Bay**
Georges Island *see* **Penguin Island**
Georges Islands *see* **Patricia Islands**

Georges Point. 64°40' S, 62°40' W. The N tip of Rongé Island, W of Arctowski Peninsula, and about 13 km SW of Cape Anna, on the Danco Coast, on the W coast of Graham Land. Discovered and charted on Feb. 3, 1898, by BelgAE 1897-99, and named by de Gerlache as Cap Georges, probably for Georges Lecointe. It appears as Cape Georges on Dr. Frederick Cook's 1900 English language map of the same expedition, and that was the name seen on a 1943 U.S. Hydrographic Office chart, and was also the name accepted by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. US-ACAN also accepted that name. It appears on a 1949 Argentine chart as Cabo Georges, and that was the name accepted not only by the Argentine gazetteer of 1970, but also by the Chilean gazetteer of 1974. Following a survey conducted by Fids on the *Norsel*, in April 1955, and air photos taken by FIDASE in 1956-57, UK-APC redefined it on July 7, 1959, as Georges Point, and it appears as such on a British chart of 1961. US-ACAN went along with this.

Caleta Georgi. 60°46' S, 45°08' W. Name also spelled Caleta Giorgi. A cove in the Robertson Islands, off the SE point of Coronation Island, in the South Orkneys. Named by the Argentines.

Georgian Cliff. 71°15' S, 68°15' W. A prominent cliff along George VI Sound, just N of the terminus of Eros Glacier, and N of Fossil Bluff, on the E side of Alexander Island. It forms a bluff, about 550 m high at its N end, but becomes a sharp ridge toward the south. Mapped by FIDS cartographers from late 1947 aerial photographs taken by RARE 1947-48, and also from FIDS surveys conducted between 1948-50. Resurveyed by BAS personnel from Fossil Bluff between 1961 and 1973. Named by UK-APC on Dec. 21, 1974, in association with George VI Sound, and also in association with Uranus Glacier, the planet Uranus being known as The Georgian until about 1850. US-ACAN accepted the name in 1975. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Gora Georgija Grechko. 79°23' S, 159°31' E. A nunatak, just SW of Mount Willis, in the S part of the Conway Range. Named by the Russians.

Gora Georgija Pobedonosca *see* **Mount Paris**

Gérard, Jean-Louis. b. May 29, 1821, Paris. Cabin boy on the *Zélée* during FrAE 1837-40. On May 29, 1838 he became an apprentice seaman.

Gerard Bluffs. 83°37' S, 157°18' E. Prominent ice-free bluffs, marked by brilliant vertical bands of marble, which form the S extremity of the Miller Range. Discovered and mapped on Dec. 26, 1957, by the NZ Southern Survey Party of BCTAE in 1957-58, and named by them for Vernon Bruce "Vern" Gerard (b. 1924, Christchurch, NZ), IGY geophysicist who wintered-over at Scott Base in 1957, and who supervised the equipment used for ionospherics and radio. NZ-APC accepted the name, and ANCA followed suit. US-ACAN accepted the name in 1966.

Gerardi, Juan. Stoker on the *Uruguay*, 1903.

Gerasimou Glacier. 84°42' S, 177°03' W. A steep-walled tributary glacier, 8 km long, it enters the W side of Shackleton Glacier opposite the Gemini Nunataks, in the Queen Maud Mountains. Named by the Texas Tech Shackleton Glacier Expedition of 1964-65 for Helen T. Gerasimou (b. 1925), NSF polar personnel specialist with the Office of Antarctic Programs. US-ACAN accepted the name in 1966.

Gora Gerasimova. 83°28' S, 51°28' W. A nunatak, NW of Grob Ridge, at the S end of the Forrestal Range, in the Pensacola Mountains. Named by the Russians.

Gerber Peak. 65°07' S, 63°17' W. Rising to about 500 m, 3 km SSW of Rahir Point, close S of Thomson Cove, Flandres Bay, on the Danco Coast, on the W coast of Graham Land. First roughly charted in 1898, by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Friedrich Gerber (1797-1872), Swiss veterinarian who first suggested the use of photography for book illustrations, in 1839. US-ACAN accepted the name in 1965.

Nunataks Gercena. 70°27' S, 63°50' E. A group of nunataks, SW of Vrana Peak, in the Athos Range of the Prince Charles Mountains. Named by the Russians.

Isla Gerd *see* **Gerd Island**
Islote Gerd *see* **Gerd Island**
Islotes Gerd *see* **Gerd Island**

Gerd Island. 60°40' S, 45°44' W. Rising to an elevation of 16 m above sea level, 1.5 km WSW of Stene Point, near the E side of the entrance of Norway Bight, off the S coast of Coronation Island, in the South Orkneys. Roughly charted by Petter Sørlle in 1912-13, and named by him as Gerdholmane, a name that was soon singularized to Gerdholmen. Gerd was Sørlle's daughter, later married to Mr. Stranger. It appears as such on a British chart of 1916, and on a 1930 Argentine chart as Islote Gerdholm. Resurveyed by the Discovery Investigations in 1933, it appears as Gerd Island on their chart of 1934. It appears as Islote Gerd on a 1945 Argentine chart. The island was visited by Fids from Signy Island Station in Sept. 1948, and renamed Gerd Islet. It appears on a 1951 Argentine map as Isla Gerd. Gerd Islet was the name accepted by US-ACAN in 1952, and by UK-APC on March 31, 1955. Surveyed by Fids from Signy between 1956 and 1958, and, as a result of this survey, UK-APC, on July 7, 1959, redefined the island back to its original name of Gerd Island. US-ACAN followed suit in 1963. The name that was accepted by the 1970 Argentine gazetteer was Islotes Gerd (i.e., in the plural), which reflects the very, very first name ever given to the feature. *See also* **Reid Island** and **Mariholm**.

Gerd Islet *see* **Gerd Island**

Mount Gerdel. 85°59' S, 149°19' W. Rising to 2520 m, 3 km SE of Mount Andrews, at the S side of Albanus Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Lt. (later Capt.) David Holland "Dave" Gerdel (b. May 21, 1938, Deland, Fla. d. April 9, 2010, Punta Gorda, Fla.), who, while still at Duke University, did 3 summers with the Army in the Arctic, and then joined the U.S. Navy's officer candidate program in 1960, being commissioned into the Civil Engineer Corps. He wintered-over at Byrd Station in 1965, and retired from the Navy in 1988.

Gerdholm *see* **Gerd Island**
Islote Gerdholm *see* **Gerd Island**
Gerdholmane *see* **Gerd Island**

Gerhardsennuten. 74°33' S, 11°06' W. A mountain in the northernmost part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Einar Henry Gerhardsen (1897-1987), Resistance leader in Norway during World War II, mayor of Oslo in 1940 and 1945, and prime minister of Norway, 1945-51, 1955-63, and 1963-65.

Gerlache *See also* **de Gerlache**

Cape Gerlache. 66°30' S, 99°02' E. Also called Cape de Gerlache. Forms the NE tip of Davis Peninsula, 6 km SE of David Island, on the coast of Queen Mary Land. Discovered in Nov. 1912 by the Western Base Party of AAE 1911-14, and named by Mawson for Adrien de Gerlache, the great explorer. US-ACAN accepted the name in 1962, and ANCA followed suit.

Détroit de Gerlache *see* **Gerlache Strait**
Isla Gerlache *see* **Gerlache Island**

Mount Gerlache. 74°59' S, 162°26' E. Also

called Mount de Gerlache. A prominent mountain, rising to 980 m, on the NE side of Larsen Glacier, between Widowmaker Pass and Backstairs Passage Glacier, behind Terra Nova Bay, in Victoria Land. Discovered by BNAE 1901-04, and named by Scott for Adrien de Gerlache, the great explorer. US-ACAN accepted the name in 1953, and NZ-APC followed suit.

Gerlache Channel *see* **Gerlache Strait**

Gerlache Inlet. 74°41' S, 164°06' E. An inlet, 6 km wide, in the NW corner of Terra Nova Bay, indenting the Northern Foothills just S of Mount Browning, between that point and Campbell Glacier, along the coast of Victoria Land. Named by Scott during BNAE 1901-04, for Adrien de Gerlache, the great explorer. US-ACAN accepted the name in 1967. The Italian scientific station, Mario Zucchelli Station (formerly Baia Terra Nova Station), is here.

Gerlache Island. 64°35' S, 64°16' W. The largest of the Rosenthal Islands, in the Palmer Archipelago, 11 km NNE of Cape Monaco, off the W coast of Anvers Island. First roughly charted by FrAE 1903-05, and Charcot, thinking it was a point on the W coast of Anvers Island, named it as Pointe de Gerlache, after Adrien de Gerlache. The Chileans called it Punta De Gerlache, and the British and Americans called it De Gerlache Point (it appears as such on Wilkins' map of 1929), which became Gerlache Point (it appears as such on a British chart of 1909). It appears as Punta Gerlache on a Chilean chart of 1947. UK-APC accepted the name Gerlache Point on Sept. 20, 1955, but, subsequently, during the 1956-58 FIDS survey (from Base N), and after FIDASE air photos in 1956-57, no point was found here that could have been visible from Charcot's ship. However, it was judged that this island was most likely what Charcot saw, the name Gerlache Island was given to it by UK-APC, on July 7, 1959, and the old Gerlache Point was scrubbed. US-ACAN accepted the new name and definition in 1960. The Argentines call it Isla Gerlache. It appears on a 1962 Chilean chart as Islote Rosenthal, and that was the name accepted by the 1974 Chilean gazetteer (after they had rejected Isla Rosenthal).

Gerlache Kanal *see* **Gerlache Strait**

Gerlache Point *see* **Gerlache Island**

Gerlache Strait. 64°30' S, 62°20' W. A deep, wide strait separating Brabant Island from the Danco Coast, on the W coast of Graham Land, or, more broadly speaking, separating the SW portion of the Palmer Archipelago from Trinity Island and the Danco Coast. Its N limit is an imaginary line running between Hoseason Island and Cape Wollaston (on Trinity Island), and its S limit is a line between Cape Ererra (on Wiencke Island) and Cape Renard. Discovered (at least its S entrance was) by Dallmann, in 1873-74, and included in some late 19th-century maps as Bismarck Strasse (*see* **Bismarck Strait**). First roughly charted along its length between Jan. 23 and Feb. 12, 1898, by BelgAE 1897-99, and named by de Gerlache as Détroit de Belgica (i.e., "Belgica strait"), "in honor of our country and our ship." However, it appears on Arctowski's 1900 maps of the expedition as both Détroit de la Belgica and Canal de la Belgica. Consequently, it appears on a 1900 British map as Belgica Strait. However, on the return of the expedition to Belgium, the scientific commission of the expedition, at the insistence of the expedition members, renamed it Détroit de Gerlache, and, as early as 1902, Edwin Swift Balch was referring to it as Gerlache Strait, and the Argentines were calling it Estrecho de Gerlache (as well as Estrecho de Belgica). It was further charted by FrAE 1903-05, and appears on the 1905 chart of that expedition as Gerlache Channel. SwedAE 1901-04 called it Gerlache Kanal, Gerlache Kanalen, and Belgica Kanal, but a 1917 map reflecting that expedition shows Gerlache Kanal as a combination of both this feature and Orléans Strait. It was further charted by FrAE 1908-10. In all British correspondence between 1908 and at least 1912, and in whalers' usage from that period, it is always Belgica Strait, never Gerlache Strait. However, by 1908, the Argentines were occasionally refering to it as Canal Gerlache. It appears as De Gerlache Strait on British charts of 1910, 1938, and 1947, but as Gerlache Strait on British charts of 1930 and 1948, and that latter was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. The name Belgica Straits was used by at least David Ferguson on his 1921 chart and by Lester on his 1922 chart (from the British Imperial Antarctic Expedition). Lester also calls it the Straights [sic] of Belgica, the Straits of Gerlache, and Gerlache Straits. The Discovery Investigations charted it again in 1927. It appears as De Gerlache Channel on a 1943 U.S. Hydrographic Office chart, and as Estrecho Gerlache in a 1947 Argentine reference. It appears as Gerlache Strait in the 1955 British gazetteer (defined as separating the Palmer Archipelago from the Danco Coast), but, following an extensive 1959-60 RN Hydrographic Office survey conducted from the *Shackleton*, it appears in the 1960 British gazetteer as separating the SW part of the Palmer Archipelago from Trinity Island and the Danco Coast. It appears (with the latter definition) on 2 British charts of 1961. Another RN Hydrographic Office survey was carried out here from the *Protector*, in 1963-64. The Argentine gazetteer of 1970, and the Chilean gazetteer of 1974, both accepted the name Estrecho de Gerlache (which means Gerlache Strait).

Gerlovo Beach. 62°29' S, 60°49' W. A beach, snow-free in summer, stretching for 2 km both S and NE of Mercury Bluff, on the Ioannes Paulus II Peninsula, on Livingston Island, and facing San Telmo Island to the N by W, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov, 23, 2009, for the region of Gerlovo, in northeastern Bulgaria.

GermAE *see* **German Antarctic Expedition**

German Antarctic Expedition 1901-03. This was von Drygalski's expedition in the *Gauss*, and, because it was sponsored by the German government, was also known as the German National Antarctic Expedition. **April 1899**: Rear Admiral Graf von Baudissin of the Admiralty, and Graf von Posadowsky, the Imperial home secretary, secured a grant that would cover the total expense of the trip. Prior to leaving port, during a test, a crewman fell to his death. The crew were all young and inexperienced, Germans and Scandinavians picked up in Hamburg and other north German ports. **Aug. 11, 1901**: The *Gauss* left Kiel. The leader was geologist Erich Dagobert von Drygalski. The additional scientists were: Emil Philippi (glaciologist and geologist), Prof. Ernst Vanhöffen (naturalist), Friedrich Bidlingmaier (doctor, magnetician, and meteorologist), and Hans Gazert (surgeon and geologist). The crew were: Hans Ruser (captain), Wilhelm Lerche (1st officer), Richard Vahsel (2nd officer), Ludwig Ott (3rd officer), Josef Müller (chief bosun), Albert Stehr (chief engineer), Paul Heinacker and Reinhold Mareck (engineer's assistants), August Besenbrock (steward), August Reimers (1st carpenter), Willy Heinrich (2nd carpenter), Leonhard Müller, Gustav Bähr and Karl Franz (stokers), and the following able seamen: Paul Björvik, Max Fisch, Daniel Johannsen, Karl Klück (who would become replacement cook), Georg Noack, Josef Urbansky, Wilhelm Schwarz, and Georg Wienke. Also aboard was zoologist Dr. Emil Werth (b. March 11, 1869, Münster. d. July 8, 1958, Münster), who was destined for the Kerguélen Islands. When the *Gauss* arrived at the Kerguélens en route to Antarctica, Werth would join up with another two scientists from the expedition — Munich meteorologist Dr. Karl Luyken (b. Feb. 13, 1874, Pawelwiss bei Breslau; he was actually a physicist) and meteorologist Josef Enzensperger (b. Feb. 8, 1873, Rosenheim), who were heading out separately, via Sydney, with their equipment. The Kerguélen station would be involved primarily in meteorology and magnetics. **Aug. 18, 1901**: The *Gauss* passed Dover. **Aug. 31, 1901**: They passed Madeira. **Sept. 11, 1901**: The *Gauss* pulled into Cape Verde. **Sept. 16, 1901**: The *Gauss* left Cape Verde, heading for Ascension. **Sept. 18, 1901**: They crossed the Equator in 18°W, heading south, conducting valuable oceanographic work all the way. **Nov. 23, 1901**: The *Gauss* arrived at Cape Town. Here, they lost several men, and 7 new ones were taken on to replace them — 2nd bosun Hans Dahler; stoker Emil Berglöf; 2 German able seamen, Albert Possin and Reinhold Michael; and 3 Swedish able seamen, Wilhelm Lysell, Karl Lennart Reuterskiöld, and Curt Stjernblad. They also lost their cook, and seaman Schwarz moved into that role. **Dec. 7, 1901**: The *Gauss* left Cape Town. **Dec. 31, 1901**: They arrived at the Kerguélen Islands. **Jan. 2, 1902**: They moored at the Kerguélens, where they found Enzensperger and Luyken building their observatory. Von Drygalski dropped off two able seamen (known in German as "matrossen") to help them during their stay there — Urbansky (b. Sept. 6, 1877, Namslau) and Wienke (thus these two did not make it to Antarctica). **Jan. 31, 1902**: The *Gauss* left the Kerguélens. **Feb. 6, 1902**: They saw their first iceberg. **Feb. 12, 1902**: After visiting Heard

Island, they crossed into Antarctic waters, in 92°E. **Feb. 13, 1902**: They reached the pack-ice, in 61°58' S, 95°08' E. **Feb. 21, 1902**: They sighted the Antarctic continent, and named the land they saw as Kaiser Wilhelm II Land (which later became Wilhlem II Land). That same day the *Gauss* became trapped in the ice. **March 2, 1902**: They knew they would be forced to winter-over. **March 18, 1902**: The first sledging expedition went out, with 2 sledges, 18 dogs, and 3 men — Philippi, Vahsel, and one of the sailors. They discovered Gaussberg, 80 km away. The standard number of dogs per sledge was between 7 and 9, harnessed by pairs, the leader out in front. The men lived and slept in tents and sleeping bags, which gave protection from the cold as severe as -22°F. Cooking was done with petroleum or naphtha. **March 26, 1902**: The sledging party returned to the ship. **March 29, 1902**: von Drygalski, Philippi, and Ruser went up in a balloon to view Gaussberg, the first Germans to fly in Antarctica. At about 1500 feet they remained for 2 hours, photographing the scenery. **April 4, 1902**: Philippi, Lerche, and some sailors went out on an expedition with 4 sledges, for geological research at Gaussberg. An ice hut was built at the foot of the mountain, and meteorological instruments were set up. **April 16, 1902**: The sledgers returned. **April 22, 1902**: Finally von Drygalski himself went on a sledging expedition, to Gaussberg, with Vanhöffen, Gazert, Ott, and some sailors, with 4 sledges. **April 27, 1902**: von Drygalski's sledging party arrived at Gaussberg. **May 15, 1902**: von Drygalski's party got back to the *Gauss*, barely having survived the return trip. **Sept. 16, 1902**: von Drygalski, Vanhöffen, Gazert, Ott, and some sailors, set out on the western route to Gaussberg, with 4 sledges. **Oct. 14, 1902**: von Drygalski's sledging party returned to the *Gauss*. **Oct. 26, 1902**: Philippi, Lerche, and some sailors took 2 sledges on the SW route to Gaussberg. They discovered West Ice. **Nov. 5, 1902**: The sledging party returned to the *Gauss*. **Nov. 18, 1902**: Bidlingmaier, Ruser, Ott, and some sailors, took 2 sledges out, to ascertain, among other things, the N edge of West Ice. **Nov. 24, 1902**: The sledging party returned to the *Gauss*. **Dec. 1, 1902**: von Drygalski, Philippi, Gazert, Ruser, and sailors took 2 sledges to West Ice. **Dec. 4, 1902**: The sledging party returned to the *Gauss*. **Jan. 30, 1903**: The pack-ice began to break up. **Feb. 2, 1903**: The *Gauss* began to drift with the pack. **Feb. 8, 1903**: The ship started to free up, and they headed north to explore the coast. **Feb. 9, 1903**: They were again beset by pack-ice. **Feb. 16, 1903**: The *Gauss* was in 65°45' S, 87°57' E. **Feb. 19, 1903**: In 65°32' S, 87°40' E, the *Gauss* lost her course, as she ran along the edge of West Ice. **Feb. 21, 1903**: They met up with an iceberg that they had previously marked. **March 14, 1903**: Despite the fact that the *Gauss* was running out of coal, and there was danger of being caught in Antarctica for another winter, von Drygalski made the decision to sail south for further exploration. First, with the water freeing up, they headed north. **March 15, 1903**: They turned west. **March 16, 1903**: The *Gauss* was in 63°52' S, 83°19' E, and heading west. **March 17, 1903**: They turned to the south, with an open sea before them, warm temperatures, and albatrosses flying overhead. **March 18, 1903**: They were stopped by an ice barrier. **March 19, 1903**: A storm came from the west, and the open water started to close in on them. **March 20, 1903**: They pressed on, first west, and then south. **April 8, 1903**: At midday, while in 64°58' S, 79°33' E, von Drygalski gave the order to get out while the going was good. The pack was closing in, as was winter, and their coal supply was now dangerously low. **April 9, 1903**: They got clear of the ice. **April 13, 1903**: The *Gauss* left Antarctic waters, heading for the Kerguélens. **April 19, 1903**: They passed the Kerguélens. **April 26, 1903**: They passed St. Paul's Rock. **April 27, 1903**: They passed New Amsterdam Island. **May 31, 1903**: They reached Port Natal. **June 9, 1903**: They reached Cape Town. Von Drygalski wanted another season in Antarctica, but German authorities ordered him home. **Nov. 24, 1903**: The *Gauss* arrived back in Kiel.

German Antarctic Expedition 1911-12. Led by Oberleutnant Wilhelm Filchner. Filchner planned to prove or disprove the existence of the Ross-Weddell Graben, by making a transantarctic crossing, and raised the money for the expedition by public lottery. Prince Regent Luitpold of Bavaria was the patron of the expedition. **March 5, 1910**: Filchner announced the expedition. **May 4, 1911**: At 4.30 A.M. the *Deutschland* unceremoniously left Bremerhaven for Buenos Aires. Those on board were: Heinrich Seelheim (geographer and leader at this point in the expedition; Filchner was in Berlin, wrapping up unfinished business, and would later follow by the steamer *Cap Ortegal*), Erich Barkow (meteorologist), Wilhelm Brennecke (oceanographer), Erich Przybyllok (magnetician and astronomer), Fritz Heim (geologist), Dr. Felix König (alpinist), Ludwig Kohl and Wilhelm von Goeldel (ship's doctors), and Georg Noack (in charge of the preservation of zoological specimens). The crew consisted of: Richard Vahsel (captain), Wilhelm Lorenzen (1st officer), Johannes Müller (2nd officer and navigator), Walter Slossarczyk (3rd officer), Alfred Kling (4th officer), Adolf Schwabe (chief bosun), Louis Schalitz (2nd bosun), Conrad Heyneck (engineer), Wilhelm Simon (2nd engineer), Gustav Dreyer (carpenter), Johan Ludwig Johnsen (sail maker), August Besenbrock (steward), Karl Klück (cook), Kurt Hoffmann (stoker), and Adolf Künze, Mortenn Olaisen, Karl Anton Olsen, Paul Björvik and Fritz Engemann (able seamen). The ship covered 10,000 miles on this first leg, doing an enormous amount of heavy hydrographic work. Already there was tension on board the ship, with Seelheim and Vahsel establishing warring camps. Vahsel quit, and Filchner, then steaming separately toward Buenos Aires, got the news by radio telegraph. He sent a telegraph to the *Deutschland*, instructing Kling to take over command of the ship. By the time Filchner arrived in B.A., the quarrel had been patched up, and Vahsel remained as skipper. **Oct. 4, 1911**: The *Deutschland* left Buenos Aires, with the huskies on board. **Oct. 18, 1911**: They reached South Georgia (54°S). Kling arrived separately with the Manchurian ponies. **Nov. 26, 1911**: Slossarczyk committed suicide at South Georgia. **Dec. 11, 1911**: The *Deutschland* left South Georgia, heading south with 33 men aboard. Dr. Kohl had stayed behind in South Georgia, having just suffered from appendicitis, and they had picked up a sailor, Fritz Böttcher. There were also 2 oxen aboard, and 2 pigs, and several sheep, as well as the 75 dogs (some of whom were giving birth), and the 8 ponies (in stalls). **Dec. 14, 1911**: They were in Antarctic waters, after having explored the South Sandwich Islands. They were now heading toward the Weddell Sea. "None of us knew if we would ever come back alive," said Filchner. **Dec. 15, 1911**: They encountered their first icebergs, spotting over 200 in the next 3 days. **Dec. 17, 1912**: The *Deutschland* got caught in the ice, and began a slow southward drift. **Jan. 27, 1912**: Samples of clay were brought up from 11,250 feet, proving that land was near. **Jan. 28, 1912**: They emerged from the pack into the open Weddell Sea. **Jan. 29, 1912**: At 3 P.M., they sighted land at the Luitpold Coast (which Filchner named as Prinzregent Luitpold Land), in 76°48' S, 30°25' W. It was their farthest south. **Jan. 30, 1912**: They charted this coast between 29°W and 37°W, and sailed along what is now the Filchner Ice Shelf. Filchner planned to set up a stationhaus (a winter camp), and then strike out across country to the Ross Sea. **Feb. 9, 1912**: They began unloading on the (Filchner) ice shelf and started construction of the camp. **Feb. 18, 1912**: The hut (55 feet by 30 feet) was almost completed when the ice started to break up at 4 A.M. The camp was now on a berg floating north, with 75 dogs, 7 horses, and 7 men (all rescued). In addition, huge bergs threatened the ship. **Feb. 20, 1912**: They dismantled the hut and got all materials and provisions to the ship, all except one dog who wanted to stay on the berg. For several days the ship drifted, and Filchner built 2 depots on the ice again. He planned to winter in South Georgia, then come back to Antarctica the following summer. "The devil himself has sealed our fate." **March 6, 1912**: They were frozen in, slowly drifting north in the Weddell Sea. **April 1912**: Filchner and Vahsel were no longer on speaking terms. Alcohol was a major problem aboard. "This drunkenness is a cancer," wrote Filchner. Vahsel was a terminal alcoholic, and, in addition, a terminal syphilitic. What added to this mess was that the tension on the way down had now worsened, especially with Filchner aboard. Filchner was unfortunately stiff and basically unable to communicate with the crew, and thus unable to defuse the situation. Two armed camps now formed — the crew and their allies, and Filchner and his allies. Vahsel led the almost pathologically anti-Filchner crew, the nucleus of which was himself, Dreyer, Bjørvig, Klück, and Lorenzen. Filchner's friends were Heim, Przybyllok, and Kling, but Heim was little more than a

pleasant drunk, and Przybyllok and König were more than capable of very juvenile behavior. **May 10, 1912**: Kling became navigator of the *Deutschland*. **June 30, 1912**: Filchner, Kling, and König all went looking for the mythical New South Greenland, on two sledges, each drawn by 8 dogs, and provisions for 3 weeks. **July 7, 1912**: Filchner's sledging party made it back to the ship, after having sledged 31 miles out and then back, without having found Morrell's mysterious land. They almost proved its non-existence. **Aug. 8, 1912**: Captain Vahsel died of pericardial effusion. Far from making things easier, his death only made matters worse. Filchner, who had been retreating further and further into himself, yielded command of the ship to Lorenzen, and now feared for his life. Filchner made it worse by bullheadedly objecting to Lorenzen signing himself "captain" in the log. Dr. von Goeldel even tried to shoot König. **Oct. 17, 1912**: Filchner wrote, "I sleep nights on a bench in my room, so that von Goeldel can't shoot me through the wall. I'm locked in and have a rifle and cartridges ready." Paranoia was running rampant aboard the *Deutschland*. And it wasn't imagined. The *Deutschland* was a time bomb, waiting, waiting. **Nov. 26, 1912**: The ship freed in 63°37' S, 36°34' W. **Dec. 19, 1912**: They arrived at Grytviken, in South Georgia. Immediately there was a dust-up between Filchner's group and the hostiles. It was finally stopped when a British policeman came aboard. When Carl Anton Larsen, the harbormaster, came aboard, Lorenzen shouted that he wanted Filchner off the ship. "I am the commander," he yelled. The crew, who had believed the rumor (started by Lorenzen) that they wouldn't be paid, supported Lorenzen. Kling became captain of the *Deutschland*. Filchner and the officers went back to Germany on separate ships, very definitely unenriched by their experience. The Siberian huskies were shot on South Georgia, and the horses were allowed to starve to death. **1912-13:** The *Deutschland*, under Kling, relieved Órcadas Station.

German Antarctic Expedition, 1938-39. Also called the German New Schwabenland Expedition, or, simply, the *Schwabenland* Expedition. Herman Goering chose Nazi captain Alfred Ritscher to lead this expedition to Antarctica in the *Schwabenland*. It was ostensibly for whaling investigations, but was really a propaganda exercise. **May 1938**: The idea was given the go-ahead, presumably by der Führer. **July 7, 1938**: The *Schwabenland* put in at Bremen, with "machinery" on board. **July 1938**: Ritscher was on vacation in the Harz when he received a letter offering him leadership of the expedition. **Sept. 1938**: Preparations began. **Dec. 17, 1938**: The *Schwabenland* left Hamburg in a temperature of 1°F. They took 2 hydroplanes — the *Passat* and the *Boreas*— both aircraft loaned to Ritscher by Lufthansa, as were their pilots, as was the expedition ship itself, the *Schwabenland*. Also on board (aside from Ritscher) were: Joseph Bludau (expedition doctor); Rudolf Mayr (pilot of the *Passat*), and his crew: Franz Preuschoff (mechanic), Herbert Ruhnke (radio operator), and Max Bundermann (aerial photographer); Richardheinrich Schirmacher (pilot of the *Boreas*), and his crew: Karl Lösener (mechanic), Erich Gruber (radio operator), and Siegfried Sauter (aerial photographer); Herbert Regula (meteorologist); Heinz Lange (meteorological observer); Walter Krüger and Wilhelm Gockel (technical assistants); Erich Barkley (marine biologist); Leo Gburek (geophysicist); Ernst Herrmann (geographer); Karl-Heinz Paulsen (oceanographer); Dietrich Witte (motor mechanic). The crew were: Alfred Kottas (captain); Otto Kraul (ice pilot); Herbert Amelang (1st officer); Karl-Heinz Röbke (2nd officer and Nazi informant); Hans-Werner Viereck (3rd officer); Vincenz Grisar (4th officer); Erich Harmsen (radio chief); Kurt Bojahr and Ludwig Muellmerstadt (radio operators); Karl Uhlig (chief engineer); Robert Schulz (2nd engineer); Henry Maas (3rd engineer); Edgar Gäng (4th engineer); Hans Nielsen (5th engineer); Johann Frey, Georg Jelschen, and Heinz Siewert (engineer's assistants); Herbert Bruns and Karl-Heinz Bode (electricians); Herbert Bolle (aviation supervisor); Wilhelm Hartmann ("catapult" chief); Alfred Rücker (stores and supply); Franz Weiland, Axel Mylius, and Wilhelm Lender (flight mechanic specialists); Willy Stein (bosun); Richard Wehrend (1st carpenter); Alfons Schäfer (2nd carpenter); and the following sailors: Heinz Hoek, Jurgen Ulpts, Albert Weber, Adolf Künze, Karl Hedden, Eugen Klenk, Fritz Jedamczyk, and Emil Brandt; Alfred Peters (apprentice seaman); and Alex Burtscheid (deck boy). **Jan. 14, 1939**: The Norwegians, objecting to the Nazis' land-grabbing expedition, claimed all Antarctic land between 20°W and 45°E. **Jan. 20, 1939**: The ship dropped anchor near the edge of the Queen Maud Land pack-ice, in 69°14' S, 4°30' W. That day the first photographic reconnaissance flight was made. **Jan. 23, 1939**: They had finished their long-range photographic flights — 7 in all (for details of their photography *see* **Aerial photography**). The aircraft would be launched from the ship by catapult, and when they landed again after a flight they came down in the sea next to the ship, and a huge crane on board lifted the little aircraft back onto the *Schwabenland*. The pilots dropped 5-foot-long aluminum darts, their tails engraved with the swastika, all over what they called Neu Schwabenland. From that height these darts penetrated even solid ice, and were used as markers to stake their claim to the vast area surveyed, i.e., Neu Schwabenland (*see* **New Schwabenland**), between 11°W and 19°E, a substantial part of the very same Queen Maud Land claimed by the Norwegians (it is interesting that, for once, the Nazis were out-claimed). Three landings were made on the continent during the 3 weeks that the ship lay off the coast. **Jan. 29, 1939**: Rudolf Mayr took his crew in the *Passat* to a small bay at 69°55' S, 1°09' W, planted the swastika, and spent 5 hours taking photos. **Jan. 30, 1939**: The *Boreas* touched down briefly in 70°18' S, 4°22' E, and some men made a landing. **Jan. 31, 1939**: Erich Barkley was flown in the *Boreas* to capture some emperor penguins, caught 5, and returned. **Feb. 2, 1939**: An attempt to land a party had to be called off on account of bad weather. **Feb. 5, 1939**: One man almost drowned in an unsuccessful attempt to land a large party by boat. **March 1, 1939**: The *Schwabenland* arrived at Cape Town. **April 10, 1939**: Back at Hamburg. The expedition brought back 6 reels of color film, each being 390 meters long and containing 1,000 frames measuring 18 by 18 cm. A second expedition, 1939-40, and a third, 1940-41, were planned, but World War II got in the way. Ritscher wrote *Deutscher Antarktische Expedition*, in 1943.

German Antarctic Expeditions. This section refers to the Antarctic expeditions sent down by a reunified Germany after 1990. For German expeditions before that time, *see* Germany, East Germany, and West Germany. This is a list of such German Antarctic expeditons (GermAE). GermAE 1990-91: The ships were the *Polarstern* and the *Polar Queen*. GermAE 1991-92: The ships were the *Polar Stern* and the *Polar Queen*. GermAE 1992-93: The ships were the *Polarstern* and the *Polar Queen*. GermAE 1993-94: The ship was the *Polarstern*. GermAE 1994-95: The ship was the *Polarstern*. GermAE 1995-96: The ship was the *Polarstern*. GermAE 1996-97: The ship was the *Polarstern*. GermAE 1997-98: The ship was the *Polarstern*. GermAE 1998-99: The ship was the *Polarstern*. GermAE 1999-2000: The ships were the *Polastern* and the *Polar Duke*, and the *Agulhas* helped out. GermAE 2000-01: The ship was the *Polarstern*. GermAE 2001-02: The ship was the *Polarstern*. GermAE 2002-03: The ship was the *Polarstern*. GermAE 2003-04: The ship was the *Polarstern*. GermAE 2004-05: The ship was the *Polarstern*. The Germans continue to send expeditions to Antarctica on an annual basis.

German Antarctic Receiving Station. 63°19' S, 57°54' W. Known as GARS. Opened on Oct. 9, 1991, at Jubany Station, by the Germans and the Chileans, as part of the ERS program. It has a radio telescope.

German Atlantic Expedition. Under the terms of the Treaty of Versailles, 1919, Germany had been forbidden to send vessels into foreign ports. German naval captain and hydrographer Fritz Spiess saw a way it could be done, under the guise of oceanographic research, but he needed the prestige of a famous oceanographer. He put the idea of the Deutsche Atlantische Expedition to Capt. Alfred Merz, head of the Oceanographic Institute in Berlin, and Merz agreed to lead the expedition. The small ship *Meteor* was obtained, and the crew were trained in oceanography. The mission was to collect and investigate deep sea samples in the southern Atlantic Ocean. **Jan. 11, 1925**: Merz's second assistant, hydrographer Dr. Günther Böhnecke, went aboard ship. **Jan. 19, 1925**: Merz went aboard ship, as did his first assistant, hydrographer Dr. Arnold Schumacher, and also senior scientist Ernst Hentschel, the biologist. **April 14, 1925**: Georg Wüst, Merz's former student, and a relative by marriage, although not originally due to go on the expedition, did so, as a hydrog-

rapher. **April 16, 1925**: After a trial run to the Azores and back, the *Meteor*, outfitted with the latest technology (including two echo-sounding machines; the *Meteor* was the first oceanographic vessel ever to use echo-sounders), left Wilhelmshaven bound for Buenos Aires on its oceanographic expedition. 136 men were on the expedition — 9 scientists, 5 officers, 9 officers of marine, 20 marine personnel, and 90 sailors (matrosen). Scientific leader was Merz, and skipper of the ship was Spiess. Dr. Otto Pratje was geologist for the first half of the expedition, until Oct. 1926 (he would be replaced by mineralogist Dr. Carl Wilhelm Correns). Dr. Hermann Wattenberg, also aboard, was one of the few marine chemists in the world at that time. Merz's third assistant was Dr. Fritz P. Loewe. Erich Kuhlbrodt and Josef Reger were meteorologists and aerologists (they would fly the balloons daily and the kites twice a week). There were the officers Kapitänleutnant Siburg, Oberleutnant W. Löwisch, Bender, Ekman, Oberleutnant Freiherr O. von Recum (in charge of echo-sounding), Marineoberstabsarzt (sugeon colonel) Karl Krafft (biologist and plankton catcher), Engineer Kapitänleutnant Johannes Nixdorff, Landrock, and Oberleutnant zur see H. Ahlmann (radio direction finder), Hessen (radioman), Rudel (steuermann), and the following matrosen: Heizer, Funker, Köche, Schneider, Schuhmacher, Schreiber, Zimmerleute, Handwerker, and Funkgäste. Other names: Hinz, Runge, F. Laubenthal, W. Höfer, Steinbrecher, Dittmar, K. Ixmeier, M. Burgmeier, A. Werth, A. Kuhnt, A. Werner, Stirn, Wilke, Maurer, Th. Stocks, Jehnig, Buchholz, A. Gampert. **May 25, 1925**: The *Meteor* arrived in Buenos Aires. **June 4, 1925**: The *Meteor* left Buenos Aires. **June 9, 1925**: Merz was sick, so Spiess took over acting command. **June 13, 1925**: The ship was back in Buenos Aires, and Merz was admitted to a German hospital there. **Aug. 16, 1925**: Merz died in a German hospital in Buenos Aires, and Spiess took over, although in reality, Wüst did so. **Sept. 8, 1925**: Dr. Hans H.F. Meyer, oceanographer, came aboard. Altogether, over the course of the expedition, they made 13 trips back and forth between South America and Africa, but it was only on the 5th trip that they went south of 60°S, in early 1926, and that was twice, their southing record being 64°S. They left Ushuaia, and went south to visit Deception Island, then back up to South Georgia, then along the 54th parallel to Bouvet Island, then dipped south again into Antarctic waters, then up to Cape Town. **Oct. 1926**: Pratje left the expedition, to be replaced by Dr. Correns (who did not go into Antarctic waters). **Jan. 15, 1927**: Meyer left the expedition, and oceanographer Albert Defant (*see* **Defant Glacier**) and chemist Kurt Quasebarth came aboard as guest voyagers. **May 1927**: The *Meteor* returned to Germany, after more than 67,500 miles. **June 3, 1927**: Wüst, Hentschel, and Schumacher left the ship. **June 15, 1927**: Böhnecke left the ship.

German Deep Sea Expedition *see* **German Navy Oceanographic Expedition**

German National Antarctic Expedition *see* **German Antarctic Expedition 1901-03**

German Navy Oceanographic Expedition. 1898-99. Also called the Deutsche Tiefsee-Expedition (German Deep Sea Expedition). Led by zoologist Prof. Carl Chun, on the *Valdivia*. **Sept. 24, 1897**: The German government accepted the proposal Chun had made to the Gesellschaft Deutscher Naturforscher und Ärzte, of a purely zoologial expedition. However, it was expanded to include chemistry and physics, and to be an investigation of the physical and biological conditions of the Atlantic and Indian Oceans. The Hamburg-Amerika steamship *Valdivia* was secured as the expedition vessel. There were 8 officers and engineers, including Adalbert Krech (captain), Hans Ruser (1st officer), and Walter Sachse (navigator). Crew of 35. With Chun were 11 scientific personnel, the 8 official ones each receiving 8 marks a day from the government, and their lives were insured for 30,000 each: botanist Wilhelm Schimper; zoologists Karl Apstein, Ernst Vanhöffen, and Fritz Braem; oceanographer Gerhard Schott; chemist Paul F. Schmidt; navigator Walter Sachse (also a scientist); and physician and bacteriologist Martin Bachmann. The unofficial members were: zoologists August Brauer and Otto L. zur Strassen; and scientific draftsman and photographer Herr. Fr. Winter. The German Parliament voted 300,000 marks towards the equipment. **Aug. 1, 1898**: So, it was a well-endowed expedition that left Hamburg, amid huge fanfare. It proceeded around the N of Scotland to the Canary Islands, then down the W coast of Africa to Cape Town. From there they examined the Agulhas Bank, and then, past Prince Edward Island, to the edge of the Antarctic pack-ice. **Dec. 16, 1898**: They reached their farthest south, 64°15' S. Their return journey was due north through the Indian Ocean to Sumatra, then home through the Suez Canal. **Jan. 1899**: Bachmann died. **April 29, 1899**: They arrived back in Hamburg.

German New Schwabenland Expedition *see* **German Antarctic Expedition, 1938-39**

German Peninsula. 67°39' S, 66°45' W. A mountainous peninsula projecting for 11.4 km in a westerly direction from the Fallières Coast between Bourgeois Fjord to the N and W and Dogs Leg Fjord to the S, on the W coast of Graham Land. The Bulgarian gazeteer then goes on to say that it extends 15.9 km between Thompson Head to the N and Bottrill Head to the SW. One is not sure how to interpret this in the light of the previous description. Mapped by the British in 1978. Named by the Bulgarians on Dec. 6, 2010, for the settlement of German, in western Bulgaria.

German Whaling and Sealing Expedition *see* **Dallmann, Eduard**

The *Germania*. Chilean whale catcher, built in Norway for the Sociedad Ballenera de Corral (*see* **The *Tioga***), which was catching for the *Tioga* in Antarctic waters in 1911-12 and 1912-13.

Germany. The first German expedition into Antarctica was Dallmann's in 1873-75. The *Valdivia* was there briefly in 1898-99 during the German Navy Oceanographic Expedition. and in 1901-03 von Drygalski led a government-sponsored expedition (GermAE 1901-03). Also government-backed were GerAE 1911-12, led by Filchner; and GerAE 1938-39, led by Ritscher. In 1936-37 Germany sent a whaling fleet to Antarctica for the first time (*see* **The *Jan Wellem***). During the War a Nazi raider, the *Pinguin*, captured three Norwegian factory ships in Antarctic waters. After World War II Germany was split into West Germany (q.v.) and East Germany (q.v.), but in 1990 the country was re-united as Germany (*see* **German Antarctic Expeditions**). Since 1991 there has been a German Antarctic Receiving Station (GARS), operating out of General Bernardo O'Higgins Station. There has also been, since 1994, the Eduard Dallmann Laboratory, at Jubany Station. For (what this author considers) an amusing sidebar, *see* **Hitler, Adolf**.

Gerof, Demetri Semenovich. His last name is also seen as Gerov, Giref, Girev, Gorov, and his first name in any number of ways. b. June 1, 1889, Alexandrovsk, Sakhalin Island, in eastern Siberia, the illegitimate son of a convict. Raised in Nikolayevsk, where he trained as an electrical engineer, he was also a dog driver and hunter. Picked by Cecil Meares to help with the dogs in Nikolayevsk, and to bring them to Antarctica for BAE 1910-13, he became a significant member of the expedition. After the expedition, he went to England, and then NZ, but on his return to Siberia, he became involved in gold mining and dredging, and in 1930 was arrested by the Soviet secret police and imprisoned in Vladivostok. Released after 18 months, he died of a heart attack on his way home in 1932.

Gerontius Glacier. 69°32' S, 70°30' W. Flows N from the Elgar Uplands into Tufts Pass, in the N part of Alexander Island. Surveyed by BAS in 1968. With the uplands in mind, it was named by UK-APC on Dec. 8, 1977, for "The Dream of Gerontius," a 1900 oratorio by the composer Elgar. It appears in the 1980 British gazetteer. US-ACAN accepted the name.

Gerov Pass. 62°44' S, 60°17' W. A pass running at an elevation of 400 m on Friesland Ridge, 1.6 km SSE of Pleven Saddle, and bounded by Shumen Peak to the ENE, and Gabrovo Knoll to the WSW, it provides overland access between Charity Glacier (to the NW) and Tarnovo Ice Piedmont (to the S), in the Tangra Mountains of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Dec. 15, 2006, for the Bulgarian linguist and nationalist Nayden Gerov (1823-1900), compiler of the *Dictionary of the Bulgarian Language*.

Pik Gerova *see* **Anders Peak**

Gerrish Peaks. 74°40' S, 111°42' W. A line of eroded rock peaks, 6 km SE of Hunt Bluff, on the W side of Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. First photographed aerially during OpHJ 1946-47. Named by US-ACAN in 1967, for Samuel D. Gerrish, ionosphere physicist at Byrd Station in 1966. Origi-

nally plotted in 74°41' S, 111°33' W, it has since been replotted.

Gerritsz, Dirck. Name also seen as Gherritz, but his name was, correctly Dirck Gerritzsoon Pomp. He was also known as Dirck China. b. 1544, Enkhuizen, Holland. Raised partly in Lisbon, so that he could be trained for the Portuguese sea trade, he was a merchant in Goa by the time he was in his early 20s. In 1585 he visited Japan (for the second time), being the first Dutchman to do so (twice that is). He was back in Holland by 1590, and in 1598 took part in a 5-ship expedition to the Pacific by way of the Straits of Magellan. The ship he was commanding, the *Blyde Bootschap*, was blown off course, and, according to a later written account (by Jacob le Maire), the ship reached 64°S, and saw mountainous, ice-covered land that resembled Norway (possibly the South Shetlands, if the account is true). The *Blyde Bootschap* made it as far as Valparaíso before she was captured by the Spanish. Gerritsz was freed in 1604, and in 1606 set out from Enkhuizen on a voyage to the East Indies, and never returned. *See also* **South Shetlands**. However, Laurens Claess, supposedly bosun on the *Blyde Bootschap*, claims the ship went to 64°S in March 1603, under Gerritsz.

Gerry Glacier. 77°24' S, 152°05' W. On Edward VII Peninsula, it flows N between Reeves Peninsula and Howard Heights to the head of Sulzberger Bay. Features in this area were photographed aerially during ByrdAE 1928-30 and ByrdAE 1933-35, and first mapped from these photos. Re-mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by Byrd for Senator Peter Goelet Gerry (1879-1957) of Rhode Island, a long-time friend of the Byrd family, a contributor to ByrdAE 1933-35, and a great grandson of Elbridge Gerry, the former vice president of the USA. US-ACAN accepted the name in 1970.

Gertrude *see* **Gertrude Rock**

Gertrude Rock. 71°17' S, 170°13' E. Also called Gertrude. The northern of 2 rocks in water, The Sisters, off the N extremity of Cape Adare. At the suggestion of Murray Levick, this feature was named by Victor Campbell of the Northern Party during BAE 1910-13, for one of the sisters in a popular song at the time (*see* **The Sisters**). US-ACAN accepted the name in 1962, and NZ-APC followed suit. This feature collapsed into the sea and disappeared between 2003 and 2006.

Gervaize, Charles-François-Eugène. b. July 8, 1814, Dinan, France. Élève on the *Astrolabe* during FrAE 1837-40. He was promoted to ensign on Aug. 20, 1839.

Gervaize Rocks. 63°21' S, 58°06' W. A group of rocks in water, about 5 km NNE of Cape Ducorps, Trinity Peninsula. Surveyed by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for Charles Gervaize. US-ACAN accepted the name later in 1964.

Geschiebebach. 62°09' S, 58°56' W. A stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans. The word "geschiebe" means "debris."

Gessner Peak. 71°46' S, 6°55' E. Rising to 3020 m, it is the highest peak on Storkvarvet Mountain (it is on the S part of the mountain), 5 km N of Habermehl Peak, in the NE part of the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Discovered by GermAE 1938-39, and named by Ritscher for Wilhelm Gessner (d. 1945), manager of Hansa Luftbild, an aerial photographic corporation which began life in 1926 as a subsidiary of Lufthansa, the new German airline.

Gessner Spitze *see* **Gessner Peak**

Gessnerspitze *see* **Gessner Peak**

Gessnertind *see* **Gessner Peak**

Mount Gester. 75°01' S, 134°48' W. A flat-topped, ice-topped mountain, rising to 950 m on the divide between Johnson Glacier and Venzke Glacier, and just S of Mount Kohnen and Bowyer Butte, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Lt. (jg) Ronald L. Gester, seismologist and geomagnetist at Byrd Station in 1971.

Gestlingen *see* **Gosling Islands**

Getman Ice Piedmont. 68°06' S, 64°57' W. Between Reichle Mesa and Three Slice Nunatak, at the NE end of Joerg Peninsula, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Explored from the ground and photographed aerially by USAS 1939-41, and by RARE 1947-48, and surveyed from the ground by Fids from Base E between 1946 and 1948. Named by US-ACAN in 1978, for Cdr. Robert T. Getman, U.S. Coast Guard, executive officer on the *Southwind* during OpDF 69 (i.e., 1968-69). It appears on the 1979 USGS sketch map of the N part of Palmer Land. UK-APC accepted the name on May 21, 1979, and it appears in the 1980 British gazetteer.

Mount Getz. 76°33' S, 145°13' W. Rising to 1120 m, 8 km ESE of Mount Ferranto, in the S part of the Fosdick Mountains, in the Ford Ranges of Marie Byrd Land. Named by Byrd for George Fulmer Getz, Jr. (1908-1992), son of George F. Getz (*see* **Getz Ice Shelf**), and a supporter of USAS 1939-41, the expedition which mapped this feature. US-ACAN accepted the name in 1970.

Getz Ice Shelf. 75°00' S, 125°00' W. Also called Getz Shelf Ice. Over 500 km long, and between 30 and 100 km wide, bordering the Bakutis Coast and the Hobbs Coast of Marie Byrd Land between McDonald Heights and Martin Peninsula. It has wholly or partially embedded within it several sizeable islands — Carney, Siple, Dean, Grant, and Wright. The ice shelf westward of Siple Island was discovered in Dec. 1940, during USAS 1939-41, and named by them as George Getz Shelf Ice, for George Fulmer Getz (1865-1938), Chicago industrialist, who furnished a seaplane for the expedition. The portion E of Siple Island was first delineated from air photos taken during OpHJ 1946-47. The name later became George Getz Ice Shelf, and then was shortened, and accepted by US-ACAN in 1953. The entire feature was mapped by USGS from USN air photos taken between 1962 and 1965.

Getz Shelf Ice *see* **Getz Ice Shelf**

Mount Gevers. 85°50' S, 158°29' W. A rock peak, rising to 1480 m, at the N side of Cappellari Glacier, at the point where that glacier enters Amundsen Glacier, in the Hays Mountains of the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Traugott Wilhelm "T.W." Gevers (1900-1991), South African geologist from the University of Witwatersrand, at McMurdo in 1964-65.

Geyer, Alfred B., Jr. b. Dec. 27, 1902, South Bend, Ind., son of German immigrant clerk Alfred B. Geyer and his wife Flora Ellen Cullar (known as Ella). After graduating from Indiana University in 1922, and after that the University of Oregon, he became a doctor. In 1927 he married Margaret, and they lived in Portland, Oreg. In the 1930s he was with the Bureau of Quarantine, in the Philippines, and then at the U.S. Marine Hospital, in San Francisco. He was ship's doctor on the *North Star* during the first half of USAS 1939-41. He died in Palos Verdes, Calif., on March 6, 1958.

Geysen Glacier. 73°31' S, 64°36' E. A large, prominent glacier, about 22 km wide at its confluence with Fisher Glacier (which flows just to the N), into which it feeds from the SW after flowing NE between Mount Bayliss and Mount Ruker, in the Prince Charles Mountains of Mac. Robertson Land. Plotted from ANARE air photos taken in 1956 and 1957. Named by ANCA on July 4, 1961, for Hendrik "Henk" Geysen (b. Dec. 24, 1921, Holland; of Upwey, Vic.), officer-in-charge of Mawson Station in 1960, who, on Oct. 6, 1960, almost came to grief when his tractor plunged into a crevasse in the Prince Charles Mountains. Mr. Geysen had been a Resistance fighter in World War II, then went to Bangkok to work for KLM, then on to Australia. In 1968, he sailed a ketch from Singapore to Darwin. US-ACAN accepted the name in 1967. There seems to be confusion everywhere about his first name and his nickname. The first is Hendrik, and the second is Henk (which is the standard shortened form of Hendrik).

GF08. 68°30' S, 102°11' E. An Australian automatic weather station in Queen Mary Land, installed on Oct. 28, 1986, at an elevation of 2123 m, and closed on Sept. 29, 2008, to be replaced with GF08-A (see below).

GF08-A. 68°30' S, 102°11' E. An Australian automatic weather station in Queen Mary Land, installed on Jan. 28, 2000, to replace the old GF08 (see above), in the same location. It was still going in 2009.

Ghent Ridge. 77°34' S, 163°07' E. It parallels the S flank of Commonwealth Glacier, 0.8 km N of Mount Falconer, in the lower Taylor Valley, in Victoria Land. Named by VUWAE 1965-66 as Smith Ridge, for Ian Smith (*see* **Ian Peak**). However, that name was already over-used in Antarctica, and the name was changed to Ghent Ridge, for Edward D. Ghent, leader of the field

party of VUWAE 1965-66 which explored the Taylor Valley area that season. He was later with the department of geology, at the University of Calgary, in Alberta. NZ-APC accepted the name, and US-ACAN followed suit in 1997.

Gherritz, Dirck *see* **Gerritsz, Dirck**

Ghiaurov Peak. 62°38' S, 59°58' W. A rocky peak rising to 250 m on Delchev Ridge, 960 m SSE of Rila Point, and 2.1 km NNW of Delchev Peak, in the Tangra Mountains of Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for their famous singer Nikolai Ghiaurov (1929-2004).

Giacomo Bove Hut. 62°10' S, 58°30' W. Built on Jan. 20, 1976 by Renato Cepparo's (non-governmental) Italian expedition, in Italia Valley, Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands, and occupied until Feb. 12, 1976.

Glacier Giaever *see* **Giaever Glacier**

Giaever, John Schjelderup. b. Dec. 31, 1901, Tromsø, Norway, son of John Schjelderup Giaever, director of Skandia Kovververk, and his wife Thyra Høegh. Arctic explorer, and trapper in Greenland, 1929-34, he also served in Canada, with the Royal Norwegian Air Force, 1941-44. In March 1940, in Oslo, he married Oddbjørg Jacobsen, and they had a son, and on Dec. 29, 1948, he married Anna Margrethe Gløersen, and they had a daughter. He was head of the Norsk Polarinstitutt from 1948 to 1960, and leader of NBSAE 1949-52. He died on Nov. 9, 1970, in Oslo. He was famous as an author too, perhaps his best known book being *Maudheim* (*see* the Bibliography).

Giaever Glacier. 72°37' S, 31°08' E. Flows NW between Mount Kerckhove de Denterghem and Mount Lahaye, in the Belgica Mountains. Discovered by BelgAE 1957-58, led by Gaston de Gerlache, and named by him as Glacier Giaever, for John Giaever (q.v.), counselor for de Gerlache's expedition. US-ACAN accepted the name Giaever Glacier.

Giaever Ridge. 72°00' S, 5°00' W. An ice ridge, large, broad, and snow-covered, with a few small nunataks in its W and S ends, it runs about 110 km long in a N-S direction, on the W side of Schytt Glacier, NW of Borg Massif, in the E part of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and named by them as Giaeverryggen (i.e., "Giaever ridge"), for John Giaever. US-ACAN accepted the name Giaever Ridge in 1962. The Norwegians also call it Førstefjellsryggen (i.e., "first mountain ridge"). *See also* **Johnsbrotet**.

Giaeverryggen *see* **Giaever Ridge**

Giannini Peak. 71°00' S, 62°50' W. A peak, 22 km ESE of Mount Nordhill, in the E part of Palmer Land, on the N side of Dana Glacier, where that glacier swings NE toward Lehrke Inlet. Mapped by USGS in 1974. Named by US-ACAN in 1976, for Albert P. Giannini, USARP biologist at Palmer Station in 1973. UK-APC, who plotted it in 71°01' S, 62°47' W, accepted the name on July 21, 1976.

Giant fulmars *see* **Fulmars**

Giants Cirque. 67°17' S, 67°17' W. A large cirque on the W side of the Tyndall Mountains, S of Ward Glacier, which opens to the SW to Vallot Glacier, on Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Named descriptively by UK-APC on April 3, 1984, following geological work done in this area by BAS personnel from Rothera Station. US-ACAN accepted the name.

Point Giard *see* **Giard Point**

Pointe Giard *see* **Giard Point**

Punta Giard *see* **Giard Point**

Giard Point. 64°26' S, 63°49' W. Forms the SW entrance point of Perrier Bay, on the NW coast of Anvers Island, in the Palmer Archipelago. Roughly charted by FrAE 1903-05, and named by Charcot, during FrAE 1908-10, for Alfred Giard (1846-1908), French entomologist, member of the Institut de France, and a government appointee to the commission charged with publishing the scientific results of Charcot's expedition. It appears on a 1943 U.S. Hydrographic Office chart as Point Giard, on a 1949 Argentine chart as Punta Giard, and on a 1957 Argentine chart as Cabo Giard. In 1956 the point was photographed aerially by FIDASE, and surveyed from the ground by Fids from Base N. UK-APC accepted the name Giard Point on July 7, 1959, and US-ACAN followed suit in 1971. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Punta Giard.

Gibb Island *see* **Gibbs Island**

Gibbney Island. 67°33' S, 62°20' E. A small island, 4 km N of Forbes Glacier, on the W side of Holme Bay, off Mac. Robertson Land. Photographed aerially by LCE 1936-37, and named Bryggeholmen (i.e., "the wharf islet") by the Norwegians who mapped it in 1946 from these photos. Renamed by ANCA for Australian biologist Leslie F. "Les" Gibbney (b. 1923, Kalgoorlie), who wintered-over at Heard Island (53°S) in 1950 and 1952, the second year as officer-in-charge. US-ACAN accepted the name in 1965. *The Potted Autobiography of Les Gibbney* was published by Pen & Pencil Publications, York.

Bahía Gibbon *see* **Gibbon Bay**

Gibbon, Geoffrey McKay. b. 1896, Scarborough, Yorks, but raised in Laggan, Inverness, son of tax man John Gibbon and his wife Fannie Elizabeth, who finally settled in Elgin. After Gordon's College, Aberdeen and Edinburgh University, he became a doctor, and served in World War I. He was later an RNVR surgeon, married Margaret, and they had a daughter, Joyce, in 1926. He was ship's surgeon in Antarctic waters on the *Discovery II* in 1931-33, medical officer in Cyprus, 1933-38, and then to Uganda. In the 1950s he was living in Nova Scotia. He died in 1983.

Gibbon, S.E. On Nov. 19, 1912, at Hobart, he signed on to the *Aurora*, as a steward, at £10 per month, for the 2nd voyage south during AAE 1911-14. He left the expedition at Hobart on March 18, 1913.

Gibbon Bay. 60°39' S, 45°11' W. A bay containing water of Lewthwaite Strait, 1.5 km wide, which indents the E end of Coronation Island for 1.5 km, in the South Orkneys, between Rayner Point and The Turret. Discovered by Powell and Palmer in Dec. 1821. It was more accurately delineated on a 1912 chart made by Petter Sørlle. Re-surveyed by personnel on the *Discovery II* in Jan. 1933, and named by them for Dr. Geoffrey Gibbon. It appears on their 1934 chart. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on an Argentine chart of 1947, as Bahía Gibbon, and that was the name accepted by the 1970 Argentine gazetteer.

Gibbon Nunatak. 85°31' S, 127°36' W. An isolated nunatak, on the N side of the Wisconsin Range, 13 km N of Lentz Buttress, on the W side of Davisville Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Thomas L. Gibbon (b. March 17, 1928, Claysburg, Pa.), who joined the U.S. Navy in Aug. 1945, and who wintered-over as a construction driver at Byrd Station in 1959. He retired from the Navy in Sept. 1975.

Gibbons, Barney *see* **USEE 1838-42**

Gibbous Rocks. 61°04' S, 54°59' W. A group of gibbous (hump-shaped) rocks, 6 km NW of Cape Belsham, off the N coast of Elephant Island, in the South Shetlands. These rocks were surveyed and charted by the British Joint Services Expedition of 1970-71, and named descriptively by UK-APC on Nov. 3, 1971. US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer. The feature appears on an Argentine chart of 1977, as Rocas Gibosas. The British were the latest to re-plot this feature, in late 2008.

Isla Gibbs *see* **Gibbs Island**

Mount Gibbs. 73°49' S, 162°56' E. Rising to 3140 m, on the S side of Recoil Glacier, in the Deep Freeze Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Lt. Maurice E. Gibbs, USN, meteorological officer at McMurdo in 1967.

Gibbs, George Washington, Jr. b. Nov. 7, 1916, Jacksonville, Fla., son of railroad fireman George Washington Gibbs and his wife Florence Call. In Macon, Ga., in 1935, he joined the U.S. Navy, and was mess attendant 1st class on the *Bear*, during both halves of USAS 1939-41, but not a member of the shore parties. In his journal he wrote: "When the *Bear* came up to the ice close enough for me to get ashore, I was the first man aboard the ship to set foot in Little America, and help tie her lines deep into the snow. I met Admiral Byrd; he shook my hand and welcomed me to Little America, and for being the first Negro to set foot in Little America." This is not a claim — it is a fact, confirmed by Herwil Bryant's *Antarctic Journal*. Gibbs was not only the first black man to set foot at Little America, he is also the first recorded black man to set foot on the actual continent of Antarctica. During

the expedition, he was promoted to officers' cook 3rd class. He was a gunner in the Pacific in World War II, fighting at Midway. On Sept. 26, 1953, he married Joyce Powell, in Portsmouth, Va., retired from the Navy in 1959 as a chief petty officer, and went to the University of Minnesota, at Minneapolis, graduating four years later in education. In 1963 he settled in Rochester, Minn., where he worked for IBM, in the personnel department, until 1982. After retiring, he managed his own employment agency until 1999. An effective civil rights leader, he founded the Rochester branch of the NAACP, and in 1974 he was refused admission to the Rochester Elks Club. He died of cancer on his 84th birthday, in 2000, in Rochester.

Gibbs, Peter McCausland. b. Sept. 30, 1934, Salisbury, Rhodesia, son of the Very Rev. Michael McCausland Gibbs, rector of Bulawayo and archdeacon of Matabeleland, and his wife Edith Marjorie Ward. Educated at Cape Town (where he lived between 1942 and 1954), and then Oxford, he was in Lapland in 1956 with an Oxford expedition. He joined FIDS in 1956, as a surveyor, and wintered over at Base Y in 1957, and was base leader at Base E for the winter of 1958. On July 21, 1961 he married Judith Ann Orgill, in Chester Cathedral (where his father was now dean). He later worked as a surveyor in Africa, Scotland, Iraq, Libya, and Oman, and retired to Cyprus.

Gibbs Bluff. 73°29' S, 68°23' E. A rock bluff on the Mawson Escarpment, between Arriens Glacier and England Glacier, in Mac. Robertson Land. Plotted by Australian cartographers from ANARE air photos taken in 1956, 1960, and 1973. Named by ANCA for William James "Bill" Gibbs (1918-2005), who joined the Australian Bureau of Meteorology in 1939, and was its director, in Melbourne, from 1962 to 1978. He was also first vice pesident of the World Meteorological Organization, 1967-75. He retired in 1978 and became the Bureau's archivist.

Gibbs Glacier. 68°28' S, 66°00' W. A glacier, 24 km long, flowing SE into the N part of Mercator Ice Piedmont, on the Bowman Coast, on the E side of the Antarctic Peninsula, and, together with Neny Glacier, which flows NW, it occupies a transverse depression between Mercator Ice Piedmont and Neny Fjord (on the W side of the Antarctic Peninsula), a transverse depression that was originally called Neny Valley, then Neny Trough, and (to confuse things even more) Neny Glacier. What is now Gibbs Glacier was photographed from the air by USAS 1939-41, and mapped by them. RARE 1947-48 did the same thing. After a FIDS survey in 1958, the situation was clarified. *See* **Neny Glacier** for a more complete story of the naming of these features at that period of time. On Aug. 31, 1962, UK-APC allocated two separate names for the two separate glaciers. Gibbs Glacier was named for Peter Gibbs (q.v.), who, with Peter Forster (both from Base E), was the first to conduct a ground survey of this glacier. US-ACAN accepted the new situation in 1963. The name Neny Trough was abolished.

Gibbs Island. 61°28' S, 55°38' W. One of the easterly group of the South Shetlands, about 23 km SSW of Elephant Island, and separated from that island by the Loper Channel, in the South Shetlands, it is completely ice-covered, and has a rugged relief, with steep, inaccessible cliffs, the average height of the island being 275 m. There is a pronounced depression in the center of the island. On von Bellingshausen's 1831 chart, reflecting his expedition of 10 years before (he had charted it on Jan. 21, 1821), it appears as Ostrov Rozhnova, named for Admiral Rozhnov, of the Russian Navy. On Powell's chart published in 1822, it appears as Narrow Isle, or Narrow Island (*see* **Furse Peninsula**). In 1823, Weddell seems to have named it Gibbs Islands (it does appear, at times to be 2 islands), and it appears as such on his chart published in Aug. 1825. It appears as Gibbs Island on Powell's 1828 chart, on a British chart of 1901, and one one of 1937. On the 1838 chart drawn up by FrAE 1837-40 it appears as Île Gibb, and on an 1839 British chart as Gibb Island. In Vincendon-Dumoulin's 1847 atlas it appears as Île Narrow, and on Friederichsen's 1895 map as Gibb Insel. On an Argentine map of 1908 it appears as Isla Gibb. It was recharted by the Discovery Investigations in 1937, when its 2 parts were conclusively shown to be joined by The Spit. The island appears on a 1939 Argentine chart as Isla Gibbs, and that name was accepted by the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Gibbs Island in 1947 (after rejecting the name Rainoff's Island), and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57. The island was originally plotted in 61°28' S, 55°34' W, but it was re-plotted by the British in late 2008. *See also* **Ostrov Rozhnova** (under **R**).

Gibbs Islands *see* **Gibbs Island**

Gibbs Point. 67°48' S, 67°10' W. Forms the NW entrance to Gaul Cove, on the NE side of Horseshoe Island, in Marguerite Bay, off the coast of the Antarctic Peninsula. The name, proposed by Glenn Stein, was accepted by US-ACAN on Sept. 2, 2009, for George Gibbs.

Gibney Reef. 66°15' S, 110°30' E. An exposed reef, 0.8 km W of Clark Peninsula, and 2 km NW of Wilkes Station, in the Windmill Islands, off the Budd Coast. Discovered and charted in Feb. 1957 by personnel on the *Glacier*, and, on the suggestion of Lt. Robert C. Newcomb of that cruise (*see* **Newcomb Bay**), named by US-ACAN in 1958, for seaman Joseph Gibney, also a member of that survey party.

Rocas Gibosas *see* **Gibbous Rocks**

Islote Giboso *see* **Humps Island**

Gibraltar Peak. 72°05' S, 164°59' E. A peak, 1.5 km SE of Lavallee Peak, in the West Quartzite Range. Named by NZGSAE 1967-68 for its similarity to the Rock of Gibraltar (in Europe). NZ-APC accepted the name, and US-ACAN followed suit in 1969.

Gibraltar Rock *see* [2]**Castle Rock**

Bahía Gibson *see* **Gibson Bay**

Mount Gibson. 71°20' S, 66°20' E. A small mountain about 4.5 km W of Mount Cameron, and 5.5 km S of Schmitter Peak, in the Prince Charles Mountains. Plotted by Australian cartographers from air photos taken by ANARE in 1956 and 1960. Named by ANCA for Peter R. Gibson, plumber at Wilkes Station in 1965, and at Mawson Station in 1969. US-ACAN accepted the name in 1967.

Gibson, James H. *see* **USEE 1838-42**

Gibson, Kenneth Vernon "Ken." b. April 4, 1932, Gorleston-on-Sea, near Yarmouth, Norfolk, only child of marine engineer Vernon Pearse Gibson and his wife Mabel Margaret Drayson Crispe. In 1940 he was evacuated to Ludlow. His father died in 1943, and Mrs. Gibson came to Ludlow to work at Ken's school. In Oct. 1948 Ken joined the Royal Navy, serving in the Mediterranean, the Middle East, and the Far East, before going back on Civvy Street in 1957. He applied for the Northern Rhodesia Police, was accepted, but had also seen an ad in the *Daily Telegraph*, for FIDS, and went to London for the interview by Ray Priestley and Bill Sloman. On Oct. 1, 1957, after 3 months meteorological training at Stanmore, he left Southampton on the *Shackleton*, on Oct. 1, 1957, bound for Montevideo, and sharing a cabin with Jim Franks. That was the year of the Spanish flu epidemic on board the *Shackleton*, and, being ex-Navy, Gibson was the one who steered the ship most of the way across the Atlantic. He wintered-over at Base B in 1958. After that, he was due to winter-over at Base Y, but that fell through. He was then detailed for Base W, but that did not materialize either, so he wound up spending the 1959 winter at Base G. He returned to the UK on the *Kista Dan* in 1960, went back to Ludlow, and married Jean Layton on Oct. 31, 1960. Now too old for the police, he went to Sierra Leone as a diamond prospector, then on to Ghana, where Jean joined him in April 1961. He worked his way up through assaying officer, field engineer, and geologist, until, by 1969, he was chief prospector for Ghana. He stayed on there until 1974, and then went to work for a Vancouver-based company in the Central African Republic. Then on to Guyana, and South Africa, and finally back to the UK in 1979, where he went to college and became personnel training manager with Blue Circle Cement. In 1987 he retired, and he and Jean lived in Spain for 8 years before retiring to Gloucestershire.

Gibson, Samuel. b. Leicester, son of Samuel Gibson. A Marine private on Cook's 1st voyage, 1768-71, during which he tried to run at Tahiti, but was punished. On July 9, 1772, at Plymouth, he joined the *Resolution* as a Marine corporal, for Cook's 2nd voyage, 1772-75. He was with Cook a third time, 1776-80, this time as a sergeant, and, as a linguist and now a friend of Cook's, he was with the great navigator when Cook was killed by the Hawaiians. He took ill in the East Indies, and on the return of the expedition he married Janet Coupland in the Orkneys (in Scotland), on Sept. 4, 1780. He died there 18 days later, on Sept. 22, 1780.

Gibson Bay. 63°19' S, 55°53' W. A small bay

on the S side of Joinville Island, just W of Mount Alexander (which forms the peninsula separating Gibson Bay from Haddon Bay), at the junction of Active Sound and the Firth of Tay. Discovered, roughly charted, and named on Jan. 8, 1893, by Thomas Robertson of the *Active*. Surveyed by Fids from Base D in 1953–54. UK-APC accepted the name on Sept. 4, 1957, it appears on a British chart of 1962, and US-ACAN followed suit with the naming in 1963. The Argentine gazetteer of 1970 accepted the name Bahía Gibson. The first Chilean Antarctic expedition, in 1947, named it Bahía Oliver, for Carlos Oliver Schneider (1899–1949), Uruguayan-born professor of geology at the University of Concepción. It appears as such on a Chilean map of 1962, and also in the 1974 Chilean gazetteer.

Gibson Spur. 77°20' S, 160°40' E. A high, rocky spur which forms the divide between the first two cirques just W of the mouth of Webb Glacier, in Victoria Land. From Lake Vashka, it appears to form a head wall of Barwick Valley. Named by VUWAE 1959–60 for Graham W. Gibson, one of the geologists in the party. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Mount Giddings. 67°25' S, 50°47' E. About 12 km ESE of Debenham Peak, in the Scott Mountains of Enderby Land. Plotted by Australian cartographers from aerial photographs taken by ANARE in 1956. Named by ANCA for John Edward "Ted" Giddings (b. March 25, 1932), cook who wintered-over at Mawson Station in 1961 and at Davis Station in 1963. He was at Macquarie Island (not in Antarctica) in the winter of 1965, and in 1966 spent a third Antarctic winter, as a mechanic and driver at Wilkes Station. US-ACAN accepted the name in 1965.

Giddings Peak. 70°12' S, 64°44' E. A small peak just W of Mount Béchervaise, in the Athos Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1965, and named by ANCA for Albert Leonard "Alby" Giddings, who wintered-over as cook at Wilkes Station in 1959. An Englishman, he had been second chef at the Menzies Hotel, in Melbourne, and had trained as a motor mechanic. US-ACAN accepted the name in 1971.

Ostrova Gidrografov *see* **Hydrographer Islands**

Gidrografov Islands *see* **Hydrographer Islands**

Gierloff Nunataks. 85°31' S, 129°00' W. A group of nunataks, 13 km NW of Lentz Buttress, at the N side of the Wisconsin Range, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Seabee George Bernhard "Bernie" Gierloff, Jr. (b. Oct. 7, 1934, Mount Kisco, NY. d. May 29, 2008, Cottonwood Heights, Utah), builder at Byrd Station in 1961. His action in a bulldozer fire earned him this feature. He was back in Antarctica for two more summers between 1971 and 1974, with MCB71 (Mobile Construction Battalion). After serving all over the world for 25 years, he retired from the Navy and the Seabees in 1977.

Giewont. 66°16' S, 100°45' E. Rising to 89.5 m, it is the highest hill in the area around Dobrowolski Station, standing about 1 km N of the station, in the Bunger Hills of Queen Mary Land. Named by the Poles in 1985, after a massif of the same name in the Tatra Mountains of southern Poland, whence sleeping knights will awake when Poland is in danger (they still sleep, despite the great dangers Poland has faced over the centuries).

Caleta Giffard *see* **Giffard Cove**

Giffard Cove. 64°37' S, 61°42' W. Also seen spelled (erroneously) as Gifford Cove. A cove, 1.5 km wide, in the SW end of Charlotte Bay, S of Boxing Island, along the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897–99. Photographed aerially by FIDASE in 1956–57, and surveyed from the ground by Fids from Portal Point, between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, for Henri Giffard (1825–1882), French engineer who constructed and flew the first truly navigable dirigible airship, in 1852. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Caleta Giffard.

Gifford Cove *see* **Giffard Cove**

Gifford Peaks. 79°36' S, 84°48' W. A line of sharp peaks and ridges along the escarpment at the W side of the Heritage Range, between the Watlack Hills and Soholt Peaks. Named by the University of Minnesota Geological Party of 1963–64, for CWO Leonard A. Gifford, pilot of the 62nd Transportation Detachment, who helped the party. US-ACAN accepted the name in 1966.

Giganteus Island. 67°35' S, 62°30' E. An island in the NW corner of the Rookery Islands, in the W part of Holme Bay, off the coast of Mac. Robertson Land. Photographed aerially by LCE 1936–37, and mapped from these photos by Norwegian cartographers in 1947. Named by ANARE in Dec. 1958 for a giant petrel (*Macronectes giganteus*) rookery seen here at the time. US-ACAN accepted the name in 1965.

Gigen Peak. 63°41' S, 58°25' W. Rising to 1092 m on the S side of Benz Pass, 14.39 km SE of Mount Ignatiev, 7.97 km NNE of Mount Daimler, and 6.67 km WNW of Panhard Nunatak, it surmounts Russell East Glacier to the W and S, and Cugnot Ice Piedmont to the E, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Gigen, in northern Bulgaria.

Giggenbach Ridge. 77°28' S, 168°20' E. A N-S chain of summits, 8 km long, rising to about 2400 m to the W and NW of Mount Terror, but descending to 1320 m at the N end, on Ross Island. Named by Phil Kyle. The name was accepted by US-ACAN in 2000, and by NZ-APC on June 19, 2000. Werner F. Giggenbach (b. Nov. 9, 1937, Augsburg, Germany. d. Nov. 7, 1997, while conducting volcanic research in Rabaul, PNG) was a NZ scientist with (from 1968) the chemistry division of NZ's DSIR, one of the leading volcanic gas geochemists of the period, who worked with NZARP at Mount Erebus for 4 field seasons in the 1970s. He rappelled into the inner crater of Erebus in 1978, but had to be pulled out when an eruption showered him and colleagues on the crater rim with volcanic bombs.

Estrecho Gilbert *see* **Gilbert Strait**

Mount Gilbert. 69°16' S, 66°17' W. Rising to 1420 m, on the divide between Airy Glacier and Seller Glacier, 8 km NW of Mount Castro, on the Fallières Coast, on the W coast of Graham Land. Photographed aerially on Feb. 1, 1937, by BGLE 1934–37. Re-photographed aerially on Nov. 27, 1947, by RARE 1947–48. Surveyed from the ground by Fids from Base E in 1958. Named by UK-APC on Aug. 31, 1962, for Dr. William Gilbert (1540–1603), magnetism pioneer. US-ACAN accepted the name later in 1962.

Gilbert, Frederick W. Of Victoria, British Columbia. Skipper of the *Beatrice L. Corkum*, out of Nova Scotia, in Antarctic waters for the 1907–08 season.

Gilbert, Joseph. Baptized on June 1, 1732, in Kirton, Lincs, son of John Gilbert and his wife Elizabeth. On Nov. 15, 1758, at Freiston, Lincs, he married Frances Plant. He was a ship's master in Newfoundland in the early 1760s, and on Jan. 7, 1772 was master of the *Asia* when he transferred to the *Resolution* for Cook's 1772–75 voyage. On Aug. 4, 1774 he was hit in the chest by an arrow fired by an angry native, but not hurt. The Gilbert Islands were named after him. His post-expedition career was as master attendant, first at Sheerness in 1776, then from 1776 to 1791 at Portsmouth, and finally, from 1791 to 1802, at Deptford. He retired to Fareham, Hants, where he died in 1821. His son George sailed with Cook on the 3rd voyage, 1776–80.

Gilbert, Neil Stephen. BAS algal physiologist who summered-over at Signy Island Station in 1985–86, and wintered-over there in 1991, 1992, and 1993. In July of that winter he was appointed permanent base commander of the station, even though he may not actually be there. The administrative role was his, and it was during his tenure that the base became not ony summer-only, but also mixed-gender.

Gilbert Bluff. 74°58' S, 136°37' W. A rock bluff with abrupt cliff faces on its N and E sides, on the S side of Garfield Glacier, and near the N margin of Erickson Bluffs, in the McDonald Heights area of coastal Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for James R. Gilbert, biologist with a party making population studies of seals, whales, and birds in the pack ice of the Bellingshausen Sea and the Amundsen Sea, using the *Southwind* and 2 helos, in 1971–72.

Gilbert Glacier. 70°00' S, 71°00' W. About 30 km long, it flows S from the Nichols Snowfield and empties into the Mozart Ice Piedmont at Wilkins Sound, on the NW part of Alexander Island. Plotted in 69°50' S, 71°07' W, by Searle of the FIDS in 1960, working off aerial photos

taken by RARE 1947–48. Surveyed by BAS in 1968. In association with Sullivan Glacier, it was named by UK-APC on Dec. 8, 1977, for Sir William Schwenk Gilbert (1836–1911), the librettist part of the Gilbert & Sullivan team. It appears in the 1980 British gazetteer. US-ACAN accepted the name. It has since been replotted.

Gilbert Grosvenor Range *see* **Grosvenor Mountains**

Gilbert Strait. 63°38' S, 60°16' W. A strait running NW-SE, and separating Tower Island from Trinity Island, in the Palmer Archipelago, off the W coast of the Antarctic Peninsula. Roughly charted by Foster in 1829, during the *Chanticleer* Expedition 1828–31, and named by him as Davis Gilbert Strait, or Davis Gilberts Strait (sic, sic), for Davies Gilbert (1767–1839), president of the Royal Society, 1827–30, and of the *Chanticleer* expedition committee. It appears on British charts of 1901 and 1916 as Davis Gilbert Inlet (sic). It was re-charted in 1902 by SwedAE 1901–04. On Charcot's 1912 and 1914 maps (both reflecting FrAE 1908–10), it is called Détroit de Davis Gilbert and Détroit Davis Gilbert respectively. A bay on the E coast of Trinity Peninsula shows up on a 1917 map as Davis Gilbert Bay. On a 1937 French chart the strait is seen as Détroit Davies Gilbert, and on a 1942 USAAF chart as Davies Gilbert Strait, a name that also appears on a British chart of 1945, and which was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a Chilean chart of 1947 as Estrecho Davies Gilbert, but on another one of theirs from the same year as Estrecho Gilberto Davies. It was photographed aerially by FIDASE in 1956–57. UK-APC shortened the name to Gilbert Strait on on Sept. 23, 1960, and US-ACAN followed suit that year. It appears with the new, shortened, name on a British chart of 1962. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Estrecho Davies Gilbert, but, today, the Argentines, at least, tend to call it Estrecho Gilbert.

Estrecho Gilberto Davies *see* **Gilbert Strait**

Gilbey, William Batty. b. Sept. 13, 1922, in Burnley, Lancs, son of William C. Gilbey and his wife Muriel Batty. He joined the RAF, and, as a corporal, was part of the RAF Antarctic Unit during the first season of NBSAE 1949–52. After his part in the expedition, he made his way to Cape Town, and from there caught the *Warwick Castle*, arriving in Southampton in March 1950. He died in Southampton in Aug. 1991.

Gilchrist, Edward. b. Feb. 15, 1811, Medford, Mass., son of James Gilchrist and his wife Susan Wyman. He was appointed an assistant surgeon in the U.S. Navy on Jan. 26, 1832, and at that rank was on the *Peacock*, with the Brazil Squadron, in 1833–34. In 1836 he went to the Navy Yard in Boston, and the following year to the Naval Hospital in the same city. He served on the *Vincennes* during USEE 1838–42. He was detached at Sydney in March 1840, and was promoted to surgeon on Sept. 27, 1840. From 1842 to 1843 he was at the Navy Yard in Portsmouth, NH, and then transferred to the Pacific Squadron, first with the *Levant*, in 1844–45, and then, during the Mexican War, with the *Portsmouth*. He was posted to a receiving ship in Boston Harbor in 1850–51, and then served with the Mediterranean Squadron in 1852. From 1855 to 1858 he was resident physician at Chelsea Hospital, in Massachusetts, and in 1861 served on the *Wabash*. He was fleet surgeon with the Mississippi Flotilla, 1861–62, then fleet surgeon with the East Gulf Blockading Squadron from 1863 to 1865. After the war he went back to Chelsea, from 1866 to 1869, and died in Boston, on Nov. 6, 1869.

Gilchrist, Willie. b. Scotland. After many years as a ship's radio man in the Merchant Navy, including stints in China, he joined FIDS in 1961, and was BAS radio operator at Base E for the winter of 1962, and at Deception Island (Base B) for the winter of 1963. He was a supporter of Kilmarnock football team.

Gilchrist Glacier. 66°07' S, 114°06' E. A short channel glacier which flows to the Budd Coast, just over 14 km NW of Fox Glacier. Delineated in 1955 by U.S. cartographer Gard Blodgett, working from air photos taken during OpHJ 1946–47. Named by US-ACAN in 1955, for Edward Gilchrist. Originally plotted in 66°05' S, 114°00' E, it has since been replotted.

Gildea Glacier. 78°38' S, 85°39' W. Flows westward from the Craddock Massif, between Mount Slaughter and Mount Atkinson, into Nimitz Glacier, in the Sentinel Range of the Ellsworth Mountains. The upper portion of the glacier also receives ice from Hammer Col and the S portion of the Vinson Massif. Named by US-ACAN in 2006, for Damien Gildea, Australian leader of several Omega Foundation expeditions to the Sentinel Range and to Livingston Island, between 2000 and 2007. In 1998 he wrote *The Antarctic Mountaineering Chronology*, and since then has become a well-known writer. In 2001 he was a guide for an Adventure Network expedition to the South Pole. He was the youngest Australian to ski to the Pole, and the first Australian to guide a client to the Pole. He made an ascent of Mount Craddock via this glacier, in 2005, and directed the preparation of a 1:50,000 scale map of the Vinson Massif area for the Omega Foundation, in 2006 (it was published in 2007).

Gilderdale, George Dunn. Shipmaster of Mystic, Conn., and commander of many sealing and whaling vessels. b. Feb. 22, 1824, Swinefleet, Yorks, England, youngest son of George Gilderdale and Mary Ellen Dunn. He was captain of the tender *Wilmington* on Thomas Eldridge's *Aeronaut* expedition to the South Shetlands in 1853–54, and upon his return he married Elvira Murdock, on July 2, 1854, at Mystic. During the Civil War he served in the U.S. Navy. He was in the South Shetlands again, as commander of the *Peru*, 1871–72. His diary of April, May and June 1872 is extant. He died in Mystic, July 9, 1901.

Mount Giles. 75°09' S, 137°37' W. Also called Mount Carrol Kettering. Rising to 820 m, and mainly snow-covered, 8 km SSE of Lynch Point, it is the highest elevation on the divide between the seaward ends of Frostman Glacier and Hull Glacier, on the coast of Marie Byrd Land. Discovered aerially by USAS from West Base in 1940, and named by Byrd for Walter Giles. US-ACAN accepted the name in 1947.

Giles, Brian Douglas. b. 1932, Birmingham, son of Arthur J. Giles and his wife Emily Boyes. A met man, while working toward his PhD, he joined FIDS in 1957, as a meteorologist, and wintered-over at Base F in 1958 and 1959. He married as soon as he returned to the UK, and then went to Australia, but later reports have him returned to Birmingham.

Giles, Edward George "Ted." b. Dec. 11, 1934. Radio officer at Mawson Station in 1972 and 1974.

Giles, Walter Robert "Walt." b. Jan. 3, 1912, Sheffield, Ga., son of farmer Augustus C. Giles and his wife Genevieve. He joined the U.S. Marines on June 3, 1932, in Atlanta, and worked his way up through the ranks, becoming a flyer as well. He was a technical sergeant when he became co-pilot and radio operator on flights out of West Base during USAS 1939–41. He fought as a lieutenant at Guadalcanal, during World War II. He died in Conyers, Ga., on April 11, 1996.

Giles Glacier. 78°40' S, 84°46' W. A hanging glacier flowing eastward along the S side of Moyher Ridge to Thomas Glacier, in the S part of the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN in 2006, for J. David Giles, polar ice coring officer with the University of Nebraska, who supported USAP drilling operations at Taylor Dome, the South Pole, Windless Bight, Siple Dome, and Kamb Ice Stream, between 1993 and 1998.

Gill, Allan. b. May 6, 1930, 3 Harbour Crescent, Wibsey, Bradford, Yorks, son of journeyman joiner John "Jack" Gill and his wife Ethel Tetley. He began as a solicitor's clerk, then did his national service, as a senior clerk in the Medical Corps in Kenya, being demobbed as a sergeant after 2 years. He then worked as a clerk for a furniture dealer in Bradford, joined FIDS in 1957, as a meteorological observer, and, after 6 months met training at Stanmore, left Southampton on the *Shackleton*, on Oct. 1, 1957, bound for Montevideo. He wintered-over at Base G in 1958, and at Base D in 1959. In the winter of 1959 he and Selwyn Bibby spent 130 days in the field on James Ross Island (see Bibby for details). On his return to the UK in 1960, he went back to his job in Bradford, and then in 1961–62 he, Fritz Koerner, and Brian Beck got involved in the Devon Island project, in the Arctic, and he spent most of the 1960s there, including the famous 1968–69 Trans-Arctic Expedition led by Wally Herbert, but he also found time to summer-over as an aurora researcher at Byrd Station (3 men only), in Antarctica, in 1962–63, and to winter-over in 1963 at Byrd Aurora Substation. He went back to the Arctic for the last time in 1989, and in May 2002 he suffered a massive stroke, and was confined to hospital in

Kingussie, Scotland, unable to speak, and paralyzed down one side. He died in Raigmore Hospital, Inverness, on Jan. 13, 2010.

Gill, Ronald Victor "Ron." They called him "Fat Ronnie" (a play on Finn Ronne, a typically British one, incomprehensible to anyone else). Army sergeant, driver and mechanic. He joined FIDS in 1961, and was BAS general assistant and tractorman who wintered-over at Base E in 1962, and at Base T in 1963. He was back for the winter of 1970, at Halley Bay Station, and in 1971 wintered-over as diesel electric mechanic at Faraday Station (Base F).

Gill, Simon Neil. b. June 9, 1963. BAS carpenter who wintered-over at Rothera Station in 1987 and 1988. Between 1989 and 1999 he summered-over in Antarctica every season except two, and in 1994 became support manager at Rothera. In the late 1990s he was base commander at Halley Bay Station for 18 months.

Gill Automatic Weather Station. 79°55' S, 179°00' W. An American AWS at an elevation of 54 m, on the Ross Ice Shelf. It was installed on Jan. 24, 1985, named for an LC-130 pilot whose last name was Gill. It was closed in 1990. It was visited on Feb. 2, 2005, and had moved 3.8 miles.

Gill Bluff. 76°14' S, 112°33' W. A rock bluff on the NW side of Mount Takahe, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Allan Gill.

Gillan, William *see* **USEE 1838-42**

Gillespie, Colin Ainsley. b. 1906, Bolton, Lancs, son of John Arthur H. Gillespie. Able seaman who, at Dunedin, stowed away on board the *Eleanor Bolling* as she pulled out of port on April 1, 1930, headed for Tahiti. He was found two days later, and they put him to work as 2nd cook. He arrived, with the ship, in NYC in 1930. But he never saw Antarctica. He went to work for the Pacific Whaling Company, out of California, and was still sailing the seas into World War II, and into the 1950s, becoming a Canadian citizen.

Gillespie Glacier. 85°11' S, 175°12' W. A small tributary glacier just SW of Mount Kenyon, it flows from the W slopes of the Cumulus Hills into Shackleton Glacier. Named by US-ACAN in 1966, for Lester F. Gillespie, of the U.S. Weather Bureau, USARP meteorologist at Pole Station in 1962.

Mont Gillet *see* **Mount Gillet**

Mount Gillet. 72°34' S, 31°23' E. Rising to 2460 m, close N of Mount Van der Essen, in the Belgica Mountains. Discovered by BelgAE 1957-58, led by Gaston de Gerlache, and named by him as Mont Gillet, for French industrialist Charles Gillet, a director of the Crédit Lyonnais, head of the textile company Gillet-Thaon, and a patron of the expedition. US-ACAN accepted the name Mount Gillet in 1966.

Gillett Ice Shelf. 69°37' S, 159°45' E. A narrow ice shelf occupying an indentation of the coast off the Wilson Hills, between Anderson Peninsula and the (as yet seemingly unnamed) peninsula that contains Holladay Nunataks, on the coast of Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Capt. Clarence R. Gillett (b. June 17, 1929), U.S. Coast Guard (from 1952), who served on the *Burton Island* between Dec. 1966 and June 1968, and as ship's operations officer on the staff of Naval Support Force, Antarctica from June 1968 until May 1970. He retired on Aug. 1, 1981. ANCA accepted the name. Originally plotted in 69°35' S, 159°42' E, then again in 69°33' S, 159°39' E, it was replotted in late 2008 by the Australians.

Gillett Nunataks. 75°48' S, 114°43' W. Two nunataks, mainly snow-covered, at the E end of Spitz Ridge and the Toney Mountain massif, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1976, for Richard D. Gillett, radioman at Pole Station in 1974.

Gilliamsen Peak. 71°51' S, 70°20' W. Rising to 650 m, it is the most southeasterly of the Staccato Peaks, in the south-central part of Alexander Island. Photographed aerially by Ellsworth on Nov. 23, 1935. Named by US-ACAN for Lt. Cdr. Donald A. Gilliamsen (b. 1930), USN, a VXE-6 pilot during OpDF 69 (i.e., 1968-69) and OpDF 70 (i.e., 1969-70). UK-APC accepted the name on June 11, 1980.

Gillick Rock. 75°36' S, 129°12' W. An isolated rock nunatak at the NW end of the McCuddin Mountains, 13 km N of the summit of Mount Flint, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1975, for Lt. (later Lt. Cdr.) Thomas Lee Gillick, USNR, helicopter pilot in Antarctica during OpDF 70 (i.e., 1969-70) and OpDF 71 (i.e., 1970-71).

Gillies, Frederick Jacob M. b. 1874, Roath, Cardiff, Wales, son of sailor Jacob L'Barron Gillies and his wife Sarah Mason Moreton. His father was always away at sea, and his mother kept a tobacconist's shop in Roath. In London, on Aug. 2, 1911, during AAE 1911-14, Gillies replaced H. McKenzie as chief engineer on the *Aurora*, at £18 per month, a salary that would increase to £20 per month. On March 19, 1913, at Lyttelton, NZ, he left the *Aurora*, but was rehired on Aug. 29. He finally left the expedition on March 19, 1914. He was on the same ship in 1917 when they went down to relieve BITE 1914-17. He died on June 2, 1941.

Gillies, James McDonald. b. May 13, 1890, Sunny Bank, Barnhill, Perth, Scotland, son of reasonably well-to-do English teacher Walter Gillies and his wife Margaret. At the age of 9 he was enrolled at Perth Academy, and later trained as an engineer, moving to India, returning to the UK on the outbreak of World War I. After the war, he went to work on the American merchant ship *Neponset* for several years, as a refrigeration engineer, working his way up to become chief engineeer. He was chief engineer of the *Jacob Ruppert*, 1934-35, i.e., during the 2nd half of ByrdAE 1933-35. At the end of the expedition, he was being described as ex chief engineer, and that role had been taken over by Bert Paul. He lived in Virginia and New Jersey, and died in Oct. 1965.

Gillies, John. b. Feb. 14, 1943, Fairfield, Vic., son of brass fitter and turner Norman Thomas Gillies and his wife Florence May Tosch. He trained as a radio technician in the Postmaster General's Department (PMG), and wintered-over as radio technician at Mawson Station in 1967, and again at Casey Station in 1969, where he was senior radio tech. He returned to Melbourne in 1970, and began work at the PMG laboratories, and stayed there (through its various name changes) until 2001. In 1972, in Camberwell, Vic., he married Maria Helena Petronella deKort. In 2003 he became editor of *Aurora* magazine.

Gillies Islands. 66°32' S, 96°25' E. Also called Gillies Nunataks. Three small grounded rocky islands protruding above the Shackleton Ice Shelf, 5 km (the Australians say about 7 km) N of Cape Moyes. Discovered by the Western Base Party of AAE 1911-14, and named by Mawson for Frederick Gillies. Astronomical control was established on the central island in Jan. 1948, during OpW 1947-48. US-ACAN accepted the name in 1963, and ANCA followed suit.

Gillies Nunataks *see* **Gillies Islands**

Gillies Rock. 83°07' S, 54°45' W. An isolated rock on land, rising to about 1185 m, 10 km N of Mount Dasinger, in the N part of the Neptune Range, in the Pensacola Mountains. Surveyed from the ground by USGS in 1963-64, photographed aerially by USN in 1964, and mapped from these efforts by USGS. Named by US-ACAN in 1968, for Betty Huyler Gillies (1909-1998), aviatrix and San Diego ham radio operator who, throughout the 1960s, patched Antarcticans through to the USA. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer. *See* **Madey Ridge**, for a similar story.

Lake Gillieson. 69°25' S, 76°08' E. On the E side of Stornes Peninsula, about 1.2 km NE of Blundell Peak, in the Larsemann Hills. Named by ANCA for David Gillieson, limnologist at the University of New South Wales, who was a member of the 1987 Law Base summer field party.

Gillin, John *see* **USEE 1838-42**

Mount Gillmor. 70°28' S, 159°46' E. A mainly ice-free, ridge-type mountain, rising to 2185 m, at the S side of the head of Svendsen Glacier, and about 9 km N of the main mass of the Pomerantz Tableland, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Charles Stewart Gillmor (known as Stewart Gillmor; b. Nov. 6, 1938, Kansas City), ionosphere physicist with the U.S. National Bureau of Standards, and exchange scientist at Mirnyy Station in 1961. ANCA accepted the name.

Montaña Gillmore. 66°08' S, 63°36' W. A mountain, rising to 1472 m, about 3 km NW of

the mouth of Morrison Glacier, at the head of Cabinet Inlet, on the E coast of the Antarctic Peninsula. Named by the Chileans for General Francisco Javier Gillmore Stock (b. Jan. 9, 1909, Iquique) titular bishop of Auzio, and vicar general for the Chilean Armed Forces, who was in Antarctica with ChilAE 1962-63. The Argentines call it Montaña Olivero.

Gillock, Robert Hugh. b. Nov. 10, 1919, Arkansas City, Kans. He joined the U.S. Navy on June 28, 1939, and was lieutenant navigator on OpHJ 1946-47. He was also involved in the search for the Liberty Bell 7, Gus Grissom's 1961 Mercury space capsule. He retired from the Navy, in Norfolk, Va., as a captain, in Feb. 1967, and subsequently taught engineering at the Virginia Beach campus of Tidewater College. He retired in 1982, and died on April 24, 1995, in Virginia Beach.

Gillock Glacier. 72°00' S, 24°08' E. A glacier, 8 km long (the Norwegians say 15 km long), it flows N from Mount Walnum to the W of Smalegga Ridge, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Gillockbreen, for Lt. Robert Gillock. US-ACAN accepted the translated name Gillock Glacier in 1966.

Gillock Island. 70°26' S, 71°52' E. An ice-covered island, about 29 km long, and between 3 and 9 km wide, with numerous outcrops exposed along its flanks, extending NNW-SSE on the E side of the Amery Ice Shelf. Mapped by U.S. cartographer John H. Roscoe in 1952 from air photos taken during OpHJ 1946-47, and named by him for Lt. Robert Gillock. US-ACAN accepted the name in 1956, and ANCA followed suit on July 22, 1959.

Gillockbreen *see* **Gillock Glacier**

Mount Gilmour. 76°56' S, 144°40' W. A mountain, 6 km SE of Mount Passel, in the Ford Ranges of Marie Byrd Land. Discovered in 1940 by USAS from West Base. Named by Byrd for Harold Gilmour. US-ACAN accepted the name in 1947.

Gilmour, Harold Philip "Gil." b. March 19, 1903, Lynn, Mass., son of gardener and odd job man Philip David Gilmour and his wife Margaretta Marie "Etta" Best. He joined the U.S. Navy as a yeoman, and served on the USS *Vermont*, at Mare Island, Calif. He was the recorder and historian on USAS 1939-41, based at Little America III (West Base) as administrative assistant to the expedition commander. He married Isabelle. He settled in Viña del Mar, Chile, and married again, to Maria Teresa Corea Santa Cruz, and had several children. He died there on April 16, 1969, and is buried in Valparaíso.

Gilpin, Brian Edward. b. Nov. 18, 1932, Newton Abbot, Devon, son of Culcheth Edward Gilpin and his wife Queenie Marie Monica Browne. After doing his national service in the RAF, he went to work at the Met Office, and, while there met ex-Fid Norman Broadbear, who suggested he join FIDS, which he did in 1953, after an intervew with Frank Elliott in London. He left England on the *Alcantara*, bound for Montevideo, and from there caught the *Fitzroy* down to Port Stanley. He worked in the Met Office there for a year, and then, at his own suggestion, went to Deception Island on the *John Biscoe*, and wintered-over there that year as meteorologist at Base B in 1955. It was hard to find takers for a FIDS tour at Deception in those days, partly because word had got around that it was a depressing place, and also because Arthur Farrant had recently committed suicide there. Mr. Gilpin studied Spanish with the Argentines from the local base, and on one occasion, out skiiing to the penguin colony to collect eggs, fell and ripped his trousers, sustaining frostbite in areas that are not normally subject to such an attack. After a radio consultation with Hope Bay doctor Paul Massie, he was given penicillin, proved to be allergic, and had to spend a month at the hospital at the Argentine base. After his tour he returned to Port Stanley on the *John Biscoe*, via South Georgia, and from the Falklands to Montevideo, where he caught the *Alcantara* bound for Southampton, arriving on March 14, 1956. That year he married Jean Mitchell. While at Deception, he had made friends with Peter Mott, head of FIDASE, through whom he got a job with a consulting firm working with Iraq Petroleum. He spent years living and working in the Middle East and Kurdistan, with Wink Mander, Derek Clarke, and Ken Powell, working on snow surveys, and with pipelines, was in Zambia for 3 years with the UN, was on a South African fisheries ex-whaling ship for 3 years, and also lived in the Canary Islands. He finally made it back to the UK, in 1992, and settled down in Torquay. While he had been working in Qatar, a climbing accident in Pakistan left him with a steel right leg, a small price to pay for all the adventure.

Mount Gilruth. 71°44' S, 168°48' E. A mostly ice-covered mountain, rising to 3160 m, 7 km ENE of Mount Adam, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Robert R. Gilruth (b. Oct. 18, 1913, Nashwauk, Minn. d. Aug. 17, 2000, Charlottesville, Va.), director of NASA's manned space center, who visited McMurdo in 1966-67.

Mount Gimber. 72°01' S, 102°00' W. An ice-covered mountain, 0.8 km SE of Landfall Peak, in the extreme W part of Thurston Island. Named by US-ACAN in 2003, for Cdr. Harry Gimber.

Gimber, Harry Meeker Stuart, Jr. b. Nov. 25, 1909, Windber, Pa., son of civil engineer (and ex naval officer) Harry Meeker Stuart Gimber and his wife Mary. After Annapolis, he entered the Navy on June 4, 1931, and became a commander, USN, serving in World War II. Captain of the *Brownson* from Nov. 2, 1946 to July 26, 1947, i.e., during OpHJ 1946-47. He served in Korea, and retired as a captain. On April 18, 1977, in San Diego, he married Amy Lodge Woods. He died on Dec. 8, 1999, in San Diego.

The Gin Bottle. An informal name given to an ice hill, 30 feet above the surrounding ice, near Chippantodd Creeks, 9.7 km E along the coast from Halley Bay. A gin bottle was left here by members of the British Royal Society Expedition, in Oct. 1956.

Gin Cove. 64°03' S, 58°25' W. Indents the NW coast of James Ross Island, to the NE of Tumbledown Cliffs. Surveyed by Fids from Base D in 1960-61. BAS did geological work here between 1981 and 1983. Named by UK-APC on April 3, 1984, in association with other alcoholic spirits that have given their name to features in this area, and cheer to Fids. It appears in the 1986 British gazetteer. US-ACAN accepted the name. One of the Argentine Antarctic expeditions named it Bahía Villar Fabre, for geologist Jorge Félix Villar Fabre, and it appears as such on a 1978 map. However, today, they seem to call it Caleta Falcón.

Ginger Islands. 67°45' S, 68°42' W. A group of islands W of Cape Alexandra, off the S end of Adelaide Island. Surveyed in early 1963 by an RN Hydrographic Survey unit on the *John Biscoe*, and named by UK-APC on Feb. 12, 1964, for Kenneth Ginger (b. Aug. 9, 1928, Brentford, Mdsx. d. Nov. 1995, Taunton, Somerset), principal civil hydrographic officer with the Hydrographic Department, responsible for Admiralty charts of Antarctica for several years beginning in 1958. The largest of the islands appears a reddish color (ginger) when it is free of snow. US-ACAN accepted the name later in 1964. It appears on a British chart of 1964.

Ginger Lake. 62°13' S, 58°27' W. A lake with ginger-colored water (hence the translation of the name Jeziorko Imbirowe, given by the Poles; "imbirowe" means ginger), between Brama and Demay Point, at Admiralty Bay, King George Island, in the South Shetlands. It is a new lake, created as the result of the thawing of a glacier during the past 20 years.

Caleta Giorgi *see* **Caleta Georgi**

Giotbreen. 72°19' S, 26°45' E. A glacier, 8 km long, between Kampesteinen and Kjelbotn Peak, in the E part of the Sør Rondane Mountains. Named by the Norwegians for Jacques Giot, dog-master with BelgAE 1957-58. He wintered-over at Roi Baudoin Station in 1958.

Giovanni Peak. 70°02' S, 71°26' W. An isolated peak, rising to about 500 m (originally thought to be about 750 m), above the Mozart Ice Piedmont, 1.5 km S of the S portion of Debussy Heights, in the N part of Alexander Island. Mapped by Searle of the FIDS in 1959-60 from air photos taken by RARE 1947-48, and plotted by him in 69°50' S, 71°24' W. It appears as such on a British chart of 1961. Named by UK-APC on March 2, 1961, for the Mozart opera, *Don Giovanni*. US-ACAN accepted the name later in 1961. The coordinates were corrected from U.S. Landsat images taken in Feb. 1975, and, with the new coordinates, the feature appears in the 1977 British gazetteer.

Cordón Giovannini *see* **Cordón Lobell**

Giovinco Ice Piedmont. 84°01' S, 176°10' E. About 16 km wide, between Canyon Glacier and

Perez Glacier, gradually descending N to the Ross Ice Shelf. Named by US-ACAN in 1966, for Frank A. Giovinco (b. Nov. 2, 1915. d. March 21, 1972), who joined the U.S. Coast Guard in 1940, and was in Antarctica for OpDF 65 (i.e., 1964-65), as captain of the *Towle*.

Mount Giovinetto. 78°16' S, 86°10' W. Rising to 4090 m, it is the summit of a buttress-type mountain, 3 km N of Mount Ostenso, in the main ridge of the Sentinel Range, in the Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse Party of 1957-58, and named by the leader of that party, Charles Bentley, for Mario Giovinetto. US-ACAN accepted the name in 1960.

Giovinetto, Mario B. b. 1933, Argentina. He was part of ArgAE 1955-56, and on March 6, 1956, was lowered from a helo off the *Bahía Aguirre* at Shag Rocks, near South Georgia, to make the first landing there, to collect geological specimens. He was glaciological assistant and observer who arrived in Antarctica in the summer of 1956-57, wintered-over at Byrd Station in 1957, stayed on at the Ross Ice Shelf in the summer of 1957-58, wintered-over again at Pole Station in 1958, and left Antarctica in the 1958-59 summer.

Gipps, Derek Raymond. b. July 11, 1929, East London, and raised in Leyton, son of shoemaker Frederick Augustus Gipps and his wife Violet Lawrence. After World War II he joined the Civil Service, going first to the Foreign Office, and in 1954 began work with the Crown Agents, the logistical supplier to FIDS (Ricky Cook then being head of Crown Agents). He went to Antarctica in 1960-61 (the first of many summers there) on the *John Biscoe*, to study the bases first-hand. From 1963 to Jan. 1, 1974 he worked for BAS, and then became personnel manager for the National Environment Research Council (NERC), who supplied the money to BAS. He retired to Swindon, Wilts.

Gipps Ice Rise. 68°46' S, 60°56' W. A roughly elliptical ice rise, 16 km long, bounded by an ice cliff on all sides, and rising to about 270 m above the edge of the Larsen Ice Shelf, E of Revelle Inlet, on the Wilkins Coast, about 56 km NE of Hearst Island, on the E coast of the Antarctic Peninsula. It may have been seen from the air by Wilkins on Dec. 20, 1928, when he plotted "indications of low, snow-covered islands or snow ridges" in this vicinity, and which appear thus on his 1929 map. Officially discovered by William R. MacDonald of USGS, on Dec. 18, 1966, on a VX-6 photographic mapping mission over the area in a Super Constellation, and first mapped by USGS from these photos. On Feb. 15, 1970, BAS traversed it on a radio echo-sounding flight. Named by UK-APC on Dec. 20, 1974, for Derek Gipps. US-ACAN accepted the name in 1975. It appears in the 1976 British gazetteer, and also on the 1979 USGS sketch map of the N part of Palmer Land. It is now an island.

Cabo Giralt *see* **Cape Shirreff**

Bahía Girard *see* **Girard Bay**

Baie Girard *see* **Girard Bay**

Girard Bay. 65°08' S, 64°00' W. A bay, 1.5 km wide, indenting the Graham Coast for 3 km between Cape Cloos and Mount Scott, off the N entrance to the Penola Strait, on the W coast of Graham Land. Discovered and roughly charted in Feb. 1898, by BelgAE 1897-99. Further charted by FrAE 1903-05, and named by Charcot as Baie Girard, for geographer Jules-Marie-Simon Girard (1839-1921) of the Paris Geographical Society, and later a member of the Comité de Patronage for FrAE 1908-10, during which expedition, in 1909, this feature was recharted. It appears as Girard Bay on the Discovery Investigations chart of 1934 (the DI had re-surveyed it in 1933), and that was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a Briish chart of 1960. It was photographed aerially by FIDASE in 1956-57. It appears on a 1947 Argentine chart as Bahía Girard, and that was the name accepted by the 1970 Argentine gazetteer. It also appears as Bahía Girard on a 1971 Chilean chart, and was the name accepted by the Chilean gazetteer of 1974.

Islote Girardi. 62°35' S, 59°54' W. A small island, immediately to the S of Half Moon Island, in the entrance to Moon Bay, off the SE extremity of Greenwich Island, in the South Shetlands. Named by the Argentines.

Islote Girdler *see* **Girdler Island**

Girdler Island. 66°00' S, 65°39' W. A small, narrow island at the extreme S side of Mutton Cove, 0.1 km SW of Cliff Island, E of Beer Island, and 13 km W of Prospect Point, off Holtedahl Bay on the Graham Coast, on the W coast of Graham Land. Charted in Feb. 1936, by BGLE 1934-37, and named by them as Girdler Islet, because it girdles the entrance to Mutton Cove. It appears as such on a U.S. Hydrographic Office chart of 1947, and US-ACAN accepted the name. UK-APC followed suit with the naming on Sept. 20, 1955. It appears on a 1957 Argentine chart, translated as Islote Girdler, and that was the name accepted not only by the 1970 Argentine gazetteer, but also by the 1974 Chilean gazetteer. However, on July 7, 1959, following FIDASE air photos taken in 1956-57, UK-APC redefined it as Girdler Island, and US-ACAN followed suit with that in 1963. It appears as such on a British chart of 1960.

Girdler Islet *see* **Girdler Island**

Girev, Demetri *see* **Gerof, Demetri**

Giró Nunatak. 82°13' S, 42°02' W. Rising to 380 m, 6 km NW of Vaca Nunatak, on the SW side of the Panzarini Hills, in the Argentina Range, in the Pensacola Mountains. Surveyed from the ground during the USGS Pensacola Mountains Project, photographed aerially by USN in 1967, and mapped from these efforts by USGS. Named by US-ACAN in 1968, for Capt. (later Maj.) Gustavo Adolfo Giró Tapper, Argentine officer-in-charge of Esperanza Station in 1962 (when he was a 1st Lt.), General Belgrano Station in 1965, and a member of the traverse party to the South Pole in 1965-66 (*see* **Operación 90**). UK-APC accepted the name on Nov. 3, 1971, and it appears in th 1974 British gazetteer. The Argentines call it Nunatak Paraná, after the Argentine city of Paraná. Why they do not call it Nunatak Giró is a mystery.

Giroux, Ferdinand William "Frank." b. 1895, Williamstown, Mass., son of French Canadian immigrant parents, railroad worker William H. Giroux and his wife Melina (known as Minnie). He went to sea in 1927, and became an oiler and fireman. As an oiler he was on the *Jacob Ruppert*, during ByrdAE 1933-35, but did not winter-over.

Mount Gist. 67°21' S, 98°54' E. Rising to 1529 m above sea level, and marked by a cluster of small peaks protruding above the ice, about 14 km WNW of Mount Strathcona, near the head of Denman Glacier, in Queen Mary Land. Delineated by U.S. cartographer Gard Blodgett in 1955, from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Lt. Francis John "Jack" Gist (b. May 17, 1921, Tulare Co., Calif., but raised in nearby Bakersfield. d. March 5, 1989, Mclean, Va.), USN, of Waterville, Ia., co-pilot and navigator with David Bunger's crew, during OpHJ 1946-47. ANCA accepted the name.

Giulia Automatic Weather Station. 75°32' S, 145°52' E. An Italian AWS in Victoria Land, opened at Midpoint Station in Dec. 1998, at an elevation of 2508.95 m.

Giza Peak. 71°20' S, 68°16' W. Rising to 492.6 m (the Americans say about 600 m) above sea level, on the W side (the Americans say the E side) of the Fossil Bluff massif, on Alexander Island. For years this feature was known to BAS workers here as Sphinx, for its shape, but when the time came for UK-APC to name it, on Feb. 15, 1988, there were too many names in Antarctic like that, so they picked Giza Peak, which was a rather unsatisfactory compromise (i.e., something better could have been found with a little more thought). US-ACAN accepted the name. However, people here still call it Sphinx. For a parallel, *see* **Khufu Peak**.

The *Gizhiga*. Soviet Fisheries vessel which took part in SovAE 1979-81 (Capt. Yuriy Dmitriyevich Utusikov). She was back in Antarctic waters in 1985-86, off the coast of Adélie Land, in company with the *Mys Juno*, the *Mys Ostrovsky*, and the *Lazarev More*.

Mount Gjeita. 68°12' S, 58°14' E. The highest peak in the Hansen Mountains, about 5 km E of Brusen Nunatak, in Kemp Land. Mapped by Norwegian cartographers in 1947 from aerial photographs taken by LCE 1936-37, and named by them as Gjeitafjell. They plotted it in 68°12' S, 58°22' E. This feature was included in a triangulation carried out by Graham Knuckey, surveyor at Mawson Station in 1958, and named by ANCA (and for themselves only) on Oct. 11, 1960, as Mount Banfield, for Flight Lt. Geoffrey A. "Geoff" Banfield, who was at Mawson Station that summer season of 1958-59, and who wintered-over there in 1959. US-ACAN accepted the name Mount Gjeita in 1965.

Gjeitafjell *see* **Mount Gjeita**

Gjel Glacier. 71°53' S, 24°55' E. A glacier,

28 km long, it flows N between Mefjell Mountain and the steep cliffs of the Brattnippane Peaks of the Luncke Range, in the central part of the Sør Rondane Mountains. Plotted in 71°58' S, 24°47' E by Norwegian cartographers in 1957, from air photos taken by OpHJ 1946–47, and mapped by them as a 43-km long glacier which they named Gjelbreen (i.e., "the mountain-pass glacier"). US-ACAN accepted the name Gjel Glacier in 1966, and re-plotted and re-mapped it.

Gjelbreen *see* **Gjel Glacier**

Gjeldnes, Rune. b. 1971. During the austral summer of 2005–06 this Norwegian adventurer skied, unsupported by any outside help, across the continent of Antarctica, in 93 days, from Troll Station to Mario Zucchelli Station, via the South Pole. This was the longest Antarctic traverse. He was picked up at the Italian station by the *Spirit of Enderby*.

Mount Gjelsvik. 72°30' S, 2°00' E. Rising to 12,008 feet, in Queen Maud Land. Named for Tore Gjelsvik (*see* **Gjelsvik Mountains**) by the Norwegians. This seems to be a term no longer in use.

Gjelsvik Mountains. 72°09' S, 2°36' E. A group of mountains, about 40 km long, between the Sverdrup Mountains and the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39, and first roughly plotted from these photos. Mapped in more detail by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949–52, and also from 1958–59 air photos taken during the long NorAE 1956–60, and named by them as Gjelsvikfjella, for Tore Gjelsvik (1916–2006), managing director of the Norsk Polarinstitutt, in Oslo (cf. John Giaever), 1960–83, and president of SCAR, 1974–78. US-ACAN accepted the translated name Gjelsvik Mountains in 1962.

Gjelsvik Peak. 85°19' S, 168°00' W. A small, but impresssive, peak, rising to 3660 m (the New Zealanders say 3600 m), below and 4 km to the NW of Mount Fridtjof Nansen, in the Queen Maud Mountains. Seen from the SW it appears to be an isolated mountain at the edge of the Polar Plateau, but from the N and NW it appears as a peak at the head of a buttress projecting into the Liv Glacier. Surveyed by the Southern Party of NZGSAE 1961–62, and named by them for Tore Gjelsvik (*see* **Gjelsvik Mountains**). NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Gjelsvik Spur. 79°18' S, 156°19' E. A rock spur, 3 km NW of Mount Ayres, on Butcher Ridge, in the Cook Mountains, in the Transantarctic Mountains. Named by US-ACAN in 2001, for Per Gjelsvik, of the University of Wisconsin at Madison aeromagnetic project, under John Behrendt, 1963–64. Working from USN aircraft, Gjelsvik obtained aeromagnetic profiles over the Transantarctic Horst bordering the Ross Sea and the Ross Ice Shelf.

Gjelsvikfjella *see* **Gjelsvik Mountains**

Gjerdøe, Carl Olaf. b. May 29, 1888, Norway. One of the 4 Hektor Whaling Company employees (he was the skipper) who died immediately as the whale catcher *Bransfield* capsized in South Bay, Doumer Island (or was it at Deception Island? Sources vary), in the South Shetlands, on March 11, 1924. He was buried in the Whalers Bay Cemetery, at Deception Island.

Mount Gjertsen. 86°40' S, 148°27' W. Rising to 2420 m, 3 km NE of Mount Grier, in the La Gorce Mountains of the Queen Maud Mountains. In 1911, while speeding toward the South Pole, Amundsen named a mountain in this area as Mount Hj.F. Gjertsen, for Hjalmar Gjertsen. Modern geographers could not be sure which mountain Amundsen meant, so they named this one, discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933–35 (an expedition which Gjertsen also took part in). US-ACAN accepted this situation in 1947.

Gjertsen, F. b. 1854, Norway. 1st mate on the *Antarctic* Expedition 1893–95. Borchgrevink described him as "a stout, broad, handsome, kind-looking man, thirty-eight years of age."

Gjertsen, Fredrik Arthur "Fred." b. Sept. 29, 1879, Knarberg, Nøtterøy, Norway, son of sailor Gjert Sande Gjertsen and his first wife Wilhelmine Mathilde Nissen. He went to sea in 1900, worked his way up through the mate ranks, and by 1919 was living in Punta Arenas, married (in 1913) to a Valparaíso girl named Mary Gladys Malcolm, raising a family of daughters, and skippering the *Alejandrina* for Duncan Fox & Co. In 1926–27 and 1927–28 he was captain of the *Nielsen-Alonso* in the Ross Sea. He was skipper of the *Hektoria*, in Antarctic waters in 1932–33, and of the *Terje Viken* in 1936–37. On this last one, his daughter, Mimi was one of the three stewardesses (*see* **Women in Antarctica**, and also her own entry, below). On May 21, 1941, he took the *Hektoria* out of Liverpool, bound for New York. His old bosun from the *Terje Viken* was now his 2nd officer. He was not the skipper in 1942, when the *Hektoria* was sunk in the Atlantic. He died in Liverpool, in 1956. His wife died in Nøtterøy, in 1960.

Gjertsen, Hjalmar Fredrik. b. July 6, 1885, Porsgrund, Norway, son of ship's pilot Thron Andreas Gjertsen and his wife Olivia Gurine. He went to sea in 1900, and became a lieutenant in the Royal Norwegian Navy. He was 2nd officer on the *Fram* during NorAE 1910–12, and was one of the group who returned to London on June 29, 1912, on the *Highland Scot*, from La Plata. He was loaned to the *Sir James Clark Ross* expedition of 1923–24 as ice pilot. He received special permission from the Norwegian Navy to be commodore of Byrd's Antarctic Fleet during ByrdAE 1933–35, and went south on the *Jacob Ruppert*. On Feb. 5, 1934 he left Little America on the *Ruppert*, bound for NZ, and on March 26, 1934 arrived in San Francisco with Walter Queen. He then went home, to his wife Maren, in Horten, Norway, then back to NZ in the fall of 1934 for the 2nd half of the Byrd expedition. He died in 1958.

Gjertsen, Mary May "Mimi." b. 1917, Punta Arenas, Chile, daughter of Norwegian whaling skipper Fred Gjertsen (q.v.) and his wife Chilean wife Mary Gladys Malcolm. As a child, she and her older sister Bellamina Gladys (known as Gladys), and younger sister Borghild, would often travel on their father's ships (but not, of course, to Antartcic waters). However, things had changed by the 1930s, and she was one of the three stewardesses on her father's whaler *Terje Viken*, in 1937–38, thus making her one of the first women in Antarctica (q.v.).

Gjertsen Promontory. 86°38' S, 148°32' W. A low but sharply rising promontory at the extremity of the spur trending N from Mount Gjertsen, in the La Gorce Mountains, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by NZGSAE 1969–70 in association with the mountain. NZ-APC accepted the name, and US-ACAN followed suit in 1970.

Gjeruldsenhøgda. 71°59' S, 10°49' E. The easternmost mountains in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("Gjeruldsen heights") for Odd Gjeruldsen (b. 1919), who wintered-over at Norway Station as a scientific assistant in 1957 and 1958, during NorAE 1956–60. The Russians call it Gora Titova. *See also* **Odde Nunatak**.

Gjeslingene *see* **Gosling Islands**

Glacial Bay *see* **Lednikov Bay**

Glacial flour. Fine, powdery, icy material found under a glacier. It washes out as glacier milk.

Glacial milk *see* **Glacier milk**

Glacial polish. This is where the substrate or the sides of valleys have been polished by small rocks carried by a glacier as it flows through the valley.

Glacial striations. Scratches on the bedrock made by large rocks carried by glaciers.

Glacial troughs *see* **Hanging valleys**

Glacial valleys *see* **Hanging valleys**

Caleta del Glaciar Rocoso *see under* **D**

Morro Glaciar *see* **Glacier Bluff**

Punta Glaciar *see* **Glacier Bluff**

Caleta Glaciar Rocoso. 62°43' S, 60°24' W. A cove, overlooked by Miers Bluff, at the S end of Hurd Peninsula, on the S coast of Livingston Island, in the South Shetlands. Named descriptively by the Spanish ("rocky glacier cove").

The *Glacier*. Nicknamed "Big Red," she was the first icebreaker to be designed and built specifically for the U.S. Navy. She was the largest cutter in Antarctica, and the most powerful diesel-electric (14 engines) ship ever built in the USA, until the *Polar Star* in 1976, being able to break through ice 15 feet thick. She was 100 times more powerful than, say, Byrd's 1928 ship *City of New York*. Also an Antarctic research vessel, the *Glacier* was 8449 tons, had 23,000 hp, could travel at 17.6 knots, and was 309.6 feet long. Built by the Ingalls Shipping Corporation, she was the fourth ship to carry the name (named after Glacier Bay, Alaska). **Aug. 27, 1954**: Launched as AGB-4, at Pascagoula, Miss. **May 27, 1955**: The vessel was commissioned. Pat Maher was skipper. **Oct. 19, 1955**: Left

Davisville, RI, for Norfolk, Va., on her maiden voyage, as the lead ship on OpDF I (1955-56). **April 6, 1956**: Arrived at Montevideo, then went around the world. **Oct. 5, 1956**: Left Valparaíso, to take part in OpDF II. Captain was Bernard J. Lauff. **Oct. 29, 1956**: Arrived at McMurdo Sound, the earliest ever penetration of the pack-ice during the start of a summer season, breaking the Dec. 7, 1912 record set by the *Kainan Maru*. **1957-58**: In Antarctica for OpDF III. First skipper that season was Capt. Lauff, replaced by Joseph A. Houston. **1958-59**: In Antarctica for OpDF IV. Joseph A. Houston was skipper. **1959-60**: In Antarctica for OpDF 60. Captain was Philip W. Porter. **Oct. 13, 1960**: Left Boston on her 6th Antarctic cruise, for OpDF 61 (1960-61). Capt. Porter was still skipper. **Nov. 21, 1960**: Arrived at Lyttelton, NZ, to unload cargo. **March 1961**: Left Antarctica. **April 27, 1961**: Arrived back in Boston. **Oct. 8, 1961**: Left Boston for OpDF 62 (1961-62), bound for Lyttelton. Captain E.G. Grant. **Nov. 13, 1961**: Entered the Ross Sea. **March 6, 1962**: Arrived at Lyttelton. **May 5, 1962**: Arrived back at Boston. **Sept. 17, 1962**: Left Boston for OpDF 63 (1962-63). Captain Grant. **Nov. 6, 1962**: Reached the edge of the pack-ice. **Nov. 13, 1962**: Reached the edge of the fast bay ice at McMurdo Sound. **1963-64**: OpDF 64. Captain V.J. Vaughan (*see* **Vaughan Promontory**). **1964-65**: OpDF 65. Captain Vaughan. **1965-66**: OpDF 66. Cdr. Franklin Peter Faughman (skipper). **June 30, 1966**: The *Glacier* was transferred to the Coast Guard. **July 1, 1966**: She was struck from the Navy List. **1966-67**: OpDF 67. Captain Opie L. Dawson. **1967-68**: OpDF 68. Capt. Dawson. **1968-69**. OpDF 69. Captain Eugene E. McCrory. **1969-70**: OpDF 70. Capt. McRory. **1972**: She and her helicopters were painted red so they could be seen better in the Arctic (Ted Roberge was skipper then). **1972-73**: OpDF 73. Captain William Edwin West. **1973-74**: OpDF 74. Captain West. **1974-75**: OpDF 75. Captain Clarence R. Gillett. **1975-76**: OpDF 76. Capt. Gillett. **1977-78**: OpDF 78. Captain John J. Dirschel. **1978-79**: OpDF 79. Captain Bruce S. Little. **1979-80**: OpDF 80. Captain Little. **1980-81**: OpDF 81. Captain James W. Coste. **1981-82**: OpDF 82. Capt. Coste. **1982-83**: OpDF 83. Captain Richard Taylor. **1984-85**: OpDF 85. Captain William P. Hewel. **1985-86**: OpDF 86. Capt. Hewel. **1986-87**: OpDf 87. Captain Robert E. Hammond. **Feb. 1987**: After many adventures, she sailed out of Antarctic waters for the 29th and last time. **June 7, 1987**: Decommissioned. **2000**: The *Glacier* Society saved her from being scrapped.

Presqu'île du Glacier *see under* **D**

Glacier Bank *see* **Glacier Rise**

[1]**Glacier Bay**. Just E of Paradise Bay, on the Danco Coast of the Antarctic Peninsula. This is a term no longer used.

[2]**Glacier Bay** *see* **Glacier Bight**

[3]**Glacier Bay** *see* **Halley Bay**

Glacier Bight. 71°50' S, 99°25' W. Also called Glacier Roads and Glacier Bay. An open embayment, about 33 km wide, indenting the N coast of Thurston Island between Hughes Peninsula and Noville Peninsula. First delineated from air photos taken in Dec. 1946, during OpHJ 1946-47, and plotted in 71°48' S, 99°45' W. Named by US-ACAN for the *Glacier* (q.v.), the first ship to make its way to this coastal area, in Feb. 1960. It has since been replotted.

Glacier Bluff. 62°31' S, 59°47' W. An ice cliff, rising to 30 m (the Chileans say 52 m), which forms the NW side of the entrance to Yankee Harbor, in Greenwich Island, in the South Shetlands. Charted and named by the personnel on the *Discovery II* in 1935, it appears on British charts of 1942 and 1948. UK-APC accepted the name on Sept. 8, 1953, US-ACAN followed suit that year, and it appears in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Morro Glaciar (which means pretty much the same thing), and that is how it appears in their 1970 gazetteer. On a 1953 Chilean chart it is wrongly mapped as Punta Triangle, but by the 1962 chart they had corrected this to Punta Glaciar, and that is how it appears in the 1974 Chilean gazetteer. The British were the latest to plot this feature, in late 2008.

Glacier Dome *see* **McLeod Hill**

Glacier milk. Also called glacial milk. This is wet, white liquid formed from glacial flour (q.v.).

Glacier Mountain *see* **Flagship Mountain**

Glacier Ridge. 77°35' S, 167°16' E. A broad ridge, 1.3 km wide, running N-S for about 7 km, on the S slopes of Mount Erebus, on Ross Island. Completely ice-covered, it descends from about 2220 m to 600 m, terminating 3.2 km NW of Tyree Head. Named by NZ-APC on Nov. 4, 1999, for the *Glacier*. US-ACAN accepted the name in 2000.

Glacier Rise. 67°32' S, 166°57' E. An undersea feature off the coast of northern Victoria Land. The name was accepted by international agreement in June 1995.

Glacier Roads *see* **Glacier Bight**

Glacier Strait. 73°25' S, 169°24' E. A strait, trending N-S, off the coast of Victoria Land, in the W part of the Ross Sea. To the E of it is Coulman Island, and to the W are Cape Jones, Borchgrevink Glacier Tongue, and Mariner Glacier Tongue. The *Glacier* was the first vessel to navigate it, in Feb. 1965. Named for this icebreaker, by M.R.J. Ford, NZ surveyor who was aboard the *Glacier* at that time (*see* **Mount Ford**). US-ACAN accepted the name in 1966.

Glacier tongues. Portions of a glacier which are afloat in the sea, but still attached to the glacier itself. *See* the following in this book: Astrolabe, Aviator, Borchgrevink, Campbell, Commandant Charcot, Dibble, Erebus, Français, Harbord, Harbour, Helen, Lillie, Mackay, Mariner, Matusevich, Mertz, Ninnis, Pourquoi Pas, Simpson, Sjögren, Stancomb-Wills, Sørsdal, Thwaites, Tinker, Totten, Utstikkar, Whittle, Williamson, and Zélée.

Glaciers. Streams of ice running down a valley. The original glaciers were streams of ice formed on the tops of high mountains about 50 million years ago, and they ran down valleys to the sea, where they formed ice shelves. The more glaciers that fed a common area, the larger the ice shelf thus fed. Some glaciers receded during warmer eras in Antarctica's history, and thus dry valleys were formed. Glaciers either move from high ground to low ground, or they float. If they float, they spread. Ice sheets, ice shelves, ice piedmonts, and mountain glaciers are all forms of glacier. The early American sealers would often call glaciers "icebergs." The biggest and fastest moving glacier is Byrd Glacier, flowing at 7½ feet per day into the Ross Ice Shelf. The longest in the world is the Lambert Glacier, its upper section being known as Mellor Glacier. Transverse glaciers flow east and west from low divides on the spine of the Antarctic Peninsula. Wilkins mistook these for straits of sea ice while he was flying overhead in 1928-30, because from the air they do look like channels. It was only later ground checks that disproved his theory that the Antarctic Peninsula is not part of the continent. There are simply too many glaciers to list here, but the principal ones (for one reason or another), aside from the ones mentioned above, are: the Axel Heiberg, the Beardmore, the Darwin, the Nimrod, and the Reedy.

Glaciologist Bay. 71°14' S, 5°30' W. An ice-filled bay, about 40 km long, in the SW part of the Jelbart Ice Shelf, along the Princess Martha Coast of Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Glasiologbukta (i.e., "glaciologist bay"). US-ACAN accepted the translated name in 1966.

Rocher des Glaciologues *see under* **D**

Glaciology. The study of ice. It used to mean the study of glaciers only. Much is unexplained about the origins and demise of glaciers and ice sheets. 20,000 years ago North America (at least that part of it north of St. Louis), then under the Laurentide Ice Sheet, probably looked much like Antarctica does today.

Glade Bay. 73°56' S, 115°20' W. An open, triangular-shaped Amundsen Sea indentation into the Bakutis Coast of Marie Byrd Land. It is 50 km wide at its broad N entrance, and is defined by the angle formed by the N part of Wright Island, the front of the Getz Ice Shelf, and the NW side of Murray Foreland, at Martin Peninsula. Mapped by USGS from ground surveys, and from USN air photos taken between 1959 and 1967, it was at first plotted in 73°58' S, 115°15' W, but has since been re-plotted. Named by US-ACAN for Cdr. Gerald Leon Glade (b. May 1931), USN, helo pilot on the *Atka* during OpDF II (1956-57), and later (1975-76), deputy commander, U.S. Naval Support Force, Antarctica.

Cap(e) Glandaz *see* **Glandaz Point**

Pointe Glandaz *see* **Glandaz Point**

Punta Glandaz *see* **Glandaz Point**

Glandaz Point. 65°05' S, 63°59' W. Forms the S side of the entrance to Deloncle Bay, on the Lemaire Channel, on the Graham Coast, on the W coast of Graham Land. Discovered and roughly charted in Feb. 1898, by BelgAE 1897-99. Charted by FrAE 1903-05, and named by

Charcot as Cap Glandaz, or Pointe Glandaz, for Albert Ernest Glandaz (1870–1944), an Olympic sailor, and an officer of the French Oceanographic Society. He was later a member of the International Olympic Committee, 1913–44. It appears on a 1943 U.S. Hydrographic Office chart as Cape Glandaz. UK-APC accepted the name Glandaz Point on Sept. 22, 1954, and US-ACAN followed suit in 1955. It appears as such in the 1955 British gazetteer, and also on a 1958 British chart. It was photographed aerially by FIDASE in 1956–57. It appears on a 1962 Chilean chart as Punta Glandaz, and that was the name accepted by the 1974 Chilean gazetteer. The Argentines call it that too.

Glasgal Island. 66°12' S, 110°23' E. A small island which marks the SW extremity of the Donovan Islands, in Vincennes Bay, off the Budd Coast. First mapped from air photos taken during OpHJ 1946–47. Photographed aerially again in 1956, by ANARE, and also by SovAE 1956. Observed from the ground in 1957 by a team from Wilkes Station led by Carl Eklund, who named it for Ralph Glasgal, aurora scientist who wintered-over at Wilkes that year. US-ACAN accepted the name in 1960, and ANCA followed suit on July 4, 1961.

The *Glasgow*. A 9100-ton Royal Navy light cruiser, built by Scott's Shipbuilding & Engineering, in Glasgow, and launched on June 20, 1936. During World War II she served in, among other places, the Arctic. In 1948–49 she was in the South Orkneys, South Shetlands, and at the Antarctic Peninsula, under the command of Capt. Charles Leslie Firth, and in company with the *Sparrow*. She was decommissioned in 1956, and sold for scrap in 1958.

Mount Glasgow. 71°08' S, 162°55' E. Rising to 2490 m, 6 km NW of Mount Webb, in the Explorers Range of the Bowers Mountains, in Oates Land. Named by NZGSAE 1967–68 for J. Glasgow, field assistant with the expedition. NZ-APC accepted the name, and US-ACAN followed suit in 1969.

Glashaugen *see* **Glashaugen Hill**

Glashaugen Hill. 72°12' S, 27°24' E. A small, rocky hill (a nunatak, really), 3 km N of Bleiskoltane Rocks, near the head of Byrdbreen, and S of Balchen Mountain, in the easternmost part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946–47, and named by them as Glashaugen (i.e., "the glass hill"). US-ACAN accepted the name Glashaugen Hill in 1966.

Glasiologbukta *see* **Glaciologist Bay**

Glass, Robert Hill. b. July 21, 1825, Somerset, Tristan da Cunha. In 1816 Britain stationed a garrison on the Atlantic island of Tristan da Cunha, to be ready in case the French should try to pry Napoleon loose from St. Helena. They left in 1817, but one of the corporals, a Scotsman from Kelso, William Glass, stayed on with his Cape Coloured wife, Mary Magdalene, to become the first real settlers of the island. One of their many children was Robert H. Glass, who was baptized on the island on Oct. 12, 1835, at the age of 10. Tristan da Cunha had become very well known to sealing captains from New London, Conn., and Robert went to live there. He and several brothers became sealers (James, John, and Albert; Albert, for example, was 2nd mate on the *Charles Colgate*, sealing in the South Shetlands in 1877–78). Robert was 3rd mate on the *Hannah Brewer* in 1852, 2nd mate on the *Dove*, in 1864, 1st mate on the *Franklin*, under Capt. Edwin Church, and on the *E.R. Sawyer*, in 1862, and in 1864 skippered his first ship, the *Roswell King*, going after elephant seals. In 1869 he took over the *Francis Allyn* (this vessel had an auxiliary steam engine), and in 1871 took her to the South Atlantic for the first time, and in 1873–74 to the South Shetlands for the first of several trips (1874–75, 1875–76, 1876–77, 1877–78, and 1878–79). He lived in New London with his English wife Annie, until he died in 1884.

Glass Point. 61°56' S, 58°09' W. A point, 7 km SW of False Round Point, on the N coast of King George Island, in the South Shetlands. Photographed aerially by FIDASE in 1956, and surveyed from the ground by FIDS in 1957–58. Named by UK-APC on Sept. 23, 1960, for Robert Glass. US-ACAN accepted the name later in 1960. Originally plotted in 61°56' S, 58°12' W, this feature was re-plotted by the British in late 2008.

Gl'atsiologov Island. 66°12' S, 147°00' E. In the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ostrov Gljaciologov, in honor of all Antarctic glaciologists.

Glavinitsa Peak. 67°39' S, 66°43' W. A peak, with precipitous and partly ice-free NW and S slopes, it rises to about 1500 m in the central part of the Rudozem Heights, 12.84 km NE of Bottrill Head, and 6.71 km SSE of Thompson Head, and surmounts Bader Glacier to the N and Bucher Glacier to the SW, on the Fallières Coast, on the W coast of Graham Land. Mapped by the British in 1978. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Glavinitsa, in northeastern Bulgaria.

Ostrov Glavnyj *see* **Glavnyj Island**

Glavnyj Island. 66°18' S, 100°44' E. An island within Lake Figurnoe, in the Bunger Hills. The island, which has 2 small spits on the SW side of it, has steep slopes up from the shore on all sides, and cliffs on the SE shore. Charted by SovAE 1956, and named by the Russians as Ostrov Glavnyj. ANCA translated the name on March 7, 1991.

Gora Glaz. 71°46' S, 66°41' E. A nunatak, pretty much due N of Mount Willing, in the Prince Charles Mountains. Named by the Russians.

Glaze. Called glazed frost in Britain. Ice-coating that forms when supercooled raindrops, drizzle, or fogdrops land on surfaces which have temperatures near or below freezing level.

Glazed frost *see* **Glaze**

Glazunov Glacier. 72°25' S, 71°37' W. Flows N into Stravinsky Inlet from Monteverdi Peninsula, on Alexander Island. Named by the USSR Academy of Sciences in 1987, as Lednik Glazunova, for the composer Alexander Glazunov (1865–1936). US-ACAN accepted the translated name in 2006.

Lednik Glazunova *see* **Glazunov Glacier**

Mount Gleadell. 66°57' S, 50°27' E. A nearly conical, ice-free peak (the Australians describe it as a mountain ridge), rising to 560 m, it is the highest summit on the headland just N of Observation Island, at the E side of Amundsen Bay, in Enderby Land, about 22 km SSW of Mount Riiser-Larsen. Discovered in Oct. 1956 by Peter Crohn's ANARE party, and named by ANCA on July 22, 1957, for Jeffrey Desmond "Jeff" Gleadell (b. May 4, 1911, South Georgia), cook at Mawson Station during that station's first winter, in 1954. It is claimed that he was with Wilkins in Antarctica in the late 1920s, and he may have been. He may also be related to ex-Fid Pat Davis (q.v.). US-ACAN accepted the name in 1961.

The *Gleaner*. American whaling brig of 166 tons, built in 1818 at Troy, Mass. (now part of Maine). Registered in New Bedford, Mass., on May 12, 1818, and in 1819–20 was whaling off Patagonia. She left New Bedford at the end of Oct. 1820, for the 1820–21 seal rush in the South Shetlands, under the command of Capt. David Leslie, who owned the vessel with John A. Parker. They arrived too late and were unsuccessful, leaving Antarctica on March 24, 1821. Thomas A. Boyd succeeded Leslie as captain on July 5, 1821.

Alturas Gleaner *see* **Gleaner Heights**

Gleaner Heights. 62°34' S, 60°14' W. A series of elevations, rising to about 530 m, extending SW from Leslie Hill, in the E part of Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956–57, and surveyed from the ground by FIDS between 1957 and 1959. Named by UK-APC on July 7, 1959, for the *Gleaner*. US-ACAN accepted the name in 1960. The Argentines call it Alturas Gleaner (which means the same thing). The British were the latest to re-plot this feature, in late 2008.

Mount Gleaton. 72°11' S, 168°27' E. Rising to 2130 m, it overlooks Tucker Glacier from the N, at the SW end of the ridge just N of Helman Glacier and 5 km W of Taylor Peak, in the Admiralty Mountains. Named by US-ACAN in 1964, for CWO Clarence E. Gleaton, U.S. Army, helicopter pilot here in 1961–62, supporting USGS's Topo North-South party. NZ-APC accepted the name.

Ledjanaja Bukhta Gleba Vereshchagina. 81°12' S, 160°45' E. A bay, at the SW edge of the Darley Hills, in the Churchill Mountains. Named by the Russians, for limnologist Gleb Yurievich Vereshchagin (1889–1944).

Glee Glacier. 78°16' S, 163°00' E. A small glacier enclosed by the two arms of Dismal Ridge, it flows eastward to Roaring Valley. Named by VUWAE 1960–61, that expedition always being happy to see it through the mists of Dismal Ridge. NZ-APC accepted the name, and US-ACAN followed suit in 1974.

Mount Gleeson. 71°15' S, 66°09' E. A mountain, 10 km (the Australians say about 5 km) W of Mount Woinarksi, in the Prince Charles

Mountains, it has a rock ridge extending SE from it for 3.5 km, and a large area of snow drift has accumulated on the NE side of this ridge. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA for Thomas Kevin Gleeson (known as Kevin, or "Torch"), weather observer who wintered-over at Wilkes Station in 1963 and 1965 (the latter season as weather observer-in-charge). In 1967 he wintered-over at Macquarie Island. US-ACAN accepted the name in 1967.

Monte Glen *see* **Glen Peak**

Glen Glacier. 80°44' S, 25°16' W. At least 11 km long, it flows S to join Recovery Glacier to the W of the Read Mountains, in the Shackleton Range. First surveyed and mapped by BCTAE in Oct. 1957, and named by them for Alexander Richard "Sandy" Glen (1912-2004; knighted in 1967), Scottish member of the Committee of Management of the BCTAE. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year. Photographed aerially by USN in 1967. Sandy Glen was educated at Fettes (as was James Bond), was an intelligence officer during World War II, an Arctic explorer, a good friend of Ian Fleming's, and, some say, the model for Fleming's famous character, or one of the models anyway (Fleming himself being the main one, of course). From 1969 to 1977 he was chairman of the British Tourist Authority.

Glen Peak. 66°46' S, 67°24' W. Rising to about 1000 m, on the N end of Liard Island, in Hanusse Bay, on the Loubet Coast, on the W coast of Graham Land. Roughly charted by FrAE 1903-05, who, apparently, used the name Sommet Gaudry collectively for this feature and Mount Bridgman. Mapped by FIDS cartographers from air photos taken by RARE 1947-48 and FIDASE 1956-57, and also from ground surveys conducted by Fids from Base W in 1958-59. Named by UK-APC on Sept. 23, 1960, for John Wallington Glen (b. 1927), University of Birmingham (in Britain) physicist specializing in the creep of single and polycrystalline ice. It appears on a British chart of 1961. US-ACAN accepted the name in 1966. The Argentines call it Monte Glen.

Glenzer, Hubert, Jr. Nicknamed "Glen." b. April 15, 1924, Green Grove, Wisc., son of farmer Hubert Glenzer and his wife Hilda. He joined the U.S. Navy in 1943, and, as an aviator ensign, was a fighter pilot of distinction in the Pacific during World War II. On June 3, 1944, he married Jean Lois Cattanach, in Owen, Wisc. He was a lieutenant (jg) when he became part of OpW 1947-48, as a helo pilot. From 1968 to 1970 he was commanding officer of the Naval Station at Adak, Alaska, and retired, as a captain, to Alaska in 1973, working in many civic jobs, including Anchorage's director of public works, and (from 1988) director of the port. He died on March 10, 2008, at his home in Anchorage.

Glenzer Glacier. 65°58' S, 103°15' E. A glacier, 8 km W of Conger Glacier, it flows northward from the Knox Coast into the E part of the Shackleton Ice Shelf. Mapped in 1955 by Gard Blodgett from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Glen Glenzer. *See also* **Lednik Angarskij** and **Lednik Kiselëva**.

Gless Peak. 72°12' S, 165°51' E. Rising to 2630 m, 3 km WSW of Cirque Peak, in the Millen Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Elmer Elden Gless (b. Feb. 3, 1928, Rogers, Nebr.), biologist at Hallett Station in 1965-66, 1966-67, and 1967-68.

Gletscherbach. 62°09' S, 58°56' W. A stream flowing into Porebski Cove, on the Joannes Paulus II Coast, between Fildes Peninsula and Pottinger Point, King George Island, in the South Shetlands. Named by the Germans.

Gletscherbucht *see* **Porebski Cove**

Glevum Ridge. 80°02' S, 155°50' E. A north-trending ridge rising from 1180 m on Hatherton Glacier, toward which it runs between Lindum Valley and Lemanis Valley, and achieving an elevation of over 1800 m, in the Britannia Range. Named by NZ-APC on Feb. 27, 2003, for Glevum, the Roman name for present-day Gloucester.

Glezen Glacier. 76°32' S, 162°18' E. A glacier flowing E from the Endeavour Massif, along the N side of Ketchum Ridge to the Tripp Ice Tongue, in the Kirkwood Range of Victoria Land. Named by NZ-APC on Nov. 4, 1999, for Lt. Cdr. Glenn Frank Glezen (b. March 11, 1917, Pasadena, Calif. d. Aug. 13, 1995, Naples, Fla.), who entered the U.S. Navy in April 1934, and who was administrative officer of Task Force 43 during OpDF I (i.e., 1955-56) and OpDF IV (i.e., 1958-59). He retired from the Navy in March 1959. US-ACAN accepted the name in 2000.

Glidden, Charles. b. 1893, Cooktown, Hobart, son of laborer Charles Glidden. He was one of the seamen taken on at Hobart in Oct. 1914, on the *Aurora*, during BITE 1914-17. The youngest seaman aboard, he was a keen hunter. He stole Ninnis's camera during the expedition.

Glider Lake. 68°28' S, 78°17' E. A triangular-shaped saline lake, about 500 m by 150 m, in the area of the S shore of Taynaya Bay, in the Vestfold Hills. The surface of the lake is a little below sea level, and the maximum recorded depth is 9 m. It is probable that the lake is permanently stratified, and therefore meromictic. So named by ANCA on April 27, 1995, because its shape is something like that of a hang-glider.

Glimpse Glacier. 78°16' S, 162°46' E. An alpine glacier, it has 2 parts to it, separated by an icefall, both segments flowing northeastward from the névé in the area between Mount Kempe and Mount Huggins, to join Pipecleaner Glacier 3 km S of the confluence of that glacier with Radian Glacier. So named by VUWAE 1960-61 because they went up this glacier in Jan. 1961, in order to get their only glimpse of the Polar Plateau. NZ-APC accepted the name, and US-ACAN followed suit in 1973.

Glinka Islands. 69°30' S, 72°10' W. A small group of rocky islands in Lazarev Bay, immediately E of Rothschild Island. Photographed aerially by USAS 1939-41 and by OpHJ 1946-47. Mapped in 1960, as 2 islands with offlying rocks, by Searle of the FIDS in 1959-60, from air photos taken by RARE 1947-48, and plotted by him in 69°23' S. 72°17' W. Named by UK-APC on March 2, 1961, for Russian composer, Michael Ivanovich Glinka (1803-1857). It appears on a British chart of 1961. US-ACAN accepted the name later in 1961. The feature has since been re-plotted by UK-APC, from U.S. Landsat images taken in Feb. 1975. It was re-mapped by BAS between 1975 and 1977, as one island with offlying rocks. With the new definition and coordinates it appears in the 1986 British gazetteer.

Gliozzi Peak. 80°01' S, 81°31' W. Rising to 1475 m, 5 km S of Plummer Glacier, in the Douglas Peaks of the Heritage Range. Named by US-ACAN in 1966, for James Gliozzi, glaciologist on the first USARP South Pole-Queen Maud Land Traverse, 1964-65. In 2002 the southernmost summit of this peak was named Cima CAI (q.v.).

Glitrefonna *see* **Glitrefonna Glacier**

Glitrefonna Glacier. 71°57' S, 25°33' E. At the N side of Mount Bergersen, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken during OpHJ 1946-47, and named by them as Glitrefonna (i.e., "the glitter glacier"). US-ACAN accepted the name Glitrefonna Glacier in 1966.

Glitrenosa. 72°02' S, 25°46' E. A mountain in the northwesternmost part of the Mount Bergersen, in the E part of the Sør Rondane Mountains. Named by the Norwegians in association with nearby Glitrefonna Glacier.

Ostrov Gljaciologov *see* **Gl'atsiologov Island**

Snezhnik Gljaciologov. 70°44' S, 67°12' E. A névé on the SE side of Mount Mackenzie, in the Amery Peaks, in the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Global warming. "Next great deluge forecast by science. Melting polar ice caps to raise the level of seas and flood the continents." *New York Times* headline. Sound familiar? That was from May 15, 1932. It continues: "Very slowly the great ice sheets in the Arctic and Antarctic regions are melting and pouring their torrents into the oceans. The earth must inevitably change its aspect and its climate." "The earth is steadily growing warmer," it declares; "As all the ice at the two poles melts, a stupendous volume of water will be released. Prof. [Sir Edgeworth] David conservatively estimates that the sea level will rise 50 feet." William J. Humphreys, of the U.S. Weather Bureau, said that the rise would be 151 feet, which was amazingly specific. Mind you, these scientists were not talking about tomorrow. They were looking 30,000 or more years into their crystal balls. Anyone can do that — and they did. Anyway, for a while it took the people's minds off the Great Depression, in the same way the old Roman rulers used to divert the people with "pan e circo." Then there's this from the *Los Angeles Times* of May 30, 1947:

"Polar Climate Changes Viewed as Menacing. Geophysicist sees catastrophic possibilities with rising temperatures melting glaciers." By 1955 there was a general consensus among meteorologists that the world was hotting up. No question of that. Among other signs — glaciers were melting more rapidly. So great was the scare that part of the *Atka*'s mission, during the United States Navy Antarctic Expedition of 1954-55, was to check on low-lying coastal areas of the USA, to see if there was any danger of the Americas being overrun by oceanic force unleashed by the melting polar caps. Even the great Byrd explorer Larry Gould was getting in on the act, threatening (the possibility) of dire consequences to the world. In March 1955, Lloyd Berkner left no room for error, when, talking about the ice caps melting, he said, "It is a pretty important question to us with the world warming up as it is now. We know that as the world warms up, the seas will rise." At that time, they didn't know if Antarctica was made up entirely of ice, or what. That was going to be part of IGY's mission, to decide whether the world was doomed or not. In Sept. 1955, Dr. John G. Hutton, of General Electric's engineering lab in Schenectady, warned that the Earth was heating up, and was going to continue to do so, because of what he called the "greenhouse effect." Carbon dioxide allows sunlight to enter the atmosphere and heat the Earth, but it inhibits the escape of heat radiation back into space. Now [1955], with mankind (or humankind as it is called today, 2010) polluting the atmosphere like never before, this would only add to the "greenhouse effect." In June 1956, Dr. Joseph Kaplan warned that in the next 50 years an additional 1700 billion tons of new carbon dioxide would go up into the atmosphere. Whether it would all stay there, he couldn't say. In fact, no one could actually say much at all — all they could do was put forward dire warnings based on theories. A syndicated headline, written at McMurdo, yelled, "Melting Antarctic Ice Masses Could Change Face of Globe." It gets worse: "The endless ice of the Antarctic," it reads, "hangs like a sword of doom over the heads of the people of all the world." UPI headline of Feb. 15, 1959, "The World is Slowly Warming Up." "It may be partly man's doing," they said, although they said it also might be to do with more input from the sun. In other words, they didn't know. It was just the typical dire threat. Anyway, it kept the people's minds off the Cold War. On the very last day of 1959, in Chicago, the incoming president of the American Association for the Advancement of Science, Dr. Chauncey D. Leake, assistant dean of the Ohio State University Medical School, announced in an interview that the way to save the world was to plant millions of trees, all over the world. This would dissipate the screen of gas hanging over the Earth, and which was preventing the Earth's heat from going up into space, a heat that "could" become so intense that it would turn the polar ice into water. Robert Buckhorn's March 1964 UPI article, which was syndicated in many newspapers across the USA, sported the headline, "Seas Rising Steadily, Survey Shows." On both American coasts, the article says (using a report from the U.S. Coast and Geodetic Survey), the sea is "literally inching up the shorelines, with no hint the trend will come to a stop." Admiral Karo is quoted as claiming as much as between 2 and 9 inches since 1940. "Part of the blame is fixed on melting glaciers in Greenland and Antarctica." They also said that land rising and falling was also a contributor, whatever that means. In Dec. 1969, J.O. Fletcher, a physical scientist with the Rand Corporation, warned in a Santa Monica meeting that Man (i.e., humankind) had only a few decades in which to solve the "global warming" problem that we humans have caused by pollution. Although the sentiments were not new, the term "global warming" was, and it caught on. He also said that global warming could cause further melting of the polar ice caps and affect the Earth's climate. On the subject of scientists hedging their bets, the "science report" in the London *Times* of Jan. 28, 1975, opens with this rubbish: "The great sheet of ice that covers the West Antarctic, and becomes the Ross Ice Shelf where it floats on the sea, is of worldwide importance. If this ice were to melt, sea levels would rise dramatically, and many coastal areas would be flooded. If, on the other hand, the ice were to spread over a wider area, reflecting back more of the sun's heat, it could cause a global cooling, even a new ice age." This is not science, it is ineffable twaddle. Note: The writer of that piece did not believe in it, but was merely reporting tongue-in-cheek almost. On June 22, 1976, the World Meteorological Organization warned that the next century would "probably" see significant rises in global temperature, due to the build-up of atmospheric carbon dioxide, which, they claimed, had already risen by 10 per cent in the past 50 years. This rise was (and would be) because of the increase in usage of coal and oil fuels. But, as usual, it was all "coulds" and "buts" and "probablys," all terms designed to inflame, to gain attention, and (some cynics say) to get grant money (threat = danger = need for solution = scientists = funding). However, they did describe an impending "very significant warming of global climate." This warning was in direct contrast to that which co-existed with it, i.e., a return to the Little Ice Age of the 16th, 17th, 18th and 19th centuries. The layman was, obviously, as confused as the "experts." The argument hotted up in Dec. 1976. On Dec. 1 of that year, the findings of an Anglo-American commission on warming (or cooling; take your pick) were revealed — we were going into a cooling period for the next 20,000 years. Then, later that day, B.J. Mason, director general of the British Met Office, declared that we were hotting up. On Dec. 2, 1976, Pearce Wright wrote an article for the London *Times*, in which he also used the term "global warming." In his summation of the raging hot and cold feud between the two scientific camps, Mr. Wright concluded that there are trends in the earth's climatological history, with the distinct implication that these trends are a a pure whim of Mother Nature, and that historical records are only of value in showing what we "might" expect — i.e., in reality, we don't know what to expect. The 300 years or so of the Little Ice Age, then a warming period between 1850 and 1940, and then a cooling off again until 1970. Then — confusion. No rhyme or reason, or if there is, we haven't figured it out yet. The article finished with the warning that the world temperature "might" increase by 1°C over the next 50 years. In Jan. 1978 Dr. J.H. Mercer, of the Institute of Polar Studies at Ohio State University, was warning of the effects of carbon dioxide in the atmosphere, and that infrared heat would be trapped as in a greenhouse, and that that effect would melt the ice in Antarctica. However, Prof. Hubert Lamb, of the Climatic Research Unit at East Anglia University, viewed this concern with skepticism. He said world temperatures had been falling since 1950. In 1978, two American doctors, Leona Libby and Louis Pandolfi, after examining old trees, predicted that there would be a severe "cold snap" for the first 50 years or so of the 21st century, "if we can believe our projections. This has to be tested." On Feb. 14, 1979, a Walter Sullivan article in the *New York Times* warned that some people in their infancy now [1979] might live to see a time when the ice at the North Pole had all melted. Again the villain was carbon dioxide. By 1980 the term "global warming" was in general use, but that year, a British government study concluded that the weather would remain the same. But the discussion of what we are doing to our atmosphere was getting louder and louder. In 1981 climatologists confirmed that the average world temperature had risen 0.4°F since the mid 1960s. They also predicted the partial melting of the West Antarctic ice sheet by the early part of the 21st century, as well as a rise in sea levels. And so it has always been, argument between scientists, to the present day. What seems likely is that heating and cooling trends used to be subject exclusively to the fluctuations in the sun's output, and to some extent still are, but that man has helped this process by pollution. As Prof. Patrick Michaels, Virginia's state climatologist, said, in an article in the *Washington Post* of June 15, 1986, "Curious: why do people who express so much skepticism at the daily weather forecast readily panic at one for 50 years from now?" And he hits the nail on the head. How many times have we been listening to the local radio station's weather forecast of freezing rain and sleet that's meant to be happening right now, and we're looking out at phenomenal sunshine? Some people (probably cynics again) estimate that, at best, the "inexact science" of weather forecasting gets it right about 50 per cent of the time, so, if it's so shockingly inaccurate, why do we attach so much importance to predictions of global warming? Especially with the knowledge that so much grant money is involved. How many lies will a scientist knowingly tell in order to keep not only his grant money coming in, but simply to keep his $80,000-a-year job? How much peer pressure can a scientist endure before he, too, cracks and

becomes a traitor to the truth? Prof. Michaels cites the National Research Council's 1983 report on "Changing Climate," in which it states that "the Northern latitudes, from 24 through 90 degrees, have actually cooled off since 1930." In late 1988 Al Gore made the following statement, "That we face an ecological crisis without any precedent in historic times is no longer a matter of any dispute worthy of recognition." Which sort of ends the conversation, doesn't it? Trouble is, it didn't end the conversation. Could it be that Al Gore and people like him want to save the world? A noble motive, indeed. But, and here's an awful thought, perhaps they just want to be seen saving the world. Let's suppose the world just happens to save itself, like it always has done. Who will take the credit? Some say that what was happening by the end of 2010 was that there had been no warming of the earth to speak of (it does, certainly, feel the same). As for the main Antarctic icon of the global warmingists, i.e., ice shelves breaking away well, Antarctic ice shelves have always broken away. This is nothing new. And now that scientists have been alerted to that fact, they now declare that it is not the size of the ice shelf breaking away, but which type it is that is the threat. This is unconvincing at the very best. Global warming took a severe battering during the ice age-like winter of 2009-10, such a batering indeed that the term "global warming" disappeared, to be replaced with the more ambiguous "climate change."

The *Globe I*. A 206-ton Norwegian whale catcher, built in Oslo in 1925, for Globus, and working for the *Lancing* in Antarctic waters in 1925-26. In April 1941, she was requisitioned by the Royal Navy for use as a minesweeper, and in June 1942 was renamed *Daylight*. After the war she was returned to Norway, and her name reverted to *Globe I*. In 1947 she was sold to the Sølvøy Company, in Haugesund, being converted into the seiner *Hansrobe*. She was lengthened in 1955, her weight going up to 242 tons. She was sold again, and then again, and in 1966 her name was changed to *Nordfalk*. In 1967 she was rebuilt again, her new weight being 271 tons. In 1974 she was sold again, and her name changed to *Karl Haakon*. After several more sales, she was renamed *Spjelkvåg*. On Feb. 15, 1977, she was lost off the coast SE of Hesnesbraegen, on a trip from Kristiansund to Stavanger, carrying scrap iron.

The *Globe II*. A 206-ton Norwegian whale catcher, built in Oslo in 1925, for Globus, and working for the *Lancing* in Antarctic waters in 1925-26. In April 1941, she was requisitioned by the Royal Navy, for use as a minesweeper, and in June 1942 was renamed *Flash*. After the war she was returned to Norway, and her name reverted to *Globe II*. She was sold to Einar Gaard, of Larvik, and then in 1948 to Harald Falnes, being converted into a 217-ton seiner and freighter. She ran aground and sank on Sept. 28, 1953, in a heavy fog near Trøndenhølmen.

The *Globe III*. A 165-ton, 103 foot 7 inch Norwegian whale catcher, built in 1925, at Nyland Mek., in Oslo, for Globus, and working for the *Lancing* in Antarctic waters in 1925-26. In April 1941, she was requisitioned by the Royal Navy as a minesweeper, and her name was changed to *Heykur*.

The *Globe V*. A 249-ton Norwegian whale catcher, built in Moss, in 1930, she was in the waters of East Antarctica in 1932-33. She rescued some of Riiser-Larsen's party of that season who had tried sledging on the sea ice. In April 1941, she was requisitioned by the Royal Navy for use as a minesweeper, and in June 1942 was renamed *Karmøy*. In Aug. 1944, with a British crew, she was renamed the *Fiery Cross*. After the war she was returned to Norway, reverted to her name *Globe V*, but was sold and converted into the seiner *Kavholm*. She was sold again in 1959. In 1980, she was condemned, and sunk in Nedstrandsfjord.

The *Globe VIII*. 297-ton Norwegian whale catcher, built in Moss in 1936, in Antarctic waters in 1940-41, skippered by Kjellstrøm. She narrowly avoided being taken by the German raider *Pinguin*. She was scrapped in 1966.

Globemaster *see* **Airplanes**

The *Glomar Challenger*. Deep sea drilling project ship, built in the late 1960s by Global Marine, Inc., she was the sister ship of the *Glomar Explorer*. 400 feet long, 65 feet wide, and 10,500 tons, she had a 142-foot derrick amidships, and could house 70 persons. She could drill to 20,000 feet and bring back core samples from 2500 feet below the sea floor. She drilled 16 sediment cores in the floor of the Ross Sea in her first season, 1972-73 (Capt. Loyd E. Dill). In 1974, while working for the Scripps Institute, she drilled bore holes in the Bellinsghausen Sea, as part of the International Deep Sea Drilling Project. Dill was skipper again that season, with Joseph Clarke. She repeated this task for many seasons after that in Antarctic waters.

Glomar Challenger Basin. 77°45' S, 180°00'. A NE-trending submarine basin in the central Ross continental shelf. Named by international agreement in 1988, for the *Glomar Challenger*.

Cliffs of Gloom. 62°11' S, 58°15' W. Cliffs rising to about 200 m above sea level, and extending between Syrezol Rocks and Martins Head, at the S end of Kraków Peninsula, on King George Island, in the South Shetlands. Named descriptively by UK-APC on April 23, 1998. The cliffs are south-facing, and are therefore constantly in shadow. The British plotted this feature in late 2008.

Glopeflya *see* **Glopeflya Plain**

Glopeflya Plain. 72°07' S, 10°25' E. A narrow, ice-covered plain, S of the Conrad Mountains, and between the E part of the Orvin Mountains and the interior ice plateau which rises close southward, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Glopeflya (i.e., "the ravine plateau"). US-ACAN accepted the name Glopeflya Plain in 1966.

Glopeken. 71°53' S, 10°07' E. A glacier, 40 km long, on the E side of the Conrad Mountains, in the Orvin Mountains, in the central part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians.

Glopeneset. 72°11' S, 10°00' E. A promontory, mainly ice-covered, at the S side of Glopeflya Plain and the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them (name means "the ravine promontory"). US-ACAN accepted the name without modification in 1966.

Glopenesranen *see* **Glopenesranen Nunatak**

Glopenesranen Nunatak. 72°08' S, 10°01' E. The Norwegians describe it as small mountain ridge, it surmounts the N end of Glopeneset, at the S side of Glopeflya Plain, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Glopenesranen (i.e., "the ravine promontory"). US-ACAN accepted the name Glopenesranen Nunatak in 1966. The Russians call it Skala Vitkovskogo.

Caleta Gloria. 64°49' S, 62°52' W. A cove at Waterboat Point (a point the Chileans call Península Munita), Paradise Bay, at the N of the Antarctic Peninsula, on the E coast of the Aguirre Passage. Named by the Chileans for the daughter of Captain Diego Munita Whittaker (*see* **Racovitza Islands**), leader of ChilAE 1950-51.

Punta Gloria. 64°48' S, 63°32' W. The point between Punta Victoria and Damoy Point, on the W coast of Wiencke Island, in the Palmer Archipelago. The name first appears on a Chilean chart of 1947, and has been in use ever since.

Glories *see* **Phenomena**

Glossopteris. A genus of fossil plants dating to the late Paleozoic Era (which ended 225 million years ago). Discovered in 1824 and considered to be a fern, it was later declared to be a gymnosperm, and later still an angiosperm, or flowering plant. Wilson discovered some in Antarctica in 1912, during BAE 1910-13. *Gangamopteris* is a variety also found in Antarctica.

Mount Glossopteris. 84°44' S, 113°43' W. Rising to 2865 m, and mainly ice-covered, it has exposed horizontal bedding on the N face, at the NE end of the Buckeye Table, in the Ohio Range. Named for *Glossopteris* (*see* above) by Bill Long (*see* **Long Hills**) who, with Charlie Bentley, Fred Darling, and Bill's brother Jack Long, climbed to the top in Dec. 1958. US-ACAN accepted the name in 1962.

Glossopteris Gully. 70°51' S, 68°06' E. A steep-sided, narrow gully, about 900 m long, on the E side of Bainmedart Cove, Radok Lake, in the Prince Charles Mountains. A three-man ANARE party from the Prince Charles Mountains Survey camped near the mouth of the gully

for a month in Jan.-Feb. 1969. So named by ANCA for the *Glossopteris* found in the upper part of the gully. US-ACAN accepted the name in 1971.

Nunatak Glotova. 77°25' S, 145°32' W. On the W side of Mount West, in the Ford Ranges of Marie Byrd Land. Named by the Russians.

Glovebruna. 73°44' S, 4°25' W. An ice slope between Utråkket Valley and Urfjelldokka Valley, in the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the cleft edge").

Glover, John *see* **USEE 1838-42**

Glover Cirque. 77°30' S, 161°05' E. A cirque occupied by a glacier, in the S part of the Mount Boreas massif, in the Olympus Range of Victoria Land. It is bounded on the NE side by a ridge connecting Mount Boreas with Mount Thrace. Named by US-ACAN in 2004, for Robert P. Glover, USGS cartographer who was in Antarctica for 5 field seasons up to 2003-04. NZ-APC accepted the name on Nov. 30, 2004.

Glover Hills. 76°41' S, 161°40' E. The prominent hills separating Atka Glacier and Baxter Glacier, in the Convoy Range of Victoria Land. Named by VUWAE 1976-77, led by Christopher J. Burgess, for Dennis James Matthews Glover (1912-1980), NZ writer, publisher, and poet (he wrote the famous "Quardle oodle ardle wardle doodle"). NZ-APC accepted the name, and US-ACAN followed suit in 1993.

Glover Rocks. 67°46' S, 68°55' W. A group of rocks in water, NNW of Avian Island, off the S end of Adelaide Island. Named by UK-APC on Feb. 12, 1964, for John Francis Glover (b. 1940), 3rd engineer of the *John Biscoe*, 1962-63, whose ship (and Mr. Glover too) assisted the RN Hydrographic Survey unit that charted these rocks that summer. US-ACAN accepted the name later in 1964. It appears on a 1964 British chart.

Gloves. For the tourist they must be warm, woolen, and waterproof, with thin gloves under the mittens. Mittens are better than fingered gloves (*see also* **Clothing**).

Mount Glowa. 75°27' S, 73°17' W. A prominent mountain, rising to 960 m, 13 km W of Mount Hirman, it is the most southwesterly of the Behrendt Mountains of Ellsworth Land, NW of Cape Zumberge, on the Orville Coast. Discovered and photographed aerially by RARE 1947-48, and named by Finn Ronne for Col. Latimer William "Bill" Glowa (1908-2007), USAF, who, at the time was on the staff of Gen. Curt LeMay, and who helped get support for the expedition. He retired in 1963. US-ACAN accepted the name in 1966, and it appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Gløymdehorten *see* **Gløymdehorten Nunatak**

Gløymdehorten Nunatak. 72°07' S, 12°11' E. On the W side of Horteriset Dome, just W of the Weyprecht Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Gløymdehorten (i.e., "the forgotten nunatak"). US-ACAN accepted the name Gløymdehorten Nunatak in 1966.

Glozhene Cove. 62°53' S, 62°19' W. A cove, 700 m wide, indenting the NW coast of Smith Island for 400 m, W of Cape Smith, in the South Shetlands. Mapped in 2008 by the Bulgarians, who named it on Aug. 12, 2008, after the town and monastery in northern Bulgaria.

[1]**Ozero Glubokoe** *see* **Profound Lake**

[2]**Ozero Glubokoe** *see* **Lake Glubokoye**

[3]**Ozero Glubokoe** *see* **Lake Henderson**

[4]**Ozero Glubokoe**. 70°46' S. 11°49' E. A lake in the E part of Russeskaget, in the Schirmacher Hills of Fimbulheimen, in Queen Maud Land. Named by the Russians (it means "deep lake"). The Norwegians call it Glubokoevatnet.

Glubokoevatnet *see* [3]**Ozero Glubokoe**

Lake Glubokoye. 67°40' S, 45°52' E. A small lake, just E of Lake Lagernoye and Molodezhnaya Station, in the Thala Hills of Enderby Land. Mapped by SovAE 1961-62, and named by them as Ozero Glubokoe (i.e., "deep lake"). Name also seen in the Russian-to-English transliteration as Ozero Glubokoye. ANCA translated the name to Lake Glubokoye, and US-ACAN accepted that name in 1971.

Ozero Glubokoye *see* **Ozero Glubokoe, Lake Glubokoye**

Gluck Peak. 71°44' S, 72°41' W. A rock peak rising to 335 m (the British say about 500 m), on the NW side of Boccherini Inlet, between the head of that inlet and the head of Weber Inlet, 11 km SSW of Mount Borodin, on Beethoven Peninsula, in the SW part of Alexander Island. Photographed aerially in Dec. 1947, by RARE 1947-48, and first mapped from these photos in 1959-60 by Searle of the FIDS, who plotted it in 71°39' S, 72°35' W. Named by UK-APC on March 2, 1961, for the Austrian composer Christoph Willibald Ritter von Gluck (1714-1787). US-ACAN accepted the name later in 1961, and it appeared on a 1962 U.S. Hydrographic Office chart. The coordinates were corrected from U.S. Landsat images taken in Jan. 1973, and with the new coordinates the peak appears in the 1977 British gazetteer.

Glückaufkette. 71°04' S, 165°30' E. The N crest of Vigil Spur, at the SW extremity of Mount Bolt, in the Anare Mountains. Named by the Germans.

Glufseufsa. 73°50' S, 4°23' W. An icefall, on the S side of Urfjelldokka Valley, in the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians ("the breeze bluff").

Lednik Gluhoj *see* **Glukhoy Glacier**

Glukhoy Glacier. 70°48' S, 67°46' E. Flows eastward for about 10 km between the Manning Massif and the McLeod Massif, terminating in the rock bluff of the latter massif about 2.5 km W of Radok Lake, in the Aramis Range of the Prince Charles Mountains. It appears on a Russian map of 1983, as Lednik Gluhoy, and this was translated by US-ACAN on Oct. 20, 2009.

Gluvreklett Glacier. 72°14' S, 2°35' E. Flows NW between Von Essen Mountain and Terningskarvet Mountain, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39,. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Gluvrekblettbreen, in association with Gluvrekeltten Peak. US-ACAN accepted the name Gluvreklett Glacier in 1966.

Gluvreklettbreen *see* **Gluvreklett Glacier**

Gluvrekletten *see* **Gluvrekletten Peak**

Gluvrekletten Peak. 72°12' S, 2°32' E. A rock peak rising to 2200 m, between Terningskarvet Mountain and Nupskammen Ridge, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Gluvrekletten. US-ACAN accepted the name Gluvrekletten Peak in 1966. "Kletten" is another Norwegian name for "the nunatak." The word "glyvere" (sic) means "ravine" (the letter "y" being pronounced like a German "ü," and so very similar to a "u").

Gora Glyba. 72°29' S, 68°44' E. A nunatak in the Lawson Hills, N of the Mawson Escarpment. Named by the Russians.

Nunatak Glyba. 70°57' S, 65°55' E. Just NW of Nunatak Chirikova, in the Prince Charles Mountains. Named by the Russians.

Gory Glybovye. 73°02' S, 66°09' E. A group of nunataks, W of Edwards Pillar, in the Prince Charles Mountains. Named by the Russians.

Gneiskolten *see* **Gneiskopf Peak**

Gneiskopf *see* **Gneiskopf Peak**

Gneiskopf Peak. 71°56' S, 12°07' E. Rising to 2930 m, 8 km SW of Mount Neustruyev, at the S end of the Südliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Gneiskopf (i.e., "gneiss peak"). US-ACAN accepted the name Gneiskopf Peak in 1970. The Norwegians call it Gneisskolten.

Gneiss Hills. 60°44' S, 45°39' W. Two prominent, flat-topped hills, rising to 270 m and 260 m respectively (the British say 255 and 240 m) on a N-S line, at the W side of McLeod Glacier, in the SW part of Signy Island, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1947 and 1949, and named by them in 1947 for the band of pink gneiss outcrops near the summits. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. The feature was photographed aerially by the RN in 1968. On Sept. 29, 2004, UK-APC gave the two hills individual names, North Gneiss and South Gneiss, but also retained the collective name.

Gneiss Lake. 60°44' S, 45°39' W. A small lake on the W side of the Gneiss Hills, at the W side of McLeod Glacier, in the S part of Signy Island, in the South Orkneys. Permanently ice-covered, it is visible only in summer when the ice melts at the perimeter. BAS conducted freshwater biological studies here from 1970. Named by UK-APC on Dec. 9, 1981, in association with the Gneiss Hills. US-ACAN accepted the name.

Gneiss Peak. 69°25' S, 76°05' E. A conical peak, rising steeply from its W coastal shoreline, about 1.7 km NW of Blundell Peak, in the Larsemann Hills. Named by ANCA on Nov. 24, 1987. The Chinese call it Song Shan.

Gneiss Point. 77°24' S, 163°44' E. A rocky point, 3 km N of Marble Point, on McMurdo Sound, 10 km N of Cape Bernacchi, along the coast of Victoria Land, just in front of Wilson Piedmont Glacier. Mapped by BAE 1910-13, and named by them for the gneissic granite here. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Gneistoppen *see* **Gneysovaya Peak**

The *Gnevnyy*. Russian fishery vessel which, while on a trip to the Ross Sea and the Bellingshausen Sea, put into Signy Island Station in 1964-65, carrying, among other passengers, Svetlana, the Russian movie star. Her husband, Alexei Nikolayevich Solyanik, was leader of the expedition, and Vladimir Karol was skipper of the ship. The vessel was back in Antarctic waters in 1966-67, in company with the *Obdorsk*, and visited Signy Island. *See* **Svetlana Passage**.

Gora Gneysovaja *see* **Gneysovaya Peak**

Gneysovaya Peak. 71°33' S, 12°10' E. Rising to 2050 m, between Krakken Mountain and Sandseten Mountain, in the Westliche Petermann Range of the Wohlthat Mountains, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and named Gora Gneysovaja (i.e., "gneiss mountain") by the USSR in 1966. US-ACAN accepted the name Gneysovaya Peak in 1970.

Mys Gnezdovoj *see* **Gnezdovoy Point**

Gnezdovoy Point. 67°39' S, 46°06' E. On Alasheyev Bight, 12 km E of Molodezhnaya Station, in Enderby Land. Named by the Russians as Mys Gnezdovoj. The name was translated into English by ANCA.

Mount Gniewek. 79°20' S, 158°57' E. A conspicuous, ice-covered, flat-topped mountain, rising to 2060 m, at the N end of Carlyon Glacier, 11 km SW of Mount Keltie. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1965, for John J. Gniewek, geomagnetician at Little America in 1958. ANCA accepted the name on Aug. 27, 1975.

Gniezno Glacier. 62°02' S, 58°07' W. Between Mount Hopeful and the nunatak the Poles call Newcomer, it is a tributary glacier to the Polonia Glacier, in the Arctowski Mountains, in the S part of King George Island, in the South Shetlands. Named by the Poles in 1981, for their oldest capital, Gniezno.

Gnome Island. 67°33' S, 66°50' W. A rocky island between the E end of Blaiklock Island and Thomson Head, near the head of Bourgeois Fjord, off the Loubet Coast, on the W coast of Graham Land. First surveyed by Fids from Base E in Nov. 1949, and named by them as Gnome Islet, because the shape of the feature reminded them of a small gnome coming out of the water. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears as such on a British chart of 1957. On July 7, 1959, UK-APC redefined it as Gnome Island, and US-ACAN followed suit in 1963. It appears as such on a British chart of 1961. The Argentines call it Islote Gnomo.

Gnome Islet *see* **Gnome Island**

Islote Gnomo *see* **Gnome Island**

Islote Gnomon *see* **Gnomon Island**

Gnomon Island. 61°06' S, 54°52' W. A small rocky island, rising to an elevation of about 85 m above sea level, just N of Point Wild, off the N coast of Elephant Island, in the South Shetlands. Charted by BITE 1914-17, and so named by them because, when seen from Point Wild, it looks like the elevated arm of a sundial. US-ACAN accepted the name in 1953. Both the Chileans and Argentines call it Islote Gnomon.

GO41 *see* **Radok Lake Automatic Weather Station**

Mount Goat *see* **Goat Mountain**

Goat Mountain. 77°55' S, 163°50' E. A prominent peak, rising to 1640 m (the New Zealanders say about 1767 m), W of Hobbs Glacier, between Hobbs Peak and Mount Kowalczyk, or, to put it another way, at the N end of the N-S section of the divide between Hobbs Glacier and Blue Glacier, in Victoria Land. Climbed and charted by VUWAE 1960-61, and so named by them because, from a distance, the silhouette of a balanced mass of gneiss protruding about 9 m above the general profile of the S slope of the mountain, reminds one of a goat. NZ-APC accepted the name, and US-ACAN followed suit in 1964. It is said that the Russians call it Mount Goat, and that may be.

Gobamme Rock. 68°22' S, 41°56' E. Also called Gobanme Rock. A bare rock exposure between Kozo Rock and Byobu Rock, on the Prince Olav Coast of Queen Maud Land, about 44 km E of Cape Omega. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-59, and named by them on Oct. 1, 1962, as Gobanme-iwa (i.e., "checkerboard rock"). In 1968, US-ACAN accepted the name Gobamme Rock (presumably because it is more euphonious to western ears than Gobanme). The Norwegians call it Ruteknausen (which means "square rock").

Gobanme-iwa *see* **Gobamme Rock**

Gobanme Rock *see* **Gobamme Rock**

Gobart, Charles. Petty officer, RN, and assistant steward on the *William Scoresby*, 1927-30.

Islas Gobernador *see* **Governor Islands**

The *Gobernador Bories*. Originally a British freighter named the *Wordsworth*, she was bought by the Chileans, and converted in 1905-06 into a 2332-ton whaling factory ship, managed by Adolf Amandus Andresen's company, the Sociedad Ballenera de Magallanes, and based out of Deception Island in 1906-07, under the management of Capt. A. Nilsen (Andresen's cousin). Theodore Stolhani was actual skipper of the ship. She had two whale catchers — the *Almirante Valenzuela* and the *Almirante Uribe*, as well as the transport vessel *Cornelia Jacoba*. She was the first whaler to use Whalers Bay, on Deception Island, as a base for processing whales. She was back in 1907-08, again under Nilsen and Stolhani, and was moored at Deception Island, certainly between Jan. 23 and Feb. 11, 1908. She was back in 1908-09 and 1909-10, both seasons again under Nilsen and Stolhani. Erling Malver was the young medical officer aboard on these last two trips. The *Bories* (as she was generally called) remained based out of Deception Island even after Andresen left the Sociedad in 1912, and was condemned at the end of the 1913-14 season, but remained afloat. To replace her, the Sociedad bought the Harrison Line ship *Senator* in 1914, renamed her *Gobernador Bories*, and was in the process of having her converted in Europe into a whaling factory ship when World War I broke out. So, the company lost the use of their new ship, and, in desperate financial trouble, was forced to charter Haldor Virik's whaler *Normanna*, for the 1914-15 whaling season in Antarctica. When the Sociedad wound up, in 1916, the new *Gobernador Bories* was sold to an American company, and most of her catchers went to a European buyer.

Mount Gobey. 72°58' S, 165°15' E. Rising to 3125 m, it is the highest mountain in the Retreat Hills, at the S margin of Evans Névé. Climbed on Dec. 26, 1966, by the Northern Party of NZGSAE 1966-67, who named it for the party's field assistant, David W. Gobey. NZ-APC accepted the name, and US-ACAN followed suit in 1968.

Goblin Col. 62°40' S, 61°11' W. At the W extremity of the N side of Lucifer Crags, on Livingston Island, in the South Shetlands. Named by UK-APC on Dec. 2, 1993, in association with Devils Point, which lies about 600 m to the SSW. The UK plotted this feature in late 2008.

Göckel, Wilhelm. Meteorological assistant on GermAE 1938-39.

Gockel Ridge. 72°42' S, 0°12' E. Extends from Alan Peak to Nupskåpa Peak, at the S end of the Sverdrup Mountains. Discovered by GermAE 1938-39, and named by Ritscher as Göckel-Kamm, for Wilhelm Göckel. This may or may not be the ridge Ritscher saw, but it is close, and preserves his naming. The name was later translated into English, but seems to have lost its umlaut along the way. US-ACAN accepted the translated name in 1970.

Göckel-Kamm *see* **Gockel Ridge**

Cerro Goddard *see* **Bynon Hill**

Goddard, Herbert Victor. b. 1898, Tasmania. On Nov. 19, 1913, he signed on to the

Aurora, as 2nd steward, at £6 10 s per month, for the 3rd and last voyage south during AAE 1911-14. He left the expedition on March 19, 1914, with a bonus of £5. It was his only sea trip. He later became a coach builder in Hobart, and married Kathleen Miriam Rose. He died in 1960. His diary of the *Aurora* expedition came to light years later.

Goddard, Samuel H. b. Connecticut. First mate on the *Huron*, 1820-21. He was probably one of the first to make a landing on the Antarctic continent (*see* **Landings**).

Goddard Hill *see* **Bynon Hill**

Godech Nunatak. 62°38' S, 60°03' W. A rocky peak, rising to 410 m, 640 m W of Cherepish Ridge, 2 km E of Kukeri Nunataks, and 4.2 km SE of Atanasoff Nunatak, in the lower part of Huron Glacier, Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the town of Godech, in western Bulgaria.

Godel Bay *see* **Godel Iceport**

Godel Iceport. 70°09' S, 21°45' E. A more-or-less permanent bay, about 8 km wide, indenting for 4 km the seaward front of the extensive ice shelf fringing the W part of the Princess Ragnhild Coast of Queen Maud Land. Discovered on March 26, 1956, by the *Glacier*, during their running survey along the coast, and named by them as Godel Bay, for William H. Godel, deputy director of the the Navy's Office of Special Operations, who assisted in forming expedition plans and policy. It was later re-defined, and US-ACAN accepted the name Godel Iceport. The Norwegians call it Godelbukta.

Godelbukta *see* **Godel Iceport**

Godfrey Upland. 68°44' S, 66°23' W. A small remnant plateau, with an undulating surface, it rises to about 1750 m, but has a mean elevation of 1500 m above sea level, and is bounded by Clarke Glacier (to the S), Meridian Glacier (to the W), Lammers Glacier (to the N), and Cole Glacier (to the E), on the Fallières Coast, on the W coast of Graham Land. In Jan. 1941, Finn Ronne and Carl Eklund traveled along Lammers and Meridian, and thus knew of the upland. It was partially photographed aerially on Nov. 27, 1947, during RARE 1947-48, and surveyed from the ground by Fids from Base E between 1958 and 1960. Named by UK-APC on Aug. 31, 1962, for Thomas Godfrey (1704-1749), American inventor of the quadrant in 1730. US-ACAN accepted the name later in 1962.

Point(e) Godfroy *see* **Godfroy Point**

Punta Godfroy *see* **Godfroy Point**

Godfroy, René-Émile. b. Jan. 10, 1885, Paris. After Naval College, he served on a number of ships until he became, while still an ensign, a member of the crew of the *Pourquoi Pas?*, during FRAE 1908-10. He was also a scientist, an atmospheric chemist, and worked on coastal hydrography and tidal observations. In 1936 he became a rear admiral, and, during World War II, in 1940, he surrendered his Force X squadron to the British at Alexandria, and the next month became a vice admiral. He wrote a book about Force X. He died on Jan. 16, 1981, in Fréjus, France.

Godfroy Point. 65°10' S, 64°10' W. Marks the N extremity of Petermann Island, in the Wilhlem Archipelago, off the Graham Coast, on the W coast of Graham Land. Discovered and charted in 1909, by FrAE 1908-10, and named by Charcot as Pointe Godfroy, for René-Émile Godfroy (q.v.), who made a sketch survey of the area. It appears as such on Charcot's 1912 map. It appears as Point Godfroy on a 1943 U.S. Hydrographic Office chart. It appears on a 1949 Argentine chart as Punta Godfroy, and that was the name accepted by the 1970 Argentine gazetteer. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Godfroy Point on July 7, 1959, and it appears as such on a 1963 U.S. Hydrographic Office chart. US-ACAN accepted that name in 1971.

Godwin Cliffs. 62°08' S, 58°10' W. A prominent group of cliffs facing NNE, and extending WNW-ESE for about 1 km, S of Flabellum Bastion, on King George Island, in the South Shetlands. Named by UK-APC on April 23, 1998, for British botanist Harry Godwin (1901-1985; knighted in 1970), from 1945 a fellow of the Royal Society, professor of botany at Cambridge, 1960-68, and reader in Quaternary research, 1948-66. He wrote *The History of the British Flora*. The British plotted this feature in late 2008.

Godwit Glacier. 77°36' S, 162°12' E. Flowing down the E side of Mount Holm-Hansen, in the Asgard Range of Victoria Land. Named by NZ-APC on Oct. 7, 1998. US-ACAN accepted the name in 1999.

Goeldi Refugio *see* **Emilio Goeldi Refugio**

Goepfert Bluff. 74°38' S, 110°19' W. At the E end of Grimes Ridge, on Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from USN air photos taken in 1966. Named by US-ACAN in 1977, for Eric R. Goepfert, USN, officer-in-charge of the NSFA detachment at McMurdo in the winter of 1976.

Goetel Glacier. 62°04' S, 58°19' W. A large glacier between Ullman Spur and Precious Peaks, it flows S from the Arctowski Icefield into Martel Inlet, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for Walery Goetel (1889-1972), Polish geologist and conservationist. UK-APC accepted the name on July 8, 2003, and US-ACAN followed suit that year. The British plotted this feature in late 2008.

Goetschy Island. 64°52' S, 63°31' W. A low, rocky island near the middle of Peltier Channel, in the Palmer Archipelago. Charted by FrAE 1903-05, and named by Charcot as Îlot Goetschy, for Gustave Goetschy (1847-1902), journalist, art critic, manager of *Paris-Noël*, and friend of the Charcot family. On one of the English language translations of Charcot's map, it appears as Goetschy Islet. It was further charted on Jan. 25, 1935, by BGLE 1934-37, who, unaware that Charcot had already named it, named it Priest Island, because W.L.S. Fleming, a member of the expedition (and a priest) made the first recorded landing on the island. It appears as such on Rymill's 1938 map of that expedition. It was surveyed by Fids from Port Lockroy Station in 1948. UK-APC accepted the name Priest Island on Sept. 8, 1953, and it appears as such in the 1955 British gazetteer, and also on a British chart of 1960. US-ACAN accepted the name Goetschy Island in 1965. It appears on a 1962 Chilean chart as Islote Priest, and that was the name accepted by the Chilean gazetteer of 1974. It appears on a 1953 Argentine chart as Islote Grillete ("grillete" meaning "shackle"; the name is descriptive of its shape), and that was the name accepted by the Argentine gazetteer of 1970.

Goetschy Islet *see* **Goetschy Island**

Goettel Escarpment. 70°14' S, 66°55' W. A prominent escarpment, rising to about 1500 m, buttressing the Dyer Plateau, 8 km N of the Orion Massif, near the head of Chapman Glacier, in Palmer Land, at George VI Sound. Surveyed by BAS between 1962 and 1972. Named by US-ACAN in 1976, for Capt. Frederick A. Goettel, U.S. Coast Guard, commander of the *Westwind* while the new Palmer Station was being built during OpDF 67 (i.e., 1966-67). UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Picos Goff *see* **Picos Faverio**

Goff Glacier. 72°14' S, 97°26' W. A broad glacier flowing from Parker Peak into the head of Koether Inlet, on the N side of Thurston Island. Named by US-ACAN in 2003, for Lt. (jg) (later Lt. Cdr.) Robert G. Goff, USN, co-pilot of planes off the *Pine Island* during OpHJ 1946-47. He was in the plane that found the survivors of the crashed Martin Mariner during that expedition.

Gora Gogolja *see* **Winsnesfjellet**

Goguet, Jean-Baptiste-Édouard. b. Feb. 12, 1809, Le Havre. Able seaman on the *Zélée* during FrAE 1837-40. He died on board on Nov. 17, 1839.

Golborne, Barry Lister. b. Dec. 29, 1929, Birkenhead, Cheshire, son of Norman Lister Golborne and his wife Kathleen Florence Modridge. He joined FIDS in 1952, as a diesel electric mechanic. He was going to winter-over at Base B in 1953, but the engines there were horribly difficult, water-cooled (of all things, in Antarctica!), and had to be ignited with ether. It was very complex, and stressful to work on, and Golborne didn't have the necessary skills. It was decided, from Port Stanley, that Golborne would go to Base G for the winter of 1953, and that Arthur Farrant would winter-over again at Base B, as engineer (there was another reason for this, for which see Farrant's entry). Golborne stayed on at Base G for the winter of 1954, and, when his tour was up, he returned to Port Stanley, then on to Montevideo, where he caught the *Argentina Star* bound for London, in company with John Standring, Mike Faulkner, and Ron Mottershead. They arrived in London on Feb. 15, 1955. He was back in Antarctica again, at Port Lockroy Station, coming in on the *Shackleton*, for the winter of 1956. That year he kept falling

in the water, and even set his beard on fire. He died in Sutton Coldfield, near Birmingham, in 1967, aged 37.

Gora Gol'covaja *see* **Corry Massif**

Gold. Has been found in Antarctica.

The *Gold Ranger*. A 3313-ton, 355-foot 4-inch British Royal Fleet auxiliary tanker, capable of 13.5 knots, launched on March 12, 1941, for service in World War II. In 1949, while under the command of Captain W.R. Parker, she was loaned by the Admiralty to FIDS, at Deception Island, 1949-50, in company with the *Bigbury Bay*, to help extricate Fuchs and his men, who were trapped on Stonington Island. She later served in the Korean War, and in Indonesia. She was sold in March 1973.

Golden Cap. 84°20' S, 164°26' E. A peak, rising to 2870 m, the highest point on the ridge running NW from Mount Falla, about midway between that mountain and Fremouw Peak, in the Queen Alexandra Range. So named by the Ohio State University party to the Queen Alexandra Range in 1966-67, because the peak consists mainly of a buff-weathering massive sandstone. US-ACAN accepted the name in 1968.

The *Golden Fleece*. British 10-passenger yacht, registered in the Falklands, skippered by Dutch woman Eef Willems, which carried tourists to the South Shetlands and the Antarctic peninsula in 1996-97. The vessel was back, under Jérôme Poncet, in 1997-98, 1998-99 and 1999-2000. In 2000-01 and 2001-02, M. Poncet was accompanied by his son, Dion Michael.

Golden Pass. 69°23' S, 70°47' W. A snow pass, at an elevation of about 1250 m, on the N side of Care Heights, in the Rouen Mountains, in the N part of Alexander Island. So named by UK-APC on Dec. 8, 1977, from the color of the granite outcrops on either side of the pass, as reported by BAS parties who have been surveying here from 1968. It appears in the 1980 British gazetteer. US-ACAN accepted the name.

The *Golden Princess*. A 109,000-ton tourist vessel, built in 1991, run by Princess Cruises (of California), and launched by actress Jane Seymour. The monstrous ocean liner, sister ship to the *Grand Princess*, was not ice-strengthened, nevertheless she first entered Antarctic waters in Jan. 2007, the largest ship ever to do so. This caused concern and controversy because, with a crew of 1100 or so, and 2425 passengers, if anything went wrong, it was too many people to rescue.

The *Golden West*. This New London sealing schooner was at the Kerguélens (not in Antarctica) under Capt. Simeon Church in 1865-68, and again under Church in the same place in 1868-71. Ben Rogers was her skipper in 1871-72, in the South Shetlands, and again in 1872-73. The vessel was again in the South Shetlands in 1873-74, leaving New London on July 23, 1873, under the command of Captain John L. Williams. The crew for this trip was: Erastus Church, Jr. (1st mate), James Randall (2nd mate), Gilbert W. Barnes, John Gomes (swarthy), Antone Pedro, James P. Sharp, John Coyle, José Ferrin, Antone Gomes (black), John De Pena, Manuel José, John Gomes, Jr., Manuel Ferreira, Claudius De Pena, Joaquim Baptista, Anicitro Galemte (black), Michael Delgardo, Charles Schawre (mulatto), and Thomas Snape. Williams took her down to the South Shetlands again in 1874-75, with Charles N. Rogers (1st mate), John E. Bryant (2nd mate), Joseph Ridington, Antone Pedro, John Gomes, Fidel Bernardo (black), Lebon Gomes (black), Kiding De Long (black; he ran), John De Gras (black), Anicitro Galemte (black), Philip Gomes (black), Henry A. Story, Ernest Wallace, E.E. O'Brien, Timothy O'Connell, Julius Kuhlemann, Henry Berliner, and Joseph Dellman. On June 30, 1875, the *Golden West* sailed from New London, under Capt. Williams, bound for the South Shetlands for the 1875-76 season. In 1876-77 the *Golden West* was back at the Kerguélens, again under Williams, and also at the Falklands, South Georgia, and the South Sandwich Islands, but not in Antarctica, as such. In 1877-78 James Holmes was her skipper in the South Atlantic (including a visit to South Georgia; Mortimer Cassidy was 2nd mate on that trip; he had been in Antarctic waters on the *Franklin*, in 1871-72), and in 1878-79, at Bouvet Island (not in Antarctica), she was under the command of Capt. Walter Chesebro. She arrived back in New London in 1880.

Goldenberg Ridge. 66°28' S, 110°35' E. A linear rocky eminence running in a NW-SE direction for 1.3 km along the E side of Browning Peninsula, at the S end of the Windmill Islands. First mapped from air photos taken in 1947 by OpHJ 1946-47 and in 1948 by OpW 1947-48. Named by US-ACAN in 1963, for Burton D. Goldenberg, meteorologist at Wilkes Station in 1962. ANCA accepted the name on Oct. 6, 2008.

Goldich Crest. 77°29' S, 161°40' E. A peak, rising to 1700 m, between Mount Jason and Bull Pass, in the Olympus Range, in the McMurdo Dry Valleys of Victoria Land. Gonzalez Spur extends ESE from this peak. Named by US-ACAN in 2004, for petrologist Samuel Stephen "Sam" Goldich (b. Jan. 17, 1909, Grand Forks, ND. d. Dec. 20, 2000, Washington, DC), with USGS from 1959, and professor of geology at Penn State and later Northern Illinois University. He took part in the McMurdo Dry Valleys Drilling Project, 1973-76. NZ-APC accepted the name on Nov. 30, 2004.

Cape Goldie. 82°38' S, 165°54' E. A snow-covered cape at the S side of the mouth of Robb Glacier, about 22 km SE of Cape Lyttelton, and 80 km to the W of the foot of the Beardmore Glacier, it projects into the W side of the Ross Ice Shelf from the W end of the Holland Range. Discovered by Scott in 1902, on his way to the Pole, during BNAE 1901-04, and named by him for George Taubman Goldie (1846-1925; knighted in 1897), one of the 4 members of the committee which made the final draft of the instructions for the expedition. US-ACAN accepted the name, and it appears in the 1958 NZ gazetteer. George Goldie, who would become president of the Royal Geographical Society in 1905, was, with Lord Lugard, one of the 2 greatest figures in Nigerian colonial history.

Goldman Glacier. 77°42' S, 162°51' E. A small glacier, 3 km E of Marr Glacier, flowing N from the Kukri Hills into Taylor Valley, in Victoria Land. Named by US-ACAN in 1964, for Charles R. Goldman, USARP biologist who made studies in this area in 1962-63. NZ-APC accepted the name.

Mount Goldring. 66°57' S, 66°01' W. A peak rising to about 1280 m on the NE side of Murphy Glacier, to the E of Lallemand Fjord, on the Loubet Coast of Graham Land. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Denis Goldring. US-ACAN accepted the name in 1965.

Goldring, Denis Charles. b. June 30, 1932, Brentford, Mdsx, son of Alfred Charles Goldring and his wife Ethel Elizabeth P. Case. He got his PhD from Bristol University in 1956, and was recruited from there by Ray Priestley as FIDS geologist. Ray Adie conducted the first interview, and Johnny Green the second. "Can you cook? Do you like dogs?" No, to both questions, so it was a surprise when he got the job. He sailed from Southampton on the brand new *John Biscoe* (the paint was still wet in the closets), to Montevideo, then on to Port Stanley by Christmas. There wasn't much of a stopover at Stanley because the Duke of Edinburgh was arriving soon, on a tour of the Antarctic bases, so they shipped down almost immediately to Base N, where geologist Peter Hooper was working, and so Goldring spent Jan. 1957 there, with Hooper, and met the Duke when he arrived early that month. Ray Adie had scheduled Goldring to be there for the 1957 winter, but Hooper had done all the geological work there was to be done, so, instead, Goldring went to Base W for the winters of 1957 and 1958. *See* **Madell, James**, for the 7 months at View Point. *See* **Base W**, for the way the lads were evacuated in March and April 1959. On the way back to the UK, the *Shackleton* stopped briefly at Tristan da Cunha, so that, together with Graham Hobbs, he could collect some paleomagnetic specimens requested by the London office. He returned to the UK in May 1959, and continued to work for FIDS, at their Geology Unit within the department of geography and geophysics at Birmingham University. He carried out additional petrological work, and completed the scientific report (Report #36) on the geology of the Loubet Coast. He left FIDS on Sept. 30, 1960, to take up an appointment as petrologist in the research & development department of United Steel Companies, at Rotherham, Yorks. Subsequently he became manager of the mineral resources department, research and development, British Steel Corp., at Teesside, and, after retiring in 1992, as a consultant.

Goldring Glacier *see* **Murphy Glacier**

Puerto Goldriz *see* **Inverleith Harbor**

Cape Goldschmidt. 80°41' S, 161°12' E. A low, ice-covered cape immediately S of Couzens Bay, it forms the E tip of Nicholson Peninsula, at the W side of the Ross Ice Shelf. Named by

the Northern Party of NZGSAE 1960-61, for Donald Riddel "Don" Goldschmidt, a member of NZGSAE 1959-60 and NZGSAE 1960-61, both of which mapped this area. NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit in 1966.

Goldschmidt Cirque. 80°44' S, 22°48' W. At the W side of Trueman Terraces, in the E portion of the Read Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, surveyed from the ground by BAS personnel from Halley Bay Station, 1968-71, and mapped by USGS from these efforts. Named by UK-APC on Jan. 5, 1972, for Victor Moritz Goldschmidt (1888-1947), Norwegian geochemist and pioneer in the field of crystal chemistry. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Goldsmith, Rainer "Rhino." b. Dec. 25, 1927, Leipzig. After Cambridge and Barts, he qualified as a doctor, and served as a captain in the RAMC for his national service, 1953-55. He was working as a medical officer for the P & O Line in 1955 when he applied to join BCTAE 1955-58. He left London on the *Theron*, on Nov. 14, 1955, bound for Montevideo and South Georgia, as medical officer of the advance party during the early (1956-57) part of Fuchs' crossing of the continent during BCTAE, and as such was one of the eight men who wintered-over in unbelievable conditions at Shackleton Base (q.v.). He was also the dentist, as well as being vet for the huskies. It was based on his diary that the book *Eight Men in a Crate* was written. He returned home in March 1957. He was with OpDF in 1959-60, and was a member of the International Biomedical Expedition of 1980. He was professor of physiology at Chelsea College, University of London, and later at Loughborough.

Goldsmith Glacier. 78°56' S, 27°42' W. Flows WNW through the Theron Mountains, 10 km S of Tailend Nunatak. First surveyed and mapped by BCTAE 1956-57, and named by them for Rainer Goldsmith. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year.

Goldstream Peak. 86°41' S, 148°30' W. Rising to about 2800 m at the junction of ridges from Mount Gjertsen, Mount Grier, and Johansen Peak, in the La Gorce Mountains, in the Queen Maud Mountains. Geologically mapped by a USARP-Arizona State University field party, 1980-81, and named by Ed Stump, leader of the party. The name derives from a contact between shallow intrusions on the W face of the peak, which has produced gold, yellow, and brown coloration among a meandering line. US-ACAN accepted the name.

Goldsworthy Ridge. 67°41' S, 63°03' E. Runs N from Mount Henderson, in the NE part of the Framnes Mountains of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped (but not named) from these photos by Norwegian cartographers in 1946. Named by ANCA for Robert W. "Bob" Goldsworthy, survey field assistant with the *Nella Dan* ANARE party of 1962. A high point on this ridge was used as a tellurometer station by surveyor Dave Carstens during that expedition. Bob Goldsworthy later (i.e., in 1982) wintered-over at Casey Station. US-ACAN accepted the name in 1965.

Mount Goldthwait. 77°59' S, 86°03' W. A prominent mountain rising to 3815 m, 4 km S of Mount Dalrymple, in the Sentinel Range of the Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse Party of 1957-58, and named by the leader of the party, Charles Bentley, for Richard Parker Goldthwait (1911-1992), consultant on the Technical Panel on Glaciology, U.S. National IGY Committee. US-ACAN accepted the name in 1960. Mr. Goldthwait was later director of the Institute of Polar Studies, at Ohio State University.

Golesh Bluff. 63°49' S, 58°53' W. An ice-covered bluff rising to about 1400 m on the N side of the Detroit Plateau, 13.27 km ESE of Poynter Hill, 6.37 km SSE of the Aureole Hills, 11.7 km SW of Skoparnik Bluff, and 9.58 km W of Darzalas Peak, on Trinity Peninsula. Its precipitous W slopes surmount a tributary glacier that flows northwestward into Pettus Glacier. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Golesh, in northeastern Bulgaria.

Golf. Not surprisingly, this pastime has been indulged in with almost as much frequency in Antarctica as in North Carolina — well, perhaps not quite, but the object here is to drive home the point that a global obsession is, after all, a global obsession.

Podlëdnye Gory Golicyna. 69°00' S, 95°00' E. A basin, NW of Pionerskaya Station, in the Larsemann Hills. Named by the Russians.

Playa Golondrina. 62°28' S, 60°48' W. A beach N of Punta Las Torres, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno, during ChilAE 1990-91, because between the rocks on this beach the terns nest. The word "golondrina" means "swallow," but "golondrina de mar," also known as "charrán," is a tern.

Gora Golovnina *see* **Mount Ronne**

Golton, David Jules "Dave." b. March 28, 1927, Barnet, Herts, son of Henry Jules Golton and his wife Etheldreda Moran. He joined FIDS as a meteorological assistant in 1947, and wintered-over at Base F in 1948. He looked after the dogs at the base, and also when they got back to England. In Jan. 1949, at Base F, he fell while bringing in a bag of coal from outside, and hit his head, knocking himself unconscious. In 1953, in Sutton, Surrey, he married Joan M. Seal. He died on Dec. 31, 2001, in Sutton, survived by his wife.

Bukhta Golubaja *see* **Golubaya Bay**

Golubaya Bay. 69°58' S, 9°50' E. In the SE extremity of Kamenev Bight, along the ice shelf fronting Queen Maud Land. Photographed aerially by NorAE 1958-59, and mapped from these photos. Re-mapped by the USSR in 1961, named by them as Bukhta Golubaja (i.e., "azure bay"), and plotted in 69°56' S, 9°45' E. It was later replotted. US-ACAN accepted the name Golubaya Bay in 1970.

Golubiew Glacier. 62°03' S, 58°14' W. Between Rose Peak and Dobrowolski Peak, it flows into the Polonia Glacier, in the Arctowski Mountains, on King George Island, in the South Shetlands. Named by the Poles in 1981, for writer Antoni Golubiew (1907-1979).

Laguna Golyamata *see* **Grand Lagoon**

Ostrov Golyj *see* **Birkenhauer Island**

Gora Golysheva. 71°37' S, 12°13' E. A peak. Named by the Russians. It would seem that is one of the Gråhorna Peaks, 8 km W of Store Svarthorn Peak, in the Wohlthat Mountains of Queen Maud Land. If so, it is the only named peak in this cluster.

Islote Gómez. 62°54' S, 58°58' W. A little island N of Bulnes Island, NW of Cape Legoupil, in the Duroch Islands, off Trinity Peninsula, on the W side of the Antarctic Peninsula. Named by ChilAE 1947-48, for Chilean Army general Teófilo Gómez Vera.

Monte Gómez *see* **Buddington Peak**

Gomez Nunatak. 73°57' S, 68°38' W. An isolated nunatak, rising to about 1550 m, 60 km SW of Mount Vang, and surmounting the interior ice plateau near the base of the Antarctic Peninsula, SE of the English Coast. Surveyed from the ground by the Antarctic Peninsula Traverse of 1961-62, photographed aerially by USN between 1965 and 1967, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for José M. Gomez, USN, construction mechanic who wintered-over at Pole Station in 1961 (the first Hispanic-American to do so), and at Eights Station in 1965. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Gommen *see* **Gommen Valley**

Gommen Valley. 73°53' S, 5°17' W. An ice-filled depression between Tunga Spur and Kuven Hill, in Uhligberga, in the NE part of the Urfjell Cliffs, near the SW end of Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegians cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Gommen (i.e., "the gum"). US-ACAN accepted the name Gommen Valley in 1966.

Gora Goncharova. 72°15' S, 25°07' E. A nunatak, SE of Mefjell Mountain, in the Sør Rondane Mountains. Named by the Russians.

Gondoin, Constant. b. Jan. 15, 1820, Caen. He joined the *Zélée* as a junior seaman, at Hobart, on Dec. 13, 1839, during FrAE 1837-40.

Mount Gondola *see* **Mount Suess**

Gondola Mountain *see* **Mount Suess**

Gondola Nunakol *see* **Gondola Ridge**

Gondola Ridge. 77°01' S, 161°45' E. A high, rocky ridge, at an elevation of about 550 m, just S of Mackay Glacier, and extending for about 6 km (the New Zealanders say 3 km) north-northeastward from Mount Suess, in southern Victoria Land. Charted in Dec. 1911, by the Western Ge-

ological Party of BAE 1910-13, and so named by Grif Taylor (at the suggestion of Frank Debenham) because Mount Suess (which they had intended to call Gondola Mountain, or Mount Gondola) looks like a gondola in shape. US-ACAN accepted the name in 1952, and NZ-APC followed suit. It seems to be the same feature as Gondola Nunakol, a name in use before World War II.

The *Gondwana*. Built for Norwegian owners by D.W. Kremer in 1975, as the tug *Gorm Viking*. In 1987, she was sold to a Finnish company, and became the *Viking*. Subsequently, she was acquired by Greenpeace, and became the 61.17-meter *Gondwana*, based out of Amsterdam, and was the organization's third ship, which, as replacement for the *Greenpeace*, began operations in 1988-89 (skipper was Capt. Arne Jacob Sørensen). The ship and skipper Sørensen were back in Antarctic waters in 1989-90, 1990-91, 1991-92, and 1992-93. She was replaced by the old *Greenpeace* for 1994-95.

Lago Gondwana. 74°37' S, 164°13' E. A lake, measuring 135 m by 100m, at an altitude of 86 m above sea level, and with seasonal ice covering, 4.9 km E of Mount Browning, and 9.5 km NNE of Mario Zucchelli Station, at Terra Nova Bay, Victoria Land. Surveyed by Vittorio Libera, during ItAE 1988-89. Named by the Italians on July 17, 1997, after the nearby German station Gondwana.

Gondwana Province *see* **East Antarctica**

Gondwana Station. 74°38' S, 164°13' E. West German summer station opened in Jan. 1983, during GANOVEX III, at Terra Nova Bay, on the Pennell Coast, near Mount Melbourne. It was open again in 1984-85, and then most seasons until 2004-05.

Gondwanaland. Cartographer Abraham Ortelius (1527-1598) may have been the first to notice that the continents of the world, if they could be moved around as jigsaw pieces, would fit together to make a whole. Francis Bacon (1561-1626) noticed the same thing, as did Benjamin Franklin (1706-1790). In 1858 French geographer Antonio Snider-Pellegrini wrote a book called *La création et ses mystères dévoilés* (*Creation and its Mysteries Unveiled*), in which he proposed that all the continents were joined together about 300 million years ago, but that the Great Flood of the Bible had caused them to drift apart. He based his theory on his earlier discovery of identical fossil plants in the USA and Europe. In 1889 and again in 1909 Italian geologist Roberto Mantovani (1854-1933) proposed continental drift, i.e., continents breaking away from a massive parent. In the 1890s Eduard Suess, an Austrian geologist, coined the term Gondwanaland, naming it for the Gondwana region of India, whose coast seems to fit into the Antarctic coastline. However, the scientific world of the time explained this away by land bridges, i.e., animals and plants migrated across land bridges that are no longer there. In 1908 Frank Bursley-Taylor (1860-1938) also proposed continental drift. All of these geologists came up with different causes to explain the drift. In 1912 Alfred Wegener, in his 1915 book, *The Origin of Continents and Oceans*, proposed an original continent (which he later called Pangaea), and that about 190 million years ago Pangaea split up into two — Laurasia and Gondwanaland, and that Gondwanaland itself split up about 120 million years ago into what are now Africa, Arabia, Madagascar, India, South America, Oceania (Australia, New Zealand, and New Guinea), and Antarctica. The theory became known as "continental drift," and although it was rejected by the scientific world until 1967, when Peter Barrett dug up his labyrinthodont, it did lead to the science of tectonics. Countries hold Gondwana symposiums.

Gongzhu Hu. 69°24' S, 76°06' E. A lake in the Larsemann Hills. Named by the Chinese.

Gonville and Caius Range. 77°07' S, 162°15' E. A series of snow-covered peaks, rising to elevations of between 900 m and 1200 m, forming the S wall of the Mackay Glacier basin for a distance of about 16 km, and bounded on the other side by Debenham Glacier, in Victoria Land. The 2 significan peaks in this range are Mount Mahoney and Mount Parker. Mapped by BAE 1910-13, and named for the Cambridge college (pronounced "Gunville an' Keys"), at which several members of the expedition had studied. US-ACAN accepted the name, and NZ-APC followed suit.

Bahía González *see* **Bahía Cordovez**

Caleta González. 63°55' S, 58°15' W. A cove, bounded on the W by Lagrelius Point, on the NW side of James Ross Island. Named by the Argentines.

Isla González *see* **González Island**

Islote González *see* **González Island**

Mount González. 77°11' S, 144°33' W. A prominent mountain, 1.5 km E of Asman Ridge, in the Sarnoff Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41, and by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Óscar González-Ferrán, University of Chile geologist on the USARP Marie Byrd Land Survey II, 1967-68. *See also* **Gonzalez Harbour** (sic).

Tenedero González *see* **González Anchorage**

González, Carlos Roberto *see* **Órcadas Station**, 1948

Gonzalez, Domingo *see* **USEE 1838-42**

González, Eulogio *see* **Órcadas Station**, 1941

Montaña González Albarracín *see* **Mount Brading**

González Anchorage. 63°19' S, 57°56' W. On the W side of Kopaitic Island, in Covadonga Harbor, in the Duroch Islands, about 1.5 km W of the extreme N of Cape Legoupil, on the W coast of the Antarctic Peninsula. Charted by ChilAE 1947-48, which named it Tenedero Comdte. González Navarrete, for Capt. Ernesto González Navarrete (see below), commander of the expedition. However, the name being too long, it was shortened in 1951 to Tenedero González Navarrete, and in 1959 to Tenedero González. US-ACAN accepted the English translation in 1964. "Tenedero" is one of the names the Spanish use for "anchorage."

Gonzalez Harbour. 62°56' S, 60°42' W. A small cove at the W side of Telefon Bay, Deception Island, in the South Shetlands, it consists of several linked explosion craters flooded by the sea. Named by the Poles on Sept. 1, 1999, for Óscar González-Ferrán (*see* **Mount González**), author of several papers on the evolution of the volcano on Deception Island. Of course, the name González should have an accent mark.

González Island. 62°29' S, 59°40' W. A small island, about 340 m long by about 170 m wide, on the S side of the entrance to Iquique Cove, Discovery Bay, Greenwich Island, in the South Shetlands. On the W side it is linked to a smaller island by a spit covered at high tide. Charted by ChilAE 1946-47, and named by them as Isla Bascopé, for Juan Bascopé Guzmán (*see* **Point Bascopé**). The following expedition, ChilAE 1947-48, changed the name to Isla Comdte. González (short for Isla Comandante González), named for Capt. Ernesto González Navarrete (see the entry below). However, by 1951, it appears on a Chilean chart in the shortened form Isla González. The island was re-surveyed by an RN Hydrographic Survey unit on the *Protector*, in 1963-64, and it appears as Gonzalez Island (i.e., without the accent) on their 1965 chart, as well as on a 1968 British chart. There is also a 1966 Chilean reference to it as Islote Gozález. US-ACAN accepted the name González Island in 1966. Without the accent, that name was accepted by UK-APC on Dec. 20, 1974. The Chilean gazetteer of 1974, after rejecting the possibility of Isla Comandante Gozález, accepted the name Isla González. Finally, on Nov. 13, 1986, UK-APC accepted the accent. The British were the last to plot this feature, in late 2008.

González Navarrete, Ernesto. Chilean capitán de fragata (frigate captain, so to speak), skipper of the *Iquique* during ChilAE 1946-47, led by Guesalaga Toro. Don Ernesto was leader of ChilAE 1947-48.

Bahía González Pacheco *see* **Azure Cove**

Gonzalez Point. 62°06' S, 57°56' W. The NW tip of Penguin Island, in the South Shetlands. Named by the Poles on Sept. 1, 1999, for Óscar González-Ferrán (*see* **Mount González**, and **Gonzalez Harbour**). He and Yoshio Katsui made the first geological map of the Penguin Island volcano. The same remark about accent marks needs to be made here as was made under the entry Gonzalez Harbour.

Gonzalez Spur. 77°30' S, 161°45' E. A prominent rock spur, 4 km long, extending ESE from the 1700-meter-high Goldich Crest, in the Olympus Range, in the McMurdo Dry Valleys in Victoria Land. The spur descends to 500 m at the E extremity, where it overhangs Wright Valley and forms the W side of the S entrance to the higher Bull Pass. Named by US-ACAN in 2004, for Angel Gonzalez, manager of the U.S. Antarctic Resource Center at USGS, from 1996. NZ-APC accepted the name on Nov. 30, 2004. Note: No accent needed, as Mr. Gonzalez was from the USA.

González Videla, Gabriel. b. Nov. 22, 1898, La Serena, Chile. President of Chile from 1946 to 1952. He visited Antarctica during the Presidential Antarctic Expedition of 1948. He died on Aug. 22, 1980, in Santiago. His wife was Rosa Markmann Reijer (b. July 30, 1907, Taltal, Chile. d. June 12, 2009, Santiago, aged 101), known as "Mitty," and the first First Lady to go to Antarctica (*see* **Women in Antarctica**).

González Videla Station *see* **Presidente Gabriel González Videla Station**

Good, John Thomas "Tom." b. 1868, Hull, Yorks, son of millstone builder (later a bricklayer's laborer) James Good and his charlady wife Kate Stubbs. He went to sea, and married Annie Brown in Hull in 1894. He was bosun's mate on the *Morning* during the relief of BNAE 1901-04. They say he was killed in an accident in the Mediterranean, circa 1905.

Good Glacier. 84°12' S, 177°50' E. A wide glacier, about 40 km long, flowing NE from the foot of Mount Bronk (on the E slopes of the Hughes Range), between Mount Brennan and Mount Waterman, into the Ross Ice Shelf to the E of Mount Reinhardt, at the above coordinates. Discovered by Flight C of Feb. 29-March 1, 1940, during USAS 1939-41. Named by Byrd for Vice Adm. Roscoe Fletcher Good (1897-1973), USN, who assisted OpHJ 1946-47. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Mount Goodale. 85°45' S, 157°43' W. A high, granite peak which has double summits of 2420 m and 2570 m respectively (the New Zealanders say the height of the mountain is 2133 m), 10 km SE of Mount Thorne, between the Amundsen Glacier and the Robert Scott Glacier, in the Hays Mountains, in the Queen Maud Mountains. Discovered by Larry Gould's party in Dec. 1929, during ByrdAE 1928-30. Named by Byrd for Eddie Goodale, the man who first saw it. US-ACAN accepted the name in 1956, and NZ-APC followed suit.

Goodale, Edward Evans "Eddie." b. April 7, 1903, Boston, son of physician Joseph M. Goodale. A meteorologist, he was one of the 6-man Southern Geological Party led by Larry Gould, which surveyed the Queen Maud Mountains during ByrdAE 1928-30. He discovered a lichen in 85°21' S, on Mount Fridtjof Nansen — the most southerly yet discovered. He also discovered Mount Goodale. He later spent much time in the Arctic. In 1955-56 he was IGY representative to U.S. Naval Support Force, Antarctica, at Little America V. He took part in the icebreaker reconnaissance of the Budd Coast that year, looking for a site for Wilkes Station. In 1956-57, during OpDF II, he oversaw the installation of equipment for, and the erection of buildings at, Byrd Station, but declined the military leadership of Little America. From 1959 to 1968 he was USARP representative at Christchurch, NZ, and was with the National Science Foundation from 1962. He died on Jan. 18, 1989, in Bangor, Maine.

Goodale Glacier. 85°35' S, 156°24' W. Flows N from Mount Goodale and Mount Armstrong, along the W side of Medina Peaks, in the foothills of the Queen Maud Mountains. Discovered and first mapped by ByrdAE 1928-30, and named in association with Mount Goodale. US-ACAN accepted the name in 1967.

Goodall Ridge. 71°02' S, 66°50' E. A partly snow-covered rock ridge, about 11 km WSW of Taylor Platform, in the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA for A. Wallace "Wally" Goodall, diesel mechanic at Davis Station in 1964. He was also at Macquarie Island for the winters of 1962 and 1968. US-ACAN accepted the name in 1967.

Goodchild, Thomas William "T.W." b. 1890, Shoreditch, London, son of upholsterer Thomas Goodchild and his wife Mary Ann Adams. He joined the Merchant Navy, and in 1924, while living in Clapham, he went to the USA (he was listed as an officer), and was then 3rd officer on the *Discovery*, 1925-27, during that ship's cruise to Antarctica for the Discovery Investigations. He was later 2nd officer (but not in Antarctica). In 1928 he went to Sydney, coming back to England in 1929. He died in Hampstead, London, on Oct. 12, 1940. What little money he had went to a married woman named Alice Maud Empson.

Goodden, Giles Richard Penn. b. March 13, 1914, Yeovil, Somerset, son of John Bernhard Harbin Goodden and his wife Joyce Marianne Crane, of Compton Hawy, near Sherborne, Dorset. He was made a midshipman on May 5, 1934, and was promoted to sub lieutenant on Jan. 16, 1935. On May 25, 1935, he was transferred to the *Vesper*, and on Sept. 3, 1935, to the *Fortune*. He was promoted to lieutenant on July 16, 1937, and, on Nov. 13, 1937, at St Michael's, Over Compton, Dorset, he married Yvette Marie Tranberg (of Bordeaux). Among the guests at the wedding were Lord and Lady Blackford, Sir Reginald and Lady Pinney, Sir Henry and Lady Peto, Sir Archibald and the Hon. Lady Langman, Col. Walker Heneage, the Livingstone-Learmonths, and the Wingfield-Digbys. On Dec. 28, 1937, he was transferred from the *Fortune* to the *Victory*. Throughout most of 1944 he commanded the escort destroyer *Oakley*, and was promoted to lieutenant commander on July 16, 1945. Still a lieutenant commander, he was skipper of the *Bigbury Bay*, in Antarctic waters in 1949-50. He was at his father's funeral at St Michael's, in July 1951. General Sir John Harding was at the service. Lt. Cdr. Goodden retired on March 16, 1956, and died on July 23, 1988, in Sherborne, Dorset.

Goodell Glacier. 72°55' S, 88°30' W. About 8 km long, it flows E and N from Fletcher Peninsula into Williams Ice Stream, at the Bellingshausen Sea. Named by US-ACAN in 2003, for Janice G. Goodell, of USGS at Woods Hole, Mass., support member of the Glacier Studies Project team from the early 1990s on.

Gooden, Kenneth Reginald "Ken." b. Sept. 20, 1927, Portsmouth, son of Royal Marine color sergeant Reginald Gooden and his wife Grace. In the late 1930s his father retired to London. Ken left school in 1945, and worked briefly as a light keeper with the Ordnance Survey, in the South of England and in the Midlands, before joining the Royal Engineers in 1946, doing field work and surveying. He was living in Mill Hill, in London, in 1949, when he joined FIDS, as a surveyor and general assistant. He wintered-over at Port Lockroy Station in 1950, and was base leader at Base G in the winter of 1951. In 1952 he returned to Port Stanley, and from there to Montevideo, where he boarded the *Andes*, with Alan Burton, bound for Southampton, arriving there on Feb. 26, 1952. He did a year of survey study at University College, London, then worked for 3 years with Hunting Aerosurveys, on various engineering jobs in Iran and Jordan. In 1958, while on a walking holiday near Keswick, he met a Rotherham girl named Jean Matthews, married her in 1958, in Rotherham, and from the 1950s lived in Netherton, near Huddersfield. He worked in various parts of the UK, surveying for pylons, and then got a job with the Huddersfield Borough Engineers Highway Department. He decided to re-invent himself, studied teaching at Leeds, and then taught geography for 13 years before retiring. He died on Sept. 30, 2008.

Cape Goodenough. 66°16' S, 126°10' E. An ice-covered cape, marking the W side of the entrance to Porpoise Bay, on the Banzare Coast, and forming the most northerly projection of Norths Highland, in Wilkes Land. Discovered aerially by BANZARE on Jan. 15, 1931, and named by Mawson for Adm. Sir William Edmund Goodenough (1867-1945), president of the Council of the Royal Geographical Society, 1930-33, and patron of BGLE 1934-37. US-ACAN accepted the name in 1947, and ANCA followed suit.

Glaciar Goodenough *see* **Goodenough Glacier**

Goodenough Glacier. 72°00' S, 66°40' W. To the S of the Batterbee Mountains, it flows WSW from the W shore of Palmer Land into George VI Sound, N of Buttress Nunataks. Discovered and surveyed in Oct. 1936, by Stephenson, Fleming, and Bertram, of BGLE 1934-37, while they were exploring the sound. Named by Rymill as Margaret Goodenough Glacier, for Margaret Goodenough, wife of Sir William Goodenough (*see* **Cape Goodenough**). It appears as such on Rymill's 1938 map of the expedition, on Stephenson's 1940 map of the same expedition, and also on a 1940 British chart. It appears on a 1948 USAF chart as Goodenough Glacier, and that was the name accepted by UK-APC on March 31, 1955, and by US-ACAN in 1956. ArgAE 1956-57 surveyed it, and renamed it Glaciar Quinteros, probably after a member of the expedition. It appears as such on their 1957 chart. However, today, the Argentines call it Glaciar Goodenough (they re-applied the name Glaciar Quinteros to a feature in the Pensacola Mountains). It was photographed aerially by USN between 1966 and 1969, and appears on the 1979 USGS sketch map of the N part of

Palmer Land. Henrietta Margaret Stanley (1874-1956), daughter of the 4th Baron Sheffield, married Goodenough in 1901.

Goodge Col. 78°28' S, 85°38' W. A broad, relatively level, ice-covered col, about 2.5 km wide, at an elevation of about 3600 m, between the Vinson Massif and the S side of Mount Shinn, in the Sentinel Range, in the Ellsworth Mountains. It is easily identified from positions E and W of the range. Named by US-ACAN in 2006, for John W. Goodge, assistant professor in the department of geological sciences at the University of Minnesota at Duluth. He was a USAP investigator of the evolution of the East Antarctic Shield from the mid-1980s on.

Goodhue, Nathaniel *see* **USEE 1838-42**

Mount Goodman. 75°12' S, 72°20' W. Rising to about 1000 m, it marks the NE extremity of the Behrendt Mountains, NW of Cape Zumberge, on the Orville Coast, where Ellsworth Land meets southern Palmer Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1966, for Alan L. "Al" Goodman, USARP aurora scientist at Eights Station in 1963. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974. Originally plotted in 75°14' S, 72°14' W, it has since been replotted.

Goodman Hills. 69°27' S, 158°43' E. A group of coastal hills, about 16 km in extent, directly S of Cape Kinsey, between Paternoster Glacier and Tomilin Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Cdr. Kelsey B. Goodman, USN, plans officer on the staff of the commander, U.S. Naval Support Force, Antarctica, 1969-72; assistant for polar regions in the office of the secretary of defense, 1972-74; and member of US-ACAN, 1973-76.

Goodspeed Glacier. 77°29' S, 162°27' E. A small hanging glacier on the S wall of Wright Valley, between Hart Glacier and Denton Glacier, in Victoria Land. Named by Bob Nichols for Bob Goodspeed, geologist from Pennington, NJ. They were both here as geologists at nearby Marble Point, in 1959-60, Goodspeed as Nichols' assistant. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Goodspeed Nunataks. 73°00' S, 61°10' E. A group of 3 rows of nunataks, between 16 and 24 km long in a roughly E-W direction, at the W end of the Fisher Glacier, in the Prince Charles Mountains, 50 km WNW of Mount McCauley. Discovered by Keith Mather's ANARE seismic party in Jan. 1958 (it was Malcolm Mellor's Weasel that arrived here first), and named by ANCA on April 29, 1958, for Morley James "Jim" Goodspeed (b. July 15, 1927), seismic geophysicist at Mawson Station in 1957, who was in charge of ice-thickness measurements during this traverse. US-ACAN accepted the name in 1962.

Glaciar Goodwin *see* **Goodwin Glacier**

Mount Goodwin. 81°16' S, 85°33' W. A rock peak which is the second most prominent summit in the Pirritt Hills. Positioned by the U.S. Ellsworth-Byrd Traverse Party on Dec. 10, 1958, and named by US-ACAN for Robert J. "Bob" Goodwin, assistant glaciologist with the party.

Goodwin, Robert *see* **USEE 1838-42**

Goodwin, William Reuther "Bill." b. Dec. 30, 1934, Louisville, Ky., son of attorney William Joseph Goodwin and his wife Louise Reuther. He joined the U.S. Navy in 1953, went through boot camp in Rhode Island, then to Oklahoma for basic aviation training, and on to Jacksonville, Fla., for electrician's school. He was on the *Point Cruise* in the Pacific in the spring of 1955 when he saw the notice for "volunteers wanted for the South Pole," and went to Davisville, RI, attached to the Seabees, for training. At Davisville he basically worked as a yeoman for Lt. Dick Bowers. He then shipped south on the *Wyandot* (q.v. for intinerary) to McMurdo Sound, where, although an aviation electrician 3rd class he worked as a mechanic in Chief Slaton's team, helping build the base. He had not intended to winter-over, but with Richard Williams's death, he was asked to, and did, therefore, winter-over at McMurdo in 1956, was promoted to AE 2/c, and on Nov. 25-26 was one of the 10 men who formed the 2nd party to be flown to the Pole to build South Pole Station (q.v.). He was one of the first party out, on Dec. 24, 1956, and flew back to McMurdo. He shipped back to San Diego, and was immediately discharged from the Navy, bought a Triumph TR-3, and he and Robbie Roberts headed east. Midway across the country, he dropped Roberts off and headed north to Louisville. He spent 4 years at the University of Louisville, where he got his bachelor's degree in chemistry, then after a year in Louisville, went to the University of Kansas, in Manhattan. He married in 1968, in Kansas, to Joyce Duesing, went to St. Louis for a year working for a chemical company, then was hired by Bristol Labs in Syracuse, NY, in 1970. In 1986 he retired and became a registered nurse at the university in Syracuse, retiring from there in 2001.

Goodwin Glacier. 65°06' S, 62°57' W. Flows W into Flandres Bay, southward of Pelletan Point, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Hannibal Goodwin (1822-1900), U.S. pastor and photography pioneer. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Goodwin.

Goodwin Nunataks. 84°38' S, 161°31' E. A small group of isolated nunataks, about 16 km W of the Marshall Mountains, at the S side of Walcott Névé. Named by US-ACAN in 1966, for Michael L. "Mike" Goodwin, USARP geomagnetist and seismologist at Pole Station in 1960.

Goodwin Peak. 85°54' S, 129°11' W. Rising to 2770 m, 5 km NE of Mount Bolton, at the W side of Haworth Mesa, in the Wisconsin Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Cdr. Edmund E. Goodwin, public affairs officer on the staff of the commander, U.S. Naval Support force, Antarctica during OpDF 65 (i.e., 1964-65) and OpDF 66 (i.e., 1965-66).

Goolsnuten. 72°18' S, 23°15' E. A nunatak at the S side of Mount Widerøe, in the south-central part of the Sør Rondane Mountains. Named by the Norwegians (name means "Gools peak"; what "Gools" means is uncertain; there is a Norwegian surname Gools).

Mount Goorhigian. 75°03' S, 133°46' W. Rising to 1115 m, it is the highest mountain in the Demas Range, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air air photos taken between 1960 and 1965. Named by US-ACAN in 1966, for Martin Goorhigian, USARP meteorologist at Byrd Station in 1961.

Goorkha Craters. 79°46' S, 159°33' E. A line of snow-free coastal mountains and hills, about 1220 m above sea level, 3 km E of Cooper Nunatak, between Carlyon Glacier and Darwin Glacier, in the Britannia Range, about 22 km SE of Mount Reeves, on the W side of the Ross Ice Shelf. Discovered by BNAE 1901-04, and named by them in association with the Kukri Hills (a kukri is a Gurkha knife). US-ACAN accepted the name in 1952, and ANCA followed suit.

Monts Goossens *see* **Mount Goossens**

Mount Goossens. 71°19' S, 35°44' E. A massif, rising to 2200 m, and mostly ice-free, next S of Mount Pierre, in the Queen Fabiola Mountains. Discovered on Oct. 7, 1960, by BelgAE 1960-61, led by Guido Derom, who named it Monts Goossens (i.e., "the Goossens mountains"), for Léon Goossens, photographer of the Belgian party which made reconnoitering aircraft flights in the area. On that flight, M. Goossens took aerial shots of the Queen Fabiola Mountains. US-ACAN accepted the singularized name of Mount Goossens in 1966.

Goossensbreen. 71°50' S, 24°30' E. A glacier, about 7 km long, on the N side of Brattnipane Peaks, in the north central part of the Sør Rondane Mountains. Named by the Norwegians ("Goossens glacier"), presumably for Léon Goossens (*see* **Mount Goossens**).

Gootee Nunatak. 80°39' S, 159°57' E. A small but distinctive nunatak, rising to about 250 m, which is the only rock outcrop at the W end of Couzens Bay, on the Shackleton Coast. It was geologically mapped by a USAP field party led by Ed Stump in 2000-01, and named by Stump after Brian Francis Gootee (b. March 29, 1972, Houston, Tex.), an Arizonan geologist with the party. US-ACAN accepted the name on Jan. 21, 2003, and NZ-APC followed suit on Feb. 27, 2003.

Gopher Glacier. 73°28' S, 94°00' W. Flows N from Christoffersen Heights, between Bonnabeau Dome and Anderson Dome, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61, and named by them. Gopher is the nickname of the university and of the state of Minnesota. US-ACAN accepted the name in 1963.

Gora Gorbataja *see* **Mount Bunt**

Mys Gorbatyj. 68°48' S, 78°01' E. A cape in the Vestfold Hills. Named by the Russians.

Gorden, John *see* **USEE 1838-42**

Nunataki Gordienko. 81°35' S, 28°37' W. A group of nunataks, to the immediate S of the Whichaway Nunataks, on the S side of Recovery Glacier, in Coats Land. Named by the Russians.

Cabo Gordon *see* **Cape Gordon**

Cap Gordon *see* **Cape Gordon**

Cape Gordon. 63°51' S, 57°03' W. A jagged headland rising to 329 m, forming the E end of Vega Island, in Erebus and Terror Gulf, S of the NE tip of the Antarctic Peninsula. Discovered and roughly surveyed by Ross on Jan. 6, 1843, during RossAE 1839-43, and named by him for Capt. (later Vice Adm.) William Gordon (1784-1858), RN, lord commissioner of the Admiralty, 1841-46, and brother of Lord Aberdeen (British prime minister during the Crimean War). It appears on Ross's chart of 1844. It appears as Cap Gordon in Vincendon-Dumoulin's 1847 atlas, and on a Spanish chart of 1861 as Cabo Gordon. It was surveyed more thoroughly in Feb. 1902, by SwedAE 1901-04, and appears on Nordenskjöld's maps as Kap Gordon, or Kapp Gordon. It was re-surveyed by Fids from Base D in 1945, appears as Cape Gordon on a 1948 British chart, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. The Argentine gazetteer of 1970 accepted the name Cabo Gordon, as did the 1974 Chilean gazetteer.

Kap Gordon *see* **Cape Gordon**

Mount Gordon. 67°36' S, 50°17' E. About 11 km NE of Simpson Peak, in the Scott Mountains of Enderby Land. A mountain near here was named by Biscoe in 1831, for Maj. Gen. Henry William Gordon (1786-1865), brother-in-law of the Enderby Brothers (he had married Elizabeth Enderby in 1817), owners of Biscoe's vessels. The Gordons were the parents of Gen. Charles George "Chinese" Gordon, of Khartoum fame. ANCA, unable to identify with certainty Biscoe's Mount Gordon, applied the name to this feature on Nov. 24, 1961, and they plotted it from ANARE air photos taken in 1956 and 1957. US-ACAN accepted the name in 1965.

Île Gordon Bennett *see* **Mount Edgell**

Mont Gordon Bennett *see* **Mount Edgell**

Gordon Glacier. 80°17' S, 26°09' W. A glacier, at least 40 km long, flowing N from Crossover Pass, through the Shackleton Range, between Fuchs Dome and the Herbert Mountains, into Slessor Glacier. First surveyed and mapped by BCTAE in Oct. 1957, and named by them for George Patrick Pirie-Gordon (b. 1918; known as Patrick), 15th Laird of Buthlaw, Abderdeenshire, treasurer for the expediton. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year. Photographed aerially by USN in 1967.

Gordon Nunataks. 72°53' S, 63°48' W. A group of nunataks, rising to about 1500 m, on the S side of Mosby Glacier (near its head), in the south-central part of Palmer Land. Mapped by USGS, from air photos taken by USN between 1966 and 1969. Further surveyed from the ground by BAS personnel from Fossil Bluff, in 1974 and 1975. Named by UK-APC on Feb. 7, 1978, for geologist and oceanographer Arnold Lewis Gordon (b. Feb. 4, 1940), for a long time from 1976 associated with the Lamont-Doherty Geological Observatory at Columbia University, and who led the American contingent to the Weddell Sea Polynya in 1981 (*see* **Weddell Sea Polynya Expedition**). It appears on the 1979 USGS sketch map of the N part of Palmer Land, and also in the 1980 British gazetteer. US-ACAN accepted the name.

[1]**Gordon Peak**. 68°09' S, 62°25' E. Rising to 1484 m above sea level, it is the highest and most central peak of the 5 that constitute the Brown Range, at the S end of the David Range, in the Framnes Mountains of Mac. Robertson Land. It was used as an unoccupied trigonometrical station by Max Corry (q.v.), ANARE surveyor at Mawson Station in 1965. Named by ANCA for P. John Gordon, radio tech at Mawson that winter.

[2]**Gordon Peak**. 72°26' S, 0°32' E. A rock peak, marking the NW end of Robin Heights (the Norwegians say it is a mountain ridge projecting NW from Robin Heights), in the Sverdrup Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Gordonnuten, for Gordon de Q. Robin (*see* Robin). US-ACAN accepted the translated name Gordon Peak in 1966.

Gordon Valley. 84°23' S, 164°00' E. A small valley, the W half of which is occupied by a lobe of ice from the Walcott Névé, W of Mount Falla, in the Queen Alexandra Range. Named by US-ACAN in 1966, for Mark A. Gordon, USARP aurora scientist at Hallett Station in 1959.

Gordonnuten *see* **Gordon Peak**

Mount Gorecki. 83°20' S, 57°35' W. Rising to 1110 m, at the SE extremity of the Schmidt Hills, in the Neptune Range, in the Pensacola Mountains. Discovered aerially on Jan. 13, 1956, on the non-stop flight from McMurdo to the Weddell Sea and back (*see* that date under Operation Deep Freeze I). Named by US-ACAN in 1957, for aviation electronics technician Francis Gorecki, radioman on the P2V-2N making that flight. They plotted it in 83°35' S, 53°00' W, which were the coordinates on a 1959 American Geographical Society map. The feature was re-photographed aerially in 1964, by USN, and surveyed from the ground in 1965-66, by USGS, during their Pensacola Mountains Project. The coordinates were corrected by 1969, and those new coordinates appear in the 1974 British gazetteer (UK-APC had accepted the name on Nov. 3, 1971). It appears on a 1964 Russian chart as Gora Goreck (which is an error), and on a 1966 Russian chart as Gora Goretskogo, a name that would have made more sense if the honoree had been a Russian.

Gorev Island. 66°32' S, 92°59' E. A tiny island, about 10 km SWW of Haswell Island, between that island and Tokarev Island, and between Buromskiy Island and Poryadin Island, in the Haswell Islands. Discovered and mapped by AAE 1911-14, who, apparently, did not name it. Re-mapped by SovAE 1956, and named by the USSR as Ostrov Goreva, for Demetri Gerov (sic and q.v.). ANCA accepted the translated name Gorev Island on Oct. 11, 1960, and US-ACAN followed suit in 1961.

Ostrov Goreva *see* **Gorev Island**

Pik Goreva *see* **Anders Peak**

Gorges. There are very few gorges yet discovered in Antarctica. *See* Grimmia Gorge, Hidden Gorge, Pagodroma Gorge, Polygon Gorge, and Talg Gorge.

Gorgon Peak. Unofficial name for a peak at the top of Mawson Glacier, to the immediate S of Griffin Nunatak, in Victoria Land.

Gorgons Head. 79°33' S, 157°30' E. A sandstone peak, with dolerite intrusions, and with a sharp summit ridge, SE of Mount Hughes, in the Cook Mountains. Named by ANCA on March 7, 1991, for the Gorgons of Greek mythology. US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001.

Mount Gorham. 74°03' S, 62°04' W. Rising to about 1600 m, just SW of Mount Tricorn, in the Hutton Mountains, on the Lassiter Coast, on the E coast of Palmer Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1968, for Charles E. Gorham, builder who wintered-over at Pole Station in 1967. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

The *Gorizont*. Ship that took the Ukrainian expedition to Antarctica in 1999-2000 (skipper was Leonid Ponomarenko) and 2001-02.

Gorki Ridge. 71°37' S, 11°37' E. A mountain ridge, 13 km long, running in a NE direction from Altartavla to Grautrenna, and forming the E wall of Schüssel Cirque, in the NE part of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted by NorAE 1956-60, and from 1958-59 air photos taken during that same long expedition. Re-mapped again by SovAE 1960-61, and named by the USSR in 1963, as Hrebet Gor'kogo, for the writer Maxim Gorki (1868-1936). US-ACAN accepted the Anglicized name in 1970. The Norwegians call it Gor'kijryggen.

Gor'kijryggen *see* **Gorki Ridge**

Hrebet Gor'kogo *see* **Gorki Ridge**

Mount Gorman. 70°29' S, 64°28' E. A mountain peak in the N part of Bennett Escarpment, just W of Mount Canham, just S of Mount Pollard, 3 km S of the W end of Corry Massif, and 11 km WSW of Mount Crohn, in the Porthos Range of the Prince Charles Mountains. Plotted by Australian cartographers from terrestrial photos taken by Syd Kirkby in 1956,

and from ANARE air photos taken in 1965. Named by ANCA on Aug. 10, 1966, for Christopher A.J. "Chris" Gorman, supervising technician (radio) at Wilkes Station in 1962. US-ACAN accepted the name in 1971.

Gorman Crags. 71°01' S, 65°27' E. A ridge, trending E-W, and marked by 4 craggy peaks, 8 km E of Husky Dome, and about 33 km NE of Mount Hicks, in the Prince Charles Mountains of Mac. Robertson Land. Plotted by Australian cartographers from ANARE air photos taken in 1960, and named by ANCA for Chris Gorman (*see* **Mount Gorman**). US-ACAN accepted the name in 1967.

Gornik Knoll. 63°38' S, 57°51' W. A rocky hill rising to 466 m on the SE side of the Cugnot Ice Piedmont, 3.97 km WSW of McCalman Peak, 2.71 km ENE of Kribul Hill, and 7.25 km SSE of Marten Crag, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Gornik, in northern Bulgaria.

Lednik Gornogo Instituta *see* **Somoveken**

Skaly Gornykh Inzhnerov *see* **Gornyye Inzhenery Rocks**

Gornyj Lager. There have been 3 Russian manned weather stations with this name ("lager" meaning "camp"). Gornyj Lager I was 1820 m above sea level, in 71°40' S, 9°32' E, and lasted from June 1959 to Jan. 1960. Gornyj Lager II was 1640 m above sea level, in 71°47' S, 5°49' E, and lasted from Nov. 1960 to Jan. 1961. Gornyj Lager III was at 1510 m above sea level, in 72°33' S, 1°16' E, and lasted from Jan. 1961 to Nov. 1961.

Gornyye Inzhenery Rocks. 71°32' S, 12°44' E. A group of rocks just S of Deildegasten Ridge, in the Östliche Petermann Range of the Wohlthat Mountains, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first mapped from these photos. Re-mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped by SovAE 1960-61, and named by the USSR in 1966 as Skaly Gornykh Inzhnerov (i.e., "mining engineers rocks"). US-ACAN accepted the translated name in 1970.

Gorodkov Hill. 67°46' S, 45°48' E. Rising to about 356 m, it is the most notable feature within the group of rock outcrops the Russians call Gory Konovalova, at the head of Freeth Bay, in Enderby Land, just E of Campbell Glacier. Photographed aerially by ANARE in 1957, again by SovAE 1962, the latter naming it Gora Gorodkova, for Arctic geobotanist Boris Nikolayevich Gorodkov (1890-1953). ANCA translated the name.

Gora Gorodkova *see* **Gorodkov Hill**

Pico Gorriti *see* **Janssen Peak**

Rocas Gorriti *see* **Covey Rocks**

Cabo Gorrochátegui *see* **Cape Wiman**

Gorrochátegui, José. b. Concepción, Uruguay. Surgeon 2nd class, he was the ship's doctor on the *Uruguay* in 1903, during the Argentine rescue attempt of SwedAE 1901-04. He and his family later had a chalet (named Uruguay) at Punta del Este.

Mount Gorton. 70°01' S, 159°15' E. A very prominent mountain, shaped like the base of a flat-iron, rising to 1995 m, 10 km WSW of Mount Pérez, in the S part of the Wilson Hills, inland behind the coastal ranges, about 150 km SE of Magga Peak, in Oates Land. It is the highest mountain visible from the sea in this area, and appears as a glistening, snow-covered peak. Photographed aerially during OpHJ 1946-47, it appears on those photos as one of several mountains (which it is). Discovered properly in 1961 by Phil Law of ANARE, positioned by his party from shipboard observations on the *Magga Dan*, and named by ANCA on July 4, 1961, for John Gorton (1911-2002), Australian minister for the navy (later prime minister). US-ACAN accepted the name in 1964.

Gorublyane Knoll. 63°46' S, 59°09' W. Rising to 775 m at the base of Belitsa Peninsula, 3.9 km N of Poynter Hill and 9.6 km S by E of Notter Point, it overlooks the Gavin Ice Piedmont to the N and E, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for the settlement of Gorublyane, in western Bulgaria, now part of the city of Sofia.

Caleta Gorziglia *see* **Petrel Cove**

Gosiki-hyoga. 71°32' S, 35°38' E. A small glacier between the nunatak the Japanese call Maku-iwa and the peak they call Tyo-ga-take, in the central part of the Queen Fabiola Mountains. Surveyed by JARE in 1960, and named by the Japanese on March 22, 1979 (name means "five-colored glacier").

Gosling Islands. 60°39' S, 49°55' W. A scattered group of islands and rocks close S and W of Meier Point, off the S coast of Coronation Island, in the South Orkneys. Petter Sørlle was the first to chart them, in 1912-13, and he named them Geslingerne. The feature appears that way on his 1912 chart. On his and Hans Borge's 1913 chart it appears as Gestlingen, and on Sørlle's 1930 chart as Gjeslingene. All these names mean "the goslings." UK-APC accepted the name Goslings Islets on March 31, 1955, and US-ACAN followed suit in 1956. Surveyed by Fids from Signy Island Station between 1956 and 1958, and on July 7, 1959, UK-APC renamed them Gosling Islands. UK-APC accepted the new name in 1963. The Argentines call them Islotes Ánsar (i.e., "goose island"), and not, as one might expect, Islotes Ansarino.

Goslings Islets *see* **Gosling Islands**

Gossard Channel. 66°05' S, 101°13' E. A narrow marine channel extending in an E-W direction, between the Mariner Islands and Booth Peninsula, in the central portion of the High-jump Archipelago. Mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1956, for Guy Carleton Gossard, Jr. (b. May 30, 1916, Pasadena, Calif.; son of a dentist. d. Dec. 29, 1989, Silverton, Oreg.), USN, served in World War II and Korea, and who was chief photographer's mate on the *Currituck* during OpHJ 1946-47.

Île(s) Gossler *see* **Gossler Islands**

Islas Gossler *see* **Gossler Islands**

Islotes Gossler *see* **Gossler Islands**

Gossler Islands. 64°42' S, 64°22' W. A group of islands, 5 km in extent, and trending in a N-S direction, 2.5 km W of Cape Monaco, Anvers Island, in the Palmer Archipelago. Discovered and roughly charted by Dallmann in 1873-74, as one island, which he named Gossler Insel, or Gosslerinsel. By 1901 it was appearing pluralized on German maps as Gosslerinseln. Further charted by FrAE 1903-05, the main island appears on Charcot's 1906 map as Île Gossler, and (from the same expedition) the group appears on Gourdon's 1908 map as Îles Gossler. On a British chart of 1908, the group appears as Gossler Islands, on a 1947 Argentine chart as Islas Gossler, and on a 1947 Chilean chart misspelled as Islas Grossler. On a 1948 British chart the group appears as Gossler Islets, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. On an Argentine chart of 1953, the group appears as Islotes Gossler, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1956. On July 7, 1959, UK-APC renamed them Gossler Islands, and US-ACAN followed suit in 1963.

Gossler Islets *see* **Gossler Islands**

Gosslerinsel *see* **Gossler Islands**

Gösta Peaks. 72°06' S, 2°44' W. The NE peaks of Liljequist Heights, in the S part of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60. Named Göstapiggane by the Norwegians, for Gösta H. Liljequist. US-ACAN accepted the translated name Gösta Peaks in 1966.

Göstapiggane *see* **Gösta Peaks**

Gostun Point. 62°43' S, 61°17' W. An ice-free point on the N coast of Snow Island, 2.5 km WNW of Karposh Point, 2.5 km ESE of Cape Timblón, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, after the Bulgar ruler Khan Gostun, who ruled before Khan Kubrat (the creator of Great Bulgaria in the 7th century).

Got, François. b. June 9, 1816, Pauillac, France. Ordinary seaman on the *Zélée* during FrAE 1837-40.

Gøthesen, Fritz B. b. 1903, Norway. He went to sea in 1919, and worked his way up through the mate ranks. In 1933 he became 2nd mate on the *Vigdis*. He was in Antarctic waters as skipper of the *Pelagos*, 1940-41.

Gothic Mountains. 86°00' S, 150°00' W. A group of mountains, 30 km long, W of the Watson Escarpment, and bounded by the Scott Glacier, Albanus Glacier, and Griffith Glacier, in the Queen Maud Mountains. First visited (but not named) in Dec. 1934, by Quin Blackburn's party during ByrdAE 1933-35. Named descriptively by Ed Stump, leader of a USARP-Arizona State University geological party here in 1980-

81. The mountains are composed of granites which have weathered to produce a series of spires and peaks reminscent of a Gothic cathedral. US-ACAN accepted the name.

Gothic Peak. 72°01' S, 164°48' E. Rising to 2085 m (the New Zealanders say 2300 m), 6 km NW of Lavallee Peak, at the NW end of the West Quartzite Range, on the Polar Plateau. Named by the Northern Party of the NZ Federated Mountain Clubs Expedition of 1962-63, for its likeness, in profile, to a Gothic cathedral. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

The *Gotland II*. West German expedition ship of 1980-81 (skipper Ewald Brune) and 1981-82. 305 feet long, and ice-strengthened. In the afternoon of Dec. 18, 1981, in Yule Bay, off the coast of northern Victoria Land, she got pinched in the ice. Within 24 hours she was crushed, and sank. All scientific equipment and supplies were lost, although passengers and crew were rescued by 5 helicopters on board, evacuated to Sturgeon Island, and from there to McMurdo. The geology program had to be canceled (*see* GANOVEX).

Gotlandbucht. 67°22' S, 179°57' E. A bay indenting the NW coast of Scott Island. Named by the Germans.

Cape Gotley. 66°42' S, 57°19' E. Also called Cape Eustnes. Forms the E extremity of Austnes Peninsula, at the N side of the entrance to Edward VIII Bay, Kemp Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Austnestangen (i.e., "the east cape tongue"), in association with the peninsula. Remapped by ANARE, and renamed by ANCA on Feb. 18, 1958 for Aubrey V. "Aub" Gotley, officer-in-charge of the ANARE party on Heard Island (53°S) in 1948. US-ACAN accepted the Australian naming in 1965.

Cabo Goubat. 69°22' S, 62°50' W. A cape, W of Cape Reichelderfer and E of DeBusk Scarp, on the Wilkins Coast, on the E coast of Palmer Land. Named by the Argentines, for Lt. Raúl Ernesto Goubat (1886-1955), early Argentine Air Force hero.

Punta Goubat. 69°17' S, 63°06' W. A point, SE of Finley Heights, on the E coast of Palmer Land. Named by the Argentines, for Lt. Raúl E. Goubat (*see* **Cabo Goubat**, above).

Île Goudier *see* **Goudier Island**

Îlot Goudier *see* **Goudier Island**

Isla Goudier *see* **Goudier Island**

Islote(s) Goudier *see* **Goudier Island**

Goudier, Ernest. He was with Charcot at Jan Mayen Island in 1902, and was chief engineer on the *Français*, during FrAE 1903-05.

Goudier Island. 64°50' S, 63°30' W. A small island, with the appearance of bare, polished rock, about 0.8 km m N of Jougla Point, in the harbor of Port Lockroy, Wiencke Island, in the Palmer Archipelago. Discovered and charted by FrAE 1903-05, and named by Charcot as Îlot Goudier, for Ernest Goudier. It appears on a 1911 French chart as Île Goudier. It appears as Goudier Islet on a British chart of 1916. It was re-charted by the Discovery Investigations in 1927, and renamed by them as Goudier Island, and appears as such on their 1929 chart. It appears as Isla Goudier on a 1947 Chilean chart. It appears as Goudier Islet again on British charts of 1948 and 1950, and that name was accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. It appears on a 1953 Argentine chart as Islote Goudier. On July 7, 1959, UK-APC renamed it Goudier Island, and it appears as such on a British chart of 1960. US-ACAN accepted that name in 1963. The Argentine gazetteer of 1970 erroneously accepted the name in the plural, i.e., Islotes Goudier, while the 1974 Chilean gazetteer accepted Islote Goudier. The Argentines have since corrected their error.

Goudier Islet *see* **Goudier Island**

Mount Goudry *see* **Mount Gaudry**

Mount Gough. 81°38' S, 159°22' E. The prominent mountain that forms the E portion of the Swinthinbank Range, in the Churchill Mountains, and which rises to over 1000 m above the W side of Starshot Glacier, where that glacier is joined by Donnally Glacier. Mapped by USGS from USN air photos taken in 1960. Named by US-ACAN in 1967, for R.P. Gough, surveyor general of NZ. ANCA accepted the name.

Gough Glacier. 84°42' S, 171°35' E. About 40 km long, it trends northward from the N slopes of the Prince Olav Mountains and the base of the Lillie Range, to enter the Ross Ice Shelf between the Gabbro Hills and the Bravo Hills. Named by the Southern Party of NZGSAE 1963-64, for Alan L. Gough, surveyor of that party. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Camp Gould. 78°57' S, 85°45' W. An American camp (a 16' x 16' Jamesway hut) built in the eastern part of the Heritage Range, in the Ellsworth Mountains, in Nov. 1962. It lasted until Feb. 1967.

[1]**Mount Gould** *see* **Gould Peak**

[2]**Mount Gould**. 85°48' S, 148°40' W. A prominent mountain, rising to 2385 m, and surmounting the central part of the Tapley Mountains, in the Queen Maud Mountains. Discovered by Larry Gould in Dec. 1929, and named for him by Byrd. US-ACAN accepted the name in 1947.

Gould, Charles F. "Chips." b. April 1, 1896, Clay, W. Va. A carpenter, he went to sea in 1924, was a Marine, and was with Byrd in the Arctic in 1926. He was living in Fort Meyers, Fla., when he went on ByrdAE 1928-30. He died in July 1977, in Marshall Co., W. Va.

Gould, Laurence McKinley "Larry." b. Aug. 22, 1896, Allegan, Mich., son of Herbert Adalbert Gould and his wife Anna Eliza Updike. After high school he taught at a village school in Boca Raton, Fla, for 2 years and in 1918 went to the University of Michigan. In World War I he served as an ambulance driver in Europe, with the Italian and American armies. He graduated in 1921, and then in 1926, after 5 years as an instructor, he became professor of economic geology at his alma mater. He was already famous for having studied and mapped the La Sal Mountains of Utah and for having been assistant director on two Arctic expeditions, when he was chosen for ByrdAE 1928-30. He was one of the 3 men trapped in the Rockefeller Mountains (*see* **Airlifts**), and led the Southern Geological Party just after the 1929 winter-over (he was 2nd-in-command during the winter-over). On Aug. 2, 1930, just after his return to Ann Arbor, he married Margaret Rice. In 1932 he established the geology department at Carlton College, in Massachusetts, and later became the college's 4th president. During World War II he was chief of the Arctic section of the USAF's Arctic, Desert, and Tropic Information Center. He was one of the sponsors of RARE 1947-48, and was director of IGY 1957-58. From 1962 to 1970 he was president of SCAR, and was also the chairman of the Committee on Polar Research, as well as being professor of geology at the University of Arizona. He periodically went back to Antarctica. For example, he was present at the ceremony at the South Pole on Nov. 26, 1962, when Admiral Reedy took over from Admiral Tyree as commander, U.S. Naval Support Force, Antarctica. He died on June 21, 1995, in Tucson. *See also* the Bibliography.

Gould Bay. 78°00' S, 45°00' W. A southern Weddell Sea indentation into the Filchner Ice Shelf, at the junction of that ice shelf with the NE corner of Berkner Island. The movement and calving of the ice shelf controls the shape of the bay at any given time. Discovered aerially on Dec. 12, 1947, by RARE 1947-48, and named by Ronne as Larry Gould Bay, for Laurence Gould (q.v.), one of the sponsors of RARE. It appears as such on the 1948 American Geographical Society map, and on Ronne's 1948 map. On Ronne's 1949 map it appears as Gould Bay, and that name was accepted by US-ACAN in 1949, and appears in the 1956 U.S. gazetteer. It appears on a British chart of 1971, and UK-APC accepted the name on Nov. 3, 1971. It appears in the 1974 British gazetteer. It appears in an Argentine atlas of 1953 as Bahía Gould, but on an Argentine chart of 1954 as Bahía Austral, the latter name being the one accepted by the 1970 Argentine gazetteer. The extent of the bay was delineated from U.S. Landsat images taken in 1973 and 1978.

Gould Coast. 84°30' S, 150°00' W. That portion of the coast of Antarctica between the W side of Scott Glacier and the S end of the Siple Coast (83°30' S, 153°W), it is the most southeasterly of the Ross Ice Shelf coasts. Named in 1961 by NZ-APC, for Laurence Gould (q.v.), who, in 1929, mapped 175 miles of this coast. US-ACAN accepted the name in 1964.

Glaciar Gould Este *see* **Gould Glacier**

Gould Glacier. 66°47' S, 64°39' W. About 20 km long, it flows SE into Mill Inlet, to the W of Aagaard Glacier, on the Foyn Coast, on the E coast of Graham Land. Surveyed by Fids from Base E in 1946-47. They charted it as a glacier which, with what became Erskine Glacier (q.v. for more details), filled a depression across Graham Land. It was photographed aerially by RARE 1947-48, and named by Ronne as Martin

Glacier, for Orville Martin (*see* **Mount Martin**). It appears as such on Ronne's map of 1949. However, on Jan. 22, 1951, UK-APC renamed it East Gould Glacier, for Lt. Rupert Thomas Gould (1890-1948), RN, British polar historian and cartographer with the Hydrographic Department of the Admiralty. He wrote a biography of Captain Cook, in 1935. It was then thought to be the E part of a huge glacier, the W part being called West Gould Glacier (*see also* **Erskine Glacier**). US-ACAN accepted this name (after rejecting the proposed Shelby Glacier—*see* **Mount Shelby**), and it appears in the 1955 British gazetteer, and the 1956 American gazetteer. It appears on a 1957 Argentine gazetteer as Glaciar East Gould. In 1957, the glacial system here was re-surveyed by Fids from Base W, and they found that the col between this glacier and Erskine Glacier is wide and indefinite, and that there is no close topographical alignment between East Gould Glacier and Erskine Glacier. On July 7, 1959, UK-APC renamed it Gould Glacier, and that is how it appears on a British chart of 1961. US-ACAN accepted the name in 1960. ChilAE 1946-47 named it Glaciar Valdivia, for Suboficial Juan Valdivia T., radio officer with that expedition. It appears as such on a 1963 Chilean chart, and was the name accepted by the 1974 Chilean gazetteer.

Gould Hill *see* **Gould Nunataks**

Gould Island. 77°08' S, 148°05' W. One of the ice-covered islands in the Marshall Archipelago, it is 3 km long, and lies just N of Spencer Island, and 3 km NE of Steventon Island, within the Sulzberger Ice Shelf, off the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Lt. Stuart S. Gould, USNR, dental officer at McMurdo in 1967.

Gould Knoll. 72°14' S, 100°35' W. A rock knoll, mostly ice-covered, which rises on the E margin of Hale Glacier, at the point where that glacier enters the Abbot Ice Shelf, on Thurston Island. Named by US-ACAN in 2003, for William G. Gould, who, from the 1960s to the mid 1990s, was a National Oceanic and Atmospheric Agency (NOAA) specialist in the archiving of advanced very high resolution radiometer (AVHRR) satellite images of the world, including those used for AVHRR image maps of the Antarctic continent.

Gould Nunatak *see* **Gould Nunataks**

Gould Nunataks. 66°30' S, 51°42' E. A small group of nunataks, about 28 km (the Australians say about 33 km) SE of Mount Biscoe, in Enderby Land. Discovered in Jan. 1930 by BANZARE 1929-31, and named by Mawson as one nunatak, Gould Nunatak, for Rupert Gould (*see* **Gould Glacier**), who worked on the Admiralty South Polar Chart. Re-defined more plurally by Australian cartographers, working from ANARE air photos taken in 1964, and named by ANCA on May 18, 1971, as Gould Nunataks. In 1973, US-ACAN accepted the Australian naming. It is said that the Russians use the term Gould Hill, which seems unlikely.

Gould Peak. 78°07' S, 155°15' W. Also called Mount Gould. A peak, 1.5 km N of Tennant Peak, in the S group of the Rockefeller Mountains, on Edward VII Peninsula, in Marie Byrd Land. Discovered in 1929, during ByrdAE 1928-30, and named by Byrd as Charles Gould Peak, for Chips Gould. US-ACAN accepted the name in 1947, but in 1966 they accepted the shortened name. NZ-APC followed suit.

Gould Spur. 79°21' S, 85°40' W. A spur, 5 km long, extending from Navigator Peak to the S side of Splettstoesser Glacier, in the Heritage Range of the Ellsworth Mountains. Named by US-ACAN on July 14, 2004, for Patricia Gould, USARP geologist in the Ellsworths in 1979-80.

Anse Goulden *see* **Goulden Cove**

Caleta Goulden *see* **Goulden Cove**

Goulden Cove. 62°11' S, 58°37' W. The southern of 2 coves at the head (i.e., the SW end) of Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Glaciers discharge into this cove, and continually shed loose pieces of ice. This feature was known to sealers as early as 1822. Charted in Dec. 1909 by FrAE 1908-10, and named by Charcot as Anse Goulden (honoree unknown). It appears as such on his 1912 chart. It appears on a British chart of 1929 as Goulden Cove, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the British gazetteer of 1955, and on a British chart of 1962. It appears on a Chilean chart of 1947, as Caleta Goulden (which means the same thing), and that was the name accepted by both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974. It was photographed aerially by FIDASE in 1956. The British re-plotted this cove in late 2008.

Cap(e) Goupil *see* **Cape Legoupil**

Goupil, Ernest-Auguste. b. April 14, 1814, Châteaudun, France. After studying art and making several voyages on ships, he became the painter on the *Astrolabe* during FrAE 1837-40. He died of dysentery just as the ship was leaving Tasmania, on Jan. 4, 1840. Louis Le Breton, the surgeon, replaced him as artist.

Isla Gourdin *see* **Gourdin Island**

Islote Gourdin *see* **Gourdin Island**

Islotes Gourdin *see* **Gourdin Island**

Roca(s) Gourdin *see* **Gourdin Island**

Roche(r) Gourdin *see* **Gourdin Island**

Gourdin, Jean-Marie-Émile. Known as Émile. b. Jan. 13, 1810, Port-Louis, Brittany. After studying at naval school in Brest, he set sail on his first ship in 1830. On April 17, 1837 he left the *Ramier* in Toulon, after a year aboard, and became an ensign on the *Astrolabe* during FrAE 1837-40. He died on board, on Dec. 8, 1839.

Gourdin Island. 63°12' S, 58°18' W. The largest island in a group of islands and rocks 1.5 km N of Prime Head (the most northerly tip of the Antarctic Peninsula). Discovered by FrAE 1837-40, and named by Dumont d'Urville as Roche Gourdin, for Jean Gourdin. It appears as such on the 1838 and 1841 maps of the expedition, as well as in Vincendon-Dumoulin's 1847 atlas. It appears on a Spanish chart of 1861 as Roca Gourdin, and as Gourdin Rock on British charts of 1901 and 1948. On a 1912 map prepared by FrAE 1908-10, it appears as Rocher Gourdin. It was re-identified and charted by Fids from Base D in 1945-47, and named by them as Gourdin Islet, and it appears as such on a British chart of 1949. UK-APC accepted that name on Nov. 21, 1949, and US-ACAN followed suit. It appears as such in the 1955 British gazetteer. On a 1953 Argentine chart, the entire group is called Islotes Gourdin, but on one of their 1958 charts as Rocas Gourdin. The name that was accepted by the 1970 Argentine gazetteer was Islotes Gourdin. However, the main island appears as Isla Gourdin on a 1954 Argentine chart, and on one of their 1957 charts as Islote Gourdin. On July 7, 1959, UK-APC renamed the main island as Gourdin Island, and it appears as such in the 1961 British gazetteer. US-ACAN accepted that name in 1963. The 1974 Chilean gazetteer accepted the name Islote Gourdin. What was bound to happen did happen, in the 1974 British gazetteer. The names Gourdin and Gourdon became confused (it appears as Gourdon Island).

Gourdin Islet *see* **Gourdin Island**

Gourdin Rock *see* **Gourdin Island**

Glaciar Gourdon *see* **Gourdon Glacier**

Massif Gourdon *see* **Gourdon Peak**

Monte Gourdon *see* **Gourdon Peak**

Mount Gourdon *see* **Gourdon Peak**

Península Gourdon *see* **Gourdon Peninsula**

Pointe Gourdon *see* **Gourdon Peninsula**

Punta Gourdon *see* **Gourdon Peninsula**

Sommet Gourdon *see* **Gourdon Peak**

Gourdon, Ernest. b. 1873. French geologist and glaciologist who joined the *Français* at Buenos Aires in Dec. 1903, for FrAE 1903-05. He was with Charcot again on the *Pourquoi Pas?*, for his FrAE 1908-10. He wrote, among other books, *Un hivernage dans l'Antarctique*.

Gourdon Glacier. 64°15' S, 57°22' W. A glacier, 6 km long, and with a conspicuous rock wall at its head, on the E side of James Ross Island, it flows SE into Markham Bay between Saint Rita Point and Rabot Point. First surveyed in 1902-03, by SwedAE 1901-04, and named by Nordenskjöld as Gourdon Gletscher, for Ernest Gourdon. It appears as Gourdon Glacier on a 1943 U.S. Hydrographic Office chart, and as Glaciar Gourdon on a 1949 Argentine chart. In 1952-53, it was re-surveyed by Fids from Base D. Gourdon Glacier was the name accepted by US-ACAN in 1956, and by UK-APC on Sept. 4, 1957, while the Argentine gazetteer of 1970 accepted Glaciar Gourdon.

Gourdon Gletscher *see* **Gourdon Glacier**

Gourdon Peak. 65°05' S, 64°00' W. A peak, rising to about 800 m (the Chileans say the mountainous N-S trending summit rises to 980 m), 0.8 km N of Wandel Peak, one of several high peaks on the the ridge that trends N-S on Booth Island, in the Wilhelm Archipelago. Its exterior flanks fall sharply to the sea, enclosing a glacier. First charted in 1904, by FrAE 1903-05, and named by Charcot as Sommet Gourdon,

for Ernest Gourdon. On later French charts it appears as Massif Gourdon. On a British chart of 1930 it appears as Mount Gourdon, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1959. It appears as such on a British chart of 1958. It appears on an Argentine chart of 1949 as Monte Gourdon, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by a FIDS-RN team between 1956 and 1958. On July 7, 1959, UK-APC renamed it Gourdon Peak. It appears on a U.S. Hydrographic Office chart of 1960 as Gourdon Mount, but in 1963 US-ACAN accepted the name Gourdon Peak.

Gourdon Peninsula. 64°26' S, 63°13' W. A snow-covered peninsula, 10 km long, it forms the SE side of Lapeyrère Bay, on the NE coast of Anvers Island, in the Palmer Archipelago. In Jan. 1905, while conducting a rough survey of the NE coast of Anvers Island, during FrAE 1903-05, Charcot named a narrow, salient point with some rocks emerging in front of it (on the NE coast of what is now called Gourdon Peninsula) between Lapeyrère Bay and Fournier Bay as Pointe Gourdon, for Vice Admiral Palma-Firmin-Christian Gourdon (1843-1913), of the French Navy. It appears on a 1943 U.S. Hydrographic Office chart as Point Gourdon. On a 1949 Argentine chart it appears as Punta Gourdon, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Following a survey by Fids from Base N in 1955, the name Goudon was re-applied to the whole peninsula, rather than just to the point at its NE end, and that situation was accepted UK-APC on Sept. 4, 1957. It appears as such on a British chart of 1959. US-ACAN followed suit in 1963. It appears on a Chilean chart of 1962 as Península Gordon (sic), but by the time of a 1966 Chilean chart, they had reverted to the Punta Gourdon situation.

Península Gourlay *see* **Gourlay Peninsula**

Punta Gourlay *see* **Gourlay Point**

Gourlay, Ronald George. Known as George. b. June 11, 1900, Kingskerswell, Devon, son of John Footman Gourlay and his wife Elizabeth Mary Bond. He was 3rd engineer on the *Discovery*, 1925-27, and on the *Discovery II*, 1929-37, and 2nd engineer on the *Discovery II*, 1937-39. After this tour, he married Nancy Snow in Ryedale Yorks, in 1939, and that is where he died, in Sept. 1986.

Gourlay Hut *see* **Rock Haven**

Gourlay Peninsula. 60°44' S, 45°36' W. An ice-free peninsula, about 180 m wide at its base, but widening to about 760 m, it forms the SE extremity of Signy Island, in the South Orkneys. The E (i.e., the seaward) end of the peninsula divides into 3 arms, Pantomime Point, Pageant Point, and Gourlay Point (which forms the end of the peninsula). Surveyed in 1933 by the personnel on the *Discovery II*, and again by Fids from Signy Island Station between 1947 and 1951 (the station was right here). Named by UK-APC on March 31, 1955, in association with Gourlay Point. US-ACAN accepted the name in 1956. The Argentines call it Península Gourlay.

Gourlay Point. 60°44' S, 45°36' W. The southernmost of the 3 finger-like points that form the SE end of Gourlay Peninsula, in the SE end of Signy Island, in the South Orkneys. Surveyed in 1933 by the personnel on the *Discovery II*, and named by them for George Gourlay. It appears as such on their 1934 chart. It was re-surveyed by Fids from Signy Island Station between 1947 and 1951. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1952 Argentine chart as Punta Gourlay, and that was the name accepted by the 1970 Argentine gazetteer.

Gourlay Snowfield. 60°43' S, 45°36' W. A southeast-facing snowfield, NW of Tilbrook Hill, on Signy Island, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1947 and 1951, and photographed by the Royal Navy in 1968. Named by UK-APC on Sept. 29, 2004, in association with Gourlay Peninsula.

Goutou Shan. 69°26' S, 76°02' E. A hill in the Larsemann Hills. Named by the Chinese.

Île Gouts *see* **Gamma Island**

Île du Gouverneur *see* **Gouverneur Island**

Gouverneur Island. 66°40' S, 139°57' E. A low island, half rocky, half glacial, about 1.8 km WSW of Pétrel Island, and almost 4 km E of Cape Géodesie, in Baie Pierre Lejay, at the extreme SW of the Géologie Archipelago. This area was photographed aerially by OpHJ 1946-47, but this particular island was charted by the French under Liotard in 1949-51, and named by them as Île du Gouverneur. Liotard was the first man to camp on the island. As leader of the French Polar Expedition, he was also honorary governor of Adélie Land. US-ACAN accepted the name Gouverneur Island in 1956.

The *Gouvernøren* *see* **The *Guvernøren***

Gouvernøren Harbor. 64°32' S, 62°00' W. Also called Puerto Svend Foyn and Guvernørhavna. A small harbor indenting the E side of Enterprise Island, just SW of Pythia Island, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Originally named Sobraon Cove (after the *Sobraon*), it was renamed Guvernørhavna (sic; the name means "governor harbor") by Norwegian whalers using the harbor about 1915, because the *Guvernøren* [sic and q.v.] was wrecked here in Jan. 1915. It was roughly charted as Gouvernøren Harbour, by the British Imperial Antarctic Expedition, and the major spelling error seems to have begun here. However, Lester and Bagshawe (of that expedition) also refer to it (correctly) as Guvernøren Harbour and (incorrectly) as Gouvernoren Harbour, as well as Pythia Harbour, named after the *Pythia*, which anchored here in 1921-22. It appears on a 1953 Argentine chart as Puerto Svend Foyn, but this was an error, mistaken for Foyn Harbor. Error or not, it seems to be what the Argentines call it today, and, worse, it appears to be the name accepted by the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1956-57. The name Gouvernøren Harbour was accepted by UK-APC on Sept. 23, 1960, and by US-ACAN in 1965 (but, of course, without the "u" in Harbour). It is unlikely that the spelling will be rectified. *See also* **Pendulum Cove**, for more on inlets used by the *Sobraon*.

Government. Antarctica is neutral. There is no government. No passports. No border control. Since 1959 the Antarctic Treaty has laid down certain rules, and these rules are worked out by the Treaty nations. Generally, but not always, by any means, people abide by these rules. At the individual bases, however, a certain local government has been desirable. Naturally, at naval bases there are specified leaders, both military and scientific, and the system works — always has. At Little America V, however, during the IGY period, a federal and municipal government was set up at the station, based on the U.S. system. The first session of the Little America senate convened in early April 1957. Nine elected senators met to discuss recreation, education, and other aspects of station life in Antarctica, and to pass on their comments to the station command. There was a president, a supreme court (3 justices), and an appointed cabinet of 95 members). The court was made up entirely of command heads. Captain Mills Dickey himself was president. There was also a Public Works system — "P.W." — which saw to things such as chores, work details, etc. — and no strikes. In the Soviet station of Mirnyy, G.I. Greku was elected mayor in 1956. Any Communist party leader was always the man to fear at the Russian camps. He may also have been the leader at the station. The leader of the French Antarctic Expedition was the honorary governor of Adélie Land. The British (i.e., the Falkland Islands) sent their first resident stipendiary magistrate to Deception Island in 1910-11. He was there every summer during the whaling seasons until 1931 (*see also* **Moyes, William**).

Islas Governor *see* **Governor Islands**

The *Governor Brooks*. American sealing schooner of 39 tons, built in Freeport, Me., in 1816, and registered in Salem, Mass., on July 13, 1818. Captain was Nicholas Witham. On Jan. 19, 1821, the vessel arrived at Yankee Harbor, in the South Shetlands, as part of the Salem Expedition. She returned for the 1821-22 season, finally leaving Antarctica on March 6, 1822.

Governor Islands. 60°30' S, 45°56' W. A group of islands and rocks, 0.8 km N of Penguin Point (the NW extremity of Coronation Island), in the South Orkneys. Discovered by Powell and Palmer in Dec. 1821. The name Guvernor Islands appears on a chart based on a running survey of the South Orkneys conducted by Petter Sørlle in 1912-13. On Sørlle and Hans Borge's chart of 1913 the feature appears as Guvernørens Islands (this must be named for the *Guvernøren*, i.e., the first whaling ship of that name in the Antarctic). On Sørlle's chart of 1930 it appears as Allardyce Øyane (i.e., "Allardyce islands"). Most of these names commemorate Sir William Lamond Allardyce (1861-1930), governor of the Falkland Islands, 1904-14, who, rather oddly, never got a feature named after him aside from this one.

They appear on a 1933 Argentine chart as Islas Governor, but on a 1947 Argentine chart they have been translated fully as Islas Gobernador. The islands were re-surveyed by the Discovery Investigations in 1933, and appear on their 1934 chart as the Governor Islands, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. The feature appears as such in the 1955 British gazetteer. The 1970 Argentine gazetteer accepted the name Islas Governor.

Governor Mountain. 69°43' S, 158°43' E. A mainly ice-free mountain, rising to 1550 m at the W side of the head of Tomilin Glacier, and on the N side of Fergusson Glacier, in the Wilson Hills, about 19 km SSW of Parkinson Peak, in Oates Land, in Victoria Land. Mapped by the USGS Topo West party of 1962-63. The mountain was occupied as a survey station by the Northern Party of NZGSAE 1963-64, and named by them for Sir Bernard Fergusson (*see* **Fergusson Glacier**), and for its dominating aspect. NZ-APC accepted the name, and US-ACAN followed suit in 1964. ANCA also accepted the name.

Mount Gow. 71°20' S, 162°40' E. Rising to 1770 m, on the E side of Rennick Glacier, it marks the W end of the rugged heights between the mouths of Carryer Glacier and Sledgers Glacier, where those two tributaries enter Rennick Glacier, in the Bowers Mountains of Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for New Zealander Anthony J. "Tony" Gow, glaciologist for 9 American Antarctic summers from 1957-58 (when he went down with CRREL) until Jan. 1968, at Byrd Station, when he penetrated the ice to the rock a mile and a half down, at Byrd Station. He was at Byrd in 1959-60, 1961-62, and 1963-64. He had spent time at McMurdo, and Pole Station (1960-61), and his specialty was core drilling on the Ross Ice Shelf. NZ-APC accepted the name.

Gowan Glacier. 79°07' S, 85°39' W. About 24 km long, it flows N from the vicinity of Cunningham Peak in the Founders Escarpment, to enter Minnesota Glacier just E of Welcome Nunatak, in the Heritage Range of the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Lt. Jimmy L. Gowan, USN (b. April 29, 1939, SC), USN, medical officer and officer-in-charge at the new Plateau Station for the first wintering-over there in 1966. Dr. Gowan later practiced in Columbia, SC.

Goward Peak. 69°36' S, 72°19' W. A sharp-pointed peak rising to about 500 m above sea level, just E of Fournier Ridge, in the Desko Mountains, on Rothschild Island, off the NW coast of Alexander Island. Surveyed by BAS in 1975-77. Named by US-ACAN for Cdr. Richard F. Goward, U.S. Coast Guard, executive officer of the *Glacier* during OpDF 69 (i.e., 1968-69). UK-APC accepted the name on June 11, 1980. Originally plotted in 69°36' S, 72°26' W, it has since been replotted.

Gowlett Peaks. 69°53' S, 64°55' E. A small group of isolated peaks, rising to about 1950 m, and consisting of tall, sharp twin peaks and 2 close outliers, 13 km NE of the Anare Nunataks, in Mac. Robertson Land. Brown rock is exposed from the general level of the ice plateau to the summits of the outcrops. Discovered in Nov. 1955, by John Béchervaise's ANARE party, and named by ANCA for Alan Stanley Gowlett (b. Jan. 21, 1921), diesel mechanic at Mawson Station in 1955. He had also been at Macquarie Island in 1951. US-ACAN accepted the name in 1961.

Goy, Gilbert. French surgeon who arrived at Adélie Land in Jan. 1957 with Jacques Dubois, and was one of the 4 men to winter-over at Charcot Station that year. He performed an appendectomy in the course of his activities.

The *Goyena*. Argentine ship which took part in ArgAE 1967-68 (Captain de corbeta Horacio F. Giorgi); ArgAE 1968-69 (Captain E. Dahms; Capt. Georgi took her out of Ushuaia, but died of a heart attack on Jan. 23, 1969; the ship returned to port, and Capt. Dahms took over); ArgAE 1971-72 (Captain Eduardo Gastón Lestrave); and ArgAE 1972-73 (Captain Pedro Granelli). She was scrapped in 1982.

Cabo Goyena. 63°22' S, 55°21' W. A cape due E of Tay Head, on Joinville Island. Named by the Argentines for the *Goyena*.

Monte Goyena *see* **Mount Kirkwood**

Goyena, Diego García *see* **Órcadas Station**, 1937

Mount Gozur. 78°07' S, 85°30' W. Rising to 2980 m, just NW of the head of Young Glacier, 14 km E of Mount Bentley, in the central part of the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Capt. (later Col.) Alexander Gozur (b. March 17, 1929), USAF, who helped in the building of Pole Station in 1956-57.

Holmen Graa *see* **Grey Island**

Graben Horn. 71°48' S, 12°02' E. A prominent horn- or cone-shaped peak, rising to 2815 m, S of Zwiesel Mountain, at the E side of Humboldt Graben, in the central part of the Pieck Range, in the Petermann Ranges of Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Grabenhorn, in association with Humboldt Graben. A graben is a rift valley. US-ACAN split up the word as Graben Horn, in 1970. The Norwegians call it Søkkhornet (i.e., "the hollow horn").

Grabenhorn *see* **Graben Horn**

The *Grace*. A 198-ton brig, built in New York in 1812, and captured by the British during the war with the USA, winding up in Plymouth, as a sealer, owned by Bullock & Co., of Stoke Damerel. On June 15, 1821, Henry Rowe, one of her owners, was appointed skipper, and the following day she sailed from Plymouth, bound for the South Shetlands and the 1821-22 sealing season. Going via the Falklands, she arrived in the South Shetlands in company with the *Enchantress*, and they both moored at New Plymouth and Clothier Harbor for the season. In 1822-23 she was whaling off the coast of Chile and Peru, and in May 1823, went down off Cape Horn. She was replaced by another ship of the same name (a vessel built in Padstow in 1819, whose name was changed in 1823 to the *Grace*), again commanded by Capt. Rowe, but that ship did not go to Antarctica. *See* **Rowe, Henry**, for a detailed thesis on the name of the skipper.

Cape Grace *see* **Grace Rocks**

Grace Lake. 68°25' S, 78°27' E. Near the ice plateau in the N part of Long Peninsula, in the Vestfold Hills. Named by ANCA for Daniel R. "Dan" Grace, biologist at Davis Station in 1973, the first wintering-over biologist to study the lakes of the Vestfold Hills.

Mount Grace McKinley *see* **McKinley Peak**

Grace Rock. 62°22' S, 58°59' W. A rock in water, 1.3 km off the S coast of Nelson Island, in the South Shetlands. Photographed aerially by FIDASE in 1956. Named by UK-APC on Aug. 31, 1962, for the *Grace*. It appears on a British chart of that year. US-ACAN accepted the name in 1965. The British were the latest to re-plot this feature, in late 2008.

Grace Rocks. 66°25' S, 100°33' E. Prominent rock outcrops on the S side of the mouth of Apfel Glacier, at its junction with Scott Glacier (on the E side of that glacier), in Queen Mary Land, about 9 km S of the Bunger Hills. Mapped as a cape from air photos taken by OpHJ 1946-47, and named by US-ACAN as Cape Grace, for Lt. Philip J. Grace, USN, pilot on OpW 1947-48. He assisted in operations which resulted in the establishment of astronomical control stations from the Wilhelm II Coast to the Budd Coast. In 1971 US-ACAN re-defined the feature. ANCA accepted the new name.

Isla Graciela *see* **Lautaro Island**

Graduation Ridge. 71°28' S, 161°44' E. A high rock ridge, N of El Pulgar, it forms the N extremity of the Morozumi Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. So named by NZGSAE 1967-68, who visited it, because J.A.S. Dow (*see* **Dow Peak**) received his exam results here. NZ-APC accepted the name, and US-ACAN followed suit in 1969.

Grady, Samuel. b. 1885, Govan, Glasgow, son of ship's riveter Samuel Grady and his Aberdeen wife Mary Ann. He became a sailor, and was taken on at Hobart in Oct. 1914, as a fireman on the *Aurora*, for the Ross Sea Party of BITE 1914-17. While the ship was moored at Cape Evans, he fell down the ladder of the engine room, and broke a rib. He is reputed to have fought in World War I with the NZ Expeditionary Force.

Gradzinski Cove. 62°09' S, 58°55' W. A cove, S of West Foreland, Fildes Peninsula, King George Island, in the South Shetlands. Named by the Poles in 1984, for geologist Ryszard Gradzinski, sedimentological and paleontological party leader of PolAE 1980-81.

Grae Cliff. 81°20' S, 152°55' E. A cliff at an elevation of about 1600 m in the Lonewolf Nunataks, W of the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for a dog

from the three dog-teams operating from Scott Base in 1959-60. *See* **Lonewolf Nunataks** for more on this.

Graf Lerchenfeld Gletscher *see* **Lerchenfeld Glacier**

[1]**The *Graham***. A 105-foot Norwegian whale catcher, with a 20-foot beam, owned by the Sydhavet Company, and working for the Norwegian factory ship *Svend Foyn*. The commander (1920-21) was Sverre Skedsmo. At the end of Feb. 1921 the catcher visited Lester and Bagshawe at Paradise Bay, promising to pick them up the following season (*see* **British Imperial Antarctic Expedition**). She did, on Dec. 18, 1921, with Captains O. Andersen, V. Hansen, and Capt. Skedsmo aboard, along with A.G. Bennett, the British government whaling magistrate from the Falklands. But the two refused the lift, their mission not yet completed. They accepted an offer on Jan. 13, 1922, however. In the early morning of Nov. 7, 1924, skippered by Capt. Kristian Walbom, the *Graham* went down, with all 10 hands, off Joinville Island (*see* **Deaths**, 1924, and Whalers Bay Cemetery).

[2]**The *Graham***. French yacht, skippered by Philippe Cardis, which visited the South Shetlands and the Antarctic Peninsula in 1982-83. She met the *Damien II* at the Antarctic Peninsula, and together they sailed to 68°21' S, down the W coast of the peninsula.

Costa de Graham *see* **Graham Coast**

Mount Graham. 85°25' S, 146°45' W. Rising to 460 m, in the N part of the Harold Byrd Mountains. Named by US-ACAN in 1967, for Lt. Cdr. Robert E. "Bob" Graham, USN, a pilot, VX-6 commander at Little America V for the winter of 1956.

Graham, Alexander N. "Alec." b. 1926. He was in the Royal Navy, a yeoman at arms (one of only three in the Navy — equivalent to a chief petty officer). In 1952 he joined FIDS, as a meteorologist, and sailed from London in 1953, bound for the Falkland Islands, and from there wintered-over as senior met man at Base F in 1954. He later lived in the Isle of Lewis, Scotland.

Graham, Ian. 2nd mate on the *William Scoresby* during Operation Tabarin, 1943-45. He was officially part of the operation.

Graham, James *see* **USEE 1838-42**

Graham, John Galbraith. After graduating from Glasgow in 1956, he joined FIDS in 1957, as a medical officer. He left Southampton on the *Shackleton*, on Oct. 1, 1957, bound for Montevideo and the Falkland Islands. That was the year a flu epeidemic broke out on the *Shackleton*. He stayed on the *Shackleton* until that vessel reached Anvers Island, when he transferred to the *John Biscoe*. He wintered over at Base W in 1958. Immediately upon his return to the UK, he did a spell at Hammersmith Hospital, in London, and later lived in Cardiff.

Graham Coast. 65°45' S, 64°09' W. That portion of the W coast of the Antarctic Peninsula between Cape Renard and Cape Bellue, on the W coast of Graham Land, opposite the Biscoe Islands. This was what Biscoe discovered and roughly charted on Feb. 17-18, 1832, naming it Graham's Land, for Sir James Graham (*see* **Graham Land**, and *also see* **Anvers Island**, which Biscoe had also called Graham's Land, thinking it to be part of the mainland), and, on Feb. 21, 1832, annexing it for King William IV of the United Kingdom. On the 1842 map prepared by FrAE 1837-40, it appears as Terre de Biscoe, named for John Biscoe. On Ross's 1847 map (reflecting RossAE 1839-43) it appears as Graham Land, as it does on an 1894 U.S. Hydrographic Office chart, and on a 1916 British chart. Note: This coast is not synonymous with Graham Land (q.v.). Much inland detail of this coast between Deloncle Bay and Beascochea Bay was roughly mapped in 1909, by FrAE 1908-10, and appears on the expedition's maps of 1910. It first appears as the Graham Coast on an American Geographical Society map of 1928, and appears that way again on a 1943 USHO chart of 1943. In Aug.-Sept. 1935, the coast was surveyed by BGLE 1934-37, and appears on Rymill's 1938 map of that expedition. It appears on a 1947 Chilean chart as Costa de Graham, a name the Chileans use to this day. However, the coast, as now defined, first appears on a British chart of 1948, and that was what was accepted by US-ACAN, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57.

Graham Coast Station *see* **Base J**

Graham Harbour *see* **Foyn Harbor**

Graham Land. Centers on 66°00' S, 63°30' W. The N part of the Antarctic Peninsula, N of a line stretching across the peninsula from Cape Jeremy (at the junction of the Fallières Coast and the Rymill Coast) on the W coast to Cape Agassiz (at the junction of the Bowman Coast and the Wilkins Coast) on the E coast, i.e., running south between 63°15' S and 69°15' S. South of this imaginary line is Palmer Land. That has been the situation since 1964, when the USA, UK, Australia, and NZ, all agreed to bring some sort of order to the confused naming of the Antarctic Peninsula (see that entry for further details). Discovered by Bransfield in Jan. 1820. Later that year, Palmer discovered the N coast of Trinity Peninsula, and that was named Palmer's Land. Biscoe annexed what is now Anvers Island and the Graham Coast, for Britain, in 1831-32, and named them both collectively as Graham's Land, for Sir James Robert George Graham (1792-1861), first lord of the Admiralty at the time of Biscoe's explorations on the W side of Graham Land in 1832. Later in the 19th century the term Graham Land began to be used for the entire peninsula (i.e., the whole of the Antarctic Peninsula), at least by the British. BGLE 1934-37 explored and charted much of it. On Sept. 8, 1953, UK-APC defined Graham Land as the area of the peninsula that extends southward from Prime Head to a line joining Bowman Peninsula and the mainland coast in about 73°25' S, 72°00' W (on the English Coast), S of the Eklund Islands. The Americans were not so sure of this, the name Graham being British, and the name Palmer being American (Palmer Land was also being used without any real control, especially by the Americans; *see* **Palmer Land**). In 1964, this was cleared up for everyone, except the Chileans and the Argentines, who, both having their own names for the entire peninsula, were not a party to this convention.

Graham Passage. 64°24' S, 61°31' W. A marine channel separating Murray Island from the Danco Coast, on the W coast of Graham Land. Discovered and roughly charted by Capt. Sverre Skedsmo, and named by him for his whale catcher, the *Graham*, which was first to pass through it (twice), on March 20, 1922, in pursuit of a whale. It appears as Graham's Passage on charts drawn up by the British Imperial Antarctic Expedition of 1920-22, and on a 1943 U.S. Hydrographic Office chart. On an Argentine chart of 1949 it appears as Pasaje de Graham. However, on an Argentine chart of 1953, it appears as Pasaje Correa, named after Capitán de navío Edelmiro Correa (1852-1906), of the Argentine Navy, who fought in the war against Paraguay. On a 1954 Argentine chart it appears as Pasaje Graham, but the 1970 Argentine gazetteer chose Pasaje Correa. The feature was photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Graham Passage on Sept. 23, 1960, and it appears as such on a 1961 British chart. US-ACAN accepted that name in 1965. On a Chilean chart of 1962, it appears as Paso Yelcho, named for the famous ship that rescued Shackleton's men from Elephant Island in 1916. It appears as such in the 1974 Chilean gazetteer.

Graham Peak. 66°46' S, 50°58' E. About 12 km E of Mount Riiser-Larsen, in the NW part of the Tula Mountains of Enderby Land. Plotted by Australian cartographers from 1956 ANARE air photos. Named by ANCA on July 4, 1961, for Neal H. "Monty" Graham, cook at Wilkes Station in 1960. US-ACAN accepted the name in 1965.

Graham Spur. 70°03' S, 62°25' W. A mostly ice-covered spur, but with prominent bare rock exposures at the tip and near its center, it rises to about 505 m on the NW side of Hughes Ice Piedmont, 10 km S of James Nunatak, on the Wilkins Coast, on the E coast of Palmer Land. Mapped by USGS in 1974 from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for William L. Graham, USARP biologist and scientific leader at Palmer Station in 1972. UK-APC accepted the name on July 21, 1976. Originally plotted in 70°06' S, 62°30' W, it has since been replotted.

Graham's Land *see* **Graham Coast**, **Graham Land**

Gråhorna *see* **Gråhorna Peaks**

Gråhorna Peaks. 71°36' S, 12°16' E. A cluster of peaks, 8 km W of Store Svarthorn Peak, in the central part of the Westliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, plotted by them from these photos, and named

by Ritscher as Graue Hörner (i.e., "gray peaks"). Re-mapped by NorAE 1956-60, and translated by them into Norwegian as Gråhorna. US-ACAN accepted the name Gråhorna Peaks in 1970.

Grainger Valley. 70°45' S, 67°52' E. A valley, about 21 km long, and up to 2 km wide, it separates the Manning Massif from the McLeod Massif, in the E part of the Aramis Range, in the Prince Charles Mountains. Photographed aerially by ANARE in 1956. Named by ANCA on May 18, 1971, for geologist David J. Grainger, a member of the ANARE Prince Charles Mountains survey party which crossed it in Feb. 1969. He took part in a similar survey the following year. US-ACAN accepted the name in 1973.

Gråkammen *see* **Gråkammen Ridge**

Gråkammen Ridge. 71°41' S, 12°20' E. A large mountainous ridge between Gråhorna Peaks and Aurdalen Valley, in the southernmost part of the Westliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Tambovskaya Peak and Mount Solov'yev are on it. Discovered and photographed aerially by GermAE 1938-39, and plotted from these photos. Re-Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Gråkammen (i.e., "the gray ridge"). US-ACAN accepted the name Gråkammen Ridge in 1970.

Isla Gral. Aurelio Celedón *see* **Isla Celedón**

Isla Gral. Ramón Cañas *see* **Islote Cañas**

Gramada Glacier. 63°02' S, 62°35' W. Flows SE for 3 km from the SE slopes of the Imeon Range, E of Riggs Peak and S of Neofit Peak, on Smith Island, in the South Shetlands, and terminates in the Bransfield Strait. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, after the town of Gramada, in northwestern Bulgaria.

Gramkroken. 74°37' S, 10°41' W. A curved ridge, in the NE part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named descriptively ("the Gram hook") by the Norwegians, for Harald Gram (1887-1961), Norwegian Resistance leader during World War II. His son, Gregers Gram (b. 1917) was a commando, killed in action in Oslo, in 1944.

Gramophones. Phonographs, Victrolas, record-players, record-machines. The term "gramophone" is a trademark. Von Drygalski recorded penguins' voices on an Edison phonograph. Charcot had one on the *Français*, but they played it only every Sunday, to avoid over-familiarity with the records. Shackleton took one on BAE 1907-09, and Amundsen had one at Framheim. Scott had one on BAE 1910-13. The Ross Sea Party of BITE 1914-17 had a 1912 HMV Gramophone, given to them by the company, which probably saved their sanity. The one at Port Lockroy was unpacked on March 7, 1944, adding a new dimension to Operation Tabarin life.

Grampus *see* **Killer whale**

Mount Gran. 76°59' S, 160°58' E. A large, flat-topped mountain, rising to 2235 m (the New Zealanders say 1920 m), immediately W of Gran Glacier, overlooking the N portion of the Mackay Glacier, in Victoria Land. Discovered by BAE 1910-13, and named by them as Mount Tryggve Gran, for Trygve Gran [sic and q.v.]. The name was later shortened. US-ACAN accepted the name, and NZ-APC followed suit.

Gran, Trygve. Most (non-Norwegian) references call him Tryggve Gran, i.e., with two "g"s in his first name. Either way he was known as Trigger to his (British) associates. b. Jan. 20, 1889, in Kongsberg, Norway. His wealthy shipbuilder father died when he was 5 years old, and his mother raised the children, Georg and Trygve. A naval sub lieutenant who in 1910, at the age of 20, was planning to lead his own expedition to Antarctica when Arctic explorer Fridtjof Nansen introduced him to Scott. So, instead, after a bit of Scott-ish persuasion, he volunteered to go on BAE 1910-13 as ski expert. Scott's early impression of Gran is revealing: "He never does his share of work, great strong chap as he is. He only comes to the fore when he thinks he is being looked at, and especially when a photograph is being taken. It's extremely annoying." A little later, on the ice, Scott reflected, "Gran proves to be no use at all. He feels the cold more than anyone, and is desperately lazy and slow. I don't think he could ever be made into a sledge traveller." By March 1911 Gran was pretending to have cramps, in order to avoid going on another sledge journey. Everyone knew this. Scott despised him by this time, and described him as "a big hulking oaf, absolutely without spirit." He goes on to say, "it was a terrible mistake to bring him, but now he is here he must work, and I shall see he does, but for all practical purposes he is useless to the expedition, and all that remains is to rid oneself as far as possible of the nuisance of his presence. For himself and for the contemptuous opinion which he has earned from every member of the expedition, he appears to feel no shame whatever." By May 1911 Scott was beginning to change his mind about Gran, beginning to see his intelligence. Gran was the principal builder of Granite House (q.v.), and was one of the relief party to sight Scott's tent in Nov. 1912. He became an aviator in Norway, was the first man to fly over the North Sea, on July 30, 1914, wrote several books, and in World War I flew with the Royal Flying Corps, as Canadian Capt. Teddy Grant. He won the MC for flying night bombers over the Western Front toward the end of the war. In 1928 he led the search for Amundsen in the Arctic, and in 1930 created a stir when he publicly voiced doubt as to the veracity of Byrd's flight to the South Pole. When it immediately transpired that he might be lynched, he recanted (at least publicly). He was the first to be so (mis)quoted, but, the world being what it is, his supposed atheism has caught on among an ever-growing lunatic fringe, the same group who say we never landed on the Moon. He retired as a major in the Norwegian Air Force, and died in Grimstad, Norway, on Jan. 8, 1980, the last survivor of Scott's last expedition.

Gran Glacier. 76°56' S, 161°14' E. A glacier, rising from a snow divide with Benson Glacier to the NE, it flows S into Mackay Glacier, between Mount Gran and Mount Woolnough. Named by the NZ Northern Survey Party of BCTAE in Nov. 1957, for Trygve Gran, and also in association with the nearby mountain, which also bears his name. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Cabo Gran Roca. 64°36' S, 62°32' W. A cape, immediately NW of Punta Formas, in Orne Harbor, on the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Granaderos Refugio. 68°42' S, 67°40' W. Argentine summer refuge hut built by personnel from General San Martín Station, on Aug. 17, 1957, on the W side of Hayrick Island, in the Terra Firma Islands, off the Fallières Coast, on the W coast of Graham Land. Named for the Regiment of Cavalry Grenadiers who built it.

Cape Granat. 67°39' S, 45°51' E. On Alasheyev Bight, in Enderby Land, about 0.7 km NE of Molodezhnaya Station, 11 km NE of Campbell Glacier, in the W part of the Thala Hills. Named Mys Granat (i.e., "garnet cape") by SovAE 1961-62, and this was translated as Granat Point by ANCA on Oct. 22, 1968. US-ACAN accepted the name in 1971. It was later redefined as a cape.

Mys Granat *see* **Cape Granat**

Granat Point *see* **Cape Granat**

Rocas Granate *see* **Garnet Rocks**

Ostrov Granatovaja Sopka *see* **Granatovaya Sopka Island**

Granatovaya Sopka Island. 66°14' S, 100°45' E. An island, 450 m long, 150 m at its widest, and reaching an elevation of 22 m above sea level, in Rybii Khvost Gulf, 1.8 km NW of Cape Eolvyj, in the Bunger Hills. Charted by SovAE 1956, and named by the Russians as Ostrov Granatovaja Sopka. ANCA translated the name.

Grand Chasm *see* **Grand Chasms**

Grand Chasms. 78°35' S, 39°30' W. Two or more deep crevasses, between 0.4 km and 5 km wide, it is the most notable crevassed area on the Filchner Ice Shelf, extending W for an unknown distance (about 100 km, perhaps) from 37°W, close W of the Touchdown Hills. Discovered by BCTAE 1955-58, who photographed them aerially and partly surveyed them from the ground. In 1957 Ed Thiel and a party from Ellsworth Station studied them, surveyed them from the ground, and named them descriptively as Grand Chasm, or Grand Chasms. US-ACAN accepted the plural name in 1962, and UK-APC followed suit on Aug. 31, 1962. They appear on a U.S. Hydrographic Office chart of that year. There is a report that on a 1966 Soviet chart this feature appears as Razlomy Grand-Kazms, but this must be taken cautiously. U.S. Landsat images from March 1986 showed massive calving of the Filchner Ice Shelf in the vicinity of this feature, and the chasms disappeared, becoming part of the shelf's new front.

Grand Lagoon. 62°38' S, 60°22' W. A lagoon covering 1 hectare, at an elevation of 2.4 m above sea level, on Bulgarian Beach, in the E part of Livingston Island, in the South Shetlands. It is formed by Rezovski Creek, and is separated from the sea by a moraine about 3 m high. It is surmounted by a nameless hill which rises to 36 m between Hespérides Hill and Sinemorets Hill. Surveyed from the ground by the Bulgarians in 1995-96, and named by them as Laguna Golyamata. The Bulgarian government accepted the name on Oct. 29, 1996. The British and Americans have translated it as Grand Lagoon.

Sommet du Grand Pérez *see* **Pérez Peak**

Glaciar Grande *see* **Breguet Glacier**

Isla Grande *see* **Guyou Islands**

Islote Grande *see* **Chanticleer Island**

Valle Grande *see* **Grande Valley**

La Grande Dorsale *see under* **L**

Grande Île. 66°40' S, 140°01' E. An island to the SE of the Buffon Islands, in the Géologie Archipelago. So named by the French owing to its relative size. The French discontinued the name in 2009.

La Grande Souille *see under* **L**

Grande Valley. 62°12' S, 58°59' W. A broad, mainly flat, valley, trending W-E, across the middle of Fildes Peninsula, S of Gemel Peaks and Teniente Rodolfo Marsh Station, on King George Island, in the South Shetlands. About 1996, the Chileans named it Valle Grande (i.e., "big valley"). UK-APC "acknowledged" the name Grande Valley, on June 6, 2007. The British plotted this valley in late 2008.

Grandes Acantilados *see* **Pardo Ridge**

Canal Grandidier *see* **Grandidier Channel**

Chenal Grandidier *see* **Grandidier Channel**

Grandidier Channel. 65°35' S, 64°45' W. A navigable channel (but, still, with much floating ice) which separates the N part of the Biscoe Islands from the Graham Coast, it extends NE-SW from the S end of Penola Strait to the N junction of Maskelyne Passage with Harrison Passage, in the vicinity of Larrouy Island, on the W coast of Graham Land. First charted by FrAE 1903-05, and named by Charcot as Chenal Grandidier, for explorer and naturalist Alfred Grandidier (1836-1921), president of the Paris Geographical Society, 1901-05. Charcot's idea of the Grandidier Channel was much bigger than that applied to it today. Originally it was the entire body of water between the Biscoe Islands and the Graham Coast and Loubet Coast, i.e., between about 65°15' S to about 66°35' S. With those limits, the name Grandidier Channel appears on a British chart of 1908, and was accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. Following air reconnaissance, the channel was further charted by BGLE 1934-37, and traversed by the expedition ship *Penola* in Feb. 1936. It appears on a 1937 French chart as Détroit Grandidier (best translated as "Grandidier strait"). A 1940 map shows this feature and Crystal Sound collectively named Pendleton Strait, but this was an error, and on a 1943 U.S. Hydrographic Office chart of 1943 it appears as "Pendleton Strait (Grandidier Channel)," just to be sure. On an Argentine chart of 1946 it appears as Canal Grandidier, a name that was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. On a 1947 Chilean chart it appears as Estrecho Pendleton. The feature was further charted by RN Hydrographic Survey units between 1956 and 1959, on the *John Biscoe*, and, as a result of these surveys, on July 7, 1959, UK-APC re-defined the feature to the limits we know today. US-ACAN accepted that change in 1963.

Grandy, Onslow. Chief cook on the *Eagle*, 1944-45, during the 2nd phase of Operation Tabarin.

Grange, Jules-Joseph-François. b. May 11, 1819, Grenoble, France. Assistant naturalist and surgeon on the *Zélée* during FrAE 1837-40. He wrote the book, *Recherches sur les glaciers, les glaciers flottantes* (1846). He later studied cretinism and goitres in Switzerland, Savoy, and France, and died in 1892.

Mount Granholm. 71°34' S, 167°18' E. Rising to 2440 m, 14 km SE of Mount Pittard, in the NW part of the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Nels H. Granholm, USARP biologist at Hallett Station in 1967-68.

Granholm Rock. 66°17' S, 110°28' E. A rock with an overhanging ice hat, NW of Beall Island, near Casey Station. Named by ANCA for Peter Granholm, skipper for many years of the *Nella Dan* and the *Thala Dan*.

Islote Gränicher *see* **Gränicher Island**

Gränicher Island. 66°53' S, 67°43' W. A small island, the most northerly of the Bennett Islands, in Hanusse Bay, off Adelaide Island. Surveyed by ChilAE 1946-47, and named by them as Isla Guacolda, for a Chilean submarine (not in Antarctic waters). It appears as such on their 1947 chart, and was the name accepted by the 1974 Chilean gazetteer. Mapped by FIDS cartographers from air photos taken by RARE 1947-48 and by FIDASE in 1956-57. It was re-surveyed by ArgAE 1956-57, and named by them as Islote Suboficial Nievas, after a member of that expedition. It appears as such on their 1957 chart. Named by UK-APC on Sept. 23, 1960, as Gränicher Island, for Walter Hans Heini Gränicher (b. 1924), Swiss physicist specializing in ice molecules. It appears, misspelled, as Gränicker Island, in the 1961 British gazetteer. US-ACAN accepted the name in 1965. Today, the Argentines call it Islote Gränicher.

Granitbach. 62°10' S, 58°58' W. A little stream flowing into Granitbucht, at Bothy Cove, on the NW coast of Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Granitbucht. 62°10' S, 58°58' W. A bay on the coast of Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Granite. Found in Antarctica.

Granite Glacier. 64°52' S, 62°46' W. A narrow tidewater glacier descending from Mount Guterch, to Leith Cove, at Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named by the Poles on Sept. 1, 1999, for the granite peaks surrounding the glacier.

Granite Harbor. 76°53' S, 162°44' E. A bay, about 11 km wide, and backed by high mountains, it indents the E coast of southern Victoria Land for about 13 km, and marks the seaward end of a deep valley between Cape Archer and Cape Roberts, at the foot of Mackay Glacier. It is a part of McMurdo Sound. Discovered by Scott from the *Discovery* in Jan. 1902, while he was searching for safe winter-quarters for the ship, during BNAE 1901-04, and named by him for the great granite boulders found on its shores. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Granite House. 76°53' S, 162°44' E. On Cape Geology, on the S shore of Granite Harbor. Built in Nov. 1911 by Grif Taylor, Frank Debenham, Robert Forde, and Trygve Gran (he was the main builder), as their kitchen, so they could live more comfortably in their tent, as they mapped the coast of Victoria Land, during BAE 1910-13. 9 feet by 6 feet, it was 5 feet 2 inches high, and was a natural granite shelter. Boulders were added to it, a sledge was placed on top, and seal skins on top of that. The men planted kale sprouts, which flourished. By Jan. 12, 1912 they knew that the *Terra Nova* couldn't get through the ice to pick them up, so they started walking back to the Ross Island base. The ship picked them up on Feb. 14, 1912. In Nov. 1959 Granite House was found by 5 U.S. scientists working the area — Bob Nichols, Bill Meserve, Bob Goodspeed, Bob Rutford, and Roger Hart. They then discovered that someone in Sir Edmund Hillary's party had been there a couple of years before from Scott Base. So, it is unclear who really found Granite House. Today it is Historic Site #67. The walls have partially collapsed, and the shelter contains corroded remanants of tin cans, a seal skin, and some cord. The sledge that formed the roof is now lying 50 meters seaward of the shelter, and consists of a few scattered pieces of wood, straps, and buckles.

Granite Knob *see* **John Nunatak**

Granite Knolls. 77°53' S, 163°29' E. Conspicuous rock outcrops on the NW flank of the upper part of Blue Glacier, 8 km W of Hobbs Peak, in Victoria Land. Named descriptively by BAE 1910-13. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Granite Pillars. 83°36' S, 170°45' E. Conspicuous ice-free rock pillars on the W side of the lower Beardmore Glacier, 3 km E of Mount Ida, in the Queen Alexandra Range. Discovered by Shackleton in 1908, during BAE 1907-09, and named by him as Cathedral Rocks. The name was later changed in order to avoid confusion with a feature of that name in the Royal Society Range. US-ACAN accepted the name in 1966.

Granite Spur. 73°30' S, 94°24' W. A rock spur along the N front of the Jones Mountains, 0.8 km W of Avalanche Ridge. Mapped by the

University of Minnesota Jones Mountains Party of 1960-61, and so named by them because the basement granite is well exposed here. US-ACAN accepted the name in 1963.

Gora Granitnaja *see* **Granitnaya Mountain**

Granitnaya Mountain. 72°08' S, 11°38' E. Rising to 2880 m, just E of Skeidshovden Mountain, in the SW part of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped (but, apparently not named) by Norwegian cartographers, working from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1960-61, and named by the Russians in 1966, as Gora Granitnaja (i.e., "granite mountain"). US-ACAN accepted the name Granitnaya Mountain in 1970. The Norwegians call it Granittfjellet (which means the same thing).

Roca Granito. 62°27' S, 60°47' W. A small granitic rock in water, hardly even separated from the coast, where Playa Ballena Norte meets Playa Ballena Sur, in the interior of Bahía Mansa, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named decriptively by the scientific personnel from the Instituto Antártico Chileno, during ChilAE 1990-91.

Granittfjellet *see* **Granitnaya Mountain**

Cabo Grano. 64°34' S, 62°09' W. A cape on the NW side of Nansen Island, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. Named by the Argentines.

Granøe, Christen Ragwald. b. 1883, Norway. On Feb. 8, 1914, in Tjorne, in Vestfold, he married Julie Halvorsen. He was a gunner on the whale catcher *Odd III*, working for the *Pythia* in Antarctic waters in 1924-25, and in 1928-29 he was manager of the *Thorshammer*.

Lago Gransasso. 74°55' S, 163°41' E. A lake, 86 m above sea level, it measures 135 m by 100 m, has a depth of 2.5 m, and has seasonal ice-covering. It is located 2.77 km SSW of the notorious "snow cave" (where Campbell's Northern Party were trapped during BAE 1910-13), on Inexpressible Island, in Terra Nova Bay, Victoria Land. Named by Vittorio Libera during ItAE 1988-89, for the great rock near the E shore of the lake. Gran Sasso means "great rock," the more famous feature of this name forming the highest point in the Appennini, in Italy, the place from which Otto Skorzeny plucked Mussolini out of captivity in Sept. 1943. The Italians accepted the name on July 17, 1997.

Grant, Alan. b. 1933, Birkenhead, Cheshire. He joined FIDS in 1955, as a diesel electric mechanic, and wintered-over at Signy Island Station in 1956.

Grant, Dave J. He wintered-over at Mawson Station in 1976 and 1982, at Casey Station in 1984, and at Mawson again in 1989. He also wintered-over at Macquarie Island in 1980.

Grant, J. Collin *see* **Órcadas Station**, 1933

Grant, James. A carpenter by trade, he was petty officer on the *Discovery II*, 1929-33.

Grant, John. b. 1859, Dundee. Cook on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04.

Grant Island. 74°28' S, 131°35' W. An ice-covered island, 30 km long and 16 km wide, 8 km E of the smaller Shepard Island, off the coast of Marie Byrd Land. Like Shepard, it is surrounded by the Getz Ice Shelf on all but the N side. Discovered and charted on Feb. 4, 1962, by the personnel on the *Glacier*. Named by US-ACAN in 1966, for Cdr. E.G. Grant, commander of the *Glacier* at the time.

Grant Valley. 79°58' S, 156°25' E. Between Communication Heights and Mount Ash, in the Darwin Mountains. A lobe of ice from Hatherton Glacier occupies the mouth of the valley. Named by US-ACAN in 2001, for Bettie Kathryn "B.K." Grant, information systems supervisor who made 11 visits to Antarctica between 1990 and 2001, the last 10 to Pole Station, where she overwintered in 1993.

The *Granville*. Ship that took part in ArgAE 1947. Her skipper was Emilio L. Díaz. In Nov.-Dec. 1947, she was at the Antarctic Peninsula, on a voyage from Ushuaia, to study ice conditions there and in the Drake Passage, under the command of Capt. Horacio A. Esteverena. She also took part in ArgAE 1947-48 (Capt. Esteverena).

Cabo Granville *see* **Cape Smith**

Graovo Rocks. 62°20' S, 59°30' W. A group of rocks, extending for 1.75 km in a N-S direction and 750 m in an E-W direction, off the N coast of Robert Island, E of Lientur Rocks and SW of Liberty Rocks, their central point being 1.51 km NNE of Newell Point, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Sept. 14, 2010, for the region of Graovo, in western Bulgaria.

Graphite. Also called plumbago, or black lead. A mineral consisting of native carbon. Has been found in Antarctica.

Graphite Peak. 85°03' S, 172°45' E. Rising to 3260 m above sea level, at the NE end of a ridge running NE for 5 km from Mount Clarke, between that mountain and Mount Usher, just S of the head of Falkenhof Glacier and E of Snakeskin Glacier, in the Queen Maud Mountains. Surveyed by the Southern Party of NZGSAE 1961-62, and named by them for the graphite here. Here, on Dec. 28, 1967, the first fossilized land animal was found in Antarctica, by Dr. Peter Barrett. It was the fossilized jawbone of a primitive lizard, labyrinthodont. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Isla Graptolita *see* **Graptolite Island**

Graptolite Island. 60°43' S, 44°27' W. An island, 0.8 km long, in the NE part of Fitchie Bay, off the SE part of Laurie Island, in the South Orkneys. Weddell's chart published in Aug. 1825 showed 2 islands here, but, in 1903, ScotNAE 1902-04 found only one, and Bruce named it Graptolite Isle, or Graptolite Island (it appears both ways on the expedition's charts), for the graptolite fossils here. Re-charted by the Discovery Investigations in 1933, it appears as Graptolite Island on their 1934 chart, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1945 Argentine chart as Isla Graptolite, but on a 1957 chart as Isla Graptolita, and that latter name was the one accepted by the 1970 Argentine gazetteer. There is also an ephemeral 1955 reference to it as Islote Graptolito.

Graptolite Isle *see* **Graptolite Island**

Gras, Jean-Gaspard. b. July 16, 1797, La Valette, France. Pilot on the *Zélée* during FrAE 1837-40.

Graser Nunatak. 74°55' S, 70°12' W. A nunatak, rising to about 1500 m, isolated except for Hinely Nunatak 1.5 km to the SE, 26 km SE of the Sky-Hi Nunataks, where Ellsworth Land meets southern Palmer Land. Named by US-ACAN in 1987, for William F. Graser, USGS cartographer, who, with John A. Hinely, formed the USGS satellite surveying team at Pole Station for the winter of 1976. UK-APC accepted the name on Feb. 15, 1988.

Grass. There are two grasses native to Antarctica, both found at the N tip of the Antarctic Peninsula. *Deschampsia parvula* and *Deschampsia elegantula*. BGLE 1934-37 tried sowing grass seeds in the Argentine Islands, but with no success. During Operation Tabarin, Ivan Mackenzie Lamb imported some plants, but they all died. In the summer of 1954-55 two grasses—*Poa annua* and *Poa pratensis*—were inadvertently introduced to Deception Island, as well as 6 trees of *Nothofagus pumilio* and *Nothofagus antarctica* to Cierva Cove, in soil imported from Ushuaia, in Chile. The trees didn't survive, but 6 years later *pratensis* was still growing, but only in the imported soil.

Grass Bluff. 85°35' S, 177°14' W. A wedge-shaped rock bluff, 6 km NW of Fluted Peak, in the S part of the Roberts Massif. Named by US-ACAN in 1966, for Robert D. Grass, meteorologist with the U.S. Weather Bureau, who wintered-over at Pole Station in 1964.

Grass Point *see* **Deschampsia Point**

Grasshoppers. Portable, battery-operated (6-week battery) automatic weather stations, used by the Americans in Antarctica. They looked like a rocket, were 6 feet long, and 2 feet in diameter. One was dropped at the South Pole before the Seabees arrived in 1956. It got to its feet, pushed out an antenna, and began transmitting weather reports. In general, the grasshoppers failed.

Gråsteinen *see* **Gråsteinen Nunatak**

Gråsteinen Nunatak. 71°57' S, 2°00' W. An isolated nunatak, 11 km SW of Litvillingane Rocks, on the E side of Ahlmann Ridge, in the NE part of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Gråsteinen (i.e., "the gray stone"). US-ACAN accepted the name Gråsteinen Nunatak in 1966.

Grasty, George Milton. Known as "Binx" (after a cartoon character). b. Oct. 24, 1904, Houston, Tex., son of steel salesman Jonathan

Milton Grasty and his wife Irene Eunice Brundrett. In the 1930s he worked in the goldfields in Juneau, studied biology, and served as a steward on the *North Star* for the 2nd half of USAS 1939-41. He joined the U.S. Navy as a hospital corpsman, and saw action in the Solomons. On Dec. 24, 1942, in San Diego, he married Anna Marguerite "Peg" Porter, and they raised a family in Arkansas (where he tried chicken farming) and Wichita, he tried teaching, and then, in 1959, settled in Coronado, Calif., which is where he died, on March 8, 2001.

Graticule Lake. 68°35' S, 78°30' E. A small, round lake, about 200 m in diameter, in the Vestfold Hills. Named by ANCA. The graticule of the 1:50,000 map forms a junction just SE of the lake. A graticule is a network of lines of latitude and longitude upon which a map is drawn.

Gratton Nunatak. 86°06' S, 127°46' W. A bare, linear mountain on the S side of the mouth of McCarthy Glacier, where that glacier enters Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Seabee John William Gratton (b. July 12, 1936, Neptune, NJ), USN, construction mechanic (heavy equipment) with Arctic experience, who wintered-over at Byrd Station in 1962. He was the first out of Byrd at the end of the winter.

Graue Hörner *see* **Gråhorna Peaks**

Graunch Gully. 72°30' S, 169°45' E. Leads from Edisto Glacier, near The Football, to Football Saddle, in Victoria Land. Several days were spent by NZGSAE 1957-58 in relaying sledges and stores up the gully to the pass by manhauling. The word "graunch," while not exclusively a Kiwi word, is heard mostly in NZ, and means to use excessive force to get something done.

Pik Graura. 71°55' S, 9°18' E. A peak at the S side of Mel Moraine, at the N end of the Gagarin Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Named by the Russians.

Grautfatet *see* **Schüssel Cirque**

Grautrenna. 71°32' S, 11°35' E. The northernmost valley in Gorki Ridge, in the Humboldt Mountains, in the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. The name means "oat meal" in Norwegian. The Germans have plotted this feature in 71°33' S, 11°37' E, and call it Am Überlauf.

Grautskåla *see* **Grautskåla Cirque**

Grautskåla Cirque. 71°37' S, 11°22' E. Immediately N of The Altar, in the N part of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, it was first plotted from these photos. Re-mapped by NorAE 1956-60, and named descriptively by the Norwegians as Grautskåla (i.e., "the mash bowl"). US-ACAN accepted the name Grautskåla Cirque in 1970.

Vulcano di Fango Grauzaria. 61°02' S, 56°57' W. A group of submarine mud volcanoes, 459 sq km in area, 2594 m under the sea, and rising to about 185 m from the ocean floor, W of Elephant Island, in the South Shetlands. Discovered from the *Explora* in 2003-04, during Project BSR. Named by the Italians on May 15, 2008, for Mt. Grauzaria, in the Alps (the leader of Project BSR, a woman, coming from that region in Italy).

Gravel Inlet. 68°37' S, 78°05' E. On the S side of Ellis Fjord, in the Vestfold Hills. It has a gravel beach, which is unusual in the Vestfold Hills. Named by ANCA.

Rocher (de) Gravenoire *see* **Gravenoire Rock**

Gravenoire Rock. 66°21' S, 136°43' E. A small rock outcrop, about 1.5 km SE of Rock X, it protrudes above the coastal ice on the E side of Victor Bay. This area was photographed aerially by OpHJ 1946-47, but this particular rock was charted by the French in 1952-53, and named by them as Rocher de Gravenoire, because of its resemblance to Gravenoire, the hill overlooking the city of Clermont-Ferrand, in France. US-ACAN accepted the name Gravenoire Rock in 1955. The French have shortened their name to Rocher Gravenoire.

Graves, Ludwig *see* **USEE 1838-42**

Graves Nunataks. 86°43' S, 141°30' W. A small group of nunataks near the edge of the Polar Plateau, 22 km ESE of Beard Peak, in the La Gorce Mountains, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Gerald V. Graves, VX-6 photographer during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67).

Graveson Glacier. 71°00' S, 163°45' E. A broad tributary glacier flowing N from that portion of the Bowers Mountains between the Posey Range and the S part of the Explorers Range, and picking up the flow of several lesser tributaries along the way, and, via Flensing Icefalls, it enters Lillie Glacier. Named by the Northern Party of NZGSAE 1963-64, for James Francis "Frank" Graveson, driller in Antarctica, 1962-63, and mining engineer for the winter of 1963 at Scott Base, and who was a field assistant with this NGSAE party. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Massif Gravier *see* **Gravier Peaks**

Mount Gravier *see* **Gravier Peaks**

Pico(s) Gravier *see* **Gravier Peaks**

Pics Gravier *see* **Gravier Peaks**

Sommet Gravier *see* **Gravier Peaks**

Gravier Massif *see* **Gravier Peaks**

Gravier Peaks. 67°12' S, 67°20' W. Three prominent, ice-covered peaks, the highest being 2315 m (the others are about 1900 m and 2100 m), extending in an ENE-WSW direction, in the Tyndall Mountains, 3 km NE of Lewis Peaks, on Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Discovered and roughly positioned in Jan. 1905, by FrAE 1903-05, and named by Charcot as Sommet Gravier, for Charles-Joseph Gravier (1865-1937), French zoologist with the Natural History Museum in Paris, and a member of the commission appointed to publish the scientific results of the expedition. Roughly surveyed in Jan. 1909, by FrAE 1908-10, at which time the individual peaks making up this group were first identified. They appear on the expedition maps from FrAE 1908-10, under the names Sommets Gravier, Pics Gravier, and Massif Gravier, and include what would later be called Mount Lagally. The name Mount Gravier appears on British charts of 1916 and 1948, and the name Mont Gravier appears on French charts of 1937 and 1948. On Feb. 13, 1937, the feature was photographed aerially during BGLE 1934-37. On a 1943 U.S. Hydrographic Office chart it appears as Gravier Massif, and on a 1946 USAAF chart as Gravier Peaks. Re-surveyed by FIDS in 1948. UK-APC accepted the name Gravier Peaks on March 31, 1955, and US-ACAN followed suit in 1956. The feature was photographed aerially by FIDASE in 1956-57, and appears on a British chart of 1957. In Oct. 1958, it was re-surveyed by Fids from Base E. On a 1958 chart it appears as Pico Gravier, but the name accepted by the 1974 Chilean gazetteer was Picos Gravier, a name that today, the Argentines also use.

Gravill, Henry "Harry." b. Nov. 19, 1873, Dundee, son of Yorkshire-born parents, master mariner John Gravill and his wife Annie Duncan. He became an apprentice mariner as a teenager, specializing in engineering, and was 2nd engineer on the *Scotia* during ScotNAE 1902-04. For a while after Allan Ramsay's death in the South Orkneys in 1903 he was chief engineer, but once they got back to Buenos Aires, the expedition hired a real chief, Carlos Haymes.

Rocher du Gravimètre *see* under **D**

Gravsteinen. 74°33' S, 14°29' W. A nunatak in the northernmost part of Mannefallknausane, in Maudheimvidda, in Queen Maud Land. Name means "the gravestone" in Norwegian.

Cape Gray. 66°51' S, 143°22' E. At the N end of a small, rocky island, joined to the ice-cap of the mainland of George V Land by an ice ramp, it forms the E side of the entrance to Commonwealth Bay. Discovered by AAE 1911-14, and named by Mawson for Percy Gray. US-ACAN accepted the name, and ANCA followed suit. Note: The Americans say it is the actual island, therefore not really a cape at all.

Islote Gray *see* **Gray Nunatak**

[1]**Mount Gray** *see* **Mount Flint**

[2]**Mount Gray**. 75°01' S, 136°42' W. Also spelled (erroneously) as Mount Grey. A rounded, ice-worn mountain on the SW part of McDonald Heights, on the E side of Hull Glacier, 3 km N of Oehlenschlager Bluff, on the coast of Marie Byrd Land. Discovered in 1940 on a flight from West Base, during USAS 1939-41, and named Mount Jane Wade, for Al Wade's wife. This was obviously an unacceptable name, and, in 1966, US-ACAN changed the name to Mount Gray, for Orville Gray.

Nunatak Gray *see* **Gray Nunatak**

Roca Gray *see* **Gray Nunatak**

Gray, David. Baptized Oct. 26, 1828, in Peterhead, Aberdeenshire, son of whaling captain John Gray and his wife Barbara Geary, and grandson of an Arctic whaler. However, it was David who was to become the great ice-king of

Peterhead. In 1851 he married Isabella Gamack Law, in Peterhead, they had 4 children, but Isabella died in childbirth in 1858. Capt. Gray remarried, in 1863, to Amelia Walker, and they had 14 children. So, the "Prince of Whalers," as he was called, produced a total of 18 children, which is noteworthy. Rather surprisingly, given that he was short on time, he published a pamphlet in 1874, "A Report on New Whaling Grounds in the Southern Seas." In 1891, recognizing that Arctic whaling was coming to an end, he came close to forming an expedition that year to the Weddell Sea, in Antarctica, but the effort was abandoned due to lack of funds. He made one last Arctic trip in 1893, and retired, as did the whaling business in Peterhead. He died on May 16, 1896, at his home at The Links, in Peterhead.

Gray, James. On Cook's voyage of 1772-75. He later became bosun on the *Essex*.

Gray, Orville. Known as "Pappy G." Aviation machinist's mate 1st class at West Base during USAS 1939-41. He piloted several flights over Marie Byrd Land, and during the expedition was promoted to chief petty officer. Charles Passel describes him as "a funny little fellow," and a "hillbilly."

Gray, Percy. b. Dec. 1888, Bowral, NSW, son of William P. Gray and his wife Matilda. Educated in England, he served on the *Worcester* as a cadet for 18 months before being apprenticed in sail on the brand new *Archibald Russell*, of Glasgow, for the NZ Shipping Company. In 1909 he transferred to the P & O Line, becoming a 3rd officer. He was also RNR. At Cardiff, on July 27, 1911, he signed on to the *Aurora* as 2nd officer and navigator, at £8 per month, for AAE 1911-14. On Nov. 25, 1911, his pay increased to £10. He went to Antarctica on the first two voyages south during the expedition, and was paid off at Hobart on March 10, 1913. However, he was recommissioned on Oct. 27, 1913, again as 2nd officer, for the 3rd and last voyage. He finally left the expedition on March 19, 1914. By 1915 he was a lieutenant on HMS *Exeter*. He was 2nd officer on the *Mauretania*, just after World War I, and in the 1920s gave up the sea to become a farmer in Africa. On the outbreak of World War II he was called back into the Navy, as a commander. He died in Oct. 1944, in Natal, following an operation.

Gray Glacier. 82°23' S, 159°35' E. A small glacier, 10 km long, S of Tarakanov Ridge, and just N of Gargoyle Ridge, in the Cobham Range, it flows SE to merge with Prince Philip Glacier where the two join the Nimrod Glacier. Named by the Holyoake, Cobham, and Princess Elizabeth Ranges Party of NZGSAE 1964-65, for M. Gray, postmaster and asssistant radio officer at Scott Base that season. NZ-APC accepted the name, and US-ACAN followed suit in 1966. ANCA also accepted the name.

Gray Hill. 82°56' S, 48°29' W. Mainly ice-covered and rising to 1020 m, 4 km S of Crouse Spur, on the SE side of the Forrestal Range, in the Pensacola Mountains. Mapped by USGS from 1964 USN air photos, and from USGS ground surveys in 1965-66, conducted during their Pensacola Mountains Project. Named by US-ACAN in 1968, for Master Sgt. Kit Gray, Jr. (b. Aug. 27, 1918, Beaumont, Tex. d. Jan. 1, 1998, Beaumont), USAF, flight engineer on the United States Air Force Electronics Test Unit, 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Gray Nunatak. 65°06' S, 60°04' W. A nunatak, 2.5 km W of Arctowski Nunatak, in the Seal Nunataks, it rises to about 100 m above the Larsen Ice Shelf, SE of the Nordenskjöld Coast, on the E coast of Graham Land. On Dec. 11, 1893, Larsen discovered the Seal Nunataks, and this one was named Jason-Insel (i.e., "Jason island"), after his ship. In those days the nunataks were thought to be islands. On the 1902 map prepared by BelgAE 1897-99, it appears as Île Jason. Surveyed and charted on Oct. 8, 1902, on a sledge journey, during SwedAE 1901-04, shown to be a nunatak, and named by Nordenskjöld as Nunatak Gray, for Capt. David Gray. It appears as such on his 1904 chart. On English language versions of this chart, it is shown as Grays Nunatak. On some versions of the chart, it is collectively grouped with Arctowski Nunatak, and shown as just Gray. On a British chart of 1921 it appears as Gray Nunatak. It appears on a 1947 Chilean chart as Roca Gray. In Aug. 1947, it was resurveyed by Fids from Base D. UK-APC accepted the name Gray Nunatak on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears as such in the 1955 British gazetteer. The Chilean gazetteer of 1964 accepted the name Nunatak Gray.

Gray Peak. 84°20' S, 173°56' E. A prominent rock peak, rising to 2570 m, at the W side of Canyon Glacier, 6 km NE of Mount Hermanson, in the Queen Maud Mountains. Named by US-ACAN in 1966, for Thomas I. "Tom" Gray, Jr., Weather Central (q.v.) meteorologist at Little America V in 1958.

Gray Rock. 74°41' S, 163°17' E. An isolated rock on land, 6 km ENE of Rhodes Head, at the SE side of the Eisenhower Range, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Alvin M. Gray, radioscience researcher at McMurdo, 1965-66.

Gray Spur. 85°10' S, 90°29' W. A rock spur between Aaron Glacier and Counts Icefall, on the E side of the Ford Massif, in the Thiel Mountains. A small peak rises from the end of the spur. Mapped by the USGS Thiel Mountains party of 1960-61. Named by US-ACAN in 1962, for James L. Gray, of Cresskill, NY (*see* **Deaths**, 1961).

Grayson Nunatak. 76°47' S, 143°48' W. A nunatak, 5 km W of Mount Crummey, it is the most northwesterly of the Gutenko Nunataks, in the Ford Ranges of Marie Byrd Land. Discovered and first mapped aerially by USAS 1939-41. Re-mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1972, for Donald E. Grayson, engineer at Byrd Station in 1970.

Isla Graziella *see* **Lautaro Island**

Grazyna Bluff. 77°38' S, 166°49' E. A rock bluff rising to about 600 m, in the S part of Turks Head Ridge, 2.5 km NNE of the actual Turks Head, on Ross Island. Named by Phil Kyle, for Grazyna Zreda-Gostynska, who worked on gas emissions from Mount Erebus in 1989-90, as a member of the New Mexico Institute of Mining and Technology team. US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001.

Grazzini Bay. 81°08' S, 160°38' E. An ice-filled coastal embayment, 3 km wide, opening to the Ross Ice Shelf between Gentile Point and Fisher Point, on the E side of the Darley Hills, in the Churchill Mountains. Named by US-ACAN on Jan. 29, 2003, for Athos D. Grazzini, cartographer and toponymic specialist on the staff of *National Geographic* Magazine from about 1950 to 1970. NZ-APC accepted the name on Feb. 27, 2003.

Greaney, David B. *see* **Creaney Nunataks** (sic)

Grease ice. Like frazil ice (q.v.), but in a later stage of development of sea ice. It is frazil, which agglutinates into a surface like an oil slick.

Greason, Sidney. b. Sept. 25, 1882, Newport, RI, son of a New York-born father. He grew up with his widowed mother, Margaret, and became successively a driver in Newport and a steward at the Atlanta Athletic Club, was involved in the produce business in Florida, and after World War I he became a ding-dong on a street car in Jacksonville, Fla, where he lived with his second wife, a Florida-born Greek girl named Marie. He served as commissary steward on ByrdAE 1928-30 (and Marie served in a clerical capacity at expedition headquarters), and it was Greason who assembled the 140 tons of provisions and supplies. He was cook at Little America while the station was being built, but lost out on the wintering-over job because he was a drunk. He left for NZ on the *City of New York* on Feb. 22, 1929, and, rather than remain in NZ for 6 months, departed Wellington with several others on the *Tahiti*, bound for San Francisco, which they reached on April 12, 1929. He died in Newport News, Va., in 1951, and his wife died in 1971, same place.

Great Antarctic Horst *see* **Transantarctic Mountains**

Great Barrier *see* **Ross Ice Shelf**

Great Britain. Britain has as good a claim on Antarctica, or rather their sector of it (*see* **Territorial claims** and **British Antarctic Territory**) as anyone, having pioneered exploration and navigation with the likes of Cook, Smith, Bransfield, Weddell, Ross, Scott, Shackleton, Bruce, Rymill, and Fuchs. One of the original 12 signatories of the Antarctic Treaty in 1959, Great Britain has, or has had, the following scientific stations in Antarctica: Base A (Port Lockroy Station), Base B (Deception Island Station), Base C (Cape Geddes Station), Base D (Hope Bay Station), Base E (Stonington Island Station, or Marguerite Bay Station), Base F (Argentine Islands Station; later Faraday Station), Base G ((Admiralty Bay Station), Base H (Signy Island Station),

Base J (Prospect Point Station), Base K or KG (Fossil Bluff Station), Base M (South Georgia), Base N (Anvers Island Station, or Arthur Harbour Station), Base O (Danco Island Station), Base R (Rothera Station), Base T (Adelaide Station), Base V (View Point Station), Base W (Loubet Coast Station, or Detaille Island Station), Base Y (Horseshoe Island Station), Base Z (Halley Bay Station, and its successors, all to be found under the name Halley), Wordie House, and Bird Island (at South Georgia).

Great Hånakken *see* **Stor Hånakken Mountain**

Great Icy Barrier *see* **Ross Ice Shelf**

Great Mackellar Islet *see* **Greater Mackellar Island**

Great Needle Peak. 62°40' S, 60°03' W. A major, heavily glaciated peak rising to 1690 m, 3.4 km E by S of Levski Peak, 2.1 km S of Tutrakan Peak, 2.2 km SW of Helmet Peak, and 3.3 km NW from M'Kean Point, it forms the summit of the central part of Levski Ridge, in the E part of Livingston Island, in the South Shetlands. After Mount Friesland (1700 m, 7 km to the W), it is the second highest summit in the Tangra Mountains, and surmounts Devnya Valley and Huron Glacier to the N, Macy Glacier to the SW, Srebarna Glacier to the S, and Magura Glacier to the E. Named by the Bulgarians as Vrah Golyam Iglen, and translated into English. For a more detailed history of this peak, *see* **Helmet Peak**.

Great Piedmont Glacier *see* **Wilson Piedmont Glacier**

Great skua *see* **Skuas**

Great Southern Barrier *see* **Ross Ice Shelf**

Great Wall Station. 62°13' S, 58°58' W. The first Chinese scientific station in Antarctica. Located 10 m above sea level, 10 m from the coast, on Fildes Peninsula, King George Island, in the South Shetlands, 1.7 km from Bellingshausen Station and Teniente Rodolfo Marsh Station. The crew arrived on Dec. 30, 1984, during the first Chinese Antarctic Expedition, and completed the station by Feb. 20, 1985. A post office was opened there that season. A monolith has been erected to commemorate the "Great Wall Station, First Chinese Antarctic Research Expedition, 20 February, 1985." **1985-86 summer**: Gao Qinguan (leader). **1986 winter**: Li Zhenpei (leader). **1986-87 summer**: Guo Kung (leader). **1987 winter**: Qian Songlin (leader). **1987-88 summer**: the station was relieved by air. Jia Genzheng (leader). **1988 winter**: Qian Songlin (leader). **1988-89 summer**: Liu Shuyan (leader). The station was relieved by air. **1989 winter**: Li Guo (leader). **1990 winter**: Zhang Jierao (leader). **1991 winter**: Yang Zhihua (leader). **1991-92 summer**: Fan Runqing (leader). **1992 winter**: Gong Tianzheng (leader). **1992-93 summer**: Liu Shuyan (leader). **1993 winter**: Chen Yongfu (leader). **1994 winter**: Wang Yongqui (leader). **1995 winter**: Xue Zuohong (leader). **1996 winter**: Gong Tianzheng (leader). **1996-97 summer**: Chen Liqi (leader). **1997 winter**: Gong Tianzheng (leader). **1998 winter**: Tong Miaochang (leader). **1999 winter**: Sun Yunlong (leader). The station has remained open every winter since (leaders unknown).

Greater Antarctica *see* **East Antarctica**

Greater Mackellar Island. 66°58' S, 142°39' E. Also called Great Mackellar Islet. It is the largest of the Mackellar Islands, 3 km N of Cape Denison, in the center of Commonwealth Bay. Discovered by Mawson during AAE 1911-14, and named by him in association with the group. US-ACAN accepted the name in 1963.

Greater sheathbill *see* **Sheathbills**

Greaves, Alexander Benjamin. On May 3, 1821, he was appointed captain of the London sealer *Brusso*, and took that vessel down to the South Shetlands, for the 1821-22 sealing season.

Greaves Peak. 62°27' S, 59°59' W. A sharp, dark, double-pointed peak, rising to 235 m, near the NW end of Greenwich Island, in the South Shetlands. Presumably known to early 19th-century sealers in the area. Charted by the personnel on the *Discovery II* in 1934-35, and named by them descriptively as Black Peak. It appears as such on their 1935 chart, as well as on British charts of 1942 and 1948, and was the name accepted by US-ACAN and UK-APC. It appears in the 1955 British gazetteer. It appears on an Argentine chart of 1948 as Pico Black, and on a 1953 Argentine chart translated all the way as Pico Negro, which was the name accepted by the 1970 Argentine gazetteer. It appears on a Chilean chart of 1961 as Monte Negro, and that is how it appears in the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1958-59. In order to avoid duplication with another feature of the name Black Peak, UK-APC renamed it Greaves Peak on Aug. 31, 1962, for Capt. Alexander Greaves, and US-ACAN accepted this change in 1963. The British were the latest to replot this feature, in late 2008.

Gora Greben'. 73°24' S, 62°15' E. A nunatak inland from the Amery Ice Shelf. Named by the Russians.

Ostrov Greben' *see* **Greben' Island**

Greben Hill. 63°36' S, 58°46' W. Rising to 935 m in Srednogorie Heights, 2.81 km NNW of Ledenika Peak, 5.12 km SW of Corner Peak, and 3.42 km SE of Hanson Hill, it surmounts Malorad Glacier to the N, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for Greben Mountain, in western Bulgaria ("greben" means "comb").

Greben' Island. 66°31' S, 93°01' E. A small, ridge-like island close N of the E end of the N coast of Haswell Island, in the Haswell Islands, off Queen Mary Land. Photographed and plotted by SovAE 1956, and named by them as Ostrov Greben', for its shape (greben' means "comb"). US-ACAN accepted the name Greben' Island in 1961. The Australians (and almost everyone else) don't worry about such orthographical (and political) niceties as a terminal apostrophe.

Greece. Although Greece has never sent an expedition to Antarctica (the very concept strikes one as odd), it was ratified on June 8, 1987, as the 34th signatory of the Antarctic Treaty. Many Greeks, or persons of Greek extraction, have gone to Antarctica. Pete Demas springs to mind.

Greegor Peak. 76°53' S, 145°14' W. Rising to 550 m, 5 km WSW of the summit of Mount Passel, in the Denfeld Mountains of the Ford Ranges, in Marie Byrd Land. First mapped aerially during USAS 1939-41. Re-mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for David H. Greegor, biologist on the USARP Marie Byrd Land Survey II, 1967-68.

Cabo Green *see* **Cape Green**

Cape Green. 63°40' S, 56°50' W. A low ice cliff forming the SE extremity of Tabarin Peninsula, at the NE end of Graham Land. Charted by FIDS in 1946, and named by them for Mike Green. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit. The Argentines call it Cabo Green.

Isla Green *see* **Green Island**

Pico Green *see* **Clifford Peak**

Green, Charles John. They called him "Charlie" or "Chef." b. Nov. 24, 1888, Richmond, Surrey, son of baker Ernest Frederick Green and his wife Sarah Annie Stocker. A baker himself, he ran away to sea in 1911 on the *Sardinian*, and was on the *Andes* as a baker when the *Endurance* pulled into Buenos Aires. The inebriate *Endurance* cook Macauley had been fired, and Green was taken on in his place for BITE 1914-17, at £8 10 a month. When he got back to England he found that his parents, believing him dead, had cashed in his life insurance policy, and his girl friend, also believing the rumors, had married someone else. What made it worse was that when he had been in Buenos Aires, about to sail south, he had mailed all his cash savings to his parents, but a U-Boat torpedoed the ship carrying his package. He joined the RN as a cook, was wounded on a destroyer in 1918, and in November of that year married Ethel May Johnston, of Hull. He then returned to sea as a merchant marine cook, and interrupted this career to be cook on the *Quest*, 1921-22, Shackleton's last expedition. He retired in 1931, to Hull, to work in a bakery and to look after his wife, who died, childless, in 1936. He lectured for years about Antarctica, using 120 slides given him by Shackleton, and became known as the "Antarctic Chef." In the 1950s he was a park keeper, and died of peritonitis on Sept. 26, 1974, in Beverley, Yorks.

Green, Daniel *see* **USEE 1838-42**

Green, Ezra *see* **USEE 1838-42**

Green, George Montague. b. Aug. 17, 1939, Aldershot, Hants, son of George Ernest Green and his wife Winifred Mae Harris. After Farnborough Grammar, and Basingstoke Tech, he apprenticed with Thornycroft, then joined the REME, and was seconded to the Kings African Rifles, in Nairobi, seeing action in Kuwait. He was then posted to Jinja, in Uganda, to help train the Ugandan Army in preparation for their independence. He met Carol in Jinja, and married her in 1964. He joined BAS in 1964, as a tractor driver, and wintered-over at Base T in 1965, as

base mechanical engineer, and again in 1966, the 2nd year as base leader. After his tour was up, he met up with his wife in Stanley, and they spent the next 8 months touring South America by Landrover. He then took a job with Owens-Illinois, in the Bahamas, and when that installation closed, he became vice president of engineering at Treasure Cay resort. After 11 years in the Bahamas, he went to work for Syncrolift, in Miami. He became a U.S. citizen in 1998, and retired in 2004. He died at home in Miami, on Nov. 14, 2008.

Green, James *see* **USEE 1838-42**

Green, John *see* **USEE 1838-42**

Green, John Robert "Johnny." b. May 28, 1922, Birmingham, son of Charles T. Green and his wife Florence Bennett. He was a Boy Scout, and in 1949 joined FIDS, wintering-over as leader at Base B in 1950, and at Base F in 1951. After his tour was up, he returned to Port Stanley, then to Montevideo, where he and Lofty Worswick caught the *Andes* bound for Southampton, arriving there on June 1, 1952. Very soon afterwards he married Doreen Margaret Clarke, in Shrewsbury, and they lived in Sutton Coldfield. Throughout the 1950s he was Asst. SecFIDS (Assistant Secretary of the FIDS) in London, and a major power within the organization. He was back in Antarctica for the 1956-57 winter, and in Jan. 1963 he and two Marines were the first to climb Mount Gaudry. He was operations officer in charge of the relief of FIDS bases in the 1963-64 season, and arrived back in Southampton on the new *John Biscoe* on May 25, 1964. He later lived in Alton, Hants, and died on May 29, 1988, in Lisbon.

Green, Madison *see* **USEE 1838-42**

Green, Michael Campbell "Mike." b. 1926, Huddersfield, Yorks, son of Thomas Farrimond Green and his wife Jessie D. Leonard. In 1932 his father became headmaster of Leominster Grammar School, and in 1944 of Bootham School in York. Mike became a geologist, and as such was appointed to FIDS in Oct. 1947. On Dec. 19, 1947, he left Tilbury on the *John Biscoe*, bound for Port Stanley. He wintered-over at Base D (Hope Bay) in 1948, and was one of the two victims of the fire there in Nov. 1948 (*see* **Deaths**, 1948).

Green, Thomas *see* **USEE 1838-42**

[1]**Green Crag**. 62°01' S, 58°08' W. A huge crag in the N part of the Mount Hopeful massif, above Poznan Glacier, in the Arctowski Mountains of King George Island, in the South Shetlands. Named by the Poles in 1981, as Zielona Turnia, because it is composed mostly of green-colored rocks. It appears on Tokarksi's map of 1981. The name has been translated.

[2]**Green Crag**. 63°00' S, 60°33' W. A crag overgrown with green lichens, in the SW part of Cathedral Crags, at Whalers Bay, Deception Island, in the South Shetlands. Mapped by Don Hawkes in 1961. Named descriptively by the Poles on Sept. 1, 1999.

[1]**Green Creek**. 62°12' S, 58°27' W. A creek carrying meltwater from Tower Glacier to Paradise Cove, at the junction of Admiralty Bay and Bransfield Strait, on King George Island, in the South Shetlands. Named by the Poles in 1984, for the green conglomerates exposed at the sides of the creek.

[2]**Green Creek**. 77°37' S, 163°04' E. A glacial meltwater stream, 1 km long, flowing NE from the extremity of Canada Glacier into the SW end of Lake Fryxell, close E of Bowles Creek, in Taylor Valley, in Victoria Land. The name was suggested by Diane McKnight (*see* **McKnight Creek**), for William J. Green, of Miami University, Oxford, O., who conducted research on the geochemistry of the Onyx River, 1980-81, and Lake Fryzell, Lake Hoare, and their feeder streams, 1982-83. US-ACAN accepted the name.

Green Gable. 60°43' S, 45°36' W. A hill, rising to about 205 m, W of Paal Harbor, and 0.3 km NW of Rusty Bluff, on Signy Island, in the South Orkneys. Named by UK-APC on May 13, 1991, from the green slopes (due to vegetation) below the cliffs of this feature. US-ACAN accepted the name.

[1]**Green Glacier**. 64°58' S, 61°50' W. A glacier, about 24 km long and 6 km wide, flowing from the plateau of Graham Land NE then E into the W side of Hektoria Glacier, on the Oscar II Coast, on the E side of the Antarctic Peninsula. Surveyed by Fids from Base D in Sept. 1955. Named by UK-APC on Sept. 4, 1957, for Johnny Green. It appears on a 1961 British chart. US-ACAN accepted the name in 1963. It was photographed aerially by USN in 1968-69.

[2]**Green Glacier**. 79°43' S, 156°10' E. A small glacier on the W side of Haskell Ridge, it flows N from the Darwin Mountains into Darwin Glacier. Mapped by the Darwin Glacier Party of BCTAE in 1957, and so named by them because of the color of the surface. NZ-APC accepted the name, and ANCA followed suit on Nov. 24, 1961. US-ACAN accepted the name in 1968.

Green Ice Rises. 66°21' S, 97°37' E. A local swelling on the ice surface, where the Shackleton Ice Shelf runs over an underlying obstruction, 8 km E of Henderson Island. Mapped by U.S. cartographer Gard Blodgett in 1955, from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Duane L. Green, radio operator and recorder on OpW 1947-48.

Green Island. 65°19' S, 64°10' W. A small island, the most northerly of the Berthelot Islands, just outside Collins Bay, off the Graham Coast, on the W coast of Graham Land. Discovered and first mapped by FrAE 1903-05. Roughly charted on Feb. 10, 1935, by BGLE 1934-37, and named by them. On the N slopes of the island is a green growth of moss, nearly 4 acres in extent. It appears as such on Rymill's 1938 map of the expedition. However, on a 1948 British chart it appears as Green Islet, and that was the name accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. On July 7, 1959, UK-APC changed the name to Green Island (which was Rymill's original naming), and US-ACAN followed suit in 1963. It appears on a 1962 Chilean chart translated all the way as Islote Verde, and that was the name accepted by the 1974 Chilean gazetteer. The Argentines used to call it Isla Green, but today they also call it Isla Verde. Due to the rich growth of vegetation, it was declared an SPA in 1967 (*see* **Specially Protected Areas**).

Green Islet *see* **Green Island**

Green Lake. 77°33' S, 166°09' E. A little lake, 0.4 km N of Cape Royds, about midway between Pony Lake and Coast Lake, near the W coast of Ross Island. Named for its color by BAE 1907-09. US-ACAN accepted the name in 1968, and NZ-APC followed suit.

Green Mesa. 77°26' S, 161°03' E. An ice-free mesa, about 1.5 km in extent, 1.4 km WSW of Canfield Mesa, in the W part of the Insel Range, in Victoria Land. Named by US-ACAN in 1997, for William J. Green, of the School of Interdisciplinary Studies, at Miami University, Oxford, O., who, from the 1968-69 season made studies of lakes and streams in the Taylor Valley and the Wright Valley, including a geochemical analysis of the Onyx River and Lake Vanda, with Donald E. Canfield, in 1980-81, 1986-87, and 1987-88. NZ-APC accepted the name.

Green Nunatak. 81°07' S, 156°34' E. Rising to about 1800 m, at the N extremity of the Wallabies Nunataks, W of the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for Edwin Neville Green, who wintered-over at Hallett Station in 1964, a technician on the geomagnetic project. US-ACAN accepted the name later in 2003.

Green Peak *see* **Clifford Peak**

[1]**Green Point**. 62°10' S, 58°51' W. A lava promontory at Collins Harbor, on the S coast of King George Island, in the South Shetlands. It is covered with green moss and lichen, hence the name given by the Poles in 1980.

[2]**Green Point**. 67°19' S, 59°30' E. Also called Rundneset. A rocky point forming the SE extremity of Fold Island, at the W side of the entrance to William Scoresby Bay, off the coast of Kemp Land, in Enderby Land. Discovered and named by the personnel on the *William Scoresby*, in Feb. 1936. US-ACAN accepted the name in 1947, and ANCA followed suit on July 22, 1959.

Green Reef. 64°44' S, 63°17' W. A group of low rocks at the W side of Neumayer Channel, close E of Green Spur, Anvers Island, in the Palmer Archipelago. Charted by the *Snipe* in Jan. 1948, and named by UK-APC, in association with the nearby spur. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1953. It appears in the 1955 British gazetteer, and on a 1956 British chart.

Green Rocks. 66°14' S, 110°38' E. A small cluster or rocks in water, 0.4 km E of Honkala Island, and 0.4 km offshore, in the E part of the Swain Islands. First mapped from air photos taken during OpHJ 1946-47. Carl Eklund, who surveyed them in 1957, named them for construction driver 2nd class Sydney E. Green, USN, at Wilkes Station that winter. US-ACAN accepted the name in 1960.

Green Spur. 64°43' S, 63°19' W. A green-colored spur, extending ESE from Copper Peak, on the SE side of Anvers Island, in the Palmer

Archipelago. Probably discovered in Feb. 1898, by BelgAE 1897-99. Surveyed by the Discovery Investigations in 1927, it appears on their chart of that year, as well as on their chart of 1929, but may well reflect an earlier naming, probably given by whalers. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1949 Argentine chart as Pico Green Spur, but on one of their 1953 charts translated as Espolón Verde, and on a 1957 chart as Pico Espolón Verde. It was surveyed by Fids from Base N in 1955. The 1974 Chilean gazetteer accepted the name Pico Green Spur.

Pico Green Spur *see* **Green Spur**

Green Valley. 85°04' S, 90°30' W. A steep-sided, ice-filled valley, indenting the E side of the Ford Massif just N of Janulis Spur, in the Thiel Mountains. Named by Peter Bermel and Art Ford, leaders of the Thiel Mountains party here in 1960-61, for David H. Green (b. 1939, New Rochelle, NY, but grew up in Denver, Colo. d. Dec. 26, 2007, Salinas, Calif., after an accident), USGS camp assistant with the party. US-ACAN accepted the name in 1962.

The *Green Wave*. A container/cargo ship, in the mid-1980s she was the main supply and research vessel used by OpDF, mostly to McMurdo Station. Operated by Gulf Lines, under charter to the U.S. Navy Military Sealift Command, she was in Antarctica every season from 1984-85 to 2004-05. Her skipper the first season was Capt. R. Beevers, and then from 1985-86 onwards it was Capt. Peter Stalkus, certainly until 1999-2000. On Feb. 3, 2000, she arrived at the edge of the ice near McMurdo, with 9 million pounds of dry cargo for the base. She was escorted through the pack-ice by the *Polar Star*, offloaded, and left McMurdo on Feb. 10, 2000.

Greenall Glacier. 73°13' S, 68°13' E. A small glacier in the Mawson Escarpment, between Pryor Bluff and McIntyre Bluffs, in Mac. Robertson Land. Plotted by Australian cartographers from ANARE air photos taken in 1956, 1960, and 1973. Named by ANCA for Andrew P. "Andy" Greenall, surveyor with the ANARE Prince Charles Mountains survey party of 1972. He was also with the Enderby Land survey party of 1976.

Greenall Nunataks. 68°10' S, 49°46' E. Two nunataks about 18 km NNE of Krasin Nunatak, in the Nye Mountains of Enderby Land. Named by ANCA for Andy Greenall (*see* **Greenall Glacier**).

Mount Greene. 72°07' S, 168°14' E. Rising to 2220 m, on the S side of the mouth of Freimanis Glacier, at the point where that glacier joins Tucker Glacier, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for 1st Lt. John H. Greene, U.S. Army, commander of a helicopter detachment here in 1961-62, supporting USGS's Topo North-South survey. NZ-APC accepted the name.

Greene Point. 73°49' S, 166°09' E. An ice-covered point, 11 km NE of Andrus Point, in Lady Newnes Bay, Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Stanley Wilson Greene (1928-1989), Cork-born biologist at McMurdo Station in 1964-65, who specialized in polar mosses.

Greene Ridge. 83°12' S, 157°10' E. A partially ice-covered ridge, 8 km long, extending northward from Martin Dome to the S edge of Argosy Glacier, in the Miller Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN for Charles R. Greene, Jr., USARP ionosphere physicist at Pole Station in 1958. ANCA accepted the name.

Mount Greenfield. 80°46' S, 27°36' W. An ice-free mountain rising to 1490 m, S of Fuchs Dome, and surmounting the W extremity of Stephenson Bastion, in the Shackleton Range. Mapped by BCTAE in Oct. 1957, and named by them for George Charles Greenfield (1917-2000), literary agent for the expedition. For 34 years Mr. Greenfield was one of London's leading agents, and also represented such illuminati as Enid Blyton, John Le Carré, Ran Fiennes, Sidney Sheldon, David Niven, and Stirling Moss. He himself wrote a couple of books—*A Smattering of Monsters* and *Scribblers for Bread*. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit that year. It was photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971.

Greenfield, Henry *see* **USEE 1838-42**

Greenfield Ponds *see* **Mahaka Ponds**

Greenhouse effect *see* **Global warming**

Cape Greenland *see* **Cape Grönland**

Mount Greenlee. 84°51' S, 177°00' W. A steep-sided, jagged mountain of metamorphic rock, rising to 2030 m, it overlooks the W side of Shackleton Glacier just E of Mount Butters. Named by Alton Wade in 1962-63 for David W. Greenlee. Both men were on the Texas Tech Shackleton Glacier expedition of that year. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Greenpeace. International environmental group founded in 1972 by (among others) Paul Watson, which, in 1984, began to be concerned about Antarctica and what was happening there in the way of pollution and danger to the native flora and fauna due to tourists. On Dec. 16, 1985 the organization's new ship, the *Greenpeace*, sailed from Sydney to Antarctica with the intention of setting up its own base, but in Jan. 1986 failed to get ashore. In 1987 it finally succeeded, at Cape Evans, Ross Island, and during 1987 the base (World Park Base) was occupied by 3 men and a woman, led by Kevin Conaglen. By 1988-89 Greenpeace had a new ship, the *Gondwana*, which took the expedition to Antarctica that season and also in 1989-90 (under the leadership of Marc Defourneaux), 1990-91, 1991-92, and 1992-93. By 1990 Greenpeace had collected over a million signatures in favor of preserving Antarctica as a world park (*see also* the Bibliography, under May). *See also* the **Sea Shepherd Organization**. In 1992-93 the organization chartered Skip Novak's yacht *Pelagic* for an additional trip to Antarctic waters. There was no 1993-94 expedition, but in 1994-95 the *Greenpeace* was used again. There was no 1995-96 expedition, but in 1996-97 and 1998-99 the *Arctic Sunrise* was used.

The *Greenpeace*. Greenpeace's 191-foot flagship, formerly the Smit tug *Elbe*, donated by anonymous persons in the USA, replaced the *Rainbow Warrior*, which was sunk by malicious persons unknown, in NZ, in July 1985. The *Greenpeace* was in Antarctic waters in 1985-86, skippered by Peter Bouquet, on an expedition led by Peter Wilkinson, tried to get through the pack ice to the Ross sea, but failed. In Dec. 1986, in Sydney, this new ship was sabotaged as well. However, she survived and that season (1986-87) Wilkinson led a new expedition, with James Cottier as skipper of the ship. They established a station at Cape Evans. In 1987-88 the ship was back, again on an expedition led by Wilkinson (this time co-led by Margriet de Poorter), relieving the base and bringing the 1988 wintering party. Cottier was again skipper. The vessel was replaced in 1988-89 by the *Gondwana*. The *Greenpeace* was used on one more Antarctic trip, in 1994-95, under Capt. Arne Jacob Sorensen, and was then replaced with the *Arctic Sunrise*.

Greenpeace Rock. Local name for a rock rising to 6 m, on the shore of Bulgarian Beach, 800 m NE of Hespérides Point, in Livingston Island, in the South Shetlands.

Greenshields Peak. 65°40' S, 64°22' W. Rising to about 760 m, between Leroux Bay and Bigo Bay, 1.5 km W of Magnier Peaks, on the W coast of Graham Land. Mapped in 1959 by FIDS cartographers working from aerial surveys conducted by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for James Newbigging Hutton "Jim" Greenshields (b. 1923), FIDASE pilot, 1955-56. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. *See also* **Cobalescou Island**.

Greenstone Point. 73°30' S, 94°19' W. A high rock spur along the N front of the Jones Mountains, immediately E of Austin Valley. Mapped by the University of Minnesota Jones Mountains Party of 1960-61, and so named by them for the color of the rock. US-ACAN accepted the name in 1963.

Greenstreet, Lionel. For some reason they called him "Horace." b. March 20, 1889, Lyonsdown, East Barnet, Herts, son of master mariner Herbert Edward Greenstreet and his wife Bertha Kingsford. He joined the RN in 1904, and sailed on many sailing ships around the world, earning his master's certificate in 1911. With only 30 minutes notice to spare he made it on board the *Endurance*, on which he had been selected as 1st officer for BITE 1914-17. After the expedition, in Feb. 1917, he was commissioned as 2nd Lt. with the Royal Engineers, and on Sept. 26, 1917, at Sutton, Surrey, he married Millie Baddeley Muir. He captained tugs, and then managed a marine insurance branch for the shipping

company of Furness Withy. He served as an officer in tugs in the Atlantic and North Sea during World War II. After the war he retired to Brixham, Devon, and on Oct. 18, 1955 married again, at Chelsea, to Audrey Day. He died on Jan. 13, 1979, at Goring, Sussex, the last survivor.

Greenville Hole. 76°43' S, 160°58' E. A circular, ice-free depression, 1 m in diameter, and 200 m deep, in the center of Greenville Valley, it marks the lowest elevation in the Convoy Range, in Victoria Land. It retains its glacially eroded form without any infilling. Named by US-ACAN in association with the valley. NZ-APC accepted the name.

Greenville Valley. 76°44' S, 160°52' E. A large, mainly ice-free valley running WSW-ENE, S of Elkhorn Ridge, its central point being 16 km due W of Flagship Mountain, in the Convoy Range, in Victoria Land. A lobe of Northwind Glacier flows a short distance W into the mouth of the valley. Near the head of the valley, the S wall is breached by the entrance to Merrell Valley. Discovered and explored by the NZ Northern Survey Party of BCTAE in Dec. 1957, and named by them for the *Greenville Victory*. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

The *Greenville Victory*. U.S. freighter, nicknamed the *Greenville Vic*. She was built in 1944 by the California Shipbuilding Corp., named after the South Carolina county of Greenville. She served as a merchant ship in World War II, and was acquired by the Navy in 1950. She arrived at Christchurch, NZ, on Dec. 12, 1955, under the command of Capt. Leopold "Leo" Duchowski (b. Nov. 15, 1898, Poland. d. Aug. 3, 1975, Seattle), and left there on Dec. 17, bound for McMurdo Sound, having taken part in OpDF I (i.e., 1955-56). Duchowski was skipper again in 1956-57, during OpDF II. Duchowski, a merchant marine skipper, had been captain of the *Greenville Vic* for some years. Captain during OpDF III (i.e., 1957-58) was Knud T. Mortensen. She was used again in OpDF 61 (i.e., 1960-61), commanded by Alfred P. Nielsen. She went out of service in 1976, and was scrapped in 1983.

Greenwell Glacier. 71°20' S, 165°00' E. A major tributary glacier, about 72 km long, flowing NW between the Mirabito Range and the Everett Range, to enter Lillie Glacier below Mount Works, in the NW part of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Cdr. Martin D. Greenwell (b. Oct. 6, 1917. d. Sept. 16, 2003), USN, commander of VX-6, 1961-62. NZ-APC accepted the name.

Isla Greenwich *see* **Greenwich Island**

Greenwich Island. 62°30' S, 59°47' W. One of the principal islands in the South Shetlands, it is about 24 km long, and between 0.8 and 10 km wide, and is separated from Livingston Island to the SW by McFarlane Strait, and from Robert Island to the NE by English Strait. The island is basically composed of two mountainous massifs joined by a central isthmus about 2 km wide, separating Discovery Bay from Yankee Harbor. The island is completely covered by a thick mantle of ice, from which, in summertime, various peaks and capes lose the ice. On Bransfield's 1820 chart, the island seems to be indicated, but it is joined all together with Nelson Island, Robert Island, and the W part of King George Island. This great agglomeration of features was called Lloyd's Land, and appears as such on Henry Foster's chart of 1820 (Foster, like Bransfield, was on the *Williams* that season, i.e., 1819-20). As an individually recognized feature (the British mapmaker, Goddard, was the first to chart is as a separate island), it may originally have been called Lloyd's Island, appearing on Miers' 1821 map as Île Lloyd or Île de Lloyd (however, *see* **Rugged Island**), but in any case it was given the present name of Greenwich Island before 1821, appearing as such on Fildes' chart of 1821, and also on Powell's chart published in 1822, named presumably after either Greenwich, in England, or Greenwich, in Connecticut. On Jan. 25, 1821, von Bellingshausen charted it as Ostrov Berezino (translated as Beresino Island), named after the Beresina River, near Minsk, where Napoleon's forces were defeated by the Russians in Nov. 1812. It appears as such on the Russian map of 1831. Weddell named it Sartorius Island, for Capt. (later admiral of the fleet) Sir George Rose Sartorius (1790-1885). Weddell had served under Sartorius (*see* **Sartorius Point**) on the *Avon*, 1813-14 (not in Antarctica). On the 1842 map produced by FrAE 1837-40, it appears as Île Greenwich, and on an 1861 Spanish chart as Isla Greenwich. It appears as Greenwich Island on a British chart of 1887, and on the Discovery Investigations chart of 1937 (the DI had re-charted it in 1935). On a 1942 USAAF chart it appears (erroneously) as Greenwich Islands. In 1945 Frank Debenham referred to it as Beresina Island. On an Argentine chart of 1946 it appears as Isla Greenwich, and Chile claimed and occupied the island in 1948. There is a 1947 Chilean reference to it as Isla Pedro Aguirre Cerda (*see* **Aguirre Passage**). It appears on a Chilean chart of 1948 as Isla de Greenwich, yet on another of their charts of that year as Isla Presidente González Videla, after Presidente Gabriel González Videla, of Chile. On yet another 1948 Chilean chart it appears as Isla Soberanía, and there is a 1950 Chilean reference to it as Isla González Videla. However, all these alternative names, at this stage of the island's history anyway, when Greenwich was so well established as a name, were just spitting in the wind. US-ACAN accepted the name Greenwich Island in 1952 (after rejecting Beresino Island), and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Isla Greenwich. The British re-plotted this island in late 2008.

Greenwich Islands *see* **Greenwich Island**

Greenwich Point *see* **Fort Point**

Greenwood Valley. 77°21' S, 162°54' E. A low-gradient, ice-filled valley at the W side of Wilson Piedmont Glacier, between Staeffler Ridge and Mount Doorly, in Victoria Land. Named by US-ACAN in 1964, for Chief Construction Mechanic Russell A. Greenwood, USN, in charge of heavy equipment maintenance at McMurdo in 1962. NZ-APC accepted the name.

Greer Peak. 76°47' S, 144°25' W. A prominent peak, the most northerly of the Wiener Peaks, in the Denfeld Mountains of the Ford Ranges, in Marie Byrd Land. Mapped by USAS 1939-41. Named by Byrd for Dr. William E.R. Greer (b. 1918, Portsmouth, NH), his personal physician in the 1950s. US-ACAN accepted the name in 1970.

Greet, Pene. b. 1959, Home Hill, Queensland. Australian upper atmosphere physicist. In 1983 she was scheduled to be the first non-medical scientist to winter over at an ANARE Antarctic station (Mawson, 1983). However, on the way south, aboard the *Nanok S*, she had an affair with one of the ship's officers, and when she arrived at Mawson she found instructions for her to return immediately to Australia. Such was government morality in Australia in those days. In 1986-87 she applied to go down that summer, was accepted, then rejected after she had made definite plans. She sued, and was awarded $9000. She was rejected again in 1988-89, but finally, after the Australian government's morals had been forced to relax, she got to winter-over at Mawson in 1990 (that winter teaming up with diesel engineer Paul Myers), and at Davis Station in 1997.

Isla Gregores *see* [1]**Jagged Island**

Cabo Gregory *see* [1]**Gregory Point**

Cap(e) Gregory *see* [1]**Gregory Point**

Glaciar Gregory *see* **Gregory Glacier**

Mount Gregory. 82°52' S, 159°44' E. At the S end of Hochstein Ridge, in the Queen Elizabeth Range, it is the only large elevation (at 2940 m) from the Cotton Plateau. Named by the Holyoake, Cobham, and Queen Elizabeth Ranges Party of NZGSAE 1964-65, for M.R. Gregory, a geologist on the party. NZ-APC accepted the name, and ANCA followed suit on Aug. 10, 1966. US-ACAN accepted the name later in 1966.

Punta Gregory *see* [1]**Gregory Point**

Gregory, Matthieu. b. Sept. 8, 1804, Luze, Corsica. Ordinary seaman on the *Astrolabe* during FrAE 1837-40.

Gregory Bluffs. 70°44' S, 165°49' E. High granite bluffs forming the E side of Nielsen Fjord, on the N coast of Victoria Land. Named by ANARE for Christopher Gregory, ANARE geologist on the *Thala Dan* cruise of 1961-62. On Feb. 12, 1962, he, John Stanwix (*see* **Stanwix Ridge**), and Phil Law (q.v.) landed a helicopter at the foot of these bluffs, in order to study them. US-ACAN accepted the name in 1964, and ANCA followed suit.

Gregory Glacier. 64°08' S, 60°48' W. Flows into Cierva Cove N of Breguet Glacier, on the Danco Coast, on the W coast of Graham Land.

Shown on an Argentine chart of 1957. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Portal Point between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, for Col. Hollingsworth Franklin "Frank" Gregory (1906-1978), USAF, helicopter pioneer. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. Today, the Argentines call it Glaciar Gregory.

Gregory Island. 76°49' S, 162°58' E. A little island, about 400 m in diameter, just off the E coast of Victoria Land, 4 km NE of Mount Archer, just to the N of Granite Harbor. Discovered by BNAE 1901-04, and named by Scott as Gregory Point, as they thought it to be a coastal point. John Walter Gregory (b. Jan. 27, 1864, Bow, London. Drowned on June 2, 1932, when his canoe overturned in a Peruvian river) had been appointed director of the civilian scientific staff, but quit rather than work with Scott (*see* **British National Antarctic Expedition**). Its true nature was determined by BAE 1910-13, and it was renamed Gregory Island. US-ACAN accepted the name, and NZ-APC followed suit.

[1]**Gregory Point**. 62°55' S, 62°32' W. A high, cliffed point on the W side of Smith Island, 11 km SW of Cape Smith, in the South Shetlands. Foster roughly charted it during the *Chanticleer* Expedition of 1828-31, and named it Cape Gregory. It appears that way on the expedition's 1829 chart, as well as on an 1839 British chart, and it was the name accepted by both US-ACAN and UK-APC. It appears as such in the 1955 British gazetteer. It appears on a 1902 map (from BelgAE 1897-99) as Cap Gregory, and on Irízar's 1903 Argentine map as Cabo Gregory, but on an Argentine chart of 1908 it appears as Cabo Gregorio, and on one of their 1946 charts as Cabo Gregori. Re-charted by an RN Hydrographic Survey unit in 1951-52, and photographed aerially by FIDASE in 1956-57. UK-APC re-defined it as Gregory Point on Aug. 31, 1962, and US-ACAN followed suit in 1963. It appears as such on a British chart of 1962. The Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 both accepted the name Cabo Gregory. However, today, the Chileans call it Punta Gregory. The British were the latest to re-plot this feature, in late 2008.

[2]**Gregory Point** *see* **Gregory Island**

Gregory Ridge. 86°03' S, 157°46' W. A narrow rock ridge descending westward from the N part of Fram Mesa, in the Queen Maud Mountains, and terminating at the E side of Amundsen Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. Cdr. Nelson Bruce Gregory (b. 1934), who joined the U.S. Navy in 1953, served on the training ship *Empire State* as a cadet, and was a pilot on photographic flights in Antarctica during OpDF 65 (i.e., 1964-65).

Gregory Rock. 77°40' S, 147°46' W. A rock that outcrops above the ice slopes on the W part of Hershey Ridge, 11 km WSW of Linwood Peak, in the Ford Ranges of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Elmer D. Gregory, aviation maintenance line crew supervisor at William Field during OpDF 67 (i.e., 1966-67).

Greig, Andrew. b. 1880, Tayport, Fife, son of seaman John Greig and his wife Elizabeth. He himself went to sea, out of Dundee (where the family came from originally), and was an able seaman on the *Scotia*, during ScotNAE 1902-04. He left the ship in Buenos Aires, in Jan. 1904, and, that month, with James Mackenzie, made his way back to Southampton on the *Clyde*.

Gora Grekova *see* **Bakkesvodene Crags**

Gremlin Island. 68°16' S, 67°12' W. A small rocky island close NW of the tip of Red Rock Ridge, it forms the S entrance point of Neny Fjord, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Surveyed in 1936 by BGLE 1934-37, it appears on Stephenson's 1940 map of that expedition. In 1948-49 Fids from Base E, while surveying it, used it as a depot, and a box of rations left there by a sledging party disappeared mysteriously, hence the name they gave this feature, Gremlin Islet. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit in 1956. However, the term "islet" fell out of general use in the English language, and on July 7, 1959, UK-APC renamed it Gremlin Island. It appears as such on a British chart of 1961. US-ACAN accepted the new name in 1963. The Argentines call it Islote Duende, which means the same thing.

Gremlin Islet *see* **Gremlin Island**

Mount Grendal. 77°34' S, 162°00' E. Rising to about 2000 m between the heads of Valhalla Glacier and Conrow Glacier, in the Asgard Range of Victoria Land. Mapped by USGS in 1962 from USN air photos taken between 1947 and 1959. In association with Mount Beowulf, it was named by NZ-APC in 1983, for Grendal, the monster in the poem *Beowulf*. US-ACAN accepted the name.

Grenlie, Lloyd Kellogg. b. Nov. 10, 1902, Alban, Wisc., son of Norwegian-American Adolph Severin Grenlie and his Danish wife Marie. On Sept. 12, 1922 he enlisted in the Marines, as a private, making corporal in 1924. He was a radio engineer with the Naval Research Laboratory when he became assistant radio operator on Byrd's North Pole expedition, and then to Antarctica with ByrdAE 1928-30. During that expedition he was stationed on the *Eleanor Bolling*. He married a daughter of Adm. Detlef de Otte, and later lived in Nelsonville and Milwaukee. He died on June 7, 1970, in Wisconsin.

Gressitt, Judson Linsley. Known as J. Linsley Gressitt. b. June 16, 1914, Japan, son of Baltimorean Baptist missionary James Fullerton Gressitt and his wife Edna Eunice Linsley, who had been in Japan since 1907. Two months after our subject was born, the Gressitts arrived back in the USA. One of the great entomologists, a fearless investigator, he and his Japanese-born wife Margaret lived in China from 1939 to 1943, being briefly interned by the Japanese in Pokong Camp, in Canton, then returned to the USA as exchange prisoners. They returned to China after the war. He spent 6 summers in Antarctica between 1959-60 and 1965-66. From 1953 he was senior entomologist at Bishop Museum in Honolulu, and from 1971 director of the Wau Ecology Institute in New Guinea. He had just published *Biogeography and Ecology of New Guinea* when he and his wife were in a Chinese airplane when it crashed into a mountain in Kweilin on April 26, 1982.

Gressitt Glacier. 71°30' S, 161°15' E. A broad glacier, about 72 km long, draining the area between the Daniels Range and Emlen Peaks, in the Usarp Mountains, and flowing NE to enter the Rennick Glacier just N of the Morozumi Range, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for J. Linsley Gressitt. NZ-APC accepted the name. Originally plotted in 71°30' S, 161°25' E, it has since been replotted.

Grew Peak. 75°18' S, 110°37' W. Rising to over 1400 m on the NE spur of the Mount Murphy massif, in Marie Byrd Land, between Benedict Peak and the higher summit peaks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1976, for Edward Sturgis Grew (b. May 29, 1944, Boston), University of Wisconsin exchange geologist at Molodezhnaya Station in 1973, and in 1987-88 with the Japanese.

Mount Grey *see* **Mount Gray**

Isla Grey *see* **Grey Island**

Grey, James *see* **USEE 1838-42**

Grey, James H. *see* **USEE 1838-42**

Grey Island. 60°45' S, 45°02' W. A tiny island, barely 0.4 km long by 0.2 km wide, 0.9 km S of Michelsen Island, and 1.5 km W of the S part of Fredriksen Island, off the S end of Powell Island, in the South Orkneys. Petter Sørlle, who was the first to chart it, named it Holmen Graa (i.e., "the gray island") in 1912-13, and it appears on his and Hans Borge's chart of that year. In 1933, personnel on the *Discovery II* translated it into (British) English, and it appears as Grey Island on their 1934 chart. However, it appears on a British chart of 1942 as Grey Islet, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 20, 1955. It appears on an Argentine chart of 1954, as Isla Grey. On July 7, 1959, UK-APC changed the name to Grey Island, and US-ACAN followed suit in 1963. In 1967, it was made part of SPA #15.

Grey Islet *see* **Grey Island**

The *Grib*. 140-ton Norwegian whale catcher, built at Framnaes Mek., in Sandefjord in 1907, delivered on Sept. 29, 1907 to Chris Christensen's Ørnen Company, and used by them in the South Shetlands in the 1907-08 season, working for the *Admiralen*. Gunner that season was Samuel Samuelsen. She was in at Deception Island in 1909-10, working for the *Bombay*. In 1911 she and the *Hauken* were sold to the Norwegian Canadian Whaling Company, and the *Grib* was lost in Canadian waters in 1915.

Grib Company. Norwegian whaling company

out of Sandefjord, owned by Einar Nøer, which bought the *Nor* in 1913 from Chris Christensen, and ran her in the South Shetlands and off Graham Land in 1913-14.

The *Gribb*. A 280-ton Norwegian whale catcher, built in 1930 in Oslo, as the *Hektor 9*, for the Ørnen Company. In 1934 she was sold to Thor Dahl's Company (i.e., Lars Christensen), and worked in Antarctic waters for the *Thorshavn* in 1934-35, 1935-36, and during LCE 1936-37. Skipper was Krogh Andersen. In 1941 she was chartered by the South Africans as a minesweeper, and returned to her owners after the war. In 1953 she was sold to the Thaule Brothers, in Haugesund, Norway.

Gribb Bank. 61°30' S, 88°00' E. Submarine feature, out to sea beyond the West Ice Shelf, about 55 km N of Wilhelm II Land. Discovered in Jan. 1937, by gunner Krogh Andersen, of the whale catcher *Gribb*, during LCE 1936-37, and named by him for his vessel. ANCA accepted the name on Dec. 7, 1976.

Gribben, William. b. 1905, Australia. He went to sea in 1924 as a messman, and, on Dec. 9, 1929, at Dunedin, signed on in his usual capacity on the *City of New York* during ByrdAE 1928-30, leaving Dunedin on Jan. 5, 1930, bound for the ice. He was with the ship as it pulled into NYC at the end of the expedition.

Mount Griboedova *see* **Tvihøgda**

Mount Grieg. 71°36' S, 73°11' W. A snow-covered mountain rising to about 800 m (the British say about 600 m), with a rock-exposed W side, it overlooks the SE part (i.e., the head) of Brahms Inlet, on Beethoven Peninsula, in the SW part of Alexander Island. A number of mountains in this vicinity first appear on maps drawn up by RARE 1947-48, and apparently this is one of them. Searle of the FIDS mapped it from those photos in 1959-60, and plotted it in 71°27' S, 73°22' W. Named by UK-APC on March 2, 1961, for Norwegian composer Edvard Hagerup Grieg (1843-1907). US-ACAN accepted the name later in 1961. Re-mapped by USGS in 1968, and again in the 1970s from U.S. Landsat images taken in Jan. 1973. With the new coordinates, it appears in the 1977 British gazetteer.

Mount Grier. 86°41' S, 148°57' W. A prominent mountain, rising to 3035 m on the E side of Scott Glacier, where it forms the most westerly summit in the La Gorce Mountains, in the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35, and named by Byrd for Dr. Garett Layton Grier (1867-1944; known as G. Layton Grier), president of the L.D. Caulk Co., of Milford, Del., who contributed dental supplies to ByrdAE 1928-30 and ByrdAE 1933-35. US-ACAN accepted the name.

Grierson, John. b. Jan. 2, 1909, Liverpool, son of wealthy Scottish cotton merchant John Grierson and his wife Edith Jessie Cairns. When John was 11, his father died, and Edith took the family to live in Weybridge, Surrey. He began flying at nearby Brooklands while still at school at Charterhouse (from which he was expelled), and graduated from RAF Cranwell in 1929, as a pilot officer. On Oct. 3, 1930, he left Kent in his own Gipsy Moth, arriving in Karachi 9 days later with malaria. He was 21. He then joined his squadron, as an aerial photographic specialist fighting a group of Northwest Frontier tribesmen called the Red Shirts. In May 1931, bored with the inactivity [sic], he went AWOL, and flew back to England solo, in his own plane in May 1931, setting a new light airplane record from Lahore to England in 4 days 10 hours and 50 minutes. He was arrested, and kicked out of the RAF. That year he flew from Brooklands to Samarkand, and in 1933 successfully petitioned the king to be re-instated in the RAF. On April 14, 1934, in London, he married Frances "Brownie" Hellyer, and, that year, on his 3rd attempt, he flew from the UK to North America, the first solo flight over the Greenland ice-cap. He was an operations officer with the Air Ministry, and in Jan. 1939 became a Hawker Siddeley test pilot for the new jets. After World War II he was director of civil aviation in the British zone of occupied Germany, and in 1946-47 was in charge of all air operations on the whaler *Balaena*, when that vessel went to Antarctica. He became an executive with an aircraft corporation, and from 1964 lived in Guernsey. He flew over the South Pole in 1966. He retired as a wing commander. He wrote several books, including a biography of Sir Hubert Wilkins. He was part way through a lecture on Lindbergh at the Smithsonian, in Washington, DC, when he died of a stroke on May 20, 1977. His autobiography, *Fun to Survive*, was never published.

Grierson Island. 66°01' S, 111°05' E. One of the Balaena Islands, about 2 km WSW of Thompson Island, off the Budd Coast. The Balaenas were photographed aerially on Feb. 2, 1947, during OpHJ 1946-47, and 10 days later, during an ice reconnaissance flight from the whaler *Balaena*, they were probably among the features sketched and thought to be mountains. The Balaenas were first delineated from the Highjump photos. This island was named by ANCA for John Grierson.

Islote Grieta *see* **Cleft Point**

Ozero Grif. 66°25' S, 100°31' E. A lake, immediately W of Grace Rocks, at the S side of the mouth of Apfel Glacier, at its junction with Scott Glacier, in Queen Mary Land, about 9 km S of the Bunger Hills. Named by the Russians.

Griffen, John P. *see* **USEE 1838-42**

Mount Griffin. 71°11' S, 166°16' E. Rising to 1760 m, 21 km ESE of Mount Bolt, it marks the S limit of the Anare Mountains, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for CWO Joe R. Griffin, U.S. Army, helicopter pilot here in 1962-63, in support of USGS's Topo East-West project, which included a survey of this mountain. NZ-APC accepted the name.

Griffin Cove. 62°28' S, 60°09' W. A small, oval-shaped bay, bounded to the NE by Gargoyle Bastion, to the SE by Basilisk Crag, and to the SW by Organpipe Point, in the NE part of Livingston Island, in the South Shetlands. In keeping with the naming of several features in this area after mythical beasts and monsters, this one was named by UK-APC on Dec. 12, 1997, after the huge bird called the griffin. US-ACAN accepted the name on Sept. 25, 1998. The British plotted this cove in late 2008.

Griffin Nunatak. 75°55' S, 158°20' E. A flat-topped nunatak, about 3 km long, between Ambalada Peak and Terminal Peak, in the Prince Albert Mountains, at the top of Mawson Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Lt. William R. Griffin, USN, who wintered-over as medical officer and officer-in-charge at Pole Station, in 1966. ANCA accepted the name.

Mount Griffith. 85°53' S, 155°30' W. A massive mountain rising to 3095 m (the New Zealanders say 1676 m), 6 km NNE of Mount Vaughan, close N of the Hays Mountains, between Amundsen Glacier and Robert Scott Glacier, in the Queen Maud Mountains. Discovered and roughly mapped by Larry Gould in Dec. 1929, during ByrdAE 1928-30. Re-mapped in Dec. 1934, by Quin Blackburn's party, during ByrdAE 1933-35, and named by Byrd for Raymond Griffith (1890-1957) of 20th Century-Fox Pictures, producer and former actor, who helped assemble movie records of that latter expedition. US-ACAN accepted the name, and NZ-APC followed suit.

Griffith, Clyde William "Grif." b. May 24, 1913, Irondale, O., son of laborer in a pipe shop (later a brick plant foreman) William T. Griffith and his wife Cinderella "Cyndia." In 1933 he joined the U.S. Navy, and was in Balboa, in the Canal Zone, serving as a machinist's mate 2nd class on the *Coco Solo*, when he signed on to USAS 1939-41. He was machine and tractor operator at West Base during the expedition. Initially he was one of the 4 men looking after the Snowcruiser (q.v.). He died on Oct. 1, 1986, in Cohasset, Minn.

Griffith, Griffith *see* **USEE 1838-42**

Griffith Glacier. 86°11' S, 149°24' W. A tributary glacier flowing westward from the California Plateau and the Watson Escarpment, to enter Scott Glacier between Mount McKercher and Mount Meeks. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Lt. Cdr. Philip G. Griffith, aircraft commander on photographic flights during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67).

Griffith Island. 66°20' S, 110°29' E. A small island at the S entrance to Robertson Channel, in the Windmill Islands. First mapped from air photos taken in 1947 during OpHJ 1946-47, and in 1948 during OpW. Named by US-ACAN in 1963, for Chief Fire Patrolman Russell B. Griffith, USN, at Wilkes Station in 1958.

Griffith Nunataks. 76°28' S, 143°45' W. A group of rock exposures on the S side of Balchen Glacier, between the O'Connor Nunataks and Mount Perkins, in the Ford Ranges of Marie

Byrd Land. Discovered aerially in 1940 by members of West Base, during USAS 1939-41, and named for Clyde W. Griffith. US-ACAN accepted the name in 1947.

Griffith Peak. 85°47' S, 131°31' W. A rock peak rising to 1800 m, in the W part of the Wisconsin Range, at the N side of the mouth of Hueneme Glacier at that glacier's junction with Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Raymond E. Griffith, who wintered-over as cook at Byrd Station in 1961 and 1963.

Griffith Ridge. 71°22' S, 164°23' E. A rock ridge, 8 km long, in the Bowers Mountains, just within the mouth of Champness Glacier, where that glacier joins the larger Lillie Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Lt. Harry G. Griffith, USN, public works officer at McMurdo in 1967.

Mount Griffiths. 66°29' S, 54°03' E. An elongated mountain with 2 prominent peaks rising to 1650 m and 1680 m respectively, 8 km NW of the Wilkinson Peaks, and about 19 km ENE of Stor Hånakken Mountain, in the Napier Mountains of Enderby Land. Photographed aerially by LCE 1936-37, and named Mefjell (i.e., "middle mountain") by the Norwegian cartographers who plotted it from these photos in 1946. It was visited by an ANARE sledge party in 1961. ANCA, in order to avoid duplication of a name used elsewhere in Antarctica, renamed it for geologist George Samuel "G.S." Griffiths (b. 1847, Demerara, South America; in Victoria since 1851), the Royal Society of Victoria's representative on the Australian Antarctic Exploration Committee of 1886. US-ACAN accepted that name in 1965.

Griffiths, Eric Neville. b. Sept. 9, 1912, London, son of Percy Griffiths and his wife Nancy Thompson. When Eric was an infant, in 1914, the family migrated to Wellington, NZ. After Wellington College, he learned to fly with the Wairarapa Aero Club, and for a while was on a barnstorming tour with Squadron leader M.C. McGregor and Scotty Fraser, doing the occasional parachute jump. He then ferried machines by air from Shanghai to Chinese war lords, and then returned to NZ, where he acquired a commercial pilot's license. He was a crewman on the *Jacob Ruppert*, during the first half of ByrdAE 1933-35, signing on in Wellington. He tried unsuccessfully to raise funds for his entry in the London to Melbourne Air Race, then went to England, where he worked for Imperial Airways. Then came the Spanish Civil War, and he was contracted to deliver three aircraft from London to Madrid. After the third one, he decided to join the Loyalist cause, as a pilot, shooting down five fighters and two bombers. In Sept. 1936, he and a companion were escorting bombers some distance over enemy lines in Toledo, when he was surprised by eight Italian Fiat fighters. His companion was killed, and Griffiths was shot through the shoulder by an explosive bullet. While convalescing in a Madrid hospital, he was placed in command of a training school for pilots. In 1937, he returned to NZ, and married Frances Marie "Fay" Robinson, of Wellington, then went to the USA, where he was employed for a time by the Douglas Aircraft Company. He was back in NZ in 1938, flying commercially, and then, in 1939, joined the RNZAF, serving in the Wellington General Reconnaissance Squadron, flying Baffins. In 1940, he was a staff pilot and test pilot at Ohakea, then sailed for Fiji, to be with the RNZAF General Reconnaissance unit, flying Vincents. But he got transferred to the 70th Pursuit Squadron, USAAF, and, on Jan. 1, 1941, he was promoted to flight lieutenant. Always a little unpredictable, Griffiths was flying a Bell P-39 Airacobra on Feb. 23, 1942, when he saw a Vincent flying along. He made a mock attack, failed to pull out of the dive, and dropped into a Fijian house a quarter of a mile north of Nadi Airport.

Griffiths Bay. 64°23' S, 58°52' W. A large bay, about 10 km long and 7 km wide, N of Longing Peninsula, Trinity Peninsula. It developed during the 1995 breakup of the Prince Gustav Ice Shelf and subsequent deglaciation. Named by UK-APC on April 4, 2008, for Donald Harrison Griffiths (1919-2007), professor of geophysics at Birmingham University (one of the first such professors in the UK), and pioneer of marine geosciences in Antarctica and Africa.

Griffiths Glacier. 77°10' S, 162°20' E. A prominent cirque-type glacier, next NE of Crisp Glacier, flowing ESE to Debenham Glacier to the E of Second Facet, in the Gonville and Caius Range of Victoria Land. Named by NZ-APC on Nov. 4, 1999, for Harold Griffiths (d. 1974), associated with Antarctic exploration for 50 years. He was instrumental in the NZ Antarctic Society's efforts to establish an official NZ presence in Antarctica, in the 1950s. US-ACAN accepted the name on May 18, 2000.

Grigg Peak. 71°26' S, 167°09' E. Rising to 2130 m, 11 km W of the N tip of the Lyttelton Range, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos traken between 1960 and 1963. Named by US-ACAN in 1970, for Gordon C. Grigg, USARP biologist at McMurdo in 1966-67.

Griggs, Wilfrid James. b. 1902, Hampstead, London, but grew up partly in Ilford, Essex, son of upholsterer James Griggs and his wife Fanny Eliza S. Midgley. He was chief engineer on the *Discovery* during both halves of BANZARE 1929-31. On June 25, 1934, still an engineer, he pulled into Pymouth on the *Mashobra*, from Port Said, and in 1935, in Malmesbury, Wilts, he married Kathleen Walden, and they lived in London for a while. In 1938 they and their son John left for Perth, Western Australia. He died on March 13, 1977, in Perth, and his wife died there in 2002, a few weeks short of her 99th birthday.

[1]**Gora Grigor'eva** *see* **Gårenevet**

[2]**Gora Grigor'eva**. 72°35' S, 68°15' E. A nunatak, NW of Styles Glacier, at the N end of the Mawson Escarpment. Named by the Russians.

Utës Grigor'eva. 80°37' S, 29°30' W. A bluff on the NW side of Guyatt Ridge, at the S end of the Haskard Highlands, in the W part of the Shackleton Range. Named by the Russians.

The *Grigoriy Mikheev*. Russian tourist ship in Antarctic waters (the South Shetlands, the South Orkneys, and the Antarctic Peninsula) in 1999-2000 and 2000-01, both times under the command of Capt. Jonas Ramanouskas. In that latter season she took down the Ukrainians for their expedition that season. She was back in 2005-06. She could take 46 passengers.

Grigorov Glacier. 64°09' S, 62°07' W. A glacier, 1.8 km long and 1.3 km wide, it flows SE to enter Hill Bay W of Kostur Point, on the S coast of Albena Peninsula, Brabant Island, in the Palmer Archipelago. Named by the Bulgarians on June 3, 2010, for Stamen Grigorov (1878-1945), scientist who discovered the bacteria *Lactobacillus bulgaricus*, used in the production of yogurt.

Grikurov Point *see* **Suffield Point**

Grikurov Ridge. 71°17' S, 69°00' W. A ridge, extending westward for about 10 km, at an elevation of about 1350 m, from the S end of the LeMay Range, on Alexander Island. Photographed aerially by RARE 1947-48, and surveyed from the ground by FIDS between 1948 and 1950. Surveyed again by BAS personnel from Fossil Bluff Station between 1961 and 1973. Named by UK-APC on Dec. 20, 1974, for Garrik E. Grikurov (b. 1934), Soviet exchange geologist who wintered over with BAS at Stonington Island (Base E) in 1964. He had spent 7 years in the Arctic. US-ACAN accepted the name in 1975. Mr. Grikurov was back in Antarctica in 1967-68, and again in 1976-77, as a member of SovAE (*see* **Welcome Pass**).

Przyla dek Grikurova *see* **Suffield Point**

Islote Grillete *see* **Goetschy Island**

Roca Grim *see* **Grim Rock**

Grim Rock. 65°23' S, 64°29' W. A small rock awash, about 5.5 km SSE of Gedges Reef, and about 17 km WNW of Cape Pérez, on the NW side of the Grandidier Channel, NW of Beascochea Bay, off the W coast of Graham Land. Discovered and charted in Feb. 1936, by BGLE 1934-37, who named it for its appearance. It appears on Rymill's 1938 map of that expedition, as well as on a British chart of 1948. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. It appears on a 1946 Argentine chart as Roca Grim, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Recharted by an RN Hydrographic Survey unit on the *John Biscoe*, in 1958.

Grimes Glacier. 79°12' S, 84°22' W. A steep glacier descending from the E side of the Anderson Massif, in the Heritage Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Master Chief Equipmentman Paul D.

Grimes, USN, who supervised the construction crews while Williams Field was being moved in Feb. 1965.

Grimes Ridge. 74°37' S, 110°25' W. A high, mostly ice-covered ridge at the N side of Holt Glacier, on Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. First mapped by USGS from air photos taken in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1967, for Capt. E.W. Grimes, in Antarctica with the U.S. Army Aviation Detachment during OpDF 66 (i.e., 1965-66).

Grimley, Peter Hugh. b. Oct. 18, 1933, Blackpool, son of Hugh Grimley and his wife Ruth Greenwood. A very accomplished boy scout, he was climbing Mount Snowdon when he discovered sea shells close to the summit. This phenomenon determined him to be a geologist and mountain climber. While at the Royal School of Mines, at Imperial College, London, he went on his first expedition to Labrador. He climbed with Eric Shipton in the Karakoram, and did his doctoral thesis (1958) based on work done in Uganda (where he had climbed the Mountains of the Moon). Alan Reece and Jon Stephenson suggested him for FIDS, which he joined in Aug. 1958. He left Southampton on the *John Biscoe* in Oct. 1958, in order to winter-over in 1959 as geologist at Base E. However, they couldn't get in because of the ice, and Grimley made observations from the ship, along the Danco Coast and in the Falklands, then went back to England in May 1959, summering in Labrador. In late Dec. 1959 he went south again, on the *Kista Dan*, this time to winter-over in 1960 at Base Y. The ship was again prevented by heavy ice from reaching Horseshoe Island, but this time he and 3 other FIDS were flown in by Otter. In Aug. 1960 the party of 4 closed Base Y, and sledged down to Stonington Island (Base E) to continue surveying and conducting geological reconnaissance for the rest of that winter, and for the summer of 1960-61, re-building the station there. He returned to England in April 1961, and upon his return he married Patricia Still. He spent until Aug. 1961 writing his report at the FIDS geology unit at the University of Birmingham, and then he and his wife moved to the Andes for 5 years, and then on to Newfoundland, and finally to just north of Toronto.

Grimley Glacier. 69°09' S, 64°40' W. A tributary glacier, 24 km long and 5 km wide, 5 km N of Sunfix Glacier, it flows ENE into Casey Glacier, on the Wilkins Coast, in northern Palmer Land. Photographed aerially on Sept. 28, 1940, by USAS 1939-41, and again on Dec. 22, 1947, by RARE 1947-48. Descended and surveyed from the ground by Fids from Base E in Dec. 1960. Named by UK-APC on Aug. 31, 1962, for Peter Grimley. US-ACAN accepted the name later in 1962.

Grimmia Gorge. 68°36' S, 78°30' E. A narrow gorge, about 20 m wide, and between 20 and 30 m deep, it is the more easterly of 2 gorges trending S-N in the Vestfold Hills, and it runs into a gravel bank at the E end of Krok Lake. There is a small waterfall on the E side at the S end. Named by ANCA for well-developed beds of moss (*Grimmia*) at the exit to this gorge.

Monte Grimminger *see* **Mount Grimminger**

Mount Grimminger. 73°16' S, 62°15' W. A cone-shaped, mostly ice-covered mountain, rising to 1685 m in the Dana Mountains, on the N side of Meinardus Glacier, close E of that glacier's junction with Haines Glacier, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940 by members of East Base, during USAS 1939-41. It appears on a U.S. Hydrographic Office photograph in 1943. In Nov. 1947, it was re-photographed aerially by RARE 1947-48, and in Dec. 1947 was surveyed from the ground by a joint sledging team of RARE personnel and Fids from Base E. Named by those Fids for George Grimminger. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and also on a U.S. Hydrographic Office chart of that year. In those days it was plotted in 73°18' S, 62°18' W. Re-mapped by USGS from USN air photos taken between 1965 and 1967, and with the new coordinates it appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. On a 1966 Chilean map it appears as Monte Grimminger.

Grimminger, George. b. Jan. 5, 1907, St. Louis, son of bookkeeper George Grimminger and his wife Adele. As a youngster, he was known as Georgie, which was one of the ways to distinguish him from his father. He was a meteorologist with the U.S. Weather Bureau when he went south on the *Bear of Oakland*, for ByrdAE 1933-35. He was in the USAF. He died on Dec. 1, 1973.

Grimshaw, Edward William "Ted." b. 1938, Ince, Lancs, son of William Grimshaw and his wife Annie Gaskell. He joined FIDS in 1960 as an ionosphere physicist, and wintered-over at Port Lockroy Station in 1961 and at Base F in 1962, the second winter as base leader. In 1967, he married Maureen S. Lawn, in Fylde, Lancs, and that was where they lived.

Mount Grimsley. 70°36' S, 66°32' E. A small mountain, about 1.5 km (the Australians say about 3 km) SW of Mount Abbs, in the Aramis Range of the Prince Charles Mountains. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960. Named by ANCA for Stephen William "Steve" Grimsley, technical officer (ionosphere) at Wilkes Station in 1961 and 1963. US-ACAN accepted the name in 1967.

Grimsley Peaks. 66°34' S, 53°40' E. A group of 5 linear peaks, just S of Stor Hånakken Mountain, in the Napier Mountains of Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who, apparently, did not name them. Re-mapped by Australian cartographers from ANARE air photos taken in 1956, and named by ANCA for Steve Grimsley (*see* **Mount Grimsley**). US-ACAN accepted the name in 1965.

Grinda *see* **Grinda Ridge**

Grinda Ridge. 71°56' S, 4°26' E. A rock ridge (the Norwegians describe it as a small mountain), 2.5 km long, immediately N of Mount Grytøyr, in the westernmost part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Grinda (i.e., "the gate"). US-ACAN accepted the name Grinda Ridge in 1967.

Grindall, Richard. b. April 9, 1750, in London, son of Rivers Grindall and his wife Martha, and great grandson of Admiral Sir Richard Grindall. After Merchant Taylor's School, he went to sea. On Jan. 7, 1772 he performed two memorable acts. The first was to marry a 13-year-old girl with the unlikely name of Katherine Gwen Mary Ann Nathaniel Festing, and the second, an hour later, was to join the *Resolution* as an able seaman for Cook's 2nd voyage, 1772-75. He rose meteorically through the naval ranks: in 1776 lieutenant, in 1781 commander, and in 1783 captain. From 1793 to 1795 he commanded the *Thalia*, and several ships later commanded the *Prince* at Trafalgar. One of his sons, Festing Horatio, was a midshipman on the *Victory* in the same battle. Rear admiral in 1805 and vice admiral in 1810, Richard Grindall was knighted in 1815, and died on May 23, 1820, in Wickham, Hants.

Rocas Grinder *see* **Grinder Rock**

Grinder Island. 77°34' S, 149°20' W. One of the ice-covered islands in the Marshall Archipelago, this one is 11 km long, 1.5 km wide, and lies 22 km SW of Steventon Island, within the Sulzberger Ice Shelf, off the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Harry W. Grinder, aviation structural mechanic, USN, at McMurdo in 1967.

Grinder Rock. 63°58' S, 61°26' W. Rising to 130 m above sea level, it is the most southerly of a group of rocks extending from the SE end of Intercurrence Island, in the Palmer Archipelago. Photographed aerially by FIDASE in 1956. Shown on Argentine and Chilean charts of 1957, but not named. Named by UK-APC on Sept. 23, 1960, for its tooth-like appearance. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961. The Argentines call it Rocas Grinder (in other words, they pluralize it).

Grindley Plateau. 84°09' S, 166°05' E. A high, ice-capped plateau, about 200 sq miles in extent, and varying in elevation between 2700 and 3900 m above sea level, just to the W of the Beardmore Glacier, in the central part of the Queen Alexandra Range. It is bordered by the peaks of Mount Mackellar, Mount Bell, and Mount Kirkpatrick. Named by the Northern Party of NZGSAE 1961-62, for George William Grindley, senior geologist with the party. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Grinnell Island. 66°11' S, 110°24' E. An island,

0.8 km long, S of Chappel Island, in the Donovan Islands, off the Budd Coast. The area was first mapped from air photos taken during OpHJ 1946-47, and the Donovan Islands specifically were first photographed aerially in 1956 by both ANARE and SovAE. Named by Carl Eklund for Lt. Sheldon Wayne Grinnell (b. April 26, 1928, Bottineau, ND), USNR, medical officer at Wilkes Station in 1957. US-ACAN accepted the name in 1960. Dr. Grinnell later practiced psychiatry at the University of California, at Napa. ANCA accepted the name on July 4, 1961.

Islote Gris. 63°22' S, 57°05' W. A small island in the SW part of Eagle Cove, near Hope Bay, on Trinity Peninsula. Named by the Argentines ("gray island").

Le Rocher Gris *see under* **L**

Grisar, Vincenz. 4th officer on the *Schwabenland* during GermAE 1938-39. Later a captain.

Grisez, David Norman "Dave." b. Oct. 1935, Indiana. He joined the Navy and became a machinery repairman, petty officer 3rd class, and was returning from the Mediterranean on a carrier in spring 1955 when he saw the notice asking for volunteers to go to Antarctica. He was attached to the Seabees, transferred to Davisville, RI, for training, and arrived at McMurdo Sound in late 1955, helping build the station there during the winter of 1956. He shipped back to the USA in early 1957, and after a tour in NYC married, was discharged in 1958, and returned to Indiana, where he was a salesman until 1976, then became a development engineer for an automotive manufacturer, and finally into a tool and die shop, from which he retired.

Griswold, Edward Allen "Ted." b. June 5, 1911, Topeka, Kans., but raised in Los Angeles from the time he was a baby, son of De Wilfred Griswold, the deputy sheriff of Los Angeles County, and his wife Nettie Alosia Nash, who, once her children were a little older, worked as a saleslady in a department store. After a brief while at Cal Tech, Ted became a tester for an electric company, and then joined the *Bear of Oakland*, as a steward, for the 2nd half of ByrdAE 1933-35. On March 5, 1935, when the expedition was over, he left Dunedin on the *Mariposa*, and arrived in Honolulu on March 18. He married Esther, a Danish girl. In 1941 he was in St. Petersburg, Fla., touring with his illustrated travelogue lecture "Experiences with Admiral Byrd at Little America," in which he described himself as an assistant scientist on the voyage. He died on June 19, 2005, at his home in Prescott, Ariz.

Grizzly Peak. 85°58' S, 151°22' W. Rising to 2200 m, on the SW flank of Mount Zanuck, in the Gothic Mountains, in the Queen Maud Mountains. Visited in Dec. 1934, by Quin Blackburn's party during ByrdAE 1933-35, and was included in what they named Darryl Zanuck Mountain. The granite of this peak is highly jointed and fairly bristles with small spires, and thus is reminiscent of the coat of a grizzly bear. Named by US-ACAN.

Grjotfjellet. 72°03' S, 2°32' E. A mountain in the area of Troll Station, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007, in association with Grjotlia.

Grjotlia. 72°01' S, 2°34' E. The W slope of Jutulsessen Mountain, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians. The word "grjot" is the old Norse name for a special kind of stone. *See also* **Nonshøgda**.

Grjotøra. 72°02' S, 2°32' E. A feature of indeterminate type (the gazetteers don't help here), in the area of Troll Station, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007, in association with nearby Grjotlia.

Grob Ridge. 83°29' S, 51°22' W. A narrow ridge running NW-SE for 5 km, at an elevation of about 1450 m, 5 km S of Dyrdal Peak, at the S end of the Forrestal Range, in the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Richard W. Grob, who wintered-over as cook at Ellsworth Station in 1957. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Gromov Nunataks. 67°45' S, 50°40' E. A group of nunataks about 12 km ESE of Mount Henry, in the Scott Mountains of Enderby Land. Named by SovAE 1961-62 as Nunataki Gromova, for pilot Mikhail Mikhailovich Gromov (1899-1985), pioneer in the flights from Russia to America via the North Pole, in the 1930s. ANCA accepted the translated name Gromov Nunataks on Oct. 22, 1968, and US-ACAN followed suit in 1971.

Nunataki Gromova *see* **Gromov Nunataks**

The *Grönland*. Dallmann's whaling barque of 1873-75. The first auxiliary steamship to visit Antarctica, she visited the South Shetlands, the South Orkneys, Bismarck Strait, and the coast of the Antarctic Peninsula. In 1868 she had carried the German North Pole expedition.

Cabo Grönland *see* **Cape Grönland**

Cape Grönland. 64°15' S, 63°21' W. A cape forming the N extremity of Anvers Island, in the Palmer Archipelago. Discovered and roughly charted by Dallmann in 1873-74, and named by him as Grönland-Kap, for his ship, the *Grönland*. It appears on an 1894 U.S. Hydrographic Office chart as Greenland Cape, and on Friederichsen's 1895 map as Cap Grönland. It appears as Cape Greenland on Bartholomew's 1898 map, and on a 1908 British chart. Further charted by FrAE 1903-05, it appears on their maps as Cap Grönland. On a British chart of 1945 it appears as Cape Grönland, and that was the name accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. On a 1949 Argentine chart it appears as Cabo Greenland, but on one of their 1953 charts as Cabo Grönland, and that latter name was the one accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It is reported that there is a 1955 reference to it as Cabo Tierras Verdes (i.e., "cape green lands"), but this seems incredible. The feature was photographed aerially by FIDASE in 1956-57.

Kap Grönland *see* **Cape Grönland**

Grootes Peak. 78°03' S, 161°36' E. Rising to 2635 m in the S extremity of the Colwell Massif, in Victoria Land. Named by US-ACAN in 1994, for Pieter Meiert Grootes of the Quaternary Isotope Laboratory, at the University of Washington, 1977-94, very active in USAP ice-coring, including an investigation of Taylor Dome. From 1994 he was director of the carbon-14 lab at Christian Albrechts University, in Kiel.

Gropa-higasi-dai. 72°01' S, 27°33' E. A tabular height in the E part of Gropeheia, in the E part of the Sør Rondane Mountains. Mapped by Japanese cartographers from JARE air photos taken in 1981-82 and 1987, and from JARE ground surveys conducted in 1987-88, and named by them on Oct. 23, 1989 (name means "Grope east height").

Gropeheia. 72°00' S, 27°28' E. The N part of Balchenfjella, N of Oberstbreen, in the E part of the Sør Rondane Mountains. Named by trhe Norwegians ("depression heights"), in association with the many depressions in the area.

Gropehøgda *see* **Gropa-higasi-dai**

Le Gros Rocher *see under* **L**

Gross, Henry *see* **USEE 1838-42**

Gross Hills. 79°18' S, 83°22' W. A line of rugged hills and peaks E of Schmidt Glacier, in the Heritage Range. Named by the University of Minnesota Geological Party of 1963-64, for Barton Gross, geologist with the party. US-ACAN accepted the name in 1966.

Grosse Brei-Schüssel *see* **Schüssel Cirque**

Grosse Eisbeine *see* **Ross Ice Shelf**

Grossenbacher Nunatak. 74°52' S, 74°01' W. Rising to about 1150 m, at the SW end of the Lyon Nunataks, 3 km SW of Holtet Nunatak, where Ellsworth Land meets southern Palmer Land. Named by US-ACAN for Ernest P. Grossenbacher, upper atmosphere physicist at Siple Station in 1970-71. UK-APC accepted the name on Feb. 15, 1988.

Grosses Schwartz-Horn *see* **Store Svarthorn Peak**

Grossman Nunataks. 74°55' S, 72°40' W. A group of about a dozen nunataks rising to elevations of between 1300 and 1500 m, and extending in a NW-SE direction for about 28 km between the Lyon Nunataks and the Sky-Hi Nunataks, where Ellsworth Land meets southern Palmer Land. The group includes features from the Smith Nunataks and Whitmill Nunatak in the NW to Gaylord Nunatak and Neff Nunatak in the SE. Mapped by USGS from ground surveys, and air photos taken by USN between 1961 and 1968, and also from U.S. Landsat images taken in Feb. 1974. Named by US-ACAN in 1994, for Charles Grossman, formerly chief of the Shaded Relief and Special Graphics unit, of the USGS's Branch of Special Maps, a specialist in Antarctic maps. UK-APC accepted the name on Oct. 5, 1994.

Grosvenor Mountains. 85°40' S, 175°00' E. Also called the Grosvenor Range. A group of widely scattered mountains, ridges, and nunataks,

pierced by several glaciers, and rising to about 3200 m above sea level, above the Polar Plateau E of the head of Mill Glacier, between the Beardmore Glacier and the Amundsen Glacier, close NW of the north-west facing escarpment of the Queen Maud Mountains that also marks the head of the Shackleton Glacier some 30 km to the NE. They extend from Mount Pratt in the N, to the Mount Raymond area in the S, and from Otway Massif in the NW, to Larkman Nunatak in the SE. Mount Block and Mount Bumstead are in these mountains. Discovered by Byrd on his polar flight of Nov. 1929, and named by him as the Gilbert Grosvenor Mountains, for Gilbert Hovey Grosvenor (1875-1966), president of the National Geographic Society, which helped finance Byrd's expedition. Mr. Grosvenor was the first full-time editor of *National Geographic Magazine* (1899-1954), and has been called the Father of Photojournalism. The name was later shortened, and accepted by US-ACAN in 1963. NZ-APC also accepted the name. Note: Several peaks near Mount Raymond were apparently seen by Shackleton in 1908, as he made his way toward the Pole during BAE 1907-09, although they were then considered to be a continuation of the Dominion Range.

Isla Grotto *see* **Grotto Island**

Grotto Glacier. 70°45' S, 68°35' W. About 40 km long, and 11 km wide at its mouth (and 5 km wide where it emerges from the coastal mountains), on the E coast of Alexander Island, it flows E into George VI Sound N of Ablation Point, between that point and Belemnite Point. Photographed aerially by Ellsworth on Nov. 23, 1935, and first roughly mapped from these photos in 1936, by U.S. cartographer W.L.G. Joerg. Photographed aerially and roughly surveyed from the ground in Oct. 1936 by BGLE 1934-37, it appears on Stephenson's 1940 map of that expedition. Surveyed again (in more detail) in 1949 by Fids from Base E, who named it for the crystal-lined crevasse, or grotto, where they rescued one of their sledge dogs. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year.

Grotto Island. 65°14' S, 64°15' W. A narrow island, 0.8 km long, 170 m N of Galíndez Island, in the Argentine Islands, N of Faraday Station, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted in 1935 by BGLE 1934-37, and named by them for an ice cave on the island. It appears on Rymill's 1938 map of that expedition, and also on a 1947 British chart. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer. The 1970 Argentine gazetteer and the 1974 Chilean gazetteer both accepted the name Isla Grotto.

Grouhand, François-Daniel. b. Aug. 24, 1817, Montoir, France. Ordinary seaman on the *Astrolabe* during FrAE 1837-40.

Ground ice *see* **Anchor ice**

Groussac Refugio. 65°11' S, 64°10' W. Argentine Navy summer refuge hut opened on Feb. 8, 1955, on a rock surface 35 m above sea level, in Port Circumcision, on the SE side of Petermann Island, in the Wilhelm Archipelago. Originally named Refugio Naval Ipólito Bouchard, the name was changed to Refugio Naval Groussac, or just Groussac. It lasted until 1958.

Groux Rock. 76°13' S, 144°47' W. An isolated rock outcrop in the N part of the Phillips Mountains, 8 km ENE of Mount June, in the Ford Ranges of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN for Roger G. Groux, USN, shipfitter who wintered-over at Byrd Station in 1967.

Grove Mountains. 72°45' S, 75°00' E. Also called Grove Nunataks, and South Eastern Nunataks. A large, scattered group of mountains and nunataks, extending over an area of about 85 km by 57 km (the Americans say about 60 by 30), about 160 km E of the Mawson Escarpment, just behind the Amery Ice Shelf, in Princess Elizabeth Land. First photographed aerially during OpHJ 1946-47, and then again by ANARE in 1956, 1957, and 1960. Australian cartographers plotted the feature from the ANARE photos. On Nov. 9, 1958, Graham Knuckey obtained an astrofix here, during an ANARE traverse. Named by ANCA on July 22, 1959, for Flight Lt. (acting squadron leader) Ivan Laurance Grove (b. Oct. 11, 1930), RAAF pilot with ANARE, who landed here in Nov. 1958, and who wintered-over at Mawson Station in 1958. US-ACAN accepted the name in 1966.

Grove Nunataks *see* **Grove Mountains**

Groves Island. 75°30' S, 143°05' W. A grounded, ice-covered island, 8 km long, at the N end of the Nickerson Ice Shelf, close off the Ruppert Coast, between Siemiatkowski Glacier and Land Glacier, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Benjamin F. Groves, meteorologist at Byrd Station in 1964.

Growler. A piece of floating ice smaller than a bergy bit, just showing above water.

Growler Rock. 62°08' S, 58°09' W. Also called Roca Gruñón. A rock in water, 1.5 km NW of Lions Rump, in the W part of King Georges Bay, King George Island, in the South Shetlands. Charted and named by the personnel on the *Discovery II* in 1937 (*see* **Growler**, above). It appears on a British chart of 1938, and was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer, and on a British chart of 1962. It appears on a 1949 Argentine chart as Roca Growler, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. It was further charted by an RN Hydrographic Survey unit on the *John Biscoe*, in 1959. The British were the latest to plot this feature, in late 2008.

Bukhta Groznaja *see* **Groznaya Bay**

Groznaya Bay. 67°39' S, 46°00' E. About 3.7 km E of Molodezhnaya Station, on the coast of Enderby Land. Photographed aerially in 1957 by both ANARE and SovAE 1957, and named by the latter as Bukhta Groznaja (i.e., "menacing bay"). ANCA translated the name.

Glaciar Grubb *see* **Grubb Glacier**

Grubb Glacier. 64°56' S, 62°38' W. Flows NE into Lester Cove, Andvord Bay, to the W of Bagshawe Glacier, on the Danco Coast, on the W coast of Graham Land. It appears on an Argentine chart of 1952. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Thomas Grubb (1800-1878), Irish optician who designed and introduced the aplanatic camera lens in 1857. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Grubb.

Gruber, Erich. b. 1912, Germany. He went to sea at 15, working as a deck boy on the Hamburg-Amerika Line ship *Resolute*, plying the Atlantic between Hamburg and New York, but he deserted. He learned the radio business, and, falsifying his age (but not his name), he went back to work as a radio operator for Hamburg-Amerika, again plying the Atlantic. In 1932 he left the line to work as a radioman on Deutsch-Amerikanishe Petroleum Company oil tankers in the Caribbean. On Oct. 2, 1938 Rudolf Mayr arrived in New York from the Azores, flying the German plane *Nordstern*. On board were 3 other men, one of whom was Gruber, radio officer. He was flight radio operator on the plane *Boreas*, during GermAE 1938-39. Then came the war.

Gruber-Berge. During GermAE 1938-39, Ritscher discovered and named these mountains in the N part of the Mühlig-Hofmann Mountains. They have not been identified since, and they are not the Gruber Mountains (q.v.).

Gruber Mountains. 71°22' S, 13°25' E. A small group of mountains, consisting of a main massif and several rocky outliers, they form the NE portion of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by NorAE 1956-60, who named the feature Gruberfjella, for Otto Heinrich Franz Anton von Gruber (1884-1942; Ritter von Gruber from 1915), the Austrian cartographer who compiled the maps of Neu Schwabenland from the aerial photos taken during Ritscher's expedition. US-ACAN accepted the name Gruber Mountains in 1966. *See also* **Gruberberge** (below).

Gruberberge. 72°00' S, 4°50' E. Named by the Germans. This is probably a synonym for the Thälmann Mountains, in the Mühlig-Hofmann Mountains of Queen Maud Land.

Gruberfjella *see* **Gruber Mountains**

Gruendler Glacier. 72°38' S, 167°28' E. A tributary glacier draining the N slopes of the Malta Plateau, near Mount Hussey, and flowing N into Trainer Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for James D. Gruendler, member of the USARP glaciological party to Roosevelt Island in 1967-68.

Glaciar Gruening *see* **Gruening Glacier**

Mount Gruening *see* **Mount Jackson**

Ventisquero Gruening *see* **Gruening Glacier**

Gruening Glacier. 71°52' S, 61°55' W. A broad glacier flowing SE between steep rock walls into the NW part of Hilton Inlet, on the Black Coast, on the E coast of Palmer Land. Discovered aerially on Dec. 30, 1940, on a flight down this glacier from East Base, and plotted by them, during USAS 1939-41. However, due to an error in navigation, they plotted it in 72°35' S, 60°00' W, in the approximate latitude of Maury Glacier. The feature was also sighted from the ground by the same expedition, and they plotted it (much more accurately) in 72°00' S, 61°25' W. Consequently, there was no reason to guess that the two were one and the same feature. The aerial one (so to speak) was named Aviza Black Glacier, for Dick Black's second wife, Aviza Johnson (1907-1997), and appears as such on a 1942 USAAF chart, on a 1943 U.S. Hydrographic Office photograph, and also on Finn Ronne's 1945 map. The one that had been surveyed from the ground appears (unnamed) on the same 1942 USAAF chart, but, of course, as a separate feature. Aviza Black Glacier was renamed Gruening Glacier on a 1943 USAAF chart, and that name was accepted by US-ACAN in 1947. Newspaper editor Ernest H. Gruening (1887-1974) was director of the Division of Territories and Island Possessions, U.S. Department of the Interior, 1934-39 (he was later governor of and senator from Alaska, the "father of Alaska statehood"). On a 1946 Argentine chart, the name Glaciar Gruening appears, plotted in 72°35' S, 60°00' W. With those same coordinates, it appears as Ventisquero Gruening on a Chilean chart of 1947 (the word "ventisquero" is almost an alternative to "glaciar"). In Nov. 1947, a joint FIDS-RARE sledging party sighted the glacier seen by the 1940 USAS ground party, and located its mouth, although the full extent of the glacier was not determined at that time. The USAS error was discovered, and the name Gruening Glacier was applied to the more northerly of the two glaciers, i.e., the unnamed one discovered by the USAS ground party. It appears as such on Finn Ronne's 1948 map, and UK-APC accepted that situation on Jan. 28, 1953. US-ACAN also accepted the situation. There is a 1948 Chilean reference to this glacier as Glaciar Pérez Rosales, named after the Chilean politician Vicente Pérez Rosales (1807-1886). It was mapped by USGS in 1974 from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. The 1974 Chilean gazetteer accepted the name Ventisquero Gruening, with the coordinates 71°52' S, 61°55' W.

Gruev Cove. 62°30' S, 59°34' W. A cove, 300 m wide, indenting the E coast of Greenwich Island for 650 m S of Santa Cruz Point and N of Parchevich Ridge, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for Dame Gruev (1871-1906; real name Damyan Yovanov Gruev), a leader of the Bulgarian liberation movement in Macedonia and Thrace.

Roca Grumete Sánchez *see* **Burton Rocks**

Estrecho Grumman. 63°32' S, 55°55' W. A strait between Dundee Island and Paulet Island, in the Joinville Island group. Named by the Argentines.

Rocas Grunden *see* **Grunden Rock**

Grunden, Toralf. b. 1874, Larvik, Norway. He had much Arctic fishing experience when he became a seaman on the *Antarctic* during SwedAE 1901-04. He was one of the party forced to winter over at Hope Bay in 1903.

Grunden Rock. 63°24' S, 56°58' W. A rock in water, rising to between 12 and 15 m, surrounded by a group of smaller rocks, just E of Hut Cove, along the SE side of the entrance to Hope Bay, Trinity Peninsula, on the NE end of the Antarctic Peninsula. Discovered by SwedAE 1901-04. In 1945 the FIDS named the entire group of rocks as Grunden Rocks, for Toralf Grunden. UK-APC accepted that name on Nov. 21, 1949, and US-ACAN followed suit in 1951. In 1951 the Argentines established a lighthouse on the big rock. In 1952, following a 1951-52 survey by an RN Hydrographic Survey unit, UK-APC restricted the name to the island with the lighthouse on it (i.e., Grunden Rock), thus making reference to the lighthouse easier. As far as the British and Americans were concerned, the group itself became nameless. Grunden Rock was accepted by US-ACAN in 1953. It appears as such in the 1955 British gazetteer, and on a 1956 British chart. However, on a 1953 Argentine chart, the group appears as Rocas Grunden, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Grunden Rocks *see* **Grunden Rock**

Grunehogna *see* **Grunehogna Peaks**

Grunehogna Base. 77°02' S, 2°48' W. An 18-man South African geological field station completed at Grunehogna Peaks (see below), near Borga Station, on Ahlmann Ridge, in Queen Maud Land on May 8, 1971. Five men wintered-over there in 1971. H. Barnard was leader for the 1976 winter. The station closed after this winter, and the area was not occupied again by South Africans until 1980-81, when it was opened for the summer. Sarie Marie Base was established there as a summer research station in 1982-83.

Grunehogna Peaks. 72°03' S, 2°47' W. A group of peaks, 3 km N of Liljequist Heights, and also N of Kullen Knoll, in the S part of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Grunehogna (i.e., "the groundhog"). US-ACAN accepted the name Grunehogna Peaks in 1966.

Roca Gruñón *see* **Growler Rock**

Rocas Grupo. 67°33' S, 67°44' W. A group of rocks immediately W of the Covey Rocks, off the Loubet Coast, on the W coast of Graham Land. Named by the Argentines. Name means "group rocks" in Spanish.

Grushallet. 73°20' S, 14°02' W. A slope, gentle at first, then getting steeper to the eastward, about 1.3 km NE of the mountain the Norwegians call Dagvola, in the N part of the Kraul Mountains, in Maudheimvidda, in Queen Maud Land. So named by the Norwegians ("the gravel slope") because the area consists of very disintegrated material, making it appear as a gravel slope.

Grusknatten. 71°33' S, 15°28' E. A small nunatak, SSW of Vorposten Peak, in the easternmost part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians (name means "the gravel peak").

Costa de las Grutas *see under* **D**

Gruvleflesa *see* **Gruvleflesa Knolls**

Gruvleflesa Knolls. 71°44' S, 8°50' E. Two low rock knolls rising above the glacial moraine just W of Gruvletindane Crags, in the Kurze Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Gruvleflesa (gruvle means "toothed"; a flesa is a low lying islet). US-ACAN accepted the name Gruvleflesa Knolls in 1967.

Gruvlehommane. 72°01' S, 8°45' E. Small valleys on the W side of Hålisrimen Peak, in the Kurze Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians (name means "small toothed valleys").

Gruvletindane *see* **Gruvletindane Crags**

Gruvletindane Crags. 71°44' S, 8°59' E. Rock crags rising to 2255 m, bounded on their W side by a large and prominent glacial moraine, they form the N end of the Kurze Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Gruvletindane (i.e., "toothed peaks"). US-ACAN accepted the name Gruvletindane Crags in 1967. The Russians call it Pik Shishmarëva.

Grynet. 71°35' S, 25°19' E. A small nunatak between the heights the Norwegians call Storhausen and the mountain they call Krekla, in the north-central part of the Sør Rondane Mountains. Name means "the grain" in Norwegian.

Grytøyr *see* **Mount Grytøyr**

Mount Grytøyr. 72°00' S, 4°31' E. A broad, ice-topped mountain, rising to 2695 m, between Flogeken Glacier and Stuttflog Glacier, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted by NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Grytøyr, for Bjørn Grytøyr (b. 1932), meteorological assistant who wintered-over at Norway Station in 1957 and 1958, during

the expedition. US-ACAN accepted the name Mount Grytøyr in 1966. The name Bundermannketten (named for Max Bundermann) was used by GermAE 1938–39, to signify what were later individualized as Mount Grytøyr and Skigarden. The name means "Bundermann ridge."

Grytøyrfjellet *see* **Mount Grytøyr**

Grzybowski Bay. 62°03' S, 58°43' W. Between Stigant Point and Musialski Point, on Joannes Paulus II Coast, on King George Island, in the South Shetlands. Named by the Poles in 1984, for Jozef Grzybowski, engineer, chief of the helicopter team with PolAE 1980–81.

Isla Guacolda *see* **Gränicher Island**

Guanjing Shan. 69°22' S, 76°22' E. A hill in the Larsemann Hills. Named by the Chinese.

Île au Guano *see* **Guano Island**

Guano Island. 66°46' S, 141°36' E. An island formed from several rocky massifs, about 330 m long, E of Cape Découverte, and about 330 m S of Chameau Island, at the SE end of the Curzon Islands. Charted by the French in 1951, and named by them as Île au Guano, for the penguin droppings here. US-ACAN accepted the English translation in 1962.

Guanyin Shan *see* **Castle Bluff**

The Guaraní. Built for the U.S. Army as LT-817, at Marietta Manufacturing, during World War II, sister vessel to the tug that later became the *Charrúa*, she was sold (along with the *Charrúa*) to Argentina in 1946, becoming the *Guaraní*. She took part in ArgAE 1958–59. Skipper was Capitán de corbeta Geraldo Zaratieguí. On Oct. 15, 1958, she foundered off Isla de los Estados, in South America, during an attempted medical evacuation, 38 dying, including Capt. Zaratieguí.

Guaraní Refugio. 64°30' S, 59°40' W. Argentine refuge hut built by Army personnel (led by Capt. Ignacio Carro) from Esperanza Station, on June 25, 1959, on a rock surface at Cape Sobral, on the Nordenskjöld Coast, at the very N end of the Larsen Ice Shelf.

Guarcello Peak. 79°55' S, 83°10' W. Rising to 2050 m, 5.5 km SSE of Mount Dolence, in the Enterprise Hills of the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Dominic Guarcello, meteorologist at Little America V in 1958.

Guard Glacier. 71°01' S, 62°10' W. A broad tributary glacier flowing SE along the S margin of the Parmelee Massif, into Murrish Glacier, on the Black Coast, on the E side of Palmer Land. Mapped by USGS in 1974 from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E between 1971 and 1973. Named by US-ACAN in 1976, for Charles L. Guard, USARP biologist here studying birds in 1972–73, 1973–74, and 1974–75, with David E. Murrish (*see* **Murrish Glacier**). UK-APC accepted the name on July 21, 1976.

Bahía Guardia Nacional *see* **Maxwell Bay**

Roca Guardián *see* **Guardian Rock**

Isla Guardián Gutiérrez *see* **Cierva Point**

Guardian Islands *see* **Øygarden Group**

Guardian Nunatak. 83°49' S, 173°13' E. A rock exposure rising to 210 m (the New Zealanders say it is a nunatak rising to about 335 m), part of the ice-covered spur (the New Zealanders describe this spur as a submerged ridge) that descends ENE from Mount Scott to form the W edge of Hood Glacier, near the junction of that glacier with the Ross Ice Shelf. Named by the NZ Alpine Club Expedition of 1959–60, for its guardian-type stance at the entrance to Hood Glacier. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Guardian Rock. 67°33' S, 67°16' W. A low, ice-free rock in water, in Bigourdan Fjord, 2.5 km N of Parvenu Point, on Pourquoi Pas Island, close off the Loubet Coast, on the W coast of Graham Land. Surveyed by Fids from Base E in 1948–49, and so named by them because it guards the NW entrance to The Narrows. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on British charts of 1957 and 1982.

Guardrail Ridge. 77°32' S, 168°50' E. A ridge, 3 km long, and rising to 2200 m (in Sherve Peak), 3 km WSW of The Tooth, in the Kyle Hills of Ross Island. Named by US-ACAN on Oct. 27, 2000, the name alluding to the position of the ridge along the S margin of Lofty Promenade. NZ-APC accepted the name on Feb. 20, 2001.

Ensenada Guayaquil *see* **Guayaquil Bay**

Guayaquil Bay. 62°27' S, 59°46' W. A bay which, with depths of less than 100 m, and, sheltered as it is against the winds from the SW, offers a good anchorage, between Agüedo Point and Orión Peak, on the N coast of Greenwich Island, in the South Shetlands. Named by the Ecuadorians in 1990, as Ensenada Guayaquil, after their chief port in Ecuador. UK-APC accepted the translated name on Sept. 19, 2005. The British plotted this bay in late 2008.

Gora Gubareva. 79°24' S, 159°56' E. A nunatak, SW of the Olson Peaks, on the W side of the Ross Ice Shelf. Named by the Russians.

[1]**Gubben**. 71°49' S, 11°17' E. A mountain rock, W of the N part of Vindegga Ridge, in the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the husband"). Where there is a husband, there should be a wife, but there isn't — not yet, anyway.

[2]**Gubben**. 71°53' S, 2°50' E. A small nunatak, N of Kjerringa, in the N part of Jutulsessen Mountain, in the Gjelsvik Mountains of Fimbulheimen, in Queen Maud Land. Name means "the husband" in Norwegian. Where there is a husband, there is a wife (*see* **Kjerringa**).

Podnjatie Gubina. 67°00' S, 12°00' E. The upland on the coast of Queen Maud Land overlooking the sea the Norwegians call Kong Håkon VII Hav. Named by the Russians.

Skaly Gubkina *see* **Oddenskjera**

Mount Gudmundson. 79°13' S, 157°51' E. A mainly ice-free mountain rising to about 2040 m, 10 km NE of Fault Bluff, in the Cook Mountains. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1959 and 1963. Named by US-ACAN in 1965, for Julian Peter "Goody" Gudmundson (b. Aug. 1, 1916, Limestone, Minn. d. Aug. 12, 2004, Falls Church, Va.), son of Icelandic parents, who started out as a carpenter, served with the Seabees on Guadalcanal during World War II, returned to civilian life after the war, and then joined the U.S. Navy in 1951, in time for the Korean War. In 1956 he volunteered for OpDF, and was the explosives expert at Little America V in 1957. He also blasted the foundation for McMurdo's power plant in 1961, and in 1962 supervised construction of the plant while attached to the Seabees. He was back in Antarctica in 1967–68 and 1968–69, and again, as master chief of Naval Support Force, Antarctica, in 1974–75 and 1975–76. He retired in 1976, as the highest-ranking non-commissioned officer in the Navy. He is buried in Arlington National Cemetery. ANCA accepted the name on Aug. 27, 1975.

Îlots de Guébriant *see* **Guébriant Islands**

Islote(s) Guébriant *see* **Guébriant Islands**

Guébriant Islands. 67°48' S, 68°25' W. Two small islands, ice-free in summer, the more southerly one being high and cliffed, in the N part of Marguerite Bay, 8 km SE of Cape Alexandra (the SE cape of Adelaide Island), and 6 km S of Jenny Island. Discovered and roughly charted by FrAE 1908–10, and named by Charcot as Îlots de Guébriant, for Father Jean-Baptiste Budes de Guébriant (1860–1935), the French missionary in China. They appear as such on Charcot's 1912 map. The feature appears as Guébriant Islets on British charts of 1914 and 1948, and as de Guébriant Islets on a 1943 U.S. Hydrographic Office chart. Surveyed by Fids from Base E in Oct. 1948, and the name appears erroneously as de Guébriand Islets, in a report by Fuchs in 1951. The name Guébriant Islets was accepted by UK-APC on Sept. 20, 1955, and by US-ACAN in 1956. The feature appears as Islotes Roca on a 1957 Argentine chart (however, today, the Argentines call this feature Islotes Guébriant). On July 7, 1959, UK-APC redefined the feature as Guébriant Islands, and it appears as such on a 1961 British chart. US-ACAN accepted that change in 1963. It appears on a 1962 Chilean chart as Islotes Guébriant, and that was the name accepted by the Chilean gazetteer of 1974, despite the fact that on a 1971 Chilean chart the larger of the two islands is shown as Islote Guébriant. Re-charted by an RN Hydrographic Survey unit from the *John Biscoe*, in 1963.

Guébriant Islets *see* **Guébriant Islands**

Monte Guéguen *see* **Mount Guéguen**

Mount Guéguen. 65°04' S, 64°00' W. Also called Guéguen Peak. A sharp, rocky peak rising to 366 m, 0.4 km NW of Louise Peak, in the N part of Booth Island, in the Wilhelm Archipelago. Discovered by FrAE 1903–05, and named by Charcot for François Guéguen. US-ACAN accepted the name in 1952. The Argentines call it Monte Guéguen.

Point Guéguen *see* **Guéguen Point**

Guéguen, François-Marie. b. 1876, Henvic,

France, brother of Jacques Guéguen. He was with Charcot at Jan Mayen Island in 1902, and was stoker on the *Français* during FrAE 1903-05, and on the *Pourquoi Pas?* during FrAE 1908-10, both times with Charcot.

Guéguen, Jacques. b. 1875, Pont-de-la-Corde, France, brother of François-Marie Guéguen. He was in the north with Charcot at Jan Mayen Island in 1902, and was a sailor on the *Français* during FrAE 1903-05, and again on the *Pourquoi Pas?* during FrAE 1908-10. He was a resistance fighter during World War II, ferrying Frenchmen across the Channel to England in his own boat, also called the *Pourquoi Pas?* He died in 1957.

Guéguen Peak *see* **Mount Guéguen**

Guéguen Point. 65°09' S, 64°07' W. Forms the S end of Hovgaard Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted in 1904, by FrAE 1908-10, and named by Charcot as Pointe Guéguen, or Pointe J. Guéguen, for Jacques Guéguen (it appears both ways on the expedition's maps). Photographed aerially by FIDASE in 1956-57, and between 1956 and 1958 it was surveyed from the ground by a team of Fids and RN personnel. UK-APC accepted the name on July 7, 1959, and it appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Gueillet, Honoré-Marius. b. March 17, 1818, Toulon. Ordinary seaman on the *Zélée* during FrAE 1837-40.

Ensenada Güemes *see* **Rockpepper Bay**

Güemes Refugio *see* **Martín Güemes Refugio**

Guenter Bluff. 70°40' S, 159°44' E. A prominent rock bluff on the W side of the Pomerantz Tableland, in the Usarp Mountains, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1970, for Clarence Alfred Guenter, of the University of Calgary, physiopsychology worker at Pole Station in 1967-68. ANCA accepted the name on July 31, 1972.

Île Guépratte *see* **Guépratte Island**

Isla Guépratte *see* **Guépratte Island**

Guépratte Island. 64°30' S, 63°00' W. A completely snow-covered island, 2.5 km long, off the NE part of Anvers Island, between that island and Brabant Island, at the E side of the entrance to Fournier Bay, in the Palmer Archipelago. Its coasts are made up of ice cliffs about 50 m high, and its E coast is foul. A group of islands and rocks extend out from the central part of this E coast for about 1.5 km. Discovered by Dallmann, in 1873-74, it appears on Friederichsen's 1895 map. Re-charted in Jan. 1905, during FrAE 1903-05, and named by Charcot as Île Guépratte, for Capt. (later Adm.) Émile-Paul-Aimable Guépratte (1856-1939) of the French Navy. In 1927 the personnel on the *Discovery* renamed it Discovery Island, in association with Discovery Sound (on its S side). It appears as such on their 1929 chart, on a 1948 British chart, on a Chilean chart of 1947 (badly translated as Isla Descubrimiento), on a 1949 Argentine chart (well translated as Isla Discovery), and on a 1951 French chart (as Île Discovery). However, it appears on a 1952 British chart as Guépratte Island, and that was the name accepted by UK-APC on Jan. 28, 1953, and by US-ACAN later that year. It appears as such on a 1959 British chart. It was photographed aerially by FIDASE in 1956. It appears on Chilean charts of 1962 and 1966 as Isla Guépratte (although perhaps misspelled in the latter), and that was the name accepted by the 1974 Chilean gazetteer. The Argentine gazetteer of 1970 accepted the name Isla Discovery.

Île Guernesey *see* **Mount Guernsey**

Monte Guernsey *see* **Mount Guernsey**

Mount Guernsey. 69°20' S, 68°14' W. An isolated and mainly ice-covered mountain, rising to about 1250 m, 10 km N of the summit of Mount Edgell, between that mountain and what was the Wordie Ice Shelf, on the W coast of the Antarctic Peninsula. On Jan. 16, 1909, during FrAE 1908-10, Charcot, seeing it from near the center of the entrance to Marguerite Bay, thought it was an island, and named it Île Guernesey, for the Channel island off the French coast. Five days later, from a point SE of Jenny Island, he saw a peak rising in what would later be called the Douglas Range. He though this was the "island" he had seen on the 16th, and (mis) plotted it accordingly. It appears on his expedition charts, and also on Wilkins' 1929 map. The feature was photographed aerially and surveyed from the ground in Aug.-Sept. 1936, by BGLE 1934-37, and found to be a mountain on the mainland. It appears on Stephenson's 1940 map of the expedition, but not named. In 1940, USAS 1939-41, photographed it from the air, and named it White Cross Mountain, for its appearance as seen from above. It appears as such on a 1943 U.S. Hydrographic Office chart. Further surveyed by Fids from Base E in 1948. Although Charcot's "island" and this mountain are in different positions, the Fids determined that they are one and the same feature, and named it Mount Guernsey. UK-APC accepted that name (with the English spelling, of course, rather than the French spelling "Guernesey") on March 31, 1955, and US-ACAN followed suit that year. It appears on a 1955 USHO chart, in the 1956 British gazetteer, and on a 1961 British chart. It appears on a Chilean chart of 1962 as Monte Guernsey, and that was the name accepted by the 1974 Chilean gazetteer. The Argentine call it the same thing.

Punta Guerra *see* **Cape Legoupil**

Guerra Boneo, Alejandro Martín. b. 1898, Buenos Aires, son of Nicolás Guerra Stewart and his wife María Teresa Boneo. Internationally famous chess player who also worked for the department of meteorology within the Ministry of Agriculture. He wintered-over at Órcadas Station in 1925. He died in an accident at La Quiaca, in Jujuy, on Dec. 29, 1926.

Punta Guerrabut. 60°42' S, 45°09' W. A point projecting into Spence Harbor, immediately S of Punta Escobar, Greenwich Island, on the W side of the Lewthwaite Strait, in the South Shetlands. Named by the Argentines.

Cerro Guerrero *see* **Cerro Argentino**

Guerrero Glacier. 78°32' S, 84°15' W. About 11 km long, it flows from the SE slopes of Mount Havener to the S side of Taylor Spur, in the SE part of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for John F. Guerrero, meteorologist from California, who wintered-over at Pole Station in 1957.

Bahía Guesalaga *see* **Curtiss Bay**

Islote Guesalaga *see* **Guesalaga Island**

Paso Guesalaga. 61°57' S, 57°25' W. A marine passage between the E coast of King George Island and the Simpson Rocks, in the extreme NE part of the South Shetlands. Named by the Chilean Hydrographic Institute in 1947, as Paso Comandante Guesalaga, for Federico Guesalaga Toro. However, in order to avoid compound names, in 1951 Chile shortened the name.

Península Guesalaga *see* **Guesalaga Peninsula**

Guesalaga Island. 64°16' S, 61°59' W. The northern of two islands (Isla Viola being the other) off the E side of Lecointe Island, in the Palmer Archipelago. Named by ChilAE 1946-47, as Islote Guesalaga, for the expedition commander, Federico Guesalaga T. (see below). However, they also grouped the two small islands together as Islotes Sigrid. On Sept. 23, 1960, UK-APC named it (for themselves only) as Bell Island, after Sir Charles Bell (1774-1842), British anatomist, surgeon, and specialist on the nervous system. It appears as such on a British chart of 1961. US-ACAN accepted the name Guesalaga Island in 1965. It appears on a Chilean chart of 1962 as Islote Guesalaga, and that name was accepted by the 1974 Chilean gazetteer (as was Islotes Sigrid).

Guesalaga Peninsula. 62°29' S, 59°40' W. A small, low-lying, shingle-covered peninsula, 1.3 km SSW of Point Bascopé, on the E side of Discovery Bay, Greenwich Island, in the South Shetlands. Named by ChilAE 1946-47, as Península Comodoro Guesalaga, for Capt. Federico Guesalaga Toro (see below), leader of the expedition. In 1951 the Chileans shortened the name to Península Guesalaga, a name the Argentines also use. UK-APC accepted the English translation on Nov. 3, 1971, and US-ACAN followed suit in 1972. The British were the latest to plot this feature, in late 2008. Capitán Arturo Prat Station is here.

Guesalaga Refugio. 67°45' S, 68°54' W. More properly Comodoro Federico Guesalaga Toro Refugio. Chilean summer refuge hut built on Avian Island, off the S coast of Adelaide Island, off the Fallières Coast, on the W coast of Graham Land, on Feb. 28, 1963.

Guesalaga Toro, Federico. Capitán de navío (captain in the Chilean Navy), commander of the first Chilean Antarctic Expedition, ChilAE 1946-47. He retired still as a capitán de navío, and, in one of those freaks of official neglect, it was only at the beginning of 1974 that he was made a rear admiral.

Guest Island *see* **Guest Peninsula**

Guest Peninsula. 76°18' S, 148°00' W. A snow-covered peninsula, about 72 km long, and projecting into the Ross Sea between the Sulzberger Ice Shelf and Block Bay, at the foot of the Ford Ranges, in the NW part of Marie Byrd Land. Mitchell Peak, on the S side of the peninsula, was sighted in 1929 during ByrdAE 1928-30. In 1940, USAS 1939-41 defined it and mapped it as an island, and named it Amy Guest Island, for the amazing Amy Phipps Guest (1876-1959), contributor to ByrdAE 1933-35. Mrs. Guest was the daughter of Pittsburgh steel magnate Henry Phipps, and was married to Frederick E. Guest, first cousin and close friend of Winston Churchill. This name became shortened to Guest Island. In 1966 it was re-defined as a peninsula by USGS, from air photos taken by USN between 1962 and 1965. US-ACAN accepted the name Guest Peninsula in 1966.

Guettard Mountains *see* **Guettard Range**

Guettard Range. 74°21' S, 63°27' W. Also called the Guettard Mountains. A mountain range, 16 km wide, rising to about 1700 m, and running NW-SE for about 60 km, NW of Bowman Peninsula, between Johnston Glacier and Irvine Glacier, on the Lassiter Coast, on the SE coast of Palmer Land. Features within this range include Mount Lampert, Mount Laudon, and Mount Mull. Photographed aerially by RARE 1947-48. Mapped by USGS from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Jean-Étienne Guettard (1715-1786), French geologist and naturalist. It appears on the 1969 USGS sketch map of Ellsworth land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974. The SE portion of this range is referred to (from 1978) by the Argentines as Cordón Martín Fierro, named after a member of one of the Argentine Antarctic expeditions.

Gui Shan. 62°13' S, 58°57' W. A hill on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Nunatak Guichou. 66°06' S, 61°23' W. One of the many nunataks on Jason Peninsula named by the Argentines.

Punta Guido. 64°03' S, 60°56' W. A point about 5 km ENE of Cape Sterneck, on the peninsula that separates Curtiss Bay from Cierva Cove, on the W coast of the Antarctic Peninsula. Named by the Chileans for Guido Sanhuezo Briccio, taxidermist with the Instituto Antártico Chileno who participated in ChilAE 1970-71. The Argentines call it Punta Saavedra (*see* **Saavedra Rock**).

Guido, Manuel *see* **USEE 1838-42**

Guido Island. 64°55' S, 63°50' W. An island, 1.5 km NE of Prioress Island, in the Wauwermans Islands, in the Wilhelm Archipelago. It appears (unnamed) on an Argentine chart of 1950. ArgAE 1953-54 re-surveyed it, and named it Isla Ruy, presumably for a member of the expedition. It appears as such on their chart of 1954. Charted by an RN Hydrographic Survey unit on the *Protector*, in 1957. On an Argentine chart of 1957 it appears as Isla Guido Spano, named for Argentine poet Carlos Guido Spano (1829-1918), and that was the name accepted by the Argentine gazetteer of 1970. However, the Argentines today call it Isla Guido. Following the practice of naming various features in this area after characters from Chaucer's *Canterbury Tales*, UK-APC accepted the name Pardoner Island on July 7, 1959, and it appears that way on a 1960 British chart. US-ACAN accepted the name Guido Island in 1965. Note: Guido is the Spanish for the male name "Guy." The British almost invariably pronounce this as "gweedo," partly because that is how the Italians pronounce it, and also because it used to be a name quite common in England. The Spanish pronounce it quite differently.

Isla Guido Spano *see* **Guido Island**

Guifei Chi. 69°24' S, 76°17' E. A lagoon in the Larsemann Hills. Named by the Chinese.

Caleta Guijarro *see* **Scree Cove**

Guijianchou Ya. 62°12' S, 58°55' W. A cliff on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Guile Island. 65°44' S, 65°11' W. An island, 1.5 km SW of Duchaylard Island, in the Grandidier Channel, in the Biscoe Islands, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by a FIDS-RN team between 1956 and 1958. So named by UK-APC on July 7, 1959, because, while there appears to be a number of landing places on this island, numerous underwater rocks make approach dangerous. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Guillard, Robert. French builder of Dumont d'Urville Station, and leader of the 1956 wintering party there. He also led the wintering parties there in 1963, 1972, and 1977, and also led the summer expedition of 1969-70 on the *Thala Dan*. He was back in 1979-80, 1980-81, and 1981-82, leading summer glaciological expeditions, as part of the International Antarctic Glaciological Program.

Bahía Guillermina *see* **Wilhelmina Bay**

Glaciar Guillermo *see* **William Glacier**

Monte Guillermo *see* **Mount Banck**

Ventisquero Guillermo *see* **William Glacier**

Guillermo Mann Refugio *see* **Punta Spring Refugio** (under **P**)

Guillochón Refugio *see* **Cadete Guillochón Refugio**

Guillou, Charles Fleury Bien-aimé. b. July 26, 1813, Philadelphia, one of 19 children of Victor Gabriel Guillou and his wife, the daughter of dispossessed nobleman Dieudonné de las Casas. Victor was a colonial Breton from Saint-Domingue, one of the French landowners who lost everything when Haiti suffered its breach birth, and was forced to become a dancing master in Philadelphia. At the age of 13, while at a military academy in Pennsylvania, young Charles was introduced by his father to the famous Lafayette. He studied medicine under naval surgeon Thomas Harris, in Philadelphia, and, in 1836, received his diploma from the University of Pennsylvania. On Feb. 9, 1837, he was commissioned into the U.S. Navy as an assistant surgeon. In that capacity he went on Charles Wilkes's USEE 1838-42. He joined the *Peacock* in Sydney, and was detached from the *Flying Fish* at Honolulu, in Nov. 1841. While he was on the expedition, his father, who had bought a sugar estate in Cuba, died there in 1841. Wilkes brought charges against Charles, who was subsequently court-martialed for insubordination, scandalous conduct, and neglect of duty, found guilty, and ordered to be dismissed from the Navy. However, the inordinate number of complaints about Wilkes led to a mere one year suspension of duty, with no pay. In June 1842 Guillou passed his surgeon's exam, but there was no vacancy until 1847, so he helped William P.C. Barton organize the Navy's Bureau of Medicine and Surgery. In 1845, the first treaty between the USA and China was signed. The *Columbus* was there, and Guillou was the surgeon aboard. He had been picked for this mission partly because of his linguistic and diplomatic skills. In 1846 he joined the *Constitution*, and on June 21, 1847 he was officially promoted to surgeon. In 1849 the *Constitution* was in Italian waters, and Guillou persuaded Pope Pius IX and King Ferdinand of the Two Sicilies to come aboard. The Pope was seasick, and Guillou gave him something to ease the discomfort. In 1852 he was assigned to the *North Carolina*, the receiving ship in the Brooklyn Navy Yard, and that year married Dinah Postlethwaite. In 1854 he resigned to run a marine hosiptal in Honolulu, and at the same time to be court physician to King Kamehameha IV and also Italian consul there. In 1866 he moved to Petersburg, Va., and then to New York, where he became a manufacturing pharmacist. He died of pneumonia on Jan. 1, 1899, in New York.

Monte Guina. 65°45' S, 64°21' W. A mountain, about 1.5 km inland from the E coast of Bigo Bay, on the W coast of the Antarctic Peninsula. Named by the Chileans for Sub Lt. Alex Guina Queirolo, of the Chilean Army, who was on the *Rancagua* during ChilAE 1953-54, when they relieved O'Higgins Base. The Argentines call it Monte Hirart.

Islote Guión. 61°17' S, 55°14' W. One of the two islets offlying Rowett Island (the other is Islote Mira), off Cape Lookout (the SW end of Elephant Island), in the South Shetlands. Named by the Argentines.

Gulang Yu. 62°13' S, 58°56' W. An island off Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Gulbrandsen, Captain. Skipper of the *Orwell* in 1918.

Isla Gulch *see* **Gulch Island**

Gulch Island. 63°59' S, 61°29' W. An island, NW of Small Island, in the Christiania Islands, in the Palmer Archipelago. Shown on an Argentine chart of 1952. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for its deep indentations. US-ACAN accepted the name later that year. It appears on a British chart of 1961. The Argentines call it Isla Gulch, and the Chileans call it Isla Aragay, for Lt. Ramón Aragay Boada, who took part in

ChilAE 1946–47. It appears as such on a Chilean chart, and was the name accepted by the Chilean gazetteer of 1974.

Gulfplatået *see* **Edward VIII Plateau**

Canal Gull *see* **Gull Channel**

Gull Channel. 68°11' S, 67°00' W. A marine channel, about 160 m wide, between Dynamite Island and Stonington Island, at Back Bay, in Marguerite Bay, on the Fallières Coast, on the W coast of Graham Land. Surveyed by members of East Base, during USAS 1939–41, and named by them for the gulls here. It appears on Glenn Dyer's map of 1941, and on a 1946 U.S. Hydrographic Office chart. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a Chilean chart of 1947, as Canal Gull, a name the Argentines use today as well.

Gull Rock *see* **Gaviotín Rock**

The Gullet. 67°10' S, 67°39' W. A narrow marine channel between the E extremity of Adelaide Island and Arrowsmith Peninsula, on the W coast of Graham Land, it separates Hansen Island (to the N) from Day Island (to the S). The area was first explored in Jan. 1909, by FrAE 1908–10, and, although uncertain of the existence of the channel, they sketched its probable position on the expedition's charts of 1910 and 1912. After studying the 1910 chart, Edwin Swift Balch named it Charcot Strait. Whether he should have been so presumptuous or not (after all, the feature was still only hypothetical at that point) is a matter of debate, but it was, after all, Balch. The channel was first actually seen aerially in 1936, during BGLE 1934–37, and therefore its existence was proved and Balch was vindicated. It was visited and roughly surveyed that same year, by the same expedition, and appears on Rymill's 1938 map of the expedition. However, it was found to be narrower than indicated by Charcot. On a 1943 U.S. Hydrographic Office chart it appears as Loubet Strait, in association with the coast off which it runs. Re-surveyed in 1948 by Fids from Base E, who named it The Gullet because the feature forms a constriction through which the tide flows between Hanusse Bay to the N and Laubeuf Fjord to the S, therefore connecting the heads of both. Fuchs refers to it as such in 1951, and it was the name accepted by UK-APC on March 31, 1955, and by US-ACAN in 1956. It appears on a British chart of 1957. It appears on a 1962 Chilean chart as Angosutura Gullet, and that name was accepted by the Chilean gazetteer of 1974. The Argentines call it Canal Garganta ("garganta" meaning "gullet").

Angostura Gullet *see* **The Gullet**

Gullfisken *see* **Kingyo Rock**

Gulliksen, Hans Albert. b. April 7, 1871, Sandar, Norway, son of Gullik Hansen and his wife Bergitta Olava Hansdatter. He was ship's carpenter and sail maker in the South Shetlands, on the *Svend Foyn I*, who died of heart disease on Jan. 4, 1928. He was buried in the Whalers Bay Cemetery on Deception Island. After the 1969 volcano on the island had wiped out the cemetery, his relatives arranged for a cross to be placed for him to the west of the cemetery.

Nunatak Gulliver *see* **Gulliver Nunatak**

Gulliver Nunatak. 66°12' S, 62°40' W. Rising to 575 m, it has a flat, ice-free summit, and stands at the N side of Adie Inlet, on the Oscar II Coast, on the E coast of Graham Land. In late 1947 it was photographed aerially by RARE 1947–48, and surveyed from the ground and charted by Fids from Base D, and so named by the latter for Jonathan Swift's fictional character, because, when seen from the SE the feature resembles a giant man lying on his back with his head toward the south. UK-APC accepted the name on Jan. 22, 1951 (but, misspelled as Guliver Nunatak), and US-ACAN followed suit in 1952. It appears (correctly spelled) on a British chart of 1954, and in the 1955 British gazetteer. On a 1957 Argentine chart it appears as Nunatak Gulliver, and that name was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Further surveyed by BAS personnel from Base E in 1974–75.

Gulls. The only gull found in Antarctica is the Kelp gull, *Larus dominicanus*, also known as the Dominican gull, or the Southern (great) black-backed gull. It lays 2 to 3 eggs, and breeds year round on the Antarctic Peninsula, and in the South Shetlands and South Orkneys.

Gully Bay. 77°38' S, 166°24' E. A small bay near Cape Evans, Ross Island. Named by BAE 1910–13. The name appears in the 1958 NZ provisional gazetteer.

Punta Gumercindo *see* **Rossini Point**

Gora Gunbinoj. 74°11' S, 6°13' W. A nunatak, E of the mountain the Norwegians call Sørflya, in the Kirwan Escarpment of Maudheimvidda, in Queen Maud Land. Named by the Russians.

Mount Gunn. 76°52' S, 160°42' E. A massive mountain, rising to 2465 m, in the Convoy Range of Victoria Land, about 11 km (the New Zealanders say about 14 km) NW of Mount Gran, and overlooking the extreme head of Benson Glacier, and Merrill Valley and Greenville Valley. On the W it is separated by the broad Cambridge Glacier from Mount Brooke and the Coombs Hills. Photographed by the NZ Northern Survey Party of BCTAE in Oct.–Nov. 1957, and named by them for Bernie Gunn (q.v.), a member of the party. US-ACAN accepted the name in 1962.

Gunn, Bernard Maurice "Bernie." b. Aug. 31, 1926, on a sheep farm, near Wanaka, NZ. During World War II he joined the RNZAF as a trainee pilot. After the war, he attended a forestry class, and then went to the University of Otago, reading biology, zoology, and geology, graduating in 1953. That was where he met his future wife, Tania. While going for his master's degree, he worked as an alpine guide in the Cook Mountains of NZ, and Harry Ayres suggested he apply for Antarctica. He was an accomplished climber, skier, photographer, surveyor, cartographer, motor mechanic, builder, botanist, photogrammetrist, medic, cook, and radio operator, when he was selected to be geologist to winter-over at Scott Base in 1957, and to be with the NZ party during BCTAE 1957–58. He was in the first group to climb Mount Harmsworth. He was back in Antarctica in 1959, mapping the area between the Barne Glacier and the Beardmore Glacier, but had a serious accent and had to be medivac'd back to NZ. However, he was back in 1960, studying for his PhD in the McMurdo Dry Valleys, and taking a trip to the Pole. He was also the first to climb Mount Lister. He was back in 1988, as a representative for the *Herald*, and again in Jan. 2000, with other members of BCTAE. He died in Dunedin Hospital on March 16, 2008.

Gunn Peaks. 73°25' S, 66°36' W. A group of isolated peaks, rising to about 1600 m, 15 km E of Mount Vang, SE of the English Coast, in southern Palmer Land. Mapped by USGS from ground surveys conducted between 1961 and 1964, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Robert C. Gunn, USARP glaciologist at Byrd Station in 1965–66. It appears on the 1969 USGS sketch map of Ellsworth Land–Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Cabo Gunnar *see* **Cape Anna**

Cap Gunnar *see* **Cape Kater**

Cape Gunnar *see* **Cape Kater**

Kap Gunnar *see* **Cape Kater**

Kap Gunnar Andersson *see* **Cape Kater**

Gunnar Isachsen Mountain *see* **Isachsen Mountain**

Gunnar Isachsenfjellet *see* **Isachsen Mountain**

Gunnarkampen. 72°14' S, 26°35' E. The NE part of Isachsen Mountain, in the E part of the Sør Rondane Mountains. Named by the Norwegians for Gunnar Isachsen. The Russians call it Gora Pirogova.

Canal Gunnel *see* **Gunnel Channel**

Paso Gunnel *see* **Gunnel Channel**

Gunnel Channel. 67°06' S, 67°33' W. A marine channel, 11 km long, and 0.8 km wide, in the S part of Hanusse Bay, it runs N-S separating Hansen Island from Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. Discovered aerially on Feb. 25, 1936, by BGLE 1934–37, and roughly charted by them. Surveyed by FIDS in 1948, and so named by them because the channel looks so narrow that a boat would scrape its gunwhales (pronounced "gunnels") on either side as it passed through. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears in the 1958 British gazetteer, and also on a 1961 British chart. It appears on a Chilean chart of 1962 as Paso Gunnel, and that was the name accepted by the 1974 Chilean gazetteer. The Argentines chose the name Canal Gunnel (i.e., "Gunnel channel").

Mount Gunner. 83°32' S, 169°38' E. Rising to 1430 m, and partly snow-covered, in the S part of Morris Heights, in the Queen Alexandra Range. Named by US-ACAN in 1970, for John D. Gunner, Ohio State University geologist here in 1967–68, with a party from that university.

He was in other parts of Antarctica in 1968-69 and 1969-70.

Gunnerus Bank. 68°00' S, 33°00' E. A submarine feature beyond the Riiser-Larsen Peninsula, off the Prince Harald Coast. Named by international agreement in July 1964. The Norwegians call it Gunnerusbanken.

Gunnerus Ridge. 66°30' S, 33°45' E. A linear feature that projects northward from the East Antarctica margin, between 68°S and 65°S, it is believed to be a finger-like extension of the continental crust after India and Ceylon broke away from Antarctica. Just N of the nose of this ridge lie the Kainan Maru Seamounts. The name was accepted by international agreement in June 1988.

Gunnerusbanken *see* **Gunnerus Bank**

Gunnestad, Alf. b. 1904, Norway. A lieutenant in the Norwegian Air Force, he was pilot on Lars Christensen's *Thorshavn* expedition of 1933-34. After returning from the expedition, he and Nils Romnaes formed a private air charter company, but several crashes later, they were forced to close the company in 1935. He was still alive in 1955.

Gunnestad Glacier. 72°03' S, 23°50' E. A glacier, 21 km long (the Norwegians say 40 km), flowing N between Mount Widerøe (to the W) and Mount Walnum (to the E), in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken during OpHJ 1946-47, and named by them as Gunnestadbreen, for Alf Gunnestad. US-ACAN accepted the translated name Gunnestad Glacier in 1962. The Norwegians plotted it in 72°07' S, 23°36' E, but it was later replotted in 71°58' S, 23°55' E. The Russians plot it in 72°10' S, 23°50' E. It has since been replotted yet again.

Gunnestadbreen *see* **Gunnestad Glacier**

Mount Gunter. 69°00' S, 66°34' W. A conspicuous mountain, rising to 1970 m, with precipitous black rock cliffs on its W side, at the S side of Hariot Glacier, 5 km E of Briggs Peak, E of the N end of the now-disappeared Wordie Ice Shelf, on the Fallières Coast, on the W side of Graham Land. Roughly surveyed in 1936-37 by BGLE 1934-37, photographed aerially on Nov. 27, 1947, during RARE 1947-48, and surveyed again from the ground by Fids from Base E in 1958. Named by UK-APC on Aug. 31, 1962, for Edmund Gunter (1581-1626), English mathematician who helped revolutionize navigation. US-ACAN accepted the name later in 1962.

Günther, Eustace Rolfe. Known as Rolfe Günther. b. 1902, Heacham, Norfolk, son of Dr. R.W.T. Günther, the curator of the Museum of the History of Science, at Oxford, and the grandson and nephew of famous zoologists (Albert Carl Ludwig Gotthilf Günther and William Carmichael McIntosh respectively). After Winchester, and Caius, Cambridge (where he sculled), he himself became a naturalist specializing in zoology. During the Discovery Investigations he was junior zoologist on the *Discovery*'s 1925-27 cruise, then for a couple of years worked at the Natural History Museum on the results of krill investigations conducted during that expedition. He was then on the first part of the *Discovery II*'s cruise of 1929-31 (i.e., 1929-30), then scientific leader on the *William Scoresby*, 1930-32. During the same period, his contributions to the exploration of the Humboldt Current, off the South American coast, were definitive. In 1929 he married Mavis Hilda Dorothea Carr (later a doctor). He was also a talented artist. In 1937 he joined the Territorial Army as a sapper, and in 1938 was commissioned a 2nd lieutenant in the Royal Artillery. Late at night, on May 31, 1940, during World War II, he was coming back to his barracks when he was accidentally shot and killed by a sentry. He was buried in his home village, on June 4, 1940.

Guozdén, Helvio Nicolás A. b. Jan. 2, 1914, Buenos Aires, son of Manuel Guozdén and his wife Enriqueta Prada. He studied at the Escuela Naval Militar from 1928 to 1933, and married María Alcira Elsegood. He was chief of artillery on the cruiser *La Argentina*, and captain of the *King* from Feb. 7, 1948 to Jan. 15, 1949, a period that took in ArgAE 1948. Leader of ArgAE 1956-57. He retired from the Navy as a rear admiral, and went into politics, becoming governor of La Pampa (1967-71). During the troubles of the early 1970s, he became also "interventor" of Córdoba, between 1971 and 1973.

Gupwell Pond. 77°33' S, 160°54' E. A pond, 0.5 km S of Connell Pond (in the central part of Hoffman Ledge), in the feature called Labyrinth, in the Wright Valley, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN on July 14, 2004, for J.H. "Jim" Gupwell, drilling supervisor with the NZ drilling team during the McMurdo Dry Valleys Drilling Project, 1973-76. NZ-APC accepted the name on Nov. 8, 2006.

Gurev Gap. 62°35' S, 60°13' W. A flat, ice-covered saddle, 450 m above sea level, extending 2.8 km in a S-N direction between Hemus Peak and Gleaner Heights, its midway point lies 5.13 km NE by N of Rezen Knoll, and 3.2 km N by W of Mount Bowles, and it separates the glacial catchments of Kaliakra Glacier and that portion of the island's ice-cap NW of Hemus Peak that flows NW into Hero Bay, in the E part of Livingston Island, in the South Shetlands. It forms part of the overland route between St. Kliment Ohridski Station and Varna Peninsula, going via Balkan Snowfield, Rezen Saddle, and Perunika Glacier. Mapped by the British in 1968, and roughly mapped by the Argentines in 1980, it was given an extensive and accurate topographic survey by the Bulgarians in 1995-96, and they named it Sedlovina Gureva, for Vasil Gurev, meteorologist at St. Kliment Ohridski for many seasons since 1993. The Bulgarian government accepted the name on Aug. 19, 1997. The British and the Americans translated it as Gurev Gap.

Sedlovina Gureva *see* **Gurev Gap**

Nunataki Gurevicha. 80°39' S, 19°48' W. Nunataks in the Shackleton Range. Named by the Russians.

Gurgulyat Peak. 63°50' S, 58°37' W. Rising to 1050 m in Kondofrey Heights, 2.08 km SW of Skakavitsa Peak, 4 km W by N of Mount Reece, and 10.6 km S of Mount Schuyler, it surmounts Victory Glacier to the N, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010 for the settlement of Gurgulyat, in western Bulgaria.

Gurkha Peak. 77°40' S, 163°16' E. Just E of Howard Glacier, in the Kukri Hills. Named by NZ-APC, in association with the Kukri Hills. US-ACAN accepted the name.

Gurling Glacier. 70°34' S, 62°20' W. Flows NE between Krebs Ridge and Leininger Peak, into the SW corner of Smith Inlet, on the Wilkins Coast, on the E coast of Palmer Land. Photographed aerially by USN in 1966. Named by UK-APC on July 21, 1976, for Paul William Gurling ((b. June 16, 1946), BAS geologist who wintered-over at Fossil Bluff Station in 1970, and as a surveyor at Base E in 1971 and 1972. In the 1972-73 season, he was one of the Fids who surveyed this feature (they plotted it in 70°34' S, 62°27' W). In 1973-74 he was at Signy Island Station, and in 1974-75 on the Ross Ice Shelf. US-ACAN had accepted the name later in 1976. It appears in the 1977 British gazetteer.

Gurney, Norman Arthur L. b. March 2, 1912, Luton, Beds, only son of Edwin John Gurney and his wife Edith Nellie Bird, both later of St Albans, Herts. He had been at Cambridge for a year, studying to become a priest, when he became a sailor on BGLE 1934-37. On April 2, 1941, in London, while a sub lieutenant serving in the RNVR during World War II, he married Jean Sinclair Plenderleith. He was ordained as a minister in 1947, was priested in 1948, and lived in Shropshire. He was rector of Grendon, in Warwickshire, 1969-68, and died on Sept. 14, 1980.

Gurney Point. 71°02' S, 67°29' W. A small, rocky mass, 610 m above sea level, which overlooks the E coast of George VI Sound, and which marks the W extremity of the rock ridge separating Bertram Glacier from Ryder Glacier, on the W coast of Palmer Land. Discovered and photographed aerially by Ellsworth on Nov. 23, 1935, and roughly mapped from these photos in 1936 by U.S. cartographer W.L.G. Joerg. Surveyed in Oct. 1936 by BGLE 1934-37, it appears on Stephenson's 1940 map of that expedition. Re-surveyed by Fids from Base E in 1948-49. Named by UK-APC on March 31, 1955, for Norman Gurney. US-ACAN accepted the name later that year, and, also that year, it appears on a U.S. Hydrographic Office chart.

Gurnon Peninsula. 74°22' S, 110°35' W. A completely ice-covered peninsula, 16 km long, between Park Glacier and Bunner Glacier, in the NE part of Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. First mapped by USGS from air photos taken in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1967, for Lt. (later Lt. Cdr.) Paul Joseph Gurnon, USN, aircraft commander on Hercules planes in 1965-67. Originally plotted in 74°23' S, 110°30' W, it has since been replotted.

The *Gurruchaga* *see* **The *Francisco Gurruchaga***

Base Gurruchaga *see* **Francisco de Gurruchaga Refugio**

Punta Gurruchaga. 62°04' S, 58°23' W. A point at Caleta Aldea (what the Argentines call Caleta Tarragona), and in the immediate vicinity of Ajax Icefall, at the head of Visca Anchorage, King George Island, in the South Shetlands. Named by the Argentines for the *Francisco Gurruchaga*.

The *Gus W. Darnell*. T-AOT-1121. 39,624-ton (full load) Military Sea Transportation oil tanker, built by the American Shipbuilding Company, of Tampa, Fla., and launched on Aug. 10, 1985, as the *Ocean Freedom*. 615 feet long, she could travel at 16 knots. She was the second ship of that name (the first being sunk by the Japanese in 1944). She was operated by Ocean Ships, Inc., of Houston, and was part of the U.S. Navy Military Sealift Command's Sealift Program, which supplied McMurdo Station as part of OpDF 87 (1986-87; her skipper that season was Capt. David Morway) and OpDF 88 (1987-88; Capt. Joseph Dixon). She was back at McMurdo on Jan. 22, 2002, and left 4 days later. On Feb. 6, 2002 she arrived at Lyttelton, NZ, and left the following day. On the way back from that trip, on Sept. 10, while empty in the Gulf of Mexico, and on a clear day, she collided with the *Vega*, which was carrying more than 10 million gallons of gasoline. On Sept. 10, 2005 she was retired from Sealift Command service, and returned to her owners.

Seno Gusano *see* **Seno Malfanti**

Gusberti, Ángel Guillermo Nicolás Luis *see* **Órcadas Station**, 1940 and 1942

Gora Guseva. 73°10' S, 63°40' E. A nunatak, close to Gora Sharonova, in the S part of the Prince Charles Mountains. Named by the Russians.

Gushi Yan. 69°23' S, 76°24' E. A rock in the Larsemann Hills. Named by the Chinese.

Gusla Peak. 63°46' S, 58°31' W. A rocky peak rising to 995 m in the S part of Trakiya Heights, 5.36 km SE of Antonov Peak, 3.06 km SSW of Mount Daimler, 3.45 km WNW of Survakari Nunatak, 4.79 km NE of Bezbog Peak (in Kondofrey Heights), and 7.9 km E by S of Skoparnik Bluff, it surmounts Victory Glacier to the W and S, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Gusla, in northeastern Bulgaria.

Mount Gustav Bull *see* **Gustav Bull Mountains**

Gustav Bull Mountains. 67°50' S, 66°12' E. Also called Mount Gustav Bull, and Mount Bull. A small group of bare, rugged mountain peaks and nunataks, 6 km inland, and 16 km (the Australians say 20 km) SW of Scullin Monolith, just S of the Mawson Coast of Mac. Robertson Land. They comprise Mount Hinks, Mount Kennedy, Mount Marsden, and Mount Rivett. Land was seen aerially in this area on Dec. 31, 1929, during BANZARE 1929-31, and again on Jan. 5, 1931, during the same expedition. The area was visited by the expedition on Feb. 13, 1931, when a landing was made at Scullin Monolith. In Jan. and Feb. 1931, at the same time the Mawson expedition was here, several Norwegian whalers were exploring here, and they sketched and photographed this coast. They called these mountains Gustav Bullfjella, for Gustav B. Bull, who was, at that time, whaling manager on the *Thorshammer*. US-ACAN accepted the translated name Gustav Bull Mountains in 1947.

Gustav Bullfjella *see* **Gustav Bull Mountains**

Roca Gustavo. 64°50' S. A rock which emerges at low tide, SW of Muñoz Point (in the extreme SW of Lemaire Island), off the W coast of Graham Land. The name appeared on some 1951 Chilean charts, and has been used by them ever since.

Gusty Gully. 77°54' S, 161°28' E. A small valley, running N-S, the upper portion of which is occupied by a glacier, between Mount Kuipers and Knobhead, in the Quartermain Mountains of Victoria Land. So named by Alan Sherwood, leader of the NZGSAE party here in 1987-88, because of the strong winds here, similar to those in Windy Gully, 5 km to the west. NZ-APC accepted the name, and US-ACAN followed suit in 1993.

Gutenberg Glacier. 81°58' S, 158°32' E. A glacier, about 12.5 km long, in the N part of the Holyoake Range, in the Churchill Mountains, it flows NW between Mount Hubble and Mount Richter, to enter Starshot Glacier. Named by US-ACAN on Jan. 29, 2003, for German-born seismologist Beno Gutenberg (1889-1960), director of the California Institute of Technology's seismology laboratory in the 1930s. He collaborated with Charles F. Richter in developing the Richter Scale, in 1935, used to measure the magnitude of earthquakes. NZ-APC accepted the name on Feb. 27, 2003.

Montanås Gutenko *see* **Gutenko Mountains**

Montes Gutenko *see* **Gutenko Mountains**

Gutenko, Sigmund "Sig." b. July 28, 1905, Baltimore, Md., son of Polish Galician immigrant carpenter Vincente Gutenko and his wife Bertha (*see* **Gutenko Mountains**). He joined the merchant marine as a teenager, and was already plying the Atlantic as an ordinary seaman in the early 1920s. On Nov. 29, 1929, he married Rose Szazapaniak, and they lived in Baltimore. He was steward and cook at West Base during USAS 1939-41, and thus got to know Finn Ronne. Then World War II happened, and he was a chief commissary steward in the U.S. Navy, cooking on submarines and destroyers. His ship was torpedoed in Leyte Gulf, in the Philippines, and he received a complicated fracture of the pelvis. In 1945 Finn Ronne found him in hospital at Annapolis. "I look like a mess now, but I'll be all set to be with you on the expedition." And he was, as cook and steward on RARE 1947-48. On Dec. 4, 1953, in Washington, DC, he married Louise Mildred Zeleny. In 1955 he was working in a Baltimore bakery, and prepared the pemmican for OpDF I (1955-56, even though he did not actually go on that expedition. He died on May 27, 1991. Note: Sig's birthdate is from his death certificate, and all other records seem to bear that out. However, his father was convinced the date was April 20, 1906.

Gutenko Mountains. 72°00' S, 64°45' W. A large, scattered group of hills, nunataks, and small mountains, rising to about 1700 m, at the SW end of the Dyer Plateau, in central Palmer Land. They include (from N to S) the Elliott Hills, the Rathbone Hills, the Guthridge Nunataks, and the Blanchard Nunataks. Discovered aerially on Nov. 21, 1947 and Dec. 23, 1947, during RARE 1947-48, mapped in about 72°15' S, 64°15' W, and named by Ronne as the Vincent Gutenko Mountains, for the father of Sig Gutenko. It appears as such on the 1948 American Geographical Society's map, but as Gutenko Mountains on Finn Ronne's map of that year. On an Argentine chart of 1952 the feature appears s Montes Gutenko. The name was later shortened, and, as Gutenko Mountains, was accepted by US-ACAN in 1966. Mapped in detail by USGS in 1974, from USN air photos taken between 1966 and 1969, and from 1971-72 ground surveys conducted by BAS personnel from Base E. On Feb. 2, 1978, UK-APC accepted the feature as it is now defined, and it appears as such on the 1979 USGS sketch map of the N part of Palmer Land. Today, the Argentines call it Montañas Gutenko. Vincente Gutenko was born on May 4, 1866, in Nadworne, Galicia. He became a carpenter, married Aniela Bertha Bugankow (known as Bertha; born Nov. 7, 1875, in Barkow), and they had five children in Nadworne and Raho. On Jan. 24, 1904, Vince left Bremen bound for Antwerp, where he picked up the *Vaderland*, heading for New York, which he reached on Feb. 11, 1904. From there he established himself in Baltimore. On Sept. 15, 1904, Bertha left Bremen on the *Breslau*, with the children, arriving in New York on Sept. 28, and then on to join Vince in Baltimore, where Sig and his younger sister were born. Their effort to become naturalized in Baltimore on Feb. 21, 1914, was denied, but they finally became American citizens on July 26, 1917.

Gutenko Nunataks. 76°53' S, 143°40' W. Small, elongated nunataks, 1.5 km W of Mount Morgan, in the Ford Ranges of Marie Byrd Land. Discovered aerially by members of USAS from West Base, in 1940, and named by Byrd for Sig Gutenko. US-ACAN accepted the name in 1947.

Mount Guterch. 64°52' S, 62°44' W. A prominent mountain, rising to 1100 m, on a high ridge that separates Paradise Harbor from Andvord Bay, on the Danco Coast, on the W coast of Graham Land. Named by the Poles on Sept. 1, 1999, for Prof. Aleksander Guterch, who led the Polish Geodynamic Expeditions to Antarctica between 1977 and 1991.

Guthridge Nunataks. 71°48' S, 64°33' W. A scattered group of sharp-peaked nunataks and small mountains, about 35 km long, 10 km wide, and rising to about 1700 m, about midway between the Rathbone Hills and the Blanchard Nunataks, in the Gutenko Mountains of central Palmer Land. They include Randall Ridge,

Mount Jukkola, Walcott Peak, and Lokey Peak. Mapped by USGS in 1974, from USN air photos taken between 1966 and 1969. Named by US-ACAN for Guy G. Guthridge (b. Oct. 1941), NSF manager of the polar information program, and editor of the *Antarctic Journal of the U.S.* (*see* the Bibliography, under *Antarctic Journal*). He was with US-ACAN from 1989, and was its chairman from 1994. UK-APC accepted the name on Feb. 7, 1978. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Islote Gutierres *see* **Cierva Point**

Bajo Gutiérrez *see* **Gutiérrez Reef**

Islote Gutiérrez *see* **Cierva Point**

Morro Gutiérrez. 62°56' S, 60°34' W. A hill, E of Punta Andressen, Pendulum Cove, Deception Island, in the South Shetlands. Named in 1958 by ChilAE 1957-58.

Punta Gutiérrez. 64°52' S, 62°56' W. A completely snow-covered point, in the form of a hanging cliff, to the N of the E coast of Bryde Island, at the entrance to Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named by ChilAE 1950-51, for Lt. Pedro Gutiérrez Forno, engineer on the *Lautaro* during that expedition. The Argentines call it Punta Maipú.

Gutiérrez Reef. 63°18' S, 57°55' W. A reef with 2 fathoms of water over it, 310 m NNE of the N end of Kopaitic Island, in the Duroch Islands, off Trinity Peninsula. Named Bajo Gutiérrez, by ChilAE 1947-48, for a bosun on that expedition. US-ACAN accepted the translated name Gutiérrez Reef in 1964.

Gutteridge, Edward Charles "Ted." b. Dec. 9, 1920, Kingston, Surrey, son of shoemaker Percival Gutteridge. He was with the Kingston Electricity Department, and then served the latter part of the war in Trinidad (with, among others, Ken Pawson). In Nov. 1947, E.W. Bingham appointed him to FIDS, as general assistant and meteorologist, and he left Tilbury on the *John Biscoe*, on Dec. 19, 1947, bound for Port Stanley. He wintered-over at Base B in 1948, and was scheduled to winter-over in 1949 at the new Base K, but when that station failed to open, he was recruited by the Public Works Department of the Falkland Islands government, in March 1949, to install new power station equipment in Stanley. In April 1949 he left the Falklands for 6 months further electrical engineering training in the UK, and by early 1950 was back on the job. In 1951 he took over as superintendent of the power plant, and aside from 6 months in Uganda in 1953-54, he would be a Public Works man until he retired. He was back in Antarctica in the 1956-57 summer season, on the *Protector*, arriving at Port Lockroy on Nov. 11, 1956, but only for a visit. On Oct. 15, 1960, in Stanley, he married Dorothy Margaret Sedgwick. In 1973 he retired, and returned to the UK, and died on Dec. 11, 2000, in Surrey.

Guttorm Jakobsenbukta. 70°52' S, 9°58' W. The most westerly bay of the Ekström Ice Shelf, on the N side of the dome the Norwegians call Auståsen, on the Princess Martha Coast. Named by the Norwegians for Guttorm Jakobsen (q.v.).

Guvernor Islands *see* **Governor Islands**

[1]**The *Guvernøren.*** Name also seen as the *Guvernøren I*, and the spelling is also seen (erroneously) as *Gouvernøren*. Formerly the *Thøger*, she was a Norwegian whaling vessel of 5459 tons, owned by the Odd Company and managed by Leif Bryde, in the South Shetlands and at Graham Land in 1913-14, and 1914-15. She replaced the *Sobraon*, and was the largest pre-World War I factory ship in the South Shetlands. She burned and sank in Gouvernøren Harbor, on Jan. 27, 1915, with 16,615 barrels of whale oil aboard. All 85 men were saved. John Cope, during the British Imperial Antarctic Expedition, salvaged several of her lifeboats. *See also* **Gouvernøren Harbor**.

[2]**The *Guvernøren.*** She was built as the White Star liner *Runic*, in 1889, was subsequently bought by the South Pacific Whaling Company (R. Osmundsen), of Sandefjord, Norway, renamed the *Imo*, and used as a factory whaling ship off the African coast. In Dec. 1917 she was involved (with an ammunition ship) in an explosion at Halifax, Nova Scotia, in which 1900 men died. In 1920 she was bought by Haldor Virik's Odd Company, re-named *Guvernøren* (the second Norwegian whaling factory ship of that name — see above), converted into a 5043-ton whaling factory ship by Framnaes Mek., and worked in the South Shetlands and off Graham Land in the 1920-21 season. In fact, she was the first old White Star liner to be converted into a whaling factory (the next being the *New Sevilla*, in 1930). She was at the Falklands on Nov. 29, 1921, on her way south again, under the command of Capt. Berggreen, when she was driven ashore in thick fog, and foundered. The 96 men aboard were saved by the factory vessel's three catchers, *Odd I*, *Odd II*, and *Odd III*, which were then were all re-distributed to other whalers.

Guvernørenhavna *see* **Gouvernøren Harbor**

Guvernørens Islands *see* **Governor Islands**

Guy, Adam. British gentleman who chartered the *San Juan Nepomuceno* out of Buenos Aires in 1819, with Charles Tidblom (q.v.), in order to look for seals in the South Shetlands. He was one of the first sealers in these islands.

Guy, Don. City editor of the *Rutland Herald*, in Vermont until 1943, when he joined Associated Press as a photographer, and became head of AP Newspictures, in Boston. He went to the Arctic, and, later, as a UP reporter with the Boston Bureau, took off from Christchurch, NZ, in an R5D piloted by Ed Ward, headed for Antarctica, to cover OpDF II (i.e., 1956-57). This was a very dangerous moment (*see* **Operation Deep Freeze II**, under that date), and Guy filmed it, rushing off the photos to the States, were they received little space (Hungary and Suez were the big items at that time). He was on the Oct. 26, 1956, flight to the Pole (*see* **South Pole**), during which he blacked out. As for his participation in the famous first landing at the Pole (Gus Shinn flying the Dakota in on Oct. 31, 1956), this is (in part) what his AP report has to say (*San Mateo Times*, Nov. 2, 1956), with the headline Over the South Pole, Oct. 31, 1956: "I saw the flag of the United States raised over the South Pole today for the first time in history." "Circling overhead in a Globemaster, I saw," etc. The problem is, Don Guy was not in the Globemaster with the other reporters. He had become dispirited by the poor response to his earlier photos, and was now covering the famous Pole landing from the comfort of the air operations shack at McMurdo, listening to the strike report as it filtered in from the Globemaster to McMurdo, thus giving Guy a jump on his competitors.

Guy Peaks. 72°09' S, 98°53' W. A cluster of peaks 5 km NE of Mount Borgeson, overlooking Peale Inlet, on Thurston Island. Mapped from air photos taken in Dec. 1946 by OpHJ 1946-47, and originally plotted in 72°04' S, 99°04' W. Named by US-ACAN in 1968, for Arthur W. Guy, electrical engineer at Byrd Station in 1964-65. It has since been replotted.

Guyatt Ridge. 80°38' S, 29°27' W. A ridge, rising to about 1070 m, SW of Wedge Ridge, in the S part of the Haskard Highlands, in the W part of the Shackleton Range. Surveyed in 1957, by BCTAE 1955-58. Photographed aerially in 1967, surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971, and mapped by USGS from these efforts. Named by UK-APC on Jan. 5, 1972, for Malcolm John "Bloke" Guyatt (b. 1944), BAS general assistant who wintered-over at Halley in 1969 and 1970, and who worked in the Shackleton Range in 1969-70. US-ACAN accepted the name. *See also* **Gora Sergienko**.

Guyer Rock. 68°33' S, 69°01' W. A low-lying rock, about 28 km W of Flyspot Rocks, in Marguerite Bay, off the W coast of Graham Land. Named by UK-APC on Feb. 15, 1988, for Lt. Simon Thomas Glade Guyer (b. 1964), RN, officer of the watch at the time the *Endurance* grounded on the rock in 1985-86. US-ACAN accepted the name.

Mount Guyon. 78°25' S, 158°17' E. A bluff-type mountain with a small summit area, it rises to 2541 m at the W side of Deception Glacier, and forms the highest elevation in the Warren Range. Named in 1957-58 by the Northern Party of BCTAE, as Mount Warren, for Guyon Warren, a member of that field party. There was another Mount Warren (in the Sentinel Range), albeit named later than this one, but, more to the point, there was the Warren Range itself, so NZ-APCN accepted the name Guyon Mountain on Nov. 4, 1999, and US-ACAN followed suit on May 22, 2000.

Bahía Guyou *see* **Guyou Bay**

Baie Guyou *see* **Guyou Bay**

Île Guyou *see* **Ménier Island**

Îles Guyou *see* **Guyou Islands**

Islas Guyou *see* **Guyou Islands**

Guyou Bay. 64°06' S, 62°35' W. An indentation, 6 km wide, into Pasteur Peninsula, between Claude Point and Metchnikoff Point, in the NW part of Brabant Island, in the Palmer Archipelago. Discovered and roughly charted by FrAE 1903-05, and named by Charcot as Baie

Guyou, for Capt. Émile Guyou (1843-1915), of the French Navy, the mathematician who prepared a report on the magnetic results of the expedition, and who had done the same for de Gerlache in 1897-99. It appears as Guyou Bay on a British chart of 1908, and that was the name accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a Chilean chart of 1947, as Bahía Guyou, and that was the name accepted by the 1970 Argentine gazetteer and by the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57.

Guyou Island *see* **Guyou Islands, Ménier Island**

Guyou Islands. 65°03' S, 63°24' W. A small group of 2 islands with offlying rocks, 3 km NE of Sonia Point, slightly to the SE of Ménier Island, N of Lauzanne Cove, in Flandres Bay, off the Danco Coast, on the W coast of Graham Land. Roughly charted on Feb. 11, 1898, by BelgAE 1897-00, and named by de Gerlache as Îles Guyou, for Émile Guyou (*see* **Guyou Bay**). It appears as such on Lecointe's map of 1899. On Dr. Frederick Cook's 1900 English language translation of the expedition's maps, it appears as Guyou Islands. On a 1901 British chart the larger of the islands appears as Guyou Island, as it does (although misspelled as Isla Guyon) on Irízar's 1903 Argentine map, and on a 1908 Argentine chart (correctly spelled). ArgAE 1952-53 individually named the two main islands as Isla Grande and Isla Chica (this last was later renamed Islote Chico, thus rendering the comparison between the two more obvious). Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Guyou Islands on Sept. 23, 1960, and it appears as such on a British chart of 1961. US-ACAN accepted the name in 1965. For the rather complicated history of the misnaming of Guyou Islands (or Guyou Island) as related to Ménier Island, *see* **Ménier Island**.

Guyou Isles *see* **Ménier Island**

Guyver, Percy. b. Feb. 8, 1929, Edmonton, London, son of Percy Guyver and his wife Vera Beatrice M. Jewell. He joined FIDS in 1955, as a diesel electric mechanic, and left Southampton in October of that year on the *John Biscoe*, bound for Port Stanley. He wintered-over as leader at Base B in the winter of 1956, and at Base Y in the winter of 1957. His ambition was to buy a motor fishing vessel, and sail around the world, but he died in Sept. 1993, in Salisbury.

Punta Guzmán. 64°49' S, 62°51' W. A low, rocky point at the extreme NW of Caleta Gloria, at Paradise Harbor, off the E coast of Lemaire Island, on the Danco Coast, on the W coast of Graham Land. Named by ChilAE 1950-51, for Sub Lt. Sergio Guzmán Stewart, an officer on the *Angamos* that season.

Gvas Bay. 63°38' S, 59°04' W. The collective name given (ca. 1912) to what are now Bone Bay and Charcot Bay. Named for Thor Dahl's steam whale catcher *Gvas* (skipper A. Kristiansen), built in England in 1911, and which was later sold to Waalman & Bugge, and renamed the *Windegg* (and later still, the *Gun 4*). It appears as such on Capt. Johannessen's chart of 1919-20. A term no longer used.

Gvas Point *see* **Cape Kater**

Nunatak Gvozd'. 70°55' S, 65°39' E. On the W edge of the Dyer Plateau, in the W part of Palmer Land. Named by the Russians.

Nunatak Gvozdeva. 77°32' S, 146°05' W. On the E side of the Haines Mountains, in the Ford Ranges of Marie Byrd Land. Named by the Russians.

Gwamm. 67°37' S, 62°52' E. The old airstrip of blue ice above Mawson Station. Named in association with the RAAF Antarctic Flight, but no one seems to know why. Theories range from the comfortably plausible to the downright insane.

Gwynn Bay. 67°05' S, 57°57' E. Close W of Hoseason Glacier, along the coast of Enderby Land. Photographed by LCE 1936-37, and mapped in 1946 from these photos by Norwegian cartographers, who named this feature Breidvika (i.e., "the broad bay"). Renamed by ANCA for Dr. Arthur Montague Gwynn, officer in charge at Macquarie Island Station (not in Antarctica) in 1949. He was also at Heard Island (53°S) in 1953. US-ACAN accepted the name in 1965. The Australians plot this feature in the same degree of latitute as do the Americans, but they give 58°02' E as the longitude.

Gygra *see* **Gygra Peak**

Gygra Peak. 71°58' S, 3°16' E. Rising to 1980 m, just W of Risen Peak, it is the most northeasterly peak in the Gjelsvik Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Gygra (i.e., "the giantess"). US-ACAN accepted the name Gygra Peak in 1967.

Gyldén, Fredrik Hans Olof. Known as Olof. b. Jan. 11, 1867, Jena, Prussia, as Hans Adolf Fredrik Gyldén (he changed his name later), son of Finnish-born Swedish astronomer Johan August Hugo Gyldén and his wife Therese Amalie Henriette von Knebel. In 1871 Gyldén père became director of the Stockholm Observatory and in 1884 of the Göttingen Observatory. Olof's sister, Thyra Sigrid Maria Gyldén was born at the Stockholm Observatory, in 1874, and would later marry Baron Axel Klinckowström (q.v.). Olof joined the Swedish Navy as a young officer, and on July 8, 1894, in Paris, married Yvonne-Elisabeth-Jeanne-Emélie-Marie Hédal. Olof was a lieutenant and professor of astronomy and navigation at the Naval War College in Sweden, and had just been to Spitsbergen, in the Arctic, as skipper of the *Antarctic*, when he was selected to be captain of the *Frithiof*, 1903-04, and leader of the effort to relieve Nordesnkjöld during SwedAE 1901-04. During World War I he was head of the Navy War College in Sweden. He was killed in 1943, during World War II.

Gyoten-dake. 71°17' S, 35°42' E. A precipitous peak, rising to 2056.2 m, it is the second highest peak in the N extremity of Mount DeBreuck, in the Queen Fabiola Mountains. Surveyed by JARE in 1960, and named by the Japanese on March 22, 1979. The name means "peak looking straight up at sky."

H.E. Hansenbreen *see* **Hansenbreen**

Cape H. Hansen *see* **Cape Hansen**

H. Hansen Pynten *see* **Cape Hansen, Meier Point**

The *H.J. Bull*. A 573-ton, 151-foot Norwegian whale catcher and spotter, built in 1935, at Frederiksstad, for Anders Jahre's Kosmos Company, of Sandefjord. At the time, with benefit of the relatively new Fredriksstad Steam Motor, she was the world's fastest catcher, capable of 16 knots, and became the prototype of the new whale catcher. She was in Antarctic waters, in the Amundsen Sea, doing whaling reconnaissance in 1935-36. She was catcher for the *Ulysses* in 1937-38 (Martinsen was her skipper). In 1940 the Norwegian Navy requisitioned her, and renamed her *Namsos*. After the war, she was catching off Norway, and in 1959 was sold to the Union Whaling Company, of South Africa, and renamed the *A.E. Larsen*. She was taken out of service in 1962, and broken up in 1964.

H.J. Sjögren Fjord *see* **Sjögren Glacier**

Mount Haag *see* **Haag Nunataks**

Haag Nunataks. 77°00' S, 78°18' W. Three low elevations running in a rough N-S line, about 110 km WSW of Mount Hassage, and about 135 km E of Mount Ullmer, W of the Ronne Ice Shelf, and SW of the Evans Ice Stream, in Ellsworth Land. The northern one, probably best defined as a nunatak, is the least of the 3, and is probably snow-covered most of the time. The central, dominant, elevation of the three, is definitely a nunatak, with exposed rock on it, and rising to about 1150 m. The southern elevation, which is also probably a nunatak, also has exposed rock. They were seen aerially on Dec. 21, 1947, from a distance of about 160 km, by RARE 1947-48, but Finn Ronne felt that only the central one, in 77°40' S, 79°00' W, was worth naming, and he called it Mount Joseph Haag, after Joseph Haag, Jr. (1895-1958), head of the Todd Shipyards in New York, which worked on Ronne's ship (as it had also done on Byrd's ships during ByrdAE 1928-30). Ronne estimated its height at 3050 m. Ronne himself had shortened the name to Mount Haag by 1949, when US-ACAN accepted the name (*see also* **Mount Coman**). During OpDF 62 the feature was sighted again, aerially, on Dec. 14-15, 1961, from an LC-130 commanded by Lt. Ronald F. Carlson (*see* **Carlson Inlet**) as he flew from McMurdo to Camp Sky-Hi. During OpDF 67, on a VX-6 flight of Dec. 1, 1966, the feature was determined to be what we know it today. Consequently, US-ACAN re-defined the feature as Haag Nunataks, and on Feb. 7, 1978, UK-APC accepted this new naming. The old Mount Haag appears on a 1966

Argentine map of 1966, as Monte Haag, and that was the name accepted by the 1974 Chilean (sic) gazetteer (they plot it in 77°40' S, 79°00' W). The nunataks were further surveyed on a BAS radio echo-sounding flight from Siple Station, in Jan. 1975, when a landing was made near one of them. The name Haag Nunataks appears in the 1980 British gazetteer (plotted in 77°00' S, 78°24' W). It may also be seen (erroneously) as Haag Nunatak.

Haakon Island *see* **Dufayel Island**

Haakon VII Sea. 68°00' S, 25°00' E. Off the Princess Ragnhild Coast of Queen Maud Land. Named by the Norwegians as Kong Håkon VII Hav, after King Haakon VII of Norway (1872-1957), who reigned from 1905 until his death.

Haas Glacier. 85°45' S, 164°55' W. A steep tributary glacier flowing northward from Rawson Plateau into the S side of Bowman Glacier, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Charles G. Haas, meteorological technician with the U.S. Weather Bureau, who was at Pole Station in the winter of 1960.

Haase, Otto *see* **Órcadas Station**, 1918

Haban Spur. 73°18' S, 163°00' E. A bald rock spur, 8 km N of Scarab Peak, and extending NE from the E central part of Tobin Mesa, in the Mesa Range, in Victoria Land. Studied by an Ohio State University geological field party in 1982-83, and named by US-ACAN for Marta A. Haban, one of the party. She had also been there in 1981-82.

Gora Habarova *see* **Bamseungen**

Habermehl Peak. 71°49' S, 6°55' E. A large mountain, rising to 2945 m, 5 km S of Gessner Peak, and also S of Storkvarvet Mountain, in the NE part of the Mühlig-Hofmann Mountains of New Schwabenland, in Fimbulheimen, in Queen Maud Land. Discovered by GermAE 1938-39, and named by Ritscher as Habermehlgipfel, for Dr. Richard Habermehl (1890-1980), the director of the German Weather Service. It was remapped from air photos taken in 1958-59, during the long NorAE 1956-60, and named by the Norwegians as Habermehltoppen (which means the same thing). US-ACAN accepted the name Habermehl Peak in 1966.

Habermehlgipfel *see* **Habermehl Peak**

Habermehltoppen *see* **Habermehl Peak**

Hachinosu Peak. 69°01' S, 39°35' E. Also spelled Hatinosu Peak. A small hill rising to 43.4 m, it is the highest peak on East Ongul Island, 330 m E of Nishino-ura Cove, between Kitano-ura Cove and Naka-no-ura, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from ground surveys and air photos taken during JARE in 1957, and named by them in May 1963, as Hatinosu-yama (or Hachinosu-yama) (i.e., "beehive peak"). US-ACAN accepted the name Hachinosu Peak in 1968. The Norwegians call it Kuben (i.e., "the cube."

Hachinosu-yama *see* **Hachinosu Peak**

Bahía Hackapike *see* **Hackapike Bay**

Caleta Hackapike *see* **Hackapike Bay**

Hackapike Bay. 64°31' S, 62°55' W. An anchorage at the N end of Parker Peninsula, 6.5 km NW of Ryswyck Point, it is entered NW of False Point, along the NE coast of Anvers Island, in the Palmer Archipelago. It is limited by Andrews Point, False Island, Pear Island, and Head Island. Charted in Jan. 1936, by BGLE 1934-37, and named by them for the hackapike, the club used by Norwegians to kill seals. It appears on a U.S. Hydrographic Office chart of 1948, and on a British chart of 1950. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955, and on a 1960 British chart. It appears on a 1947 Chilean chart as Bahía Hackapike, and on a 1962 Chilean chart as Caleta Hackapike (the Chileans considering that "cove" is a better term than "bay"), this last one being the name accepted by the Chilean gazetteer of 1974.

Hackerman Ridge. 72°39' S, 167°46' E. A large mountainous ridge trending N-S, between Gruendler Glacier and Rudolph Glacier, in the Victory Mountains of Victoria Land. Named by US-ACAN in 1977, for chemist Norman Hackerman (b. March 1, 1912, Baltimore. d. June 16, 2007), president of the University of Texas at Austin (1967-70), of Rice University (1970-85), and chairman of the National Science Board of the USA from 1974 to 1978. He visited Antarctica in 1975 and 1977.

Hackworth, Cedric James "Jim." b. Nov. 10, 1892, Wellington, NZ, son of J.B. Hackworth. He went to sea in 1908, as a 15-year-old boy sailor on the *Helen Denny*, plying Antipodean waters, and had worked his way up to able seaman when he signed on to the *Aurora* on May 6, 1912, in Sydney, at £5 per month, for the 2nd run to Antarctica during AAE 1911-14. He left the expedition at Lyttelton, NZ, on March 18, 1913, and immediately signed on to the *Warrimoo*, on the Wellington to Sydney run. Later that year (on Aug. 13) he got his 2nd mate's ticket, but was 4th mate on the *Tofua* for a few years. Sometime during all that activity, on Dec. 7, 1914, he found time to enlist at Sydney in the 2nd Signal Troop, with the 2nd Light Horse, of the Australian Expeditionary Force, was at Gallipoli and Gaza, and made corporal. He was 2nd mate on the *Moeraki* from 1919 to 1921, and then joined the *Manuka*, still as 2nd mate. He finally made ship's captain, and died in 1979.

Isla (de) Haddington *see* [1]**James Ross Island**

Monte Haddington *see* **Mount Haddington**

Mount Haddington. 64°13' S, 57°38' W. Also called Mount Ross. Rising to 1630 m in the shape of a cone, it surmounts the central part of James Ross Island, and, indeed, is the highest point on the island. Discovered and roughly charted by Ross on Dec. 31, 1842, and named by him for Thomas Hamilton, 9th Earl of Haddington (1780-1858), first lord of the Admiralty, 1841-46. Further charted in 1902-03 by SwedAE 1901-04. It appears, wrongly spelled as Mount Hadington, on a 1943 USAAF chart. US-ACAN accepted the name Mount Haddington in 1947, and UK-APC followed suit on Sept. 8, 1953. Fids from Base D re-surveyed it in 1952-53. It appears in the 1955 British gazetteer. It appears as Monte Haddington in the 1970 Argentine gazetteer and in the 1974 Chilean gazetteer.

Haddington Land *see* [1]**James Ross Island**

Bahía Haddon *see* **Haddon Bay**

Haddon Bay. 63°18' S, 55°44' W. Immediately E of Mount Alexander, along the S coast of Joinville Island. Discovered and roughly charted on Jan. 11, 1893 by Thomas Robertson of the *Active*, during DWE 1892-93. Surveyed by Fids from Base D in Dec. 1953, and named by UK-APC on Sept. 4, 1957, for Prof. Alfred Cort Haddon (1855-1940), biologist and anthropologist, who helped Bruce with his scientific preparation before that explorer first went to the Antarctic with DWE 1892-93. It appears on a British chart of 1962. US-ACAN accepted the name in 1963. The Argentines call it Bahía Haddon.

Häderich Berg *see* **Mount Hädrich**

Hades Terrace. 73°41' S, 163°30' E. A steep bluff, mostly ice-covered, along the E side of Campbell Glacier, just W of the Vulcan Hills, in the Southern Cross Mountains of Victoria Land. Named by NZGSAE 1965-66 for the Greek mythological location. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Mount Hadington *see* **Mount Haddington**

Hadley Peak. 85°01' S, 90°40' W. Rising to 2660 m, it surmounts the escarpment at the N edge of Ford Massif, in the Thiel Mountains. Named by Bermel and Ford, leaders of the USGS Thiel Mountains Party 1960-61, for research geologist Jarvis Bardwell Hadley (b. July 13, 1909, South Kingstown, RI. d. in the mountains near Frederick, Md., on Nov. 14, 1974) of USGS, and administrator of their geology programs in Antarctica. US-ACAN accepted the name in 1962.

Hadley Point. 73°55' S, 113°58' W. The NE point of Murray Foreland, on Martin Peninsula, 8 km SE of Cape Herlacher, on the Bakutis Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1967. Named by US-ACAN for Richard C. Hadley, USN, who wintered-over at McMurdo in 1959, and then for certain other winters, including his last, 1977, during which he was in charge of supply functions.

Hadley Upland. 68°29' S, 66°24' W. A triangular shaped remnant plateau with an undulating surface, running in a NE-SW direction and rising to between 1500 and 1900 m (the British say 2310 m), SE of Rymill Bay, on the Fallières Coast, on the W coast of Graham Land. It is bounded to the NW by Remus Glacier and Martin Glacier; to the N by Snowshoe Glacier; to the NE by Gibbs Glacier; and to the S by Lammers Glacier and Windy Valley. It includes Mount Cortés and Mount Medina. It was known by USAS 1939-41, Ronne and Eklund having sledged along Lammers Glacier and Gibbs Glacier in Jan. 1941, thus skirting the upland on its E side. Fids from Base E surveyed its

NW side in 1948-50, and its S and NE sides in Dec. 1958. Named by UK-APC, on Aug. 31, 1962, for John Hadley (1682-1744), English mathematician who, independent of, and just before the American Thomas Godfrey, invented the reflecting nautical quadrant in 1730-31. US-ACAN acceped the name later in 1962.

Mount Hädrich. 71°57' S, 6°12' E. Rising to 2885 m, in the E part of Håhellerskarvet, in the Mühlig-Hofmann Mountains of Queen Maud Land. Discovered by GermAE 1938-39, and named in 1939 by Ritscher as Hädrich-Berg, for Willy Hädrich, the procurator of Lufthansa. This may not be the actual peak which the German fliers saw and which Ritscher named, but it is in the vicinity. The name is also seen as Häderich Berg. Not to be confused with Snønutane Peaks.

Hädrichberg *see* **Snønutane Peaks**

Haefeli Glacier. 67°18' S, 66°23' W. A glacier, 3 km wide and 10 km long, at the NW side of Finsterwalder Glacier, it flows SSW toward the head of Lallemand Fjord, on the Loubet Coast, on the W coast of Graham Land. With Finsterwalder Glacier and Klebelsberg Glacier, its mouth merges with Sharp Glacier, where that glacier enters Lallemand Fjord. Surveyed in its upper part in 1946-47 by Fids from Base E, and named by them for the Swiss glaciologist Robert Haefeli (1898-1978). UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. In 1956-57 it was photographed aerially by FIDASE.

Haelbreen. 68°49' S, 90°30' W. A glacier, 3.5 km long, at the N side of Austryggen, on the coast the Norwegians call Von Bellingshausenkysten, in the NE part of Peter I Island. Named by the Norwegians ("the heel glacier").

Hae-no-iwa. 71°26' S, 35°42' E. Two adjacent rock exposures, one of them being 2085.6 m above sea level, 5 km SE of Mount Fukushima, just N of Yamato Glacier, in the Queen Fabiola Mountains. Surveyed by JARE 1969, and named by the Japanese on March 22, 1979 (name means "south wind rocks").

Haffner Glacier. 71°28' S, 169°24' E. A small, steep valley glacier, flowing into Berg Bay, in the area of Robertson Bay, along the coast of northern Victoria Land. First charted in 1899, by BAE 1898-1900, and named by Borchgrevink for Colonel Johann Fredrik Wilhelm Haffner (b. 1835, Fredriksvaern. d. 1901. Oslo), director of the Government Survey of Norway, and president of the Norwegian Geographical Society. US-ACAN and NZ-APC both accepted the name.

Haffner Pass. 69°47' S, 71°22' W. Running NE-SW at about 500 m above sea level, between Gilbert Glacier and Mozart Ice Piedmont, in the N part of Alexander Island. Surveyed by BAS between 1975 and 1977, and named by UK-APC on June 11, 1980, in association with Mozart, for the composer's 1782 Haffner Symphony. US-ACAN accepted the name in 1995.

The *Hafnen*. Norwegian whale catcher which struck an iceberg and sank in the South Shetlands on Dec. 10, 1911. There was one death, Hans Olsen. As with much of the information that comes solely from the Whaler's Graveyard, on Deception Island, the very existence of this whale catcher, and certainly of Mr. Olsen, is doubtful.

Hag Pike. 68°57' S, 66°59' W. A conspicuous rock column, rising to 710 m (the British say 1000 m), on the SE side of Rasmussen Peninsula, and which, together with the mountain to the N, forms the W side of Hariot Glacier, on the N side of the Wordie Ice Shelf, near the Fallières Coast, on the W coast of Graham Land. Photographed aerially in 1937 by BGLE 1934-37, and again in Nov. 1947, by RARE 1947-48. Surveyed from the ground by Fids from Base E in 1948-50 and again in Dec. 1958, and named descriptively by UK-APC on Aug. 31, 1962 (a hag is a tree stump; a pike is an English lakeland term for a hilltop). US-ACAN accepted the name later in 1962.

Hageman Peak. 71°43' S, 70°48' W. Rising to about 940 m, it is the most northwesterly of the Staccato Peaks, on Alexander Island. Photographed by Ellsworth as he flew over in 1935. Named by US-ACAN for Lt. Cdr. Roger H. Hageman (b. April 25, 1933, Ohio. d. May 1987, Anchorage, Alaska), USN, LC-130 aircraft commander during OpDF 1969 (i.e., 1968-69). UK-APC accepted the name on July 11, 1980.

Mount Hager. 70°53' S, 162°48' E. Rising to 2420 m, 10 km W of Mount Cantello, in the Explorers Range of the Bowers Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1965. Named by US-ACAN in 1970, for Clarence Lloyd Hager, Jr. (b. 1931), geophysicist at the University of California, at Los Angeles, who summered-over at Pole Station, 1967-68.

Hagerty Peak. 75°17' S, 68°11' W. Rising to about 1500 m, at the SE extremity of the Sweeney Mountains, on the Orville Coast of Ellsworth Land. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1967. Named by US-ACAN in 1968, for Ensign Cornelius John "Neil" Hagerty, Jr. (b. July 4, 1925, Nashua, NH. d. Dec. 5, 2009, San Jose, Calif.; known as "Red" or "Hacksaw Hagerty"), who joined the U.S. Navy at 18, during World War II, and who was photo officer who wintered-over with Detachment Alfa, at McMurdo Station in 1960 (he was promoted to the officer ranks during this expedition). It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974, but, they say Hagerty was a chief hospital corpsman, which, of course, is wrong. Red Hagerty retired as a lieutenant commander.

Hagey Ridge. 74°57' S, 134°56' W. A high snow-covered ridge between Björnert Cliffs and Johnson Glacier, it forms the E end of McDonald Heights, on the coast of Marie Byrd Land. First photographed aerially, in Dec. 1940, by USAS 1939-41. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1974, for Lt. (later Lt. Cdr.) Donald Warren Hagey (b. Jan. 1932, Cove, Oreg.), USN, officer-in-charge at Byrd Station in 1969.

Hagfellekammen. 72°05' S, 25°12' E. The easternmost ridge in Mefjell Mountain, in the central part of the Sør Rondane Mountains. Name means "the fence ridge" in Norwegian.

Hagfish. Class: Agnatha. Non-bony, primitive, eel-like, scaleless fish found in Antarctic waters (*see also* **Fish**).

Haggerty, James *see* **USEE 1838-42**

Haggerty Hill. 77°57' S, 164°12' E. Mostly ice-free, and rising to 1100 m, 0.8 km SE of Salmon Hill, and immediately N of the snout of Salmon Glacier, on the Scott Coast of Victoria Land. Named by US-ACAN in 1992, for Patrick R. "Pat" Haggerty, of Holmes & Narver, who managed construction and logistics activities at McMurdo, Pole Station, Siple Station, and at various field camps during the 1970s and 1980s. He introduced female construction workers to USAP, in 1978-79, and implemented computer-based construction scheduling in the 1990s. He later moved over to Antarctic Support Associates, and was their manager for the South Pole Station Modernization Project.

Haggits Pillar. 67°24' S, 179°55' W. An isolated stack, or column of rock, largely glaciated, rising to about 63 m, about 170 m W of Scott Island, and 504 km NNE of Cape Adare (the NE extremity of Victoria Land). Discovered in Dec. 1902 by William Colbeck in the *Morning*, and named during his relief expedition of BNAE 1901-04. The name was first seen on George Mulock's official charts of the expedition. US-ACAN accepted the name in 1952.

Håhellerbotnen *see* **Håhellerbotnen Cirque**

Håhellerbotnen Cirque. 71°54' S, 6°05' E. A large cirque on the E side of Håhelleregga Ridge, between that ridge and Håhellerskarvet, in the E part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and, in association with Håhelleren Cove, named by them as Håhellerbotnen (i.e., "the shark cave cirque"). US-ACAN accepted the name Håhellerbotnen Cirque in 1967.

Håhelleregga *see* **Håhelleregga Ridge**

Håhelleregga Ridge. 71°52' S, 5°58' E. An irregular ridge, just N of Håhellerskarvet, in the E part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and, in association with Håhelleren Cove, named by them as Håhelleregga (i.e., "the shark cave ridge"). US-ACAN accepted the name Håhelleregga Ridge in 1967.

Håhelleren *see* **Håhelleren Cove**

Håhelleren Cove. 71°55' S, 6°04' E. Indents the N side of Håhellerskarvet, between that feature and Håhelleregga Ridge, in the E part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from

1958-59 air photos taken during the same long expedition, and named by them as Håhelleren (i.e., "the shark cave"). US-ACAN accepted the name Håhelleren Cove in 1967.

Håhellerskarvet. 71°57' S, 6°08' E. A large, broad, partially ice-covered mountain rising to 2910 m, between Austreskorve Glacier and Lunde Glacier, in the E part of the Mühlig-Hofmann Mountains, in Fimbulheimen, Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them ("the shark cave mountain"). In 1967 US-ACAN accepted the name without modification.

Mount Hahn. 69°17' S, 70°09' W. Rising to about 1100 m, between Walter Glacier and Hampton Glacier, at the head of Schokalsky Bay, in the N part of Alexander Island. Photographed aerially by RARE 1947-48, and surveyed from the ground by Fids from Base E between 1948 and 1950. Named by US-ACAN for Lt. Cdr. Gerald Lawrence Hahn (b. Jan. 1936), USN, LC-130 aircraft pilot, in Antarctica for OpDF 1975 (i.e., 1974-75) and OpDF 1976 (i.e., 1975-76). UK-APC accepted the name on June 11, 1980.

Hahn, Percival Ethelbert. The NZ newspaper, the *Evening Post*, of July 19, 1936, reports the death of "a well-known and highly respected townsman" of Tauranga, named Capt. Percival E. Harne, RNR, who "died yesterday afternoon after an ilnness of some months." It says he was born at Braistead Manor, Kent, the second son of Mr. Heatie Henry Harne, educated at Clifton College, later trained for the sea, serving with the P & O Company and with the Egyptian government naval service. "Captain Harne was associated with Captain Scott on his first Antarctic expedition, on which occasion he was navigating oficer on the relief ship *Morning*." It goes on to say that he transferred to the Royal Navy on the outbreak of World War I, served on various destroyers on special duty in the North Sea and in the East. While in command of the monitor *Sawfly*, on the River Tigris, he was wounded by Turkish shrapnel during an attack at an Arab village in April 1917. "For his fine part in this engagement, he was mentioned in dispatches." On recovering, he was appointed naval transport officer at Basra, and later at Aden. After the war, he returned to cable repair work, serving as chief officer with All-America Cables, based out of Callao, and until 1934 he commanded their mainentance ships in South American waters. He became famous in 1931 for pulling in a 90-ton whale, which had drowned when it had become entangled in the cable. He retired in 1934, and he and his wife settled in Tauranga, where they took a keen interest in local movements. He was survived by his wife. This is very detailed, and is sure to whet the appetite, especially as one has never heard of him in connection with Scott. The Braisted Manor is, in fact, Brasted Manor (pronounced as Braistead), near Westerham, Kent. And his name was Percival Ethelbert Hahn, born 1879. He would change his name, to make it less German. On Feb. 14, 1945, in Wellington, his widow, Nora, married again, to Edward Russell Dymock. He bore more than a passing resemblance to Herbert Hoover. His death made the London *Times*.

Hahn Island. 78°15' S, 164°58' E. A small island, 1.5 km long, 12 km N of Mount Discovery, on the E side of Koettlitz Glacier. Mapped by USGS from ground surveys, and USN air photos. Named by US-ACAN in 1963, for Cdr. James Hahn, USN, public information officer on the staff of the commander, U.S. Naval Support Force, Antarctica, for several years prior to 1963.

The *Hai Kung*. A 711.58-ton steel-hull, single-crew deep-sea trawling vessel, capable of 13.5 knots, belonging to the Taiwan Fisheries Research Institute, operated by the National University of Taiwan, and based out of Keelung, she made her maiden voyage in 1976-77, to the Weddell Sea. Her skipper was Chen Chang Chiang. For 18 days in Jan. and Feb. 1977 she investigated krill fishing off the coasts of Queen Maud Land and Enderby Land, and took 130 tons. She was back in 1977-78, being in the same area in Jan. and Feb. 1978. In 1981 she was off the coast of Australia.

Haigh Nunatak. 71°15' S, 71°13' E. A low, conical peak, rising to about 30 m above the surrounding ice at the E end of the Amery Ice Shelf, about 22 km NE of Pickering Nunatak, on the E side of the mouth of Lambert Glacier. There is an area of low-lying moraine on the W side of the peak. Photographed aerially by ANARE in 1957. Named by ANCA for John E. Haigh, geophysicist at Mawson Station in 1965, who accompanied the Soviet party which first visited this nunatak in Jan. 1966. US-ACAN accepted the name in 1970.

Haigh Point. 64°55' S, 63°06' W. West of Mount Banck, it forms the N entrance point of Thomas Cove, on the Danco Coast, on the W coast of Graham Land. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base O. Named by UK-APC on Nov. 13, 1985, for Miss Dorothy Haigh (1905-1988), who was with the Foreign Office from 1943, was appointed a draftswoman (senior grade) in 1949, and promoted to senior draftswoman in 1955, with the cartographic section until 1970, with the responsibility of preparing UK-APC maps. US-ACAN accepted the name.

Haihun Jiao. 69°26' S, 76°03' E. A cape in the Larsemann Hills. Named by the Chinese.

Hailstorm Island. 66°13' S, 110°37' E. A rocky island, 0.4 km long, lying between Cameron Island and the E end of Burnett Island, in the central part of the Swain Islands. Photographed during OpHJ 1946-47, and first mapped (roughly) from these photos. ANARE and SovAE both photographed it aerially in 1956. Carl Eklund led a group that surveyed the Swain Islands, while they were at Wilkes Station in 1957, and Eklund named it for Pueblo Indian Kenneth José "Ken" Hailstorm (b. Aug. 20, 1936, McCarty's Reservation, near Valencia, N.M. d. April 25, 2005, Albuquerque, N.M.), USN, radioman who wintered-over at Wilkes Station in 1957. US-ACAN accepted the name in 1960. ANARE again photographed it aerially in 1962.

Hainaut Island *see* **D'Hainaut Island**

Glaciar Haines *see* **Haines Glacier**

Haines, William Cassius "Bill." Known as "Cyclone." b. Feb. 1, 1887, Reinersville, Ohio, but raised partly in Sharon, O., son of farmer Jasper Haines and his wife Mary. A graduate of George Washington University, in Washington, DC, he became an assistant meteorologist with the St. Louis Weather Bureau in 1912 (he would hold that position until 1948). He served in World War I in the Signal Corps, was with Byrd on the North Pole expedition of 1926, and then was 3rd-in-command (and the barber) of ByrdAE 1928-30, wintering-over at Little America in 1929. He detested shoveling snow, and thus was always being detailed to shovel snow. On his return he became chief of the airways weather station at Washington Hoover Airport, and, on Nov. 9, 1932, in Washington, DC, he married a North Dakota girl, Irene Gentry, who had lived in the nation's capital since 1918, working as an accountancy specialist with the Internal Revenue Bureau. He was 3rd-in-command of ByrdAE 1933-35. He died on April 7, 1956, at Jefferson Barracks Hospital, in Missouri.

Haines Glacier. 73°21' S, 62°33' W. A glacier, 6 km wide, flowing in a SE direction, and joining Meinardus Glacier immediately E of Mount Barkow, on the Lassister Coast, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940, by USAS 1939-41. It appears on a 1943 U.S. Hydrographic Office photo of 1943. In Dec. 1947 it was photographed aerially by RARE 1947-48, who, also, with a FIDS team from Base E, partially surveyed it from the ground that season, 1947-48. Named by FIDS for Bill Haines. They plotted it in 73°14' S, 62°56' W. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the 1955 British gazetteer, and also on a U.S. Hydrographic Office chart of that year. It was photographed aerially by USN in 1965-67, and based largely on these photos, it appears replotted on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. It appears on a Chilean map of 1966, as Glaciar Haines.

Haines Mountains. 77°34' S, 146°20' W. A range of ice-capped mountains trending NW-SE for about 40 km, and forming the SW wall of Hammond Glacier, in the Ford Ranges of Marie Byrd Land. Discovered in 1934 by ByrdAE 1933-35, and named by Byrd for Bill Haines. US-ACAN accepted the name in 1947. The Russians call them Nunataki Filippova.

Haining, David *see* **USEE 1838-42**

Haiyan Wan. 62°12' S, 58°58' W. A cove on Fildes Peninsula, King George Island, in the South Shetlands, in the area of the Great Wall Station. Named by the Chinese.

Haizhu Bandao. 69°25' S, 76°11' E. A peninsula in the Larsemann Hills, at Prydz Bay, on the

Ingrid Christensen Coast. Named by the Chinese.

Håkollen *see* **Håkollen Island**

Håkollen Island. 67°00' S, 57°15' E. An island, 1.5 km long (the Australians say about 3 km), and rising to 100 m above sea level, in the SW part of the Øygarden Group. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Håkollen (i.e., "the shark knoll"). US-ACAN accepted the name Håkollen Island in 1965. The Australians call it Shark Island, and have plotted it in 67°00' S, 57°19' E.

Håkon Col. 71°54' S, 8°52' E. A short mountain ridge at the S side of Saether Crags, between those crags and Nupsskarvet Mountain, in the Kurze Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Håkonbandet, for Håkon Saether, medical officer with the expedition during its 1956-57 stage. US-ACAN accepted the translated name Håkon Col in 1967. *See also* **Saether Crags**.

Håkonbandet *see* **Håkon Col**

The *Hakuho Maru*. A 3200-ton Japanese vessel, completed in March 1967, operated by the Tokyo University Ocean Research Institute, and skippered by Takayasu Shirasawa in 1968-69, when chief scientist Yoshio Horibe and his staff were investigating the chemistry of seawater in and around the Balleny Islands and Scott Island. She was back, off Wilkes Land and Enderby land, in 1983-84, skippered by Ichiro Tadama, in an expedition led by Masaaki Murano of the Tokyo University of Fisheries, and Takahisha Nemoto of the Ocean Research Institute of the University of Tokyo. She was in company with the *Kaiyo Maru* and the *Umitaka Maru*. She operated until the end of 1988, when she was retired, after 99 scientific cruises, 9 trial cruises, and after traveling over a million kilometers. She was replaced by a new ship of the same name, built in 1988, and which was in Antarctic waters in 1994-95, under the command of Youichi Jinno.

The *Hakurei Maru*. Ice-strengthened oil exploration ship, and geological and geophysical research ship, commissioned by the Metal Mining Agency of Japan, and launched on Oct. 16, 1973. Belonging to the Japanese Agency of Natural Resources and Energy, she was 86.95 m long, 13.4 m wide, weighed 1821.6 tons, and could cruise at 15 knots. **Nov. 1980-March 1981**: She was in the Bellingshausen Sea, skippered by Capt. Hideaki Okomura (he would be the captain for several seasons) conducting marine geophysical investigations, in an expedition led by chief scientist Yasufumi Ishiwada, of the Japanese National Oil Corporation. **Nov. 1981-March 1982**: She was doing the same thing, this time in the Weddell Sea, in an expedition led by Takashi Yamazaki of the Japanese National Oil Corporation. **Nov. 1982-March 1983**: She was in the Ross Sea and the Dumont d'Urville Sea, under the leadership of the same corporation's chief scientist, Shunji Sato. **Nov. 1983-March 1984**: She was off the coast of Wilkes Land, in an expedition led by the same corporation's chief scientist, Masakazu Kato. **Nov. 1984-March 1985**: She was off Enderby Land, in an expedition led by Shunji Sato. **Nov. 1985-March 1986**: Everything as before, except off the coast of Queen Maud Land. This time Sumiyuki Yoshii led the expedition. **Nov. 1986-March 1987**: As before, except off the Amundsen Sea. This time the chief scientist was Yasuo Tamura. **Nov. 1987-March 1988**: She was off the South Orkneys, with chief scientist Hiroshi Morishima. Everything else the same as before. **Nov. 1988-March 1989**: As before, but off the Antarctic Peninsula, with chief scientist Mr. Morishima again leading the expedition. This was Captain Okomura's last voyage. **Nov. 1989-March 1990**: Same as before, but off Princess Elizabeth Land, with Seizo Nakao leading the expedition. Capt. Kiyoshi Ishii was the new skipper of the ship. **Nov. 1990-March 1991**: Same as before, except off Wilkes Land, and chief scientist Seizo Nakao led the expedition. Capt. Ishii was still skipper. **Nov. 1991-March 1992**: Same as before, but in the Ross Sea, with chief scientist Yoshihisa Okuda leading the expedition. Capt. Ishii was still skipper. **Dec. 1992-March 1993**: A new ship's skipper this year, Capt. Morio Endo, and chief scientist Makoto Yuasa led the expedition back to the Ross Sea. **Nov. 1993-March 1994**: Same as before, but off Wilkes Land, with chief scientist Mr. Yuasa leading the expedition again. This time Capt. Naomi Ebihara was the skipper of the ship. **Nov. 1994-March 1995**: Again off Wilkes Land, this time chief scientist Takemi Ishihara leading the expedition. Capt. Ebihara was still the skipper. **Dec. 1995-March 1996**: Same chief scientist and same skipper, but this time in the Ross Sea. **Dec. 1996-March 1997**: This time off the Antarctic Peninsula, with chief scientist Manabu Tanahashi leading the expedition, and Capt. Toshiaki Takahashi as new skipper. **Nov. 1997-March 1998**: This time off the South Orkneys, with the same expedition leader (Capt. Tanahashi) and the same skipper (Capt. Takahashi). **Nov. 1998-March 1999**: This time in the Davis Sea, with Fumitoshi Murakami as expedition leader and chief scientist, and Capt. Takahashi still skipper. **Nov. 1999-March 2000**: This was the 20th and last of the Japanese geophysics voyages sent down by the Metal Mining Agency of Japan, on the *Hakurei Maru*. Masato Joshima was chief scientist in charge of the expedition, and Capt. Takahashi was still skipper. This time they explored off Enderby Land.

Hakurei Seamount. 62°52' S, 140°49' E. An undersea feature off Wilkes Land. Named for the *Hakurei Maru* (q.v.), which conducted a detailed survey of the area. The name was accepted internationally in July 1999.

Mount Hal Flood *see* **Mount Berlin**

Hal Flood Bay *see* **Okuma Bay**

Hal Flood Range *see* **Flood Range**

Hala. 62°09' S, 58°29' W. A small green alp ("hala" in Polish), in the area of Arctowski Station, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980.

The *Halcón*. Argentine privateer corvette commanded by Hipólito Bouchard, which, in 1815, found herself blown off course and in 65°S. *see* **Brown, Guillermo**.

Islas Halcón *see* **Curtis Island**

Islotes Halcón *see* **Curtis Island**

Haldorsentoppen. 74°35' S, 11°12' W. A mountain, W of Torsviktoppen, it is the most northwesterly peak in Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for obstetrician and gynecologist Inger Alida Haldorsen (1899-1989), a key person in the refugee organization in Bergen, helping people to escape to Britain during World War II.

Mount Hale. 78°04' S, 86°19' W. Rising to 3595 m, 2.5 km NW of Mount Davis, in the main ridge of the Sentinel Range of the Ellsworth Mountains. Discovered by Charles Bentley and his 1957-58 Marie Byrd Land Traverse Party, and named by him for Daniel Payne Hale (b. June 17, 1926. d. Nov. 4, 2005, Knoxville, Tenn.), aurora physicist at Byrd Station and a member of the traverse. US-ACAN accepted the name in 1960.

Hale Glacier. 72°13' S, 100°33' W. About 10 km long, just E of Mount Simpson, it flows SW into the Abbot Ice Shelf in Peacock Sound, on Thurston Island. Delineated from VX-6 air photos taken in Jan. 1960. Named by US-ACAN in 1960, for Lt. (jg) (later Lt. Cdr.) Bill Joe Hale, USN, helicopter pilot on the *Burton Island* here in Feb. 1960. Originally plotted in 72°12' S, 100°48' W, but has since been replotted.

Hale Valley. 79°52' S, 156°40' E. Immediately S of Kennett Ridge, it is the northernmost of 3 largely ice-filled valleys that trend E from the Midnight Plateau, in the Darwin Mountains. Named by US-ACAN in 2001, for lichenologist and linguist Mason Ellsworth Hale, Jr. (b. Sept. 23, 1928, Winsted, Conn. d. April 23, 1990, Arlington, Va.), who worked about 6 austral summers in the McMurdo Dry Valleys, beginning in about 1980. He was later curator of botany at the Smithsonian.

Hales Peak. 64°08' S, 62°09' W. Rises to about 1000 m above sea level from the NE shoulder of Mount Cabeza, between Bouquet Bay and Hill Bay, in the NE part of Brabant Island, in the Palmer Archipelago. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for British physiologist Rev. Stephen Hales (1677-1761), the first person to estimate blood pressure. US-ACAN accepted the name in 1965.

Haley Glacier. 71°33' S, 61°50' W. A glacier, 13 km long, flowing SE along the N side of the Rowley Massif into Odom Inlet, on the Black Coast, on the E coast of Palmer Land. Photographed aerially by USN in 1966, surveyed from the ground by BAS personnel from Base E in 1972-73, and, from these efforts, it was mapped by USGS in 1974. Named by US-ACAN in 1976, for Philip H. Haley (b. 1952), of the University of California, at Davis, USARP

biologist at Palmer Station in 1973. UK-APC accepted the name on July 21, 1976.

Half Black Peak. 71°47' S, 163°40' E. Rising to over 2000 m, 3 km NE of Mount Edixon, in the SE part of the Lanterman Range, in the Bowers Mountains. Malcolm Laird proposed the name for two reasons — its color (half black rock and half snow) and because of its proximity to All Black Peak. NZ-APC accepted the name, as did US-ACAN.

Half Century Nunatak. 85°22' S, 178°50' W. A prominent nunatak, snow-covered on the top and W side, and displaying a high, east-facing rock escarpment, 6 km N of Dismal Buttress, at the W side of the upper Shackleton Glacier. Named by the Southern Party of NZGSAE 1961-62. Near here they celebrated the 50th anniversary of Amundsen reaching the South Pole. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Half Dome Nunatak. 82°27' S, 159°14' E. A small nunatak, just above the lower Nimrod Icefalls, 3 km S of the Cobham Range, at the mouth of Lucy Glacier. So named by the Northern Party of NZGSAE 1961-62 because it is dome-shaped on one side and is cut into sheer rocky cliffs on the other. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Half Moon. *See also under* **Halfmoon**

Isla Half Moon *see* **Half Moon Island**

Half-moon Bay *see* **Moon Bay**

Half Moon Beach. 62°29' S, 60°47' W. A small beach, immediately SW of Punta Yuseff, 1.5 km SE of Scarborough Castle, on the E coast of Cape Shirreff, between that cape and Black Point, on the NW coast of Livingston Island, in the South Shetlands. Named for its shape by the early sealers, possibly Robert Fildes in 1820-21. He was certainly the first to record it on a chart, as Half-moon Beach (for its shape). It was described as being approachable overland from Shirreff Cove, and a useful refuge for boats caught between Desolation Island and Cape Shirreff in an easterly gale. It was photographed aerially by FIDASE in 1956-57, and named by UK-APC on July 7, 1959, as Half Moon Beach. US-ACAN followed suit with the naming in 1960. The Chileans translated it as Playa Media Luna. The British were the last to plot this feature, in late 2008.

Half Moon Crater. 77°48' S, 166°45' E. A crater, 0.8 km SW of Castle Rock, on Hut Point Peninsula, Ross Island. Descriptively named by Frank Debenham during BAE 1910-13, as he was making a plane table survey of the peninsula in 1912. US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001.
